shelves, which remain unchanged, and, though its surface has been heightened, its superficial area has not been materially enlarged since the country was peopled. Pharos was inhabited by fishermen under the Pharaohs of Aegypt; but it first became a place of importance under the Macedonian kings. During his survey of the coast, B. C. 332, Alexander the Great perceived that the island would form, with the help of art, an excellent breakwater to the harbour of his projected capital. He accordingly caused its southern extremity to be connected with the mainland by a stone mole seven stadia, or about an English mile, in length, which from this circumstance was called the Heptastadium or Seven-furlong Bridge. At either end the mole was left open for the passage of ships, and the apertures were covered by suspension bridges. In later times a street of houses, erected on the mole itself, converted the island of Pharos into a suburb of Alexandreia, and a considerable portion of the modern city stands on the foundations of the old Heptastadium.

Yet, long after its junction with the Delta, Pharos was spoken of as an island (ἡ παλαί νῆσος, Aelian, *H. An.* ix. 21; τοπρότερον νῆσος, Zonar. iv. 10). The southern portion of this rocky ledge (χοιράς) was the more densely populated; but the celebrated lighthouse, or the Tower of the Pharos, stood at the NE. point, directly in a line with point Pharillon, on the eastern horn of the New Port. The lighthouse was erected, at a cost of 800 talents, in the reign of Ptolemy I., but was not completed until that of his successor Philadelphus. Its architect was Sostratus of Cnidus, who, according to Pliny (xxxvi. 12. s. 18), was permitted by his royal patron to inscribe his own name upon its base. There is indeed another story, in which it is related that Sostratus, being forbidden to engrave his name on his work, secretly cut it in deep letters on a stone of the building, which he then adroitly covered with some softer and perishable material, on which were inscribed the style and titles of Ptolemy. Thus a few generations would read the name of the king, but posterity would behold the authentic impress of the architect. (Strab. xvii. p. 791; Suidas, *s. v.* Φάρος; Steph. B. *s. v.*; Lucian, *de Conscrib. Hist.* c. 62.) Pharos was the seat of several temples, the most conspicuous of which was one dedicated to Hephaestos, standing near the northern extremity of the Heptastadium.

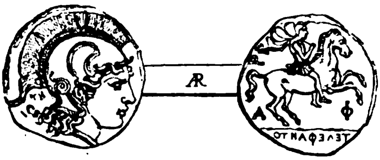
That Pharos, in common with many of the Deltaic cities, contained a considerable population of Jews, is rendered probable by the fact that here the translators of the Hebrew Scriptures resided during the progress of their work. (Joseph. *Antiq.* xii. 2. § 13.) Julius Caesar established a colony at Pharos, less perhaps to recruit a declining population than with a view to garrison a post so important as regarded the turbulent Alexandrians. (Caesar, *B. Civ.* iii. 112.) Subsequently the island seems to have been comparatively deserted, and inhabited by fishermen alone. (Montfaucon, *Sur le Phare d'Alexandrie*, *Mém. de l'Acad. des Inscript.* ix. p. 285.) [W. B. D.]

PHARPAR. [DAMASCUS.]

PHARRA'SII. [PRASII.]

PHARSA'LUS (Φάρσαλος: *Eth.* Φαρσάλιος: the territory is Φαρσαλία, Strab. ix. p. 430), one of the most important cities of Thessaly, situated in the district Thessaliotis near the confines of Phthiotis, upon the left bank of the Enipeus, and at the foot of Mt. Narthacium. The town is first mentioned after the Persian wars; but it is probable that it existed much earlier, since there is no other locality in this part of Thessaly to be compared to it for a combination of strength, resources, and convenience Hence it has been supposed that the city was probably named Phthia at a remote period, and was the capital of Phthiotis. (See Leake, *Northern Greece*, vol. iv. p. 484.) Among its ruins there are some remains which belong apparently to the most ancient times. On one side of the northern gateway of the acropolis are the remnants of Cyclopian walls; and in the middle of the acropolis is a subterraneous construction, built in the same manner as the treasury of Atreus at Mycenae. Leake observes that Pharsalus "is one of the most important military positions in Greece, as standing at the entrance of the most direct and central of the passes which lead from the plains of Thessaly to the vale of the Spercheius and Thermopylae. With a view to ancient warfare, the place had all the best attributes of a Hellenic polis or fortified town: a hill rising gradually to the height of 600 or 700 feet above the adjacent plain, defended on three sides by precipices, crowned with a small level for an acropolis, watered in every part of the declivity by subterraneous springs, and still more abundantly at the foot by sources so copious as to form a perennial stream. With these local advantages, and one of the most fertile plains in Greece for its territory, Pharsalus inevitably attained to the highest rank among the states of Thessaly, and became one of the largest cities of Greece, as its ruined walls still attest." The city was nearly 4 miles in circuit, and of the form of an irregular triangle. The acropolis consisted of two rocky tabular summits, united by a lower ridge. It was about 500 yards long, and from 100 to 50 broad, but still narrower in the connecting ridge. Livy speaks of Palaepharsalus (xliv. 1), and Strabo distinguishes between Old and New Pharsalus. (Strab. ix. p. 431.) It is probable that at the time of these writers the acropolis and the upper part of the town were known by the name of Palaepharsalus, and that it was only the lower part of the town which was then inhabited.

Pharsalus is mentioned by Scylax (p. 25) among the towns of Thessaly. In B. C. 455 it was besieged by the Athenian commander Myronides, after his victory in Boeotia, but without success. (Thuc. i. 111.) At the commencement of the Peloponnesian War, Pharsalus was one of the Thessalian towns that sent succour to the Athenians. (Thuc. ii. 22.) Medius, tyrant of Larissa, took Pharsalus by force, about B. C. 395. (Diod. xiv. 82.) Pharsalus, under the conduct of Polydamas, resisted Jason for a time, but subsequently formed an alliance with him. (Xen. *Hell.* vi. 1. § 2, seq.) In the war between Antiochus and the Romans, Pharsalus was for a time in the possession of the Syrian monarch; but on the retreat of the latter, it surrendered to the consul Acilius Glabrio, B. C. 191. (Liv. xxxvi. 14.)



Pharsalus, however, is chiefly celebrated for the memorable battle fought in its neighbourhood between Caesar and Pompey, B. C. 48. It is a curious fact that Caesar has not mentioned the place where he gained his great victory; and we are indebted for the name to other authorities. The exact site of the battle has been pointed out by Leake with his usual clearness. (*Northern Greece*, vol. iv. p. 475, seq.) Merivale, in his narrative of the battle (*History of the Romans under the Empire*, vol. ii. p. 286, seq.), has raised some difficulties in the in-

terpretation of Caesar's description, which have been commented upon by Leake in an essay printed in the *Transactions of the Royal Society of Literature* (vol. iv. p. 68, seq., 2nd Series), from which the following account is taken.

A few days previous to the battle Caesar had taken possession of Metropolis, a city westward of Pharsalus, and had encamped in the plain between these two cities. Meantime Pompey arrived at Larissa, and from thence advanced southwards towards Pharsalus; he crossed the Enipeus, and encamped at the foot of the heights, which are adjacent to the modern *Férsala* on the east. Caesar's camp, or rather his last position before the battle, was in the plain between Pharsalus and the Enipeus, at the distance of about 3 miles from the still extant north-western angle of the walls of Pharsalus. There was a distance of 30 stadia, or about 4 Roman miles, from the two camps. (Appian, *B. C.* ii. 65.) Appian adds that the army of Pompey, when drawn up for battle, extended from the city of Pharsalus to the Enipeus, and that Caesar drew up his forces opposite to him. (*B. C.* ii. 75.) The battle was fought in the plain immediately below the city of Pharsalus to the north. There is a level of about 2½ miles in breadth between the Enipeus and the elevation or bank upon which stood the northern walls of Pharsalus. Merivale is mistaken in saying that "the plain of Pharsalus, 5 or 6 miles in breadth, extends along the *left* bank of the Enipeus." It is true that 5 or 6 miles is about the breadth of the plain, but this breadth is equally divided between the two sides of the river; nor is there anything to support Merivale's conjecture that the course of the river may have changed since the time of the battle. Leake observes that the plain of 2½ miles in breadth was amply sufficient for 45,000 men drawn up in the usual manner of three orders, each ten in depth, and that there would be still space enough for the 10,000 cavalry, upon which Pompey founded chiefly his hopes of victory; for the breadth of the plain being too great for Caesar's numbers, he thought himself sure of being able, by his commanding force of cavalry, to turn the enemy's right.

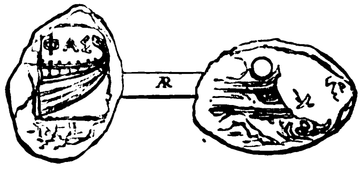
At first Pompey drew up his forces at the foot of the hills; but when Caesar refused to fight in this position, and began to move towards Scotussa, Pompey descended into the plain, and arranged his army in the position already described. His right wing being protected by the Enipeus, which has precipitous banks, he placed his cavalry, as well as all his archers and slingers, on the left. Caesar's left wing was in like manner protected by the Enipeus; and in the rear of his right wing, behind his small body of horse, he stationed six cohorts, in order to sustain the anticipated attack of the enemy's cavalry. Pompey resolved to await the charge. Caesar's line advanced running, halted midway to recover their breath, and then charged the enemy. While the two lines were thus occupied, Pompey's cavalry on the left began to execute the movement upon which he placed his hopes of victory; but after driving back Caesar's small body of horse, they were unexpectedly assailed by the six cohorts and put to flight. These cohorts now advanced against the rear of Pompey's left; while Caesar at the same time brought up to his front the third line, which had been kept in reserve. Pompey's troops now gave way in every direction. Caesar then advanced to attack the fortified camp of the enemy, which was defended for some time by the cohorts left in charge of it; but at length they fled to the mountains at the back of the camp. Pompey proceeded straightway to Larissa, and from thence by night to the sea-coast. The hill where the Pompeians had taken refuge being without water, they soon quitted it and took the road towards Larissa. Caesar followed them with four legions, and, by taking a shorter road, came up with them at the distance of 6 miles. The fugitives now retired into another mountain, at the foot of which there was a river; but Caesar having cut off their approach to the water before nightfall, they descended from their position in the morning and laid down their arms. Caesar proceeded on the same day to Larissa. Leake observes that the mountain towards Larissa to which the Pompeians retired was probably near Scotussa, since in that direction alone is any mountain to be found with a river at the foot of it.

In the time of Pliny, Pharsalus was a free state (iv. 8. s. 15). It is also mentioned by Hierocles (p. 642) in the sixth century. It is now named *Férsala* (τὰ Φέρσαλα), and the modern town lies at the foot of the ancient Acropolis.

COIN OF PHARSALUS.

PHARU'SII (Φαρούσιοι, Strab. ii. p. 131, xvii. pp. 826, 828; Ptol. iv. 6. § 17; Polyb. *ap. Plin.* v. 1. s. 8, vi. 35), a people on the W. coast of N. Africa, about the situation of whom Strabo, Pliny, and Ptolemy are in perfect agreement with one another, if the thirty journeys of Strabo (p. 826) between them and Lixus (*El-Araish*), on the W. coast of *Morocco*, to the S. of *Cape Spartel*, be set aside as an error either of his information or of the text; which latter is not improbable, as numbers in MSS. are so often corrupt. Nor is this mere conjecture, because Strabo contradicts himself by asserting in another place (p. 828) that the Pharusii had a great desert between them and Mauretania, which they crossed, like natives of the present day, with bags of water hung from the bellies of their horses. (Leake, *London Geog. Journ.* vol. ii. p. 16.) This locality, extending from beyond *Cape Bojador* to the banks of the *Senegal*, was the seat of the many towns of the Tyrians, amounting, according to some (Strab. p. 826), to as many as 300, which were destroyed by the Pharusii and Nigritae. (Comp. Humboldt, *Cosmos*, vol. ii. p. 129, note 123, trans.) Strabo reckons this number of 300 commercial settlements, from which this part of the coast of the Atlantic received the name of SINUS EMPORICUS, as an exaggeration. He appears in this to have followed the criticism of Artemidorus upon Eratosthenes, whom Strabo depreciates. The number 300 may be an exaggeration, or one not intended to be literally taken; but it is incredible that Eratosthenes should represent a coast as covered with Phoenician factories where none existed.

When Ezekiel prophesies the fall of Tyre, it is said (xxvii. 10) "The men of Pheres (the common version reads Persia), and Lud, and Phut were in thine armies." These Pheres thus joined with the Phut or Mauretanians, and the Ludim, who were



nomads of Africa (the Septuagint and the Vulgate understand the Lydians), may be reasonably supposed to belong to the same region. Without the vowel points, the name will represent the powerful and warlike tribe whom the Greeks call Pharusii. The similarity of the names seems to have given rise to the strange story which Sallust (*B. J.* 18) copied from the Punic books, that Hercules had led an army of Persians into Africa. ("Pharusii quondam Persae," Plin. v. 8; comp. Pomp. Mela, iii. 10. § 3.) The fierce tribes of Africa thus furnished the Phoenicians with inexhaustible supplies of mercenary troops, as they afterwards did to Carthage. (Kenrick, *Phoenicia*, pp. 135, 277.) [E. B. J.]

PHARYGAE. [TARPHE.]

PHARY'GIUM (Φαρύγιον), a promontory of Phocis, with a station for shipping, lying E. of Anticyra, between Marathus and Myus, now called *Aghiá*. (Strab. ix. p. 423; Leake, *Northern Greece*, vol. ii. p. 549.)

PHASAE'LIS (Φασαηλίς, Joseph., Steph. B., *s. v.*; Φασηλίς, Ptol. v. 16. § 7; Phaselis, Plin. xiii. 4. s. 19, xxi. 5. s. 11: *Eth.* Φασαηλίτης), a town of Palestine built by Herod the Great in the Aulon or *Ghor*, N. of Jericho, by which means a tract formerly desert was rendered fertile and productive. (Joseph. xvi. 5. § 2, xvii. 11. § 5, xviii. 2. § 2, *B. J.* i. 21. § 9.) The name seems still to have existed in the middle ages, for Brocardus, quoted by Robinson, speaks of a village named Phasellum, situated a league N. of *Dúk*, and corresponding to the position of *El-'Aujeh*, where there are ruins. (Robinson, *Biblical Researches*, vol. ii. p. 305.)

PHASE'LIS (Φασηλίς: *Eth.* Φασηλίτης), a maritime town of Lycia, on the Pamphylian gulf, whence some say that it was a town of Pamphylia (Plin. v. 36; Steph. B. *s v.*; Dionys. Per. 855; *Stadiasm. Mar. Mag.* § 205); but Strabo (xiv. p. 667) distinctly informs us that Phaselis belonged to Lycia, and that Olbia was the first Pamphylian town on the coast. The town was a Dorian colony (Herod. ii. 178), situated on a headland, and conspicuous to those sailing from Cilicia to Rhodes. (Liv. xxxvii. 23; Cic. *in Verr.* ii. 4.) Behind it rose a mountain of the same name, probably the same which is elsewhere called τὰ Σόλυμα (*Stadiasm. Mar. Mag.* § 204; Strab. xiv. p. 666); and in its vicinity there was a lake and a mountain-pass leading between Mount Climax and the sea-coast into Pamphylia. Phaselis had three harbours, and rose to a high degree of prosperity, though it did not belong to the political confederacy of the other Lycian towns, but formed an independent state by itself. It is mentioned by Thucydides (ii. 69, comp. viii. 88, 89; Polyb. xxx. 9) as a place of some importance to the commerce of the Athenians with Phoenicia and Cilicia. At a later period, having become the haunt of the pirates, it was attacked and taken by Servilius Isauricus. (Cic. *in Verr.* iv. 10; Eutrop. vi. 3; Flor. iii. 6.) Although it was restored after this disaster, yet it never recovered its ancient prosperity; and Lucan (viii. 249, &c.) describes it as nearly deserted when visited by Pompey in his flight from Pharsalus. According to Athenaeus (xiv. p. 688) the town was celebrated for the manufacture of rose-perfume, and Nicander (*ap. Athen.* p. 683) praised its roses. It was the common opinion among the ancients that the phaseli (φάσηλοι), a kind of light sailing boats, were invented at Phaselis, whence all the coins of the town show the image of such a boat. Pausanias (iii. 3. § 6) reports that the spear of Achilles was exhibited in the temple of Athena at Phaselis. In Hierocles (p. 683) the name of the place is corrupted into Phasydes; and the Acts of Councils show it to have been the see of a bishop. It may also be remarked that Phaselis was the birthplace of Theodectes, a tragic poet and rhetorician of some note. (Steph. B. *s. v.*; comp. Scylax, p. 39; Ptol. v. 3. § 3, 5. § 2; Eckhel, *Doctr. Num.* iii. p. 6.) There are still considerable remains of the ancient Phaselis. The lake in its vicinity, says Beaufort (*Karamania*, p. 56), is now a mere swamp, occupying the middle of the isthmus, and was probably the source of those baneful exhalations which, according to Livy and Cicero, rendered Phaselis so unhealthy. The principal port was formed by a stone pier, at the western side of the isthmus; it projected about 200 yards into the sea, by which it has been entirely overthrown. The theatre is scooped out of the hill, and fronting it are the remains of several large buildings. There are also numerous sarcophagi, some of them of the whitest marble, and of very neat workmanship. The modern name of Phaselis is *Tekrova*. (Comp. Fellows, *Asia Minor*, p. 211, foll.; Leake, *Asia Minor*, p. 190.) [L. S.]

COIN OF PHASELIS.

PHASIA'NI (Φασιανοί), a tribe in the eastern part of Pontus, on the river Phasis, from which both they and the district called Φασιανὴ χώρα derived their names. (Xenoph. *Anab.* iv. 6. § 5, vii. 8. § 25; Diodor. xiv. 29; Eustath. *ad Dionys. Per.* 689.) [L. S.]

PHASIS (Φᾶσις), a navigable river in Colchis, on the east of the Euxine, which was regarded in ancient times as forming the boundary between Europe and Asia, and as the remotest point in the east to which a sailer on the Euxine could proceed. (Strab. xi. p. 497; Eustath. *ad Dionys. Per.* 687; Arrian, *Peripl. Pont. Eux.* p. 19; Herod. iv. 40; Plat. *Phaed.* p. 109; Anonym. *Peripl. Pont.* p. 1; Procop. *Bell. Goth.* iv. 2, 6.) Subsequently it came to be looked upon as forming the boundary line between Asia Minor and Colchis. Its sources are in the southernmost part of the Montes Moschici (Plin. vi. 4; Solin. 20); and as these mountains were sometimes regarded as a part of Mount Caucasus, Aristotle and others place its sources in the Caucasus. (Strab. xi. p. 492, xii. p. 548; Aristot. *Met.* i. 13; Procop. *l. c.*; Geogr. Rav. iv. 20.) Strabo (xi. p. 497; comp. Dionys. Per. 694; Schol. *ad Apollon. Rhod.* ii. 401) makes the Phasis in a general way flow from the mountains of Armenia, and Apollonius specifies its sources as existing in the country of the Amaranti, in Colchis. For the first part of its course westward it bore the name Boas (Procop. *Bell. Pers.* ii. 29), and after receiving the waters of its tributaries Rhion, Glaucus, and Hippus, it discharges itself as a navigable river into the Euxine, near the town of Phasis. (Strab. xi. pp. 498, 500; Plin. *l. c.*) Some of the most ancient writers believed

that the Phasis was connected with the Northern Ocean. (Schol. *ad Apollon. Rhod.* iv. 259; Pind. *Pyth.* iv. 376, *Isthm.* ii. 61.) The length of its course was also erroneously estimated by some at 800 Roman miles (Jul. Honor. p. 697, ed. Gronov.), but Aethicus (*Cosmogr.* p. 719) states it more correctly to be only 305 miles. The fact is that its course is by no means very long, but rapid, and of such a nature as to form almost a semicircle; whence Agathemerus (ii. 10) states that its mouth was not far from its sources. (Comp. Strab. xi. p. 500; Apollon. Rhod. ii. 401; Ov. *Met.* vii. 6; Amm. Marc. xxii. 8; Prisc. 673.) The water of the Phasis is described as very cold, and as so light that it swam like oil on the Euxine. (Arrian, *Peripl. Pont. Eux.* p. 7, &c.; Procop. *Bell. Pers.* ii. 30; comp. Hesiod. *Theog.* 340; Hecat. *Fragm.* 187; Herod. iv. 37, 45, 86; Scylax, p. 25; Polyb. iv. 56, v. 55; Ptol. v. 10. §§ 1, 2.) The different statements of the ancients respecting the sources and the course of this river probably arose from the fact that different rivers were understood by the name Phasis; but the one which in later times was commonly designated by it, is undoubtedly the modern *Rioni* or *Rion*, which is sometimes also mentioned under the name *Fachs*, a corruption of Phasis. It has been conjectured with great probability that the river called Phasis by Aeschylus (*ap. Arrian, l. c.*) is the Hypanis; and that the Phasis of Xenophon (*Anab.* iv. 6. § 4) is no other than the Araxes, which is actually mentioned by Constantine Porphyr. (*de Admin. Imp.* 45) under the two names Erax and Phasis. [L. S.]

PHASIS (Φᾶσις), the easternmost town on the coast of the Euxine, on the southern bank, and near the mouth of the river Phasis, which is said to have received this name from the town having previously been called Arcturus. (Plut. *de Fluv. s. v.*; Eustath. *ad Dion. Per.* 689.) It was situated in a plain between the river, the sea, and a lake, and had been founded by the Milesians as a commercial establishment. (Strab. xi. p. 498; Steph. B. *s. v.*) The country around it was very fertile, and rich in timber, and carried on a considerable export commerce. In the time of Ammianus Marcellinus (xxii. 8), the place still existed as a fort, with a garrison of 400 picked men. It contained a temple of Cybele, the great goddess of the Phasiani. (Comp. Arrian, *Peripl. Pont. Eux.* p. 9; Scylax, p. 32; Strab. xi. pp. 497, 500; Ptol. v. 10. § 2, viii. 19. § 4; Pomp. Mela, i. 19; Plin. vi. 4; Zosim. ii. 33.) Some geographers regard Phasis and Sebastopolis as two names belonging to the same place [SEBASTOPOLIS]. The name of the town and river Phasis still survives in the languages of Europe in the wood pheasants (phasianae aves), these birds being said to have been introduced into Europe from those regions as early as the time of the Argonauts. (Aristoph. *Acharn.* 726; Plin. ii. 39, 44, x. 67; Martial, iii. 57, 16; Suet. *Vit.* 13; Petron. 93.) [L. S.]

PHASIS (Φᾶσις), a river of Taprobane or *Ceylon*. It is clear from the statement of Ptolemy that it was on the N. side of the island; but like other rivers and places in that island, it is hardly possible now to identify it with any modern stream. Forbiger has conjectured that it is the same as the *Awerie*. Lassen has supposed it to be the *Ambá*, in that portion of the island which was called *Nagadwípa*. If this be so, it flowed into the sea a little to the N. of the narrow ledge of rocks which connects *Ceylon* with the mainland of *Hindostán*. Forbiger further supposes that this is the same river which Pliny calls Cydara in his account of the island of Taprobane (vi. 22. s. 24). [V.]

PHAURA. [ATTICA, p. 330, b.]

PHAZANIA. [GARAMANTES.]

PHAZE'MON (Φαζημών), a small town in the west of Pontus, south of Gazelonitis, and north of Amasia; it contained hot mineral springs, which, according to Hamilton (*Researches*, i. p. 333), are the modern baths of *Cavvsa*. (Strab. xii. pp. 553, 560, 561.) Pompey, after his victory over Mithridates, planted a colony there, and changed its name into Neapolis, from which the whole district was called Neapolitis, having previously been called Phazemonitis. (Strab. xii. p. 560; Steph. B. *s. v.* Φαμιζών, for thus the name is erroneously written.) Phazemon is generally supposed to correspond in situation with the modern town of *Marifun* or *Marsifun*. [L. S.]

PHECA or PHECADUM, a fortress near Gomphi in Thessaly. (Liv. xxxi. 41, xxxii. 14.) [GOMPHI.]

PHEGAEA. [ATTICA, p. 330, b.]

PHE'GIA. [PSOPHIS.]

PHEIA or PHEA (αἱ Φειαί, Hom. *Il.* vii. 135, *Od.* xv. 297; Φειά, Thuc. Strab; Φεά, Steph. B. *s. v.*: *Eth.* Φεάτης, Steph. B.), a city of Elis in the Pisatis, situated upon the isthmus connecting the promontory Ichthys (*C. of Katákolo*) with the mainland. Strabo erroneously speaks of two promontories upon this part of the coast; one called Pheia, from the name of the neighbouring town, and another more to the south, of which he has not given the name. (Strab. viii. 343.) Pheia is mentioned by Homer, who places it near the Iardanus, which is apparently the mountain torrent north of Ichthys, and which flows into the sea on the northern side of the lofty mountain *Skaphidi*. (Hom. *l. c.*) Upon a very conspicuous peaked height upon the isthmus of Ichthys are the ruins of a castle of the middle ages, called *Pontikókastro*, built upon the remains of the Hellenic walls of Pheia. On either side of Ichthys are two harbours; the northern one, which is a small creek, was the port of Pheia; the southern one is the broad bay of *Katákolo*, which is now much frequented, but was too open and exposed for ancient navigation. The position of these harbours explains the narrative of Thucydides, who relates that in the first year of the Peloponnesian War (B. C. 431), the Athenian fleet, having sailed from Methone in Messenia, landed at Pheia (that is, in the bay of *Katákolo*), and laid waste the country; but a storm having arisen, they sailed round the promontory Ichthys into the harbour of Pheia. In front of the harbour was a small island, which Polybius calls Pheias (Strab. *l. c.*; Polyb. iv. 9). About a mile north of the small creek at *Pontikókastro*, there is a harbour called *Khortús*, which Leake is disposed to identify with the port mentioned by Thucydides, on the ground that the historian describes it "not as the port of Pheia, but as a harbour in the district Pheia" (τὸν ἐν τῇ Φθειᾷ λιμένα); but we think it more probable that the historian intended the creek at the foot of *Pontikókastro*. In any case Pheia stood on the isthmus of Ichthys, and neither at *Khortús* nor at the mouth of the torrent of *Skaphidi*, at one or other of which spots Pheia is placed by Boblaye, though at neither are there any ancient remains. (Leake, *Morea*, vol. ii. p. 189, seq., *Peloponnesiaca*, p. 213, seq.; Boblaye, *Récherches, &c.* p. 131; Curtius, *Peloponnesos*, vol. ii. p. 44, seq.)

PHELLIA. [LACONIA, p. 110, a.]

PHELLOE. [AEGEIRA.]

PHELLUS. [ANTIPHELLUS.]

PHE'NEUS (Φένεος, Hom. *Il.* ii. 605; Φενεός, Steph. B. *s. v.*: *Eth.* Φενεάτης: the territory ἡ Φενεατική, Paus.; ἡ Φενεᾶτις, Alciphr. iii. 48; ἡ Φενική, Polyb.), a town in the NE. of Arcadia, whose territory was bounded on the N. by that of the Achaean towns of Aegeira and Pallene, E. by the Stymphalia, W. by the Cleitoria, and S. by the Caphyatis and Orchomenia. This territory is shut in on every side by lofty mountains, offshoots of Mt. Cyllene and the Aroanian chain; and it is about 7 miles in length and the same in breadth. Two streams descend from the northern mountains, and unite their waters about the middle of the valley; the united river is now called *Foniátiko*, and bore in ancient times the name of Olbius and Aroanius. (Paus. viii. 14. § 3.) There is no opening through the mountains on the S.; but the waters of the united river are carried off by *katavóthra*, or subterranean channels in the limestone rocks, and, after flowing underground, reappear as the sources of the river Ladon. In order to convey the waters of this river in a single channel to the *katavóthra*, the inhabitants at an early period constructed a canal, 50 stadia in length, and 30 feet in breadth. (Paus. *l. c.*; comp. Catull. lxviii. 109.) This great work, which was attributed to Hercules, had become useless in the time of Pausanias, and the river had resumed its ancient and irregular course; but traces of the canal of Hercules are still visible, and one bank of it was a conspicuous object in the valley when it was visited by Leake in the year 1806. The canal of Hercules, however, could not protect the valley from the danger to which it was exposed, in consequence of the *katavóthra* becoming obstructed, and the river finding no outlet for its waters. The Pheneatae related that their city was once destroyed by such an inundation, and in proof of it they pointed out upon the mountains the marks of the height to which the water was said to have ascended. (Paus. viii. 14. § 1.) Pausanias evidently refers to the yellow border which is still visible upon the mountains and around the plain; but in consequence of the great height of this line upon the rocks, it is difficult to believe it to be the mark of the ancient depth of water in the plain, and it is more probably caused by evaporation, as Leake has suggested; the lower parts of the rock being constantly moistened, while the upper are in a state of comparative dryness, thus producing a difference of colour in process of time. It is, however, certain that the Pheneatic plain has been exposed more than once to such inundations. Pliny says that the calamity had occurred five times (xxxi. 5. s. 30); and Eratosthenes related a memorable instance of such an inundation through the obstruction of the *katavóthra*, when, after they were again opened, the water rushing into the Ladon and the Alpheius overflowed the banks of those rivers at Olympia. (Strab. viii. p. 389.)

The account of Eratosthenes has been confirmed by a similar occurrence in modern times. In 1821 the *katavóthra* became obstructed, and the water continued to rise in the plain till it had destroyed 7 or 8 square miles of cultivated country. Such was its condition till 1832, when the subterraneous channels again opened, the Ladon and Alpheius overflowed, and the plain of Olympia was inundated. Other ancient writers allude to the *katavóthra* and subterraneous course of the river of Pheneus. (Theophr. *Hist. Plant.* iii. 1; Diod. xv. 49.)

chomenian plain to that of Pheneus through a narrow ravine (φάραγξ), in the middle of which was a fountain of water, and at the further extremity the village of Caryae. The mountains on either side were named ORYXIS (Ὄρυξις), and SCIATHIS (Σκίαθις), and at the foot of either was a subterraneous channel, which carried off the water from the plain. (Paus. viii. 13. § 6, 14. § 1.) This ravine is now called *Gióza*, from a village of this name, which occupies the site of Caryae*. The mountains on either side are evidently the Oryxis and Sciathis of Pausanias, and at the foot of either there is a *katavóthra*, as he has remarked.

The eastern road from Pheneus led to Stymphalus, across Mt. Geronteium (now *Skipési*), which formed the boundary between the territories of the two cities.

To the left of Mt. Geronteium near the road was a mountain called Tricrena (Τρίκρηνα), or the three fountains; and near the latter was another mountain called Sepia (Σηπία), where Aepytus is said to have perished from the bite of a snake. (Paus. viii. 16. §§ 1, 2.) (Leake, *Morea*, vol. iii. p. 135, seq., *Peloponnesiaca*, p. 385, seq.; Curtius, *Peloponnesos*, vol. i. p. 185, seq.)

COIN OF PHENEUS.

PHERAE (Φέραι: *Eth.* Φεραῖος, Pheraeus). 1. One of the most ancient cities of Thessaly, was situated in the SE. corner of Pelasgiotis, W. of the lake Boebeis, and 90 stadia from Pagasae, which served as its harbour. (Strab. ix. 436.) It was celebrated in mythology as the residence of Admetus and his son Eumelus, the latter of whom led from Pherae and the neighbouring towns eleven ships to the Trojan War. (Hom. *Il.* ii. 711—715.) Pherae was one of the Thessalian towns which assisted the Athenians at the commencement of the Peloponnesian War. (Thuc. ii. 22.) At this time it was under the government of an aristocracy; but towards the end of the war Lycophron established a tyranny at Pherae, and aimed at the dominion of all Thessaly. His designs were carried into effect by his son Jason, who was elected Tagus or generalissimo of Thessaly about B.C. 374, and exercised an important influence in the affairs of Greece. He had so firmly established his power, that, after his assassination in B.C. 370, he was succeeded in the office of Tagus by his two brothers Polydorus and Polyphron. The former of these was shortly afterwards assassinated by the latter; and Polyphron was murdered in his turn by Alexander, who was either his nephew or his brother. Alexander governed his native city and Thessaly with great cruelty till B.C. 359, when he likewise was put to death by his wife Thebe and her brothers. Two of these brothers, Tisiphonus and Lycophron, successively held the supreme power, till at length in B.C. 352 Lycophron was deposed by Philip, king of Macedon, and Pherae, with the rest of Thessaly, became virtually subject to Macedonia. (For details and authorities see the *Dict. of Biogr.* under the respective names above mentioned.)

In B.C. 191 Pherae surrendered to Antiochus, king of Syria, but it shortly afterwards fell into the hands of the Roman consul Acilius. (Liv. xxxvi. 9, 14.) Situated at the end of the Pelasgian plain, Pherae possessed a fertile territory. The city was surrounded with plantations, gardens, and walled enclosures. (Polyb. xviii. 3.) Stephanus B. (*s. v.*) speaks of an old and new Pherae distant 8 stadia from each other.

In the middle of Pherae was a celebrated fountain called Hypereia. (Ὑπέρεια, Strab. ix. p. 439; Pind. *Pyth.* iv. 221; Sophocl. *ap. Schol. ad Pind. l. c.*; Plin. iv. 8. s. 15.) The fountain Messeis was also probably in Pherae. (Strab. ix. p. 432; Hom. *Il.* vi. 457; Val. Flacc. iv. 374; Plin. *l. c.*)

The remains of Pherae are situated at *Velestino*, where the ancient walls may be traced on every side except towards the plain. On the northern side are two tabular summits, below the easternmost of which on the southern side is the fountain Hypereia, which rushes from several openings in the rock, and immediately forms a stream. Apollonius says (i. 49; comp. Schol. *ad loc.*) that Pherae was situated at the foot of Mt. Chalcodonium (Χαλκωδόνιον), which is perhaps the southern and highest summit of *Mt. Karadágh.* (Leake, *Northern Greece*, vol. iv p. 439, seq.)

2. In Messenia. [See PHARAE, No. 2.]

PHERINUM, a fortress in Thessaly, of uncertain site. (Liv. xxxii. 14.)

PHEUGARUM (Φεύγαρον), a town in the northern part of Germany, probably in the territory of the Dulgubini. (Ptol. ii. 11. § 27.) Its site is commonly assigned to the vicinity of *Paderborn* in Westphalia (Wilhelm, *Germanien*, p. 134); but nothing certain can be said about it. [L. S.]

PHIALA. [PALAESTINA, p. 519, b.]

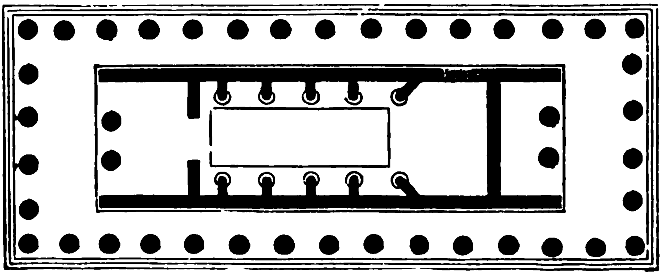
PHIA'LIA. [PHIGALIA.]

PHIARA (Φίαρα), a town of the district Sargarausena, in Cappadocia (Ptol. v. 6. § 13), appears to be the same as the one mentioned in the Antonine Itinerary (p. 205) under the name of Phiarasis, which was 36 miles west of Sebastia. [L. S.]

PHIBALIS. [MEGARA, p. 317, a.]

PHI'CIUM. [BOEOTIA, p. 412, a.]

PHIGALIA or PHIALIA (Φιγαλία, Paus.; Φιγαλέα, Polyb. iv. 3; Φιγάλεια, Paus.; Rhianus, *ap. Steph. B. s. v.*; Φιαλία, Paus.; Φιάλεια, Polyb.: *Eth.* Φιγαλεύς, Φιαλεύς, Φιγαλείτης), an ancient town of Arcadia, situated in the south-western corner of the country, close to the frontiers of Messenia, and upon the right bank of the Neda, about halfway between the sources and the mouth of this river. The name Phigalia was more ancient than that of Phialia, but the original name had again come into use in the time of Pausanias (viii. 39. § 2). The city was said to have derived its more ancient name from Phigalus, a son of Lycaon, its original founder, and its later name from Phialus, a son of Lycaon, its second founder. (Paus. *l. c.*; Steph. B.) In B.C. 659 the inhabitants of Phigalia were obliged to surrender their city to the Lacedaemonians, but they recovered possession of it again by the help of a chosen body of Oresthasians, who, according to an oracle, perished fighting against the Lacedaemonians.



* Most editors of Pausanias have substituted Καφυαί for Καρυαί; but the latter is the reading in all the MSS., and Caphyae is in another direction, to the E. of Orchomenus.

(Paus. viii. 39. §§ 4, 5.) In B.C. 375 Phigalia was rent asunder by hostile factions; and the supporters of the Lacedaemonian party, being expelled from the city, took possession of a fortress in the neighbourhood named Heraea, from which they made excursions against Phigalia. (Diod. xv. 40.) In the wars between the Aetolians and Achaeans, Phigalia became for some time the head-quarters of the Aetolian troops, who from thence plundered Messenia, till they were at length driven out by Philip of Macedon. (Polyb. iv. 3, seq., 79, seq.) The Phigaleans possessed several peculiar customs, respecting which Harmodius of Lepreum wrote a special work. This author relates that they were given to excess both in eating and drinking, to which their cold and ungenial climate may perhaps have contributed. (Athen. iv. p. 149, x. p. 442.)

Phigalia was still a place of importance when visited by Pausanias. He describes it as situated upon a lofty and precipitous hill, the greater part of the walls being built upon the rocks. There are still considerable remains of the ancient walls above the modern village of *Pávlitza*. The city was upwards of two miles in circumference. The rock, upon which it stood, slopes down towards the Neda; on the western side it is bounded by a ravine and on the eastern by the torrent Lymax, which flows into the Neda. The walls are of the usual thickness, faced with masonry of the second order, and filled in the middle with rubble. On the summit of the acropolis within the walls are the remains of a detached citadel, 80 yards in length, containing a round tower at the extremity, measuring 18 feet in the interior diameter. In ancient times a temple of Artemis Soteira stood on the summit of the acropolis. On the slope of the mountain lay the gymnasium and the temple of Dionysus Acratophorus; and on the ground below, where the village of upper *Pávlitza* stands, was the agora, adorned with a statue of the pancratiast Arrachion, who lost his life in the Olympic games, and with the sepulchre of the Oresthasians, who perished to restore the Phigaleans to their native city. (Paus. viii. 39. §§ 5, 6, 40. § 1.) Upon a rock, difficult of access, near the union of the Lymax and the Neda, was a temple of Eurynome, supposed to be a surname of Artemis, which was opened only once a year. In the same neighbourhood, and at the distance of 12 stadia from the city, were some warm baths, traces of which, according to the French Commission, are visible at the village of *Tragói*, but the waters have long ceased to flow. (Paus. viii. 41. § 4, seq.)

Phigalia was surrounded by mountains, of which Pausanias mentions two by name, COTILIUM (τὸ Κωτίλιον) and ELAEUM (τὸ Ἐλάϊον), the former to the left of the city, at the distance of 30 stadia, and the latter to the right at the distance of 30 stadia. As Cotilium lies to the NE. of Phigalia, and Pausanias in this description seems to have looked towards the east, Mt. Elaeum should probably be placed on the opposite side of Phigalia, and consequently to the south of the Neda, in which case it would correspond to the lofty mountain of *Kúvela*. Mt. Elaeum contained a cavern sacred to Demeter the Black, situated in a grove of oaks. Of the position of Mt. Cotilium there is no doubt. On it was situated the temple of Apollo Epicurius, which was built in the Peloponnesian War by Ictinus, the architect of the Parthenon at Athens. It was erected by the Phigaleans in consequence of the relief afforded by Apollo during the plague in the Peloponnesian War, whence he received the surname of Epicurius. The temple stood in a place called Bassae, and according to Pausanias excelled all the temples of Peloponnesus, except that of Athena Alea at Tegea, in the beauty of the stone and the accuracy of its masonry. He particularly mentions that the roof was of stone as well as the rest of the building. (Paus. viii. 41. §§ 7, 8.) This temple still remains almost entire, and is next to the Theseium at Athens the best preserved of the temples of Greece. It stands in a glen (whence the name Βᾶσσαι, Dor. for Βῆσση, Βῆσσαι) near the summit of Mt. Cotilium, in the midst of a wilderness of rocks, studded with old knotty oaks. An eye-witness remarks that "there is certainly no remnant of the architectural splendour of Greece more calculated to fascinate the imagination than this temple; whether by its own size and beauty, by the contrast it offers to the wild desolation of the surrounding scenery, or the extent and variety of the prospect from its site." (Mure, *Tour in Greece*, vol. ii. p. 270.) A spring rises about 10 minutes SW. of the temple, and soon afterwards loses itself in the ground, as Pausanias has described. North of the temple was the highest summit of the mountain, which one reaches in 10 minutes' time by a broad road constructed by the Greeks. This summit was called Cotilum (Κώτιλον), whence the whole mountain derived the name of Cotilian; here was a sanctuary of Aphrodite, of which there are still some traces. The grandeur of the ruins of the temple have given to the whole of the surrounding district the name of the Columns (στοὺς στύλους or κολόνναις). The temple is at least two hours and a half from the ruins of the city, and consequently more than the 40 stadia, which Pausanias mentions as the distance from Phigalia to Cotilium; but this distance perhaps applies to the nearest part of the mountain from the city.

In modern times the temple remained long unknown, except to the shepherds of the country. Chandler, in

GROUND PLAN OF THE TEMPLE OF APOLLO AT BASSAE

1765, was the first who gave any account of it: it was subsequently visited and described by Gell, Dodwell, and others; and in 1812 the whole temple was very carefully examined by a body of artists and scholars, who cleared away the ruins of the cella, and thus became acquainted with the exact form of the interior of the building. The results of these labours are given by Stackelberg, *Der Apollotempel zu Bassä in Arkadien*, Rom. 1826. The temple was a peripteral building of the Doric order. The stone of which it is built is a hard yellowish-brown limestone, susceptible of a high polish. It faces nearly north and south, was originally about 125 feet in length and 48 in breadth, and had 15 columns on either side, and 6 on either front. There were also 2 columns in the pronaos and 2 in the posticum; so that the total number in the peristyle was 42, of which 36 are standing. The cella was too narrow to allow of interior rows of columns as in the Parthenon; but on either side of the cella five fluted Ionic semi-columns projected from the walls, which supported the timbers of the hypaethron. The frieze of the cella, representing contests between the Centaurs and the Lapithae, and between Amazons and Greeks, is now in the British Museum. (Leake, *Morea*, vol. i. p. 490, seq., vol. ii. p. 1, seq.; Ross, *Reisen im Peloponnes*, p. 98, seq.; Boblaye, *Récherches, &c.*, p. 165; Curtius, *Peloponnesos*, vol. i. p. 318, seq.)

PHIGAMUS (Φιγαμοῦς or Φυγαμοῦς), a small coast river in Pontus, flowing into the Euxine 160 stadia west of Polemonium. (Arrian, *Peripl. Pont. Eux.* p. 16; Anonym. *Peripl. P. E.* p. 11.) [L. S.]

PHILA, one of the small islands on the south coast of Gallia, which Pliny (iii. 5) enumerates between the Stoechades (*Isles d'Hières*) and Lero and Lerina (*Les Lérins*). Pliny's words are: "Tres Stoechades . . . Ab his Sturium, Phoenice, Phila: Lero et Lerina adversum Antipolim." There seem to be no means of determining which of the islets between the *Isles d' Hières* and *Sainte Marguerite* represent these three small islands of Pliny. [LERINA; LERON.] [G. L.]

PHILA (Φίλα), a frontier fortress of Macedonia towards Magnesia, and distant 5 M. P. from Heracleia, which stood near the mouth of the Peneus, on the left bank. It was occupied by the Romans when their army had penetrated into Pieria by the passes of Olympus from Thessaly. (Liv. xlii. 67, xliv. 2, 3, 7, 8, 34.) Stephanus of Byzantium (*s. v.*) asserts that it was built by Demetrius, son of Antigonus Gonatas, and father of Philip, who named it, after his mother, Phila. [E. B. J.]

PHILADELPHEIA (Φιλαδέλφεια: *Eth.* Φιλαδελφεύς). 1. An important city in the east of Lydia, on the north-western side of Mount Tmolus, and not far from the southern bank of the river Cogamus, at a distance of 28 miles from Sardes. (Plin. v. 30; *It. Ant.* p. 336.) The town was founded by Attalus Philadelphus of Pergamum. (Steph. B. *s. v.*) Strabo (xiii. p. 628, comp. xii. p. 579), who places it on the borders of Catacecaumene, remarks that it frequently suffered from violent shocks of earthquakes; the walls and houses were constantly liable to be demolished, and in his time the place had become nearly deserted. During the great earthquake in the reign of Tiberius it was again destroyed. (Tac. *Ann.* ii. 47.) But in the midst of these calamities Christianity flourished at Philadelpheia at an early period, as is attested by the book of Revelations (iii. 7). The town, which is mentioned also by Ptolemy (v. 2. § 17) and Hierocles (p. 669), gallantly defended itself against the Turks on more than one occasion, until at length it was conquered by Bajazid in A. D. 1390. (G. Pachym. p. 290; Mich. Duc. p. 70; Chalcond. p. 33.) It now bears the name *Allahsher*, but is a mean though considerable town. Many parts of its ancient walls are still standing, and its ruined churches amount to about twenty-four. (Chandler, *Travels*, p. 310, foll.; Richter, *Wallfahrten*, p. 513. foll.)

2. A town in the interior of Cilicia Aspera, on the river Calycadnus, above Aphrodisias. (Ptol. v. 8. § 5; Hierocl. p. 710, who mentions it among the episcopal sees of Isauria.) Beaufort (*Karamania*, p. 223) supposes the site to be represented by the town of *Mout* or *Mood*, which Leake regards as the site once occupied by Claudiupolis (*Asia Minor*, p. 17). [L. S.]

3. A town of Palestine in the district of Peraea, east of Jordan, near the river Jabbok, was the later name of Rabbath-Ammon, sometimes called Rabbah only, the ancient capital of the Ammonites. (*Deut.* iii. 11; *Josh.* xiii. 25.) It was besieged by Joab and taken by David. (2 *Sam.* xi. 1, xii. 26—31; 1 *Chron.* xx. 1.) It recovered its independence at a later period, and we find the prophets denouncing its destruction. (*Jer.* xlix. 3; *Ezek.* xxv. 5.) Subsequently, when this part of Palestine was subject to Aegypt, the city was restored by Ptolemy Philadelphus, who gave it the name of Philadelpheia. (Steph. B. *s. v.*; Euseb. *Onom. s. v.* Ῥάμαθ, Ἀμμάν.) Stephanus says that it was originally called Ammana, afterwards Astarte, and lastly Philadelpheia. It is frequently mentioned under its new name by Josephus (*B. J.* i. 6. § 3, i. 19. § 5, ii. 18. § 1), and also by Ptolemy (v. 17. § 23), Pliny (v. 18. s. 16), Hierocles (p. 722), and upon coins. (Eckhel, vol. iii. p. 351.) The old name, however, did not go out of use, for Polybius speaks of the city under the name of Rabbatamana (Ῥαββατάμανα, v. 71); and the ruins are now called *Amman*, a name which they also bore in the time of Abulfeda. (*Tab. Syr.* p. 91.) Burckhardt has given a description of these ruins, with a plan. The most important are the remains of a large theatre. There are also remains of several temples, some of the columns being three feet and a half in diameter. A river flows through the ruins of the town. (Burckhardt, *Syria*, p. 357.)

PHILAE (Φιλαί, Strab. i. p. 40, xvii. pp. 803, 818, 820; Diod. i. 22; Ptol. iv. 5. § 74; Senec. *Quaest. Nat.* iv. 1; Plin. v. 9. s. 10), was, as the number of the word both in the Greek and Latin denotes, the appellation of two small islands situated in lat. 24° N., just above the cataract of Syene. Groskurd (*Strab.* vol. iii. p. 399) computes the distance between these islands and Syene at about 6¼ miles. Philae proper, although the smaller, is, from its numerous and picturesque ruins, the more interesting of the two. It is not more than 1250 English feet, or rather less than a quarter of a mile, long, and about 400 feet broad. It is composed of Syenite stone: its sides are steep and perhaps escarped by the hand of man, and on their summits was built a lofty wall encompassing the island. For Philae, being accounted one of the burying-places of Osiris, was held in high reverence both by the Aegyptians to the N. and the Aethiopians to the S.: and it was deemed profane for any but priests to dwell therein, and was accordingly sequestered and denominated "the unapproachable" (ἄβατος,

Plut. *Is. et Osir.* p. 359; Diod. i. 22). It was reported too that neither birds flew over it nor fish approached its shores. (Senec. *Quaest. Nat.* iv. 2.) These indeed were the traditions of a remote period; since in the time of the Macedonian kings of Aegypt Philae was so much resorted to, partly by pilgrims to the tomb of Osiris, partly by persons on secular errands, that the priests petitioned Ptolemy Physcon (B. C. 170—117) to prohibit public functionaries at least from coming thither and living at their expense. The obelisk on which this petition was engraved was brought into England by Mr. Bankes, and its hieroglyphics, compared with those of the Rosetta stone, threw great light upon the Aegyptian phonetic alphabet. The islands of Philae were not, however, merely sacerdotal abodes; they were the centres of commerce also between Meroë and Memphis. For the rapids of the cataracts were at most seasons impracticable, and the commodities exchanged between Aegypt and Aethiopia were reciprocally landed and re-embarked at Syene and Philae. The neighbouring granite-quarries attracted hither also a numerous population of miners and stonemasons; and, for the convenience of this traffic, a gallery or road was formed in the rocks along the E. bank of the Nile, portions of which are still extant. Philae is also remarkable for the singular effects of light and shade resulting from its position near the tropic of Cancer. As the sun approaches its northern limit the shadows from the projecting cornices and mouldings of the temples sink lower and lower down the plain surfaces of the walls, until, the sun having reached its highest altitude, the vertical walls are overspread with dark shadows, forming a striking contrast with the fierce light which embathes all surrounding objects. (Ritter, *Erdkunde*, vol. i. p. 680, seq.)

The hieroglyphic name of the smaller island is *Philak*, or boundary. As their southern frontier, the Pharaohs of Aegypt kept there a strong garrison, and, for the same reason, it was a barrack also for Macedonian and Roman soldiers.

The most conspicuous feature of both islands is their architectural wealth. Monuments of very various eras, extending from the Pharaohs to the Caesars, occupy nearly their whole area. The principal structures, however, lie at the S. end of the smaller island. The most ancient, at present discovered, are the remains of a temple of Athor (Aphrodite), built in the reign of Nectanebus. The other ruins are for the most part coeval with the Ptolemaic times, more especially with the reigns of Philadelphus, Epiphanes, and Philometor (B. C. 282—145), with many traces of Roman work as recent as Claudius I. (A. D. 41—54). The chief temple in Philae, dedicated to Ammon-Osiris, was approached from the river through a double colonnade. In front of the propyla were two colossal lions in granite, behind which stood a pair of obelisks, each 44 feet high. The propyla were pyramidal in form and colossal in dimensions. One stood between the dromos and pronaos, another between the pronaos and the portico, while a smaller one led into the sekos or adytum. At each corner of the adytum stood a monolithal shrine, the cage of a sacred hawk. Of these shrines one is now in the Louvre, the other in the Museum at Florence. Right and left of the entrance into the principal court are two small temples or rather chapels, one of which, dedicated to Athor, is covered with sculptures representing the birth of Ptolemy Philometor, under the figure of the god Horus. The story of Osiris is everywhere represented on the walls of this temple, and two of its inner chambers are particularly rich in symbolic imagery. Upon the two great propyla are Greek inscriptions intersected and partially destroyed by Aegyptian figures cut across them. The inscriptions belong to the Macedonian era, and are of earlier date than the sculptures, which were probably inserted during that interval of renascence for the native religion which followed the extinction of the Greek dynasty in Aegypt. (B. C. 30.) The monuments in both islands indeed attest, beyond any others in the Nile-valley, the survival of pure Aegyptian art centuries after the last of the Pharaohs had ceased to reign. Great pains have been taken to mutilate the sculptures of this temple. The work of demolition is attributable, in the first instance, to the zeal of the early Christians, and afterwards to the policy of the Iconoclasts, who curried favour for themselves with the Byzantine court by the destruction of heathen as well as Christian images. The soil of Philae was carefully prepared for the reception of its buildings,—being levelled where it was uneven, and supported by masonry where it was crumbling or insecure. For example, the western wall of the Great Temple, and the corresponding wall of the dromos, are supported by very strong foundations, built below the level of the water, and resting on the granite which in this region forms the bed of the Nile. Here and there steps are hewn out from the wall to facilitate the communication between the temple and the river.

At the S. extremity of the dromos of the Great Temple is a smaller temple, apparently dedicated to Isis; at least the few columns which remain of it are surmounted with the head of that goddess. Its portico consists of twelve columns, four in front and three deep. Their capitals represent various forms and combinations of the palm-branch, the *dhoum*-leaf, and the lotus-flower. These, as well as the sculptures on the columns, the ceilings, and the walls, were painted with the most vivid colours, which, owing to the dryness of the climate, have lost little of their original brilliance.

Philae was a seat of the Christian religion as well as of the ancient Aegyptian faith. Ruins of a Christian church are still visible, and more than one adytum bears traces of having been made to serve at different eras the purposes of a chapel of Osiris and of Christ. For a more particular account of the architectural remains of Philae we must refer the reader to the works of Dénon, Gau, Rosellini, Russegger, and Hamilton (*Aegyptiaca*). The latter has minutely described this island—the Loretto of ancient Aegypt. The Greek inscriptions found there are transcribed and elucidated by Letronne.

A little W. of Philae lies a larger island, anciently called Snem or Senmut, but now by the Arabs *Beghé*. It is very precipitous, and from its most elevated peak affords a fine view of the Nile, from its smooth surface S. of the islands to its plunge over the shelves of rock that form the First Cataract. Philae, *Beghé*, and another lesser island, divide the river into four principal streams, and N. of them it takes a rapid turn to the W. and then to the N., where the cataract begins. *Beghé*, like Philae, was a holy island; its rocks are inscribed with the names and titles of Amunoph III., Rameses the Great, Psammitichus, Apries, and Amasis, together with memorials of the Macedonian and Roman rulers of Aegypt. Its principal ruins consist of the propylon and two

columns of a temple, which was apparently of small dimensions, but of elegant proportions. Near them are the fragments of two colossal granite statues, and also an excellent piece of masonry of much later date, having the aspect of an arch belonging to some Greek church or Saracen mosque. [W. B. D.]

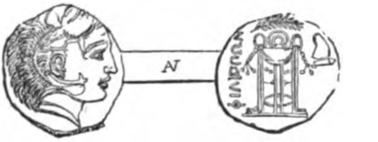
PHILAEA (Φιλαία), a fort on the coast of Cilicia, is mentioned only in the Stadiasmus Maris Magni (§§ 167, 168). [L. S.]

PHILAENI and PHILAENORUM ARAE (Φιλαίνου or Φιλαίνων βωμοί, Scyl. p. 47; Polyb. iii. 39. § 2, x. 40. § 7; Strab. iii. p. 171, xvii. p. 836; Ptol. iv. 3. § 14, iv. 4. § 3; *Stadiasm.* § 84; Pomp. Mela, i. 7. § 6; Plin. v. 4), the E. frontier of Carthage towards Cyrene, in the middle of the Greater Syrtis. About the middle of the fourth century B. C., according to a wild story which may be read in Sallust (*B. J.* 79; comp. Val. Max. v. 6. § 4), these monuments commemorated the patriotic sacrifice of the two Philaeni, Carthaginian envoys. These pillars, which no longer existed in the time of Strabo (p. 171), continued to give a name to the spot from which they had disappeared. The locality is assigned to *Râs Linouf*, a headland a little to the W. of *Múktar*, the modern frontier between *Sórt* and *Barka*. The Peutinger Table has a station of this name 25 M. P. from Anabricis; and, at the same distance from the latter, the Antonine Itinerary has a station BENADAD-ARI, probably a Punic name for Philenian Altars, as they were named by the Greeks of Cyrene. (Beechey, *Expedition to the Coast of Africa*, p. 218; Barth, *Wanderungen*, pp. 344, 366, 371.) [E. B. J.]

PHILAIDAE. [ATTICA, p. 332, b.]

PHILANO'RIUM. [HERMIONE, p. 1058, a.]

PHILEAE (Mela, ii. 2. § 5), or PHILIAS (*Tab. Peut.*; Geog. Rav. iv. 6, v. 12; Φιλέας, Scymn. v. 722; Steph. B. 698, who, however, has also the forms Φιλέα and Φινέα; Φιλία, Anon. B. *Per. P. Eux.*, who also says that it was called Φρυγία, with which name it is likewise found in Arrian, *Per. P. Eux.* p. 25; comp. Zosim. i. 34), a town on the coast of Thrace, built by the Byzantines, on a promontory of the same name. It still exists under the slightly altered appellation of *Fillea* or *Filine*. [T. H. D.]



PHILEROS. [MYGDONIA.]

PHILIA (Φιλία ἄκρα, Ptol. iii. 11. § 4), a promontory on the coast of Thrace, 310 stadia SE. of Salmydessus (*Kara Burnu?*), with a town of the same name. [T. H. D.]

PHILIPPI (Φίλιπποι: *Eth.* Φιλιππεύς, Φιλιππήσιος), a city of Macedonia, which took its name from its founder, Philip, the father of Alexander. Originally, it had been called CRENIDES (Κρηνίδες, Strab. vii. p. 331; Appian, *B. C.* iv. 105, 107; Steph. B. *s. v.* Φίλιπποι), or the "Place of Fountains," from the numerous streams in which the Angites takes its source. Near Crenides were the principal mines of gold in a hill called according to Appian (*l. c.*) DIONYSI COLLIS (λόφος Διονύσου), probably the same mountain as that where the Satrae possessed an oracle of Dionysus interpreted by the Bessi. (Herod. vii. 111.) Crenides does not appear to have belonged to the Thasians in early times, although it was under their dominion in the 105th Olympiad (B. C. 360). When Philip of Macedon got possession of the mines, he worked them with so much success, that they yielded 1000 talents a year, although previously they had not been very productive. (Diodor. xvi. 4—8.) The old city was enlarged by Philip, after the capture of Amphipolis, Pydna, and Potidaea, and fortified to protect his frontier against the Thracian mountaineers. On the plain of Philippi, between Haemus and Pangaeus, the last battle was lost by the republicans of Rome. Appian (*l. c.*) has given a clear description of Philippi, and the position on which Cassius and Brutus encamped. The town was situated on a steep hill, bordered to the N. by the forests through which the Cassian army advanced,—to the S. by a marsh, beyond which was the sea, to the E. by the passes of the Sapaei and Corpili, and to the W. by the great plains of Myrcinus, Drabescus, and the Strymon, which were 350 stadia in length. Not far from Philippi, was the hill of Dionysus, containing the gold mines called Asyla; and 18 stadia from the town, were two other heights, 8 stadia asunder; on the one to the N. Brutus pitched his camp, and Cassius on that to the S. Brutus was protected on his right by rocky hills, and the left of Cassius by a marsh. The river Gangas or Gangites flowed along the front, and the sea was in the rear. The camps of the two leaders, although separate, were enclosed within a common entrenchment, and midway between them was the pass, which led like a gate from Europe to Asia. The galleys were at Neapolis, 70 stadia distant, and the commissariat in Thasos, distant 100 stadia. Dion Cassius (xlvii. 35) adds, that Philippi was near Pangaeus and Symbolum, and that Symbolum, which was between Philippi and Neapolis, was so called because it connected Pangaeus with another mountain stretching inland; which indentifies it with the ridge which stretches from *Právista* to *Kavála*, separating the bay of *Kavála* from the plain of Philippi. The Pylae, therefore, could be no other than the pass over that mountain behind *Kavála*. M. Antonius took up his position on the right, opposite to that of Cassius, at a distance of 8 stadia from the enemy. Octavius Caesar was opposed to Brutus on the "left hand of the even field." Here, in the autumn of B. C. 42, in the first engagement, Brutus was successful against Octavius, while Antonius had the advantage over Cassius. Brutus, incompetent to maintain the discipline of his troops, was forced to fight again; and in an engagement which took place on the same ground, twenty days afterwards, the Republic perished. Regarding the battle a curious mistake was repeated by the Roman writers (Manil. i. 908; Ovid, *Met.* xv. 824; Flor. iv. 42; Lucan, i. 680, vii. 854, ix. 271; Juv. viii. 242), who represented it as fought on the same ground as Pharsalia,—a mistake which may have arisen from the ambiguity in the lines of Virgil (*Georg.* i. 490), and favoured by the fact of the double engagement at Philippi. (Merivale, *Hist. of Roman Empire*, vol. iii. p. 214.) Augustus afterwards presented it with the privileges of "a colonia," with the name "Col. Jul. Aug. Philip." (Orelli, *Inscr.* 512, 3658, 3746, 4064; and on coins; Rasche, vol. iii. pt. 2. p. 1120), and conferred upon it the "Jus Italicum." (Dion Cass. li. 4.) It was here, in his second missionary journey, that St. Paul, accompanied by Silas, came into contact with the itinerant traders in popular superstitions (*Acts*, xvi. 12—40); and the city was again visited by the Apostle on his departure from Greece. (*Acts*, xx. 6.) The Gospel obtained a home in Europe here, for the first time; and in the autumn of A. D. 62, its great teacher, from his prison, under the walls of Nero's palace, sent a letter of grateful acknowledgment to his Macedonian converts. Philippi was

on the Egnatian road, 33 M. P. from Amphipolis, and 21 M. P. from Acontisma. (*Itin. Anton.*; *Itin. Hierosol.*) The Theodosian Table presents two roads from Philippi to Heracleia Sintica. One of the roads passed round the N. side of the lake Cercinitis, measuring 55 M. P., the other took the S. side of the lake, and measured 52 M. P. When Macedonia was divided into two provinces by Theodosius the Younger, Philippi became the ecclesiastical head of Macedonia Prima (Neale, *Hist. of East. Church*, vol. i. p. 92), and is mentioned in the Handbook of Hierocles.

The site, where there are considerable remains of antiquity, is still known to the Greeks by its ancient name; by the Turks the place is called *Felibedjik*. For coins of Philippi, see Eckhel, vol. ii. p. 75. (Leake, *Northern Greece*, vol. iii. pp. 215—223.) [E.B.J.]

COIN OF PHILIPPI.

PHILIPPI PROM. (Φιλίππου ἄκρα, *Stadiasm.* § 85), a headland on the coast of the Great Syrtis, identical with the HIPPI PROM. of Ptolemy (iv. 3. § 14), and with the remarkable projection of high cliff into the sea, on which are traces of a strong fortress, at *Râs Bergawâd*. Beechey (*Expedition to the N. Coast of Africa*, p. 188) identifies this cliff, which he calls *Bengerwâd*, with Euphrantas; but this is a mistake, as is shown by Barth (*Wanderungen*, p. 367), who refers the station AD TURREM (*Peut. Tab.*) to this headland. [E. B. J.]

PHILIPPO'POLIS. 1. (Φιλιππόπολις, Ptol. iii. 11. § 12; Polyb. v. 100; Steph. B. *s. v.*), a town of Thrace, founded by Philip of Macedon, on the site of a previously existing town, called Eumolpias or Poneropolis. (Amm. Marc. xxvi. 10. § 4; Plin. iv. 11. s. 18.) From its situation on a hill with three peaks or summits, it was also called Trimontium. (Plin. *l. c.*; Ptol. *l. c.*) It lay on the SE. side of the Hebrus. The Thracians, however, regained possession of it (Polyb. *l. c.*; Liv. xxxix. 53), and it remained in their hands till they were subdued by the Romans. Its size may be inferred from the fact of the Goths having slaughtered 100,000 persons in it (Amm. Marc. xxxi. 5. § 17), though doubtless many persons from the environs had taken refuge there. The assumption that it likewise bore the name of Hadrianopolis, rests only on an interpolation in Ptolemy. It is still called *Philippopoli*, and continues to be one of the most considerable towns of Thrace. (Tac. *Ann.* iii. 38; *Itin. Ant.* p. 136; Hierocl. p. 635.) [T.H.D.]

2. A city of Arabia, near Bostra, founded by the Roman emperor Philippus, who reigned A. D. 244—249, and who was a native of Bostra. (Aurel. Vict. *de Caes.* 28; Cedrenus, p. 257, ed. Paris., vol. i. p. 451, ed. Bonn; Zonar. xii. 19.) Some writers suppose that Philippopolis was only a later name of Bostra, and it must be admitted that the words of Cedrenus and Zonaras are ambiguous; but they are mentioned as two different places in the Councils. (Labbei, *Concil.* vol. viii. pp. 644, 675; Wesseling, *ad Hierocl.* p. 722.)

PHILISTI'NI. [PALAESTINA.]

PHILOBOEO'TUS (Φιλοβοιωτός), a fertile woody hill in the plain of Elateia in Phocis, at the foot of which there was water. (Plut. *Sull.* 16.) This description, according to Leake, agrees with the remarkable insulated conical height between *Bissikéni* and the Cephissus. (*Northern Greece*, vol. ii. p. 194.)

PHILOCALEIA (Φιλοκάλεια), a town on the coast of Pontus Cappadocius, 90 stadia to the east of Argyria, and 100 to the west of Coralla. (Arrian, *Peripl. Pont. Eux.* p. 17; Anonym. *Peripl. P. E.* p. 13; Plin. vi. 4.) Cramer (*Asia Minor*, i. p. 283) is inclined to identify it with the modern *Helehou*, about half-way between *Keresoun* and *Trebizond*, while Hamilton (*Researches*, i. p. 254) seeks its site near the promontory of *Kara Bouroun*, where a large river falls into the sea, which is more in accordance with Pliny's words. [L. S.]

PHILOME'LIUM, PHILOME'LUM (Φιλομήλιον: *Eth.* Φιλομηλεύς, Philomeliensis), a town in the south-eastern part of Phrygia, which perhaps derived its name from the number of nightingales found in the district. It was situated in a plain not far from the borders of Lycaonia, on the great road from Synnada to Iconium. (Cic. *ad Fam.* iii. 8, xv. 4; Strab. xiv. p. 663, comp. with xii. p. 577; Ptol. v. 2. § 25; Steph. B. *s. v.*) Philomelium belonged to the conventus of Synnada (Plin. v. 25), and is mentioned in later times as belonging to Pisidia (Hierocl. p. 672; Ptol. *l. c.*), the Pisidians in their pronunciation changing its name into Philomede or Philomene. (Procop. *Hist. Arc.* 18.) The town is often alluded to by the Byzantine historians in the wars of the Greek emperors with the sultans of Iconium. (Anna Comn. p. 473; Procop. *l. c.*; Nicet. *Ann.* p. 264.) Col. Leake (*Asia Minor*, p. 59) believes that the place was situated near the modern *Ilgun*; but it is more probable that we have to look for its site at *Akshehr*, where ruins and inscriptions attest the existence of an ancient town. (Hamilton, *Researches*, i. p. 472, ii. p. 184; Arundell, *Discoveries*, i. p. 282, foll.) [L. S.]

PHILO'TERA. 1. (Φιλωτέρα, Strab. xvi. p. 769; Steph. B. *s. v.*; Plin. vi. 29. s. 33; Φιλωτέρας λιμήν, Ptol. iv. 5. § 14; Φιλωτερίς, Apollod. *ap. Steph. B. s. v.*; *Eth.* Φιλωτερίτης), a town in Upper Aegypt in the country of the Troglodytae, on the Arabian Gulf, near Myos-Hormus. It was named after a sister of Ptolemy Philadelphus, and was founded by Satyrus, who was sent by Ptolemy to explore the country of the Troglodytae. (Strab. *l. c.*; see Meineke, *ad Steph. B. l. c.*)

2. (*Eth.* Φιλωτέριος), a city in Coele-Syria on the lake of Tiberias. (Steph. B. *s. v.*; Polyb. v. 70.) Stephanus says that in consequence of the Ethnic Φιλωτέριος some called the city Φιλωτερία; and in Polybius it is written Φιλοτερία.

PHILOTE'RIA. [PHILOTERA, No. 2.]

PHILYRE'IS (Φιλυρηΐς), an island off the coast of Pontus, in the Euxine. It must have been situated near Cape Zephyrium, opposite the district inhabited by the Philyres, from which, in all probability, it derived its name. (Apollon. Rhod. ii. 1231; comp. Amm. Marc. xxii. 8; Dionys. Per. 766; Steph. B. *s. v.* Φίλυρες.) Hamilton (*Researches*, i. p. 261) identifies it with the small rocky island 2 miles west of *Cape Zefreh*, and between it and the island of *Kerasonde Ada*. [L. S.]

PHINNI (Φίννοι). [FENNI.]

PHINO'POLIS (Φινόπολις, Ptol. iii. 11. § 4; Strab. vii. p. 319), a maritime town of Thrace, not far from the junction of the Bosporus with the

Euxine, and close to the town of Phileae. It has been variously identified with *Inimakale*, *Mauromolo*, and *Derkus*. (Mela, ii. 2; Plin. iv. 11. s. 18, v. 32. s. 43.) [T. H. D.]

PHI'NTIAS (Φιντίας: *Eth.* Phintiensis: *Alicata*), a city on the S. coast of Sicily, situated at the mouth of the river Himera, about midway between Agrigentum and Gela. It was not an ancient city, but was founded about 280 B. C. by Phintias, tyrant of Agrigentum, who bestowed on it his own name, and laid it out on a great scale, with its walls, temples, and agora. He then peopled it with the inhabitants of Gela, which he utterly destroyed, compelling the whole population to migrate to his newly founded city. (Diod. xxii. 2, p. 495.) Phintias, however, never rose to a degree of importance at all to be compared to that of Gela: it is mentioned in the First Punic War (B. C. 249) as affording shelter to a Roman fleet, which was, however, attacked in the roadstead by that of the Carthaginians, and many of the ships sunk. (Diod. xxiv. 1, p. 508.) Cicero also alludes to it as a seaport, carrying on a considerable export trade in corn. (Cic. *Verr.* iii. 83.) But in Strabo's time it seems to have fallen into the same state of decay with the other cities on the S. coast of Sicily, as he does not mention it among the few exceptions. (Strab. vi. p. 272.) Pliny, indeed, notices the Phintienses (or Phthinthienses as the name is written in some MSS.) among the stipendiary towns of Sicily; and its name is found also in Ptolemy (who writes it Φθινθία); but it is strange that both these writers reckon it among the inland towns of Sicily, though its maritime position is clearly attested both by Diodorus and Cicero. The Antonine Itinerary also gives a place called "Plintis," doubtless a corruption of Phintias, which it places on the road from Agrigentum along the coast towards Syracuse, at the distance of 23 miles from the former city. (*Itin. Ant.* p. 95.) This distance agrees tolerably well with that from *Girgenti* to *Alicata*, though somewhat below the truth; and it seems probable that the latter city, which is a place of some trade, though its harbour is a mere roadstead, occupies the site of the ancient Phintias. There is indeed no doubt, from existing remains on the hill immediately above *Alicata*, that the site was occupied in ancient times; and, though these have been regarded by local antiquarians as the ruins of Gela, there is little doubt of the correctness of the opinion advanced by Cluverius, that that city is to be placed on the site of *Terranova*, and the vestiges which remain at *Alicata* are those of Phintias. (Cluver. *Sicil.* pp. 200, 214. See also the article GELA.) The remains themselves are of little interest. [E. H. B.]

PHINTON or PHINTONIS INSULA (Φίντωνος νῆσος, Ptol.), a small island in the strait between Sardinia and Corsica, mentioned both by Pliny and Ptolemy. It is probably the one now called the *Isola della Maddalena*, the most considerable of the group so situated. (Plin. iii. 6. s. 13; Ptol. iii. 3. § 8.) [E. H. B.]

PHLA (Φλά), an island in the lake Tritonis in the interior of Libya (Herod. iv. 178), which Stephanus B., copying from Herodotus, calls an island in Aegypt, confounding it with the island of Philae in the Nile.

PHLEGRA. [PALLENE.]

PHLEGRAEI CAMPI. [CAMPANIA, p. 491, a.]

PHLIUS (Φλιοῦς: *Eth.* Φλιάσιος, the territory Φλιασία), an independent city in the north-eastern part of Peloponnesus, whose territory was bounded on the N. by Sicyonia, on the W. by Arcadia, on the E. by Cleonae, and on the S. by Argolis. This territory is a small valley about 900 feet above the level of the sea, surrounded by mountains, from which streams flow down on every side, joining the river Asopus in the middle of the plain. The mountain in the southern part of the plain, from which the principal source of the Asopus springs, was called Carneates (Καρνεάτης) in antiquity, now *Polýfengo*. (Strab. viii. p. 382.) The territory of Phlius was celebrated in antiquity for its wine. (Athen. i. p. 27, d.) According to Strabo (viii. p. 382), the ancient capital of the country was Araethyrea (Ἀραιθυρέα) on Mt. Celosse, which city is mentioned by Homer (*Il.* ii. 571); but the inhabitants subsequently deserted it and built Phlius at the distance of 30 stadia. Pausanias (ii. 12. §§ 4, 5), however, does not speak of any migration, but says that the ancient capital was named Arantia (Ἀραντία), from its founder Aras, an autochthon, that it was afterwards called Araethyrea from a daughter of Aras, and that it finally received the name of Phlius, from Phlias, a son of Ceisus and grandson of Temenus. The name of Arantia was retained in the time of Pausanias in the hill Arantinus, on which the city stood. Hence the statement of grammarians that both Arantia and Araethyrea were ancient names of Phlius. (Steph. B. *s. vv.* Φλιοῦς, Ἀραντία; Schol. *ad Apoll. Rhod.* i. 115.) According to Stephanus B. (*s. v.* Φλιοῦς) Phlius derived its name from Dionysus and Chthonophyle. Phlius was subsequently conquered by Dorians under Rhegnidas, who came from Sicyon. Some of the inhabitants migrated to Samos, others to Clazomenae; among the settlers at Samos was Hippasus, from whom Pythagoras derived his descent. (Paus. ii. 13. § 1, seq.) Like most of the other Doric states, Phlius was governed by an aristocracy, though it was for a time subject to a tyrant Leon, a contemporary of Pythagoras. (Diog. Laërt. i. 12, viii. 8; Cic. *Tusc.* v. 3.) Phlius sent 200 soldiers to Thermopylae (Herod. vii. 202), and 1000 to Plataea (ix. 28). During the whole of the Peloponnesian War it remained faithful to Sparta and hostile to Argos. (Thuc. v. 57, seq., vi. 105.) But before B. C. 393 a change seems to have taken place in the government, for in that year we find some of the citizens in exile who professed to be the friends of the Lacedaemonians. The Phliasians, however, still continued faithful to Sparta, and received a severe defeat from Iphicrates in the year already mentioned. So much were they weakened by this blow that they were obliged to admit a Lacedaemonian garrison within their walls, which they had been unwilling to do before, lest their allies should restore the exiles. But the Lacedaemonians did not betray the confidence placed in them, and quitted the city without making any change in the government. (Xen. *Hell.* iv. 4. § 15, seq.) Ten years afterwards (B. C. 383) the exiles induced the Spartan government to espouse their cause; and with the fate of Mantineia before their eyes, the Phliasians thought it more prudent to comply with the request of the Spartans, and received the exiles. (Xen. *Hell.* v. 2. § 8, seq.) But disputes arising between the returned exiles and those who were in possession of the government, the former again appealed to Sparta, and Agesilaus was sent with an army in B. C. 380 to reduce the city. At this period Phlius contained 5000 citizens. Agesilaus laid siege to the city, which held out for a year and eight months.

It was at length obliged to surrender through failure of provisions in B. C. 379; and Agesilaus appointed a council of 100 members (half from the exiles and half from the besieged), with powers of life and death over the citizens, and authorised to frame a new constitution. (Xen. *Hell.* v. 3. § 10, seq.; Plut. *Ages.* 24; Diod. xv. 20.) From this time the Phliasians remained faithful to Sparta throughout the whole of the Theban War, though they had to suffer much from the devastation of their territory by their hostile neighbours. The Argives occupied and fortified Tricaranum above Phlius, and the Sicyonians Thyamia on the Sicyonian frontier. (Xen. *Hell.* vii. 2. § 1.) In B. C. 368 the city was nearly taken by the exiles, who no doubt belonged to the democratical party, and had been driven into exile after the capture of the city by Agesilaus. In this year a body of Arcadians and Eleians, who were marching through Nemea to join Epaminondas at the Isthmus, were persuaded by the Phliasian exiles to assist them in capturing the city. During the night the exiles stole to the foot of the Acropolis; and in the morning when the scouts stationed by the citizens on the hill Tricaranum announced that the enemy were in sight, the exiles seized the opportunity to scale the Acropolis, of which they obtained possession. They were, however, repulsed in their attempt to force their way into the town, and were eventually obliged to abandon the citadel also. The Arcadians and Argives were at the same time repulsed from the walls. (Xen. *Hell.* vii. 2. §§ 5—9.) In the following year Phlius was exposed to a still more formidable attack from the Theban commander at Sicyon, assisted by Euphron, tyrant of that city. The main body of the army descended from Tricaranum to the Heraeum which stood at the foot of the mountain, in order to ravage the Phliasian plain. At the same time a detachment of Sicyonians and Pellenians were posted NE. of the Acropolis before the Corinthian gate, to hinder the Phliasians from attacking them in their rear. But the main body of the troops was repulsed; and being unable to join the detachment of Sicyonians and Pallenians in consequence of a ravine (φαράγξ), the Phliasians attacked and defeated them with loss. (Xen. *Hell.* vii. 2. § 11, seq.)

After the death of Alexander, Phlius, like many of the other Peloponnesian cities, became subject to tyrants; but upon the organisation of the Achaean League by Aratus, Cleonymus, who was then tyrant of Phlius, voluntarily resigned his power, and the city joined the league. (Polyb. ii. 44.)

Phlius is celebrated in the history of literature as the birthplace of Pratinas, the inventor of the Satyric drama, and who contended with Aeschylus for the prize at Athens. In the agora of Phlius was the tomb of Aristias, the son of Pratinas. (Paus. ii. 13. § 6.)

Pausanias says that on the Acropolis of Phlius was a temple of Hebe or Ganymeda, in a cypress grove, which enjoyed the right of asylum. (Comp. Strab. viii. p. 382.) There was also a temple of Demeter on the Acropolis. On descending from the citadel there stood on the right a temple of Asclepius, and below it the theatre and another temple of Demeter. In the agora there were also other public buildings. (Paus. ii. 13. § 3, seq.) The principal place at present in the Phliasia is the village of *St. George*, situated at the southern foot of Tricaranum, a mountain with three summits, which bounds the plain to the NE. The ruins of Phlius are situated three quarters of
on one of the spurs of Tricar

4. The way to Nemea.

PHLYA. [ATTICA, p. 332,

PHLYGO'NIUM (Φλυγόνιον), a city of Phocis, of unknown site, destroyed at the end of the Phocian War. (Paus. x. 3. § 2; Steph. B. *s. v.*) Pliny calls it Phlygone, and erroneously represents it as a city of Boeotia (iv. 7. s. 12).

PHOCAEA (Φώκαια: *Eth.* Φωκαιεύς or Φωκαεύς), the most northern of the Ionian cities in Asia Minor, was situated on a peninsula, between the Sinus Cymaeus and the Sinus Hermaeus, and at a distance of 200 stadia from Smyrna. (Strab. xiv. p. 632; Plin. v. 31; Pomp. Mela, i. 17.) It was said to have been founded by emigrants from Phocis, under the guidance of two Athenian chiefs, Philogenes and Damon. (Strab. *l. c.* p. 633; Paus. vii. 3. § 5.) The first settlers did not conquer the territory, but received it as a gift from the Cumaeans. The town, however, did not become a member of the Ionian confederacy until it placed princes of the line of Codrus at the head of the government. It had two excellent harbours, Naustathmus and Lampter, and before the entrance into them was situated the little island of Baccheion, which was adorned with temples and splendid buildings (Liv. xxxviii. 22); and owing to this favourable position, and the enterprising spirit of its inhabitants, the town soon rose to great eminence among the maritime cities of the ancient world. Herodotus (i. 163, &c.) states that the Phocaeans were the first Greeks who undertook distant voyages, and made themselves acquainted with the coasts of the Adriatic, and the Tyrrhenian and Iberian seas; and that they were the first to visit Tartessus. Arganthonius, king of the Tartessians, became so attached to them as to try to prevail upon them to quit Ionia and settle in his own dominions; but on their declining this, he gave them a large sum of money to fortify their own city against the Persians. The Phocaeans accordingly surrounded their city by a wall of several stadia in circumference, and of a very solid construction. In the war of Cyrus, Phocaea was one of the first towns that was besieged by the army of Cyrus, under the command of Harpagus. When called upon to surrender, the Phocaeans, conscious of being unable to resist the enemy much longer, asked and obtained a truce of one day, pretending that they would consider his proposal. But in the interval they embarked with their wives and children and their most valuable effects, and sailed to Chios. There they endeavoured by purchase to obtain possession of the group of islands called Oenussae, and belonging to the Chians; but their request being refused, they resolved to sail to Corsica, where twenty years before these occurrences they had planted the colony of Alalia. Before setting out they landed at Phocaea and put the Persian garrison to the sword. They then bound themselves by a solemn oath to abandon their native country; nevertheless, however, one half of their number, unable to overcome their feelings, remained behind. The rest proceeded to Corsica, where they were kindly received by their colonists. Soon they became formidable to the neighbouring nations by their piracy and depredations, so that the Tyrrhenians and Carthaginians united to destroy their power. The Phocaeans succeeded indeed in defeating their enemies, but their loss was so great that they despaired of being able to continue the contest, and proceeded to Rhegium, in the south of Italy. Not long after their arrival there, they were induced to settle at Elaea or Velia, in Lucania, which, in the course of time, became a flourishing town Among the numerous colonies of the Phocaeans the most important was MASSILIA or *Marseilles*, in the south of France, and the most western MAENACA, in Hispania Baetica. After the emigration of half the population, Phocaea continued to exist under the Persian dominion; but was greatly reduced in its commerce and prosperity, as we may infer from the fact that it furnished only three ships to the fleet of the revolted Ionians at the battle of Lade; but their commander was nevertheless the ablest man among the Ionians. (Herod. vi. 11—17.) After these events Phocaea is little mentioned (Thucyd. i. 13, viii. 31; Hom. *Hymn.* i. 35; Scylax, p. 37); but some centuries later, in the war of the Romans against Antiochus, when Phocaea was besieged by a Roman fleet, Livy (xxxvii. 31) describes the place as follows: — "The town is situated in the inmost recess of a bay; its shape is oblong, and its walls enclose a space of 2500 paces; they afterwards unite so as to form a narrower wedge: this they themselves call Lampter, and it is about 1200 paces in breadth. A tongue of land running out into the sea a distance of 1000 paces, divides the bay nearly into two equal parts, and forms on each side of the narrow isthmus a very safe port. The one towards the south was called Naustathmus, from its being able to contain a great number of ships, the other was situated close to the Lampter." On that occasion the town was taken by the Romans, after a desperate resistance, and given up to plunder by the praetor Aemilius, though the inhabitants had voluntarily opened their gates. The town with its territory, however, was restored to the inhabitants by Aemilius. (Liv. *l. c.* 32; Polyb. xxii. 27, comp. v. 77, xxi. 4; Liv. xxxviii. 39.) At a still later period the Phocaeans offended the Romans by supporting the cause of Aristonicus, the claimant of the throne of Pergamum; and they would have been severely punished had not the inhabitants of Massilia interceded in their behalf. (Justin, xxxvii. 1, xliii. 3; Strab. p. 646.) The existence of Phocaea can be traced throughout the imperial period from coins, which extend down to the time of the Philips, and even through the period of the Lower Empire. (Hierocl. p. 661.) From Michael Ducas (*Ann.* p. 89) we learn that a new town was built not far from the ancient city by some Genoese, in A. D. 1421. This latter, situated on the isthmus mentioned by Livy, not far from the ruins of the ancient city, is the place now called *Foggia Nova:* the ruins bear the name of *Palaeo Foggia.* (Chandler, *Travels*, p. 96; Arundell, *Seven Churches*, p. 294; Hamilton, *Researches*, ii. p. 4; Eckhel, *Doctr. Num.* ii. p. 53, &c.; Rasche, *Lex. Rei Num.* iii. 2, p. 1225, &c.; Sestini, p. 83; Thisquen, *Phocaica*, Bonn, 1842, 8vo.)

Another town of the same name in the peninsula of Mount Mycale, in Caria, is mentioned by Stephanus B. (*s. v.*). [L. S.]

COIN OF PHOCAEA.

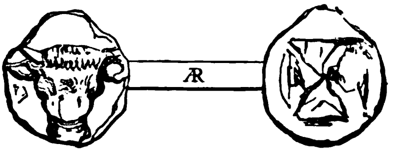
PHOCEAE. [LEONTINI, p. 159, b.]

PHO'CICUM. [PHOCIS.]

PHOCIS (ἡ Φωκίς: *Eth.* Φωκεύς, Phocensis), a small country in central Greece, bounded on the N. by Doris, on the NE. and E. by the Locri Epicnemidii and Opuntii, on the SE. by Boeotia, on the W. by the

Ozolian Locrians, and on the S. by the Corinthian gulf. The Phocians at one period of their history possessed a sea-port, Daphnus, on the Euboean sea, intervening between the Locri Epicnemidii and Opuntii (Strab. x. pp. 424, 425.) Phocis is a mountainous country. The greater part of it is occupied by the lofty and rugged range of Parnassus, the lower portion of which, named Cirphis, descends to the Corinthian gulf between Cirrha and Anticyra: below Cirphis was the fertile valley of Crissa, extending to the Corinthian gulf. On the NE. and E. were the Locrian mountains, lofty and difficult of access on the side of the Epicnemidii, but less precipitous on the side of the Opuntii. [LOCRIS.] Between Mount Parnassus and the Locrian mountains flowed the river Cephissus, which empties itself into the lake Copais in Boeotia. [BOEOTIA, p. 410, seq.] In the valley of the Cephissus are some narrow but fertile plains. The only other rivers in Phocis, besides the Cephissus and its tributaries, are the Pleistus, flowing by Delphi [DELPHI], and the Heracleius, flowing into the Corinthian gulf near Bulis. [BULIS.]

Phocis is said to have been originally inhabited by several of those tribes who formed the population of Greece before the appearance of the Hellenes. Among the earliest inhabitants we find mention of Leleges (Dicaearch. p. 5), Thracians (Strab. ix. p. 401; Thuc. ii. 29; comp. Paus. i. 41. § 8), and Hyantes. (Strab. *l. c.*) The aboriginal inhabitants were conquered by the Phlegyae from Orchomenus. (Paus. viii. 4. § 4, x. 4. § 1.) The country around Tithorea and Delphi is said to have been first called Phocis from Phocus, a son of Ornytion, and grandson of Sisyphus of Corinth; and the name is said to have been afterwards extended to the whole country from Phocus, a son of Aeacus, who arrived there not long afterwards. (Paus. ii. 29. § 3, x. 1. § 1.) This statement would seem to show that the Phocians were believed to be a mixed Aeolic and Achaean race, as Sisyphus was one of the Aeolic heroes, and Aeacus one of the Achaean. In the Trojan War the inhabitants appear under the name of Phocians, and were led against Troy by Schedius and Epistrophus, the sons of Iphitus. (Hom. *Il.* ii. 517.)



Phocis owes its chief importance in history to the celebrated oracle at Delphi, which originally belonged to the Phocians. But after the Dorians had obtained possession of the temple, they disowned their connection with the Phocians; and in historical times a violent antipathy existed between the Phocians and Delphians. [DELPHI, p. 762.]

The Phocians proper dwelt chiefly in small towns situated upon either side of the Cephissus. They formed an ancient confederation, which assembled in a building named Phocicum, near Daulis. (Paus. x. 5. § 1.) They maintained their independence against the Thessalians, who made several attempts to subdue them before the Persian War, and upon one occasion they inflicted a severe loss upon the Thessalians near Hyampolis. (Herod. viii. 27, seq.; Paus. x. 1.) When Xerxes invaded Greece, the Thessalians were able to wreak their vengeance upon their ancient enemies. They conducted the Persian army into Phocis, and twelve of the Phocian cities were destroyed by the invaders. The inhabitants had previously escaped to the summits of Parnassus or across the mountains into the territory of the Locri Ozolae. (Herod. viii. 32, seq.) Some of the Phocians were subsequently compelled to serve in the army of Mardonius, but those who had taken refuge on Mt. Parnassus sallied from their fastnesses and annoyed the Persian army. (Herod. ix. 17, 31; Paus. x. 1. § 11.)

It has been already remarked that the oracle at Delphi originally belonged to the Phocians. The latter, though dispossessed by the Delphians, had never relinquished their claims to it. In B. C. 450 the oracle was again in their possession; the Lacedaemonians sent an army to deprive them of it and restore it to the Delphians; but upon the retreat of their forces, the Athenians marched into Phocis, and handed over the temple to the Phocians. (Thuc. i. 112.) In the Peloponnesian War the Phocians were zealous allies of the Athenians. (Comp. Thuc. iii. 95.) In the treaty of Nicias (B. C. 421), however, it was expressly stipulated that the Delphians should be independent of the Phocians (Thuc. v. 18); and from this time the temple continued in the undisputed possession of the Delphians till the Sacred War. After the battle of Leuctra (B. C. 371), the Phocians became subject to the Thebans. (Xen. *Hell.* vi. 5. § 23.) After the death of Epaminondas they deserted the Theban alliance; and the Thebans, in revenge, induced the Amphictyonic Council to sentence the Phocians to pay a heavy fine on the pretext of their having cultivated the Cirrhaean plain, B. C. 357. Upon their refusal to pay this fine, the Amphictyonic Council consecrated the Phocian territory to Apollo, as Cirrha had been treated two centuries before. Thereupon the Phocians prepared for resistance, and were persuaded by Philomelus, one of their chief citizens, to seize the temple at Delphi, and appropriate its treasures to their own defence. Hence arose the celebrated Sacred or Phocian War, which is narrated in all histories of Greece. When the war was at length brought to a conclusion by the aid of Philip, the Amphictyonic Council wreaked its vengeance upon the wretched Phocians. It was decreed that all the towns of Phocis, twenty-two in number, with the exception of Abae, should be destroyed, and the inhabitants scattered into villages, containing not more than fifty houses each; and that they should replace by yearly instalments of fifty talents the treasures they had taken from the temple. The two votes, which they had had in the Amphictyonic Council, were taken away from them and given to Philip. (Diod. xvi. 60; Paus. x. 3; Dem. *de Fals. Leg.* p. 385.) The Phocians subsequently rebuilt several of their cities with the assistance of the Athenians and their old enemies the Thebans, who had joined the Athenians in their opposition to Philip. The Phocians fought on the side of Grecian independence at the battle of Chaeroneia and in the Lamiac war; and at a later period they resisted the Gauls, when they attempted to plunder the temple at Delphi. (Paus. x. 3. § 3.)

The chief town in Phocis, excepting DELPHI, was ELATEIA, situated upon the left bank of the Cephissus, on the highroad from Locris to Boeotia, in the natural march of an army from Thermopylae into central Greece Next in importance was ABAE, also to the left of the Cephissus, upon the Boeotian frontier, celebrated for its ancient oracle of Apollo. The other towns of Phocis may be enumerated in the following order. Left of the Cephissus from N. to S. DRYMAEA, EROCHUS, TITHRONIUM, TRITAEA, HYAMPOLIS. Right of the Cephissus, and between this river and Mount Parnassus, LILAEA, CHARADRA, AMPHICAEA, LEDON, NEON, which was supplanted by TITHOREA [see NEON], PARAPOTAMII.

Between Parnassus and the Boeotian frontier, DAULIS, PANOPEUS, TRACHIS. On Mount Parnassus, LYCOREIA, DELPHI, CRISSA, ANEMOREIA, CYPARISSUS. West of Parnassus, and in the neighbourhood of the Corinthian gulf from N. to S., CIRRHA, the port-town of Crissa and Delphi, CIRPHIS, MEDEON, ECHEDAMEIA, ANTICYRA, AMBRYSUS, MARATHUS, STIRIS, PHLYGONIUM, BULIS with its port MYCHUS. (Dodwell, *Classical Tour*, vol. i. p. 155, seq.; Leake, *Northern Greece*, vol. ii. p. 69, seq.)

COIN OF PHOCIS.

PHOCU'SAE, PHUCUSSAE (Φωκοῦσαι, Ptol. iv. 5. § 75; Φοκοῦσσαι, Athen. i. p. 30. d.; Hesych. *s. v.*; Steph. B.), islands lying off Zephyrium in Marmarica (*Marsa Labeit*), which the Coast-describer (*Stadiasm.* § 20) calls DELPHINES. [E. B. J.]

PHOEBA'TAE, PHOEBA'TIS. [DASSARETAE.]

PHOE'BIA. [BUPHIA.]

PHOENI'CE (Φοινίκη), a city of Chaonia in Epeirus, situated a little inland north of Buthrotum (Strab. vii. p. 324), upon a river, the ancient name of which is not recorded. It is described by Polybius, in B. C. 230, as the strongest, most powerful, and richest of the cities of Epeirus. (Polyb. ii. 5, 8.) In that year it was captured by a party of Illyrians, assisted by some Gallic mercenaries; and the Epirots, who had marched to the rescue of the place, were surprised by a sally of the Illyrians from the city, and put to the rout with great slaughter. (Polyb. *l. c.*) Phoenice continued to be an important city, and it was here that a treaty of peace was negotiated between Philip and the Romans towards the close of the Second Punic War, B. C. 204. (Liv. xxix. 12; Polyb. xxvi. 27.) Phoenice appears to have escaped the fate of the other Epeirot cities, when they were destroyed by order of the senate, through the influence of Charops, one of its citizens. (Polyb. xxxii. 22.) It is mentioned by Ptolemy (iii. 14. § 7) and Hierocles (p. 652), and was restored by Justinian. (Procop. *de Aedif.* iv. 1.) Procopius says that it was situated in a low spot, surrounded by marshes, and that Justinian built a citadel upon a neighbouring hill. The remains of the ancient city are found upon a hill which still bears the name of *Finiki*. "The entire hill was surrounded by Hellenic walls. At the south-eastern extremity was the citadel, 200 yards in length, some of the walls of which are still extant, from 12 to 20 feet in height. . . . . About the middle of the height is the emplacement of a very large theatre, the only remains of which are a small piece of rough wall, which encircled the back of the upper seats; at the bottom, in the place of the scene, is a small circular foundation, apparently that of a town of a later date. Between it and the north-western end of the citadel are the remains of a Roman construction, built in courses of tiles." (Leake *Northern Greece*, vol. i. p. 66.)

PHOENI'CIA, a country on the coast of Syria, bounded on the E by Mount Lebanon.

I. NAME.

Its Greek name was Φοινίκη (Hom. *Od.* iv. 83; Herod. iii. 5; Thucyd. ii. 69; Strab. p. 756; Ptol. v. 15. § 21, &c.), which in the best Latin writers is literally rendered Phoenice (Cic. *Acad.* ii. 20; Tac. *H.* v. 6; Mela, i. 12; Plin. v. 13, &c.), and in later authors Phoenicia (Serv. *ad Virg. Aen.* i. 446; Mart. Capell. vi. 219, &c.), and once in a suspected passage of Cicero. (*Fin.* iv. 20.) The latter form has, however, prevailed among the moderns. By the Phoenicians themselves, and by the Israelites, their land was called Canaan, or Chna; an appellation which embraced the whole district between the river Jordan and the Mediterranean. In Genesis the name of Canaan occurs only as that of a person, and the country is described as "the land of Canaan." In the tenth chapter of that book the following tribes are mentioned; the Arvadites, Sinites, Arkites, and Zemarites, whose sites may be identified with Aradus, Sinna, Arca, and Simyra; whilst the name of Sidon, described as the firstborn of Canaan, marks one of the most important of the Phoenician towns. The abbreviated form Chna (Χνᾶ) occurs in a fragment of Hecataeus (*Fragm. Histor. Graec.* p. 17, Paris, 1841), and in Stephanus Byzantinus (*s. v.*); and the translation of Sanconiatho by Philo, quoted by Eusebius (*Praep. Evang.* i. p. 87, ed. Gaisford) records the change of this appellation into Phoenix. The Septuagint frequently renders the Hebrew Canaan and Canaanite by Phoenicia and Phoenician. In Hebrew, Chna or Canaan signifies a low or flat land, from כנע, "to be low," in allusion to the low land of the coast. Its Greek name Φοίνιξ has been variously deduced from the brother of Cadmus, from the palm-tree, from the purple or blood-red dye, φοινός, which formed the staple of Phoenician commerce, and from the Red Sea, or Mare Erythraeum, where the Phoenicians are supposed to have originally dwelt. (Steph. B. *s. v.*; Sil. Ital. i. 89; Hesych. *s. v.* φοινόν; Ach. Tatius, ii. 4; Strab. i. p. 42, &c.) Of all these etymologies the second is the most probable, as it accords with the practice of antiquity in many other instances.

II. PHYSICAL GEOGRAPHY.

The boundaries of Phoenicia are not very clearly laid down in ancient writers. The Mediterranean sea on the W. and Lebanon on the E. form natural limits; but on the N. and S. they are variously fixed. According to Herodotus the N. boundary of Phoenicia was the bay of Myriandrus, whilst on the S. it terminated a little below Mount Carmel, or where the territory of Judaea touched the sea (iii. 5, iv. 38. vii. 89). Strabo makes it extend from Orthosia on the N., to Pelusium in Egypt on the S. (xvi. pp. 753, 756). But Phoenicia, considered as a political confederation, neither reached so far N. as the boundary of Herodotus, nor so far S. as that of Strabo. Myriandrus was indeed inhabited by Phoenicians; but it appears to have been only a colony, and was separated from Phoenicia, properly so called, by an intervening tract of the Syrian coast. (Xenoph. *Anab.* i. 4. § 6.) The more accurate boundaries of Phoenicia, and which will be adopted here, are those laid down by Pliny (v. 17), which include it between Aradus on the N., and the river Chorseas or Crocodilon on the S. The same limits are given in Ptolemy (v. 15. § 4), except

that he makes the river Eleutherus the N. boundary, and does not mention Aradus, which lay a little to the N. of that stream. There can be no question, however, that Aradus belonged to Phoenicia. So, too, at the southern extremity, the town of Dora was unquestionably Phoenician, whilst Caesarea, the first town S. of the Chorseus, belonged to Palestine.

Phoenicia, as thus defined, lies between lat. 32° 38′ and 34° 52′ N., and long. 35—36° E. It forms a narrow slip of land about 120 miles in length, and seldom more, but frequently less, than 12 miles broad. The range of Libanus, which skirts the greater part of its eastern side, throws out spurs which form promontories on the coast, the most remarkable of which are Theu-prosopon (Θεοῦ-πρόσωπον) between the towns of Trieris and Botrys, and the Promontorium Album between Tyre and Ecdippa. Farther to the S. Mount Carmel forms another bold promontory. The whole of Phoenicia presents a succession of hills and valleys, and is traversed by numerous small rivers which descend from the mountains and render it well watered and fruitful. The coast-line trends in a south-westerly direction; so that whilst its northern extremity lies nearly under long. 36°, its southern one is about under 35°. Aradus, its most northerly town, lies on an island of the same name, between 2 and 3 miles from the mainland, and nearly opposite to the southern extremity of Mount Bargylus. On the coast over against it lay Antaradus. From this point to Tripolis the coast forms an extensive bay, into which several rivers fall, the principal being the Eleutherus (*Nahr-el-Kebir*), which flows through the valley between Mount Bargylus and Libanus. To the N. of the Eleutherus lie the towns of Simyra and Marathus; to the S. the principal town before arriving at Tripolis was Orthosia, close to the sea-shore. Tripolis stands on a promontory about half a mile broad, and running a mile into the sea. It is washed by a little river now called *El-Kadisha*, "the holy." Tripolis derived its name from being the federal town of the three leading Phoenician cities, Tyre, Sidon, and Aradus, each of which had here its separate quarter. To the S. of Tripolis the country rises into chalk hills, which press so closely on the sea as to leave no room for cultivation, and scarcely even for a road, and which form the bold promontory already mentioned of Theuprosopon. (*Ras-es-Shekah.*) The chief towns of this district are Calamos and Trieris. To the S. of Theuprosopon the hills recede a little from the sea, but at a distance of between 20 and 30 miles form another lofty promontory called Climax (*Ras Walta Sillan*), from the circumstance that the steepness of the cliffs rendered it necessary to cut steps in them. Along this tract several rivers descend into the sea, the principal of which is the Adonis (*Nahr-el-Ibrahim*). The chief towns are Botrys, 7 miles S. of Theuprosopon, and Byblus, a little S. of the Adonis. Palai-byblus lay still further S., but its site is unknown. Aphaca, noted for its licentious worship of Venus, was seated in the interior, at the source of the river Adonis in Libanus. The promontory of Climax formed the N. point of the bay, now called *Kesruan*, the S. extremity of which, at a distance of about 12 miles, is formed by the headland *Ras-en-Nahr-el-Kelb*, on which the town of Berytus formerly stood. At about the middle of this bay the river Lycus (*Nahr-el-Kelb*) discharges itself into the sea through a narrow chasm the nearly perpendicular cliffs of which are 200 feet in height. At the eastern extremity of the valley of the Lycus rises the *Gebel-el-Sannin*, the highest summit of Libanus. The southern side of this valley is enclosed by steep and almost inaccessible cliffs, up the face of which traces of a road are still visible, made probably by the Egyptians during their wars in Palestine. A lower and broader road of more gradual ascent was constructed by the emperor M. Aurelius. To the S. of this spot, the plain between Libanus and the sea at Berytus is of greater length than in any other part of Phoenicia. The land, which consists of gentle undulations, is very fertile, and produces orange and mulberry trees in abundance. This plain extends southwards as far as the river Tamyras, a distance of about 10 miles. Berytus (*Beirout*) is washed by the river Magoras. From the headland on which it stands—the most projecting point in Phoenicia — the coast again forms a long curve down to Sidon. On this part of the coast stand the towns of Platanus and Porphyrium. A little to the N. of Platanus is the river Tamyras (*Damour*), already mentioned, and between Porphyrium and Sidon the river Bostrenus (*Auwaleh*). To the S. of the Tamyras the country again becomes rugged and barren, and the hills press closely upon the sea. The narrow plain of the Bostrenus, however, about 2 miles broad, is of the highest fertility, and produces the finest fruits in Syria. Sidon stands on a small promontory about 2 miles S. of the Bostrenus. From Sidon a plain extends to a distance of about 8 miles S., as far as Sarepta, the Zarepthah of the Book of Kings (1 *Kings*, xvii. 9), which stands on an eminence near the sea. From Sarepta to Tyre is about 20 miles. Nine miles to the N. of Tyre the site of the ancient Ornithonopolis is supposed to be marked by a place called *Adnon* or *Adloun*. At this place the plain, which had expanded after passing Sarepta, again contracts to about 2 miles, and runs along the coast in gentle undulations to Tyre, where it expands to a width of about 5 miles. The hills which bound it are, however, of no great height, and are cultivated to the summit. At about 5 miles N. of Tyre this plain is crossed by the river *Kasimieh*, supposed to be the ancient Leontes, the most considerable of Phoenicia, and the only one which makes its way through the barrier of the mountains. It rises in the valley of Bekaa, between Libanus and Anti-libanus, at a height of 4000 feet above the level of the sea. The upper part of its course, in which it is known by the name of *El-Litani*, is consequently precipitous and romantic, till it forces its way through the defiles at the southern extremity of Libanus. Sudden and violent gusts of wind frequently rush down its valley, rendering the navigation of this part of the coast very dangerous. From Tyre, the site of which will be found described under its proper head, the coast runs in a westerly direction for a distance of about 8 miles, to the Promontorium Album (*Ras-el-Abiad*), before mentioned,—a bluff headland consisting of white perpendicular cliffs 300 feet high. The road from Tyre to its summit seems originally to have consisted of a series of steps, whence it was called Climax Tyriorum, or the Tyrian staircase; but subsequently a road was laboriously cut through the rock, it is said, by Alexander the Great. From this promontory the coast proceeds in a straight and almost southerly direction to Ptolemais or Acco (*Acre*), a distance of between 20 and 30 miles. About midway lay

Ecdippa, now *Zeb*, the Achzib of Scripture (*Josh.* xix. 29), regarded by the Jews after the captivity as the northern boundary of Judaea. Ptolemais stands on the right bank of the river Belus (*Naaman*), but at a little distance from it. To the SE. a fertile plain stretches itself out as far as the hills of Galilee. From Ptolemais the coast forms a deep bay, about 8 miles across, the further extremity of which is formed by the promontory of Carmel. It is now called the bay or gulf of *Khaifa*. The bold and lofty headland of Carmel is only a continuation or spur of the mountain of the same name, a range of no great height, from 1200 to 1500 feet, which runs for 18 miles in a direction from SE. to NW., gradually sinking as it approaches the coast. A convent near the cape or promontory is about 582 feet above the sea. On its NE. side flows the Kishon of Scripture, which, when not swollen by rains, is a small stream finding its way through the sand into the sea. Towards the bay the sides of Carmel are steep and rugged, but on the south they slope gently and are more fertile. Carmel was celebrated in Hebrew song for its beauty and fertility; and though its orchards and vineyards no longer exist, the richness of the soil is still marked by the profusion of its shrubs and the luxuriance of its wild-flowers. From the promontory of Carmel the coast gradually sinks, and at its lowest point stands Dora, a town celebrated in ancient times for the manufacture of the Phoenician purple. Beyond this point we shall not pursue the description of the coast; for although between Dora and Egypt some towns are found which were inhabited by Phoenicians, yet in their geographical distribution they belong more properly to Palestine.

That part of the Mediterranean which washed the coast of Phoenicia was called by the Greeks τὸ Φοινίκιον πέλαγος (Agathem. ii. 14), or Σιδονίη θάλασσα (Dion. Per. v. 117), and by the Latins Mare Phoenicium. (Plin. v. 13, ix. 12, &c.) Its southern portion, as far as Sidon, is affected by the currents which carry the alluvial soil brought down by the Nile to the eastward; so that towns which were once maritime are now become inland, and the famous harbours of Tyre and Sidon are nearly choked with sand.

The climate of Phoenicia is tempered by the vicinity of Lebanon, which is capped with snow during the greater part of the year, and retains it in its ravines even during the heats of summer. (Tac. *Hist.* v. 6.) Hence the temperature is much lower than might be expected from the latitude. At *Beirout*, which lies in the centre of Phoenicia, the usual summer heat is about 90° Fahrenheit, whilst the winter temperature is rarely lower than 50°. In the mountains, however, the winter is severe, and heavy falls of snow take place. The rainy season commences towards the end of October, or beginning of November, from which time till March there are considerable falls of rain or snow. From May till October rain is very unusual.

As Phoenicia, though small in extent, is, from its configuration and natural features, subject to a great variety of climate, so its vegetable productions are necessarily very various. The sides of Lebanon are clothed with pines, firs, and cypress, besides its far-famed cedars. The lowlands produce corn of all sorts, peaches, pomegranates, grapes, oranges, citrons, figs, dates, and other fruits. It also yields sugar, cotton, tobacco, and silk. The whole country is subject to earthquakes, the effect of volcanic agency; from which cause, as well as from the action of the currents already mentioned, both Tyre and Sidon have suffered changes which render them no longer to be recognised from ancient descriptions. In some places the coast has been depressed by earthquakes, and at the mouth of the river Lycus are traces of submerged quarries. (Berton, *Topogr. de Tyr.* p. 54.) In like manner, the lake Cendevia, at the foot of Carmel, in which Pliny (v. 17) describes the river Belus as rising, has now disappeared; though Shaw (*Trav.* ii. 33) mentions some pools near its source. The geological structure of Phoenicia is recent, and consists of chalk and sandstone, the higher mountains being formed of the Jura limestone. The only metal found is iron, which occurs in considerable quantities in the hills above *Beirout*. In the sandstone of the same district, bituminous wood and brown coal are found, but in small quantities and impregnated with sulphur.

III. Ethnological Relations of the Phoenicians.

The Phoenicians were called by the Greeks Φοίνικες (Hom. *Od.* iv. 84; Herod. i. 1; Thucyd. i. 8, &c.), and by the Romans Phoenices (Cic. *N. D.* ii. 41; Mela, i. 12; Plin. v. 13, &c.). They were a branch of the great Semitic or Aramaean race. The Scriptures give no intimation that they were not indigenous; and when the Hebrews settled in Canaan, Sidon and Tyre were already flourishing cities. (*Josh.* xix. 28, 29.) By classing, however, the Phoenicians, or Canaanites, among the descendants of Ham (*Genesis*, x. 15), the Scriptures imply an immigration. The reason of this classification, was probably their colour, the darkness of their complexion indicating a southern origin; yet their language, a safer criterion, marks them, as we have said, for a Semitic race. This, though not strictly identical with the Hebrew, was the nearest allied to it of all the Semitic tongues. St. Jerome (*Comm. in Jer.* xxv. 21) and St. Augustine (*Tract.* 15 *in Evang. Joan.*) testify that the Punic language resembled the Hebrew. The same affinity is observable in Punic words preserved in Greek and Roman writers; as in the *Poenulus* of Plautus, especially since the improvement of the text by the collation of Mai. The similarity is also evinced by bilingual inscriptions discovered at Athens, where many Phoenicians were settled, as will be related in the sequel. But perhaps one of the most remarkable proofs is the inscription on the Carthaginian tablet discovered at *Marseilles* in 1845, of which 74 words, out of 94, occur in the Old Testament.

Profane writers describe the Phoenicians as immigrants from the borders of the Persian Gulf. Thus Herodotus (i. 1, vii. 89) asserts that they originally dwelt on the Erythraean sea; an appellation which, in his language, as well as in that of other ancient writers, embraces not only the present Red Sea, but also the Persian Gulf and Indian Ocean. To the same purpose is the testimony of Strabo (xvi. p. 766), who adds that there were in the Persian Gulf two islands, Tyrus and Aradus, the inhabitants of which had temples resembling those of the Phoenicians, and who claimed the like-named islands on the coast of the Mediterranean as their colonies. Heeren (*Researches*, vol. ii. p. 56, Eng. trans.), who admits that traces of Phoenician workmanship and buildings have lately been discovered in these islands, reverses the parentage, and

makes them to be colonies of their more celebrated namesakes, in opposition to the testimony of Strabo, and without producing any counter authority. The isle of Tylus or Tyrus is likewise mentioned by Pliny (vi. 32). The account given by Justin is in harmony with these authorities (xviii. 3). He describes the Tyrians as having been disturbed in their native seats by an earthquake, and as migrating thence, first to what he calls the "Assyrian lake," and subsequently to the shores of the Mediterranean. A recent writer (Kenrick, *Phoenicia*, p. 47) takes this Assyrian lake to have been Gennesaret or the Dead Sea, as there was no other collection of waters in S. Assyria to which the term could be applied. This would have formed a natural resting-place in the journey of the emigrants. It must not, however, be concealed, that the account of these writers has been rejected by several very eminent authors, as Bochart, Hengstenberg, Heeren, Niebuhr, and others, and more recently by Movers, a writer who has paid great attention to Phoenician history, and who has discussed this question at considerable length. (*Die Phönizier*, vol. ii. pt. i. pp. 23—62.) His principal arguments are, that the Phoenician traditions, which go back to the primitive chaos, represent even the gods, as well as the invention of all the arts of life, as indigenous; that the Scriptures, whose testimony is preferable, both on account of its antiquity, and because it arose out of the bosom of the people themselves, make no mention of any such immigration, though at that time its memory could not have been obliterated had it really occurred, and though it would have served the purpose of the Jews to represent the Canaanites as intruders; and that the name of the people, being derived from the character of the land, as well as the appellations of different tribes, such as the Gibli at Byblus, the Sidonians at Sidon, &c., mark them as indigenous. But it may be observed, that the Phoenician traditions rest on the equivocal authority of the pretended Sanconiatho, and come to us in so questionable a shape that they may evidently be made to serve any purpose. Thus Movers himself quotes a passage from Sanconiatho (vol. ii. pt. i. p. 28), to the effect that the Tyrians invented ship-building, because it directly contradicts the statement that they were the descendants of a sea-faring people on the shores of the Persian Gulf; although he had previously cited the same passage (vol. i. p. 143) in proof of the Euhemerism of Philo-Sanconiatho, who, it is there said, attributed the invention of navigation to the Cabiri merely because the Phoenician mariners considered themselves as sailing under the protection of their deities. Can such testimony be compared with that of the "loyal-hearted and truthful Herodotus," as Movers characterises him (vol. i. pt. ii. p. 134), who, be it observed, also founds his account on the *traditions* of the Phoenicians (ὡς αὐτοὶ λέγουσι, vii. 89), and who could have had no possible interest in misrepresenting them? Nor could the natural vanity of the Phoenicians have found any gratification in misleading him on this point, since the tradition lessened, rather than enhanced, the splendour of their origin. The testimony of the Scriptures on the subject is merely *negative*; nor, were it otherwise, could they be taken as a certain guide in ethnological inquiries. They were not written with that view, and we have already adverted to a discrepancy in their treatment of this subject. The question, however, is too long to be fully discussed in this place. We have merely adverted to some of the principal heads, and they who wish to pursue the inquiry further are referred to the passage in Mover's work already indicated, and to Mr. Kenrick's *Phoenicia* (chap. iii.).

IV. History.

Our knowledge of Phoenician history is only fragmentary. Its native records, both literary and monumental, have almost utterly perished; and we are thus reduced to gather from scattered notices in the Old Testament and in the Greek and Roman authors, and sometimes to supply by inference, the annals of a country which stands the second in point of antiquity, which for some thousands of years played a considerable part in the world, and to which Europe owes the germs of her civilisation.

If we accept the authority of Herodotus, the Phoenicians must have appeared upon the coasts of the Mediterranean at least twenty-seven or twenty-eight centuries before the birth of Christ. In order to ascertain the age of Hercules, respecting which the Egyptian chronology differed very widely from the Greek, that conscientious historian resolved to inquire for himself, and accordingly sailed to Tyre, where he had heard that there was a famous temple of Hercules. It was, therefore, expressly for the purpose of settling a chronological point that he was at the trouble of making this voyage, and it is natural to suppose that he did not adopt the information which he received from the priests without some examination. From these he learned that the temple had existed 2300 years, and that it was coeval with the foundation of Tyre (ii. 43, 44). Now, as Herodotus flourished about the middle of the fifth century before our aera, it follows that Tyre must have been founded about 2750 years B. C. The high antiquity of this date is undoubtedly startling, and on that account has been rejected by several critics and historians. Yet it does not appear why it should be regarded as altogether improbable. The chronology of the Jews is carried back more than 2000 years B. C.; yet the Jewish Scriptures uniformly intimate the much higher, and indeed immemorable, antiquity of the Canaanites. Again, if we look at Egypt, this aera would fall under the 14th dynasty of its kings* (2750—2631 B. C.), who had had an historical existence, and to whom many conquests are attributed before this period. This dynasty was followed by that of the Hyksos, who were probably Canaanites, and are described by Manetho as skilled in the art of war, and of fortifying camps and cities. (Sync. pp. 113, 114; Schol. *in Platon. Tim.* vol. vii. p. 288, ed. Tauchn.)

If Sidon was older than Tyre, and its mother-city, as it claimed to be, this would add some difficulty to the question, by carrying back the chronology to a still higher period. But even this objection cannot be regarded as fatal to the date assigned to Tyre. Cities at so short a distance might easily have been planted by one another within a very brief space of time from their origin; and the contest between them in ancient times for priority, not only shows that the question was a very ambiguous one, but also leads to the inference that the difference in their dates could not have been very great. The weight of ancient evidence on either side of the question is pretty nearly balanced. On

* This is the date assigned by Movers; but by some authorities it is placed later.

one side it is alleged that Sidon is styled in Scripture the eldest born of Canaan (*Gen.* xlix. 13), whilst Tyre is not mentioned till the invasion of Palestine by the Israelites. (*Josh.* xix. 29.) But in the former passage there is nothing to connect the person with the city; and the second argument is at best only negative. It is further urged that the name of Tyre does not once occur in Homer, though the Sidonians are frequently mentioned; and in one passage (*Od.* xiii. 285) Sidonia is used as the general name of Phoenicia. This, however, only shows that, in the time of Homer, Sidonia was the leading city, and does not prove that it was founded before Tyre. The same remark may be applied to the silence of Scripture. That Tyre was in existence, and must have been a flourishing city in the time of Homer, is unquestionable; since, as will be seen further on, she founded the colony of Gadeira, or *Cadiz*, not long after the Trojan War; and many years of commercial prosperity must have elapsed before she could have planted so distant a possession. Poets, who are not bound to historical accuracy, will often use one name in preference to another merely because it is more sonorous, or for some similar reason; and Strabo (xvi. p. 756), in commenting upon this very circumstance of Homer's silence, observes that it was only the poets who glorified Sidon, whilst the Phoenician colonists, both in Africa and Spain, gave the preference to Tyre. This passage has been cited in proof of Strabo's own decision in favour of Sidon; but, from the ambiguous wording of it, nothing certain can be concluded. Movers (ii. pt. i. p. 118) even construes it in favour of Tyre; but it must be confessed that the opposite view is rather strengthened by another passage (i. p. 40) in which Strabo calls Sidon the metropolis of the Phoenicians (τὴν μητρόπολιν αὐτῶν). On the other hand, it may be remarked, that all the most ancient Phoenician traditions relate to Tyre, and not to Sidon; that Tyre is called ματέρα Φοινίκων by Meleager the epigrammatist (*Anth. Graec.* vii. 428. 13), who lived before the time of Strabo; that an inscription to the same effect is found on a coin of Antiochus IV., B. C. 175—164 (Gesen. *Mon. Phoen.* i. 262); and that the later Roman and Greek writers seem unanimously to have regarded the claim of Tyre to superior antiquity as preferable. Thus the emperor Hadrian settled the ancient dispute in favour of that city (Suidas, *s. v.* Παῦλος Τύριος), and other testimonies will be found in Orosius (iii. 16), Ulpian (*Dig.* tit. xxv.), and Eunapius (*v. Porphyr.* p. 7, ed. Wytt.) It may also be remarked that if the Phoenicians came from the Persian Gulf, the name of Tyre shows that it must have been one of their earliest settlements on the Mediterranean. This dispute, however, was not confined to Tyre and Sidon, and Byblus and Berytus also claimed to be regarded as the oldest of the Phoenician cities.

But however this may be, it seems certain that the latest of the Phoenician settlements in Syria, which was, perhaps, Hamath or Epiphania on the Orontes, preceded the conquest of Canaan by the Jews, which event is usually placed in the year 1450 B. C. The expedition of Joshua into Canaan is one of the earliest events known in the history of the Phoenicians. In order to oppose his progress, the king of Hazor organised a confederacy of the Canaanite states. (*Josh.* ii. 10.) But the allies were overthrown with great slaughter. Hazor was taken and destroyed, and the territory of the confederate kings, with the exception of a few fortresses, fell into the power of the Israelites. The defeated host was pursued as far as Sidon; but neither that nor any other town of Phoenicia, properly so called, fell into the hands of the Jews, nor on the whole does the expedition of Joshua seem to have had much effect on its political condition. Yet there was a constant succession of hostilities between the Phoenicians and some of the Jewish tribes; and in the book of Judges (x. 12) we find the Sidonians mentioned among the oppressors of Israel.

Sidon, then, must have early risen to be a powerful kingdom, as may indeed be also inferred from the Homeric poems, in which its trade and manufactures are frequently alluded to. Yet a year before the capture of Troy, the Sidonians were defeated by the king of Ascalon, and they were obliged to take refuge—or at all events a great proportion of them —at Tyre. (Justin, xviii. 3.) We are ignorant how this conquest was effected. The name of Ascalon probably represents the whole pentapolis of Philistia; and we know that shortly after this event the Philistines were powerful enough to reduce the kingdom of Israel to the condition of a tributary, and to retain it as such till the time of David. Justin, in the passage just cited, speaks of Tyre as *founded* by the Sidonians (condiderunt) on this occasion. This expression, however, by no means implies a *first* foundation, since in the next chapter he again uses the same word to denote the *restoration* of Tyre by Alexander the Great. It has been already said, as will appear at greater length in the account of the Phoenician colonies, that Tyre must have been a city of considerable importance before this period. The account of Justin is corroborated by Josephus, who, in allusion no doubt to the same event, places the foundation of Tyre 240 years before that of Solomon's temple. (*Ant.* viii. 3.) If Justin followed the computation of the Parian marble, the fall of Troy took place in the year 1209 B. C.; and if the disputed date of Solomon's temple be fixed at 969 B. C., the aera adopted by Movers (*Phön.* ii. pt. i. p. 149), then $969 + 240 = 1209$. Josephus, in the passage cited, uses the word οἴκησις, "a dwelling in," and could no more have meant the original foundation of Tyre than Justin, since that city is mentioned in the Old Testament as in existence two centuries and a half before the building of the temple.

From the period of the Sidonian migration, Tyre must be regarded as the head of the Phoenician nation. During the headship of Sidon, the history of Phoenicia is mythical. Phoenix, who is represented as the father of Cadmus and Europa, is a mere personification of the country; Belus, the first king, is the god Baal; and Agenor, the reputed founder both of Tyre and Sidon, is nothing but a Greek epithet, perhaps of Hercules. The history of Tyre also, before the age of Solomon, is unconnected. Solomon's relations with Hiram, king of Tyre, led Josephus to search the Tyrian histories of Dius and Menander. Hiram succeeded Abibal; and from this time to the foundation of Carthage there is a regular succession of dates and reigns.

Tyre was in fact a double city, the original town being on the continent, and the new one on an island about half a mile from the shore. When the latter was founded, the original city obtained the name of Palae-Tyrus, or Old Tyre. The island, however, was probably used as a naval station from the very earliest times, and as a place consecrated to the

worship of the national deities Astarte, Belus, and particularly Melcarth, or the Tyrian Hercules. According to Justin, indeed, the oldest temple of Hercules was in Palae-Tyrus (xi. 10; comp. Curt. iv. 2); but this assertion may have been made by the Tyrians in order to evade the request of Alexander, who wished to gain an entrance into their island city under pretence of sacrificing to that deity.

Hiram succeeded to the crown of Tyre a little before the building of Solomon's temple (B. C. 969). He added to and improved the new city, and by means of substructions even gained space enough to build a large square or place, the *eurychorus*. He maintained friendly relations with king David, which were confirmed by commerce and by intermarriages. Hiram furnished the Jewish monarch with cedar-wood and workmen to construct his palace, as well as materials for his proposed temple, the building of which, however, was reserved for his son. The Phoenicians, on the other hand, imported the corn and oil of Judah. Under the reign of Solomon this intercourse was cemented by a formal treaty of commerce, by which that monarch engaged to furnish yearly 20,000 *cors* of wheat*, and the like quantity of oil, for the use of Hiram's household, while Hiram, in return, supplied Solomon with workmen to cut and prepare the wood for his temple, and others skilful in working metal and stone, in engraving, dyeing, and manufacturing fine linen. Solomon also ceded to Tyre a district in Galilee containing twenty towns. (1 *Kings*, ix. 13; Joseph. *Ant.* viii. 5.) In these transactions we perceive the relations of a commercial and an agricultural people; but Hiram was also of great assistance to Solomon in his maritime and commercial enterprises, and his searches after the gold of Ophir, when his victories over the Edomites had given him the command of the Aelanitic, or eastern, gulf of the Red Sea. The pilots and mariners for these voyages were furnished by Hiram. Except, however, in connection with the Israelites, we know little concerning the reign of this monarch. He appears to have undertaken an expedition against Citium in Cyprus, probably a revolted colony of the Phoenicians, and to have established a festival in honour of Melcarth, or Hercules. (Joseph. *l. c.*) By his great works at Tyre he entailed an enormous expense upon the people; and his splendid reign, which lasted thirty-four years, was followed at no great interval by political troubles. His dynasty was continued for seven years in the person of his son Baleazar, or Baleastartus, and nine years in that of his grandson Abdastartus. The latter was put to death by the four sons of his nurse, the eldest of whom usurped the supreme power for a space of twelve years. This revolution is connected by Movers (ii. pt. i. p. 342) with the account of the servile insurrection at Tyre given by Justin (xviii. 3), who, however, with his usual neglect of chronology, has placed it a great deal too late. This interregnum, which, according to the account adopted, was a complete reign of terror, was terminated by a counter-revolution. The usurper, whose name is not mentioned, either died or was deposed, and the line of Hiram was restored in the person of Astartus,—the Strato of Justin,—a son of Baleastartus. This prince reigned twelve years, and was succeeded by his brother Astarymus, or Aserymus, who ruled nine years. The latter was murdered by another brother, Phales, who after reigning a few months was in turn assassinated by Ithobaal, a priest of Astarte. Ithobaal is the Ethbaal of Scripture, father of Jezebel, the wife of Ahab, who endeavoured to restore the worship of Baal and Ashtoreth in the kingdom of her husband. (1 *Kings*, xvi. 31.) In the reign of Ithobaal Phoenicia was visited with a remarkable drought, which also prevailed in Judaea in the time of Ahab. (Joseph. *Ant.* viii. 13. § 2; 1 *Kings*, c. xvii. 7.) We know nothing further of Ithobaal's reign, except that he founded Botrys, on the coast N. of Sidon, and Auza in Numidia. (Joseph. viii. 7, 13. § 2.) He reigned thirty-two years, and was the founder of a new dynasty. Badezor, his son, succeeded to the throne, and after a reign of six years was followed by Matteu, or Mutto, who ruled for thirty-two years. The reign of his successor, Pygmalion, brings us into contact with classical history and tradition, through the foundation of Carthage by his sister Elisa, or Dido, which took place not long after his accession. Probably, however, this was only a second foundation, as in the case of Tyre itself. The whole story, which indicates a struggle between an aristocratical and sacerdotal party and the monarchical power, has been obscured by mythical traditions and the embellishments of poets; but it need not be repeated here, as it will be found in the *Dictionary of Biography and Mythology*, *s. v.* DIDO.

Pygmalion occupied the throne forty-seven years, and after his reign there is a gap in the history of Tyre. When we can next trace the Phoenicians in the Scriptures, we find them at war with Israel. The prophet Joel, who flourished about the beginning of the eighth century B. C., bitterly complains of the outrages committed by Tyre and Sidon on the coasts of Judaea, and his complaints are repeated by Amos, a contemporary prophet. This was the chief period of the maritime ascendency of the Phoenicians, and their main offence seems to have been the carrying off of youths and maidens and selling them into slavery. Towards the end of the same century we find Isaiah prophesying the destruction of Tyre. It was about this period that the Assyrians began to grasp at the countries towards the west, and to seek an establishment on the sea-board of the Mediterranean; a policy which was continued by the succeeding empires of the Babylonians, Medes, and Persians. The expedition of Shalmaneser, who, after reducing the kingdom of Israel, turned his arms against Phoenicia, is recorded by Josephus from the history of Menander. (*Ant.* ix. 14.) After overrunning the whole of Phoenicia, he retired without attempting any permanent conquest. He seems to have been assisted by several Phoenician cities, as Sidon, Ace, and even Palae-Tyrus, which were oppressed by the domination of Elulaeus, king of Tyre. These cities furnished him with sixty ships for a second attempt upon Tyre: but this fleet was defeated by the Tyrians with only twenty vessels. Shalmaneser blockaded them on the land side for a space of five years, and prevented them from having any fresh water except what they could preserve in tanks. How this blockade ended we are not informed, but it was probably fruitless. We have no further accounts of Elulaeus, except that he had reduced to obedience the revolted town of Citium in Cyprus previously to this invasion. After his reign another long gap occurs in the history of Phoenicia, or rather of Tyre, its head. This silence would seem to indicate that it was enjoying the blessings of peace, and consequently increasing in prosperity. The Phoenician alliance was courted

* The *cor* was equal to 75 gallons, or 32 pecks.

by the Egyptian monarchs, and an extensive commerce appears to have been carried on with the port of Naucratis. The next wars in which we find the Phoenicians engaged were with the Babylonians; though the account of Berosus, that Nabopalassar, who reigned towards the end of the seventh century B. C., held Phoenicia in subjection, and that his son Nebuchadnezzar reduced it when in a state of revolt, must be regarded as doubtful. At all events, however, it appears to have been in alliance with the Chaldeans at this period; since we find it related that Apries, king of Egypt, when at war with that nation, conquered Cyprus and Phoenicia. (Herod. ii. 161; Diod. i. 68.) When Nebuchadnezzar ascended the throne, we find that, after quelling a revolt of the Jews and reducing Jerusalem (B. C. 587), he marched into Phoenicia, took Sidon apparently by assault, with dreadful carnage, and proceeded to invest Tyre. (*Ezekiel*, xxvi.) For an account of this siege, one of the most memorable in ancient history, we are again indebted to Josephus (x. 11), who extracted it from Tyrian annals. It is said to have lasted thirteen years. Another Ithobaal was at this time king of Tyre. The description of the siege by Ezekiel would seem to apply to Palae-Tyrus, though it is probable that insular Tyre was also attempted. (Grote, *Hist. of Greece*, iii. p. 355, note.) The result of the siege is by no means clear. Berosus, indeed, affirms (*ap.* Joseph. *c. Apion.* i. 20) that Nebuchadnezzar subdued all Syria and Phoenicia; but there is no evidence of an assault upon Tyre, and the words of Ezekiel (xxix. 17) seem to imply that the siege was unsuccessful. The same dynasty continued to reign. Ithobaal was succeeded by Baal; and the subsequent changes in the government indicate internal revolution, but not subjection to a foreign power. The kings were superseded by judges or suffetes, and after a few years the royal line appears to have been restored; but whether by the spontaneous act of the Tyrians, or by compulsion of the Babylonians, is a disputed point.

Ezekiel's description of Tyre at the breaking out of the Babylonian war exhibits it as the head of the Phoenician states. Sidon and Aradus are represented as furnishing soldiers and mariners, and the artisans of Byblus as working in its dockyards. (*Ezek.* xxvii. 8, 9, 11.) But that war was a severe blow to the power of the Tyrians, which now began to decline. Cyprus was wrested from them by Amasis, king of Egypt, though a branch of the regal family of Tyre appears to have retained the sovereignty of Salamis for some generations. (Herod. v. 104; Isocr. *Evag.* p. 79. 1, 2, 28.) Merbalus was succeeded by his brother Eiramus, or Hiram, during whose reign Cyrus conquered Babylon (538 B. C.). When the latter monarch permitted the Jews to rebuild Jerusalem, we find Tyre and Sidon again assisting in the work (*Ezra*, iii. 7), a proof that their commerce was still in a flourishing state. Xenophon (*Cyropaed.* i. 1. § 8) represents Cyrus as ruling over Phoenicia as well as Cyprus and Egypt; and though this is not confirmed by any collateral proof, they must at all events have very soon submitted to his son Cambyses. (Herod. iii. 19.) The relations with Persia seem, however, to have been those of a voluntary alliance rather than of a forced subjection; since, though the Phoenicians assisted Cambyses against the Egyptians, they refused to serve against their colonists the Carthaginians. Their fleet was of great assistance to the Persians, and enabled Darius to make himself master of the islands off the coast of Asia Minor. (Thucyd. i. 16; Plat. *Menex.* c. 9.) Phoenicia, with Palestine and Cyprus, formed the fifth of the twenty nomes into which the empire of Darius was divided. (Herod. iii. 91.) These nomes were, in fact, satrapies; but it does not appear that they interfered with the constitutions of the several countries in which they were established; at all events native princes continued to reign in Phoenicia. Although Sidon became a royal Persian residence, it still had its native king, and so also had Tyre. (Herod. viii. 67.) When Darius was meditating his expedition against Greece, Sidon supplied two triremes and a storeship to enable Democedes to explore the coasts. (Ib. iii. 136.) Subsequently the Phoenicians provided the Persians with a fleet wherewith to reduce not only the revolted Ionian cities, but even their own former colony of Cyprus. In the last of these enterprises they were defeated by the Ionian fleet (Ib. v. 108, 112): but they were the chief means of reducing the island of Miletus (Ib. vi. 6), by the defeat which they inflicted on the Ionians off Lade. (Ib. c. 14.) After the subjugation of the Asiatic islands, the Phoenician fleet proceeded to the Thracian Chersonese, where they captured Metiochus, the son of Miltiades (Ib. c. 41), and subsequently appear to have scoured the Aegean and to have ravaged the coasts of Boeotia. (Ib. c. 118.) They assisted Xerxes in his expedition against Greece, and along with the Egyptians constructed the bridge of boats across the Hellespont. (Ib. vii. 34.) They helped to make the canal over the isthmus of Mount Athos, in which, as well as in other engineering works, they displayed a skill much superior to that of the other nations employed. (Ib. c. 23.) In the naval review of Xerxes in the Hellespont they carried off the prize from all competitors by the excellence of their ships and the skill of their mariners; whilst among the Phoenicians themselves the Sidonians were far the most distinguished (Ib. cc. 44, 96), and it was in a vessel belonging to the latter people that Xerxes embarked to conduct the review. (Ib. c. 100.) The Phoenician ships composed nearly half of the fleet which Xerxes had collected; yet at the battle of Artemisium they do not appear to have played so distinguished a part as the Egyptians. (Ib. viii. 17.) When routed by the Athenians at Salamis they complained to Xerxes, who sat overlooking the battle on his silver-footed throne, that their ships had been treacherously sunk by the Ionians. Just at this instant, however, extraordinary skill and valour were displayed by a Samothracian vessel, and the Great King, charging the Phoenicians with having falsely accused the Ionians in order to screen their own cowardice and ill-conduct, caused many of them to be beheaded. (Ib. c. 90.) At the battle of the Eurymedon (B. C. 466), the Phoenician fleet was totally defeated by the Athenians under Cimon, on which occasion 100 of their vessels were captured (Diod. xi. 62), or according to Thucydides (i. 100) 200, who, however, is probably alluding to the whole number of their fleet. Subsequently the Athenians obtained such naval superiority that we find them carrying on maritime operations on the coast of Phoenicia itself; though in their unfortunate expedition to Egypt fifty of their triremes were almost entirely destroyed by the Phoenicians. (Thucyd. i. 109.) This disgrace was wiped out by the Athenians under Anaxicrates in a great victory gained over

the Phoenicians off Salamis in Cyprus, B. C. 449, when 100 of their ships were taken, many sunk, and the remnant pursued to their own harbours. (Ib. c. 112.) A cessation of hostilities now ensued between the Greeks and Persians. The Phoenician navy continued to be employed by the latter, but was no longer exposed to the attacks of the Athenians. In B. C. 411 the Phoenicians prepared a fleet of 147 vessels, to assist the Spartans against Athens; but after advancing as far as Aspendus in Pamphylia it was suddenly recalled, either because the demonstration was a mere *ruse* on the part of Tissaphernes, or that the Phoenicians were obliged to defend their own coast, now threatened by the Egyptians. (Thucyd. viii. 87, 108; Diod. xiii. 38, 46.) They next appear as the auxiliaries of the Athenians against the Spartans, who had gained the naval supremacy by the battle of Aegospotami, a preponderance which had changed the former policy of Persia. The allied fleet was led by Conon and Pharnabazus, and after the defeat of the Spartans the Phoenician seamen were employed in rebuilding the walls of Athens. (Diod. xiv. 83; Nep. *Con.* c. 4.) These events led to a more intimate connection between Phoenicia and Athens; Phoenician traders appear to have settled in that city, where three Phoenician inscriptions have been discovered of the date apparently of about 380 B. C. (Gesen. *Mon. Pun.* i. 111.) A few years later, a decree was passed by the Athenian senate, establishing a *proxenia* between Strato, king of Sidon, and the Athenians; whilst an immunity from the usual burthens imposed on aliens was granted to Sidonians settling at Athens. (Böckh, *Corp. Inscr.* i. 126.) About the same time we find the Phoenicians, as the subjects of Persia, engaged in a disastrous war with Evagoras, prince of Salamis in Cyprus, who ravaged their coasts, and, according to Isocrates (*Evag.* p. 201) and Diodorus (xiv. 98, 110, xv. 2), captured even Tyre itself. But in 386 B. C. Evagoras was defeated in a great naval engagement, and subsequently became a tributary of Persia. (Ib. xv. 9.) During all this period Sidon appears to have been the most wealthy and prosperous of the Phoenician cities. (Ib. xvi. 41.) The next important event in the history of the Phoenicians is their revolt from Persia, which ended in a disastrous manner. Sidon had been oppressed by the satraps and generals of Artaxerxes Ochus; and in a general assembly of the Phoenicians at Tripolis, in B. C. 352, it was resolved to throw off the Persian yoke. The royal residence at Sidon was destroyed and the Persians massacred. The Phoenicians then fortified Sidon, and invited Nectanebus, king of Egypt, to assist them. In the following year Ochus made great preparations to quell this revolt, and particularly to punish Sidon; when Tennes, king of that city, alarmed at the fate which menaced him, treacherously negotiated to betray it to the Persians. He inveigled 100 of the leading citizens into the enemy's camp, where they were put to death, and then persuaded the Egyptian mercenaries to admit the Persians into the city. The Sidonians, who had burnt their fleet in order to prevent any escape from the common danger, being thus reduced to despair, shut themselves up with their wives and children, and set fire to their houses. Including slaves, 40,000 persons are said to have perished on this occasion. Tennes, however, suffered the merited reward of his treason, and was either put to death by Ochus or committed suicide. This calamity was a great, but not a fatal, blow to the prosperity of Sidon, which even to a much later period retained a considerable portion of her opulence. (Diod. xvi. 41, sqq.; Mela, i. 12.)

The cruelty of the Persians left a lasting remembrance, and was not wholly unrequited. When about twenty years afterwards Alexander entered Phoenicia, Sidon hastened to open her gates to him. The defeat of Darius at Issus, B. C. 333, opened the whole coast of Phoenicia to the Greeks. On his march Alexander was met by Strato, son of Gerostratus, king of Aradus, who surrendered that island to him, as well as some towns on the mainland. As he proceeded southwards he received the submission of Byblus, and entered Sidon at the invitation of the inhabitants. He deposed Strato, their king, a vassal of the Persians; and Abdolonimus, who was related to Strato, but who at that time followed the humble occupation of a gardener in the suburbs of the city, was nominated to the vacant throne by Alexander's general Hephaestion. (Curt. iv. 4.) The Tyrians now sent an embassy, professing submission to the Macedonians, but without any real design of giving up their city. (Arrian, ii. 15.) It was impossible, however, for Alexander to proceed on his intended expedition, whilst so important a place lay in his rear, at best a doubtful friend, and, in case of reverses, soon, perhaps, to become a declared enemy. With a dissimulation equal to that of the Tyrians, he sought to gain possession of their town by requesting permission to enter and sacrifice to Hercules, the progenitor of the royal race of Macedon, as well as the tutelary god of Tyre. But the Tyrians perceiving his design, directed him to another temple of Hercules at Palae-Tyrus, where he might sacrifice in all liberty and with still greater effect, as the fane, they asserted, was more ancient and venerable than that of the new city in the island. Alexander, however, still hankered after the latter, and made preparations for besieging the new town. (Arrian, ii. 15, 16; Curt. iv. 7, seq.) The means by which he succeeded in reducing Tyre will be found described in another place. [TYRUS.] It will suffice here to say, that by means of a causeway, and after a seven months' siege, the city of merchant princes yielded to the arms of Alexander, who was assisted in the enterprise by the ships of Sidon, Byblus, and Aradus. The city was burnt, and most of the inhabitants either killed or sold into slavery. Alexander repeopled it, principally, perhaps, with Carians, who seem to have been intimately connected with the Phoenicians, since we find Caria called Phoenice by Corinna and Bacchylides. (Athen. iv. p. 174.) After the battle of Arbela, Alexander incorporated Phoenicia, Syria and Cilicia into one province. With the true commercial spirit the Phoenicians availed themselves of his conquests to extend their trade, and their merchants, following the track of the Macedonian army, carried home myrrh and nard from the deserts of Gedrosia. (Arrian, vi. 22, *Indic.* 18.) Alexander employed them to man the ships which were to sail down the Hydaspes to the Indian Ocean, as well as to build the vessels which were conveyed overland to Thapsacus on the Euphrates, with the view of descending to Babylon. (*Ib.*) By these means he intended to colonise the islands and coasts of the Persian Gulf; but his schemes were frustrated by his death, B. C. 323. After that event Ptolemy, to whom Egypt had fallen, annexed Phoenicia, together with Syria and Palestine, to his kingdom.

(Diod. xvi. 43.) But in the year 315 B. C. Antigonus, returning victorious from Babylonia, easily expelled the garrisons of Ptolemy from all the Phoenician towns except Tyre, where he experienced an obstinate resistance. Eighteen years had sufficed to restore it in a considerable degree to its ancient wealth and power; and although the mole still remained it was almost as impregnable as before, and was not reduced till after a siege of fifteen months. From this period down to near the end of the third century B. C. there was an almost constant succession of struggles for the possession of Phoenicia between the Ptolemies on one side and the Seleucidae on the other. Ptolemy Euergetes succeeded in reducing it, and it was held by him and his son Philopator down to the year 218 B. C.; when Antiochus the Great, taking advantage of the indolent and sensual character of the latter, and the consequent disorders of his administration, undertook its recovery. Tyre and Ace were surrendered to him by the treachery of Theodotus, the lieutenant of Philopator, and the Egyptian army and fleet were defeated and driven to take refuge at Sidon. In the following year, however, Philopator defeated Antiochus at Raphia near the frontiers of Egypt, and regained possession of Phoenicia and Syria, which he retained till his death, B. C. 205. The reign of his infant son again tempted the ambition of Antiochus. He succeeded in reducing Phoenicia, and after repulsing an attempt of the Egyptians to regain it in B. C. 198, firmly established his dominion, and bequeathed it to his sons.

Notwithstanding these struggles, Tyre appears to have still enjoyed a considerable share of commercial prosperity, in which, however, she had now to encounter a formidable rival in Alexandria. At first, indeed, that city did not much interfere with her prosperity; but the foundation of Berenice on the Red Sea by Ptolemy Philadelphus, the making of a road between that place and Coptos, and the reopening of the canal which connected the gulf of *Suez* with the Pelusiac branch of the Nile (Strab. p. 781) inflicted a severe blow upon her commerce, and converted Alexandria into the chief emporium for the products of the East.

The civil wars of the Seleucidae, and the sufferings which they entailed, induced the Syrians and Phoenicians to place themselves under the protection of Tigranes, king of Armenia, in the year 83 B. C. (Justin, xl. 1; Appian, *Syr.* 48.) Ace, or Ptolemais, was the only city which, at the instigation of Selene, queen of Antigonus, refused to open its gates to Tigranes. That monarch held Phoenicia during fourteen years, when the Seleucidae regained it for a short time in consequence of the victories of Lucullus. Four years later Pompey reduced all Syria to the condition of a Roman province. During the civil wars of Rome, Phoenicia was the scene of many struggles between the Roman generals. Just previously to the battle of Philippi, Cassius divided Syria into several small principalities, which he sold to the highest bidders; and in this way Tyre had again a king called Marion. Antony presented the whole country between Egypt and the river Eleutherus to Cleopatra, but, in spite of her intreaties to the contrary, secured Tyre and Sidon in their ancient freedom. (Joseph. *Ant.* xv. 4. § 1.) But when Augustus visited the East, B. C. 20, he deprived them of their liberties. (Dion Cass. liv. 7.)

Although the Roman dominion put an end to the political existence of Tyre and Sidon, they retained their manufactures and commerce for a considerable period. Mela, who probably wrote during the reign of Claudius, characterises Sidon as "adhuc opulenta" (i. 12); and Pliny, at about the same period, adverts to the staple trade of Tyre as being still in a flourishing condition ("nunc omnis ejus nobilitas conchylio atque purpura constat," v. 17). At the instance of the rhetorician Paulus, Hadrian, as we have already mentioned, granted to Tyre the title of *metropolis*. It was the residence of a proconsul, and the chief naval station on the coast of Syria. During the contest of Septimius Severus and Pescennius Niger for imperial power, A. D. 193, Berytus favoured the cause of Niger, Tyre that of Septimius; in consequence of which, it was taken and burnt by the light Mauritanian troops of Niger, who committed great slaughter. (Herodian, iii. 9. § 10.) Severus, after his success, recruited the population of Tyre from the third legion, and, as a reward for its attachment, bestowed on it the *Jus Italicum* and the title of colony. (Ulpian, *Dig. Leg. de Cens.* tit. 15; Eckhel, vol. iii. p. 387.) In the time of St. Jerome, towards the end of the fourth century, it was still the first commercial city of the East (*Comm. ad Ezek.* xxvi. 7, xxvii. 2); and after the destruction of Berytus by an earthquake in the reign of Justinian, it monopolised the manufacture of imperial purple, which it had previously shared with that city. Beyond this period it is not necessary to pursue the history of Phoenicia. We shall only add that Tyre continued to flourish under the mild dominion of the caliphs, and that, in spite of all the violence which it suffered from the crusaders, its prosperity was not utterly annihilated till the conquest of Syria by the Ottoman Turks, A. D. 1516; a result, however, to which the discovery of the New World, and of a route to Asia by the *Cape of Good Hope*, likewise contributed.

V. Political Constitution.

Phoenicia consisted of several small independent kingdoms, or rather cities, which were sometimes united with and sometimes opposed to one another, just as we find Canaan described at the time when it was invaded by the Israelites. (Strab. xvi. p. 754; *Joshua*, x.) We have but little information respecting the constitution of these kingdoms. The throne was commonly hereditary, but the people seem to have possessed a right of election. (Justin, xviii. 4.) The chief priests exercised great power, and were next in rank to the king. Thus Sicharbas, or Sichaeus, chief priest of the temple of Hercules, was the husband of Dido, and consequently the brother-in-law of king Pygmalion. There seems also to have been a powerful aristocracy, but on what it was founded is unknown. Thus a body of nobles, who are called senators, accompanied the emigration of Dido. (Justin, *l. c.*) During the interregnum at Tyre after the servile insurrection, the government was carried on by elective magistrates, called judges or suffetes. (Joseph. *c. Ap.* i. 21.) This institution also obtained at Gades and Carthage, and probably in all the western colonies of Tyre. (Liv. xxviii. 37; comp. Movers, ii. pt. i. p. 534.) Kings existed in Phoenicia down to the time of Alexander the Great. (Arrian, ii. 24.) The federal constitution of Phoenicia resembled a Grecian hegemony: either Tyre or Sidon was always at the head, though Aradus and Byblus likewise had kings. During the earliest period of its history, Sidon appears to have been the leading city; but after its capture by the king

of Ascalon, and the emigration of its inhabitants, as already related, Tyre became dominant, and retained the supremacy till the Persian conquest. Confederations among the Phoenician cities for some common object were frequent, and are mentioned by Joshua as early as the time of Moses (xi.). Subsequently, the great council of the Phoenicians assembled on these occasions at Tripolis (Diod. xvi. 41), where, as we have already said, the three leading towns, Sidon, Tyre, and Aradus, had each its separate quarter; from which circumstance, the town derived its name. Aradus, however, does not appear to have obtained this privilege till a late period of Phoenician history, as in the time of Ezekiel it was subordinate to Tyre (xxvii. 8, sqq.); and Byblus, though it had its own king, and is sometimes mentioned as furnishing mariners, seems never to have had a voice in the confederate councils. The population of Phoenicia consisted in great part of slaves. Its military force, as might be supposed from the nature of the country, was chiefly naval; and in order to defend themselves from the attacks of the Assyrians and Persians the Phoenicians were compelled to employ mercenary troops, who were perhaps mostly Africans. (Diod. *l. c.*; *Ezekiel*, xxvii.)

VI. Religion.

The nature of the Phoenician religion can only be gathered from incidental allusions in the Greek and Roman writers, and in the Scriptures. A few coins and idols have been found in Cyprus, but connected only with the local Phoenician religion in that island. The most systematic account will be found in the *Praeparatio Evangelica* of Eusebius, where there are extracts from Sanconiatho, professed to have been translated into Greek by Philo of Byblus. It would be too long to enter here into his fanciful cosmogony, which was of an atheistic nature, and was characterised chiefly by a personification of the elements. From the wind *Kol-pia*, and *Baau*, his wife, were produced Aeon and Protogonus, the first mortals. These had three sons, Light, Fire, and Flame, who produced a race of giants from whom the mountains were named, — as Casius, Libanus, Antilibanus and Brathy, — and who with their descendants discovered the various arts of life. In later times a human origin was assigned to the gods, that is, they were regarded as deified men; and this new theology was absurdly grafted on the old cosmogony. Eliun and his wife Beruth are their progenitors, who dwelt near Byblus. From Eliun descends Ouranos (Heaven), who weds his sister Ge (Earth), and has by her four sons, Ilus (or Cronos), Betutus, Dagon, and Atlas; and three daughters, Astarte, Rhea, and Dione. Cronos, grown to man's estate, deposes his father, and puts to death his own son Sadid, and one of his daughters. Ouranos, returning from banishment, is treacherously put to death by Cronos, who afterwards travels about the world, establishing Athena in Attica and making Taut king of Egypt. (Kenrick, *Phoen.* p. 295.)

Baal and Ashtaroth, the two chief divinities of Phoenicia, were the sun and moon. The name of Baal was applied to Phoenician kings, and Belus is the first king of Assyria and Phoenicia. At a later period Baal became a distinct supreme God, and the sun obtained a separate worship (2 *Kings*, xxiii. 5). As the supreme god, the Greeks and Romans identified him with their Zeus, or Jupiter, and not with Apollo. Bel or Baal was also identified with the planet Saturn. We find his name prefixed to that of other deities, as Baal-Phegor, the god of licentiousness, Baal-Zebub, the god of flies, &c.; as well as to that of many places in which he had temples, as Baal-Gad, Baal-Hamon, &c. Groves on elevated places were dedicated to his worship, and human victims were sometimes offered to him as well as to Moloch. (*Jerem.* xix. 4, 5.) He was worshipped with fanatical rites, his votaries crying aloud, and cutting themselves with knives and lancets. Ashtaroth or Astarte, the principal female divinity, was identified by the Greeks and Romans sometimes with Juno, sometimes with Venus, though properly and originally she represented the moon. The principal seat of her worship was Sidon. She was symbolised by a heifer, or a figure with a heifer's head, and horns resembling the crescent moon. The name of Astarte was Phoenician (Ps. Lucian, *de Dea Syr.* c. 4); but she does not appear with that appellation in the early Greek writers, who regard Aphrodite, or Venus Urania, as the principal Phoenician goddess. Herodotus (i. 105, 131, iii. 8) says that her worship was transferred from Ascalon, its oldest seat, to Cyprus and Cythera, and identifies her with the Babylonian Mylitta, the character of whose worship was unequivocal. Her orginal image or symbol, like that of many of the oldest deities, was a conical stone, as in the case of the Paphian Venus (Tac. *H.* ii. 3.; Max. Tyr. *Diss.* 38), of the Cybele of Pessinus (Liv. xxix. 11), and others. In Cyprus her worship degenerated into licentiousness, but the Cyprian coins bear the primitive image of the conical stone. In Carthage, on the contrary, she appeared as a virgin, with martial attributes, and was worshipped with severe rites. She must be distinguished from Atargatis, or Derceto, who had also a temple at Ascalon, and was represented as half woman, half fish. It is characteristic of the religion of the Phoenicians, that though they adored false gods, they were not so much idolaters as the Egyptians, Greeks, and Romans, since their temples had either no representation of the deity, or only a rude symbol. The worship of Astarte seems to have been first corrupted at Babylon. Adonis, who had been wounded by the boar on Lebanon, was worshipped at Aphaca, about 7 miles E. of Byblus, near the source of the stream which bears his name, and which was said to be annually reddened with his blood. (Zosim. i. 58; Ps. Lucian, *de Dea Syr.* c. 9.) By the Phoenicians Adonis was also regarded as the sun, and his death typified the winter. His rites at Aphaca, when abolished by Constantine, were polluted with every species of abomination. (Euseb. *V. Const.* iii. 55.)

Cronos, or Saturn, is said by the Greek and Latin writers to have been one of the principal Phoenician deities, but it is not easy to identify him. Human victims formed the most striking feature of his worship; but he was an epicure difficult to please, and the most acceptable offering was an only child. (Porphyr. *de Abs.* ii. 56; Euseb. *Laud. Const.* i. 4.) His image was of bronze (Diod. xx. 14), and, according to the description of Diodorus, resembled that of Moloch or Milcom, the god of the Ammonites; but human sacrifices were offered to several Phoenician deities.

The gods hitherto described were common to all the Phoenicians; Melkarth*, whose name literally

* It is singular that the name of Melcarth read backwards is, with the exception of the second and last letters, identical with Heracles.

es "king of the city," was peculiar to the Ty- He appears in Greek mythology under the ly altered appellation of Melicertes. Cicero). iii. 16) calls the Tyrian Hercules the son of er and Asteria, that is of Baal and Ashtaroth. was a festival at Tyre called "The Awakening rcules," which seems connected with his cha- as a sun-god. (Joseph. *Ant.* viii. 5.) In emple at Gades there was no image, and his l was an ever-burning fire.

other Phoenician deity was Dagon, who had a tail, and seems to have been identical with annes of Babylonia.

Phoenician goddess Onca was identified by Greeks with Athena. One of the gates of s was named after her, and she was also wor- d at Corinth. (Euphor. *ap. Steph. Byz. s. v.*; h. *s. v.*; Tzetz. *ad Lycoph. Cass.* 658.) It is probable that the Athena Polias of Athens erived from Thebes. The Palladium of Troy so of Phoenician origin.

might be expected among a maritime people, hoenicians had several marine deities, as Po- , Nereus, and Pontus. Poseidon was wor- d at Berytus, and a marine Jupiter at Sidon. resent deities of navigation were, however, the , the seat of whose worship was also at Bery- d whose images, under the name of Pataeci, placed on the prows of Phoenician ships. l. iii. 37.) They were the sons of Hephaestos, Egyptian Phta, and were represented as ridi- little pigmaic figures. By the Greeks and s they were identified with their Anaces, and Penates. Aesculapius, who was iden- with the air, was their brother, and also had a at Berytus. (Paus. vii. 23. § 6.)

know but little of the religious rites and festivities of the Phoenicians. They prac- circumcision, which they learned from the ians; but, owing to their intercourse with the s, the rite does not seem to have been very y observed. (Herod. ii. 104; Aristoph. *Av.* We are unable to trace their speculative ns; but, as far as can be observed, they seem e been material and atheistic, and, like the Semitic nations, the Phoenicians had no idea uture state of existence.

II. MANNERS, LITERATURE, AND ART.

e commercial habits of the Phoenicians did not r their warlike spirit, and Chariton (vii. 2) ents the Tyrians as ambitious of military Their reputation for wisdom and enterprise out in the jealous and often ironical bitterness which they are spoken of by Hebrew writers. wealth and power was envied by their neigh- , who made use of their services, and abused in return. (*Ezek.* xxxviii. 2, 12; *Isaiah*, 18.) The Greeks expressed their opinion of nician subtlety by the proverb Σύροι πρὸς Φοί- (Suid.), which may be rendered by our "Set ef to catch a thief;" and their reputation for ity was marked by the saying ψεῦσμα Φοινι- , "a Phoenician lie." (Strab. iii. p. 170.) But cessful commercial nation is always liable to tations of this description. In common, and times in confusion, with Syria, Phoenicia was unced by the Romans for the corruption of its als, and as the nursery of mountebanks and mu- ns. (Hor. *Sat.* i. 2. 1; Juv. iii. 62, viii. 159; en. xv. 53.) The mimes of Tyre and Berytus were renowned far and wide. (*Exp. tot. Mundi*, Hudson, *Geogr. Min.* iii. p. 6.)

Ancient authority almost unanimously attributes the invention of an alphabet to the Phoenicians. Lucan (*Phars.* iii. 220) ascribes the use of writing to them before the invention of the papyrus in Egypt. The Phoenician Cadmus was reputed to have intro- duced the use of writing among the Ionians; and Herodotus says that he saw the Cadmean letters at Thebes. (Herod. v. 58, 59; Plin. vii. 57; Diod. v. 24; Tac. *Ann.* xi. 14; Mela. i. 12, &c.) The in- scriptions found in Thera and Melos exhibit the oldest forms of Greek letters hitherto discovered; and these islands were colonised by Phoenicians. No inscriptions have been found in Phoenicia itself; but from several discovered in Phoenician colonies — none of which, however, are older than the fourth century B.C.— the Phoenician alphabet is seen to consist, like the Hebrew, of twenty-two letters. It was probably more scanty at first, since the Greek alphabet, which was borrowed from it, consisted originally of only sixteen letters (Plin. *l. c.*); and, according to Irenaeus (*adv. Haeres.* ii. 41), the old Hebrew alphabet had only fifteen. The use of hieroglyphics in Egypt was, in all probability, older. (Tac. *l. c.*) The connection of this Phonetic system with the Phoe- nician alphabet cannot be traced with any certainty; yet it is probable that the latter is only a more simple and practical adaptation of it. The names of the Phoenician letters denote some natural object, as *aleph*, an ox, *beth*, a house, *daleth*, a door, &c., whence it has been conjectured that the figures of these objects were taken to represent the sounds of the respective letters; but the resemblance of the forms is rather fanciful.

Babylonian bricks, inscribed with Phoenician cha- racters, have long been known, and indicate the residence of Phoenicians at Babylon. In the recent discoveries at Nineveh other bricks have been found with inscriptions both in the Phoenician and cuneiform character. Phoenician inscriptions have also been discovered in Egypt, but in an Aramaean dialect. (Gesen. *Mon. Phoen.* lib. ii. c. 9.) The purest ex- amples of the Phoenician alphabet are found in the inscriptions of Malta, Athens, Cyprus, and Sardinia, and on the coins of Phoenicia and Sicily.

The original literature of the Phoenicians has wholly perished, and even in Greek translations but little has been preserved. Their earliest works seem to have been chiefly of a philosophical and theological nature. Of their two oldest writers, Sanchoniatho and Mochus, or Moschus, of Sidon, accounts will be found in the *Dictionary of Biography and My- thology*, as well as a discussion of the question re- specting the genuineness of the remains attributed to the former; on which subject the reader may also consult Lobeck (*Aglaophamus*, ii. p. 1264, sqq.), Orelli (*Sanchoniathonis Fragm.* p. xiii. sqq.), Creu- zer (*Symbolik*, pt. i. p. 110, 3rd edit.), Movers (*Die Phönizier*, i. p. 120, sqq.; and in the *Jahr- bücher für Theologie u. christl. Philosophie*, 1836, vol. vii. pt. i.), and Kenrick (*Phoenicia*, ch. xi.). Later Phoenician writers are known only under Greek names, as Theodotus, Hypsicrates, Philo- stratus, &c., and blend Greek legends with their native authorities. We learn from Josephus (*c. Apion.* i. 17) that there were at Tyre public re- cords, very carefully kept, and extending through a long series of years, upon which the later histories seem to have been founded; but unfortunately these have all perished. Thus we are deprived of the

annals of one of the oldest and most remarkable people of antiquity; and, by a perverse fate, the inventors of letters have been deprived of that benefit which their discovery has bestowed on other, and often less distinguished, nations which have borrowed it.

The arithmetical system of the Phoenicians resembled that of the Egyptians. The units were marked by simple strokes, whilst 10 was denoted either by a horizontal line or by a semicircle; 20 by the letter א; and 100 had also a special mark, with strokes for the units denoting additional hundreds. (Gesen. *Mon. Phoen.* i. 1. c. 6.) Their weights and measures were nearly the same as those of the Jews.

The Phoenicians, and more particularly the Sidonians, excelled in the glyptic and plastic arts. Their drinking vessels, of gold and silver, are frequently mentioned in Homer: as the silver vase which Achilles proposed as the reward of the victor in the funeral games in honour of Patroclus (*Iliad*, xxiii. 743), and the bowl given to Telemachus by Menelaus. (*Od.* iv. 618; comp. Strab. xvi. p. 757.) The Phoenicians probably also manufactured fictile and glass vases; but the origin of the vases called Phoenician, found in Southern Italy, rests on no certain authority. They particularly excelled in works in bronze. Thus the pillars which they cast for Solomon's temple were 18 cubits in height and 12 in circumference, with capitals 5 cubits high. From the nature of their country their architecture must have consisted more of wood than of stone; but they must have attained to great art in the preparation of the materials, since those designed for the temple of Solomon required no further labour, but only to be put together, when they arrived at Jerusalem. The internal decorations were carvings in olive-wood, cedar, and gold. The Phoenicians do not appear to have excelled in sculpture. This was probably owing to the nature of their religion. Their idols were not, like those of Greece and Rome, elaborate representations of the human form, but mere rude and shapeless stones called *Baetuli;* and frequently their temples were entirely empty. Figures of the Phoenician Venus, but of very rude sculpture, have, however, been found in Cyprus. The Phoenicians brought to great perfection the art of carving and inlaying in ivory, and the manufacture of jewellery and female ornaments, which proved of such irresistible attraction to the Grecian and Jewish women, as may be seen in the story of Eumaeus in Homer (*Od.* xv. 415), and in the indignant denunciations of Isaiah (iii. 19). They likewise excelled in the art of engraving gems. (2 *Chron.* ii. 14.) Music is said to have been an invention of the Sidonians (Sanchoniath. p. 32, ed. Orell.), and a peculiar sort of cithara was called λυροφοίνιξ. (Athen. iv. 183.)

VIII. Manufactures, Commerce, and Navigation.

The staple manufacture of Phoenicia was the celebrated purple dye; but it was not a monopoly. Ezekiel (xxvii. 7) characterises the purple dye as coming from Greece; and Egypt and Arabia also manufactured it, but of vegetable materials. The peculiarity of the Phoenician article was that it was obtained from fish of the genera buccinum and murex, which were almost peculiar to the Phoenician coast, and which even there were found in perfection only on the rocky part between the Tyrian Climax and the promontory of Carmel. The liquor is contained in a little vein or canal which follows the spiral line of these molluscs, and yields but a very small drop. The fluid, which is extracted with a pointed instrument, is of a yellowish white, or cream colour, and smells like garlic. If applied to linen, cotton, or wool, and exposed to a strong light, it successively becomes green, blue, red, and deep purple; and when washed in soap and water a bright and permanent crimson is produced. The buccinum, which is so named from its trumpet shape, is found on rocks near the shore, but the murex must be dredged in deep water. The latter, in its general form, resembles the buccinum, but is rougher and more spinous. The *Helix ianthina*, also found on the Phoenician coast, yields a similar fluid. The superiority of the Tyrian purple was owing to the abundance and quality of the fish, and probably also to some chemical secret. The best accounts of these fish will be found in Aristotle (*H. Anim.* lib. v.) and Pliny (ix. 61. s. 62); and especially in a paper of Reaumur in the *Mémoires de l'Académie des Sciences*, 1711; and of the manufacture of the purple in Amati, *De Restitutione Purpurarum*, and Don Michaele Rosa, *Dissertazione delle Porpore e delle Materie Vestiarie presso gli Antichi*. The trade seems to have been confined to Tyre, though the poets speak of Sidonian purple. (Ovid, *Tr.* iv. 2. 27.) Tyre, under the Romans, had the exclusive privilege of manufacturing the imperial purple, and decrees were promulgated prohibiting its use by all except magistrates. (Flav. Vopisc. *Aurel.* c. 45; Suet. *Nero*, 32.) The manufacture seems to have flourished till the capture of Constantinople by the Turks.

As Tyre was famed for its purple, so Sidon was renowned for its glass, which was made from the fine sand on the coast near Mount Carmel. Pliny (xxxvi. 65) describes its discovery as accidental. Some merchants who had arrived on this coast with a cargo of natron, employed some lumps of it, instead of stones, to prop up their cauldron, and the natron being melted by the heat of the fire, produced a stream of glass on the sand. It is probable, however, that the art was derived from Egypt, where it flourished in very ancient times. The Sidonians made use of the blowpipe, the lathe or wheel, and the graver. They also cast glass mirrors, and were probably acquainted with the art of imitating precious stones by means of glass. (Plin. *l. c.*) The Phoenicians were also famous for the manufacture of cloth, fine linen, and embroidered robes, as we see in the description of those brought from Sidon by Paris (πέπλοι παμποίκιλοι, ἔργα γυναικῶν Σιδονίων, *Iliad*, vi. 289), and in Scriptural allusions. (2 *Chron.* ii. 14, &c.) Phoenicia was likewise celebrated for its perfumes. (Juv. viii. 159; Plin. xi. 3. s. 2.)

Assyria and Egypt, as well as Phoenicia, had reached a high pitch of civilisation, yet the geographical position of the former, and the habits and policy of the latter, prevented them from communicating it. On the Phoenicians, therefore, devolved the beneficent task of civilising mankind by means of commerce, for which their maritime situation on the borders of Europe and Asia admirably fitted them. Their original occupation was that of mere carriers of the produce and manufactures of Assyria and Egypt (Herod. i. 1); but their maritime superiority led them to combine with it the profession of piracy, which in that age was not regarded as disgraceful. (Thucyd. i. 5; Hom. *Od.* xv. 415, &c.) They were especially noted as slave-dealers. (Herod.

ii. 54; Hom. *Od.* xiv. 285.) The importation of cloths, trinkets, &c., in Phoenician ships, is constantly alluded to in the Homeric poems; but the Phoenicians are as constantly described as a crafty deceitful race, who were ever bent on entrapping the unwary. (*Il.* vi. 290, xxiii. 743, &c.) It would be absurd, however, to suppose that they were always fraudulent in their dealings. Ezekiel (xxvii.) draws a glowing picture of their commerce and of the splendour of their vessels. From his description we may gather the following particulars. The trade of the Phoenicians with the Erythraean sea, comprised spices, myrrh, frankincense, precious stones, and gold-sand. The coast of Africa S. of *Bab-el-Mandeb* produced frankincense and spices superior to those of Arabia. The cotton garments mentioned by the prophet were probably Indian fabrics, and the "bright iron" Indian steel. Ezekiel mentions only linen as forming their trade with Egypt, but we know that they also drew their supplies of corn from thence. (*Isaiah*, xxiii. 3.) In return for these commodities, the Phoenicians supplied the Egyptians with wine, with asphalt for their embalmments, and probably with incense for their temples. (Herod. iii. 6; Diod. xix. 99.) Their traffic with Syria and Mesopotamia, besides the indigenous products of those countries, probably included Indian articles, which came by that route. Babylon, which is called by Ezekiel (xvii. 4) a city of merchants, must have been a place of great trade, and besides the traffic which it carried on by means of its canal communication with the Tigris, had manufactures of its own, especially embroideries. With Nineveh also, while it flourished, the Phoenicians must have had an extensive commerce. The neighbouring Judaea furnished them with wheat, grape-honey, oil, and balm; and from the pastoral nations of Arabia they procured sheep and goats. Proceeding to more northern regions, we find Damascus supplying them with white wool and the precious wine of Helbon. Armenia and the countries bordering on the southern and eastern shores of the Euxine—the modern *Georgia* and *Circassia*—furnished horses, mules, and slaves; also copper and the tunny fish. Phoenicia had undoubtedly great commercial intercourse with Greece, as is evident from the fact that the Grecian names for the principal objects of oriental commerce, especially spices and perfumes, were derived from the Phoenicians. (Herod. iii. 111.) In the time of Socrates a Phoenician vessel seems regularly to have visited the Peiraeeus. (Xenoph. *Oecon.* c. 8.) Tarshish, or Tartessus, the modern *Andalusia*, was the source whence the Phoenicians derived their silver, iron, tin, and lead. Silver was so abundant in this country that they substituted it for the masses of lead which served as anchors. At a later period they procured their tin from Britain. They appear also to have traded on the NW. coast of Africa as far as *Senegal*, as well as to the Fortunate Islands, or *Canaries*. They must also, of course, have carried on a great trade with their many colonies, which there will be occasion to enumerate in the following section. It is remarkable that Ezekiel always describes the nations as *bringing* their wares to the Phoenicians, and the latter are not mentioned as going forth to fetch them. The caravan trade must at that time have been in the hands of the nomad Syrian and Arabian tribes by whom the Phoenicians were surrounded, and the business of the latter consisted in distributing by voyages to the various coasts of the Mediterranean the articles which had thus been brought to them overland. (Herod. i. 1.) At a later period, however, they seem to have themselves engaged in the caravan trade, and we have already mentioned their journeys in the track of Alexander. Their pedlars, or retail dealers, probably traversed Syria and Palestine from the earliest times. (*Proverbs*, xxxi. 24; *Isaiah*, xxiii. 8.) In some foreign towns the Phoenicians had factories, or settlements for the purposes of trade. Thus the Tyrians had a fish-market at Jerusalem (*Nehemiah*, xiii. 16), chiefly perhaps for the salted tunnies which they brought from the Euxine. They had also a settlement at Memphis (Herod. ii. 112), and, after the close of the wars between the Greeks and Persians, at Athens, as already related, as well as in other places.

In their original seats on the Persian Gulf the Phoenicians used only rafts (Plin. vii. 57); but on the coasts of the Mediterranean they constructed regular vessels. In their early voyages, which combined piracy with trade, they probably employed the *penteconter*, a long and swift vessel of 50 oars. (Comp. Herod. i. 163.) The trireme, or ship of war, and *gaulos*, or tub-like merchantman adapted for stowage, which took its name from a milk-pail, were later inventions. (Ibid. iii. 136.) The excellent arrangements of a Phoenician vessel are described in a passage of Xenophon before cited. (*Oecon.* 8; cf. Heliodor. v. 18; *Isaiah*, ii. 16.) We have already described the *Pataeci*, or figure-heads of their vessels. The Phoenicians were the first to steer by observation of the stars (Plin. vii. 56; Manil. i. 297, sqq.); and could thus venture out to sea whilst the Greeks and Romans were still creeping along the coast. Astronomy indeed had been previously studied by the Egyptians and Babylonians, but the Phoenicians were the first who applied arithmetic to it, and thus made it practically useful. (Strab. xvi. 757.) Herodotus (iv. 42) relates a story that, at the instance of Neco, king of Egypt, a Phoenician vessel circumnavigated Africa, setting off from the Red Sea and returning by the Mediterranean; and though the father of history doubted the account himself, yet the details which he gives are in themselves so probable, and the assertion of the circumnavigators that they had the sun on their right hand, or to the N. of them, as must really have been the case, is so unlikely to have been invented, that there seems to be no good reason for doubting the achievement. (Comp. Rennell, *Geogr. of Herodotus*, p. 682, sqq.; Grote, *Hist. of Greece*, iii. pp. 377, sqq.)

IX. Colonies.

The foundation of colonies forms so marked a feature in Phoenician history, that it is necessary to give a general sketch of the colonial system of the Phoenicians, although an account of each settlement appears under its proper head. Their position made them a commercial and maritime people, and the nature of their country, which would not admit of a great increase of inhabitants, led them to plant colonies. Before the rise of the maritime power of the Greeks they had the command of the sea for many centuries, and their colonisation thus proceeded without interruption. Their settlements, like those of the Greeks, were of the true nature of colonies, and not, like the Roman system, mere military occupations; that is, a portion of the population migrated to and settled in these distant possessions. Hence they resembled our own colonies in America or

Australia, as distinguished from our occupation of India. A modern writer has, with much erudition and ingenuity, endeavoured to trace the progress of Phoenician colonisation from the threefold cycle of ancient myths respecting the wanderings of Bel or Baal — the Cronos of the Greeks, and patron god of Byblus and Berytus; of Astarte or Io (Venus-Urania), who was especially worshipped at Sidon; and of Melcarth or the Tyrian Hercules. (Movers, *Phoen.* vol. ii. pt. ii. ch. 2.) With these myths are combined the legends of the rape of Europa, of the wanderings of Cadmus and Harmonia, of Helen, Dido, &c. That some portion of historical truth may lie at the bottom of these myths can hardly be disputed; but a critical discussion of them would require more space than can be here devoted to the subject, and we must therefore content ourselves with giving a short sketch of what seems to be the most probable march of Phoenician colonisation.

Cyprus, which lay within sight of Phoenicia, was probably one of the first places colonised thence. Its name of Chittim, mentioned in Genesis (x.), is preserved in that of Citium, its chief town. (Cic. *Fin.* iv. 20.) Paphos and Palaepaphos, at the SW. extremity of the island, and Golgos, near the SE. point, were the chief seats of the worship of Venus-Urania, the propagation of which marked the progress of Phoenician colonisation. The origin of the colony is likewise shown by the legend of the conquest of Cyprus by Belus, king of Sidon (—"tum Belus opimum Vastabat Cyprum, et victor ditione tenebat," Virg. *Aen* i. 621, *et ib.* Serv.), who was the reputed founder of Citium, Lapathus, and other Cyprian towns. (Alex. Ephes. *in Stephan. v.* Λάπηθος.) A great many Phoenician inscriptions have been found in this island. Hence the Phoenicians seem to have proceeded to the coast of Asia Minor, the islands of the Greek Archipelago, and the coast of Greece itself. Phoenician myths and traditions are interwoven with the earliest history of Greece, and long precede the Trojan War. Such are the legends of Agenor in Cilicia, of Europa in Rhodes and Crete, of Cadmus in Thasos, Boeotia, Euboea and Thera. Rhodes seems to have been early visited by the Phoenicians; and, if it did not actually become their colony, there are at least numerous traces that they were once predominant in the island. It is mentioned in Genesis (x. 4) in connection with Citium and Tartessus. (Comp. Epiphan. *adv. Haeres.* 30 25, and Movers, vol. ii. pt. ii. p. 248, note 127.) Conon, a writer who flourished in the Augustan period, mentions that the Heliades, the ruling dynasty in Rhodes, were expelled by the Phoenicians (*Fab.* 47, *ap. Phot.* p. 187), and numerous other traditions testify their occupation of the island. Traces of the Phoenicians may also be found in Crete, though they are fainter there than at Rhodes. It is the scene of the myth of Europa, the Sidonian Astarte; and the towns of Itanos, which also bore the name of Araden (Steph. B. *s. v.* Ἰτανός; Hierocl. § 11; *Acts*, xxvii. 12), Lebena, and Phoenice, were reputed to have been founded by them. We learn from Thucydides (i. 8) that the greater part of the Cyclades were colonised by Phoenicians. There are traces of them in Cilicia, Lycia, and Caria. We have already alluded to their intimate connection with the last-named country, and Thucydides, in the passage just cited, mixes the Carians and Phoenicians together. Chios and Samos are also connected with the Phoenicians by ancient myths; and at Tenedos, Melicertes, worshipped with the sacrifice of infants, is the Tyrian Meclarth, also called Palaemon by the Greeks. (Lycophr. *Cass.* 229.) There are traces of Phoenician colonies in Bithynia, but not more eastward in the Euxine, though it cannot be doubted that their voyages extended farther. Mythological analogies indicate their presence in Imbros and Lemnos, and there are distinct historical evidences of their settlements in the neighbouring island of Thasos. Herodotus had himself beheld the gigantic traces of their mining operations there, in which they appeared to have turned a whole mountain upside-down (vi. 47). The fable ran, that they had come thither in search of Europa. (Id. ii. 44.) They had also settlements for the purposes of mining at Mount Pangaeus, on the opposite coast of Thrace. (Plin. vii. 57; Strab. xiv. p. 680.) According to Strabo (x. p. 447), Cadmus and his *Arabs* once dwelt at Chalcis in Euboea, having crossed over from Boeotia. Of the settlement of the Phoenicians in the latter country, there is historical testimony, to whatever credibility the legend of Cadmus may be entitled. (Herod. v. 57). The name of Ὄγκα, or Onca, by which Minerva was worshipped at Thebes, and which was also given to one of the city gates, was pure Phoenician. (Euphor. *ap Steph. B. s. v.*: cf. Pausan. ix. 12.) From Thebes the Cadmeans were expelled by the Argives, and retired among the Enchelees, an Illyrian people (Herod. v. 61); and Illyrius, a son of Cadmus and Harmonia, was said to have given name to their country. (Apollod. iii. 5. § 4.) The Paphians, the ancient inhabitants of Cephallenia, were the reputed descendants of Cadmus. (*Odyss.* xv. 426.)

To colonise Sicily required bolder navigation; but with the instinct of a commercial and maritime people, the Phoenicians seized its promontories and adjacent isles for the purpose of trading with the natives. (Thucyd. vi. 2.) Subsequently, however, they were gradually driven form their possessions by the growing power of the Greek colonies in that island, and were ultimately confined to its NW. corner (*Ib.*), which was the nearest point to Carthage. Daedalus, an epithet of Hephaestos, the father of the Phoenician Cabiri, is represented as flying from Crete to Sicily. (Diod. iv. 77.) The Venus of Mount Eryx was probably of Phoenician origin from the veneration paid to her by the Carthaginians. (Aelian, *H. An.* iv. 2; Athen. ix. p. 934.) An inscription found at Segesta mentions a priestess of Venus-Urania, which was the Phoenician Venus. (*Rhein. Mus.* vol. iv. p. 91.) There is some difficulty, however, with regard to the temples of this deity, from the attempts which have frequently been made to connect them with the wanderings of the Trojans after the capture of their city. Thus Dionysius of Halicarnassus (*Ant. R.* i. 20) attributes the temple of Venus at Cythera to Aeneas, whilst by Herodotus (i. 105) it is assigned to the Phoenicians. The migration of the latter to the western side of Sicily must have taken place after the year 736 B.C., the date of the arrival of the Greek colonists. There are no traces of the Phoenicians in Italy, but the islands between Sicily and Africa seem to have been occupied by them. Diodorus (v. 12) mentions Melite, or *Malta*, as a Phoenician colony. In later times, however, it was occupied by the Carthaginians, so that here, as in the rest of these islands, it is difficult to distinguish whether the antiquities belong to them, or to the Phoenicians. Farther westward we may track the

latter in Sardinia, where Claudian (*Bell. Gild.* 520) mentions Caralis as founded by the Tyrians, in contradistinction to Sulci, founded by the Carthaginians. And the coins of Aebusus (*Ivica*) seem to denote the occupation of it by the Phoenicians, since they have emblems of the Cabiriac worship.

The very early intercourse between Phoenicia and the south of Spain is attested by the mention of Tarshish, or Tartessus, in the 10th chap. of Genesis. To the same purport is the legend of the expedition of Hercules against Chrysaor, the father of Geryon, which was of course naval, and which sailed from Crete. (Herod. iv. 8; Diod. iv. 17, sqq. v. 17, &c.) The account of Diodorus leads us to conclude that this was an earlier colony than some of the intermediately situated ones. The Phoenicians had no doubt carried on a commercial intercourse with Tartessus long before the foundation of Gadeira or *Cadiz*. The date of the latter event can be ascertained with very remarkable accuracy. Velleius Paterculus (i. 2) informs us that it was founded a few years before Utica; and from Aristotle (*de Mirab. Auscult.* c. 146) we learn that Utica was founded 287 years before Carthage. Now as the latter city must have been founded at least 800 years B. C., it follows that Gadeira must have been built about eleven centuries before our aera. The temple of Hercules, or Melcarth, at this place retained, even down to the time of Silius Italicus, the primitive rites of Phoenician worship; the fane had no image, and the only visible symbol of a god was an ever-burning fire; the ministering priests were barefooted and clad in linen, and the entrance of women and swine was prohibited. (*Punic.* iii. 22, seq.) Long before this period, however, it had ceased to be a Phoenician colony; for the Phocaeans who sailed to Tartessus in the time of Cyrus, about 556 B. C., found it an independent state, governed by its own king Arganthonius. (Herod. i. 163.) Many other towns were doubtless founded in the S. of Spain by the Phoenicians; but the subsequent occupation of the country by the Carthaginians renders it difficult to determine which were Punic and which genuine Phoenician. It is probable, however, that those in which the worship of Hercules, or of the Cabiri, can be traced, as Carteia, Malaca, Sexti, &c., were of Tyrian foundation. To this early and long continued connection with Phoenicia we may perhaps ascribe that superior civilisation and immemorable use of writing which Strabo (iii. 139) observed among the Turduli and Turdetani.

Farther in the Atlantic, it is possible that the Phoenicians may have had settlements in the Cassiterides, or tin districts on the coast of *Cornwall* and the *Scilly Islands;* and that northwards they may have extended their voyages as far as the *Baltic* in search of amber. [BRITANNICAE INS. Vol. I. p. 433, seq.] (Comp. Heeren, *Researches, &c.* ii. pp. 53, 68.) But these points rest principally on conjecture. There are more decided traces of Phoenician occupation on the NW. or Atlantic coast of Africa. Abyla, like Calpe, was one of the Pillars of Hercules, and his temple at Lixus in Mauretania was said to be older even than that at Gadeira. (Plin. xix. 4. s. 22.) Tinge was founded by Antaeus, with whom Hercules is fabled to have combated (Mela, i. 5; Strab. iii. p. 140); and the Sinus Emporicus (κόλπος Ἐμπορικός, Strab. xvii. 827), on the W. coast of Mauretania, seems to have been so named from the commercial settlements of the Phoenicians. Cerne was the limit of their voyages on this coast; but the situation of Cerne is still a subject of discussion. [CERNE.]

With regard to their colonies on the N. or Mediterranean coast of Africa, Strabo (i. p. 48) tells us that the Phoenicians occupied the middle parts of Africa soon after the Trojan War, and they were probably acquainted with it much sooner. Their earliest recorded settlement was Itace, or Utica, on the western extremity of what was afterwards called the gulf of Carthage, the date of which has been already mentioned. Pliny (xvi. 79) relates that the cedar beams of the temple of Apollo at Utica had lasted since its foundation, 1178 years before his time; and as Pliny wrote about 78 years after the birth of Christ, this anecdote corroborates the date before assigned to the foundation of Gades and Utica. The Phoenicians also founded other towns on this coast, as Hippo, Hadrumetum, Leptis, &c. (Sall. *Jug.* c. 19), and especially Carthage, on which it is unnecessary to expatiate here. [CARTHAGO.]

The principal modern works on Phoenicia are, Bochart's *Geographia Sacra*, a performance of unbounded learning, but the conclusions of which, from the defective state of critical and ethnographical science at the time when it was written, cannot always be accepted; Gesenius, *Monumenta Phoenicia;* Movers, article *Phönizien*, in Ersch and Gruber's *Encyclopädie*, and especially his work *Die Phönizier*, of which two volumes are published, but which is still incomplete; and Mr. Kenrick's *Phoenicia*, 8vo. London, 1855, to which the compiler of this article is much indebted The reader may also consult with advantage Hengstenberg, *De Rebus Tyriorum*, Berlin, 1832, and *Beiträge zur Einleitung in das Alte Testament*; Heeren, *Historical Researches, &c.* vol. ii. Oxford, 1833; Grote, *History of Greece*, vol. iii. ch. 18; Forbiger, *Handbuch der alten Geographie*, vol. ii. p. 659, sqq.; Russegger, *Reisen;* Burckhardt, *Syria;* Robinson, *Biblical Researches*, &c. [T. H. D.]

PHOENI'CE. [PHILA.]

PHOENI'CIS. [MEDEON, No. 3.]

PHOENI'CIUS MONS. [BOEOTIA, p. 412, a.]

PHOENI'CUS (Φοινικοῦς). 1. A port of Ionia, at the foot of Mount Mimas. (Thucyd. viii. 34.) Livy (xxxvi. 45) notices it in his account of the naval operations of the Romans and their allies against Antiochus (comp. Steph. B. *s. v.*); but its identification is not easy, Leake (*Asia Minor*, p. 263) regarding it as the same as the modern port of *Tshesme*, and Hamilton (*Researches*, ii. p. 5) as the port of *Egri-Limen*.

2. A port of Lycia, a little to the east of Patara; it was scarcely 2 miles distant from the latter place, and surrounded on all sides by high cliffs. In the war against Antiochus a Roman fleet took its station there with a view of taking Patara. (Liv. xxxvii. 16.) Beaufort (*Karamania*, p. 7) observes that Livy's description answers accurately to the bay of *Kalamaki*. As to Mount Phoenicus in Lycia, see OLYMPUS, Vol. II. p. 480. [L. S.]

PHOENI'CUS. [PHYCUS.]

PHOENI'CUS (Φοινικοῦς λίμην, Strab. xvii. p. 799; Ptol. iv. 5. § 7; *Stadiasm.* § 12), a harbour of Marmarica, off which there were the two islands DIDYMAE, which must not be confounded with those which Ptolemy (iv. 5. § 76) places off the Chersonesus Parva on the coast of Aegypt. Its position must be sought between PNIGEUS (Πνίγευς,

Strab. *l. c.*; Ptol. *l. c.*; *Stadiasm. l. c.*), which is identified with *Râs Tanhub*, and *Râs-al-Kanaîs*. [E.B.J.]

PHOENI'CUS PORTUS (λιμὴν Φοινικοῦς). 1. A harbour of Messenia, W. of the promontory Acritas, and in front of the islands of Oenussae. It seems to be the inlet of the sea opposite the E. end of the island *Skhiza*, which island is called by the Italians *Capri*, or *Cabrera*. (Paus. iv. 34. § 12; Leake, *Morea*, vol. i. p. 434.)

2. A harbour in the island of Cythera. [Vol. I. p. 738, b.]

PHOENICU'SA. [AEOLIAE INSULAE.]

PHOENIX (Φοίνιξ). 1. A river of Malis, flowing into the Asopus, S. of the latter, and at the distance of 15 stadia from Thermopylae. (Herod. vii. 198; Strab. ix. p. 428; Leake, *Northern Greece*, vol. ii. p. 32.)

2. A river of Thessaly, flowing into the Apidanus. (Vibius Sequest. p. 16; Plin. iv. 8. s. 15; Lucan, vi. 374; Leake, *Northern Greece*, vol. iv. p. 515.)

3. A small river of Achaia. [Vol. I. p. 13, b.]

PHOETEIAE. [PHYTIA.]

PHOEZON. [MANTINEIA, p. 264, a.]

PHOLEGANDROS (Φολέγανδρος, Strab. x. p. 484, seq.: Steph. B. *s. v.*; Φολέκανδρος or Φελόκανδρος, Ptol. iii. 15. § 31: *Eth.* Φολεγάνδριος, Φολεγανδρῖνος: *Polykandro*), an island in the Aegaean sea, and one of the smaller of the Cyclades, lying between Melos and Sicinos. It was said to have derived its name from a son of Minos. (Steph. B. *s. v.*) It was called the iron Pholegandros by Aratus, on account of its ruggedness, but it is more fertile and better cultivated than this epithet would lead one to suppose. The modern town stands upon the site of the ancient city, of which there are only a few remains, upon the northern side of the island. (Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 146.)

PHO'LOE. [ELIS, p. 817.]

PHO'RBIA. [MYCONOS.]

PHOTICE (Φωτική), a city in Epeirus, mentioned only by later writers, was restored by Justinian. Procopius says that it originally stood in a marshy situation, and that Justinian built a citadel upon a neighbouring height. It is identified by *Velá*, in the ancient Molossis, which now gives title to a bishop, but there are no Hellenic remains at this place. (Procop. iv. 1; Hierocl. p. 652, with Wesseling's note: Leake, *Northern Greece*, vol. iv. p. 96.)

PHRA (Φρά, Isidor. *Mans. Parth.* c. 16), a town in Ariana, mentioned by Isidorus in his brief summary of the principal stations between Mesopotamia and Arachosia. There can be little doubt that this place corresponds with the *Ferrah* or *Furrah* of modern times (Wilson, *Ariana*, p. 153), on the river called the *Ferrah-rud*. Ritter (viii. p. 120) has supposed that this is the same place which Ptolemy mentions by the name of Pharazana, in Drangiana (vi. 19. § 5); and Droysen (ii. p. 610) imagines that it is the same as the Phrada of Stephanus B., which was also a city of Drangiana. Both conjectures are probable. [V.]

PHRAATA (τὰ Φράατα, Appian. *Parth.* pp. 80, 99, ed. Schw.; Πράασπα, Dion Cass. xlix. 25; Steph. B. *s. v.*; Φαράσπα, Ptol. vi. 2. § 10), a place in ancient Media, which seems to have served as a winter residence for the Parthian kings, and at the same time as a stronghold in the case of need. Its position is doubtful. Forbiger imagines that it is the same as the citadel described by Strabo, under the name of Vera (xi. p. 523); and there seems some ground for supposing that it is really the same place. If the name Phraata be the correct one, it is likely that it derived its name from Phraates. (Plut. *Anton.* c. 38.) (See Rawlinson *On the Atropatenian Ecbatana*, *R. Geog. Journ.* vol. x. part 1, 1840.) [V.]

PHRAGANDAE. [MAEDI.]

PHREATA (Φρέατα), that is, the Wells, a place in the district of Garsauritis in Cappadocia. (Ptol. v. 6. § 14.) The name is an indication of the fact noticed by ancient writers, that the country had a scanty supply of water. (Wesseling, *ad Hierocl.* p. 700.) [L. S.]

PHRI'CIUM (Φρίκιον), a mountain of Locris, above Thermopylae. (Strab. xiii. pp. 582, 621; Steph. B. *s. v.*)

PHRICONIS. [CYME.]

PHRIXA (Φρίξα, Paus. et alii; Φρίξαι, Herod. iv. 148: *Eth.* Φριξαῖος), a town of Triphylia in Elis, situated upon the left bank of the Alpheius, at the distance of 30 stadia from Olympia. (Strab. viii. p. 343; Steph. B. *s. v.*) It was founded by the Minyae (Herod. *l. c.*), and its name was derived from Phaestus. (Steph. B. *s. v.* Μάκιστος.) Phrixa is rarely mentioned in history; but it shared the fate of the other Triphylian cities. (Comp. Xen. *Hell.* iii. 2. § 30; Polyb. iv. 77, 80.) Its position is determined by Pausanias, who says that it was situated upon a pointed hill, opposite the Leucanias, a tributary of the Alpheius, and at a ford of the latter river. (Paus. vi. 21. § 6.) This pointed hill is now called *Paleofánaro*, and is a conspicuous object from both sides of the river, whence the city received the name of Phaestus in later times. (Steph. B. *s. v.* Φαιστός.) The city was in ruins in the time of Pausanias, who mentions there a temple of Athena Cydonia. Upon the summit of the hill there are still remains of Hellenic walls. (Leake, *Morea*, vol. ii. p. 210; Boblaye, *Récherches &c.* p. 136: Ross, *Reisen im Peloponnes*, p. 108; Curtius, *Peloponnesos*, vol. ii. p. 90.)

PHRIXUS (Φρίξος), a tributary of the Erasinus, in the Argeia. [ARGOS, p. 201, a.]

PHRUDIS. [FRUDIS.]

PHRURI (Φροῦροι), a Scythian people in Serica, described as cannibals. (Plin. vi. 17. s. 20; Dionys. Per. 752, and Eustath. *ad loc.*)

PHRY'GIA (Φρυγία: *Eth.* Φρύγες, Phryges), one of the most important provinces of Asia Minor. Its inhabitants, the Phrygians, are to us among the most obscure in antiquity, at least so far as their origin and nationality are concerned. Still, however, there are many indications which seem calculated to lead us to definite conclusions. Some regard them as a Thracian tribe (Briges or Bryges), who had immigrated into Asia; others consider them to have been Armenians; and others, again, to have been a mixed race. Their Thracian origin is mentioned by Strabo (vii. p. 295, x. p. 471) and Stephanus B. (*s. v.*); and Herodotus (vii. 73) mentions a Macedonian tradition, according to which the Phrygians, under the name of Briges, were the neighbours of the Macedonians before they migrated into Asia. This migration, according to Xanthus (*ap. Strab.* xiv. p. 680), took place after the Trojan War, and according to Conon (*ap. Phot. Cod.* p. 130, ed. Bekk.) 90 years before that war, under king Midas. These statements, however, can hardly refer to an original migration of the Phrygians from Europe into Asia, but the migration spoken of by these authors seems to refer rather to the return to Asia of a portion of

the nation settled in Asia; for the Phrygians are not only repeatedly spoken of in the Homeric poems (*Il.* ii. 862, iii. 185, x. 431, xvi. 717, xxiv. 535), but are generally admitted to be one of the most ancient nations in Asia Minor (see the story in Herod. ii. 2), whence they, or rather a portion of them, must at one time have migrated into Europe; so that in our traditions the account of their migrations has been reversed, as in many other cases. The geographical position of the Phrygians points to the highlands of Armenia as the land of their first abode, and the relationship between the Phrygians and Armenians is attested by some singular coincidences. In the army of Xerxes these two nations appear under one commander and using the same armour; and Herodotus (vii. 73) adds the remark that the Armenians were the descendants of the Phrygians. Eudoxus (*ap. Steph. B. s. v.* Ἀρμενία, and *Eustath. ad Dion. Per.* 694) mentions the same circumstance, and moreover alludes to a similarity in the languages of the two peoples. Both are said to have lived in subterraneous habitations (Vitruv. ii. 1; Xenoph. *Anab.* iv. 5. § 25; Diod. xiv. 28); and the names of both, lastly, are used as synonyms. (*Anecd. Graec. Oxon.* iv. p. 257, ed. Cramer.) Under these circumstances it is impossible not to come to the conclusion that the Phrygians were Armenians; though here, again, the account of their migration has been reversed, the Armenians not being descended from the Phrygians, but the Phrygians from the Armenians. The time when they descended from the Armenian highlands cannot be determined, and unquestionably belongs to the remotest ages, for the Phrygians are described as the most ancient inhabitants of Asia Minor. (Paus. i. 14. § 2; Claudian, *in Eutrop.* ii. 251, &c.; Appulei. *Metam.* xi. p. 762, ed. Oud.) The Phrygian legends of a great flood, connected with king Annacus or Nannacus, also are very significant. This king resided at Iconium, the most eastern city of Phrygia; and after his death, at the age of 300 years, a great flood overwhelmed the country, as had been foretold by an ancient oracle. (Zosim. vi. 10; Suid. *s. v.* Νάννακος; Steph. B. *s. v.* Ἰκόνιον; comp. Ov. *Met.* viii. 620, &c.) Phrygia is said to have first risen out of the flood, and the ark and Mount Ararat are mentioned in connection with the Phrygian town of Celaenae. After this the Phrygians are said to have been the first to adopt idolatry. (*Orac. Sibyll.* i. 196, 262, 266, vii. 12—15.) The influence of the Old Testament upon these traditions is unmistakable, but the identity of the Phrygians and Armenians is thereby nevertheless confirmed. Another argument in favour of our supposition may be derived from the architectural remains which have been discovered in modern times, and are scarcely noticed at all by the ancient writers. Vitruvius (ii. 1) remarks, that the Phrygians hollowed out the natural hills of their country, and formed in them passages and rooms for habitations, so far as the nature of the hills permitted. This statement is most fully confirmed by modern travellers, who have found such habitations cut into rocks in almost all parts of the Asiatic peninsula. (Hamilton, *Researches*, ii. p. 250, 288; Texier, *Description de l'Asie Mineure*, i. p. 210, who describes an immense town thus formed out of the natural rock.) A few of these architectural monuments are adorned with inscriptions in Phrygian. (Texier and Steuart, *A Description of some ancient Monuments with Inscriptions still existing in Lydia and Phrygia*, London, 1842.) These inscriptions must be of Phrygian origin, as is attested by such proper names as Midas, Ates, Aregastes, and others, which occur in them, though some have unsuccessfully attempted to make out that they are Greek. The impression which these stupendous works, and above all the rock-city, make upon the beholder, is that he has before him works executed by human hands at a most remote period, not, as Vitruvius intimates, because there was a want of timber, but because the first robust inhabitants thought it safest and most convenient to construct such habitations for themselves. They do not contain the slightest trace of a resemblance with Greek or Roman structures; but while we assert this, it cannot be denied, on the other hand, that they display a striking resemblance to those structures which in Greece we are in the habit of calling Pelasgian or Cyclopian, whence Texier designates the above mentioned rock-city (near *Boghaigkieui*, between the Halys and Iris) by the name of a Pelasgian city. (Comp. Hamilton, *Researches*, i. pp. 48, 490, ii. pp. 226, &c., 209.) Even the lion gate of Mycenae reappears in several places. (Ainsworth, *Travels and Researches*, ii. p. 58; Leake, *Asia Minor*, p. 28.) These facts throw a surprising light upon the legend about the migration of the Phrygian Pelops into Argolis, and the tombs of the Phrygians in Peloponnesus, mentioned by Athenaeus (xiv. p. 625). But yet much remains to be done by more systematic exploration of the countries in Asia Minor, and by the interpretation of their monuments. One conclusion, however, can even now be arrived at, viz. that there must have been a time when the race of the Phrygians formed, if not the sole population of Asia Minor, at least by far the most important, bordering in the east on their kinsmen, the Armenians, and in the south-east on tribes of the Semitic race. This conclusion is supported by many facts derived from ancient writers. Independently of several Greek and Trojan legends referring to the southern coasts of Asia Minor, the name of the Phrygian mountain Olympus also occurs in Cilicia and Lycia; the north of Bithynia was in earlier times called Bebrycia, and the town of Otroia on the Ascanian lake reminds us of the Phrygian chief Otreus. (Hom. *Il.* iii. 186.) In the west of Asia Minor, the country about Mount Sipylus was once occupied by Phrygians (Strab. xii. p. 571); the Trojan Thebe also bore the name Mygdonia, which is synonymous with Phrygia (Strab. xiii. p. 588); Mygdonians are mentioned in the neighbourhood of Miletus (Aelian, *V. H.* viii. 5); and Polyaenus (*Strateg.* viii. 37) relates that the Bebryces, in conjunction with the Phocaeans, carried on war against the neighbouring barbarians.

From all this we infer that Trojans, Mysians, Maeonians, Mygdonians, and Dolionians were all branches of the great Phrygian race. In the Iliad the Trojans and Phrygians appear in the closest relation, for Hecuba is a Phrygian princess (xvi. 718), Priam is the ally of the Phrygians against the Amazons (iii. 184, &c.), the name Hector is said to be Phrygian (Hesych. *s. v.* Δαρεῖος), and the names Paris and Scamandrius seem likewise to be Phrygian for the Greek Alexander and Astyanax. It is also well known that both the Greek and Roman poets use the names Trojan and Phrygian as synonyms. From the Homeric hymn on Aphrodite (113) it might be inferred that Trojans and Phrygians spoke different languages; but that passage is equally clear, if it is taken as alluding

only to a dialectic difference. Now as the Trojans throughout the Homeric poems appear as a people akin to the Greeks, and are even called Hellenes by Dionysius of Halicarnassus (*Ant. Rom.* i. 61), it follows that the Phrygians also must have been related to the Greeks. This, again, is further supported by direct evidence; for, looking apart from the tradition about Pelops, which we have already alluded to, king Midas is said to have been the first of all foreigners to have dedicated, about the middle of the eighth century B. C., a present to the Delphic oracle (Herod. i. 14); and Plato (*Cratyl.* p. 410) mentions several words which were common to the Greek and Phrygian languages. (Comp. Jablonski, *Opera*, vol. iii. p. 64, &c. ed. Te Water.); and, lastly, the Armenian language itself is now proved to be akin to the Greek. (Schroeder, *Thesaur. Ling. Arm.* p. 51.) The radical identity of the Phrygians, Trojans, and Greeks being thus established, we shall proceed to show that many other Asiatic nations belonged to the same stock. The name of the Mygdonians, as already observed, is often used synonymously with that of the Phrygians (Paus. x. 27. § 1), and in Homer (*Il.* iii. 186) the leader of the Phrygians is called Mygdon. According to Stephanus B. (*s. v.* Μυγδονία), lastly, Mygdonia was the name of a district in Great Phrygia, as well as of a part of Macedonia. The Doliones, who extended westward as far as the Aesepus, were separated from the Mygdonians by the river Rhyndacus. (Strab. xiv. p. 681; Schol. *ad Apollon. Rhod.* i. 936, 943, 1115.) At a later time they disappear from history, their name being absorbed by that of the Phrygians. The Mysians are easily recognisable as a Phrygian people, both from their history and the country they inhabited. They, too, are called Thracians, and their language is said to have been a mixture of Phrygian and Lydian (Strab. xii. p. 572), and Mysians and Phrygians were so intermingled that their frontiers could scarcely be distinguished. (Strab. xii. p. 564; Eustath. *ad Hom. Il.* ii. 862, *ad Dionys. Per.* 810; Suid. *s. v.* οὐδὲν ἧττον.) As to the Maeonians, see LYDIA. The tribes of Asia Minor, which are usually designated by the name Pelasgians, thus unquestionably were branches of the great Phrygian stock, and the whole of the western part of the peninsula was thus inhabited by a variety of tribes all belonging to the same family. But the Phrygians also extended into Europe, where their chief seats were in the central parts of Emathia. (Herod. viii. 138; comp. Strab. xiv. p. 680.) There we meet with Phrygians, or with a modification of their name, Brygians, in all directions. Mardonius, on his expedition against Greece, met Brygians in Thrace. (Herod. vi. 45; Steph. B. *s. v.* Βρύκαι; Plin. iv. 18, where we have probably to read Brycae for Brysae.) The Phrygian population of Thrace is strongly attested by the fact that many names of places were common to Thrace and Troas. (Strab. xiii. p. 590; comp. Thucyd. ii. 99; Suid. *s. v.* Θάμυρις; Solin. 15; Tzetz. *Chil.* iii. 812.) Traces of Phrygians also occur in Chalcidice. (Lycoph. 1404; Steph. B. *s. v.* Κρουσίς.) Further south they appear about Mount Oeta and even in Attica. (Thucyd. ii. 22; Strab. xiii. p. 621; Steph. B. *s. v.* Φρυγία and Φρίκιον; Eustath. *ad Dionys. Per.* 810.) Mount Olympus, also, was perhaps only a repetition of the Phrygian name. In the west of Edessa in Macedonia, about lake Lychnidus, we meet with Bryges (Strab. vii. pp. 326, 327; Steph. B. *s. v.* Βρύξ), and in the same vicinity we have the towns of Brygion, Brygias, and Mutatio Brucida. (Steph. B. *s. vv.*; *It. Hieros.* p. 607.) The westernmost traces of Brygians we find about Dyrrhachium. (Strab. *l. c.*; Appian, *Bell. Civ.* ii. 39; Scymn. 433, 436.) It is difficult to determine how far Phrygian tribes extended northward. The country beyond the eastern part of Mount Haemus seems to have been occupied at all times by Thracians; but Phrygians extended very far north on both sides of Mount Scardus, for PANNONIA and MOESIA seem to be only different forms for PAEONIA and MYSIA; and the Breucae on the Savus also betray their origin by their name. It is possible also that the DARDANI were Phrygians, and descendants of the Teucrians in Troas; at least they are clearly distinguished from the Illyrians. (Polyb. ii. 6.) Strabo, lastly, connects the Illyrian Henetes with those of Asia Minor who are mentioned by Homer (*Il.* ii. 852), and even the Dalmatians are in one passage described as Armenians and Phrygians. (Cramer, *Anecd. Graec. Ox.* iii. p. 257.) If we sum up the results thus obtained, we find that at one time the Phrygians constituted the main body of the population of the greater part of Thrace, Macedonia, and Illyricum. Allusions to their migrations into these countries are not wanting, for, independently of the traditions about the migrations of the Teucrians and Mysians (Herod. v. 13, vii. 20; Strab. *Fragm.* 37; Lycophr. 741, &c.), we have the account of the migration of Midas to the plains of Emathia, which evidently refers to the same great event. (Athen. xv. p. 603; Lycoph. 1397, &c.)

The great commotions which took place in Asia and Europe after the Trojan War were most unfortunate for the Phrygians. In Europe the Illyrians pressed southwards, and from the north-east the Scytho-Thracian tribes pushed forward and occupied almost all the country east of the river Axius; Hellenic colonies were established on the coasts, while the rising state of the Macedonians drove the Phrygians from Emathia. (Syncell. pp. 198, 261; Justin, viii. 1.) Under such circumstances, it cannot surprise us to find that the great nation of the Phrygians disappeared from Europe, where the Paeonians and Pannonians were their only remnants. It is probable that at that time many of them migrated back to Asia, an event dated by Xanthus ninety years before the Trojan War. It must have been about the same time that Lesser Mysia and Lesser Phrygia were formed in Asia, which is expressed by Strabo (xii. pp. 565, 571, 572, xiii. p. 586) in his statement that the Phrygians and Mysians conquered the ruler of the country, and took possession of Troas and the neighbouring countries.

But in Asia Minor, too, misfortunes came upon the Phrygians from all quarters. From the south-east the Semitic tribes advanced further and further; Diodorus (ii. 2, &c.) represents Phrygia as subdued even by Ninus; but it is an historical fact that the Syrian Cappadocians forced themselves between the Armenians and Phrygians, and thus separated them. (Herod. i. 72, v. 49, vii. 72.) Strabo also (xii. p. 559) speaks of structures of Semiramis in Pontus. The whole of the south coast of Asia Minor, as far as Caria, received a Semitic population at a very early period; and the ancient Phrygian or Pelasgian people were in some parts reduced to the condition of Helots. (Athen. iv. p. 271.) The latest of these Syrophoenician immigrants seem to have been the Lydians [LYDIA], whose struggles with the Mysians are expressly mentioned. (Strab. xiii. p. 612; Scylax, p. 36.) This victorious progress of the

Semitic races exercised the greatest influence upon the Phrygians; for not only was their political importance weakened, but their national independence was lost, and their language and religion were so deeply affected that it is scarcely possible to separate the foreign elements from what is original and indigenous. In the north also the Phrygians were hard pressed, for the same Thracians who had driven them out of Europe, also invaded Asia; for although Homer does not distinctly mention Thracians in Asia, yet, in the historical ages, they occupied the whole coast from the Hellespont to Heracleia, under the names of Thyni, Bithyni, and Mariandyni. (Comp. Herod. vii. 75.) The conflicts between the ancient Phrygians and the Thracians are alluded to in several legends. Thus king Midas killed himself when the Treres ravaged Asia Minor as far as Paphlagonia and Cilicia (Strab. i. p. 61); the Mariandyni are described as engaged in a war against the Mysians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apollod. i. 9. § 23, ii. 5. § 9; Apollon. Rhod. ii. 752, 780, 786, with the Schol.; Tzetz. *Chil.* iii. 808, &c.) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, according to others, only five years, and which is assigned to the beginning of the ninth century B. C., is probably connected with that age in which the Phrygians were engaged in perpetual wars (Diod. vii. 13; Syncell. p. 181); and it may have been about the same time that Phrygians from the Scamander and from Troy migrated to Sicily. (Paus. v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the coast of Asia Minor counteracted the spreading influence of the Semitic race; but still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the peninsula, and Croesus incorporated them with his own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are already distinguished (Xenoph. *Cyrop.* i. 5. § 3, vi. 2. § 10, vii. 4. § 16, viii. 6. § 7), the former being governed by a satrap (ii. 1. § 5), and the latter, also called Phrygia on the Hellespont, by a king. (vii. 4. § 8).

After having thus reached the period of authentic history, we are enabled to turn our attention to the condition of the Phrygians, and the country which they ultimately inhabited. As to the name Phryges, of which Bryges, Briges, Breuci, Bebryces, and Berecynthae are only different forms, we are informed by Hesychius (*s. v.* Βρίγες) that in the language of the kindred Lydians (that is, Maeonians) it signified "freemen." The nation bearing this name appears throughout of a very peaceable disposition, and unable to resist foreign impressions and influences. None of their many traditions and legends points to a warlike or heroic period in their history, but all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordius. After the conquest of their country by Persia, the Phrygians are generally mentioned only with contempt, and the Phrygian names Midas and Manes were given to slaves. (Cic. *p. Flacc.* 27; Curt. vi. 11; Strab. vii. p. 304.) But their civilisation increased in consequence of their peaceful disposition. Agriculture was their chief occupation; and whoever killed an ox or stole agricultural implements was put to death. (Nicol. Damasc. p. 148, ed. Orelli.) Gordius, their king, is said to have been called from the plough to the throne. (Arrian, *Anab.* ii. 3. § 1; Justin, xii. 7.) Pliny (vii. 6) calls the biga an invention of the Phrygians. Great care also was bestowed upon the cultivation of the vine; and commerce flourished among them in the very earliest times, as we must infer from their well-built towns mentioned by Homer (*Il.* iii. 400). The foundation of all their great towns, which were at the same time commercial emporia, belongs to the mythical ages, as, e. g., Pessinus, Gordium, Celaenae, and Apamea. The religious ideas of the Phrygians are of great interest and importance, and appear to have exercised a greater influence upon the mythology of the Greeks than is commonly supposed, for many a mysterious tradition or legend current among the Greeks must be traced to Phrygia, and can be explained only by a reference to that country. Truly Phrygian divinities were Cybele (Rhea or Agdistis), and Sabazius, the Phrygian name for Dionysus. (Strab. x. p. 470, &c.) With the worship of these deities were connected the celebrated orgiastic rites, accompanied by wild music and dances, which were subsequently introduced among the Greeks. Other less important divinities of Phrygian origin were Olympus, Hyagnis, Lityerses, and Marsyas. It also deserves to be noticed that the Phrygians never took or exacted an oath. (Nicol. Damasc. p. 148.) But all that we hear of the religion of the Phrygians during the historical times appears to show that it was a mixture of their own original form of worship, with the less pure rites introduced by the Syro-Phoenician tribes.

The once extensive territory inhabited by the Phrygians, had been limited, as was observed above, at the time of the Persian dominion, to LESSER PHRYGIA, on the Hellespont, and GREATER PHRYGIA. It is almost impossible accurately to define the boundaries of the former; according to Scylax (p. 35; comp. Pomp. Mela, i. 19) it extended along the coast of the Hellespont from the river Cius to Sestus; but it certainly embraced Troas likewise, for Ptolemy marks the two countries as identical. Towards the interior of the peninsula the boundaries are not known at all, but politically as a province it bordered in the east on Bithynia and Great Phrygia, and in the south on Lydia. GREAT PHRYGIA formed the central country of Asia Minor, extending from east to west about 40 geographical miles, and from south to north about 35. It was bounded in the north by Bithynia and Paphlagonia, and in the east by Cappadocia and Lycaonia, the river Halys forming the boundary. (Herod. v. 52.) The southern frontier towards Pisidia and Cilicia was formed by Mount Taurus; in the west Mounts Tmolus and Messogis extend to the western extremity of Mount Taurus: but it is almost impossible to define the boundary line towards Mysia, Lydia, and Caria, the nationalities not being distinctly marked, and the Romans having intentionally obliterated the ancient landmarks. (Strab. xii. p. 564, xiii. p. 629.) The most important part in the north of Phrygia was the fertile valley of the Sangarius, where Phrygians lived in the time of Homer (*Il.* iii. 187, xvi. 719), and where some of their most important cities were situated. Iconium, the easternmost city of Phrygia, was situated in a fertile district; but the country to the north-west of it, with the salt lake Tatta, was barren and cold, forming a high plateau, which was only fit for pasture, and suffered from frequent droughts. The southern portion of Phrygia, surrounded by Mount Taurus, a

branch of it turning to the north-west, and by the mountains containing the sources of the Maeander, bore the surname PARORIOS; it was a table-land, but, to judge from the many towns it contained, it cannot have been as barren as the northern plateau. In the west Phrygia comprised the upper valley of the Maeander, and it is there that we find the most beautiful and most populous parts of Phrygia; but that district was much exposed to earthquakes in consequence of the volcanic nature of the district, which is attested by the hot-springs of Hierapolis, and the Plutonium, from which suffocating exhalations were sent forth. (Claudian, *in Eutrop.* ii. 270, &c.; Strab. xii. pp. 578, &c., 629, &c.; Herod. vii. 30; Vitruv. viii. 3.)

Phrygia was a country rich in every kind of produce. Its mountains seem to have furnished gold; for that metal plays an important part in the legends of Midas, and several of the Phrygian rivers are called "auriferi." (Claudian, *l. c.* 258.) Phrygian marble, especially the species found near Synnada, was very celebrated. (Strab. xii. p. 579; Paus. i. 18. § 8, &c.; Ov. *Fast.* v. 529; Stat. *Silv.* i. 5. 36.) The extensive cultivation of the vine is clear from the worship of Dionysus (Sabazius), and Homer (*Il.* iii. 184) also gives to the country the attribute ἀμπελόεσσα. The parts most distinguished for their excellent wine, however, were subsequently separated from Phrygia and added to neighbouring provinces. But Phrygia was most distinguished for its sheep and the fineness of their wool (Strab. xii. p. 578). King Amyntas is said to have kept no less than 300 flocks of sheep on the barren table-land, whence we must infer that sheep-breeding was carried on there on a very large scale. (Comp. Suid. *s. v.* Φρυγίων ἐρίων; Aristoph. *Av.* 493; Strab. *l. c.* p. 568.)

When Alexander had overthrown the Persian power in Asia Minor, he assigned Great Phrygia to Antigonus, B. C. 333 (Arrian, *Anab.* i. 29); and during the first division of Alexander's empire that general retained Phrygia, to which were added Lycia and Pamphylia, while Leonnatus obtained Lesser Phrygia. (Dexipp. *ap. Phot.* p. 64; Curt. x. 10; Diod. xviii. 3; Justin, xiii. 4.) In the beginning of B. C. 321, Perdiccas assigned Greater Phrygia, and probably also the Lesser, to Eumenes (Justin, xiii. 6: Corn. Nep. *Eum.* 3); but in the new division of Triparadisus Antigonus recovered his former provinces, and Arrhidaeus obtained Lesser Phrygia, which, however, was taken from him by Antigonus as early as B. C. 319. (Diod. xviii. 39, xix. 51, 52, 75; Arrian, *ap. Phot.* p. 72.) After the death of Antigonus, in B. C. 301, Lesser Phrygia fell into the hands of Lysimachus, and Great Phrygia into those of Seleucus (Appian, *Syr.* 55), who, after conquering Lysimachus, in B. C. 282, united the two Phrygias with the Syrian empire. (Appian, *Syr.* 62; Justin, xvii. 2; Memnon, *Hist. Heracl.* 9.) Soon two other kingdoms, Bithynia and Pergamum, were formed in the vicinity of Phrygia, and the Gauls or Galatae, the most dangerous enemy of the Asiatics, took permanent possession of the north-eastern part of Phrygia, the valley of the Sangarius. Thus was formed Galatia, which in our maps separates Greater Phrygia from Paphlagonia and Bithynia; and the ancient towns of Gordium, Ancyra, and Pessinus now became the seats of the Gauls. To the east also Phrygia lost a portion of its territory, for Lycaonia was extended so far westward as to embrace the whole of the above mentioned barren plateau. (Strab. xiv. p. 663.) It is not impossible that Attalus I. of Pergamum may have taken possession of Lesser Phrygia as early as B. C. 240, when he had gained a decisive victory over the Gauls, seeing that the Trocmi, one of their tribes, had dwelt on the Hellespont (Liv. xxxviii. 16); but his dominion was soon after reduced by the Syrian kings to its original dimensions, that is, the country between the Sinus Elaeus and the bay of Adramyttium. However, after the defeat of Antiochus in the battle of Magnesia, in B. C. 191, Eumenes II. of Pergamum obtained from the Romans the greater part of Asia Minor and with it both the Phrygias. (Strab. xiii. p. 624; Liv. xxxvii. 54, &c.) Eumenes on that occasion also acquired another district, which had been in the possession of Prusias, king of Bithynia. Livy (xxxviii. 39) calls that district Mysia, but it must have been the same country as the PHRYGIA EPICTETUS of Strabo (xii. pp. 563, 564, 571, 575, 576). But Strabo is certainly mistaken in regarding Phrygia Epictetus as identical with Lesser Phrygia on the Hellespont,—the former, according to his own showing, nowhere touching the sea (p. 564), but being situated south of Mount Olympus (p. 575), and being bounded in the north and partly in the west also by Bithynia (p. 563). The same conclusion must be drawn from the situations of the towns of Azani, Midaeum, and Dorylaeum, which he himself assigns to Phrygia Epictetus (p. 576), and which Ptolemy also mentions as Phrygian towns. These facts clearly show how confused Strabo's ideas about those countries were. The fact of Livy calling the district Mysia is easily accounted for, since the names Phrygia and Mysia are often confounded, and the town of Cadi is sometimes called Mysian, though, according to Strabo, it belonged to Phrygia Epictetus. It was therefore unquestionably this part of Phrygia about which Eumenes of Pergamum was at war with Prusias, and which by the decision of the Romans was handed over to the Pergamenian king, and hence obtained the name of Phrygia Epictetus, that is, "the acquired in addition to." (Polyb. *Excerpt. de Legat.* 128, 129, 135, 136; Liv. xxxix. 51; Strab. p. 563.) After the death of Attalus III., B. C. 133, all Phrygia with the rest of the kingdom of Pergamum fell into the hands of the Romans. A few years later, when the kingdom of Pergamum became a Roman province, Phrygia was given to Mithridates V. of Pontus (Just. xxxviii. 1; Appian, *Bell. Mithr.* 57), but after his death in B. C. 120 it was taken from his son and successor, Mithridates VI., and declared free. (Appian, *l. c.*) This freedom, however, was not calculated to promote the interests of the Phrygians, who gradually lost their importance. The Romans afterwards divided the country into jurisdictiones, but without any regard to tribes or natural boundaries. (Strab. xiii. p. 629; Plin. v. 29.) In B. C. 88 the districts of Laodiceia, Apameia, and Synnada seem to have been added to the province of Cilicia. (Cic. *in Verr.* i. 17, 37.) But this arrangement was not lasting, for afterwards we find those three districts as a part of the province of Asia, and then again as a part of Cilicia, until in B. C. 49 they appear to have become permanently united with Asia. The east and south of Phrygia, however, especially the towns of Apollonia, Antiocheia, and Philomelium, did not belong to the province of Asia. In the new division of the empire made in the 4th century A. D., Phrygia Parorios was added to the province of Pisidia, and a district on the Maeander to Caria.

The remaining part of Phrygia was then divided into Phrygia Salutaris, comprising the eastern part with Synnada for its capital, and Phrygia Pacatiana (sometimes also called Capatiana), which comprised the western part down to the frontiers of Caria. (*Notit. Imp.* c. 2; Hierocl. pp. 664, 676; Constant. Porph. *de Them.* i. 1; Ducas, p. 42; see the excellent article *Phrygia* in Pauly's *Realencyclopaedie*, by O. Abel; Cramer, *Asia Minor*, ii. p. 1, &c.; Niebuhr, *Lect. on Anc. Hist.* i. p. 83, &c., ii. p. 382.) [L. S.]

PHRYGIA PISIDICA. [PISIDIA.]

PHTHENOTES NOMOS (Φθενότης or Φθενότου νομός, Ptol. iv. 5. § 48; Plin. v. 9. s. 9), another name for the Nomos Chemmites in the Aegyptian Delta. [BUTO; CHEMMIS.] [W. B. D.]

PHTHIA. [PHAIA.]

PHTHIA, PHTHIO'TIS. [THESSALIA.]

PHTHIRA (Φθίρα, Steph. B. *s. v*; written Φθίρ in Meineke's edition of Stephanus), a mountain in Caria, inhabited by the Phthires, is evidently the same as the Φθειρῶν ὄρος of Homer (*Il.* ii. 868), which, according to Hecataeus, was identical with Mt. Latmus, but which others supposed to be the same as Mt. Grius, running parallel to Mt. Latmus. (Strab. xiv. p. 635.)

PHTHIRO'PHAGI (Φθειροφάγοι), *i. e.* "lice-eaters," a Scythian people, so called from their filth and dirt (ἀπὸ τοῦ αὐχμοῦ καὶ τοῦ πίνου, Strab. xi. p. 449). Some modern writers endeavour to derive their name from φθείρ, the fruit of the πίτυς or fir-tree, which served as their food (Ritter, *Vorhalle*, p. 549), but there can be no doubt, from the explanation of Strabo, of the sense in which the word was understood in antiquity. This savage people is variously placed by different writers. According to Strabo they inhabited the mountains of Caucasus (Strab. xi. pp. 492, 499), and according to other writers different parts of the coasts of the Black Sea. (Arrian, *Per. P. Eux.* p. 18; Mela, i. 18; Plin. vi. 4.) Ptolemy places them in Asiatic Sarmatia beyond the Rha (v. 9. § 17). According to Pliny (vi 4) they were subsequently called Salae. The Budini are also said to have ate lice (φθειροτραγέουσι, Herod. iv. 109).

PHTHUTH (Φθούθ, Ptol. iv. 1. § 3; Φούτης, Jos. *Antiq.* i. 6. § 2; Fut, Plin. v. 1), a river of Mauretania, which has been identified with the *Wady Tensift.* In the ethnographic table of Genesis (x. 6), Phut is reckoned among the sons of Ham. This immediate descent of Phut (a name which is generally admitted to indicate Mauretania) from Ham indicates, like their Greek name, the depth of colour which distinguished the Mauretanians. In Ezekiel (xxvii. 10) the men of Phut are represented as serving in the Tyrian armies (comp. xxx. 5, xxxviii. 5); as also in Jeremiah (xlvi. 9) they are summoned to the hosts of Aegypt; and in Nahum (iii. 9) they are the helpers of Nineveh. (Winer, *Realwörterbuch*, *s. v.*; Kenrick, *Phoenicia*, pp. 137, 277.) [E. B. J.]

PHUNDU'SI (Φουνδοῦσοι), a tribe mentioned by Ptolemy (ii. 11. § 12) as inhabiting the Chersonesus Cimbrica in the north of Germany, and dwelling north of the Cobandi and Chali. Zeuss (*Die Deutschen*, p. 152), without satisfactory reasons, regards them as the same with the Sedusii mentioned by Caesar (*B. G.* i. 31, 37, 51.) [L. S.]

PHURGISATIS (Φουργισατίς), a town in the south of Germany, mentioned only by Ptolemy (ii. 11. § 30); it was situated in the country of the Quadi, and Wilhelm (*Germanien*, p. 230) believes that it existed in Moravia, in the neighbourhood of *Znaim.* [L. S.]

PHUSIPARA (Φουσιπάρα), a town of the district of Melitene in Armenia Minor, between Ciniaca and Eusemara, is mentioned only by Ptolemy (v. 7. § 7). [L. S.]

PHYCUS (Φυκοῦς, Strab. viii. p. 363, xvii. p. 837; Ptol. iv. 4. § 5: Plin. v. 5), the most northerly point of the Libyan coast, 2800 stadia from Taenarum (350 M. P., Plin. *l. c.*), and 125 M. P. from Crete. (Plin. *l. c.*) Cato touched at this point in Africa after leaving Crete, but the natives refused to receive his ships. (Lucan, ix. 40.) Synesius, who has given in his letters (*Ep.* 51, 100, 114, 129) several particulars about this spot, states that it was dangerous to live here because of the stagnant waters, and their fetid exhalations. It had a harbour situated to the W., which is confirmed by the Coast-describer (*Stadiasm.* § 53, where it is by an error called Phoenicus). Scylax (p. 46) placed the gardens and lake of the Hesperides near this headland, now *Râs-al-Razat* or *Râs Sem*, where Smyth (*Mediterranean*, p. 455) marks the coast bold and steep, rising gradually to Cyrene. (Pacho, *Voyage*, p. 169: Barth, *Wanderungen*, p. 498.) [E. B. J.]

PHY'LACE (Φυλάκη: *Eth.* Φυλακήσιος.) 1. A town of Phthiotis in Thessaly, one of the places subject to Protesilaus, and frequently mentioned in the Homeric poems. (*Il.* ii. 695, xiii. 696, xv. 335, *Od.* xi. 290; comp. Apoll. Rhod. i. 45; Steph. B. *s. v.*) It contained a temple of Protesilaus. (Pind. *Isthm.* i. 84.) Pliny erroneously calls it a town of Magnesia (iv. 9. s. 16). Strabo describes it as standing between Pharsalus and Phthiotic Thebes, at the distance of about 100 stadia from the latter (ix. pp. 433, 435). Leake places it at about 40 minutes from *Ghidék*, in the descent from a pass, where there are remains of an ancient town. The situation near the entrance of a pass is well suited to the name of Phylace. (Leake, *Northern Greece*, vol. iv. pp. 332, 364.)

2. A town of Molossis in Epeirus, of uncertain site. (Liv. xlv. 26.)

3. A place in Arcadia, upon the frontiers of Tegea and Laconia, where the Alpheius rises. (Paus. viii. 54. § 1.)

4. A town of Pieria in Macedonia (Ptol. iii. 13. § 40), the inhabitants of which are mentioned by Pliny under the name of Phylacaei (iv. 10. s. 17).

PHYLACEIUM (Φυλακεῖον or Πυλακαῖον), a town of western Phrygia, at a short distance from Themisonium. (Ptol. v. 2. § 26; *Tab. Peut.*; Geogr. Rav. i. 18, where it is called Filaction.) The Phrygian tribe of the Φυλακήνσιοι, mentioned by Ptolemy (v. 2. § 27), undoubtedly derived its name from this place. [L. S.]

PHYLE. [ATTICA, p. 329, b.]

PHYLLEIUM, PHYLLUS. [ASTERIUM.]

PHYLLIS (Φυλλίς), a district of Thrace in the neighbourhood of Mt. Pangaeus, bounded by the Angites on the W. and by the Strymon on the S. (Herod. vii. 113; Steph. B. *s. v.*)

PHYRITES, a small tributary of the Caystrus, having its origin in the western branch of Mount Tmolus, and flowing in a southern direction through the Pegasean marsh (Stagnum Pegaseum), discharges itself into the Caystrus some distance above Ephesus. (Plin. v. 31.) [L. S.]

PHYSCA, PHYSCUS. [EORDAEA.]

PHYSCELLA. [GALEPSUS.]

PHYSCUS (Φύσκος: *Eth.* Φυσκεύς), a town of Caria, in the territory of the Rhodians, situated on the coast, with a harbour and a grove sacred to Leto. (Strab. xiv. p. 652; *Stadiasm. Mar. Mag.* § 245; Ptol. v. 2. § 11, where it is called Φοῦσκα.) It is impossible to suppose that *this* Physcus was the port-town of Mylasa (Strab. xiv. p. 659); we must rather assume that Passala, the port of Mylasa, also bore the name of Physcus. Our Physcus was the ordinary landing-place for vessels sailing from Rhodes to Asia Minor. (Strab. xiv. p 663; comp. Steph. B. *s. v.*) This harbour, now called *Marmorice*, and a part of it *Physco*, is one of the finest in the world, and in 1801 Lord Nelson's fleet anchored here, before the battle ef the Nile. [L. S.]

PHYSCUS, a tributary of the Tigris. [TIGRIS.]

PHYTEUM (Φύτεον, Pol. v. 7; Φύταιον, Steph. B. *s. v.*: *Guvala*), a town of Aetolia, probably on the northern shore of the lake Trichonis. (Leake, *Northern Greece*, vol. i. p. 155.)

PHY'TIA or PHOETEIAE (Φυτία, Thuc. iii. 106; Φοιτεῖαι, Pol. iv. 63; Φοιτίαι, Steph. B. *s. v.*: *Eth.* Φοιτιεύς, Φοίτιος, Φοιτιάν, -ᾶνος: *Porta*), a town in the interior of Acarnania, situated on a height W. of Stratus, and strongly fortified. It lay on the road from Stratus to Medeon and Limnaea. After the time of Alexander the Great it fell into the hands of the Aetolians, together with the other towns in the W. of Acarnania. It was taken by Philip in his expedition against Aetolia in B. C. 219; but the Aetolians, doubtless, obtained possession of it again, either before or after the conquest of Philip by the Romans. It is mentioned as one of the towns of Acarnania in a Greek inscription found at *Punta*, the site of Actium. the date of which is probably prior to the time of Augustus. In this inscription the ethnic form Φοιτιάν occurs, which is analogous to Ἀκαρνάν, Αἰνιάν, Ἀτιντάν, Ἀθαμάν, Ἀζάν. (Thuc., Pol., *ll. cc.*; Böckh, *Corpus Inscript.*, No. 1793; Leake, *Northern Greece*, vol. iii. p. 574, seq.)

PI'ALA (Πίαλα), a town in the interior of Pontus Galaticus, mentioned only by Ptolemy (v. 6. § 9). [L. S.]

PIALA (Πίαλα or Πιάδδα, Ptol. vi. 16. § 6), a town of Serica, from which the people Pialae (Πιάλαι or Πιάδδαι), dwelling as far as the river Oechardus, derived their name. (Ptol. vi. 16. § 4.) In some MSS. of Pliny (vi. 17. s. 19) the Pialae are mentioned as a people in Scythia intra Imaum; but Sillig reads Psacae.

PIALAE. [PIALA.]

PIA'LIA (Πιαλία), a town of Histiaeotis in Thessaly, at the foot of Mt. Cercetium, probably represented by the Hellenic remains either at *Sklátina* or *Ardhám*. (Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iv. p. 529.)

PIARE'NSII (Πιαρήνσιοι, Ptol. iii. 10. § 9), a people of Moesia Inferior, adjoining its southern or Thracian boundary. [T. H. D.]

PICARIA. [DALMATIA.]

PICE'NSII (Πικήνσιοι, Ptol. iii. 9. § 2), a people seated in the NE. part of Moesia Superior, on the river Timarus. [T. H. D.]

PICENTES. [PICENUM.]

PICE'NTIA. [PICENTINI.]

PICENTI'NI (Πικεντῖνοι, Ptol.; Πίκεντες, Strab.), a tribe or people of Central Italy, settled in the southern part of Campania, adjoining the frontiers of Lucania. Their name obviously indicates a close connection with the inhabitants of Picenum on the opposite side of the Italian peninsula; and this is explained by Strabo, who tells us that they were in fact a portion of that people who had been transported by the Romans from their original abodes to the shores of the Tyrrhenian sea. (Strab. v. p. 251.) The period of this transfer is not mentioned, but it in all probability took place on or shortly after the conquest of Picenum by the Romans, B. C. 268. During the Second Punic War, the Picentini espoused the cause of Hannibal, for which conduct they were severely punished after the close of the war, being, like the Lucanians and Bruttians, prohibited from military service, and employed for the inferior duties of public messengers and couriers. They were at the same time compelled to abandon their chief town, which bore the name of Picentia, and to disperse themselves in the villages and hamlets of the surrounding country. (Strab. *l. c.*) The more effectually to hold them in check, the Romans in B.C. 194 founded in their territory the colony of Salernum, which quickly rose to be a flourishing town, and the chief place of the surrounding district (Strab. *l. c.*; Liv. xxxiv. 45; Vell. Pat. i. 15). Picentia, however, did not cease to exist: Florus indeed appears to date its destruction only from the period of the Social War (Flor. iii. 18); but even long after this it is mentioned as a town both by Mela and Pliny, and its name is still found in the Tabula as late as the 4th century. (Mel. ii. 4. § 9; Plin. iii. 5. s. 9; *Tab. Peut.*) The name of *Vicenza* is still borne by a hamlet on the road from *Salerno* to *Eboli*, and the stream on which it is situated is still called the *Vicentino;* but it is probable that the ancient city was situated rather more inland. (Romanelli, vol. iii. p. 610; Zannoni, *Carta del Regno di Napoli.*)

The boundaries of the Picentini are clearly marked both by Strabo and Pliny. They occupied the southern slope of the ridge of mountains which separates the gulf of Posidonia from that of *Naples*, extending from the promontory of Minerva to the mouth of the Silarus. Ptolemy alone extends their confines across the range in question as far as the mouth of the Sarnus, and includes Surrentum among their towns. (Ptol. iii. 1. § 7.) But there is little doubt that this is inaccurate.

The name of Picentini is generally confined by geographers to the petty people in question, that of Picentes being given to the people of Picenum on the Adriatic. But it is doubtful how far this distinction was observed in ancient times. Picentinus is used as an adjective form for "belonging to Picenum" both by Pompey (*ap.* Cic. *ad Att.* viii. 12, c.) and Tacitus (*Hist.* iv. 63); while Strabo uses Πικεντῖνοι for the people of Picenum, and Πίκεντες for those in Campania. The latter are indeed so seldom mentioned that we can hardly determine what was the general usage in regard to them. [E. H. B.]

PICENTI'NUM, a place in Pannonia, on the left bank of the Savus, on the road from Siscia to Sirmium. (*It. Ant.* p. 260.) It is possible that some ancient remains now called *Kula* may mark the site of the ancient Picentinum. [L. S.]

PICE'NUM (ἡ Πικεντίνη, Pol., Strab.: *Eth.* Πικεντῖνοι, Strab.; Πικηνοί, Ptol.; Picentes, Cic., Varr., Plin., &c., but sometimes also Picentini and Piceni), a province or region of Central Italy, extending along the coast of the Adriatic from the mouth of the Aesis to that of the Matrinus, and inland as far as the central ridge of the Apennines. It was thus bounded on the W. by the Umbrians and Sabines, on the S. by the Vestini, and on the N. by

the territory occupied by the Galli Senones, which was afterwards incorporated into the province of Umbria. The latter district seems to have been at one time regarded as rather belonging to Picenum. Thus Polybius includes the "Gallicus Ager" in Picenum; and Livy even describes the colony of Ariminum as founded "in Piceno." (Pol. ii. 21; Liv. *Epit.* xv.) But the boundaries of Picenum were definitely established, as above stated, in the time of Augustus, according to whose division it constituted the Fifth Region of Italy. (Plin. iii. 13. s. 18; Strab. v. p. 240.) The district thus bounded forms a tract of about 80 geographical miles (800 stadia, Strab. v. p. 241) in length, with an average breadth of from 30 to 40 miles. The southern part of the territory thus limited was inhabited by a tribe called the PRAETUTII, who appear to have been to some extent a different people from the Picentes: hence Pliny gives to this district the name of Regio Praetutiana; and Livy more than once notices the Praetutianus Ager, as if it were distinct from the Picenus Ager. (Plin. *l. c.*; Liv. xxii. 9, xxvii. 43.) The narrow strip between the rivers Vomanus and Matrinus, called the Ager Hadrianus, seems to have also been regarded as in some degree a separate district (Plin. *l. c.*; Liv. xxii. 9); but both these tracts were generally comprised by geographers as mere subdivisions of Picenum in the more extensive sense.

Very little is known of the history of the Picentes; but ancient writers seem to have generally agreed in assigning them a Sabine origin; tradition reported that they were a colony sent out from the parent country in consequence of a vow, or what was called a sacred spring; and that their name was derived from a Woodpecker (picus), the bird sacred to Mars, which was said to have guided the emigrants on their march. (Strab. v. p. 240; Plin. iii. 13. s. 18; Fest. v. *Picena*, p. 212.) Silius Italicus, on the other hand, derives it from the name of Picus, the Italian divinity, whom he represents as the founder of Asculum (Sil. Ital. viii. 439—445); but this is in substance only another form of the same legend. That writer represents the region as previously possessed by the Pelasgians; no mention of these is found in any other author, but Pliny speaks of Siculians and Liburnians as having had settlements on this coast, especially in the Praetutian district, where Truentum was said still to preserve traces of a Liburnian colony (Plin. *l. c.*); while the foundation of Numana and Ancona, further to the N., was ascribed to the Siculi. (*Ib.*) We have no means of estimating the value of these statements; but it seems not improbable that in the last instance there was a confusion with the colony of *Sicilian Greeks* which was established at a much later period at Ancona [ANCONA.] This settlement, which was founded about 380 B. C., by a body of Syracusan exiles who had fled from the tyranny of Dionysius (Strab. v. p. 241), was the only Greek colony in this part of Italy; and its foundation is the only fact transmitted to us concerning the history of Picenum previous to the time when it was brought into contact with the power of Rome. The Picentes appear to have stood aloof from the long protracted contests of the Romans with their Samnite neighbours; but their proximity to the Gauls caused the Romans to court their alliance; and a treaty concluded between the two nations in B. C. 299 seems to have been faithfully observed until after the Senones had ceased to be formidable. (Liv. x. 10.) The Picentes reaped the advantages of this long peace in the prosperity of their country, which became one of the most populous districts in Italy, so that according to Pliny it contained a population of 360,000 citizens at the time of the Roman conquest. (Plin. *l. c.*) Nevertheless they seem to have offered but little resistance to the Roman arms, and were reduced by the consuls Sempronius Sophus and Appius Claudius in a single campaign, B. C. 268. (Flor. i. 19; Liv. *Epit.* xv; Oros. iv. 4; Eutrop. ii. 16.) The causes which led to the war are unknown; but the fact that the Picentes and Sallentines were at this time the only two nations of Italy that remained unsubdued is quite sufficient to explain it.

From this time the Picentes lapsed into the ordinary condition of the subject allies of Rome; and though their territory is repeatedly mentioned as suffering from the ravages of the Second Punic War (Pol. iii. 86; Liv. xxii. 9, xxvii. 43), the name of the people does not again occur in history till the great outbreak of the nations of Italy in the Social War, B.C. 90. In that memorable contest the Picentes bore a prominent part. It was at Asculum, which seems to have been always regarded as their capital, that open hostilities first broke out; the massacre of the proconsul Q. Servilius and his legate Fonteius in that city having, as it were, given the signal of the general insurrection. (Appian, *B. C.* i. 38; Liv. *Epit.* lxxii; Vell. Pat. ii. 15; Diod. xxxvii. 2.) The first attempt of Cn. Pompeius Strabo to reduce Asculum was repulsed with loss; and it was with difficulty that that general could maintain his footing in Picenum while the other Roman armies were occupied in hostilities with the Marsi, Peligni, and other nations nearer Rome. It was not till the second year of the war that, having obtained a decisive victory over the allies, he was enabled to resume the offensive. Even then the Picentine general Judacilius maintained a long struggle against Pompeius, which was at length terminated by the surrender of Asculum, and this seems to have been followed by the submission of the rest of the Picentes, B. C. 89. (Appian, *B. C.* i. 47, 48; Liv. *Epit.* lxxiv., lxxvi; Oros. v. 18; Flor. iii. 18.) There can be no doubt that they were at this time admitted, like the rest of the Italian allies, to the Roman franchise.

Picenum was occupied almost without opposition by Caesar at the commencement of the Civil War, B. C. 49 (Caes. *B. C.* i. 11—15), the inhabitants having universally declared in his favour, and thus compelled the officers of Pompey to withdraw from Auximum and Asculum, which they had occupied with strong garrisons. In the civil war between Vitellius and Vespasian A. D. 69, it was occupied in like manner without resistance by the forces of the latter. (Tac. *Hist.* iii. 42.) Picenum appears to have continued to be a flourishing province of Italy throughout the period of the Roman Empire; and though Pliny speaks of it as having much fallen off in population compared to earlier times ("*quondam* uberrimae multitudinis," Plin. iii. 13. s. 18), it still contained a large number of towns, and many of these preserved their consideration down to a late period. It is probable that its proximity to Ravenna contributed to its prosperity during the latter ages of the Empire, after that city had become the habitual residence of the emperors of the West. Under Augustus, Picenum became the Fifth Region of Italy (Plin. *l. c.*), but at a later period we find it combined for administrative purposes with the district

called Flaminia, and the two together constituted a province which comprised all the strip of Umbria along the coast of the Adriatic, as well as the territory of the Sabines, Vestini, Peligni, and Marsi. Hence we find the Liber Coloniarum including the whole of this extensive district under the name of Picenum, and enumerating not only Alba and Nursia, but even Nomentum, Fidenae, and Tibur, among the "civitates Piceni." (*Lib. Colon.* p. 252—259.) But this arrangement did not last long. Flaminia and Valeria were again separated from Picenum, and that province was subdivided into two: the one called "Picenum suburbicarium," or simply Picenum, which was the original district of that name, corresponding to the Fifth Region of Augustus; while the name of "Picenum Annonarium" was given to the tract from the Aesis to the Rubicon, which had been originally known as the "Gallicus Ager," and in the days of Augustus was comprised under the name of Umbria. (*Lib. Colon.* pp. 225—227; Mommsen, *Die Lib. Col.* pp. 208—214; *Notit. Dign.* ii. pp. 64, 65; Böcking, *ad Not.* pp. 432, 443; P. Diac. ii. 19.)

In the wars between the Goths and the generals of Justinian, Picenum repeatedly became the immediate theatre of hostilities. Auximum in particular, which was at this time the chief city or capital of the province, was regarded as one of the most important fortresses in Italy, and withstood for a long time the arms of Belisarius. (Procop. *B. G.* ii. 10, 23—27.) After the expulsion of the Goths, Picenum became one of the provinces of the exarchate of Ravenna, and as such continued subject to the Greek emperors until the final downfal of the exarchs. It was at this period that arose the geographical designation of the Pentapolis, for a province which comprised the greater part of Picenum, together with the maritime district of Umbria as far as Ariminum. The province of this name was one of those bestowed on the see of Rome by king Pepin after the defeat of the Lombard king Astolphus (A. D. 754), and has ever since continued to form part of the States of the Church.

Picenum is a district of great fertility and beauty. Extending in a broad band of nearly uniform width from the central ranges of the Apennines, which form its boundary on the W., and which here attain their greatest elevation in the *Monte Corno* and *Monti della Sibilla*, it slopes gradually from thence to the sea; the greater part of this space being occupied by great hills, the underfalls of the more lofty Apennines, which in their more elevated regions are clothed with extensive forests, while the lower slopes produce abundance of fruit-trees and olives, as well as good wine and corn. (Strab. v. p. 240; Liv. xxii. 9.) Both Horace and Juvenal extol the excellence of its apples, and Pliny tells us its olives were among the choicest in Italy. (Hor. *Sat.* ii. 3. 272, 4. 70; Juv. xi. 72; Plin. xv. 3. s. 4.) The whole district is furrowed by numerous streams, which, descending with great rapidity from the lofty ranges of the Apennines, partake much of a torrent-like character, but nevertheless serve to irrigate the whole country, which is thus rendered one of the pleasantest in Italy. These streams pursue nearly parallel courses, the direct distance from their sources to the sea in no case much exceeding 40 miles. They are, proceeding from S. to N., as follows: (1) The MATRINUS, now called *La Piomba*, a small stream which formed the southern limit of Picenum, separating it from the territory of the Vestini; (2) the VOMANUS, still called the *Vomano*, which separated the district of Adria from that of the Praetutii; (3) the BATINUS, now called the *Tordino*, but sometimes also the *Trontino*, which flows by *Teramo* (Interamna); (4) the TRUENTUS (*Tronto*), the most considerable of all these streams, which flows under the walls of *Ascoli* (Asculum); (5) the TINNA, still called the *Tenna*; (6) the FLUSOR, now the *Chienti*; (7) the POTENTIA, still called the *Potenza*; (8) the MISIO or MISIUS, now known as the *Musone*. These last names are known only from the Tabula: on the other hand Pliny mentions a stream called ALBULA, to which are added in some MSS. the names of Suinus and Helvinus. All these are placed apparently between the river Truentus and the town of Cupra Maritima; but besides the uncertainty of the reading, the whole description of this region in Pliny is so confused that it is very unsafe to rely upon his order of enumeration. The Albula cannot be identified with any certainty, but may perhaps be the stream now called the *Salinello*, and the other two names are probably mere corruptions. 9. The AESIS (*Esino*), a much more considerable stream, flowing into the sea between Ancona and Sena Gallica, formed the boundary which separated Picenum from Umbria.

The towns of Picenum are numerous, and, from the accounts of the populousness of the country in early times, were probably many of them once considerable, but few have any historical celebrity. Those on the sea-coast (proceeding as before from S. to N.) were: (1) MATRINUM, at the mouth of the river of the same name, serving as the port of Adria (Strab. v. p. 241); (2) CASTRUM NOVUM, at the mouth of the Batinus, near *Giulia Nuova*; (3) CASTRUM TRUENTINUM or TRUENTUM, at the mouth of the river of the same name; (4) CUPRA MARITIMA, at *Le Grotte a Mare*, about 3 miles N. of *S. Benedetto*; (5) CASTRUM FIRMANUM, now *Porto di Fermo*, at the mouth of the little river *Leta*; (6) POTENTIA (*Sta Maria a Potenza*), at the mouth of the river of the same name; (7) NUMANA, still called *Umana*, at the southern extremity of the mountain headland called *Monte Comero*; and (8) ANCONA, at the northern end of the same promontory. This last was by far the most important of the maritime towns of Picenum, and the only one that possessed a port worthy of the name: with this exception all the most important cities of the region were situated inland, on hills of considerable elevation, and thus enjoyed the advantage of strong positions as fortresses. The most important of these were AUXIMUM (*Osimo*), about 12 miles S. of Ancona; CINGULUM (*Cingoli*), in a very lofty situation, between the valleys of the Aesis and Potentia; FIRMUM (*Fermo*), on a hill about 6 miles from the sea; ASCULUM (*Ascoli*), the ancient capital of Picenum, in a very strong situation on the river Truentus, about 22 miles from its mouth; INTERAMNA (*Teramo*), the chief city of the Praetutii; and ADRIA (*Atri*), almost close to the southern frontier of Picenum. The minor towns in the interior were BEREGRA, which may perhaps be placed at *Civitella di Tronto*, not far from *Ascoli*; CUPRA MONTANA, so called to distinguish it from the maritime city of the same name, supposed to have occupied the site of *Ripatransone*; CLUANA, at *S. Elpidio a Mare*, about 4 miles from the sea, and a little to the N. of *Fermo*; NOVANA, probably at *Monte di Nove*, near *Montalto*; FALERIA (*Fallerone*), in the upper valley of the Tinna; URBS SALVIA (*Urbisaglia*) and TOLENTI-

NUM (*Tolentino*), on opposite sides of the valley of the Flusor (*Chienti*); SEPTEMPEDA (*S. Severino*), in the upper valley of the *Potenza*; TREIA, on the left bank of the same stream, near the modern town of *Treja*; and RICINA, on its right bank, not far from *Macerata*. The site of PAUSULAE (Pausulani, Plin.) is fixed by Holstenius at *Monte dell' Olmo*, and that of POLLENTIA (Pollentini, Id.) at *Monte Melone*, all in the same neighbourhood; but these last identifications are merely conjectural.

Picenum was traversed by a line of highroad, which followed the line of the coast from Ancona to Aternum, where it united with the Via Valeria; while its more direct communications with Rome were secured by the Via Salaria, which crossed the Apennines direct from Interocrea by Falacrinum to Asculum, and thence to the Adriatic. Further to the north, also, a branch of the Via Flaminia, quitting the main line of that great road at Nuceria, crossed the central ridge of the Apennines by Prolaqueum to Septempeda in the valley of the Potentia, and thence proceeded by Treia and Auximum to Ancona. Besides these more important lines of road, the Tabula notices two cross lines: the one leading from Auximum by Ricina and Urbs Salvia to Asculum; the other from Asculum to Firmum, and its port Castellum Firmanum. The extremely hilly and broken character of the country renders the determination of distances along these lines of road very uncertain; and the whole district is given in the Tabula in so confused a manner that little reliance can be placed on its authority. [E. H. B.]

PICTAVI. [PICTONES.]

PICTI. The names of the Picti and Scoti appear only in late writers, by whom they are spoken of as two allied people. The Picts seem to have been identical with the ancient Caledonians ("Caldonum *aliorumque Pictorum*, silvae et paludes," Eumen. *Pan.* vi. 7), and dwelt N. of the *Firth of Forth* (Beda, *H. Eccl.* i. 1). Ammianus Marcellinus represents the Picti as divided, in the time of the emperor Constans, into two tribes, the Dicalidonae and Vecturiones, and as committing fearful ravages in conjunction with the Attacotti and Scotti (xxvii. 8. § 4.) Their ethnological relations have been already discussed [BRITANNICAE INSULAE, Vol. I. p. 438]. The name of Picti, or *painted*, is commonly supposed to be derived from their custom of painting their bodies, and would thus be only a translation of the British word *Brith*, signifying anything painted, and which, according to Camden (*Gen. Descr.* p. xxxvi.), is the root of the name *Briton*. Such an etymology favours the notion that the Picts were an indigenous race; but on this point nothing positive can be affirmed. (Comp. Amm. Marc. xx. 1, xxvi. 4; Beda, *H. Eccl.* iii. 4, v. 21.) [T. H. D.]

PI'CTONES (Πίκτονες), and, at a later period, PICTAVI, were a Gallic nation, south of the *Loire* and on the coast of the Atlantic. Ptolemy (ii. 7. § 6) places them in Celtogalatia Aquitania, and mentions two of their towns, Limonum or Lemonum (*Poitiers*) and Ratiatum. "They occupy," he says, "the most northern parts of Aquitania, those on the river (Liger), and on the sea." Strabo (iv. pp. 190, 191) makes the *Loire* the boundary between the Namnetes and the Pictones. South of the Pictavi he places the Santones, who extend to the *Garonne*.

The Pictones are mentioned by Caesar. He got ships from them for his war against the Veneti (*B. G.* iii. 11). The Pictones joined Vercingetorix in B. C. 52, when he was raising all Gallia against Caesar. In B. C. 51 C. Caninius, a legatus of Caesar, marched into the country of the Pictones to relieve Lemonum, which was besieged by Dumnacus (*B. G.* viii. 26). [LEMONUM.]

Lucan (i. 436) says that the Pictones were "immunes," or paid no taxes to the Romans:—

> "Pictones immunes subigunt sua rura."

His authority is not worth much; and besides that, this verse and the four verses which follow are probably spurious. (Notes in Oudendorp's edition of Lucan.)

The territory of the Pictones was bounded on the east by the Turones and Bituriges Cubi. It corresponded to the diocese of *Poitiers*. [G. L.]

PICTO'NIUM PROMONTO'RIUM, as it is now generally written, but in Ptolemy (ii. 7. § 1) Pectonium (Πηκτόνιον ἄκρον), is placed by him on the coast of Gallia Aquitania, between the mouth of the river which he names Canentelus [CARANTONUS] and the port Secor or Sicor. It is impossible to determine what point of land is Pectonium. D'Anville supposes it to be *L'Aiguillon* near the mouth of the *Sèvre Niortaise*; and Gossellin takes it to be *La Pointe de Boisvinet*. [G. L.]

PIDA (Πίδα), a town in Pontus Galaticus, on the road leading from Amasia to Neocaesareia. (Ptol. v. 6. § 9; *Tab. Peut.*, where it is called Pidae.) [L. S.]

PIENGI'TAE (Πιεγγῖται, Ptol. iii. 5. § 20), a people in European Sarmatia, supposed by Schafarik to be the inhabitants of the river *Piena*, which falls into the *Pripjät* near *Pinsk* (*Slawische Alterthümer*, vol. i. p. 207.)

PI'ERA. [CIERIUM.]

PI'ERES (Πίερες), a Thracian people, occupying the narrow strip of plain land, or low hill, between the mouths of the Peneius and the Haliacmon, at the foot of the great woody steeps of Olympus. (Thuc. ii. 99; Strab. vii. p. 331, *Fr.* 22, ix. p. 410; Liv. xliv. 9.) This district, which, under the name of PIERIA or PIERIS (Πιερία, Πιερίς), is mentioned in the Homeric poems (*Il.* xiv. 225), was, according to legend, the birthplace of the Muses (Hesiod. *Theog.* 53) and of Orpheus, the father of song. (Apoll. *Argon.* i. 23.) When this worship was introduced into Boeotia, the names of the mountains, grots, and springs with which this poetic religion was connected, were transferred from the N. to the S. Afterwards the Pieres were expelled from their original seats, and driven to the N. beyond the Strymon and Mount Pangaeus, where they formed a new settlement. (Herod. vii. 112; Thuc. *l. c.*) The boundaries which historians and geographers give to this province vary. In the systematic geography of Ptolemy (iii. 13. § 15) the name is given to the extent of coast between the mouths of the Ludias and the Haliacmon. Pieria was bounded on the W. from the contiguous district of the Thessalian Perrhaebia by the great chain of Olympus. An offshoot from Olympus advances along the Pierian plain, in a NW. direction, as far as the ravine of the Haliacmon, where the mountains are separated by that chasm in the great eastern ridge of Northern Greece from the portion of it anciently called Bermius. The highest summit of the Pierian range called PIERUS MONS (Plin. iv. 15; comp. Pausan. ix. 29. § 3; x. 13. § 5) rises about 8 miles to the N. of *Vlakholivadho*, and is a conspicuous object in all the country to the E. It would seem that there was a city called PIERIA (Πιερία: *Eth.* Πιεριώτης, Πιε-

ρίτης, Πιερεύς, Steph. B.; Suid. *s. v.* Κρίτων), which may be represented by a "tumulus," overgrown with trees upon the extremity of the ridge of *Andreótissa*, where it ends in a point between Dium and Pydna, the other two chief cities of Pieria. Beyond Pydna was a considerable forest, called "Pieria Silva" (Liv. xliv. 43), which may have furnished the Pierian pitch, which had such a high reputation. (Herod. iv. 195; Plin. xiv. 25.) The road from Pella to Larissa in Thessaly passed through Pieria [MACEDONIA, Vol. II. p. 237, a.], and was probably the route which the consul Q. Marcius Philippus pursued in the third and fourth years of the Persic War. (Liv. xliv. 1—10; Leake, *Northern Greece*, vol. iii. pp. 177, 210, 337, 413, 446.) [E. B. J.]

PIE'RIA (Πιερία). 1. A district in Macedonia. [PIERES.]

2. A district in Syria; a name given by the Macedonians to the northern coast of Syria, on the right bank of the Orontes. The principal mountain in this district, and which was a southern branch of the Amanus, was also called Pieria. (Strab. xvi. pp. 749, 751; Ptol. v. 15. § 8.) The chief town was Seleuceia, which is frequently distinguished from other towns of the same name by the addition of ἐν Πιερίᾳ, especially on coins. (Eckhel, vol. iii. p. 324; Cic. *ad Att.* xi. 20.)

PIE'RIA. [CIERIUM.]

PIE'RIUM. [CIERIUM.]

PIGU'NTIA. [DALMATIA.]

PILO'RUS (Πίλωρος, Herod. vii. 122; Steph. B.), a town of Sithonia in Macedonia, upon the Singitic gulf, between Sane and Cape Ampelus, which probably occupied *Vurvuri*, or one of the harbours adjacent to it on the N. (Leake, *Northern Greece*, vol. iii. p. 153.) [E. B. J.]

PIMOLISA (Πιμώλισα), a fort in the western part of Pontus, on the river Halys. (Steph. B. *s. v.*) In Strabo's time (xii. p. 562, where it is called Pimolison) the fortress was destroyed, but the district on both sides of the river was still called Pimolisene. [L. S.]

PIMPLEIA (Πίμπλεια, Strab. ix. p. 410; Apollon. i. 23; Lycophr. 273), a place in Pieria, where Orpheus was said to have been born, and from which the Muses obtained their epithet of Πιμπληΐδες and Πιμπληΐδες among the Alexandrian poets. (Orph. *Fragm.* 46; "Pimplea dulcis," Horat. *Carm.* i. 26. 9; Stat. *Silv.* i. 4. 26.) Leake (*Northern Greece*, vol. iii. p. 422) identified it with the elevated situation of *Litókhoro* and its commanding prospect. [E. B. J.]

PIMPRAMA (Πίμπραμα, Arrian, *Anab.* v. 22), a place which appears to have been the capital of the tribe of Adraistae, a nation mentioned by Arrian as existing about a day's journey from the Hydraotes (*Irávati*). The name has an Indian form and sound, but has not, so far as we know, been identified with any existing place. [V.]

PINARA (τὰ Πίναρα: *Eth.* Πιναρεύς). 1. A large city of Lycia, at the foot of Mount Cragus, and not far from the western bank of the river Xanthus, where the Lycian hero Pandarus was worshipped. (Strab. xiv. 665; Steph. B. *s. v.*; Arrian, *Anab.* i. 24; Plin. v. 28; Ptol. v. 3. § 5; Hierocl. p. 684.) This city, though it is not often mentioned by ancient writers, appears, from its vast and beautiful ruins, to have been, as Strabo asserts, one of the largest towns of the country. According to the Lycian history of Menecrates, quoted by Stephanus Byz. (*s. v.* Ἀρτύμνησος), the town was a colony of Xanthus, and originally bore the name of Artymnesus, afterwards changed into Pinara, which, in the Lycian language, signified a round hill, the town being situated on such an eminence. Its ruins were discovered by Sir Charles Fellows, near the modern village of *Minara*. "From amidst the ancient city," he says (*Lycia*, p. 139), "rises a singular round rocky cliff (the pinara of the Lycians), literally specked all over with tombs." Beneath this cliff lie the ruins of the extensive and splendid city The theatre is in a very perfect state; all the seats are remaining, with the slanting sides towards the proscenium, as well as several of its doorways. The walls and several of the buildings are of the Cyclopian style, with massive gateways, formed of three immense stones. The tombs are innumerable, and the inscriptions are in the Lycian characters, but Greek also occurs often on the same tombs. Some of these rock-tombs are adorned with fine and rich sculptures. (See the plate in Fellows facing p. 141.)

2. A town of Cilicia (Plin. v. 22), perhaps the same as the one mentioned by Ptolemy (v. 15. § 12) as situated in Pieria, a district of Syria; though it should be observed that Pliny (v. 19) mentions the Pinaritae as a people in Coelesyria. [L. S.]

PINARUS. [ISSUS.]

PINDASUS, a mountain in the south of Mysia, a branch of Mount Temnus, stretching towards the Sinus Elaeus, and containing the sources of the river Cetius. (Plin. v. 33.) [L. S.]

PINDENISSUS (*Eth.* Pindenissitae), a town of the Eleuthero-Cilices, situated upon a commanding height of Mt. Amanus, which was taken by Cicero, when he was governor of Cilicia, after a siege of fifty-seven days. (Cic. *ad Att.* v. 20, *ad Fam.* ii. 10, xv. 4.)

PINDUS (Πίνδος, Herod. i. 56, vii. 129; Strab. ix. pp. 428, 430, et alii), a long and lofty range of mountains in Northern Greece, running from north to south about midway between the Ionian and Aegaean seas, and forming the back-bone of the country, like the Apennines of the Italian peninsula. It is in fact a continuation of the same range which issues from the *Balkan Mountains*, and it takes the name of Pindus where it first intersects the northern boundary of Hellas Proper at the 40th degree of latitude. Pindus forms the boundary between Thessaly and Epeirus. In its northern part it is called Lacmon or Lacmus, and here the five principal rivers of Northern Greece rise,—the Haliacmon, Peneius, Achelous, Arachthus, and Aous. [LACMON.] To that part of the range S. of Lacmon the name of Cercetium was given. (Κερκέτιον, Steph. B. *s. v.* Παλία; Κερκετήσιον ὄρος, Ptol. iii. 13. § 19; Liv. xxxii. 14; Plin. iv. 8. s. 15.) Mount Cercetium is probably the main ridge of *Khassiá*; and one of the principal passes from Epeirus into Thessaly lay across this mountain. (Leake, *Northern Greece*, vol. iv. pp. 528, 529.) Still further south, at the 39th degree of latitude, a point in the range of Pindus is called Tymphrestus (Τυμφρηστός, Strab. ix. p. 433), now *Velúkhi*; and from it branch off the two chains of Othrys and Oeta, the former running nearly due east, and the latter more towards the south-east. A little S. of Tymphrestus the range of Pindus divides into two branches, and no longer bears the same name. [See Vol. I. p. 1012.]

PINDUS (Πίνδος), one of the towns of the tetrapolis of Doris, situated upon a river of the same

name, which flows into the Cephissus near Lilaea. [DORIS.] It was also called Acyphas (Ἀκύφας), as we learn from Strabo and from Theopompus (*ap.* Steph. B. *s. v.* Ἀκύφας). In one passage Strabo says that Pindus lay above Erineus, and in another he places it in the district of Oetaea; it is, therefore, probable that the town stood in the upper part of the valley, near the sources of the river in the mountain. (Strab. ix. pp. 427, 434; Scymn. Ch. 591; Schol. *ad Pind. Pyth.* i. 121; Mel. ii. 3; Plin. iv. 7. s. 13; Leake, *Northern Greece*, vol. ii. p. 92.)

PINE'TUS (Πίνητος, Ptol. ii. 6. § 39), a town of Lusitania, on the road from Bracara to Asturica (*Itin. Ant.* p. 422). Ptolemy places it between the Durius and the Minius, and consequently in the territory of the Gallaeci; but, according to the Itinerary, it must have lain S. of the former river. Variously identified with *Pinhel*, *Pinheira*, and *Mirandella*. [T. H. D.]

PINGUS, a river of Upper Moesia, in the territory of the Dardani. (Plin. iii. 26. s. 29.) It was probably an affluent of the Margus, and is commonly identified with the *Ypek*. [T. H. D.]

PINNA (Πίννα: *Eth.* Pinnensis: *Civita di Penne*), a city of the Vestini, situated on the eastern slope of the Apennines, about 15 miles from the sea. It is noticed both by Pliny and Ptolemy, as well as by Silius Italicus, among the cities of the Vestini, and seems to have been a municipal town of importance; but the only mention of its name in history is during the Social War, when its inhabitants distinguished themselves by their fidelity to Rome, and withstood all the efforts of the Italian allies to shake their constancy. (Diod. xxxvii. *Exc. Vales.* p. 612, *Exc. Vat.* p. 120.) The circumstances are evidently misrepresented by Valerius Maximus (v. 4. § 7). Numerous inscriptions attest its local consideration; and it appears to have received a colony, or at least an accession of citizens, under Augustus. (Plin. iii. 12. s. 17; Ptol. iii. 1. § 59; *Lib. Colon.* pp. 227, 257; Sil. Ital. viii. 517; Inscr. *ap. Romanelli*, vol. iii. pp. 252, 253; Mommsen, *Inscr. R. N.* p. 327.) Vitruvius also notices it as having some mineral waters in its neighbourhood, which resembled those at Cutiliae (viii. 3. § 5). It early became an episcopal see, a dignity which it still retains; and the modern city undoubtedly occupies the same site with the ancient one. Some remains of ancient buildings are extant, but they are of little importance. The name of Pinna is found in the Tabula, where it is marked as a place of importance; but the distances annexed are confused and erroneous. [E. H. B.]

PI'NTIA (Πιντία, Ptol. ii. 6. § 50). 1. A town of the Vaccaei in Hispania Tarraconensis, and according to the Itinerary (p. 443), on the road from Asturica to Caesaraugusta. It is usually identified with *Valladolid* (Mariana, x. 7; Nonius, *Hisp.* c. 56; Ukert, vol. ii. pt. 1. p. 432).

2. A town of the Callaïci Lucenses in Hispania Tarraconensis, between Libunca and Caronium. (Ptol. ii. 6. § 23.) [T. H. D.]

PINTUA'RIA INS. [FORTUNATAE INSULAE.]

PION (Πίων), a hill in the neighbourhood of Ephesus, at the foot of which that city was situated. (Paus. vii. 5. § 5; Plin. v. 31; Strab. xiv. p. 633, where it is called Prion.) [L. S.]

PIO'NIA (Πιονία: *Eth.* Pionita), a town in the interior of Mysia, on the river Satnioeis, to the north-west of Antandrus, and to the north-east of Gargara. (Strab. xiii. p. 610.) Under the Roman dominion it belonged to the jurisdiction of Adramyttium (Plin. v. 32), and in the ecclesiastical notices it appears as a bishopric of the Hellespontine province. (Hierocl. p. 663; Sestini, p. 75.) [L. S.]

PIRAEEUS or PEIRAEEUS. [ATHENAE, p. 306.]

PIRAEUM or PEIRAEUM, in Corinthia [p. 685, b.].

PIRAEUS or PEIRAEUS, in Corinthia [p. 685, a.].

PIRATHON (Φαραθών, Joseph., LXX.), a town in the land of Ephraim, and in the mount of the Amalekites, to which Abdon, one of the judges of Israel, belonged, and where he was buried. (*Judges*, xii. 13, 15.) It was repaired and fortified by Bacchides, in his campaign against the Jews (1 *Macc.* ix. 50; Joseph. *Ant.* xiii. 1. § 3.)

PIRE'NE or PEIRE'NE FONS. [CORINTHUS, p. 680, b.]

PIRE'SIAE. [ASTERIUM.]

PIRUS or PEIRUS. [ACHAIA, p. 13, b.]

PIRUSTAE (Πιροῦσται, Ptol. ii. 17. § 8; Πειροῦσται, Strab. vii. p. 314), a people of Illyria, whom the Romans declared free of taxes, because they assisted the latter in subduing Gentius. (Liv. xlv. 26.) Strabo (*l. c*) calls them a Pannonian people. Respecting the position of the Pirustae on the northern frontier of Dassaretia, see Vol. I. p. 755, b.

PISA (Πῖσα: *Eth.* Πισάτης, Πισαιεύς), a town in Peloponnesus, was in the most ancient times the capital of an independent district, called Pisatis (ἡ Πισᾶτις), which subsequently formed part of the territory of Elis. It was celebrated in mythology as the residence of Oenomaus and Pelops, and was the head of a confederacy of eight states, of which, besides Pisa, the following names are recorded:— Salmone, Heracleia, Harpinna, Cycesium, and Dyspontium. (Strab. viii. p. 356, seq.) Pisa had originally the presidency of the Olympic festival, but was deprived of this privilege by the Eleians. The Pisatans, however, made many attempts to recover it; and the history of their wars with the Eleians, which were at last terminated by the destruction of Pisa in B. C. 572, is narrated elsewhere. [ELIS, Vol. I. p. 818, b.] Although Pisa ceased to exist as a city from this time, the Pisatans, in conjunction with the Arcadians, celebrated the 104th Olympic festival, B. C. 364. [See Vol. I. p. 819, b.] Pisa was said to have been founded by an eponymous hero, Pisus, the son of Perieres, and grandson of Aeolus (Paus. vi. 22. § 2); but others derived its name from a fountain Pisa. (Strab. viii. p. 356; Eustath. *ad Dionys. Per.* 409.) Modern writers connect its name with Πῖσος, a low marshy ground, or with Πίσσα, the name of the black fir or pine-tree. So completely was Pisa destroyed by the Eleians, that the fact of its having existed was a disputed point in the time of Strabo (*l. c.*); and Pausanias found its site converted into a vineyard (vi. 22. § 1). Its situation, however, was perfectly well known to Pindar and Herodotus. Pindar frequently identifies it with Olympia (e. g. *Ol.* ii. 3); and Herodotus refers to Pisa and Olympia as the same point in computing the distance from the altar of the twelve gods at Athens (ii. 7). Pisa appears from Pausanias to have occupied a position between Harpinna and Olympia, which were only 20 stadia asunder (Lucian, *de Mort. Peregr.* 35); and the Scholiast on Pindar (*Ol.* xi. 51) says that Pisa was only 6 stadia from Olympia. It must therefore be

placed a little east of Olympia, and its acropolis probably occupied a height on the western side of the rivulet of *Miráka*, near its junction with the Alpheius. Strabo (*l. c.*) says that it lay between the mountains Olympus and Ossa, which can only have been heights on different sides of the river. See its position marked in the map in Vol. II. p. 477. (Leake, *Morea*, vol. ii. p. 211, *Peloponnesiaca*, p. 6; Mure, *Tour in Greece*, vol. ii. p. 283; Curtius, *Peloponnesos*, vol. ii. p. 51.)

PISAE (Πίσαι, Strab. Pol.; Πίσσαι, Ptol.; Πίσσα, Lycophr.: *Eth.* Pisanus: *Pisa*), an important city of Etruria, situated on the N. bank of the river Arnus, a few miles from its mouth. All authors agree in representing it as a very ancient city, but the accounts of its early history are very confused and uncertain. The identity of its name with that of the city of Elis naturally led to the supposition that the one was derived from the other; and hence the foundation of the Italian Pisae was ascribed by some authors to Pelops himself (Plin. iii. 5. s. 8), while others assigned it to a body of settlers from the Peloponnesian Pisa who had accompanied Nestor to Troy, and on their return wandered to this part of Italy. (Strab. v. p. 222; Serv. *ad Aen.* x. 179.) Epeius, the reputed founder of Metapontum, was, according to some writers, that of Pisae also. (Serv. *l. c.*) The Elean, or Alphean, origin of the city is generally adopted by the Roman poets. (Virg. *Aen.* x. 179; Claudian, *B. Gild.* 483; Rutil. *Itin.* i. 565.) Cato, however, followed a different tradition, and represented the city as founded by the Etruscans under Tarchon, though the site was previously possessed by a people called the Teutanes, who spoke a Greek dialect. (Cato, *ap. Serv. l. c.*) Virgil also calls it distinctly an Etruscan city, though he derives its more remote origin from Elis; and the tradition reported by Cato seems to prove at least that it was one of the cities of which the Etruscans claimed to be the founders, and which must therefore have been at one period a genuine Etruscan city. On the other hand, Dionysius mentions it among the cities founded or occupied by the Pelasgi in conjunction with the Aborigines (Dionys. i. 20); and there seems to be some reason to regard it as one of the early Pelasgic settlements on the coast of Etruria, which fell at a later period under the power of the Etruscans.

We know almost nothing of Pisae as an Etruscan city, nor are there any remains of this period of its history. But Strabo still found vestiges of its past greatness, and the tradition of its foundation by Tarchon seems to point to it as one of the principal cities of Etruria. Its inhabitants were trained to arms by frequent contests with their neighbours the Ligurians, while they appear to have been one of the principal maritime powers among the Etruscans, and, like most of their countrymen, combined the pursuits of commerce and piracy. (Strab. v. p. 223.) We have no account of the period at which it became a dependency of Rome; but the first historical mention of its name is in B. C. 225, when the consul C. Atilius landed there with two legions from Sardinia, with which he shortly after attacked and defeated the Gaulish army near Telamon. (Pol. ii. 27.) It is clear therefore that Pisae was at this time already in alliance with Rome, and probably on the same footing as the other dependent allies of the republic. Its port seems to have been much frequented, and became a favourite point of departure for the Roman fleets and armies whose destination was Gaul, Spain, or Liguria. Thus it was from thence that the consul P. Scipio sailed to Massilia at the outbreak of the Second Punic War (B. C. 218), and thither also that he returned on finding that Hannibal had already crossed the Alps. (Pol. iii. 43, 56; Liv. xxi. 39.) The long-continued wars of the Romans with the Ligurians added greatly to the importance of Pisae, which became the frontier town of the Roman power, and the customary head-quarters of the generals appointed to carry on the war. (Liv. xxxiii. 43, xxxv. 22, xl. 1, &c.) It was not, however, exempt from the evil consequences incident to such a position. In B. C. 193 it was suddenly attacked and besieged by an army of 40,000 Ligurians, and with difficulty rescued by the arrival of the consul Minucius (Liv. xxxv. 3); and on several other occasions the Ligurians laid waste its territory. Hence in B. C. 180 the Pisans themselves invited the Romans to establish a colony in their territory, which was accordingly carried out, the colonists obtaining Latin rights. (Liv. xl. 43.) From this time we hear but little of Pisae; its colonial condition became merged, like that of the other "coloniae Latinae," in that of a municipium by virtue of the Lex Julia (Fest. *v. Municipium*): but it seems to have received a fresh colony under Augustus, as we find it bearing the colonial title in a celebrated inscription which records the funeral honours paid by the magistrates and senate of Pisae to the deceased grandchildren of Augustus, C. and L. Caesar. (Orell. *Inscr.* 642, 643.) It is here termed "Colonia Obsequens Julia Pisana:" Pliny also gives it the title of a colony (Plin. iii. 5. s. 8), and there seems no doubt that it was at this period one of the most flourishing towns of Etruria. Strabo speaks of it as carrying on a considerable trade in timber and marble from the neighbouring mountains, which were sent to Rome to be employed there as building materials. Its territory was also very fertile, and produced the fine kind of wheat called siligo, as well as excellent wine. (Strab. v. p. 223; Plin. xiv. 3. s. 4, xviii. 9. s. 20.) We have no account of the fortunes of Pisae during the declining period of the Roman empire, but during the Gothic wars of Narses it is still mentioned as a place of importance (Agath. *B. G.* i. 11), and in the middle ages rose rapidly to be one of the most flourishing commercial cities of Italy.

There is no doubt that the ancient city stood on the same site with the modern *Pisa*, but natural causes have produced such great changes in the locality, that it would be difficult to recognise the site as described by Strabo, were not the identity of the modern and ancient cities fully established. That author (as well as Rutilius and other writers) describes the ancient city as situated at the confluence of the rivers Arnus and Auser (*Serchio*), and distant only 20 stadia (2½ miles) from the sea. (Strab. v. p. 222; Plin. iii. 8. s. 14; Rutil. *Itin.* i. 565—570.) At the present day it is more than 6 miles from the sea, while the *Serchio* does not flow into the *Arno* at all, but has a separate channel to the sea, the two rivers being separated by a tract of 5 or 6 miles in width, formed partly by the accumulation of alluvial soil from the rivers, partly by the sand heaped up by the sea. There are no remains of the Etruscan city visible; it is probable that all such, if they still exist, are buried to a considerable depth by the alluvial soil. The only vestiges of Roman antiquity which remain are "some mean traces of baths, and two marble columns with

composite capitals, probably belonging to the vestibule of a temple of the age of the Antonines, now embedded in the wall of the ruined church of S. Felice." (Dennis, *Etruria*, vol. ii. p. 89.) But numerous sarcophagi of Roman date, some of them of very superior workmanship, and some fragments of statues are preserved in the *Campo Santo*, as well as numerous inscriptions, of which the most interesting are those already alluded to, recording the honours paid by the colony to the deceased grandsons of Augustus. These have been published with a learned and elaborate commentary by Cardinal Noris (*Cenotaphia Pisana*, fol. Venet. 1681): as well as by Gori (*Inscript. Etruriae*, vol. ii. p. 10, &c.), and more recently by Hanbold (*Monumenta Legalia*, p. 179) and Orelli (*l. c.*).

The Maritime Itinerary mentions the PORTUS PISANUS as distinct from Pisae itself, from which it was no less than 9 miles distant. (*Itin. Marit.* p. 501.) Rutilius also describes the port of Pisae, which was in his day still much frequented and the scene of an active commerce, as at some distance from the city itself. (Rutil. *Itin.* i. 531—540, 558—565, ii. 12.) But the exact site has been a subject of much controversy. Cluverius and other writers placed it at the mouth of the *Arno*, while Mannert and Mr. Dennis would transfer it to the now celebrated port of *Leghorn* or *Livorno*. But this latter port is distant 10 miles from the mouth of the *Arno*, and 14 from *Pisa*, which does not agree with the distance given in the Maritime Itinerary; while the mouth of the *Arno* is too near Pisa, and it is unlikely that the entrance of the river could ever have been available as a harbour. Rutilius also describes the port (without any mention of the river) as formed only by a natural bank of sea-weed, which afforded shelter to the vessels that rode at anchor within it. Much the most probable view is that advocated by a local writer (Targioni Tozzetti), that the ancient Portus Pisanus was situated at a point between the mouth of the *Arno* and *Leghorn*, but considerably nearer the latter city, near an old church of *St. Stefano*. The distance of this spot agrees with that of the Itinerary, and it is certain from mediaeval documents that the *Porto Pisano*, which in the middle ages served as the port of *Pisa*, when it was a great and powerful republic, was situated somewhere in this neighbourhood. (Targioni Tozzetti, *Viaggi in Toscana*, vol. ii. pp. 225—240, 378—420; Zumpt, *ad Rutil.* i. 527.) Roman remains have also been found on the spot, and some ruins, which may very well be those of the villa called Triturrita, described by Rutilius as adjoining the port, designated in the Tabula as Turrita. (Rutil. *Itin.* i. 527: *Tab. Peut.*) There is every probability that the *Porto Pisano* of the middle ages occupied the same site with the Roman Portus Pisanus, which is mentioned by P. Diaconus as still in use under the Lombard kings, and again by a Frankish chronicler in the days of Charlemagne (P. Diac. *Hist. Lang.* vi. 61; Amoin. *Rer. Franc.* iv. 9); and there is no doubt that the mediaeval port was quite distinct from *Livorno*. The latter city, which is now one of the most important trading places in Italy, was in the 13th century an obscure village, and did not rise to consideration till after the destruction of the *Porto Pisano*. But it seems probable that it was occasionally used even in ancient times, and is the LABRO noticed by Cicero (*ad Q. Fr.* ii. 6) as a seaport near Pisae. It has been supposed also to be already mentioned by Zosimus (v. 20) under the name of Liburnum; but there is really no authority for this, or for the names of Portus Liburni, and Portus Herculis Liburni employed by modern writers on ancient geography. The Antonine Itinerary, however, gives a station "Ad Herculem," which, as it is placed 12 miles from Pisae, could not have been far from *Leghorn*. (*Itin. Ant.* p. 293.)

Pliny alludes to the existence of warm springs in the territory of Pisae (ii. 103. s. 106). These are evidently the same now called the *Bagni di S. Giuliano*, situated about 4 miles from the city, at the foot of the detached group of Apennines, which divide the territory of *Pisa* from that of *Lucca*. [E. H. B.]

PISA'NUS PORTUS. [PISAE.]

PISA'TIS. [PISA.]

PISAVAE, in Gallia Narbonensis, is placed in the Table at the distance of xviii. from Aquae Sextiae (*Aix*), and on a road leading towards Glanum (*St. Remi*). The place is supposed to be in the district of *Pelissane*; and it has accordingly been conjectured that the name in the Table should be Pisanae. Roman remains have been dug up in the district of *Pelissane* near the chapel of *St. Jean de Bernasse*. There are traces of the old Roman road near *Aix*, and it is said that two Roman milestones are still there. (D'Anville, *Notice, &c.*; *Statistique du Départ. des Bouches du Rhône*, quoted by Ukert, *Gallien*, p. 436.) [G. L.]

PISAURUM (Πισαῦρον: *Eth.* Pisaurensis: *Pesaro*), a considerable town of Umbria, situated on the coast of the Adriatic, between Fanum Fortunae (*Fano*) and Ariminum (*Rimini*). It was on the line of the Via Flaminia, 24 miles from Ariminum (*Itin. Ant.* p. 126), at the mouth of the small river Pisaurus, from which it in all probability derived its name. (Plin. iii. 14. s. 19.) This is now called the *Foglia*. The site of Pisaurum, together with all the adjoining country, had been originally included in the territory of the Galli Senones; but we have no account of the existence of a Gaulish town of the name, and the first mention of Pisaurum in history is that of the foundation of a Roman colony there. This took place in B. C. 184, simultaneously with that of Potentia in Picenum, so that the same triumvirs were charged with the settlement of both colonies. The settlers received 6 jugera each, and enjoyed the full rights of Roman citizens. (Liv. xxxix. 44; Vell. Pat. i. 15; Madvig, *de Colon.* pp. 253, 286.) A few years later we hear of the construction there of some public works, under the direction of the Roman censors (Liv. xli. 27); but with this exception, we hear little of the new colony. It seems, however, to have certainly been a prosperous place, and one of the most considerable towns in this part of Italy. Hence, it was one of the places which Caesar hastened to occupy with his advanced cohorts as soon as he had passed the Rubicon, B. C. 49. (Caes. *B. C.* i. 11, 12; Cic. *ad Fam.* xvi. 12.) It is also repeatedly alluded to by Cicero as a flourishing town (Cic. *pro Sest.* 4, *Phil.* xiii. 12); hence it is impossible that the expression of Catullus, who calls it "moribunda sedes Pisauri" (*Carm.* 81. 3), can refer to the condition of the town itself. It would seem that its climate was reputed unhealthy, though this is not the case at the present day. Pisaurum received a fresh body of military colonists, which were settled there by M. Antonius; but suffered severely from an earthquake, which seems to have destroyed a great part of the town, just before the battle of

Actium, B.C. 31. (Plut. *Ant.* 60.) It appears, however, to have been restored, and peopled with fresh colonists by Augustus, for we find it bearing in inscriptions the titles of "Colonia Julia Felix;" and though Pliny does not give it the title of a colony, its possession of that rank under the Empire is abundantly proved by inscriptions. (Plin. ii. 14. s. 19; Orell. *Inscr.* 81, 3143, 3698, 4069, 4084.) From the same authority we learn that it was a place of some trade, and that vessels were built there, so that it had a "Collegium Fabrorum Navalium." (*Ib.* 4084.) The port was undoubtedly formed by the mouth of the river, which still affords a harbour for small vessels. Its position on the great Flaminian Way also doubtless secured to Pisaurum a certain share of prosperity as long as the Roman empire continued: but it was always inferior to the neighbouring Fanum Fortunae. (Mel. ii. 4. § 5; Ptol. iii. 1. § 22; *Itin. Ant.* pp. 100, 126; *Itin. Hier.* p. 615; *Tab. Peut.*)

During the Gothic Wars Pisaurum was destroyed by Vitiges, but partially restored by Belisarius (Procop. *B. G.* iii. 11); and rose again to prosperity under the exarchate of Ravenna, and became one of the cities of the Pentapolis. (Geogr. Rav. iv. 31; P. Diac. *Hist. Lang.* ii. 19.) The modern city of *Pesaro* is still a flourishing place; but has no remains of antiquity, except numerous inscriptions, which have been collected and published with a learned commentary by the Abate Olivieri. (*Marmora Pisaurensia*, fol. Pisaur. 1738.) [E. H. B.]

PISCENAE, enumerated by Pliny (iii. 4. s. 5) among the Oppida Latina of Gallia Narbonensis. It is generally assumed to be represented by *Pezenas* in the district of Agatha (*Agde*) near the Arauris (*Hérault*). Pliny (viii. 48. s. 73) speaks of a wool that was grown about Piscenae, which was more like hair than wool. [G. L.]

PISGAH. [NEBO.]

PISIDA, a municipium and station on the Roman road running along the coast-line of Syrtica, 20 M. P. from Gypsaria Taberna (*Dahman*), and 30 M. P. from Villa Magna (*Kelah*). (*Itin. Anton.*; *Peut. Tab.*) Ptolemy has a harbour, Pisindôn Portus (Πισινδῶν λιμήν, iv. 3. § 12), on the coast, which is represented by the harbour of *Bareká* or *Brega.* (Barth, *Wauderungen*, p. 271.) [E. B. J.]

PISI'DIA (ἡ Πισιδική: *Eth.* Πισίδαι, Pisidae), a province in the south of Asia Minor, which was in the earlier times always regarded as a part of Phrygia or Pamphylia, but was constituted a separate province in the division of the Roman empire made by Constantine the Great. It bordered in the east on Isauria and Cilicia, in the south on Pamphylia, in the west on Lycia, Caria, and Phrygia, and in the north on Phrygia Parorios; but it is almost impossible to mark the exact boundary lines, especially in the north and north-west, as the northern parts of Pisidia are often treated as parts of Phrygia, to which they originally belonged, and from which they are sometimes called Phrygia Pisidica, or Φρυγία πρὸς Πισιδίαν; but Amyntas separated them from Phrygia and united them with Pisidia. (Strab. xii. p. 570, &c.; Ptol. v. 5. §§ 4, 8; Dionys. Per. 858, &c.; Plin. v. 24; Hierocl. pp. 662, &c., 679, &c.) The country, which was rough and mountainous, though it contained several fertile valleys and plains, which admitted of the cultivation of olives (Strab. *l. c.*), was divided into several districts, with separate names. The south-western district bordering on Lycia was called Milyas, and

toja), a town of Etruria, situated in the northern part of that province at the foot of the Apennines, and on the direct road from Florentia to Luca, at the distance of 25 miles from each of those cities. (*Itin. Ant.* p. 284.) We have no account of it as an Etruscan town, nor has it any remains which belong to that people: under the Romans it seems to have been an ordinary municipal town of no great importance. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 48; *Itin. Ant. l. c.*) Its name is known in history only in connection with the final defeat of Catiline, B. C. 62. That general had assembled his forces in the neighbourhood of Faesulae: but on learning the discovery and failure of the conspiracy at Rome, he drew them off into the territory of Pistoria (*in agrum Pistoriensem*), with the view of making his escape across the Apennines into Cisalpine Gaul. But finding his retreat on that side cut off by Metellus Celer, while he was closely pressed by the consul C. Antonius in his rear, he suddenly turned upon the latter and gave him battle, but was cut to pieces with the whole of his remaining forces. (Sallust. *Cat.* 57.) From this narrative it appears that the battle must have been fought in the mountains on the confines of the Pistorian territory, which apparently adjoined that of Faesulae; but we have no more precise clue to its locality. Pistoria is mentioned by Ammianus Marcellinus, at a late period of the Roman Empire, as one of the municipal towns of the district called Tuscia Annonaria (Amm. Marc. xxvii. 3. § 1); but it seems to have never been a place of much consideration in ancient times, and first rose to importance in the middle ages. *Pistoja* is now a considerable town, and the see of a bishop. [E. H. B.]

PISTYRUS (Πίστυρος), a city and lake in Thrace, which the army of Xerxes passed after crossing the Nestus. (Herod. vii. 109.) The lake is described by Herodotus as 30 stadia in circumference, full of fish, and exceedingly salt. The town is called by Stephanus B. Pistirus or Bistirus (*s. vv.* Πίστιρος, Βίστιρος). Others have the form Pisteira. (Πίστειρα, Harpocrat. p. 124. 11; Schol. *ad Aesch. Pers.* 2.)

PISU'RGIA (τὰ Π σούργια), a coast-town of Cilicia, between Celenderis and Seleucia, 45 stadia to the west of Cape Crauni, and to the right of the island of Crambusa. (*Stadiasm. Mar. Mag.* §§ 172, 173.) [L. S.]

PISYE or PITYE (Πισύη, Πίτυη: *Eth.* Πισυήτης, Πιτυήτης), a town of Caria, of which the site is unknown. (Steph. B. *s. v.*; Constant. *de Them.* i. 14, p. 38, ed. Bonn.)

PITAIUM (Plin. v. 29; Πιτάου πόλις: *Eth.* Πιταεύς, Steph. B. *s. v.*), a town of Caria, of uncertain site.

PITANE (Πιτάνη: *Eth.* Πιταναῖος), an ancient city on the coast of Aeolis in Asia Minor, was situated near the mouth of the river Evenus on the bay of Elaea. It was one of the eleven ancient Aeolian settlements, and possessed considerable commercial advantages in having two harbours. (Herod. i. 149; Scylax, p. 37; Strab. xiii. pp. 581, 607, 614.) It was the birthplace of the academic philosopher Arcesilaus, and in the reign of Titus it suffered severely from an earthquake. (Oros. vii. 12; comp. Ptol. v. 2. § 5; Steph. B. *s. v.*; Plin. v. 32, xxxv. 49; Ov. *Met.* vii. 357.) The town is still mentioned in Hierocles, and its site is universally identified with the modern *Tchandeli* or *Sanderli*. Pliny (*l. c.*) mentions in its vicinity a river Canaius, which is not noticed by any other writer; but it may possibly be the river Pitanes, spoken of by Ptolemy (iii. 2. § 3), and which seems to derive its name from the town of Pitane. [L. S.]

PITANE. [SPARTA.]

PITHECUSAE INSULAE. [AENARIA.]

PITHOM. [PATUMOS.]

PITINUM (*Torre di Pitino*), a town of the Vestini, known only from the Tabula Peutingeriana, which places it on a line of road from Interocrea (*Antrodoco*) to Aveia. But the stations on each side of it, Prifernum and Eruli, are both unknown, and the distances probably corrupt. Hence, this itinerary affords us no real clue to its position. But Holstenius has pointed out that the name is retained by the *Torre di Pitino*, about 2 miles N. of *Aquila*, and has also shown that in the middle ages Pitinum still subsisted as a city, and was an episcopal see. (*Tab. Peut.*; Holsten. *Not. ad Cluver.* p. 139; Romanelli. vol. iii. p. 280). [E. H. B.]

PITULUM (Pitulanus: *Piolo*), a town of Umbria, mentioned only by Pliny (iii. 14. s. 19), who enumerates among the towns of that region the "Pitulani, cognomine Pisuertes et alii Mergentini." Both names are otherwise unknown, but according to Cluverius there is a village called *Piolo* in the Apennines between *Camerino* and *Matilica*, which probably retains the name of one or the other. (Cluver. *Ital.* p. 614.) [E. H. B.]

PITYEIA (Πιτύεια: *Eth.* Πιτυεύς), a town of Mysia, on the coast of the Propontis, between Parium and Priapus. It is mentioned even in the time of Homer. (*Il.* ii. 829; comp. Apollon. Rhod. i. 933; Strab. xiii. 588; Steph. B. *s. v.*) It is said to have derived its name from the firs which grew there in abundance, and is generally identified with the modern *Shamelik*. [L. S.]

PITYO'DES (Πιτυώδης), a small island in the Propontis off the coast of Bithynia, near Cape Hyris, and 110 stadia to the north of Cape Acritas. (Plin. v. 44; Steph. B. *s. v.* Πιτύουσσαι, who speaks of several islands of this name, which is the same as Πιτυώδεις.) The island is probably the one now called *Bojuk Ada*, where Pococke (vol. iii. p. 147) found remains of an ancient town. [L. S.]

PITYONE'SOS, a small island in the Saronic gulf, lying between Aegina and the coast of Epidaurus, and distant 6 miles from the latter. (Plin. iv. 12. s. 19.)

PITYUS (Πιτυοῦς: *Pitsunda*), a Greek town in Asiatic Sarmatia, on the north-eastern coast of the *Black Sea*, N. of Dioscurias, from which it was distant 360 stadia according to Artemidorus, and 350 according to Arrian. The real distance, however, is underrated by these writers; for from *C. Iskuria* (Dioscurias) to *Pitsunda* is not less than 400 stadia in a straight line. (Artemidor. *ap. Strab.* xi. p. 496; Arrian, *Per. P. Eux.* p. 18.) Artemidorus described it as the great Pityus, and Pliny as an "oppidum opulentissimum;" but between the time of Artemidorus and Pliny it was destroyed by the Heniochi (Plin. vi. 5), whence Arrian mentions it only as a place for anchorage, and the name does not occur at all in Ptolemy. The town was afterwards rebuilt by the Romans, and is described by Zosimus (i. 32), in the history of Gallienus, as a fortress surrounded with a very great wall, and having a most excellent harbour. (Comp. Procop. *B. Goth.* iv. p. 473, ed. Bonn; comp. C. Müller, *ad Arrian. l. c. ap. Geogr. Graec. Min.* vol. i. p. 392.)

PITYU'SA (Πιτυοῦσα or Πιτυοῦσσα, a contr. of

Πιτυόεσσα), literally, "abounding in pine-trees."
1. An island off the promontory Scyllaeum, or Bucephala, in Troezenia in Argolis. (Paus. ii. 34. § 8.) Pliny mentions (iv. 12. s. 19) an island Pityusa in the Argolic gulf, but from the order in which it occurs in Pliny, it would seem to be a different island from the preceding.

2. One of the Demonnesi in the Propontis, according to Hesychius (*s. v.*). [DEMONNESI.]

PITYU'SAE (Πιτυοῦσαι or Πιτυοῦσσαι, Strab. iii. p. 167; Ptol. ii. 6. § 77), two islands on the S. coast of Spain, 700 stadia, or nearly 100 miles from Dianium (Plin. iii. 5. s. 11; Liv. xxviii. 37). Their position is thus defined by Diodorus (v. 17): they are three nights' and days' sail from the Columns of Hercules, one day's sail from Iberia, and one day and night from Libya; whilst, according to the Itinerary (p. 511), they were 300 stadia from the Baleares, and 400 from Carthago Spartaria, or *Carthagena*. The larger of the two islands was called Ebusus (Ἔβυσσος, Ptol. *l. c.*), the smaller Ophiusa (Ὀφιοῦσσα, *Ib.*); and as they are only separated by a narrow strait, and as Ophiusa, from its small size, was unimportant, they are sometimes confounded together as one island by the ancients (Diod. v. 16; Liv. *l. c.*; Dioscor. i. 92, &c.) Their name of Pityusae was derived, like that of many other ancient places, from the abundance of pine-trees which grew upon them. They were 46 miles in extent. Diodorus (*l. c.*) compares Ebusus with Corcyra for size; and according to Strabo (*l. c.*) it was 400 stadia in circumference, and of about equal length and breadth. It was hilly in some parts, and not very fruitful, producing but little oil and wine; but its figs were good, and it afforded excellent pasturage. Snakes and noxious animals were not found upon it, whilst, on the contrary, the smaller island abounded in serpents to such a degree that it seems to have taken its name from them (Plin. iii. 14, xv. 21, xxxv. 59, &c.; Mela, ii. 7; Avien. *Descr. Orb.* 621, &c.). The chief town, also named Ebusus, which lay on the SE. side of the island, was a civitas foederata, and had a mint. (Ramus, *Cat. Num. vet. Graec. et Lat. Mus. Reg. Daniae*, i. p. 13.) It was a well-built city with a good harbour, and was the resort of many barbarians and foreigners, especially Phoenicians. (Strab., Mela, Diod., *ll. cc.*) The larger island is now *Iviza*, the smaller, *Formentara*. [T. H. D.]

PLACEN'TIA (Πλακεντία: *Eth.* Placentinus: *Piacenza*), a city of Gallia Cispadana, situated near the S. bank of the Padus, just below the point where it receives the waters of the Trebia. It was on the Via Aemilia, of which it originally formed the termination, that road being in the first instance carried from Ariminum to Placentia; and was 40 miles distant from Parma. We have no account of the existence of a town on the spot previous to the establishment of the Roman colony, which was settled there in B. C. 219, after the great Gaulish war, at the same time with Cremona. (Liv. *Epit.* xx; Vell. Pat. i. 14; Pol. iii. 40; Ascon. *in Pison.* p. 3.) It consisted of not less than 6000 colonists, with Latin rights. But the new colony was scarcely founded, and its walls hardly completed, when the news of the approach of Hannibal produced a general rising of the neighbouring Gauls, the Boians and Insubrians, who attacked Placentia, ravaged its territory, and drove many of the colonists to take refuge at Mutina; but were unable to effect anything against the city itself, which was still in the hands of the Romans in the following year, and became the head-quarters of the army of Scipio both before and after the battle of the Trebia. (Pol. iii. 40, 66; Liv. xxi. 25, 56, 59, 63; Appian, *Hann.* 5, 7.) At a later period of the same war, in B. C. 209, Placentia was one of the colonies which proved faithful to Rome at its greatest need, and came forward readily to furnish its quota of supplies for the war, when twelve of the older colonies failed in doing so. (Liv. xxvii. 10.) Shortly after this it withstood the arms of Hasdrubal, who was induced to lay siege to it, after he had crossed the Alps and descended into Cisalpine Gaul, and by so doing lost a great deal of valuable time. After a protracted siege he was compelled to abandon the enterprise, and continue his march into Italy, leaving Placentia behind him. (Id. xxvii. 39, 43.) A few years later it was less fortunate, having been taken by surprise by the sudden insurrection of the Gauls in B. C. 200, who plundered and burnt the town, and carried off the greater part of the inhabitants into captivity. (Id. xxxi. 10.) After the victory of the consul L. Furius, about 2000 of the prisoners taken on this occasion were restored to the colony; and a few years afterwards L. Valerius Flaccus, who wintered at Cremona and Placentia, restored and repaired as far as possible all the losses they had suffered during the war. (Id. xxxi. 21, xxxiv, 22.) But they were still exposed to the ravages of the Gauls and Ligurians; and in B. C. 193 their territory was laid waste by the latter up to the very gates of the city. (Id. xxxiv. 56.) Hence we cannot wonder to find them, in B. C. 190, complaining of a deficiency of settlers, to remedy which the senate decreed that a fresh body of 3000 families should be settled at each of the old colonies of Placentia and Cremona, while new ones should be established in the district of the Boii. (Id. xxxvii. 46, 47.) A few years later the consul M. Aemilius, having completed the subjection of the Ligurians, constructed the celebrated road, which was ever after known by his name, from Ariminum to Placentia (Id. xxxix. 2); and from this time the security and tranquillity enjoyed by this part of Italy caused it to rise rapidly to a state of great prosperity. In this there can be no doubt that Placentia fully shared; but we hear little of it during the Roman Republic, though it appears to have been certainly one of the principal towns of Cispadane Gaul. In the civil war of Marius and Sulla, a battle was fought near Placentia, in which the partisans of Carbo were defeated by Lucullus, the general of Sulla, B. C. 82 (Appian, *B. C.* i. 92); and in that between Caesar and Pompey, B. C. 49, it was at Placentia that a mutiny broke out among the troops of the former, which at one time assumed a very formidable aspect, and was only quelled by the personal firmness and authority of the dictator. (Appian, *B. C.* ii. 47; Dion Cass. xli. 26.) Placentia, indeed, seems to have been at this period one of the places commonly selected as the head-quarters of Roman troops in this part of Italy. (Cic. *ad Att.* vi. 9.) It was again the scene of a somewhat similar mutiny of the legions of Augustus during the Perusian War, B. C. 41. (Dion Cass. xlviii. 10.)

Cicero notices Placentia towards the close of the republican period as a municipium: its colonial rank must have been merged in the ordinary municipal condition in consequence of the Lex Julia, B. C. 90. (Cic. *in Pison.* 23; Fest. *s. v. Municipium.*) But under the Empire it reappears as a

colony, both Pliny and Tacitus giving it that title (Plin. iii. 15. s. 20; Tac. *Hist.* ii. 19): it had probably received a fresh colony under Augustus. We learn from Tacitus (*l. c.*) that it was one of the most flourishing and populous cities of the district of Gallia Cispadana; and though of no natural strength, being situated in an open plain, it was well fortified. For this reason it was occupied in A. D. 69 by Spurinna, one of the generals of Otho, and successfully defended by him against Caecina, the general of Vitellius, who had crossed the Padus, and laid siege to Placentia, but was compelled to abandon it and withdraw to Cremona. (Tac. *Hist.* ii. 17—23.) During the assaults of Caecina, the amphitheatre, which is said to have been the largest provincial edifice of the kind in Italy, and was situated without the walls, was accidentally burnt. (*Ib.* 21.) From this time we meet with no further mention of Placentia in history till the reign of Aurelian, when that emperor sustained a great defeat from the Marcomanni, under its walls. (Vopisc. *Aurel.* 21.) But the city still continued to be one of the most considerable places on the line of the Via Aemilia; and though it is noticed by St. Ambrose, towards the close of the fourth century, as sharing in the desolation that had then befallen the whole of this once flourishing province (Ambros. *Ep.* 39), it survived all the ravages of the barbarians; and even after the fall of the Western Empire was still a comparatively flourishing town. It was there that Orestes, the father of the unhappy Augustulus, was put to death by Odoacer, in A. D. 476. (P. Diac. *Hist. Miscell.* xvi. p. 558.) Procopius also mentions it during the Gothic wars as a strong fortress and the chief city of the province of Aemilia. It was only taken by Totila, in A. D. 546, by famine. (Procop. *B. G.* iii. 13, 17.) Considerably later it is still noticed by P. Diaconus among the "opulent cities" of Aemilia (*Hist. Lang.* ii. 18); a position which it preserved throughout the middle ages. At the present day it is still a flourishing and populous place, with about 30,000 inhabitants, though partially eclipsed by the superior importance to which Parma has attained since it became the capital of the reigning dukes. There are no remains of antiquity.

Placentia was undoubtedly indebted for its prosperity and importance in ancient times, as well as in the middle ages, to its advantageous situation for the navigation of the *Po.* Strabo (v. p. 215) speaks of the navigation from thence to Ravenna, as if the river first began to be navigable from Placentia downwards; but this is not quite correct. The city itself lay at a short distance from the river; but it had an emporium or port on the stream itself, probably at its confluence with the Trebia, which was itself a considerable town. This was taken and plundered by Hannibal in B. C. 218. (Liv. xxi. 57; Tac. *Hist.* ii. 19.)

It has been already mentioned that the Via Aemilia, as originally constructed, led from Ariminum to Placentia, a distance of 178 miles. It was afterwards continued from the latter city to Dertona, from whence a branch proceeded across the Apennines to Genoa (Strab. v. p. 17); while another line was carried from Placentia across the Padus direct to Mediolanum, a distance of 40 miles: and thus communicated with the whole of Gallia Transpadana. (*Itin. Ant.* pp. 98, 127, 288; *Itin Hier.* p. 616; *Tab. Peut.*) [E. H. B.]

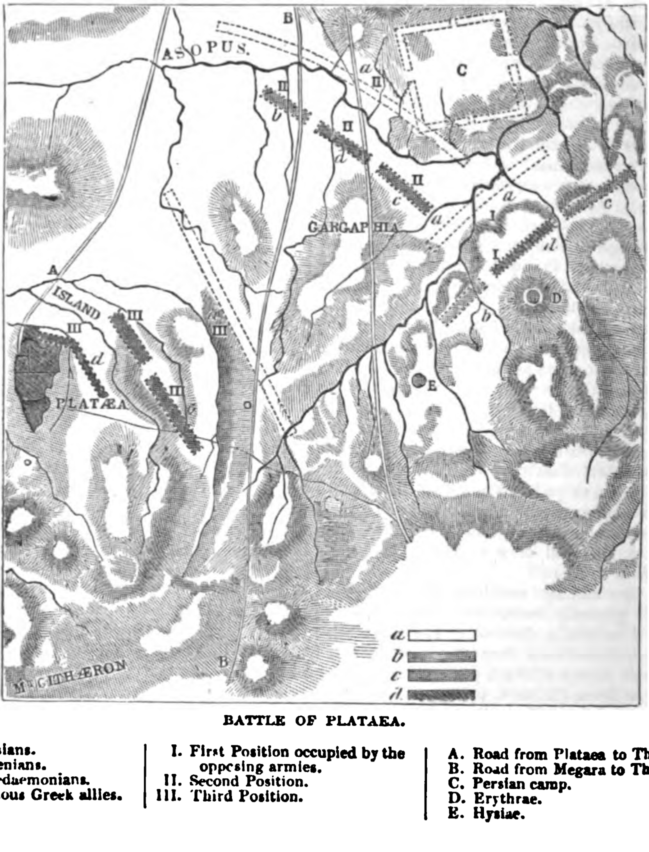
PLA'CIA (Πλακίη: *Eth.* Πλακιανός), an ancient Pelasgian town in Mysia Olympene, at the foot of Mount Olympus, and on the east of Cyzicus. The place seems to have decayed or to have been destroyed at an early time, as it is not mentioned by later writers. (Herod. i. 57; Scylax, p. 35; Dionys Hal. i. p 23: Steph. B. *s. v.* Πλάκη.) [L. S.]

PLACUS (Πλάκος), a woody mountain of Mysia, at the foot of which Thebe is said to have been situated in the Iliad (vi. 397, 425, xxii. 479); but Strabo (xiii. p. 614) was unable to learn anything about such a mountain in that neighbourhood. [See PELECAS.] [L. S.]

PLAGIA'RIA. [LUSITANIA.]

PLANA'RIA INS. [FORTUNATAE INSULAE.]

PLANA'SIA. [LERINA; LERON.]



PLANA'SIA (Πλανασία: *Pianosa*), a small island in the Tyrrhenian sea, about 10 miles SW. of Ilva (*Elba*), and nearly 40 from the nearest point on the coast of Etruria. It is about 3 miles long by 2½ in width, and is low and flat, from whence probably it derived its name. (Plin. iii. 6. s. 12; Ptol. iii. 1. § 79; *Itin. Marit.* p. 513.) The Maritime Itinerary reckons it 90 stadia from Ilva, while Pliny calls the same distance 38 miles; but this is evidently a mistake for its distance from the mainland. It is remarkable that Pliny mentions Planaria and Planasia as if they were two distinct islands, enumerating the one before and the other after Ilva; but it is certain that the two names are only forms of the same, and both refer to the same island. (Cluver. *Ital.* p. 504; Harduin. *Not. ad Plin. l. c.*) In Varro's time it seems to have belonged to M. Piso, who kept large flocks of peacocks there in a wild state. (Varr. *R. R.* iii. 6.) It was subsequently used as a place of banishment, and among others it was there that Postumus Agrippa, the grandson of Augustus, spent the last years of his life in exile. (Tac. *Ann.* i. 3, 5; Dion Cass. lv. 32; Suet. *Aug.* 65.) Some ruins of Roman buildings still remain in the island: and its quarries of granite seem to have been certainly worked in ancient times. It is now inhabited only by a few fishermen. [E. H. B.]

PLANE'SIA (Πλανησία, Strab. iii. p. 159), an island in the Sinus Illicitanus, on the SE. coast of Hispania Tarraconensis, now *Isola Plana.* [T. H. D.]

PLATAEA. [PLATEA.]

PLATAEA or PLATAEAE (Πλάταια, Hom. Herod.; Πλαταιαί, Thuc. Strab. Paus., &c.: *Eth.* Πλαταιεύς, Plataeensis), an ancient city of Boeotia, was situated upon the frontiers of Attica at the foot of Mt. Cithaeron, and between that mountain and the river Asopus, which divided its territory from that of Thebes. (Strab. ix. p. 411.) The two cities were about 6½ miles apart by the road, but the direct distance was little more than 5 geographical miles. According to the Thebans Plataea was founded by them (Thuc. iii. 61); but Pausanias represents the Plataeans as indigenous, and according to their own account they derived their name from Plataea, a daughter of Asopus. (Paus. ix. 1. § 1.) Plataea is mentioned in Homer among the other Boeotian cities. (*Il.* ii. 504.) In B. C. 519 Plataea, unwilling to submit to the supremacy of Thebes, and unable to resist her powerful neighbour with her own unaided resources, formed a close alliance with Athens, to which she continued faithful during the whole of her subsequent history. (Herod. vi. 108; Thuc. iii. 68.) She sent 1000 men to the assistance of Athens at Marathon, and shared in the glories of that victory. (Herod. *l. c.*) The Plataeans also fought at Artemisium, but were

not present at Salamis, as they had to leave the fleet in order to remove their families and property from the city, in consequence of the approach of the Persian army. (Herod. viii. 44.) Upon the arrival of the Persians shortly afterwards their city was burnt to the ground. (Herod. viii. 50.) In the following year (B. C. 479) their territory was the scene of the memorable battle, which delivered Greece from the Persian invaders. The history of this battle illustrates so completely the topography of the Plataean territory, that it is necessary to give an account of the different positions taken by the contending forces (See accompanying Map). Mardonius proceeded from Attica into Boeotia across Mount Parnes by the pass of Deceleia, and took up a position on the bank of the Asopus, where he caused a fortified camp to be constructed of 10 stadia square. The situation was well selected, since he had the friendly city of Thebes in his rear, and was thus in no danger of falling short of provisions. (Herod. ix. 15.) The Grecian army crossed over from Attica by Mt. Cithaeron; but as Pausanias did not choose to expose his troops to the attacks of the Persian cavalry on the plain, he stationed them on the slopes of the mountain, near Erythrae, where the ground was rugged and uneven. (See Map, First Position.) This position did not, however, altogether preserve them; but, in an attack made by the Persian cavalry, a body of 300 Athenians repulsed them, and killed their leader Masistius. This success encouraged Pausanias to descend into the territory of Plataea, more especially as it was better supplied with water than his present position. Marching from Erythrae in a westerly position along the roots of Mt. Cithaeron, and passing by Hysiae, he drew up his army along the right bank of the Asopus, partly upon hills of no great height and partly upon a lofty plain, the right wing being near the fountain Gargaphia, and the left near the chapel of the Plataean hero Androcrates. (Herod. ix. 25—30.) Mardonius drew up his army opposite to them on the other side of the Asopus. (See Map, Second Position.) The two armies remained in this position for some days, neither party being willing to begin the attack. The Persians assailed the Greeks at a distance with their missiles, and prevented them altogether from watering at the Asopus. Meantime the Persian cavalry intercepted the convoys of provisions proceeding to the Grecian camp, and on one occasion drove away the Lacedaemonians, who occupied the right wing from the fountain Gargaphia, and succeeded in choking it up. This fountain had been of late the only watering-place of the Greeks; and as their ground was now untenable, Pausanias resolved to retreat in the night to a place called the Island (νῆσος), about 10 stadia in the rear of their present position, and halfway between the latter and the town of Plataea. The spot selected, improperly called an island, was, in fact, a level meadow, comprised between two branches of the river Oeroë, which, rising from distinct sources in Mt. Cithaeron,

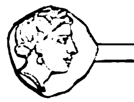
and running for some space nearly parallel with one another, at length unite and flow in a westerly direction into the gulf of Corinth. (Herod. ix. 51.) The nature of the ground would thus afford to the Greeks abundance of water, and protection from the enemy's cavalry. The retreat, however, though for so short a distance, was effected in disorder and confusion. The Greek centre, chiefly composed of Megarians and Corinthians, probably fearing that the island would not afford them sufficient protection against the enemy's cavalry, did not halt till they reached the temple of Hera, which was in front of the town of Plataea. The Lacedaemonians on the right wing were delayed till the day began to dawn, by the obstinacy of Amompharetus, and then began to march across the hills which separated them from the island. The Athenians on the left wing began their march at the same time, and got round the hills to the plain on the other side on their way to the island. After marching 10 stadia, Pausanias halted on the bank of the Moloeis, at a place called Agriopius, where stood a temple of the Eleusinian Demeter. Here he was joined by Amompharetus, and here he had to sustain the attack of the Persians, who had rushed across the Asopus and up the hill after the retreating foe. As soon as Pausanias was overtaken by the Persians, he sent to the Athenians to entreat them to hasten to his aid; but the coming up of the Boeotians prevented them from doing so. Accordingly the Lacedaemonians and Tegeatans had to encounter the Persians alone without any assistance from the other Greeks, and to them alone belongs the glory of the victory. The Persians were defeated with great slaughter, nor did they stop in their flight till they had again crossed the Asopus and reached their fortified camp. The Thebans also were repulsed by the Athenians, but they retreated in good order to Thebes, being covered by their cavalry from the pursuit of the Athenians. The Greek centre, which was nearly 10 stadia distant, had no share in the battle; but hearing that the Lacedaemonians were gaining the victory, they hastened to the scene of action, and, coming up in confusion, as many as 600 were cut to pieces by the Theban force. Meantime the Lacedaemonians pursued the Persians to the fortified camp, which, however, they were unable to take until the Athenians, more skilled in that species of warfare, came to their assistance. The barricades were then carried, and a dreadful carnage ensued. With the exception of 40,000 who retreated with Artabazus, only 3000 of the original 300,000 are said to have escaped. (Herod. ix. 50—70.) On the topography of this battle, see Leake, *Northern Greece*, vol. ii. p. 335, seq.; Grote, *History of Greece*, vol. v. p. 212, seq.

As this signal victory had been gained on the soil of Plataea, its citizens received especial honour and rewards from the confederate Greeks. Not only was the large sum of 80 talents granted to them, which they employed in erecting a temple to Athena, but they were charged with the duty of rendering every year religious honours to the tombs of the warriors who had fallen in the battle, and of celebrating every five years the festival of the Eleutheria in commemoration of the deliverance of the Greeks from the Persian yoke. The festival was sacred to Zeus Eleutherius, to whom a temple was now erected at Plataea. In return for these services Pausanias and the other Greeks swore to guarantee the independence and inviolability of the city and its territory (Thuc. ii. 71; Plut. *Arist.* c. 19—21; Strab. ix. p. 412; Paus. ix. 2. § 4; for further details see *Dict. of Ant.* art. ELEUTHERIA.)

Plataea was of course now rebuilt, and its inhabitants continued unmolested till the commencement of the Peloponnesian War. In the spring of B. C. 431, before any actual declaration of war, a party of 300 Thebans attempted to surprise Plataea. They were admitted within the walls in the night time by an oligarchical party of the citizens; but the Plataeans soon recovered from their surprise, and put to death 180 of the assailants. (Thuc. ii. 1, seq.) In the third year of the war (B. C. 429) the Peloponnesian army under the command of Archidamus laid siege to Plataea. This siege is one of the most memorable in the annals of Grecian warfare, and has been narrated at great length by Thucydides. The Plataeans had previously deposited at Athens their old men, women, and children; and the garrison of the city consisted of only 400 citizens and 80 Athenians, together with 110 women to manage their household affairs. Yet this small force set at defiance the whole army of the Peloponnesians, who, after many fruitless attempts to take the city by assault, converted the siege into a blockade, and raised a circumvallation round the city, consisting of two parallel walls, 16 feet asunder, with a ditch on either side. In the second year of the blockade 212 of the besieged during a tempestuous winter's night succeeded in scaling the walls of circumvallation and reaching Athens in safety. In the course of the ensuing summer (B. C. 427) the remainder of the garrison were obliged, through failure of provisions, to surrender to the Peloponnesians. They were all put to death; and all the private buildings rased to the ground by the Thebans, who with the materials erected a sort of vast barrack round the temple of Hera, both for the accommodation of visitors, and to serve as an abode for those to whom they let out the land. A new temple, of 100 feet in length (νεὼς ἑκατόμπεδος), was also built by the Thebans in honour of Hera. (Thuc. ii. 71, seq., iii. 20, seq., 52, seq., 68.)

The surviving Plataeans were kindly received by the Athenians. They would appear even before this time to have enjoyed the right of citizenship at Athens (Ἀθηναίων ξύμμαχοι καὶ πολῖται, Thuc. iii. 63). The exact nature of this citizenship is uncertain; but that it was not the full citizenship, possessed by Athenian citizens, appears from a line of Aristophanes, who speaks of certain slaves, who had been engaged in sea-fights, being made Plataeans (καὶ Πλαταιᾶς εὐθὺς εἶναι κἀντὶ δούλων δεσπότας, *Ran.* 706; comp. Schol. *ad Aristoph. Ran.* 33; Böckh, *Public Econ. of Athens*, p. 262, 2nd ed.). Diodorus, in relating their return to Athens at a subsequent time, says (xv. 46) that they received the ἰσοπολιτεία; but that some of them at any rate enjoyed nearly the full privileges of Athenian citizens appears from the decree of the people quoted by Demosthenes (*c. Neaer.* p. 1380). On the whole subject, see Hermann, *Staatsalterth*, § 117.

In B. C. 420 the Athenians gave the Plataeans the town of Scione as a residence. (Thuc. v. 32; Isocr. *Paneg.* § 109; Diodor. xii. 76.) At the close of the Peloponnesian War, they were compelled to evacuate Scione (Plut. *Lysand.* 14), and again found a hospitable welcome at Athens. Here they were living at the time of the peace of Antalcidas (B. C. 387), which guaranteed the autonomy of the Grecian cities; and the Lacedaemonians, who were now anxious to humble the power of Thebes, took ad-



vantage of it to restore the Plataeans to their native city. (Paus. ix. 1. § 4; Isocrat. *Plataic.* § 13, seq.) But the Plataeans did not long retain possession of their city, for in B. C. 372 it was surprised by the Thebans and again destroyed. The Plataeans were compelled once more to seek refuge at Athens. (Paus. ix. 1. §§ 5—8; Diodor. xv. 46.) The wrongs done to the Plataeans by Thebes are set forth in a speech of Isocrates, entitled *Plataicus*, which was perhaps actually delivered at this time by a Plataean speaker before the public assembly at Athens. (Grote's *Greece*, vol. x. p. 220.) After the battle of Chaeroneia (B. C. 338) the Plataeans were once more restored to their city by Philip. (Paus. ix. 1. § 8, iv. 27. § 11.) It was shortly after this time that Plataea was visited by Dicaearchus, who calls the Plataeans Ἀθηναῖοι Βοιωτοί, and remarks that they have nothing to say for themselves, except that they are colonists of the Athenians, and that the battle between the Greeks and the Persians took place near their town. (*Descript. Graec.* p. 14, Hudson.)

After its restoration by Philip, the city continued to be inhabited till the latest times. It was visited by Pausanias, who mentions three temples, one of Hera, another of Athena Areia, and a third of Demeter Eleusinia. Pausanias speaks of only one temple of Hera, which he describes as situated within the city, and worthy of admiration on account of its magnitude and of the offerings with which it was adorned (ix. 2. § 7). This was apparently the temple built by the Thebans after the destruction of Plataea. (Thuc. iii. 68.) It is probable that the old temple of Hera mentioned by Herodotus, and which he describes as outside the city (ix. 52), was no longer repaired after the erection of the new one, and had disappeared before the visit of Pausanias. The temple of Athena Areia was built according to Pausanias (ix. 4. § 1) out of a share of the spoils of Marathon, but according to Plutarch (*Arist.* 20) with the 80 talents out of the spoils of Plataea, as mentioned above. The temple was adorned with pictures by Polygnotus and Onatas, and with a statue of the goddess by Pheidias. Of the temple of Demeter Eleusinia we have no details, but it was probably erected in consequence of the battle having been fought near a temple of Demeter Eleusinia at Argiopius. (Herod. ix. 57.) The temple of Zeus Eleutherius (Strab. ix. p. 412) seems to have been reduced in the time of Pausanias to an altar and a statue. It was situated outside the city. (Paus. ix. 2. §§ 5—7.)

Plataea is mentioned in the sixth century by Hierocles (p. 645, Wesseling) among the cities of Boeotia; and its walls were restored by Justinian. (Procop. *de Aedif.* iv. 2.)

The ruins of Plataea are situated near the small village of *Kókhla.* The circuit of the walls may still be traced in great part. They are about two miles and a half in circumference; but this was the size of the city restored by Philip, for not only is the earlier city, before its destruction by the Thebans, described by Thucydides (ii. 77) as small, but we find at the southern extremity of the existing remains more ancient masonry than in any other part of the ruins. Hence Leake supposes that the ancient city was confined to this part. He observes that "the masonry in general, both of the Acropolis and of the town, has the appearance of not being so old as the time of the battle. The greater part is of the fourth order, but mixed with portions of a

PLA'TEA INS. (Πλατέα, Πλάτεα, Πλάταια, var. lect.; Herod. iv. 151, 153, 156, 169; Φλατεῖαι, Scyl. p. 46; Πλαταίαι, Πλατεῖα, Steph. B.; *Stadiasm.* § 41), an island off the shores of Libya, and on the side not far removed from the W. limits of Aegypt, where for two years in the seventh century B.C. the Theraean colonists settled before they founded Cyrene. It has been identified with the island of *Bomba* or *Bhourda* in the *Gulf of Bomba*. The island AEDONIA (Ἀηδονία, Ἀηδονίς, Ptol. iv. 5. § 75), which Scylax (*l. c.*) and the Coast-describer (*l. c.*) couple with Platea, may then be referred to the small island *Seal* off the harbour of Batrachus; unless it be assumed that there is some mistake in our present charts, and that Aedonia or Aedonis and Platea be two different names for the same island. (Pacho, *Voyage dans la Marmarique*, p. 52; Barth, *Wanderungen*, pp. 506, 548.) [E. B. J.]

PLAVIS (*Piave*), one of the most considerable rivers of Venetia, which has its sources in the Julian Alps, flows by the walls of *Belluno* (Belunum), and falls into the Adriatic sea between *Venice* and *Caorle*. Though one of the largest rivers in this part of Italy, it is unaccountably omitted by Pliny (iii. 18. s. 22). who mentions the much smaller streams of the Silis and Liquentia on each side of it; and its name is not found in any author earlier than Paulus Diaconus and the Geographer of Ravenna. (P. Diac. ii. 12; Geogr. Rav. iv. 36.) [E. H. B.]

PLEGE'RIUM (Πληγήριον, Strab. xvi. p. 698), a place mentioned by Strabo, in the NW. part of India, in the state which he calls Bandobane, on the river Choaspes (now *Attok*). [V.]

PLEGRA (Πλέγρα), a town in the interior of Paphlagonia. (Ptol. v. 4. § 5.) [L. S.]

PLEIAE (Πλεῖαι), a town of Laconia, mentioned by Livy (xxxv. 27) as the place where Nabis pitched his camp in B.C. 192, must have been situated in the plain of Leuce, which lay between Acriae and Asopus. [LEUCAE.] The name of the place occurs in an inscription (Böckh, *Inscr.* no. 1444). From its position it would appear to be the same as the παλαιὰ κώμη of Pausanias (iii. 22. § 6), in which passage Curtius suggests that we might perhaps read Πλεῖαι κώμη. (Curtius, *Peloponnesos*, vol. ii. p. 328.)

PLEISTUS. [DELPHI.]

PLEMMY'RIUM. [SYRACUSAE.]

PLERA, a town of Apulia, situated on the branch of the Via Appia which led from Venusia direct to Tarentum. It is supposed to be represented by the modern *Gravina*. (*Itin. Ant.* p. 121; Holsten. *Not. ad Cluv.* p. 281.) The name is written in many MSS. Blera. [E. H. B.]

PLERAEI (Πληραῖοι), a people of Illyricum, who lived upon the banks of the Naro, according to Strabo (vii. p. 315, seq.). Stephanus B. places them in Epeirus (*s. v.* Πλαραῖοι).

PLESTI'NIA. [MARSI.]

PLEUMO'XII, a Gallic people who were under the dominion of the Nervii (Caes. *B. G.* v. 39). Nothing more is known of them. The name is not quite certain, for there are variations in the MSS. It is clear that they were somewhere in Gallia and near the Nervii, as we may infer. [G. L.]

PLEURON (Πλευρών: *Eth.* Πλευρώνιος, also Πλευρωνεύς, Steph. B. *s. v.*, Pleuronius), the name of two cities in Aetolia, the territory of which was called Pleuronia. (Strab. x. p. 465; Auson. *Epitaph.* 10.)

1. OLD PLEURON (ἡ παλαιὰ Πλευρών, Strab. x. p. 451), was situated in the plain between the Achelous and the Evenus, W. of Calydon, at the foot of Mount Curium, from which the Curetes are said to have derived their name. Pleuron and Calydon were the two chief towns of Aetolia in the heroic age, and are said by Strabo (x. p. 450) to have been the ancient ornament (πρόσχημα) of Greece. Pleuron was originally a town of the Curetes, and its inhabitants were engaged in frequent wars with the Aetolians of the neighbouring town of Calydon. The Curetes, whose attack upon Calydon is mentioned in an episode of the Iliad (ix. 529), appear to have been the inhabitants of Pleuron. At the time of the Trojan War, however, Pleuron was an Aetolian city, and its inhabitants sailed against Troy under the command of the Aetolian chief Thoas, the son (not the grandson) of Oeneus. (Hom. *Il.* ii. 639, comp. xiii. 217, xiv. 116.) Ephorus related that the Curetes were expelled from Pleuronia, which was formerly called Curetis, by Aeolians (ap. Strab. x. p. 465); and this tradition may also be traced in the statement of Thucydides (iii. 102) that the district, called Calydon and Pleuron in the time of the Peloponnesian War, formerly bore the name of Aeolis. Since Pleuron appears as an Aetolian city in the later period of the heroic age, it is represented in some traditions as such from the beginning. Hence it is said to have derived its name from Pleuron, a son of Aetolus; and at the very time that some legends represent it as the capital of the Curetes, and engaged in war with Oeneus, king of Calydon, others suppose it to have been governed by the Aetolian Thestius, the brother of Oeneus. Thestius was also represented as a descendant of Pleuron; and hence Pleuron had an heroum or a chapel at Sparta, as being the ancestor of Leda, the daughter of Thestius. But there are all kinds of variations in these traditions. Thus we find in Sophocles Oeneus, and not Thestius, represented as king of Pleuron. (Apollod. i. 7. § 7; Paus. iii. 14. § 8; Soph. *Trach.* 7.) One of the tragedies of Phrynichus, the subject of which appears to have been the death of Meleager, the son of Oeneus, was entitled Πλευρώνιαι, or the "Pleuronian Women;" and hence it is not improbable that Phrynichus, as well as Sophocles, represented Oeneus as king of Pleuron. (Paus. x. 31. § 4.) Pleuron is rarely mentioned in the historical period. It was abandoned by its inhabitants, says Strabo, in consequence of the ravages of Demetrius, the Aetolian, a surname probably given to Demetrius II., king of Macedonia (who reigned B.C. 239—229), to distinguish him from Demetrius Poliorcetes. (Strab. x. p. 451.) The inhabitants now built the town of

2. NEW PLEURON (ἡ νεωτέρα Πλευρών), which was situated at the foot of Mt. Aracynthus. Shortly before the destruction of Corinth (B.C. 146), we find Pleuron, which was then a member of the Achaean League, petitioning the Romans to be dissevered from it. (Paus. vii. 11. § 3.) Leake supposes, on satisfactory grounds, the site of New Pleuron to be represented by the ruins called τὸ Κάστρον τῆς Κυρίας Εἰρήνης, or the *Castle of Lady Irene* about one hour's ride from *Mesolonghi*. These ruins occupy the broad summit of one of the steep and rugged heights of *Mt. Zygos* (the ancient Aracynthus), which bound the plain of *Mesolonghi* to the north. Leake says that the walls were about a mile in circumference, but Mure and Dodwell describe the circuit as nearly two miles. The most remarkable

remains within the ruined walls are a theatre about 100 feet in diameter, and above it a cistern, 100 feet long, 70 broad, and 14 deep, excavated on three sides in the rock, and on the fourth constructed of masonry. In the acropolis Leake discovered some remains of Doric shafts of white marble, which he conjectures to have belonged to the temple of Athena, of which Dicaearchus speaks (l. 55); but the temple mentioned by Dicaearchus must have been at Old Pleuron, since Dicaearchus was a contemporary of Aristotle and Theophrastus, and could not have been alive at the time of the foundation of New Pleuron. Dodwell, who visited the ruins of this city, erroneously maintains that they are those of Oeniadae, which were, however, situated among the marshes on the other side of the Achelous. Leake places Old Pleuron further south, at a site called *Ghyfto-kastro*, on the edge of the plain of *Mesolonghi*, where there are a few Hellenic remains. (Leake, *Northern Greece*, vol. i. p. 115, seq., vol. iii. p. 539; Dodwell, *Tour through Greece*, vol. i. p. 96, seq.; Mure, *Tour in Greece*, vol. i. p. 140, seq.)

PLINTHINE (Πλινθίνη, Strab. xvii. p. 799; Ptol. iv. 5. § 8; Steph. B. *s. v.*), the frontier town of Aegypt towards Libya. It stood at the head of the Plinthinetic bay, in latitude 29° 40′ N., just within the Mareotic nome, but beyond the limits of the Delta proper. There are no remains enabling us to determine the exact site of this town; but it cannot have been far from Taposiris (*Abousir*), of which the ruins are still visible about 25 miles W. of Alexandreia. An inferior kind of wine was produced in this region of Aegypt; and Hellanicus (*Fr.* 155) says that the people of Plinthine originally discovered the virtues of the grape. (Athen. i. p. 34.) [W. B. D.]

PLINTHINE'TICUS SINUS (Πλινθινήτης κόλπος, Herod. ii. 6), the westernmost of the Mediterranean harbours of Aegypt. It was indeed little more than a roadstead, and was exposed to the N. and NW. winds. W. of the Sinus Plinthineticus began the Regio Marmarica. [W. B. D.]

PLISTIA (*Prestia*), a town of the Samnites, mentioned only by Livy (ix. 21, 22) in a manner that affords but little clue to its position. It was besieged by the Samnites in B. C. 315, with the view of drawing off the Romans from the siege of Saticula: they failed in this object, but made themselves masters of Plistia. The site is probably indicated by a village still called *Prestia*, about 4 miles from *Sta Agata dei Goti*, at the foot of the *Monte Taburno*. [E. H. B.]

PLISTUS. [DELPHI.]

PLITENDUS, a town of Phrygia on the river Alander, which is probably a branch of the Sangarius. (Liv. xxxviii. 15.)

PLITHANA (τὰ Πλίθανα, Arrian, *Per. Mar. Erythr.* p. 29, Huds., p. 294, ed. C. Müller, who reads Παίθανα), an important emporium in the Dachinabades in India, from which many onyx stones were exported. It is called by Ptolemy (vii. 1. § 82) Baethana (Βαίθανα), the royal residence of Siroptolemaeus. In Pracrit it is also called *Paithana*, in Sanscrit *Prathisthana*; it is the modern town of *Pythan*, or *Pultanah* upon the river *Godaveri*. (Vincent, *Voyage of Nearchus*, vol. ii. p. 412; Lassen, *Ind. Alterth.* vol. i. p. 177; C. Müller, *ad Geogr. Graec. Min.* vol. i. p. 294.)

may be received as proving

that the city was considered as an ancient one, and certainly existed before the Roman conquest of Istria in B. C. 177, though its name is not mentioned on that occasion. It was undoubtedly the advantages of its excellent port that attracted the attention of the Romans, and led Augustus to establish a colony there, to which he gave the name of Pietas Julia. (Mel. *l. c.*; Plin. iii. 19. s. 23.) Several of the still existing remains prove that he at the same time adorned it with public edifices; and there is no doubt that under the Roman Empire it became a considerable and flourishing town, and, next to Tergeste (*Trieste*), the most important city of Istria. (Strab. *l. c.*; Ptol. iii. 1. § 27; Gruter, *Inscr.* p. 263. 7, p. 360. 1, p. 432. 8.) It is mentioned in history as the place where Crispus, the eldest son of Constantine the Great, was put to death by order of his father; and again, in A. D. 354, the Caesar Gallus underwent the same fate there by order of Constantius. (Ammian. Marc. xiv. 11.) After the fall of the Roman Empire in the West it continued to be a place of importance, and in A. D. 544 it was there that Belisarius assembled the fleet and army with which he was preparing to cross over to Ravenna. (Procop. *B. G.* iii. 10.) It probably partook of the prosperity which was enjoyed by all Istria during the period that Ravenna became the seat of empire, and which was continued throughout the period of the Exarchate; we learn from the Itineraries that it was connected by a road along the coast with Tergeste, from which it was 77 miles distant, while the direct communication by sea with Iadera (*Zara*) seems to have been in frequent use, though the passage was 450 stadia, or 56 Roman miles. (*Itin. Ant.* pp. 271, 496.)

Pola is remarkable for the importance and preservation of its ancient remains. Of these by far the most important is the amphitheatre, one of the most interesting structures of the kind still extant, and remarkable especially for the circumstance that the external circumference, usually the part which has suffered the most, is in this case almost entirely perfect. It is built on the slope of a hill, so that on the E. side it has only one row of arcades, while on the opposite side, facing the bay, it has a double tier, with an additional story above. It is 436 English feet in length by 346 in breadth, so that it exceeds in size the amphitheatre of *Nismes*, though considerably smaller than that at *Verona*. But its position and the preservation of its more architectural portions render it far more striking in aspect than either of them. Considerable remains of a theatre were also preserved down to the 17th century, but were destroyed in 1636, in order to make use of the materials in the construction of the citadel. There still remain two temples; one of which was dedicated to Rome and Augustus, and though of small size, is of very elegant design and execution, corresponding to the Augustan age, at which period it was undoubtedly erected. It has thence become a favourite model for study with Italian architects from the time of Palladio downwards. The other, which was consecrated to Diana, is in less complete preservation, and has been converted into a modern habitation. Besides these, the Porta Aurea, a kind of triumphal arch, but erected by a private individual of the name of Sergius, now forms the S. gate of the city. Another gate, and several portions of the ancient walls are also preserved. The whole of these monuments are built of the hard white limestone of the country, closely approaching to marble, which adds

much to their effect. Dante speaks of the environs of Pola, as in his time remarkable for the numerous sarcophagi and ancient tombs with which they were almost wholly occupied. These have now disappeared. (Dante, *Inf.* ix. 13.)

The antiquities of Pola have been repeatedly described, and illustrated with figures; among others, in the fourth volume of Stuart and Revett's *Athens*, fol. Lond. 1816, and in the *Voyage Pittoresque de l'Istrie et de la Dalmatie*, fol. Paris, 1802; also in Allason's *Antiquities of Pola*, fol., Lond. 1819.

The harbour of Pola is completely landlocked, so as to have the appearance of a small basin-shaped lake, communicating by a narrow channel with the sea. Off its entrance lies a group of small islands called the *Isole Brioni*, which are probably those called by Pliny Cissa and Pullaria. (Plin. iii. 26. s. 30.) The southernmost promontory of Istria, about 10 miles distant from Pola, derived from it the name of Polaticum Promontorium. It is now called *Capo Promontore*. [E. H. B.]

POLEMO'NIUM (Πολεμώνιον), a town on the coast of Pontus, at the mouth of the small river Sidenus, 10 stadia from Phadisane, and 130 from Cape Iasonium. (Arrian, *Peripl.* p. 16; Anonym. *Peripl.* p. 11, &c.; Ptol. v. 6. § 4; Steph. B. *s. v.*) Pliny (vi. 4) places the town 120 Roman miles from Amisus, which seems to be too great a distance. (Comp. Amm. Marc. xxii. 8; Hierocl. p. 702, where it is erroneously called Τολεμόνιον; *Tab. Peuting.*) Neither Strabo nor any writer before him mentions this town, and it is therefore generally believed that it was built on the site of the town of Side, which is not noticed by any writer after Strabo. Its name intimates that it was founded, or at all events was named, after one Polemon, perhaps the one who was made king of that part of Pontus, about B. C. 36, by M. Antonius. It had a harbour, and seems to have in the course of time become a place of considerable importance, as the part of Pontus in which it was situated received from it the name of Pontus Polemoniacus. The town was situated on the western bank of the Sidenus, where its existence is still attested by the ruins of an octagon church, and the remains of a massive wall; but the ancient name of the place is preserved by the village of *Pouleman*, on the opposite side of the river. (Hamilton, *Researches*, vol. i. p. 270.) [L. S.]

POLICHNA (Πολίχνα). 1. A town of Laconia, mentioned only by Polybius (iv. 36), is placed by Leake in the interior of the country on the eastern slope of Mt. Parnon at *Réonda* (τὰ Ῥέοντα), where, among the ruins of a fortified town of the lower empire, are some remains of Hellenic walls. (Leake, *Peloponnesiaca*, p. 364.)

2. A town in the NW. of Messenia on the road from Andania to Dorium and Cyparissia. (Paus. iv. 33. § 6.) [DORIUM.]

3. A town of Megaris, mentioned only in a line of Homer, quoted by Strabo, for which the Athenians substituted another to prove that Salamis at the time of the Trojan War was a dependency of Athens. (Strab. ix. p. 394.)

4. (*Eth.* Πολιχνίτης), a town of Crete, whose territory bordered upon that of Cydonia. (Thuc. ii. 85.) In B. C. 429 the Athenians assisted the inhabitants of Polichna in making war upon the Cydonians. (Thuc. *l. c.*) Herodotus also mentions the Polichnitae, and says that this people and the Praesii were the only people in Crete who did not join the other Cretans in the expedition against Camicus in Sicily in order to revenge the death of Minos (vii. 170; Steph. B. *s. v.*). Cramer (*Ancient Greece*, vol. iii. p. 380) supposes the ruins at *Pólis* S. of *Armyro* to be those of Polichna, which Pashley, however, regards as those of Lappa or Lampa. (*Crete*, vol. i. p. 83.)

POLICHNE (Πολίχνη), a small town in the upper valley of the Aesepus in Troas (Strab. xiii. p. 603; Plin. v. 32; Steph. B. *s. v.*; Hierocl. p. 662.) Respecting a place bearing the same name near Clazomenae, see CLAZOMENAE. [L. S.]

POLIMA'RTIUM (*Bomarzo*), a town of Etruria, not far from the right bank of the Tiber, and about 12 miles E. of *Viterbo*. The name is not found in any writer earlier than Paulus Diaconus (*Hist. Lang.* iv. 8), and there is therefore no evidence of its antiquity: but it is certain that there existed an ancient Etruscan city about 2 miles N. of the present village of *Bomarzo*. Some ruins and other slight vestiges of ancient buildings still remain, and numerous sepulchres have been discovered, some of which have yielded various objects of interest. One of them is adorned with paintings in the Etruscan style, but apparently not of early date. (Dennis's *Etruria*, vol. i. p. 214—226.) [E. H. B.]

POLIS (Πόλις), a village of the Hyaea in Locris Ozolis, which Leake supposes occupied the site of *Karútes*, where he found an inscription. (Thuc. iii. 101; Leake, *Northern Greece*, vol. ii. p. 620.)

POLISMA (Πόλισμα), a small place on the river Simoeis in Troas, was originally called Polion; but it was situated in an unsuitable locality, and soon decayed. (Strab. xiii. p. 601.) [L. S.]

POLITO'RIUM (Πολιτώριον: *Eth.* Πολιτωρῖνος, Steph. B.), an ancient city of Latium, destroyed at a very early period of the Roman history. The account of its capture and destruction by Ancus Marcius comprises indeed all we know concerning it; for the statement cited from Cato (Serv. *ad Aen.* v. 564), which ascribed its foundation to Polites, the son of Priam, is evidently a mere etymological fiction. According to Livy and Dionysius, it was a city of the Prisci Latini, and was the first which was attacked by the Roman king, who made himself master of it with little difficulty, and transported the inhabitants to Rome, where he settled them upon the Aventine. But the Latins having soon after recolonised the deserted city, Ancus attacked it again, and having taken it a second time, entirely destroyed it, that it might not for the future afford a shelter to his enemies. (Liv. i. 33; Dionys. iii. 37, 38, 43.) The destruction appears to have been complete, for the name of Politorium never again occurs, except in Pliny's list of the cities of Latium that were utterly extinct. (Plin. iii. 5. s. 9.) Its site is consequently involved in the greatest obscurity; the only clue we have is the circumstance that it appears in the above narrative associated with Tellenae, which is equally uncertain, and with Ficana, the position of which at *Dragoncello*, on the Via Ostiensis, may be considered as well established. [FICANA.] Nibby would place Politorium at a spot called *La Torretta* near *Decimo*, on the Via Laurentina; while Gell considers the remains of an ancient city that have been discovered at a place called *La Giostra*, on the right of the Via Appia, about a mile and a half from *Fiorano* and 10 miles from Rome, as those of Politorium There can be no doubt that the ruins at *La Giostra*—consisting of considerable fragments of walls, built in a very massive and ancient style, and enclosing a long and

narrow space, bordered by precipitous banks — are those of an ancient Latin city; but whether they mark the site of Politorium, as supposed by Gell, or of Tellenae, as suggested by Nibby and adopted by Abeken, we are wholly without the means of determining. (Gell, *Top. of Rome*, p. 280; Nibby, *Dintorni*, vol. ii. p. 571, vol. iii. p. 146—152; Abeken, *Mittel Italien*, p. 69.) The ruins at *La Giostra* are more fully noticed under the article TELLENAE. [E. H. B.]

POLLE'NTIA. 1. (Πολλεντία: *Eth.* Pollentinus: *Polenza*), a city of Liguria, situated in the interior of that province, at the northern foot of the Apennines, near the confluence of the *Stura* and *Tanaro*. It was about 7 miles W. of Alba Pompeia. It was probably a Ligurian town before the Roman conquest, and included in the territory of the Statielli; but we do not meet with its name in history until near the close of the Roman republic, when it appears as a town of importance. In B. C. 43, M. Antonius, after his defeat at Mutina, withdrew to Vada Sabata, intending to proceed into Transalpine Gaul; but this being opposed by his troops, he was compelled to recross the Apennines, with the view of seizing on Pollentia; in which he was, however, anticipated by Decimus Brutus, who had occupied the city with five cohorts. (Cic. *ad Fam.* xi. 13.) Under the Roman Empire, Pollentia is mentioned by Pliny among the "nobilia oppida" which adorned the tract of Liguria between the Apennines and the Padus. (Plin. iii. 5. s. 7.) It had considerable manufactures of pottery, and the wool produced in its territory enjoyed great reputation, having a natural dark colour. (Plin. viii. 48. s. 73, xxxv. 12. s. 46; Sil. Ital. viii. 597; Martial, xiv. 157.) It is incidentally mentioned as a municipal town under the reign of Tiberius, having been severely punished by that emperor for a tumult that occurred in its forum. (Suet. *Tib.* 37.) But its name is chiefly noted in history as the scene of a great battle fought between Stilicho and the Goths under Alaric, in A. D. 403. The circumstances of this battle are very imperfectly known to us, and even its event is variously related; for while Claudian celebrates it as a glorious triumph, Orosius describes it as a dubious success, and Cassiodorus and Jornandes boldly claim the victory for the Goths. (Claudian, *B. Get.* 580—647; Prudent. *in Symmach.* ii. 696—749: Oros. vii. 37; Prosper. *Chron.* p. 190; Cassiod. *Chron.* p. 450; Jornand. *Get.* 30.) But it seems certain that it was attended with great slaughter on both sides, and that it led to a temporary retreat of the Gothic king. No subsequent mention is found of it, and we have no account of the circumstances of its decay or destruction; but the name does not reappear in the middle ages, and the modern *Pollenza* is a poor village. Considerable remains of the ancient city may still be traced, though in a very decayed condition; they include the traces of a theatre, an amphitheatre, a temple, and other buildings; and various inscriptions have also been discovered on the spot, thus confirming the evidence of its ancient prosperity and importance. (Millin, *Voyage en Piémont, &c.* vol. ii. p. 55.) The ruins are situated two miles from the modern town of *Cherasco*, but on the left bank of the *Tanaro*.

2. A town of Picenum mentioned only by Pliny, who among the "populi" of that region, enumerates the Pollentini, whom he unites with the Urbs Salvia in a manner that seems to prove the two communities to have been united into one. (Urbesalvia Pollentini, Plin. iii. 14. s. 18.) The URBS SALVIA, now *Urbisaglia*, is well known; and the site of Pollentia must be sought in its immediate neighbourhood. Holstenius places it at *Monte Melone*, on a hill on the left bank of the *Chienti* between *Macerata* and *Tolentino*, about 3 miles fom *Urbisaglia* on the opposite side of the valley. (Holsten. *Not. ad Cluv.* p. 138.) [E. H. B.]

POLLE'NTIA. [BALEARES.]

POLLUSCA or POLUSCA (Πολούσκα: *Eth.* Πολυσκανός, Polluscinus: *Casal della Mandria*), a city of Latium, which appears in the early history of Rome inseparably connected with Longula and Corioli. Thus, in B. C. 493, we find the three places enumerated in succession as reduced by the arms of Postumus Cominius; and again in B. C. 488 all three were recovered by the Volscians under the command of Coriolanus. (Liv. ii. 33, 39; Dionys. vi. 91, viii. 36.) No subsequent mention of Pollusca occurs, except that its name is found in Pliny, among the cities of Latium of which all trace had disappeared. (Plin. iii. 5. s. 9.) As its name is there given among the places which had once shared in the sacrifices on the Alban Mount, it is probable that it was originally a Latin city, and had fallen into the hands of the Volscians; whence it is called, when first noticed in history, a Volscian city. Livy, indeed, appears to regard Longula and Pollusca as belonging to the Volsci Antiates, and therefore at that time mere dependencies of Antium. The position of Pollusca, as well as that of Longula, must be in great measure matter of conjecture, but the site suggested by Nibby, on a hill adjoining the *Osteria di Cività*, about 22 miles from Rome, on the road to *Porto d' Anzo*, has at least a plausible claim to that distinction. The hill in question which is included in the farm of the *Casal della Mandria*, stands just at the bifurcation of the two roads that lead to *Porto d' Anzo* and to *Conca*: it was noticed by Sir W. Gell as the probable site of an ancient town, and suggested as one of those which might be selected for Corioli: if we place the latter city at *Monte Giove*, the site more generally adopted, Pollusca may very well have been at the *Osteria di Cività*; but the point is one which can never be determined with certainty. (Gell, *Top. of Rome*, p. 183; Nibby, *Dintorni*, vol. i. p. 402; Abeken, *Mittel Italien* p. 72.) [E. H. B.]

POLTYOBRIA. [AENUS.]

POLYAEGUS (Πολύαιγος), a desert island in the Aegaean sea, near Melos. (Ptol. iii. 15. § 28; Plin. iv. 12. s. 23; Mela, ii. 7.) It is either *Polybos*, or perhaps *Antimelos* with its wild goats. (Ross, *Reisen auf den Griech. Inseln*, vol. iii. p. 26.)

POLYANTHES. [AMANTIA.]

POLYANUS (Πολύανος) a mountain in Epeirus mentioned by Strabo (vii. p. 327) along with Tomarus.

POLY'BOTUS (Πολύβοτος), a place in the west of Phrygia Major, a little to the south-east of Synnada, is mentioned only by Hierocles (p. 677) and a few Byzantine writers (Procop. *Hist. Arc.* 18; Anna Comnen. p. 324; Concil. Nicaen. ii. p. 358), who, however, do not give the name correctly, but call it Polybatus or Polygotus. Col. Leake (*Asia Min.* p. 53) identifies the site of Polybotus with the modern *Bulwudun*, which he regards as only a Turkish corruption of the ancient name. [L. S.]

POLY'GIUM, a place on the south coast of Gallia, mentioned in the *Ora Maritima* of Avienus (v. 611):

"Tenuisque censu civitas Polygium est,
Tum Mansa vicus oppidumque Naustalo."

There is nothing to say about a place for whose site there is no sufficient evidence. Menard supposed it to be *Bourigues* on the *Etang de Tau*. The name seems to be Greek, and the place may be one of the Massaliot settlements on this coast. [NAUSTALO]. [G. L.]

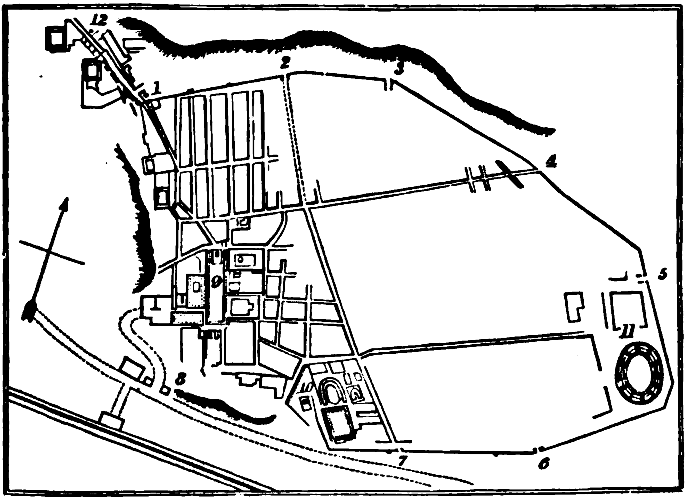
POLYME'DIUM (Πολυμήδιον, Strab. xiii. pp. 606, 616; Polymedia, Plin. v. 30. s. 32), a small place in Mysia, between the promontory Lectum and Assus, and at the distance of 40 stadia from the former.

POLYRRHE'NIA (Πολυῤῥηνία, Ptol. iii. 17. § 10; Πολύῤῥην, Πολύρην, Steph. B. *s. v.*, corrected by Meineke into Πολυῤῥηνία; Πολλύῤῥηνα, Scylax, p. 18, corrected by Gail; Πολυῤῥήνιον, Zenob. *Prov.* v. 50; Polyrrhenium, Plin. iv. 12. s. 20: *Eth.* Πολυῤῥήνιος, Polyb. iv. 53, 55; Strab. x. p. 479), a town in the NW. of Crete, whose territory occupied the whole western extremity of the island, extending from N. to S. (Scylax, p. 18.) Strabo describes it as lying W. of Cydonia, at the distance of 30 stadia from the sea, and 60 from Phalasarna, and as containing a temple of Dictynna. He adds that the Polyrrhenians formerly dwelt in villages, and that they were collected into one place by the Achaeans and Lacedaemonians, who built a strong city looking towards the south. (Strab. x. p. 479.) In the civil wars in Crete in the time of the Achaean League, B. C. 219, the Polyrrhenians, who had been subject allies of Cnossus, deserted the latter, and assisted the Lyctians against that city. They also sent auxiliary troops to the assistance of the Achaeans, because the Gnossians had supported the Aetolians. (Polyb. iv. 53, 55.) The ruins of Polyrrhenia, called *Palaeókastro*, near *Kísamo-Kastéli*, exhibit the remains of the ancient walls, from 10 to 18 feet high. (Pashley, *Crete*, vol. ii. p. 46, seq.)

POLYTIME'TUS. [OXIA PALUS.]

POME'TIA. [SUESSA POMETIA.]

POMPE'II (Πομπηΐα, Strab.; Πομπήιοι, Dion Cass.: *Eth.* Πομπηϊανός, Pompeianus: *Pompeii*), an ancient city of Campania, situated on the coast of the beautiful gulf called the Crater or *Bay of Naples*, at the mouth of the river Sarnus (*Sarno*), and immediately at the foot of Mount Vesuvius. It was intermediate between Herculaneum and Stabiae. (Strab. v. p. 247; Pliny, iii. 5. s. 9; Mela, ii. 4. § 9.) All accounts agree in representing it as a very ancient city: a tradition recorded by Solinus (2. § 5) ascribed its foundation to Hercules; but Dionysius, who expressly notices him as the founder of Herculaneum, says nothing of Pompeii (Dionys. i. 44). Strabo says it was first occupied by the Oscans, subsequently by the Tyrrhenians (Etruscans) and Pelasgians, and afterwards by the Samnites (Strab. *l. c.*). It continued in the hands of these last, that is, of the branch of the nation who had assumed the name of Campanians [CAMPANIA], till it passed under the government of Rome. It is probable that it became from an early period a flourishing town, owing to its advantageous situation at the mouth of the Sarnus, which rendered it the port of Nola, Nuceria, and all the rich plain watered by that river. (Strab. *l. c.*) But we meet with no mention of its name in history previous to the Roman conquest of Campania. In B. C. 310 it is mentioned for the first time, when a Roman fleet under P. Cornelius touched there, and the troops on board proceeded from thence to ravage the territory of Nuceria. (Liv. ix. 38.) No subsequent notice of it occurs till the outbreak of the Social War (B. C. 91), in which it appears to have taken a prominent part, as the Pompeiani are mentioned by Appian apart from the other Campanians, in enumerating the nations that joined in the insurrection. (Appian, *B. C.* i. 39.) In the second year of the war (B. C. 89) Pompeii was still in the hands of the insurgents, and it was not till after repeated engagements that L. Sulla, having defeated the Samnite forces under L. Cluentius, and forced them to take refuge within the walls of Nola, was able to form the siege of Pompeii. (Appian, *ib.* 50; Oros. v. 18; Vell. Pat. ii. 16.) The result of this is nowhere mentioned. It is certain that the town ultimately fell into the hands of Sulla; but whether by force or a capitulation we are not informed; the latter is, however, the most probable, as it escaped the fate of Stabiae, and its inhabitants were admitted to the Roman franchise, though they lost a part of their territory, in which a military colony was established by the dictator, under the guidance and patronage of his relation, P. Sulla. (Cic. *pro Sull.* 21; Zumpt, *de Colon.* pp. 254, 468.) Before the close of the Republic, Pompeii became, in common with so many other maritime towns of Campania, a favourite resort of the Roman nobles, many of whom had villas in its immediate neighbourhood. Among others, Cicero had a villa there, which he frequently mentions under the name of "Pompeianum," and which appears to have been a considerable establishment, and one of his favourite residences. (Cic. *Acad.* ii. 3, *ad Att.* i. 20, *ad Fam.* vii. 3, xii. 20.) Under the Empire it continued to be resorted to for the same purposes. Seneca praises the pleasantness of its situation, and we learn both from him and Tacitus that it was a populous and flourishing town ("*celebre* oppidum," Tac. *Ann.* xv. 22; Sen. *Nat. Qu.* vi. 1). In addition to the colony which it received (as already mentioned) under Sulla, and which is alluded to in an inscription as "Colonia Veneria Cornelia" (Mommsen, *Inscr. R. N.* 2201), it seems to have received a colony at some later period, probably under Augustus (though it is not termed a colony by Pliny), as it bears that title in several inscriptions (Mommsen, *l. c.* 2230—2234).



In the reign of Nero (A. D. 59) a tumult took place in the amphitheatre of Pompeii, arising out of a dispute between the citizens and the newly-settled colonists of Nuceria, which ended in a conflict in which many persons were killed and wounded. The Pompeians were punished for this outbreak by the prohibition of all gladiatorial and theatrical exhibitions for ten years. (Tac. *Ann.* xiv. 17.) Only four years after, the city suffered severely from an earthquake, which took place on the 5th of February, A. D. 63. The expressions both of Seneca and Tacitus would lead us to suppose that it was in great part utterly destroyed; and we learn from existing evidence that the damage done was unquestionably very great, the public buildings especially having suffered most severely. (Sen. *Nat. Qu.* vi. 1; Tac. *Ann.* xv. 22.) The city had hardly recovered from this calamity, when it met with one far greater; being totally overwhelmed by the famous eruption of Vesuvius in A. D. 79, which buried Pompeii, as well as Herculaneum, under a dense bed of ashes and cinders. The loss of life in the former city was the greater, because the inhabitants were assembled in the theatre at the time when the catastrophe took place. (Dion Cass. lxvi. 23.) The younger Pliny, in his celebrated letters describing the eruption (*Ep.* vi. 16, 20), does not even notice the destruction of Pompeii or Her-

culaneum; but his attention is directed principally to the circumstances of his uncle's death and the phenomena which he had himself witnessed.

From this time the name of Pompeii disappears from history. It is not noticed by Ptolemy; and it is certain that the city was never rebuilt. But the name is again found in the Tabula; and it thus appears that a small place must have again arisen on the site, or, more probably, in the neighbourhood, of the buried city. But all trace of Pompeii was subsequently lost; and in the middle ages its very site was entirely forgotten, so that even the learned and diligent Cluverius was unable to fix it with certainty, and was led to place it at *Scafati* on the *Sarno*, about 2 miles E. of its true position. This difficulty arose, in great measure, from the great physical changes produced by the catastrophe of A. D. 79, which diverted the course of the *Sarno*, so that it now flows at some distance from Pompeii,—and at the same time pushed forward the line of the coast, so that the city is now above a mile distant from the sea, which in ancient times undoubtedly bathed its walls.

There is no reason to suppose that Pompeii in ancient times ever rose above the rank of a second-rate provincial town; but the re-discovery of its buried remains in the last century has given a celebrity to its name exceeding that of the greatest cities. The circumstances of its destruction were peculiarly favourable to the preservation of its remains. It was not overthrown by a torrent of lava, but simply buried by a vast accumulation of volcanic sand, ashes, and cinders (called by the Italians *lapilli*), which forms a mass of a very light, dry, and porous character. At the same time, it is almost certain that the present accumulation of this volcanic deposit (which is in most places 15 feet in depth) did not take place at once, but was formed by successive eruptions; and there is little doubt that the ruins were searched and the most valuable objects removed soon after the catastrophe took place. This seems to be proved by the small number of objects of intrinsic value (such as gold and silver plate) that have been discovered, as well as by the fact that comparatively few skeletons have been found, though it appears certain, from the expressions of Dion Cassius, that great numbers of the inhabitants perished; nor have any of these been found in the theatre, where it is probable that the greatest loss of life occurred.

It was not till 1748 that an accidental discovery drew attention to the remains of Pompeii; and in 1755 regular excavations on the site were first commenced by the Neapolitan government, which have been carried on ever since, though with frequent intervals and interruptions. It is impossible for us here even to attempt to give any account of the results of these excavations and the endless variety of interesting remains that have been brought to light. We shall confine ourselves to those points which bear more immediately on the topography and character of the town of Pompeii, rather than on the general habits, life, and manners of ancient times. More detailed accounts of the remains, and the numerous objects which have been discovered in the course of the excavations, especially the works of art, will be found in the great work of Mazois (*Les Ruines de Pompeii*, continued by Gau, 4 vols. fol., Paris, 1812—1838), and in the two works of Sir W. Gell (*Pompeiana*, 1st series, 2 vols. 8vo. Lond. 1824; 2nd series, 2 vols. 8vo. 1830); also in the little work published by the Society of Useful Knowledge (*Pompeii*, 2 vols. 12mo. 1831). A recent French publication by Breton (*Pompeia*, 8vo. Paris, 1855), also gives a good account of the whole progress and results of the discoveries (including the most recent excavations) in a moderate compass and inexpensive form. The still more recent work of Overbeck (8vo. Leipzic, 1856), of which the first part only has yet appeared, contains an excellent compendium of the whole sub-

ject, with especial attention to the works of art discovered.

The area occupied by the ancient city was an irregular oval, about 2 miles in circumference. It was surrounded by a wall, which is still preserved round the whole of the city, except on the side towards the sea, where no traces of it have been found, and it seems certain that it had been pulled down in ancient times to allow for the extension of houses and other buildings down to the water's edge. The wall itself is in many places much ruined, as well as the towers that flank it, and though this may be in part owing to the earthquake of 63, as well as the eruption of 79, it is probable that the defences of the town had before that time been allowed to fall into decay, and perhaps even intentionally dismantled after the Social War. There were seven gates, the most considerable and ornamental of which was that which formed the entrance to the city by the high road from Herculaneum: the others have been called respectively the gate of Vesuvius, the gate of Capua, the gate of Nola, the gate of the Sarnus, the gate of Stabiae, and the gate of the Theatres. The entrances to the town from the side of the sea had ceased to be gates, there being no longer any walls on that side. All these names are of course modern, but are convenient in assisting us to describe the city. The walls were strengthened with an Agger or rampart, faced with masonry, and having a parapet or outer

led on three sides by a
lonnade, which appears
to have been surmounted by a gallery or upper story, though no part of this is now preserved. It would seem that this portico had replaced an older arcade on the eastern side of the Forum, a portion of which still remains, so that this alteration was not yet completed when the catastrophe took place. At the north end of the Forum, and projecting out into the open area, are the remains of an edifice which must have been much the most magnificent of any in the city. It is commonly known, with at least a plausible foundation, as the temple of Jupiter; others dispute its being a temple at all, and have called it the Senaculum, or place of meeting of the local senate. It was raised on a *podium* or base of considerable elevation, and had a portico of six Corinthian columns in front, which, according to Sir W. Gell, are nearly as large as those in the portico of St. Paul's. From the state in which it was found it seems certain that this edifice (in common with most of the public buildings at Pompeii) had been overthrown by the earthquake of 63, or, at least, so much damaged that it was necessary to restore, and in great part rebuild it, and that this process was still incomplete at the time of its final destruction. At the NE. angle of the Forum, adjoining the temple of Jupiter, stood an arch which appears to have been of a triumphal character, though now deprived of all its ornaments: it was the principal entrance to the Forum, and the only one by which it was accessible to carriages of any description. On the E. side of the Forum were four edifices, all unquestionably of a public character, though we are much in doubt as to their objects and destination. The first (towards the N.) is generally known as the Pantheon, from its having contained an altar in the centre, with twelve pedestals placed in a circle round it, which are supposed to have supported statues of the twelve chief gods. But no traces have been found of these, and the general plan and arrangement of the building are wholly unlike those of an ordinary temple. A more plausible conjecture is, that it was consecrated to Augustus, and contained a small temple or *aedicula* in honour of that emperor, while the court and surrounding edifices were appropriated to the service of his priests, the Augustales, who are mentioned in many inscriptions as existing at Pompeii. Next to this building is one which is commonly regarded as the Curia or Senaculum; it had a portico of fluted columns of white marble, which ranged with those of the general portico that surrounded the Forum. South of this again is a building which was certainly a temple, though it is impossible now to say to what divinity it was consecrated; it is commonly called the Temple of Mercury, and is of small size and very irregular form. Between this and the street known as the Street of the Silversmiths, which issued from the Forum near its SE. angle, was a large building which, as we learn from an inscription still existing, was erected by a female priestess named Eumachia. It consists of a large and spacious area (about 130 feet by 65) surrounded by a colonnade, and having a raised platform at the end with a semicircular recess similar to that usually found in a Basilica. But though in this case the founder of the edifice is known, its purpose is still completely obscure. It is commonly called the Chalcidicum, but it is probable that that term (which is found in the inscription above noticed) designates only a part of the edifice, not the whole building.

The S. end of the Forum was occupied by three buildings of very similar character, standing side by side, each consisting of a single hall with an apse or semicircular recess at the further extremity. The most probable opinion is that these were the courts of justice, in which the tribunals held their sittings. The western side of the Forum was principally occupied by a Basilica, and a large temple, which is commonly called (though without any authority) the Temple of Venus. The former is the largest

temple with a small *cella*, elevated on a *podium* or basement, surrounded by a much more extensive portico, and the whole again enclosed by a wall, forming the *peribolus* or sacred enclosure. All parts of the building are profusely decorated with painting. The temple itself is Corinthian, but the columns of the portico seem to have been originally Doric, though afterwards clumsily transformed into Corinthian, or rather an awkward imitation of Corinthian. This is only one among many instances found at Pompeii of very defective architecture, as well as of the frequent changes which the buildings of the city had undergone, and which were still in progress when the city itself was destroyed. The buildings at the NW. corner of the Forum are devoid of architectural character, and seem to have served as the public granaries and prisons.

It is commonly called the Temple of Hercules, but it is obvious that such a name is purely conjectural. It stood in an open area of considerable extent, and of a triangular form, surrounded on two sides by porticoes: but this area, which is commonly called a Forum, has been evidently constructed at a much later period, and with no reference to the temple, which is placed very awkwardly in relation to it. Another temple in the same quarter of the town, immediately adjoining the great theatre, is interesting because we learn with certainty from an inscription that it was consecrated to Isis, and had been rebuilt by N. Popidius Celsinus "from the foundations" after its overthrow in the great earthquake of A. D. 63. It is of a good style of architecture, but built chiefly of brick covered with stucco (only the capitals and shafts of the columns being of a soft stone), and is of small size. Like most of the temples at Pompeii, it consists of a cella, raised on an elevated podium, and surrounded externally by a more extensive portico. Adjoining this temple was another, the smallest yet found at Pompeii, and in no way remarkable. It has been variously called the temple of Aesculapius, and that of Jupiter and Juno.

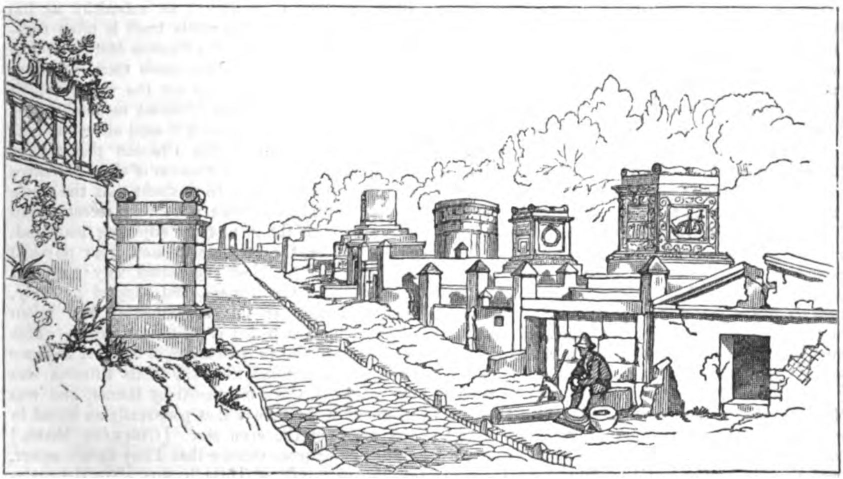
The only temple which remains to be noticed is one situated about 60 yards N. of the Forum at the angle formed by the long main street leading to the gate of Nola, with a short broad street which led from it direct to the Forum. This was the Temple of Fortune, as we learn from an inscription

and was erected by a certain M. Tullius, a citizen and magistrate of Pompeii, who has been supposed to be of the family of Cicero; but the absence of the cognomen renders this highly improbable. The epithet of Fortuna Augusta shows that the temple and its inscription are not earlier than the time of Augustus. It is much in ruins, having probably suffered severely from the earthquake of 63; and has little architectural effect.

Pompeii possessed two Theatres and an Amphitheatre. The former were situated, as seems to have been usual in Greek towns, close together; the larger one being intended and adapted for theatrical performances properly so called; the smaller one serving as an Odeum, or theatre for music. Both are unquestionably of Roman date: the larger one was erected (as we learn from an inscription found in it) by two members of the same family, M. Holconius Rufus and M. Holconius Celer, both of whom appear to have held high civil offices in the municipal government of Pompeii. The period of its construction may probably be referred to the reign of Augustus. The smaller theatre seems to be of earlier date, and was erected at the public expense under the direction of the Duumviri or chief magistrates of the city. The large Theatre is to a considerable extent excavated out of the side of a hill, on the slope of which it was situated, thus saving a considerable amount of the expense of construction. But the exterior was still surrounded by a wall, a part of which always rose above the surface of the soil, so that it is singular it should not have long before led to the discovery of the buried city. Its internal disposition and arrangements, without exactly coinciding with the rules laid down by Vitruvius, approach sufficiently near to them to show that it was constructed on the Roman, and not the Greek model. Its architect (as we learn from an inscription) was a freedman of the name of M. Artorius Primus. It seems to have been almost wholly cased or lined with marble, but the greater part of this, as well as the other decorations of the building, has been carried away by former excavations, probably made soon after the catastrophe. The interior diameter of the building is 223 feet: it had 29 rows of seats, divided into three stories by galleries or *praecinctiones*, and was capable of containing about 5000 spectators. The smaller Theatre, which communicated with the larger by a covered portico on the level of the orchestra, was not above a fourth of the size of the other, being adapted to receive only about 1500 spectators. We learn from an inscription that it was covered or permanently roofed in, a rare thing with ancient theatres, and doubtless owing to its small size. Its chief architectural peculiarity is that the seats are cut off by the walls at the two sides, so that it is only the lower seats of the *cavea*, of which the semicircle is complete.

Adjoining the two theatres, and arranged so as to have a direct communication with both, is a large quadrangular court or area (183 feet long by 148 wide), surrounded on all sides by a Doric portico. Its destination is very uncertain, it has been called a provision market (Forum Nundinarium); but is more generally regarded as having served for the barracks or quarters of the soldiers. Perhaps a more plausible conjecture is that it was a barrack, not of soldiers but of gladiators. On the W. of this, as well as of the great theatre, was the triangular area or forum already noticed, in which the Greek temple was situated. The opening of this on the N., where it communicated with the street, was ornamented by a portico or Propylaeum composed of eight Ionic columns of very elegant style, but consisting of the common volcanic tufo, cased with stucco.

The Amphitheatre is situated at the distance of above 500 yards from the Theatres, at the extreme SE. angle of the city. It offers no very remarkable differences from other edifices of the same kind; its dimensions (430 feet by 335) are not such as to place it in the first rank even of provincial structures of the class; and from being in great part excavated out of the soil, it has not the imposing architectural character of the amphitheatres of Verona, Nemausus, or Pola. It had 24 rows of seats, and about 20,000 feet of sitting-room, so that it was adapted to receive at least 10,000 spectators. From one of the inscriptions found in it, it appears that it was built, or at least commenced, by two local magistrates, named C. Quinctius Valgus and M. Porcius, after the establishment of the colony under Augustus, and probably in the reign of that emperor.



The only public building which remains to be noticed is that of the Thermae or Baths, which were situated in the neighbourhood of the Forum, adjoining the short street which led into it from the Temple of Fortune. They have no pretence to vie with the magnificent suites of buildings which bore the name of Thermae at Rome, and in some other great cities; but are interesting as containing a complete suite of all apartments really required for bathing, and from their good preservation throw much light upon all similar remains. The details of their construction and arrangement are fully given in the *Dictionary of Antiquities* [*art.* BALNEAE], as well as in the works specially devoted to Pompeii.

It is impossible here to enter into any details concerning the results of the excavations in regard to the private dwellings at Pompeii, though these are, in many respects, the most interesting, from the light they have thrown upon the domestic life of the ancient inhabitants, their manners and usages, as well as from the artistic beauty and variety of the objects discovered. A few words on the general character of the houses and other private buildings of Pompeii are all that our space will admit of. As these are almost the only remains of a similar kind that have been preserved to us, it must be borne in mind that they can hardly be regarded as representing in their purity the arrangements either of the Greek or Roman mode of building. On the one hand Pompeii, though strongly tinctured with Greek civilisation, was not a Greek city; on the other hand, though there is no doubt that the houses at Pompeii present much more the Roman plan and arrangement than that of the Greeks, we must not conclude that they represent them in all respects. We know, at least, that Rome itself was built in many respects in a very different manner. Cicero, in a well-known passage, contrasts the narrow streets, the lofty houses, and irregular construction of the capital with the broad streets and regular arrangement of Capua, resulting from its position in a level plain; and it is clear that, in some respects, Pompeii more resembled the capital of Campania than the imperial city. Its streets indeed (as already stated) were narrow, but with few exceptions straight and regular, and the houses were certainly low, seldom exceeding two stories in height; and even of these the upper story seems to have consisted

only of inferior rooms, a kind of garrets, probably serving for the sleeping-rooms of slaves, and in some cases of the females of the family. From the mode of destruction of the city the upper stories have indeed been almost uniformly totally destroyed; but this circumstance itself, as well as the few traces which occasionally remain, seems to prove that they were built wholly of wood, and could never have formed an important part of the houses. It is only on the W. side of the city, where the ground slopes steeply towards the sea, that houses are found which consisted of three stories or more. Externally the houses had little or nothing of an ornamental character; not a single instance has been found of a portico before a private house; and towards the street they presented either dead walls, with here and there a few small and scanty openings as windows, or ranges of shops, for the most part low and mean in character, even when they occupied (as was often the case) the front of dwellings of a superior description. The interior of the houses of the more wealthy class was arranged apparently on the same model as those at Rome: its disposition is given in detail in the *Dictionary of Antiquities* under the article Domus where a plan is given of the House of Pansa, one of the most extensive and complete of those found at Pompeii. In this case the single house with its garden and appurtenances, including as usual several shops, occupied the whole of an *insula* or the space bounded by four streets or alleys: but this was unusual; in most cases each *insula* comprised several houses even where they were of a better description, and must have been the residence of persons of some wealth. Among the most remarkable of these may be mentioned the dwellings known as the House of Sallust, that of the Tragic Poet, of Castor and Pollux, of the Labyrinth, &c. The work of Dr. Overbeck (above cited) gives a very interesting series of these houses, selected so as to afford examples of every description of house, from the humblest dwelling, consisting of only two rooms, to the richly decorated and spacious mansions of Sallust and Pansa.

The style of decoration of these houses presents a very general uniformity of character. The walls are almost invariably ornamented with painting, the atrium and peristyle being decorated with columns; but these are composed only of a soft and coarse stone (volcanic tufo) covered with stucco. The prodigal use of marble, both for columns and slabs to encrust the walls, which had become so general at Rome under the first emperors, apparently not having yet found its way to Pompeii. The floors are generally enriched with mosaics, some of which possess a very high degree of merit as works of art. The most beautiful yet discovered adorned the house known as the House of the Faun, from a bronze statue of a dancing Faun which was also found in it. The illustrations to Gell's *Pompeiana* (2nd series, Lond. 1835) will convey to the reader a sufficient idea of the number and variety of the artistic decorations of the private houses at Pompeii; though several of the most richly ornamented have been discovered since the date of its publication.

Outside the gate leading to Herculaneum, in a kind of suburb, stands a house of a different description, being a suburban villa of considerable extent, and adapted to have been the abode of a person of considerable wealth. From the greater space at command this villa comprises much that is not found in the houses within the town; among others a large court or garden (Xystus), a complete suite of private baths, &c. The remains of this villa are of much value and interest for comparison with the numerous ruins which occur elsewhere of similar buildings, often on a much more extensive scale, but in a far less perfect state of preservation; as well as for assisting us to understand the descriptions given by Pliny and Vitruvius of similar structures, with their numerous appurtenances. (For the details of their arrangements the reader is referred to the article Villa, in the *Dictionary of Antiquities*, and to the work on Pompeii, Lond. 1832, vol. ii. ch. 11.) Between this villa and the gate of the city are the remains of another villa, said to be on a larger scale and more richly decorated than the one just described; but its ruins, which were excavated in 1764, were filled up again, and are not now visible. It has been called, though without the slightest authority, the Villa of Cicero. The one still extant is commonly known as the Villa of Arrius Diomedes, but for no other reason than that

STREET OF THE TOMBS.

a sepulchre bearing that name was discovered near its entrance; a very slight argument, where almost the whole street is bordered with tombs. In fact, the approach to the gate of Herculaneum is bounded on both sides by rows of tombs or sepulchral monuments, extending with only occasional interruptions for above 400 yards. Many of them are on a very considerable scale, both of size and architectural character; and though they cannot vie with the enormous mausolea which border in a similar manner the line of the Via Appia near Rome, they derive additional interest from the perfect state of preservation in which they remain: and the Street of the Tombs, as it is commonly called, is perhaps one of the most interesting scenes at Pompeii. The monuments are for the most part those of persons who had held magistracies, or other offices, in the city of Pompeii, and in many cases the site was assigned them by public authority. It is therefore probable that this place of sepulture, immediately outside the gate and on one of the principal approaches to the city, was regarded as peculiarly honourable.

Besides the tombs and the two villas already noticed, there have been found the remains of shops and small houses outside the gate of Herculaneum, and there would appear to have been on this side of the city a considerable suburb. This is supposed to be the one designated in the sepulchral inscription of M. Arrius Diomedes as the "Pagus Augustus Felix Suburbanus." We have as yet no evidence of the existence of any suburbs outside the other gates. It is evident that any estimate of the population of Pompeii must be very vague and uncertain; but still from our accurate knowledge of the space it occupied, as well as the character of the houses, we may arrive at something like an approximation, and it seems certain that the population of the town itself could not have exceeded about 20,000 persons. This is in accordance with the statements of ancient writers, none of whom would lead us to regard Pompeii as having been more than a second or third rate provincial town.

The inscriptions found at Pompeii, which are often incorrectly given in the ordinary works on the subject, are carefully edited by Mommsen, in his *Inscriptiones Regni Neapolitani* (pp. 112—122). These do not, however, include a class of much interest, and peculiar to Pompeii, the inscriptions of a temporary kind which were rudely painted on the walls, or scratched on the plaster of the houses and public buildings. It is remarkable that several of these are in the Oscan dialect, and seem to prove that the use of that ancient language must have continued down to a much later period than is commonly supposed. [OSCI]. But the public or official use of the Oscan seems to have ceased after the Social War, and the numerous inscriptions of a public character which belong to the age of Augustus and his successors are uniformly in the Latin language. [E. H. B.]

POMPE'II PRAESI'DIUM (*Tab. Peut.*; Pompeii, *Itin. Ant.* p. 134; Ipompei, *Itin. Hieros.* p. 566), a place in Moesia Superior, between Horreum Margi and Naissus, identified either with *Kaschnia* (Reichard) or *Boulovan* (Lapie).

POMPEIO'POLIS (Πομπηιούπολις), a town of Paphlagonia, on the southern bank of the river Amnias, a tributary of the Halys (Strab. xii. p. 562; Steph. B. *s. v.*). Its name seems to indicate that it was founded by Pompey the Great. In the Itineraries it is marked as 27 miles from Sinope; according to which its site may be looked for in the valley of the Amnias, about the modern *Tash Kupri*, where Captain Kinneir (p. 286) found some ancient remains. In the vicinity of the place was a great mine of the mineral called Sandarach. (Strab. *l. c.*) Pompeiopolis is often referred to by late writers as an episcopal see of Paphlagonia (Socrat. ii. 39, &c.; Hierocl. p. 695; Constant. Porph. *de Them.* i. 7; Justinian, *Novell.* xxix. 1; *Tab. Peuting.*).

The name Pompeiopolis was borne temporarily by several towns, such as SOLI in Cilicia, AMISUS and EUPATORIA in Cappadocia, as well as by POMPELON in Tarraconensian Spain. [L. S.]

PO'MPELO (Πομπελών, Ptol. ii. 6. § 67; Strab. iii. p. 161, who makes the name equivalent to Πομπηιόπολις), the chief town of the Vascones in Hispania Tarraconensis, on the road from Asturica to Burdigala (*Itin. Ant.* p. 455), and a civitas stipendiaria in the jurisdiction of Caesaraugusta. (Plin. iii. 3. s. 4.) Now *Pamplona*. [T. H. D.]

POMPONIA'NA. Pliny (iii. 5) says that Pomponiana is the same as Mese, the middle island of the Stoechades or *Isles d'Hières* [STOECHADES], which lie close to the French coast east of *Toulon*. D'Anville, following the Maritime Itinerary, which places Pomponiana between Telo (*Toulon*) and Heracleia Caccabaria [HERACLEIA], thinks that Pomponiana is the peninsula of *Giens*, which is opposite to the western point of Prote (*Porquerolles*), the most western of the Stoechades. He remarks that the part of *Giens* which is on the land side is almost covered by a lagune, from which there are channels to the sea on both sides, so that the peninsula may be considered as an island. [G. L.]

POMPONIA'NIS PORTUS. [PORTUS POMPONIANIS.]

POMPTI'NAE PALU'DES (τὰ Πομπτῖνα ἕλη: *Paludi Pontine*) was the name given to the extensive tract of marshy ground in the S. of Latium at the foot of the Volscian mountains, extending from the neighbourhood of *Cisterna* to the sea at *Terracina*. They occupy a space of about 30 miles in length by 7 or 8 in breadth: and are separated from the sea on the W. by a broad tract of sandy plain, covered with forest, which is also perfectly level, and intermixed with marshy spots, and pools or lagoons of stagnant water, so that it is almost as unhealthy as the regular marsh, and the whole tract is often comprised under the name of the *Pontine Marshes*. The extremely low level of this whole tract, affording scarcely any natural outfall for the waters which descend into it from the Volscian mountains, together with the accumulation of sand along the seashore from Astura to the Circeian promontory, readily accounts for the formation of these extensive marshes; and there can be no doubt that the whole of this low alluvial tract is of very recent origin compared with the rest of the adjoining mainland. Still there is the strongest reason from physical considerations to reject the notion very generally entertained by the Romans, and adopted by Pliny, that the whole of this accumulation had taken place within the period of historical record. This idea seems indeed to have arisen in the first instance from the assumption that the Mons Circeius was the island of Circe mentioned by Homer, and was therefore in the time of that poet really an island in the midst of the open sea. [CIRCEIUS MONS.] But it is far more strange that Pliny should assert, on the authority of Theophrastus, that the accumulation had taken place in great part since the

time of that writer; though Theophrastus himself tells us distinctly that *the island* was in his days united to the mainland by the accumulated deposits of certain rivers. (Theophr. *H. P.* v. 8. § 3; Plin. iii. 5. s. 9.) Another tradition, preserved to us also by Pliny (*l. c.*), but wholly at variance with the last, asserted that the tract then covered by marshes, and rendered uninhabitable by them, had formerly been occupied by no less than 24 (or, according to some MSS., 33) cities. But no trace of this fact, which he cites from Mucianus, an author contemporary with himself, is to be found in any earlier writer; and not even the name of one of these supposed cities has been preserved; there can therefore be little doubt that the whole story has arisen from some misconception.

The Pomptine Marshes are generally represented as deriving their name from the city of Suessa Pometia, which appears to have been situated somewhere on their borders, though we have no clue to its precise position. [SUESSA POMETIA]. The "Pomptinus ager," which is repeatedly mentioned by Livy, and which was cultivated with corn, and part of it portioned out in lots to Roman colonists (Liv. ii. 34, iv. 25, vi. 5, 21) was probably rather the district bordering on the marshes than the actual swampy tract, which does not appear to have been ever effectually reclaimed; though a very moderate amount of industry must at any time have sufficed to bring into cultivation considerable portions of the adjoining plain. As early, however, as the year 312 B. C. the Appian Way appears to have been carried through the midst of the marshes (Liv. ix. 29; Diod. xx. 36), and a canal conducted along with it from Forum Appii to Tarracina, which became also much resorted to as a mode of traffic. [VIA APPIA.] The institution of the Pomptine tribe in B. C. 358, and of the Ufentine tribe in B. C. 318 (Liv. vii. 15, ix. 20), would seem also to point to the existence of a considerable population in the neighbourhood at least of the Pomptine Marshes; but still we have unequivocal testimony of the continued existence of the marshes themselves in all periods of antiquity. (Sil. Ital. viii. 380; Strab. v. p. 233, &c.)

The very circumstance that the plain is bordered throughout by a chain of considerable and populous towns situated on the mountain front, while not one is recorded as existing in the plain itself, is a sufficient proof that the latter was in great part uninhabitable.

The actual marshes are formed principally by the stagnation of the waters of two streams, the AMASENUS and the UFENS, both rising in the Volscian mountains. (Strab. v. p. 233.) Of these the latter was the most considerable, and appears to have been regarded as the principal stream, of which the Amasenus was only a tributary. The Ufens is described as a slow and sluggish stream; and Silius Italicus, amplifying the hints of Virgil, draws a dreary picture of its waters, black with mud, winding their slow way through the pestiferous Pomptine plains. (Virg. *Aen.* vii. 801; Sil. Ital. viii. 379—382; Claudian. *Prob. et Ol. Cons.* 257.) But, besides these, several minor streams either flow down from the Volscian mountains, or rise immediately at their foot in copious springs of clear water, as is commonly the case with all limestone mountains. The NYMPHAEUS, which rises at the foot of the hill at Norba, is the most remarkable instance of this. Thus the whole mass of waters, the stagnation of which gives rise to these marshes, is very considerable; and it is only by carrying these off in artificial channels to the sea that any real progress can be made in the drainage of the district.

Various attempts were made in ancient times to drain the Pontine Marshes. The first of these was in B. C. 160, by the consul Cornelius Cethegus, which, according to the brief notice transmitted to us, would seem to have been for a time successful (Liv. *Epit.* xlvi.); but it is probable that the result attained was in reality but a partial one; and we find them relapsing into their former state before the close of the Republic, so that the drainage of the Pontine Marshes is noticed among the great public works projected by the dictator Caesar, which he did not live to execute. (Suet. *Caes.* 44; Plut. *Caes.* 58; Dion Cass. xliv. 5.) It would appear that on this occasion also some progress was made with the works, so that a considerable extent of land was reclaimed for cultivation, which M. Antonius proposed to divide among the poorer Roman citizens. (Dion Cass. xlv. 9.) Horace alludes to a similar work as having been accomplished by Augustus (Hor. *Art. Poet.* 65; Schol. Crug. *ad loc.*); but we find no mention of this elsewhere, and may therefore probably conclude that no great success attended his efforts. Juvenal alludes to the Pontine Marshes as in his time a favourite resort of robbers and highwaymen (Juv. iii. 307); a sufficient proof that the district was one thinly inhabited. The enterprise seems to have been resumed by Trajan in connection with his restoration of the Appian Way through the same district (Dion Cass. lxviii. 15); but we have no particular account of his works, though inscriptions confirm the account given by Dion Cassius of his renovation of the highroad. The next serious attempt we hear of to drain this marshy tract was that under Theodoric, which is recorded both by Cassiodorus and by an inscription still extant at *Terracina*. (Cassiodor. *Var.* ii. 32, 33; Gruter, *Inscr.* p. 152. 8.) But in the period that followed the works naturally fell into decay, and the whole tract relapsed into an uninhabitable state, which continued till the close of the middle ages. Nor was it till quite modern times that any important works were undertaken with a view to reclaim it. Pope Pius VI. was the first to reopen the line of the Appian Way, which had been abandoned for centuries, and restore at the same time the canal by its side, extending from *Treponti* to *Terracina*. This canal takes the place of that which existed in the time of Horace and Strabo, and formed the customary mode of transit for travellers proceeding from Forum Appii to Tarracina. (Hor. *Sat.* i. 5. 10—24; Strab. v. p. 233; Lucan. iii. 85.) It is evidently the same which is called by Procopius (*B. G.* i. 11) the Decennovium, a name which could only be applied to an artificial cut or canal, though that author terms it a river. The "nineteen miles" indicated by the name commenced from Tripontium (*Treponti*), from whence the canal was carried in a straight line to within 3 miles of Tarracina. It was this portion of the road which, as we learn from an inscription, was restored by Trajan; and the canal was doubtless constructed or restored at the same time. Hence Cassiodorus applies the name of "Decennovii paludes" to the whole tract of the Pontine Marshes. (Cassiod. *Var* ii. 32, 33.)

The SATURAE PALUS, mentioned both by Virgil and Silius Italicus in connection with the river

Ufens (Virg. *Aen.* vii. 801; Sil. Ital. viii. 380), must have been situated in the district of the Pontine Marshes, and was probably merely the name of some portion of the swamps included under that more general designation.

The line of the Appian Way was carried in a perfectly straight line through the Pontine Marshes from the station Sub Lanuvio, at the foot of the Alban Hills, to within a short distance of Tarracina. The stations along its course and the distances are differently given in the Itineraries; but they may all be readily determined with the assistance of inscriptions and Roman milestones still existing. At the beginning of the marshes, or rather in the level tract immediately adjoining them, was the station of TRES TABERNAE, distant 17 miles from Aricia, at point where a branch road from Antium fell into the Appian Way. The site of this was fixed by the Abbé Chaupy and other writers at a place called *Le Castelle*, 2 miles on the Roman side of *Cisterna;* but there seems no reason to reject the distances given in the Antonine Itinerary, which would place it 5 miles further from Rome, or 3 miles beyond *Cisterna*, where some ruins still remain, referred by Chaupy to the station Ad Sponsas of the Jerusalem Itinerary, but which would suit equally well for those of Tres Tabernae. [TRES TABERNAE.] Six miles from this spot, and just 39 miles from Rome (as shown by a milestone still remaining there), is a place still called *Torre di Treponti*, marking the site of TREPONTIUM, the spot from whence the canal of the Decennovium commenced, and from which therefore the 19 miles from which it derived its name were measured. Four miles further on considerable remains mark the site of FORUM APPII, which in the Augustan age was a busy and thriving town; but in the fourth century had sunk to a mere Mutatio or post station. The Antonine Itinerary gives the distance from Rome to Forum Appii at 43 miles, which is exactly correct; from thence to Tarracina it reckons 18 miles; the Jerusalem Itinerary makes the distance 19 miles, and gives an intermediate station called Ad Medias (Paludes), which was 9 miles from Forum Appii and 10 from Tarracina. The site of this is still marked by a spot called *Torre di Mesa*, where a striking Roman monument still remains; but the real distance from Forum Appii is only 8 miles, which coincides with the Antonine Itinerary. (*Itin. Ant.* p. 107; *Itin. Hier.* p. 611.) The whole of this part of the road has been carefully examined and described by the Abbé Chaupy (*Découverte de la Maison d'Horace*, vol. iii. pp. 382—452); and the distances discussed and corrected by Westphal, (*Röm. Kampagne*, pp. 67—70). [E. H. B.]

PONS AENI, or, as it is called in the Peuting. Table, Ad Aenum, was a frontier fort in Vindelicia on the river Aenus, and was garrisoned by a detachment of cavalry. (*It. Ant.* pp. 236, 257; *Not. Imp.*) It is commonly believed that its site is now marked by the village of *Pfünzen*, which in the middle ages bore the name of Pontana; but Muchar (*Noricum*, i. p. 285) identifies it with *Ennsdorf* near *Kraiburg*. [L. S.]

PONS AERA'RIUS, in Gallia Narbonensis, is placed in the Jerusalem Itin. on the road from Nemausus (*Nîmes*) to Arelate (*Arles*), at the distance of xii. from Nemausus and viii. from Arelate. The Antonine Itin. marks xix. from Nemausus to Arelate in one distance. The road must therefore have been straight between these two places. D'Anville fixes the Pons at *Bellegarde*, where there is a bridge over a canal which comes from the Rhone at Ugernum (*Beaucaire*) and extends to *Aigues Mortes*. This canal separates the old dioceses of *Nîmes* and *Arles*, and probably divided the territories of Nemausus and Arelate. D'Anville conjectures that the name Aerarius may be owing to the fact that a toll was paid at the bridge, which was a common practice in the Roman period. (Dig. 19. tit. 2. s. 60. § 8: "Redemptor ejus pontis portorium ab eo exigebat.") [G. L.]

PONS ALUTI, a town in Dacia on the road from Egeta to Apula, near *Robesti*, below *Strassburg*. (*Tab. Peut.*)

PONS ARGENTEUS. [ARGENTEUS.]

PONS AUFIDI. [AUFIDUS.]

PONS AUGUSTI (*Tab. Peut.*), a town in Dacia, on the road from Tiviscum to Sarmategte (usually called Zarmizegethusa), identified by Mannert with the Zeugma (Ζεῦγμα, Ptol. iii. 8. § 10) of Ptolemy, and placed near *Bonizar* at the passage over the river Bistra: by others near *Margg*. (Ukert, vol. iii. pt. ii. p. 616.)

PONS AURE'OLI (*Pontirolo*), a place on the highroad from Mediolanum to Bergomum, where that road crossed the river Addua (*Adda*) by a bridge. It is mentioned as a station by the Jerusalem Itinerary, which places it 20 M. P. from Mediolanum and 13 from Bergomum. (*Itin. Hier.* p. 558.) It derived its name from the circumstance that it was here that the usurper Aureolus was defeated in a pitched battle by the emperor Gallienus, and compelled to take refuge within the walls of Milan, A. D. 268. (Vict. *Caes.* 33. *Epit.* 33.) After the death of Aureolus, who was put to death by the soldiers of Claudius, he was buried by order of that emperor close to the bridge, which ever after retained the name of Aureolus. (Treb. Poll. *Trig. Tyr.* 10.) [E. H. B.]

PONS CAMPA'NUS, a bridge on the Via Appia, by which that celebrated road crossed the little river Savo, a short distance from its mouth. It was 3 miles distant from Sinuessa (erroneously given as 9 in the Jerusalem Itinerary), and evidently derived its name from its being the frontier between Campania and Latium, in the more extended sense of the latter name. It is mentioned by Pliny (xiv. 6. s. 8.), as well as the Itineraries (*Tab. Peut.; Itin. Hier.* p. 611); and Horace tells us that Maecenas and his companions halted for the night in a villa adjoining it, on their journey from Rome to Brundusium. (Hor. *Sat.* i. 5. 45.) [E. H. B.]

PONS DUBIS, in Gallia, a bridge over the Dubis (*Doubs*), is marked in the Table on the road from Cabillonum (*Châlon*) to Vesontio (*Besançon*), and xiv. from Cabillonum. D'Anville supposes that the site may be a place called *Pontoux*, where it is said that when the water in the *Doubs* is low, the remains of an old bridge are visible at which several roads met. (Ukert, *Gallien*, p. 501.) [G. L.]

PONS MANSUETI'NA or PONS SOCIO'RUM, a place in Pannonia, on the road leading from Sopianae to Jovia; but no further particulars are known. (*It. Ant.* pp. 264, 267.) [L. S.]

PONS MI'LVIUS, or MU'LVIUS (*Ponte Molle*), a bridge on the Via Flaminia, by which that road crossed the Tiber just about 2 miles from the gate of Rome called the Porta Flaminia. It is probable that a bridge existed on the spot at an early period, and there must certainly have been one from the time when the Via Flaminia was constructed. The first

mention of the name in history occurs in the Second Punic War, when Livy tells us that the Roman people poured out in a continuous stream as far as the Milvian Bridge to meet the messengers who brought the tidings of the defeat of Hasdrubal, B. C. 207. (Liv. xxvii. 51). Hence, when Aurelius Victor reckons it among the works constructed by Aemilius Scaurus in his censorship (B. C. 110), it is evident that this can refer only to its rebuilding or restoration. (Vict. *de Vir. Illustr.* 72.) It is very possible that there was no stone bridge before that time. At the time of the conspiracy of Catiline, the Milvian Bridge was selected as the place where the ambassadors of the Allobroges were arrested by the orders of Cicero. (Sall. *Cat.* 45; Cic. *in Cat.* iii. 5.) It is probable that under the Empire, if not earlier, a suburb extended along the Via Flaminia as far as the Milvian Bridge. Hence we are told that it was the point from which Caesar (among his other gigantic schemes) proposed to divert the course of the Tiber, so as to carry it further from the city (Cic. *ad Att.* xiii. 33): and again, the emperor Gallienus is said to have proposed to extend the Flaminian portico as far as the Milvian Bridge. (Treb. Poll. *Gallien.* 18.) In the reign of Nero the neighbourhood of the bridge was occupied by low taverns, which were much resorted to for purposes of debauchery. (Tac. *Ann.* xiii. 47.) Its proximity to Rome, to which it was the principal approach from the N., rendered the Milvian Bridge a point of importance during civil wars. Hence it is repeatedly mentioned by Tacitus during those which followed the death of Nero (Tac. *Hist.* i. 87, ii. 89, iii. 82): and again, in A. D. 193, it was there that Didius Julianus was defeated by Severus (Eutrop. viii. 17; Vict. *Caes.* 19). At a later period, also, it witnessed the defeat of Maxentius by Constantine (A. D. 312), when the usurper himself perished in the Tiber. (Vict. *Caes.* 40; Eutrop. x. 4; Zosim. ii. 16.) Its military importance was recognised also in the Gothic Wars, when it was occupied by Vitiges during the siege of Rome, in A. D. 537; and again, in 547, when Totila destroyed all the other bridges in the neighbourhood of Rome, he spared the Milvian alone. (Procop. *B. G.* i. 19, iii. 24.) The present bridge is in great part of modern construction, but the foundations and principal piers are ancient. [E. H. B.]

PONS MOSAE, in northern Gallia, is mentioned by Tacitus (*Hist.* iv. 66), but there is nothing said to show where this bridge was. A Roman road ran from Aduatuca (*Tongern*) across the Mosa (*Maas*) past Juliacum (*Juliers*) to Colonia (*Cologne*). It is very probable that the Pons Mosae was on this route, and that it was at *Maastricht*. The termination *tricht* is a corruption of the Roman word Trajectum. [TRAJECTUM.] [G. L.]

PONS NA'RTIAE. [GALLAECIA, p. 934, b.]

PONS NE'RVIAE. [GALLAECIA, p. 934, b.]

PONS NOMENTA'NUS. [NOMENTUM.]

PONS SALA'RIUS (*Ponte Salara*), a bridge on the Via Salaria where that highroad crossed the Anio (*Teverone*) about 2½ miles from Rome. From its position this is certainly the bridge meant by Livy under the name of Pons Anienis, on which the single combat of Manlius Torquatus with the Gaul is described as taking place. (Liv. vii. 9.) The name is not again mentioned in history, but we learn from an inscription still remaining that the present bridge was constructed by Narses, in the room of the more ancient one which had been destroyed by Totila in A. D. 547, when he broke up the siege of Rome and withdrew to Tibur. (Procop. *B. G.* iii. 24; Nibby, *Dintorni*, vol. ii. p. 594.) [E. H. B.]

PONS SARAVI, a bridge over the Saravus (*Sarre*) in Gallia on the road from Divodurum (*Metz*) to Argentoratum (*Strassburg*). The Table marks 10 from Decem-pagi (*Dieuze*) to Tabernae (*Saverne*). Though the distances are not quite correct, it is clear that *Saarburg* on the *Sarre* must be the Pons Saravi; and it cannot be *Saarbrück* on the *Saar*, for *Saarbrück* is more than 30 miles north of *Saarburg*, and quite out of the way. This is an instance in which a hasty conclusion has been derived solely from the sameness of name. [G. L.]

PONS SCALDIS, or bridge over the *Schelde* in North Gallia, is placed both by the Table and the Antonine Itin. on the road from Turnacum (*Tournai*) to Bagacum (*Bavai*). There is a place on the *Schelde* named *Escaut-pont* between *Valenciennes* and *Condé* which may represent the Pons. [G. L.]

PONS SERVI'LII. [ILLYRICUM, Vol. II. p. 36, b.]

PONS TILURI, a station on the road from Sirmium to Salona, in the interior of Dalmatia. (*Itin Anton.*; Tilurium, *Peut. Tab.*; Geogr. Rav. iv. 16.) It may be identified with the passage of the river *Cettina* or *Tsettina* (Tilurus), at *Trigl*, with the opposite height of *Gardun*, where there are vestiges of a Roman town, which was probably the colony of AEQUUM (Αἴκουον κόλ., Ptol. ii. 16 (17). § 11; *Itin. Anton.*; *Peut. Tab.*; Orelli, *Inscr.* 502), where an inscription has been found commemorating the restoration of the bridge under the name of PONS HIPPI,—a Graecised form of the Latin name of the town, which was sometimes spelt as Equum. (Wilkinson, *Dalmatia*, vol. i. p. 238; Neigebaur, *Die Sud-Slaven*, p. 178.) [E. B. J.]

PONS UCASI, a town of Thrace, near the Dacian border. (*Itin. Ant.* p. 567.) [T. H. D.]

PONS ZITHA, a station on the Roman road running along the coast-line of Syrtica, and a municipium. (*Itin. Anton.*; Geogr. Rav.) In the Peutinger Table it is wrongly called Liha. Barth (*Wanderungen*, p. 263) has fixed its site at the promontory opposite to Meninx, where he found remains of a stone bridge or mole connecting the mainland with the island of the Lotophagi. [E.B.J.]

PONTEM, AD, a town of Britain, on the road from Londinium to Lindum (*Itin. Ant.* p. 477), identified by Camden (p. 560) with *Paunton* on the *Witham*, in *Lincolnshire*, where a great many Roman coins and antiquities have been discovered. Others take it to have been *Farndon*, near *Southwell*, in *Nottinghamshire*. [T. H. D.]

PONTES, in North Gallia, is placed in the Ant. Itin. on a road from Samarobriva (*Amiens*) to Gesoriacum (*Boulogne*): it is 36 M. P. from Samarobriva to Pontes, and 39 M. P. from Pontes to Gesoriacum. The Table, which marks a road between Samarobriva and Gesoriacum, does not place Pontes on it, but it has another place, named Duroicoregum, supposed to be *Douriers* on the *Authie*. D'Anville concludes that Pontes is *Ponches* on the *Authie*, at which place we arrive by following the traces of the old road which still exists under the name of *Chaussée de Brunéhaut*. [G. L.]

PONTES, a Roman station in the territory of the Atrebates, seated on the *Thames*, on the road from Calleva (*Silchester*) to Londinium. (*Itin. Ant.* p. 478). It was at or near *Old Windsor*. [T. H. D.]

PONTES TESSE'NII (*Diessen*), a place in

Vindelicia, on the road from Amber to Parthanum. (*It. Ant.* p. 275; comp. Muchar, *Noricum*, i. p. 284.) [L. S.]

PONTIA or PO'NTIAE (Ποντία: *Ponza*), an island in the Tyrrhenian sea, situated off the coast of Italy, nearly opposite to the Circeian promontory. It is the most considerable of a group of three small islands, now collectively known as the *Isole di Ponza;* the ancient names of which were, PALMARIA, now *Palmaruola*, the most westerly of the three, Pontia in the centre, and SINONIA (*Zannone*) to the NE. (Plin. iii. 6. s. 12; Mel. ii. 7. § 18.) They are all of volcanic origin, like the Pithecusae (Aenaria and Proclyta), nearer the coast of Campania, and the island of Pandataria (now called *Vandotena*), about midway between the two groups. Strabo places Pontia about 250 stadia from the mainland (v. p. 233), which is nearly about the truth, if reckoned (as he does) from the coast near Caieta; but the distance from the Circeian promontory does not exceed 16 geog. miles or 160 stadia. We have no account of Pontia previous to the settlement of a Roman colony there in B.C. 313, except that it had been already inhabited by the Volscians. (Liv. ix. 28; Diodor. xix. 101.) The colonisation of an island at this distance from the mainland offers a complete anomaly in the Roman system of settlements, of which we have no explanation; and this is the more remarkable, because it was not, like most of the maritime colonies, a "colonia maritima civium," but was a Colonia Latina. (Liv. xxvii. 10.) Its insular situation preserved it from the ravages of war, and hence it was one of the eighteen which during the most trying period of the Second Punic War displayed its zeal and fidelity to the Roman senate, when twelve of the Latin colonies had set a contrary example. (*Ibid.*) Strabo speaks of it as in his time a well peopled island (v. p. 233). Under the Roman Empire it became, as well as the neighbouring Pandataria, a common place of confinement for state prisoners. Among others, it was here that Nero, the eldest son of Germanicus, was put to death by order of Tiberius. (Suet. *Tib.* 54, *Cal.* 15.)

The island of *Ponza* is about 5 miles long, but very narrow, and indented by irregular bays, so that in some places it is only a few hundred yards across. The two minor islands of the group, *Palmaruola* and *Zannone*, are at the present day uninhabited. Varro notices Palmaria and Pontia, as well as Pandataria, as frequented by great flocks of turtle doves and quails, which halted there on their annual migrations to and from the coast of Italy. (Varr. *R. R.* iii. 5. § 7.) [E. H. B.]

PO'NTIAE (Πόντιαι νῆσοι, Scyl. p. 46), three islands off the coast of the Greater Syrtis. Ptolemy (iv. 3. § 36; comp. *Stadiasm.* §§ 72—75) calls these Misynus, Pontia, and Gaea. They may be identified with the reefs of *Ghára.* (Beechey, *Expedition to the N. Coast of Africa*, p. 238, App. p. x.; Smyth, *Mediterranean*, p. 455.) [E. B. J.]

PONTI'NUS. [ARGOS, p. 201, a.]

PONTUS (Πόντος), a large country in the north-east of Asia Minor, which derived its name from its being on the coast of the Pontus Euxinus, extending from the frontiers of Colchis in the east, to the river Halys in the west. In the earlier times the country does not appear to have borne any general appellation, but the various parts were designated by names derived from the different tribes by which they were inhabited. Xenophon (*Anab.* v. 6. § 15) is the first ancient author who uses Pontus as the name of the country. Pontus formed a long and narrow tract of coast country from the river Phasis to the Halys, but in the western part it extended somewhat further south or inland. When its limits were finally fixed, it bordered in the west on Paphlagonia, where the Halys formed the boundary; in the South on Galatia, Cappadocia, and Armenia Minor, the Antitaurus and Mount Paryadres being the boundaries; and in the east on Colchis and Armenia, from which it was separated by the river Phasis. Pontus thus embraced the modern pashaliks of *Trebisond* and *Sivas.* Although the country was surrounded by lofty mountains, which also sent their ramifications into Pontus itself, the plains on the coast, and especially the western parts, were extremely fertile (Strab. xii. p. 548), and produced excellent fruit, such as cherries, apples, pears, various kinds of grain, olives, timber, aconite, &c. (Strab. xii. p. 545, &c.; Theophrast. *Hist. Plant.* iv. 5, viii. 4, &c., ix. 16, xix. 17; Plin. xiv. 19.) The country abounded in game (Strab. xii. p. 548), and among the animals bees are especially mentioned, and honey and wax formed important articles of commerce. (Xenoph. *Anab.* iv. 8. §§ 16, 20; Dioscor. ii. 103; Plin. xxi. 45; Strab. iii. p. 163.) The mineral wealth of the country consisted chiefly in iron (Xenoph. *Anab.* v. 4. § 1; Strab. xii. p. 549; Steph. B. *s. v.* Χάλυβες; Pliny vii. 57) and salt. The chief mountains of Pontus are the PARYADRES, and on the east of it the SCOEDISES, two ranges of Antitaurus, which they connect with Mount Caucasus. The Paryadres sends two branches, LITHRUS and OPHLIMUS, to the north, which form the eastern boundary of the plain of Phanaroea. Another mountain which terminates in a promontory 100 stadia to the west of Trapezus was called the Oros Hieron (Anonym. *Peripl.* p. 13; Apollon. Rhod. ii. 1015, with Schol.), and Teches is a mountain mentioned in the south-east of Trapezus. The promontories formed by these mountains, if we proceed from west to east, are: the Heracleium, Iasonium, and Zephyrium. These projecting headlands form the bays of Amisus and Cotyora. The mountains in the south contain the sources of numerous streams and rivers, such as the Halys, Lycastus, Chadisius, Iris, Scylax, Lycus, Thermodon, Beris, Thoaris, Oenius, Phigamus, Sidenus, Genethes, Melanthius, Pharmathenus, Hyssus, Ophis, Ascurus, Adienus, Zagatis, Prytanis, Pyxites, Archabis, Apsarus, Acampis, Bathys, Acinasis, Isis, Mogrus, and the Phasis. The only lake in Pontus noticed by the ancients is the Stiphane Palus, in the west, north of the river Scylax.

Pontus was inhabited by a considerable number of different tribes, whose ethnological relations are either entirely unknown or extremely obscure. The most important among them, if we proceed from west to east, are: the LEUCOSYRI, TIBARENI, CHALYBES, MOSYNOECI, HEPTACOMETAE, DRILAE, BECHIRES, BYZERES, COLCHI, MACRONES, MARES, TAOCHI, and PHASIANI. Some of these tribes were wild and savage to the last degree, especially those of the interior; but on the coast Greek colonies continued to be established ever since the middle of the 7th century B.C., and rose to great power and prosperity, spreading Greek culture and civilisation around them.

As to the history of the country, tradition stated that it had been conquered by Ninus, the founder of the Assyrian empire (Diod. ii. 2); after the time of Cyrus the Great it certainly was, at least nominally,

PONTUS EUXINUS. [EUXINUS PONTUS.]

POPULI or POPOLI, a small place in the west of Pannonia, on the road from Jovia to Aquaviva, south of the river Dravus. (*It. Hieros.* p. 561; Geogr. Rav. iv. 19; *Tab. Peuting.*) [L. S.]

POPULO'NIUM or POPULO'NIA (Ποπλώνιον: *Eth.* Populoniensis: *Populonia*), an ancient city of Etruria, situated on the sea-coast, nearly opposite the island of Ilva (*Elba*), and about 5 miles N. of the modern city of *Piombino*. It stood on a lofty hill, rising abruptly from the sea, and forming the northern extremity of the detached and almost insulated promontory, the southern end of which is occupied by the modern town of *Piombino*. This promontory (the Ποπλώνιον ἄκρον of Ptolemy) is separated from the hills in the interior by a strip of flat marshy ground, about 5 miles in width, which in ancient times was occupied in great measure by lagunes or *paduli;* so that its position is nearly analogous to that of the still more striking *Monte Argentaro*. The Maritime Itinerary places it 30 miles S. of the Vada Volaterrana, which is just about the truth (*Itin. Marit.* p. 501). Strabo says it was the only one of the ancient Etruscan cities which was situated on the sea-shore (Strab. v. p. 223), and the remark is repeated by Pliny; thus apparently excluding Cosa as well as Pyrgi and other smaller places from that designation. It is probable at least that Populonium was the most considerable of the maritime cities of Etruria; but there are no grounds for regarding it as one of the Twelve Cities of the League, or as ever rivalling in importance the great cities of the interior. Virgil indeed represents it as one of the Etruscan cities which sent forces to the assistance of Aeneas (*Aen.* x. 172), a statement that seems to prove his belief in its antiquity; but other accounts represented it as a colony of Volaterrae, and therefore of comparatively recent date. Servius tells us that it was first founded by the Corsicans, from whom it was afterwards wrested by the Volaterrans; and distinctly represents it as of later date than the twelve chief cities of Etruria. (Serv. *ad Aen. l. c.*) It probably derived its chief prosperity from its connection with the neighbouring island of Ilva, the iron produced in the latter being all conveyed to Populonium to be smelted, and thence exported to other regions. (Strab. *l. c.*; Pseud. Arist. *de Mirab.* 95; Varr. *ap Serv. ad Aen.* x. 174.) Hence, in B. C. 205, when Scipio was fitting out his fleet for Africa, and the Etruscan cities came forward with their voluntary contributions, the Populonians undertook to supply him with iron. (Liv. xxviii. 45.) This is the first occasion on which the name is mentioned in history; a few years later (B. C. 202) we are told that the consul Claudius Nero, on his voyage to Sardinia, took refuge with his fleet in the port of Populonium from the violence of a storm. (Id. xxx. 39). No further mention of it occurs in history; but we learn from Strabo that it sustained a siege from the forces of Sulla at the same time with Volaterrae, and it appears to have never recovered the blow it then received; for in the time of that geographer the city itself was almost desolate, only the temples and a few houses remaining. The port, however, was still

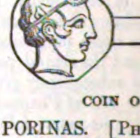
frequented, and a town had grown up around it at the foot of the hill. (Strab. v. p. 233.) Its name is still mentioned as an existing town by all the other geographers, and Ptolemy especially notices the city as well as promontory of Populonium (Mel. ii. 4. § 9; Plin. iii. 5. s. 8; Ptol. iii. 1. § 4); but this is the last evidence of its existence; and before the close of the Western Empire it had fallen into complete decay. It is described by Rutilius at the beginning of the fifth century as entirely desolate, nothing remaining but fragments of its massive walls and the fallen ruins of other edifices. Gregory the Great also describes it towards the close of the sixth century as in a state of complete decay, though retaining an episcopal see; but at a later period of the middle ages a feudal castle was erected on the site, which, with the few adjacent houses, still bears the name of *Populonia*, and is a conspicuous object from a distance. (Rutil. *Itin.* i. 401—414; Gregor. *Ep. ap. Cluver. Ital.* p. 514.)

The only Etruscan remains now existing at Populonium (with the exception of a few tombs of no interest) are those of the ancient walls, which may be traced in fragments all round the brow of the hill, throughout the entire circuit of the city. This did not exceed a mile and a half in circumference; it was of an irregular form, adapted to the requirements of the ground. The walls are constructed of rude masses of stone, arranged, like those of *Volterra*, in horizontal layers, but with little regularity; they are not, however, nearly so gigantic in character as those of *Volterra*, *Fiesole*, or *Cortona*. Within the circuit of the walls are to be seen some vaulted chambers, six in a row (which have been erroneously called an amphitheatre), a mosaic pavement, and some reservoirs of water, all unquestionably of Roman date. (Dennis's *Etruria*, vol. ii. p. 236—238.)

On the highest point of the hill, in the days of Rutilius, stood a lonely watch-tower, serving at the same time as a beacon for ships. (Rutil. *Itin.* i. 407.) It was from this point that, according to Strabo, the view comprised not only Corsica (which is visible from many points of the mainland), but Sardinia also. (Strab. *l. c.*) But this last assertion, though it has been repeated by many writers, is certainly erroneous, as, even if the distance were not too great, the nearer mountains of *Elba* would effectually conceal those of Sardinia from the view. (Dennis, vol. ii. p. 239.)

We learn from the Tabula that there were hot springs in the territory of Populonium, which had given rise to a bathing-place called the AQUAE POPULONIAE (*Tab. Peut.*). These were evidently the same now known as *Le Caldane*, at the foot of *Campiglia*, about 6 miles from Populonium, which have been identified by some writers with the "aquae calidae ad Vetulonios" mentioned by Pliny (ii. 10. s. 106); but there is no authority for placing Vetulonia in this neighbourhood. (Dennis, vol. ii. p. 225.) [VETULONIA.]

Populonium was the only city of Etruria which had a silver coinage of its own, of a very peculiar style, the reverse being generally quite plain, without type or legend, and not incuse or indented, as on the earliest Greek coins. The ordinary type is a Gorgon's head or mask, similar to that on many Etruscan monuments. The copper coins give the Etruscan name of the city "Pupluna" at full— ΠΥΠΛΥΝΑ. It is not improbable (as suggested by Millingen) that the Populonians derived the art of



coinage from the Ph

PO'RPHYRIS.

PORPHYRI'TES MONS (Πορφυρίτης ὄρος, Ptol. iv. 5. § 27), a long but not very lofty range of mountains which ran along the western shore of the Arabian Sea, nearly from lat. 26° to 27° N. Towards the sea its sides were abrupt, although occasionally scooped into serviceable harbours, e. g. the Portus Albus and Philoteras. On the land side it sloped more gradually, breaking, however, the eastern desert with numerous bluffs and ridges, and sending forth its spurs as far as Tentyra and Antaeopolis S. and N. respectively. [W. B. D.]

PO'RSULAE, another name for Maximinianopolis [MAXIMINIANOPOLIS.]

PORTA AUGUSTA (Πόρτα Αὐγούστα, Ptol. ii. 6. § 50), a town of the Vaccaei, in Hispania Tarraconensis; perhaps *Torquemada*. [T. H. D.]

PORTHMUS (Πόρθμος), a harbour in Euboea, belonging to Eretria, described by Demosthenes as opposite to Attica, is the modern *Porto Búfalo*, immediately opposite to Rhamnus, in the narrowest part of the Euboean channel, where the breadth is only two miles. It was destroyed by Philip, after expelling the Eretrians; but its advantageous position close to the coast of Attica gave it importance for many centuries afterwards. (Dem. *Phil.* iii. pp. 119, 125, iv. p. 133, *de Cor.* p. 248; Plin. iv. 12. s. 21; Hierocl. p. 645; Harpocrat. Phot. Suid. *s. v.* Πόρθμος; Leake, *Northern Greece*, vol. ii. p. 435.)

PORTUS ABUCINI, is mentioned in the Notitia of the Gallic provinces as a place in "Provincia Maxima Sequanorum." It appears to be *Port-sur-Saône*. The district about Port was once called Pagus Portisiorum, whence the modern name *Le Portois*. [G. L.]

PORTUS ACHAEORUM, a harbour in European Sarmatia, upon the coast of the Euxine, and upon the strip of land called the Dromos Achilleos. (Plin. iv. 12. s. 26.) [See Vol. I. p. 20, a.]

PORTUS AEMINES, on the south coast of Gallia, is mentioned in the Maritime Itin. It is supposed to be near the small island *Embies*. (Ukert, *Gallien*, p. 428.) [G. L.]

PORTUS AEPATIACI, is mentioned in the Notitia Imperii as being in Belgica Secunda: "Tribunus militum Nerviorum portu Aepatiaci." It is uncertain what place is meant. D'Anville (*Notice, &c.*) has an article on it. [G. L.]

PORTUS AGASUS. [GARGANUS.]

PORTUS ALBURNUS. [ALBURNUS MONS.]

PORTUS ARGOUS. [ILVA.]

PORTUS MAGNUS. [MAGNUS PORTUS.]

PORTUS MAURITII. [LIGURIA, p. 187.]

PORTUS OLIVULA. [NICAEA.]

PORTUS PISANUS. [PISAE.]

PORTUS POMPONIANIS, of the Maritime Itin., seems to be one of the bays formed by the Pomponiana Peninsula, and either that on the east side or that on the west side of the peninsula of *Giens*. The name Pomponianis Portus seems to confirm D'Anville's opinion about Pomponiana [POMPONIANA]. [G. L.]

PORTUS SYMBOLON. [SYMBOLON PORTUS.]

PORTUS TELAMONIS. [TELAMO.]

PORTUS TRAJANI. [OSTIA.]

PORTUS VENERIS (*Port Vendre*), on the south coast of France near the borders of Spain. The passage about Portus Veneris in Mela (ii. 5) is thus (ed. Is. Vossius): "Tum inter Pyrenaei promuntoria Portus Veneris insignis fano." The words "insignis fano" are a correction of Vossius without any authority, which he has substituted for the words of the best MS., "in sinu salso." *Port Vendre* is in France, near *Collioure*, a few miles south of the mouth of the *Tech*.

Ptolemy (ii. 10. § 2) fixes the boundary of Narbonensis at the promontory on which stood the Aphrodisium or temple of Venus. Pliny (iii. 3) in his description of Hispania Citerior, after mentioning Emporiae (*Ampurias*), says: "Flumen Tichis. Ab eo Pyrenaea Venus in latere promontorii altero xl. M." This river Tichis is the river which is near the site of Emporiae (*Ampurias*) in Spain. D'Anville concludes that the promontorium of Pliny is the Promontorium Pyrenaeum of the Table, the modern *Cap Creux*, which projects into the Mediterranean. This would be a fit place for the temple, for it was an ancient practice to build temples on bold headlands. But Pliny says "on the other," that is on the Gallic side of the promontorium; and the distance of xl. M. P. from the river of *Ampurias* brings us to the position of *Port Vendre*. Accordingly D'Anville concludes that the temple of Venus was near the port of Venus; and this would seem likely enough. This temple is apparently mentioned by Stephanus (*s. v.* Ἀφροδισιάς); and certainly by Strabo (iv. p. 178), who makes the coast of the Narbonensis extend from the *Var* to the temple of the Pyrenaean Venus, the boundary between Narbonensis and Iberia; but others, he adds, make the Tropaea Pompeii the boundary of Iberia and Celtica. The Tropaea Pompeii were in a pass of the Pyrenees not far from the coast. In this passage Strabo simply says that the temple of the Pyrenaean Venus was fixed as the boundary of Gallia and Hispania by some geographers, but this passage does not tell us where the temple is; and the distances which he gives in the same place (iv. p. 178) will not settle the question. But in another passage (iv. p. 181) he makes the Galaticus Sinus extend from a point 100 stadia from Massilia "to the Aphrodisium, the promontory of Pyrene." It is plain that his promontory of Pyrene is *Cap Creux*, for this is a marked natural limit of the Gallic bay on the west; and he also places the temple there. *Cap Creux* is a natural boundary between Gallia and Hispania, and we may conclude that it was the ancient coast boundary. We know that Cervaria, which is south of Portus Veneris and

north of *Cap Creux*, is in Gallia [CERVARIA]. It appears then that there is no authority for placing this temple of Venus at Portus Veneris except the passage of Pliny, which leads to this conclusion, if the distance xl. is right. The passage of Mela has been corrupted by Vossius. It is even doubtful if "inter Pyrenaei promuntoria" is the true reading. Some editions have "in Pyrenaei promuntorio," but if that reading is right, the promuntorium of Mela is not *Cap Creux*. [G. L.]

POSEIDO'NIUM, or POSI'DIUM (Ποσειδώνιον, Thuc. iv. 129; Posidium, Liv. xliv. 11), the SW. cape of Pallene, probably so called from a temple to Poseidon, which still retains its name vulgarly pronounced *Posidhi*. (Leake, *Northern Greece*, vol. iii. p. 156.) Müller (*Geog. Graec. Min.* vol. i. p. 52) identifies it with the THRAMBEIS of Scylax (p. 26; comp. Θεράμβω, Herod. vii. 123; Θράμβος: *Eth.* Θραμβούσιος, Steph. B.; Lycophr. 1405), which Leake and Kiepert place near the Canastraeum Prom.; but as Scylax interposes Scione between them, Thrambeis corresponds better with *Posidhi*. [E. B. J.]

POSI'DIUM or POSEI'DIUM (Ποσείδιον), the name of several promontories sacred to Poseidon.

I. *In Europe*. 1. A promontory on the coast of Lucania, opposite to the little island of Leucosia, from which it is still called *Punta della Licosa*. [LEUCOSIA.]

2 The SW. cape of Pallene in Macedonia, also called Poseidonium. [POSEIDONIUM.]

3. A promontory in Chaonia in Epeirus, between Onchesmus and Buthrotum, opposite the NE. of Corcyra. (Strab. vii. p. 324; Ptol. iii. 14. § 4; Leake, *Northern Greece*, vol. i. p. 92.)

4. A promontory in Thessaly, in the district Phthiotis, described by Strabo as lying between the Maliac and Pagasaean gulfs, is the promontory closing the Pagasaean gulf on the S. It is called Zelasium by Livy, now *C. Stavros* (Strab. vii. p. 330, Fr. 32; Ptol. iii. 13. § 17; Liv. xxxi. 46; Leake, *Northern Greece*, vol. iv. p. 351).

POSI'DIUM or POSEI'DIUM (Ποσείδιον). II. *In Asia*. 1. The easternmost promontory of the island of Samos. (Strab. xiv. p. 637.)

2. A promontory on the eastern coast of the island of Chios (Strab. xiv. p. 644; Ptol. v. 2. § 30), now called *Cape Helene*.

3. A promontory of Bithynia, at the northern extremity of the bay of Cios or Myrleia, forming the termination of Mount Arganthonius, is now called *Cape Bozburun*, in the *Sea of Marmora*. (Ptol. v. 1. § 4; Marcian, p. 70; Scylax, p. 35, where it is called simply ἀκρωτήριον τοῦ Κιανοῦ κόλπου.)

4. A promontory on the coast of Cilicia, 7 stadia to the west of the town of Mandane, is now called *C. Kizliman*. (*Stadiasm. Mar. Magn.* § 175.)

5. A promontory on the south-west coast of Caria, south of Miletus, to the territory of which it belonged. It forms the northern extremity of the Iasian bay, and also contained a small town of the same name. (Polyb. xvi. 1; Strab. xiv. pp. 632, 651, 658; Plin. v. 31; Pomp. Mela, i. 17; *Stadiasm. Mar. Magn.* §§ 273, 275, 276.) Its modern name is *C. Baba* or *del Arbora*. [L. S.]

6. A promontory in Arabia, on the eastern side of the entrance of the gulf of Heroopolis, where was a grove of palm-trees, and an altar to Poseidon, which was erected by Ariston, whom one of the Ptolemies had sent to explore the Arabian gulf. This promontory is now called *Ras Mohammed*. (Artemid. *ap. Strab.* xvi. p. 776; Diod. iii. 42.) Strabo, or his copyist, erroneously says that it lies within the Aelanitic recess. (See the notes of Groskurd and Kramer.)

7. A promontory in Arabia, E. of the Straits of the Red Sea (*Bab-el-Mandeb*, Ptol. vi. 7. § 8), which must not be confounded with No. 6, as some modern writers have done.

8. A town on the coast of Syria, in the district Cassiotis, lying S. of Mt. Casius. There are still remains of this town at *Posseda*. (Strab. xvi. pp. 751, 753; Ptol. v. 15. § 3; Plin. v. 20. s. 18.)

POSIDONIA, POSIDONIATES SINUS. [PAESTUM.]

POSTU'MIA or POSTUMIA'NA CASTRA, a fortress in Hispania Baetica, seated on a hill near the river Salsum (Hirt. *B. Hisp.* 8); probably the modern *Salado*, between *Osuña* and *Antequera*. (Mariana, iii. 2; Florez, *Esp. S.* x. p. 150, xii. p. 14.) [T. H. D.]

PO'TAMI (Ποταμοί), a fort on the north-eastern part of the coast of Paphlagonia, with a harbour for small craft. According to Arrian (*Peripl. P. E* p. 15) it was 150 stadia to the NE. of Stephane, but according to others only 120. (Marcian, p. 72; Anonym. *Peripl. P. E.* p. 7, who places it 100 stadia to the SW. of Cape Syrias.) [L.S.]

POTA'MIA (Ποταμία), a district in the SW. of Paphlagonia mentioned by Strabo (xii. p. 562), but without defining its extent or limits. [L. S.]

PO'TAMUS, or PO'TAMI. [ATTICA, p. 331, b.]

PO'TANA (Πόταvα, Agatharch. *de Mar. Erythr* § 104, ed Paris, 1855), a place mentioned by Agatharchides, which Alexander the Great founded at the mouth of the Indus. Diodorus calls it Πόταναι (iii. 46). It has been suspected, with some reason, that the name in both of these authors is an error for Pattala (the present *Tatta*), which is spoken of in similar terms by Arrian (*Anab.* v. 4, vi. 17, *Indic.* c. 2) and by Pliny (ii. 75). On the other hand, the name may readily be conceived as a Graecism for *Patan*, a common Indian word for a town or city. [V.]

POTE'NTIA. 1. (Ποτεντία: *Eth.* Potentinus: *Sta Maria a Potenza*), a town of Picenum, situated on the coast of the Adriatic, at the mouth of the river of the same name, still called the *Potenza*, and 18 miles S. of Ancona. We have no means of determining whether or not there was an ancient town on the spot previous to the Roman conquest of Picenum; but in B. C. 184 a Roman colony was settled there, at the same time with that at Pisaurum in Umbria. (Liv. xxxix. 44; Vell. Pat. i. 15. The older editions of Livy have Pollentia, but there seems no doubt that the true reading is Potentia.) It was, as well as the latter, a "colonia civium," but does not seem to have ever risen to a position of importance; and with the exception of an incidental notice in Cicero of an earthquake that occurred in its territory (Cic. *de Harusp. Resp.* 28), no mention of its name is found in history. It is, however, mentioned by all the geographers as one of the towns of Picenum, and at a later period its name is still found in the Itineraries. (Strab. v. p. 241; Mel. ii. 4. § 6; Plin. iii. 13. s. 18; Ptol. iii. 1. § 21; *Itin. Ant.* pp. 101, 313; *Tab. Peut.*) From the Liber Coloniarum we learn that it had received a fresh body of colonists, though it is uncertain at what period (*Lib. Colon.* pp 226, 257); but there is no evidence of its having retained the rank of a colony under the Roman Empire. (Zumpt, *de Col.* p. 336). It became an

episcopal see in the early ages of Christianity; and the time of its decay or destruction seems to be unknown; but the site is now wholly deserted. Considerable remains of the ancient city were still visible in the time of Holstenius in the plain on the right bank of the *Potenza*, near its mouth; and the name is still retained by an ancient church and abbey called *Sta Maria a Potenza*, about a mile from the *Porto di Recanati*. (Holsten. *Not. ad Cluver*. p. 134.)

2. (Ποτεντία, Ptol.: *Eth.* Potentinus: *Potenza*), a city of the interior of Lucania, situated in the valley of the Casuentus or *Basiento*, not far from its source, and above 60 miles from the gulf of Tarentum. No mention of it occurs in history, and though it is noticed by Pliny, Ptolemy, and the Liber Coloniarum, among the municipal towns of Lucania, we have no indication of its superior importance. But from the numerous inscriptions discovered there, it is evident that it was, under the Roman empire, a flourishing municipal town, and must at that period have been one of the most considerable in Lucania, the towns of that province having for the most part fallen into great decay. The Itineraries give us two lines of road passing through Potentia, the one from Venusia southwards towards Grumentum and Nerulum, the other from Salernum and the valley of the Silarus, which appears to have been continued in the direction of Tarentum. (Plin. iii. 11. s. 15; Ptol. iii. 1. § 70; *Lib. Col.* p. 209; *Itin. Ant.* p. 104; *Tab. Peut.*; Mommsen *I. R. N.* pp. 23, 24.) The modern city of *Potenza* is the capital of the *Basilicata*, a province which comprises the greater part of the ancient Lucania: it does not occupy precisely the site of the ancient town, the remains of which are visible at a place called *La Murata*, in the valley below the modern city. (Romanelli, vol. i. p. 435.) [E. H. B.]

POTHEREUS, a river of Crete mentioned by Vitruvius (i. 4), is identified by some with the Catarrhactes of Ptolemy. [CATARRHACTES.]

POTIDAEA. [CASSANDREIA.]

POTIDA'NIA (Ποτιδανία: *Eth.* Ποτιδανιάτης), a town in Aetolia Epictetus, on the borders of Locris, and one day's march from Oeneōn. (Thuc. iii. 96; Liv. xxviii. 1; Steph. B. *s. v.*)

PO'TNIAE (Πότνιαι: *Eth.* Ποτνιεύς, fem. Ποτνιάς), a village of Boeotia, on the road from Thebes to Plataea, distant 10 stadia from the former city. It was in ruins in the time of Pausanias, and contained a grove sacred to Demeter and Cora (Proserpine). Potniae is celebrated in mythology as the residence of Glaucus, who was torn to pieces by his infuriated mares. (Xen. *Hell.* v. 4. § 51; Paus. ix. 8. §§ 1, 3; Steph. B. *s. v.*; Plin. xxv. 8. s. 53; Virg. *Georg.* iii. 268; Ov. *Ibis*, 557; *Dict. of Biogr.* art. GLAUCUS.) According to Strabo (p. 412) some authorities regarded Potniae as the Hypothebae of Homer (*Il.* ii. 505). Gell places Potniae in the neighbourhood of the modern village of *Taki*. (Gell, *Itinerary*, p. 110; comp. Leake, *Northern Greece*, vol. ii. p. 323.)

PRAA'SPA. [PHRAATA.]

PRA'CTIUS (Πράκτιος), a small river in the north of Troas, flowing from Mount Ida, and discharging itself into the Hellespont a little below Percote. (Hom. *Il.* ii. 835; Strab. xiii. p. 590; Arrian, *Anab.* i. 12. § 6.) Some identify it with the modern *Borgas*, and others with the *Muskakoi-Su*. [L. S.]

PRAENESTE (Πραίνεστος, Strab. Appian; Πραίνεστε, Dion Cass.: *Eth.* Πραινεστῖνος, or Πραινεστηνός, Praenestinus: *Palestrina*), one of the most ancient, as well as in early times one of the most powerful and important, of the cities of Latium. It was situated on a projecting point or spur of the Apennines, directly opposite to the Alban Hills, and nearly due E. of Rome, from which it was distant 23 miles. (Strab. v. p. 238; *Itin. Ant.* p. 302; Westphal, *Römische Kampagne*, p. 106.) Various mythical tales were current in ancient times as to its founder and origin. Of these, that adopted by Virgil ascribed its foundation to Caeculus, a reputed son of Vulcan (Virg. *Aen.* vii. 678); and this, we learn from Solinus, was the tradition preserved by the Praenestines themselves (Solin. 2. § 9). Another tradition, obviously of Greek origin, derived its name and foundation from Praenestus, a son of Latinus, the offspring of Ulysses and Circe (Steph. B. *s. v.*; Solin. *l. c.*). Strabo also calls it a Greek city, and tells us that it was previously called Πολυστέφανος (Strab. v. p. 238). Another form of the same name name is given by Pliny (iii. 5. s. 9), who tells us its original name was Stephane. And finally, as if to complete the series of contradictions, its name is found in the lists of the reputed colonies of Alba, the foundation of which is ascribed to Latinus Silvius (Vict. *Orig. Gent. Rom.* 17; Diod. vii. *ap. Euseb. Arm.* p. 185). But there seems no doubt that the earlier traditions were those which assigned it a more ancient and independent origin. The first mention of its name in history is in the list of the cities of the Latin League, as given by Dionysius, and there can be no doubt of its having formed an important member of that confederacy. (Dionys. v. 61.) But as early as B. C. 499, according to Livy, it quitted the cause of the confederates and joined the Romans, an event which that historian places just before the battle of Regillus. (Liv. ii. 19.) Whether its separation from the rest of the Latins was permanent or not, we have no information; but on the next occasion when the name of Praeneste occurs, it was still in alliance with Rome, and suffered in consequence from the ravages of the Aequians and Volscians, B. C. 462 (Liv. iii. 8). The capture of Rome by the Gauls seems, however, to have introduced a change in the relations of the two cities. Shortly after that event (B. C. 383) the Praenestines are mentioned as making hostile incursions into the territories of the Gabians and Labicans: the Romans at first treated this breach of faith with neglect, apparently from unwillingness to provoke so powerful an enemy; but the next year, the Praenestines having sent an army to the support of the revolted colonists of Velitrae, war was formally declared against them. The Praenestines now joined their former enemies the Volscians, and, in conjunction with them, took by storm the Roman colony of Satricum. (Liv. vi. 21, 22.) The next year the Volscians were defeated in a great battle by Camillus, but no mention is made of the Praenestines as taking part in it. The following season, however (B. C. 380), they levied a large army, and taking advantage of the domestic dissensions at Rome, which impeded the levying of troops, they advanced to the very gates of the city. From thence they withdrew to the banks of the Allia, where they were attacked and defeated by T. Quintius Cincinnatus, who had been named in all haste dictator. So complete was their rout that they not only fled in confusion to the very gates of Praeneste, but

Cincinnatus, following up his advantage, reduced eight towns which were subject to Praeneste by force of arms, and compelled the city itself to submission (Liv. vi. 26—29). There can be little doubt that the statement of Livy which represents this as an unqualified surrender (deditio) is one of the exaggerations so common in the early Roman history, but the inscription noticed by him, which was placed by Cincinnatus under the statue of Jupiter Imperator, certainly seems to have claimed the capture of Praeneste itself as well as its dependent towns. (Fest. *s. v. Trientem.* p. 363.)

Yet the very next year the Praenestines were again in arms, and stimulated the other Latin cities against Rome. (Liv. vi. 30.) With this exception we hear no more of them for some time; but a notice which occurs in Diodorus that they concluded a truce with Rome in B. C. 351, shows that they were still acting an independent part, and kept aloof from the other Latins. (Diod. xvi. 45.) It is, however, certain that they took a prominent part in the great Latin War of B. C. 340. In the second year of that war they sent forces to the assistance of the Pedani, and, though defeated by the consul Aemilius, they continued the contest the next year together with the Tiburtines; and it was the final defeat of their combined forces by Camillus at Pedum (B. C. 338) that eventually terminated the struggle. (Liv. viii. 12—14.) In the peace which ensued, the Praenestines, as well as their neighbours of Tibur, were punished by the loss of a part of their territory, but in other respects their position remained unchanged: they did not, like the other cities of Latium, receive the Roman franchise, but continued to subsist as a nominally independent state, in alliance with the powerful republic. They furnished like the other "socii" their quota of troops on their own separate account, and the Praenestine auxiliaries are mentioned in several instances as forming a separate body. Even in the time of Polybius it was one of the places which retained the Jus Exilii, and could afford shelter to persons banished from Rome. (Pol. vi. 14.)

On the arrival of Pyrrhus in Italy the fidelity of the Praenestines seems to have been suspected, and the Romans compelled them to deliver hostages. (Zonar. viii. 3.) Shortly afterwards Praeneste was the point from whence that monarch turned back on his advance to Rome. There is no probability that he took the town. Eutropius says merely that he advanced *to* Praeneste; and the expression of Florus that he looked down upon Rome from the citadel of Praeneste is probably only a rhetorical flourish of that inaccurate writer. (Flor. ii. 18; Eutrop. ii. 12.) In the Second Punic War a body of Praenestine troops distinguished themselves by their gallant defence of Casilinum against Hannibal, and though ultimately compelled to surrender, they were rewarded for their valour and fidelity by the Roman senate, while the highest honours were paid them in their native city. (Liv. xxiii. 19, 20.) It is remarkable that they refused to accept the offer of the Roman franchise; and the Praenestines in general retained their independent position till the period of the Social War, when they received the Roman franchise together with the other allies. (Appian, *B. C.* i. 65.)

In the civil wars of Marius and Sulla, Praeneste bore an important part. It was occupied by Cinna when he was driven from Rome in B. C. 87 (Appian, *B. C.* i. 65) and appears to have continued in the hands of the Marian party till B. C. 82, when it afforded a shelter to the younger Marius with the remains of his army, after his defeat by Sulla at Sacriportus. The natural strength of the city had been greatly increased by new fortifications, so that Sulla abandoned all idea of reducing it by force of arms, and was content to draw lines of circumvallation round it, and trust to the slower process of a blockade, the command of which he entrusted to Lucretius Ofella, while he himself carried on operations in the field against the other leaders of the Marian party. Repeated attempts were made by these generals to relieve Praeneste, but without effect; and at length, after the great battle at the Colline Gate and the defeat of the Samnite general Pontius Telesinus, the inhabitants opened their gates to Ofella. Marius, despairing of safety, after a vain attempt to escape by a subterranean passage, put an end to his own life. (Appian, *B. C.* i. 87—94; Plut. *Mar.* 46, *Sull.* 28, 29, 32; Vell. Pat. ii. 26, 27; Liv. *Epit.* lxxxvii., lxxxviii.) The city itself was severely punished; all the citizens without distinction were put to the sword, and the town given up to plunder; its fortifications were dismantled, and a military colony settled by Sulla in possession of its territory. (Appian, *l. c.*; Lucan, ii. 194; Strab. v. p. 239; Flor. iii. 21.) The town seems to have been at this time transferred from the hill to the plain beneath, and the temple of Fortune with its appurtenances so extended and enlarged as to occupy a great part of the site of the ancient city. (Nibby, *Dintorni*, vol. ii. p. 481; but see Bormann, *Alt. Lat. Chorogr.* p. 207, note 429.)

But the citadel still remained, and the natural strength of the position rendered Praeneste always a place of importance as a stronghold. Hence, we find it mentioned as one of the points which Catiline was desirous to occupy, but which had been studiously guarded by Cicero (Cic. *in Cat.* i. 3); and at a later period L. Antonius retired thither in B. C. 41, on the first outbreak of his dispute with Octavian, and from thence endeavoured to dictate terms to his rival at Rome. Fulvia, the wife of M. Antonius took refuge there at the same time. (Appian, *B. C.* v. 21, 23, 29.) From this time we hear but little of Praeneste in history; it is probable from the terms in which it is spoken of both by Strabo and Appian, that it never recovered the blow inflicted on its prosperity by Sulla (Strab. *l. c.*; Appian, *B. C.* i. 94); but the new colony established at that time rose again into a flourishing and considerable town. Its proximity to Rome and its elevated and healthy situation made it a favourite resort of the Romans during the summer, and the poets of the first century of the Empire abound in allusions to it as a cool and pleasant place of suburban retirement. (Juv. iii. 190, xiv. 88; Martial, x. 30. 7; Stat. *Silv.* iv. 2. 15; Plin. *Ep.* v. 6. § 45; Flor. i. 11.) Among others it was much frequented by Augustus himself, and was a favourite place of retirement of Horace. (Suet. *Aug.* 72; Hor. *Carm.* iii. 4. 23, *Ep.* i. 2. 1.) Tiberius also recovered there from a dangerous attack of illness (Gell. *N. A.* xvi. 13); and Hadrian built a villa there, which, though not comparable to his celebrated villa at Tibur, was apparently on an extensive scale. It was there that the emperor M. Aurelius was residing when he lost his son Annius Verus, a child of seven years old. (Jul. Capit. *M. Ant.* 21.)

Praeneste appears to have always retained its

colonial rank and condition. Cicero mentions it by the title of a Colonia (Cic. *in Cat.* i. 3); and though neither Pliny nor the Liber Coloniarum give it that appellation, its colonial dignity under the Empire is abundantly attested by numerous inscriptions. (Zumpt, *de Colon.* p. 254; *Lib. Colon.* p. 236; Orell. *Inscr.* 1831, 3051, &c.) A. Gellius indeed has a story that the Praenestines applied to Tiberius as a favour to be changed from a colony into a Municipium; but if their request was really granted, as he asserts, the change could have lasted for but a short time. (Gell. *N. A.* xvi. 13; Zumpt, *l. c.*)

We find scarcely any mention of Praeneste towards the decline of the Western Empire, nor does its name figure in the Gothic wars which followed: but it appears again under the Lombard kings, and bears a conspicuous part in the middle ages. At this period it was commonly known as the Civitas Praenestina, and it is this form of the name—which is already found in an inscription of A. D. 408 (Orell. *Inscr.* 105)—that has been gradually corrupted into its modern appellation of *Palestrina*.

The modern city is built almost entirely upon the site and gigantic substructions of the temple of Fortune, which, after its restoration and enlargement by Sulla, occupied the whole of the lower slope of the hill, the summit of which was crowned by the ancient citadel. This hill, which is of very considerable elevation (being not less than 2400 feet above the sea, and more than 1200 above its immediate base), projects like a great buttress or bastion from the angle of the Apennines towards the Alban Hills, so that it looks down upon and seems to command the whole of the *Campagna* around Rome. It is this position, combined with the great strength of the citadel arising from the elevation and steepness of the hill on which it stands, that rendered Praeneste a position of such importance. The site of the ancient citadel, on the summit of the hill, is now occupied by a castle of the middle ages called *Castel S. Pietro*: but a considerable part of the ancient walls still remains, constructed in a very massive style of polygonal blocks of limestone; and two irregular lines of wall of similar construction descend from thence to the lower town, which they evidently served to connect with the citadel above. The lower, or modern town, rises in a somewhat pyramidal manner on successive terraces, supported by walls or facings of polygonal masonry, nearly resembling that of the walls of the city. There can be no doubt that these successive stages or terraces at one time belonged to the temple of Fortune; but it is probable that they are of much older date than the time of Sulla, and previously formed part of the ancient city, the streets of which may have occupied these lines of terraces in the same manner as those of the modern town do at the present day. There are in all five successive terraces, the highest of which was crowned by the temple of Fortune properly so called,—a circular building with a vaulted roof, the ruins of which remained till the end of the 13th century, when they were destroyed by Pope Boniface VIII. Below this was a hemicycle, or semicircular building, with a portico, the plan of which may be still traced; and on one of the inferior terraces there still remains a mosaic, celebrated as one of the most perfect and interesting in existence. Various attempts have been made to restore the plan and elevation of the temple, an edifice wholly unlike any other of its kind; but they are all to a great extent conjectural. A detailed account of the existing remains, and of all that can be traced of the plan and arrangement, will be found in Nibby. (*Dintorni*, vol. ii. p. 494—510.)

The celebrity of the shrine or sanctuary of Fortune at Praeneste is attested by many ancient writers (Ovid, *Fast.* vi. 61; Sil. Ital. viii. 366; Lucan, ii. 194; Strab. v. p. 238), and there is no doubt that it derived its origin from an early period. Cicero, who speaks of the temple in his time as one of great antiquity as well as splendour, gives us a legend derived from the records of the Praenestines concerning its foundation, and the institution of the oracle known as the Sortes Praenestinae, which was closely associated with the worship of Fortune. (Cic. *de Div.* ii. 41.) So celebrated was this mode of divination that not only Romans of distinction, but even foreign potentates, are mentioned as consulting them (Val. Max. i. 3. § 1; Liv. xlv. 44; Propert. iii. 24. 3); and though Cicero treats them with contempt, as in his day obtaining credit only with the vulgar, we are told by Suetonius that Tiberius was deterred by religious scruples from interfering with them, and Domitian consulted them every year. Alexander Severus also appears, on one occasion at least, to have done the same. (Suet. *Tib.* 63, *Domit.* 15; Lamprid. *Alex. Sev.* 4.) Numerous inscriptions also prove that they continued to be frequently consulted till a late period of the Empire, and it was not till after the establishment of Christianity that the custom fell altogether into disuse. (Inscr. *ap.* Bormann, pp. 212, 213; Orelli, *Inscr.* 1756—1759.) The Praenestine goddess seems to have been specially known by the name of Fortuna Primigenia, and her worship was closely associated with that of the infant Jupiter. (Cic. *de Div. l. c.*; Inscr. *ut sup.*) Another title under which Jupiter was specially worshipped at Praeneste was that of Jupiter Imperator, and the statue of the deity at Rome which bore that appellation was considered to have been brought from Praeneste (Liv. vi. 29).

The other ancient remains which have been discovered at *Palestrina* belong to the later city or the colony of Sulla, and are situated in the plain at some distance from the foot of the hill. Among these are the extensive ruins of the villa or palace of the emperors, which appears to have been built by Hadrian about A. D. 134. They resemble much in their general style those of his villa at *Tivoli*, but are much inferior in preservation as well as in extent. Near them is an old church still called *Sta Maria della Villa*.

It was not far from this spot that were discovered in 1773 the fragments of a Roman calendar, supposed to be the same which was arranged by the grammarian Verrius Flaccus, and set up by him in the forum of Praeneste. (Suet. *Gramm.* 17.) They are commonly called the Fasti Praenestini, and have been repeatedly published, first by Foggini (fol. Romae, 1779), with an elaborate commentary; and again as an appendix to the edition of Suetonius by Wolf (4 vols. 8vo. Lips. 1802); also in Orelli (*Inscr.* vol. ii. p. 379, &c.). Notwithstanding this evidence, it is improbable that the forum of Praeneste was so far from the foot of the hill, and its site is more probably indicated by the discovery of a number of pedestals with honorary inscriptions, at a spot near the SW. angle of the modern city. These inscriptions range over a period from the reign of Tiberius to the fifth century, thus

tending to prove the continued importance of Praeneste throughout the period of the Roman Empire. (Nibby, vol. ii. pp. 513—515; Foggini, *l. c.* pp. v.—viii.) Other inscriptions mention the existence of a theatre and an amphitheatre, a portico and curia, and a spoliarium; but no remains of any of these edifices can be traced. (Gruter, *Inscr.* p. 132; Orelli, *Inscr.* 2532; Bormann, note 434.)

The celebrated grammarian Verrius Flaccus, already mentioned, was probably a native of Praeneste, as was also the well-known author Aelianus, who, though he wrote in Greek, was a Roman citizen by birth. (Suid. *s. v.* Αἰλιανός). The family of the Anicii also, so illustrious under the Empire, seems to have derived its origin from Praeneste, as a Q. Anicius is mentioned by Pliny as a magistrate of that city as early as B. C. 304. (Plin. xxxiii. 1. s. 6.) It is probable also that in Livy (xxiii. 19) we should read M. Anicius for Manicius. It is remarkable that the Praenestines appear to have had certain dialectic peculiarities which distinguished them from the other Latins; these are more than once alluded to by Plautus, as well as by later grammarians. (Plaut. *Trinum.* iii. 1. 8, *Truc.* iii. 2. 23; Quintil. *Inst.* i. 5. § 56; Fest. *s. v. Nephrendis*, Id. *s. v. Tongere.*)

The territory of Praeneste was noted for the excellence of its nuts, which are noticed by Cato. (*R. R.* 8, 143; Plin. xvii. 13. s. 21; Naevius, *ap. Macrob. Sat.* iii. 18). Hence the Praenestines themselves seem to have been nicknamed Nuculae; though another explanation of the term is given by Festus, who derives it from the walnuts (nuces) with which the Praenestine garrison of Casilinum is said to have been fed. (Cic. *de Or.* ii. 62; Fest. *s.v. Nuculae.*) Pliny also mentions the roses of Praeneste as among the most celebrated in Italy; and its wine is noticed by Athenaeus, though it was apparently not one of the choicest kinds. (Plin. xxi. 4. s. 10; Athen. i. p. 26, f.)

It is evident from the narrative of Livy (vi. 29) that Praeneste in the days of its independence, like Tibur, had a considerable territory, with at least eight smaller towns as its dependencies; but the names of none of these are preserved to us, and we are wholly unable to fix the limits of its territory.

The name of Via Praenestina was given to the road which, proceeding from Rome through Gabii direct to Praeneste, from thence rejoined the Via Latina at the station near Anagnia. It will be considered in detail in the article VIA PRAENESTINA. [E. H. B.]

PRAE'NETUS (Πραίνετος), a town on the coast of Bithynia, on the north side of Mount Arganthonius, and at the southern entrance of the Sinus Astacenus. It was situated 28 Roman miles to the north-west of Nicaea; and Stephanus B., who calls it Πρόνεκτος, states that it was founded by the Phoenicians. If this be true, it would be a very ancient place, which can scarcely be conceived, as it is mentioned only by very late writers. (Pallad. *Vit. Chrys.* p. 75; Socrat. vi. 16; Hierocl. p. 691, where it is called Prinetus; *Tab. Peuting.*, where it is written Pronetios.) According to Cedrenus (p. 457), it was destroyed by an earthquake. Its site seems to answer to that of *Debrende.* [L. S.]

PRAESI'DIUM, the name of several fortified places established by the Romans.

1. In Lusitania, on the *Douro.* (*Itin. Ant.* p. 428.)

2. In Baetica, on the road from the mouth of the Anas to Emerita (*Ib.* 431); thought by some to be *S. Lucar de Guadiana.*

3. In Gallaecia, not far from the *Douro.* (*Ib.* 422.)

4. In Britannia Romana, in the territory of the Cornavii (*Not. Imp.*), supposed to be *Warwick* (Camden, p. 602.) [T. H. D.]

PRAESI'DIUM, a military post on the Greater Syrtis, between Tagulae or Tugulae (*Kasr-el-Ateck*) and Ad Turrem. (*Peut. Tab.*) The result of Barth's (*Wanderungen*, pp. 372—377) laborious researches upon the ancient topography of the Great Syrtis, is to place this station at *Jehudia*, where there are remains of antiquity. [E. B. J.]

PRAESIDIUM. [TARICHIAE.]

PRAESI'DIUM POMPEII. [POMPEII PRAESIDIUM.]

PRAESII. [PRASIACA.]

PRAESTI (Curt. ix. 8. § 11), a people of the *Panjáb*, who were conquered by Alexander the Great. Their king is stated by Curtius to have been named Oxycanus. He would seem to have been the same ruler who is called by Strabo Porticanus (xv. p. 701). His name, however, occurs in Arrian. (*Anab.* vi. 16.) As Curtius calls the Praesti a purely Indian nation, it is not unlikely, from the resemblance of the names, that they formed the western portion of the great empire of the Prasii.. [PRASIACA.] [V.]

PRAESUS, or PRASUS (Πραῖσος; in the MSS. of Strabo Πρᾶσος, but in inscriptions Πραῖσος, Böckh, *Inscr.* vol. ii. p. 1102: *Eth.* Πραίσιος, more rarely Πραισιεύς, Steph. B. *s. v.*), a town in Crete, belonging to the Eteocretes, and containing the temple of the Dictaean Zeus, for Mt. Dicte was in the territory of Praesus. (Strab. x. pp. 475, 478.) There is a difficulty in the passage of Strabo, describing the position of this town. He first says (p. 478) that Praesus bordered upon the territory of Leben, and was distant 70 stadia from the sea, and 180 from Gortyn; and he next speaks of Praesus as lying between the promontories Samonium and Chersonesus, at the distance of 60 stadia from the sea. It is evident that these are two different places, as a town, whose territory was contiguous to that of Leben, must have been situated in the southern part of the island; while the other town, between the promontories of Samonium and Chersonesus, must have been at the eastern end. The latter is the town of the Eteocretes, possessing the temple of the Dictaean Zeus, and the Praesus usually known in history: the former is supposed by Mr. Pashley (*Crete*, vol. i. p. 289, seq.) to be a false reading for Priansus, a town mentioned in coins and inscriptions, which he accordingly places on the southern coast between Bienna and Leben. In this he is followed by Kiepert. But Böckh thinks (*Inscr.* vol. ii. p. 405) that Πράνσος, or Πρίανσος was the primitive form of the name, from which Πραῖσος, or Πρίαισος (a form in Steph. B. *s. v.*), and subsequently Πρᾶσος, were derived, just as in the Aeolic dialect πάνσα became παῖσα, and in the Attic dialect πᾶσα. Kramer (*ad Strab. l. c.*) adopts the opinion of Böckh. Upon the whole we must leave uncertain what town was intended by Strabo in the former of the abovementioned passages.

The territory of Praesus extended across the island to either sea. (Scylax, p. 18, Huds.) It is said to have been the only place in Crete, with the exception of Polichna, that did not take part in the

expedition against Camicus in Sicily, in order to avenge the death of Minos (Herod. vii. 170). It was destroyed by the inhabitants of Hierapytna. (Strab. x. p. 479.) Agathocles, the Babylonian, related that the Praesii were accustomed to sacrifice swine before marriage. (Athen. ix. p. 376.) The ruins of Praesus are still called *Praesús*. (Pashley, *Crete*, vol. i. p. 290, seq.; Höck, *Kreta*, vol. i. p. 413, seq.)

COIN OF PRAESUS OR PRIANSUS.

PRAETO'RIA AUGUSTA. [AUGUSTA PRAETORIA.]

PRAETO'RIUM. There were places of this name in Gallia, Hispania, and in other countries which the Romans occupied. A Praetorium is the residence of a praetor and the seat of the supreme court. The word was also used to signify a magnificent palatial building. The Table marks a Praetorium in Gallia, on a road from Augustoritum (*Limoges*). At the Praetorium the road divides, one branch going to Augustonemetum (*Clermont Ferrand* in the *Auvergne*) and the other to Avaricum (*Bourges*). It is not possible to fix the site of this Praetorium. [G. L.]

PRAETO'RIUM. 1. A town in the territory of the Lacetani, in the NE. of Hispania Tarraconensis, and on the road from Tarraco, in Gaul, to Barcino. (*Itin. Ant.* p. 398.) Usually identified with *La Roca*, where there are still considerable Roman remains. (Marca, *Hisp.* ii. 20.)

2. (Πετουαρία, Ptol. ii. 3. § 17), a place in the most N. part of Britannia Romana, in the territory of the Parisi, whence there was a separate road from the Roman Wall to Eboracum (*Itin. Ant.* pp. 464, 466.) It is supposed by Camden (p. 871) to be *Beverley* in *Yorkshire;* by others it has been variously identified with *Patrington*, *Hebberstow*, *Hornsea*, *Kingston*, and *Flamborough*. Some writers distinguish the Petuaria of Ptolemy from the Praetorium of the Itinerary; and Gale (*Itin.* p. 24) identifies the former place with *Auldby* on the *Derwent*. [T.H.D.]

PRAETO'RIUM, AD (Πραιτώριον), a place in Upper Pannonia, south of the Savus, on the road from Siscia to Sirmium. (*Tab. Peuting.*; Ptol. ii. 15. § 6.) It was probably a place where a court of justice was held for the inhabitants of the surrounding district, or it contained an imperial palace where the emperors put up when travelling in that country. [L. S.]

PRAETO'RIUM AGRIPPI'NAE. This Praetorium appears in the Table, and is distinguished by the representation of a large building. D'Anville conjectures that it may have taken its name from Agrippina, the daughter of Germanicus and the mother of Nero, who gave her name to the Colonia Agrippinensis (*Cologne*). The Praetorium is placed above Lugdunum Batavorum (*Leiden*) at the distance of 11. D'Anville concludes that it is *Roomburg* near *Leiden*, where it is said that many Roman antiquities have been found. (Ukert, *Gallien*, p. 533.) [G. L.]

PRAETO'RIUM LATOVICO'RUM, a place in Upper Pannonia, on the site now occupied by *Neustädte*, on the river *Gurk*. (*It. Ant.* p. 259; *Tab. Peuting.*, called simply Praetorium.) [L. S.]

PRAETU'TII (Πραιτούττιοι, Ptol.: *Eth.* Πραιτεττιανός, Pol.; Praetutianus), a tribe of Central Italy, who occupied a district of Picenum, bounded by the river Vomanus on the S. and apparently by the stream called by Pliny the Albula on the N. This last cannot be identified with certainty, and the text of Pliny is probably corrupt as well as confused. He appears to place the Albula N. of the Truentus; but it is certain that the Praetutii did not extend as far to the N. as the latter river, and it is probable that the stream now called the *Salinello* was their northern limit. We have no account of the origin of the Praetutii, or their relation to the Picentes, from whom they seem to have been regarded as to some extent a distinct people, though more frequently included under the one general appellation. The "Ager Praetutianus" is mentioned by Livy and Polybius, as well as by Pliny, as a well-known district, and Ptolemy even distinguishes it altogether from Picenum, in which, however, it was certainly generally comprised. (Pol. iii. 88; Liv. xxii. 9, xxvii. 43; Plin. iii. 13. s. 18; Ptol. iii. 1. § 58.) But the name seems to have continued in general use, and became corrupted in the middle ages into Prutium and Aprutium, from whence the modern name of *Abruzzo* (now applied to all the northernmost provinces of the kingdom of Naples) is generally thought to be derived. (Blondi Flavii, *Italia Illustrata*, p. 394.) The chief city of the Praetutii was Interamna, called for distinction's sake Praetutiana, which under the name of *Teramo* is still the chief town of one of the provinces of the *Abruzzi*. Ptolemy also assigns to them the town of Beregra. (Ptol. *l. c.*) Pliny mentions the "Ager Palmensis" in close connection with the Praetutii ("Ager Praetutianus Palmensisque," Plin. *l. c.*); but this appears to have been only a small district, which was celebrated, as was the Praetutian region generally, for the excellence of its wines. (Plin. xiv. 6. s. 8; Dioscor. v. 19; Sil. Ital. xv. 568.) [E. H. B.]

PRAS (Πρᾶς: *Eth.* Πράντες), a town of Phthiotis in Thessaly, a little S. of Pharsalus. For its position see NARTHACIUM. (Xen. *Hell.* iv. 3. § 9, *Ages.* 2. § 5; Steph. B. *s. v.*)

PRASIACA (Πρασιακή, Ptol. vii. 1. § 53), a very extensive and rich district in the centre of *Hindostan*, along the banks of the Ganges and the Sona, whose chief town was the celebrated Palibothra. The name of its inhabitants, which is written with slight differences in different authors, is most correctly given as Prasii by Strabo (xv. p. 702, 703), and by Pliny (vi. 19. s. 22), who states that their king supported daily no less than 150,000 foot, 30,000 horse, and 9000 elephants. Diodorus calls them Praesii (xvii. 93), as does also Plutarch. (*Alex.* 62.) In Curtius again they occur under the form of Pharrasii (ix. 2. § 3). It was to the king of the Prasii, Sandrocottus (*Chandragupta*), that the famous mission of Megasthenes by Seleucus took place. (Plin. *l. c.*; Curt. ix. 2; Appian, *Syr.* 55; Plut. *Alex.* 62; Justin, xv. 4.) All authors concur in stating that this was one of the largest of the Indian empires, and extended through the richest part of India, from the *Ganges* to the *Panjáb*. There can be no doubt that Prasii is a Graecised form for

the Sanscrit *Prachinas* (meaning the dwellers in the east). (Bohlen, *Alte Indien*, i. p. 33; Ritter, *Erdkunde*, vol. v. p. 460.) [V.]

PRA'SIAE or BRA'SIAE (Πρασιαί, Thuc. Strab. Aristoph.; Πρασία, Scyl. p. 17; Ptol. iii. 17. § 10: Βρασιαί, Paus.: *Eth.* Βρασιάτης, Paus.; Πρασιεύς, Steph. B.), a town on the eastern coast of Laconia, described by Pausanias as the farthest of the Eleuthero-Laconian places on this part of the coast, and as distant 200 stadia by sea from Cyphanta. (Paus. iii. 24. § 3.) Scylax (*l. c.*) speaks of it as a city and a harbour. The name of the town was derived by the inhabitants from the noise of the waves (βράζειν). It was burnt by the Athenians in the second year of the Peloponnesian War, B. C. 430. (Thuc. ii. 56; Aristoph. *Pac.* 242.) Also in B. C. 414 the Athenians, in conjunction with the Argives, ravaged the coast near Prasiae. (Thuc. vi. 105.) In the Macedonian period Prasiae, with other Laconian towns on this coast, passed into the hands of the Argives (Polyb. iv. 36); whence Strabo calls it one of the Argive towns (viii. p. 368), though in another passage he says that it belonged at an earlier period to the Lacedaemonians (viii. p. 374). It was restored to Laconia by Augustus, who made it one of the Eleuthero-Laconian towns. (Paus. iii. 21. § 7, iii. 24. § 3.) Among the curiosities of Prasiae Pausanias mentions a cave where Ino nursed Dionysus; a temple of Asclepius and another of Achilles, and a small promontory upon which stood four brazen figures not more than a foot in height. (Paus. iii. 24. §§ 4, 5.) Leake places Prasiae at *St. Andrew* in the Thyreatis; but it more probably stood at *Tyró*, which is the site assigned to it by Boblaye, Ross, and Curtius. (Leake, *Morea*, vol. ii. p. 484; Boblaye, *Récherches, &c.* p. 102; Ross, *Reisen im Peloponnes*, p. 165; Curtius, *Peloponnesos*, vol. ii. p. 306. [See Vol. I. pp. 727, b., 729, a.]

PRASIAE, a demus in Attica. [Vol. I. p. 331, b.]

PRASIAS LACUS. [CERCINITIS.]

PRASII. [PRASIACA.]

PRASO'DES SINUS (Πρασώδης κόλπος, Ptol. vii. 4. § 4), a gulf which Ptolemy places on the SW. side of the island of Taprobane or *Ceylon*. No such gulf can now be traced upon the outline of this island; and there would seem to be some confusion between the gulf and a sea to which the geographer gives the same name of Πρασώδης, and which he makes extend along the parallel between the island of Menuthias (*Zanzibar ?*) and the *Gulf of Siam* (vii. 2. § 1). [V.]

PRASUM PROMONTO'RIUM (Πράσον ἀκρωτήριον, Ptol. i. 7. § 2, seq., vii. 3. § 6), or the *C. of Leeks*, was a headland in the region S. of Meroë, to which the ancient geographers gave the appellation of Barbarica. The position of Prasum is unknown; for it is impossible to identify Prasum, the Green Promontory, with Cape *Delgado*, i. e. Cape Slender, which, as the name implies, is a mere line upon the water. Neither is it certain that Prasum, although a lofty rock, was a portion of the mainland at all, inasmuch as the coast of *Zingebar*, where Prasum is probably to be found, is distinguished alike for the verdure of its projections and the bright green islands that stretch along and beyond them. Moreover, Agathemerus (p. 57) and Marcianus Heracleota (*ap. Hudson, Geog. Min.* i. p. 12) mention a sea in this region called, from its colour, Prasōdes, the Green. The coast and islands of *Zingebar* derive their rich verdant appearance from the prevalence of the bombyx or cotton-tree. All that is known of Prasum is that it was 100 or 150 miles S. of the headland of Rhapta, lat. 4° S., and a station for that obscure but active and remunerating trade which Aegypt under the Ptolemies and the Caesars carried on with the eastern emporia of Africa. (Cooley, *Claudius Ptolemy and the Nile*, pp. 88—90.) [W. B. D.]

PRASUS. [PRAESUS.]

PRECIA'NI, a people of Aquitania, who surrendered to P. Crassus, Caesar's legatus in B. C. 56. We know nothing about them, and even the name is uncertain, for the MSS. write it in several different ways. (Caes. *B. G.* iii. 27.) [G. L.]

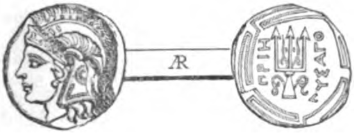
PRE'LIUS LACUS, a lake mentioned only by Cicero (*pro Mil.* 27), and in a manner that affords no indication of its position. But it is probable that it is the same which is called Lacus Aprilis in the Itineraries, and apparently Prilis by Pliny [APRILIS LACUS], the modern *Lago di Castiglione*, on the coast of Etruria. (Cluver. *Ital.* p. 474.) [E.H.B.]

PREMNIS. [PRIMIS.]

PREPESINTHUS (Πρεπέσινθος), an island in the Aegaean sea, one of the smaller Cyclades, lying between Oliaros and Siphnos. (Strab. x. p. 485; Plin. iv. 12. s. 22.)

PRIA. [GALLAECIA, p. 934, b.]

PRIANSUS. [PRAESUS.]



PRIANTAE, a people of Thrace, on the Hebrus. (Plin. iv. 11. s. 18.) Forbiger (vol. iii. p. 1076) conjectures that they may have inhabited the Βριαντική mentioned by Herodotus (vii. 108). [T. H. D.]

PRIA'PI PORTUS (Πριάπιδος λιμήν, Ptol. vii. 4. § 3), a port which Ptolemy places on the NW. side of the island of Taprobane (*Ceylon*). Mannert imagines that it is represented by the present *Negombo*. The name may not unnaturally have arisen from the Greeks having noticed at this place the prevalence of the *Lingam* or Phallic worship. [V.]

PRIA'PUS (Πρίαπος: *Eth.* Πριαπηνός), a town of Mysia on the Propontis, situated on a headland on the spur of Mount Pityus. Some said that it was a colony of Miletus, and others regarded it as a settlement of Cyzicus: it derived its name from its worship of the god Priapus. It had a good harbour, and ruled over a territory which produced good wine. (Strab. xiii. p. 587; Thucyd. viii. 107: Pomp. Mela, i. 19; Plin. iv. 24, v. 40; Steph. B. *s. v.*; Geogr. Rav. ii. 18, v. 19; Arrian, *Anab.* i. 12. § 7.) Ruins of Priapus still exist near *Karaboa*. (Richter, *Wallfahrten*, p. 425; Rasche, *Lex. Num.* iv. 1. p. 51.) [L. S.]

PRIE'NE (Πριήνη: *Eth.* Πριηνεύς, Πριήνιος), an Ionian city, near the coast of Caria, on the southeastern slope of Mount Mycale, and on a little river called Gaeson, or Gaesus. It had originally been situated on the sea-coast, and had two ports, one of which could be closed (Scylax, p. 37), and a small fleet (Herod. vi. 6); but at the time when Strabo wrote (xii. p. 579) it was at a distance of 40 stadia from the sea, in consequence of the great alluvial deposits of the Maeander at its mouth. It was believed to have been originally founded by Aepytus, a son of Neleus, but received afterwards additional colonists under a Boeotian Philotas, whence it was by some called Cadme. (Strab. xiv. pp. 633, 636; Paus. vii. 2. § 7; Eustath. *ad Dionys.* 825; Diog. Laërt. i. 5. 2.) But notwithstanding this admixture of Boeotians, Priene was one of the twelve Ionian cities (Herod. i. 142; Aelian, *V. H.* viii. 5; Vitruv

iv. 1), and took a prominent part in the religious solemnities at the Panionia. (Strab. xiv. p. 639.) It was the native place of the philosopher Bias, one of the seven sages. The following are the chief circumstances known of its history. It was conquered by the Lydian king Ardys (Herod. i. 15), and when Croesus was overpowered by Cyrus, Priene also was forced with the other Greek towns to submit to the Persians. (Herod. i. 142.) It seems to have been during this period that Priene was very ill-used by a Persian Tabules and Hiero, one of its own citizens. (Paus. *l. c.*) After this the town, which seems to have more and more lost its importance, was a subject of contention between the Milesians and Samians, when the former, on being defeated, applied for assistance to Athens. (Thucyd. i. 115.) The town contained a temple of Athena, with a very ancient statue of the goddess. (Paus. vii. 5. § 3; comp. Polyb. xxxiii. 12; Plin. v. 31.) There still exist very beautiful remains of Priene near the Turkish village of *Samsoon;* its site is described by Chandler (*Travels*, p. 200, &c.) as follows: "It was seated on the side of the mountain, flat beneath flat, in gradation to the edge of the plain. The areas are levelled, and the communication is preserved by steps cut in the slopes. The whole circuit of the wall of the city is standing, besides several portions within it worthy of admiration for their solidity and beauty." Among these remains of the interior are the ruins of the temple of Athena, which are figured in the *Ionian Antiquities*, p. 13, &c. (Comp. Leake, *Asia Minor*, pp. 239, 352; Fellows, *Asia Min.* p. 268, &c.; Rasche, *Lex. Num.* iv. 1. p. 55; Eckhel, *Doctr. Rei Num.* vol. ii.. p. 536.) [L. S.]

COIN OF PRIENE.

PRIFERNUM, a town of the Vestini, mentioned only in the Tabula, which places it 12 miles from Pitinum, the same distance from Amiternum, and 7 miles from Aveia. (*Tab. Peut.*) But the roads in this district are given in so confused a manner, that notwithstanding these data it is impossible to fix its site with any certainty. It is placed by Romanelli (vol. iii. p. 283) in the neighbourhood of *Assergio*, but this is little more than conjecture. [E. H. B.]

PRIMIS MAGNA and PARVA (Πρίμις μέγαλη, Πρίμις μικρά, Ptol. iv. 7. § 19), the names of two towns in Aethiopia, situated upon the extreme or right bank of the Nile. Primis Magna, called simply Primis by Pliny (iv. 29. s. 35), and Premnis (Πρῆμνις) by Strabo (xvii. p. 820), was taken by the Roman commander Petronius in the reign of Augustus. After taking Premnis, which is described as a strong place, the Roman commander advanced against Napata. (Strab. *l. c.*) Ptolemy places it beyond Napata and just above Meroë. Hence it is identified with *Ibrim.* (Comp. Kenrick, *Ancient Egypt*, vol. ii. p. 464.)

PRIMU'POLIS (Πριμούπολις, *Concil. Chalced.* pp. 127, 240; falsely Τριμούπολις, Hierocl. p. 682, and Πριαμούπολις, *Concil. Ephes.* p. 528), a town in Pamphylia, the later name of ASPENDUS. (See Wesseling, *ad Hierocl.* p. 682.)

PRINASSUS (Πρινασσός: *Eth.* Πρινασσεύς), a town in Caria, of uncertain site, taken by Philip V., king of Macedonia, and known also by its coins. (Polyb. xvi. 11; Steph. B. *s. v.*; Sestini, p. 89; Cramer, *Asia Minor*, vol. ii. p. 217.)

PRINOESSA, an island off the coast of Leucas, in Acarnania, mentioned only by Pliny (iv. 12. s. 19).

PRINUS. [MANTINEIA, p. 264.]

PRION (Πρίων), a mountain in the island of Cos, which is about 2760 feet high. (Plin. v. 36.) From a scholion (*ad Theocrit.* vii. 45) it might be inferred that Oromedon was another name for Mount Prion; but according to another ancient commentator Oromedon was either a surname of some divinity, or the name of some wealthy and powerful man. [L. S.]

PRION (Πρίων), a river in Arabia. [PRIONOTUS.]

PRIO'NOTUS MONS (Πριόνοτον ὄρος), a mountain in the southern part of Arabia, in the territory of the Adramitae, identified by Forster with *Ras Broom*, a headland forming the termination of a mountain chain and jutting out prominently into the ocean in long. 49°, about 35 miles NE. of *Mughda.* Prion was a river flowing into the sea near this promontory. (Ptol. vi. 7. §§ 10, 13; Forster, *Arabia*, vol. ii. p. 204, seq.)

PRISTA (Πριστή, Ptol. iii. 10. § 10, where, however, some read Τιριστή; called in the *Itin. Ant.* p. 222, Sexantaprista; in the *Not. Imp.* Sexaginta Prista; and in Procopius, *de Aed.* iv. 11, p. 307, Ἑξεντάπριστα), a place in Moesia Inferior, on the Danube, the station of the 5th cohort of the 1st Legio Ital. Identified with *Rutschuck.* [T. H. D.]

PRIVERNUM (Πριούερνον: *Eth.* Privernas -ātis: *Piperno Vecchio*), an ancient and important city of the Volscians, afterwards included, with the rest of the territory of that people, in Latium, in the more extended sense of the name. It was situated in the Volscian mountains, or *Monti Lepini;* but not, like Setia and Norba, on the front towards the plain of the Pontine Marshes, but at some distance further back, in the valley of the Amasenus. Virgil represents it as an ancient city of the Volscians, and the residence of Metabus, the father of Camilla (*Aen.* xi. 540); and there is no reason to doubt that it was originally a city of that people. Its name is not indeed mentioned during any of the earlier wars of the Volscians against Rome; but on these occasions the name of the people is generally given collectively, and the brunt of the war naturally fell upon those cities which more immediately adjoined the frontiers of Latium. When the name of Privernum first appears in history it is as a city of considerable power and importance, holding an independent position, and able not only to engage in, but to sustain, a war against Rome single-handed. In B. C. 358 the Privernates drew upon themselves the hostility of Rome by plundering the lands of the Roman colonists who had been recently settled in the Pontine Plains. The next year they were attacked by the consul C. Marcius, their forces defeated in the field, and they themselves cempelled to submit (Liv. vii. 15, 16). But though their submission is represented as an unconditional surrender (deditio), they certainly continued to form an independent and even powerful state, and only a few years afterwards again ventured to attack the Roman colonies of Norba and Setia, for which they were speedily punished by the consul C. Plautius: their city is said to have been taken, and two-thirds of their territory forfeited. (Id. vii.

42, viii. 1.) This was soon after divided among the Roman plebeians. (Id. viii. 11.) They do not appear to have taken any part in the general war of the Latins and Campanians against Rome; but in B. C. 327 the Privernates again took up arms single-handed, with only the assistance of a few of the Fundani. Notwithstanding this, the war was deemed of sufficient importance to employ two consular armies; and it was not till after a long siege that Privernum was reduced by C. Plautius, the consul of the following year. The walls of the city were destroyed, and the leaders of the defection severely punished; but the rest of the people were admitted to the Roman citizenship,—probably, however, in the first instance without the right of suffrage, though this also must have been granted them in the year B. C. 316, when the Ufentine tribe was constituted, of which Privernum was the chief town. (Liv. viii. 19—21, ix. 20: *Fast. Capit.*; Val. Max. vi. 2. § 1; Festus, *s. v. Ufentina;* Niebuhr, vol. iii. p. 176.) According to Festus (p. 233) it became a Praefectura; but notwithstanding this subordinate condition (which was perhaps confined to the short period before it attained the full franchise), it seems to have been a flourishing municipal town under the Roman government. Its territory was one of those which the agrarian law of Servilius Rullus proposed to assign to the Roman populace (Cic. *de Leg. Agr.* ii. 25); but though it escaped upon this occasion, it subsequently received a military colony (*Lib. Colon.* p. 236). The period of this is uncertain: according to Zumpt (*de Colon.* p. 401) it probably did not take place till the reign of Trajan. In inscriptions it bears the title of a colony; though others term it a municipium; and neither Pliny nor Ptolemy assign it the rank of a colony. (Plin. iii. 5. s. 9; Ptol. iii. 1. § 63; Zumpt, *l. c.*) It was noted, as well as the neighbouring Setia, for the excellence of its wine (Plin. xiv. 6. s. 8); but we hear little of Privernum under the Roman Empire, and have no subsequent account of its fate. From its secluded position, no mention occurs of it in the Itineraries. The ruins of the ancient city, which according to Cluverius are considerable, are situated about 2 miles N. of the modern *Piperno,* on the site still called *Piperno Vecchio.* The period or occasion of the abandonment of the ancient site is unknown; but it is certainly erroneous to connect it with a great earthquake which is alluded to by Cicero as taking place at Privernum (Cic. *de Div.* i. 43). On that occasion, we are told, the earth sank down to a great depth,—a phenomenon which may have given rise to a remarkable chasm or cavity still visible in the neighbourhood of *Piperno.* The ancient city was more probably deserted in consequence of the ravages of the Saracens in the tenth century, from which all this part of Latium suffered severely (Rampoldi, *Corografia d' Italia,* vol. iii. p. 258), and the inhabitants sought refuge in more elevated and secure positions, such as that of the modern town of *Piperno.* [E. H. B.]

PROBALINTHUS. [MARATHON.]

PROBA'TIA. [BOEOTIA, p. 412, b.]

PROCERASTIS, the more ancient name of CHALCEDON, according to Pliny (v. 32. s. 43).

PRO'CHYTA (Προχύτη: *Procida*), a small island off the coast of Campania, situated between Cape Misenum (from which it is distant less than 3 miles) and the larger island of Aenaria or *Ischia.* In common with the latter it is of volcanic formation, and appears to have been subject in ancient times to frequent earthquakes. Pliny and Strabo even tell us that it was a mere fragment broken off from the neighbouring island of Aenaria by one of the violent convulsions of nature to which it was subject. But this statement certainly has no historical foundation, any more than another, also recorded by Pliny, that both islands had been thrown up by volcanic action from beneath the sea. Such an event, however true as a geological inference, must have long preceded the historical era. (Strab. i. p. 60, ii. p. 123, v. pp. 248, 258; Plin. ii. 88.) The same phenomena led the poets to associate Prochyta with Aenaria or Inarime, in connection with the fable of the giant Typhoeus [AENARIA]; and Silius Italicus even assigned it a giant of its own, Mimas. (Virg. *Aen.* ix. 715; Sil. Ital. viii 542, xii. 147; Ovid. *Met.* xiv. 89.)

Virgil's epithet of "Prochyta alta" is less appropriate than usual,—the island, though girt with perpendicular cliffs, being flat and low, as compared either with *Ischia* or the neighbouring headland of Misenum. There does not appear to have been any town on the island in ancient times. Statius (*Silv.* ii. 276) terms it a rugged island, and Juvenal (*Sat.* iii. 5) speaks of it as a wretched and lonely place of residence. At the present day, on the contrary, it is one of the most fertile and flourishing spots in the Neapolitan dominions, its whole area being cultivated like a garden and supporting a population of 4000 inhabitants. It is distant between 2 and 3 miles from Cape Misenum, but only about a mile and a half from the nearest point of the mainland, which is now known as the *Monte di Procida.* [E. H. B.]

PROCONNE'SUS (Προκόννησος, or Προικόννησος in Zosim. ii. 30, and Hierocl. p. 662), an island in the western part of the Propontis, between Priapus and Cyzicus, and not, as Strabo (xiii. p. 589) has it, between Parium and Priapus. The island was particularly celebrated for its rich marble quarries, which supplied most of the neighbouring towns, and especially Cyzicus, with the materials for their public buildings; the palace of Mausolus, also, was built of this marble, which was white intermixed with black streaks. (Vitruv. ii. 8.) The island contained in its south-western part a town of the same name, of which Aristeas, the poet of the Arimaspeia, was a native. (Herod. iv. 14; comp. Scylax, p. 35; Strab. *l. c.*) This town, which was a colony of the Milesians (Strab. xii. p. 587), was burnt by a Phoenician fleet, acting under the orders of king Darius. (Herod. vi. 33.) Strabo distinguishes between old and new Proconnesus; and Scylax, besides Proconnesus, notices another island called Elaphonesus, with a good harbour. Pliny (v. 44) and the Scholiast on Apollonius Rhodius (ii. 278) consider Elaphonesus only as another name for Proconnesus; but Elaphonesus was unquestionably a distinct island, situated a little to the south of Proconnesus. The inhabitants of Cyzicus, at a time which we cannot ascertain, forced the Proconnesians to dwell together with them, and transferred the statue of the goddess Dindymene to their own city. (Paus. viii. 46. § 2.) The island of Proconnesus is mentioned as a bishopric in the ecclesiastical historians and the acts of the Council of Chalcedon. The celebrity of its marble quarries has changed its ancient name into *Marmere* or *Marmora;* whence the whole of the Propontis is now called the *Sea of Marmora.* Respecting some autonomous coins of Proconnesus, see Sestini, *Mon. Vet.* p. 75. [L. S.]

PROERNA (Πρόερνα), a town of Phthiotis, in

Thessaly (Strab. ix. p. 434), which Stephanus B. writes Proarna (Προάρνα), and calls by mistake a town of the Malians. In B. C. 191 Proerna, which had been taken by Antiochus, was recovered by the consul Acilius. (Liv. xxxvi. 14.) We learn from this passage of Livy that Proerna stood between Pharsalus and Thaumaci, and it is accordingly placed by Leake at *Ghynekókastro*. (*Northern Greece*, vol. i. p. 459.)

PROLA'QUEUM (*Pioraco*), a village or station on the branch of the Via Flaminia which crossed the Apennines from Nuceria (*Nocera*) to Septempeda (*S. Severino*). It was situated at the foot of the pass on the E. side of the mountains, and evidently derived its name from its being at the outflow of a small lake which discharges its waters into the *Potenza*. Cluverius speaks of the lake as still existing in his time: it is not marked on modern maps, but the village of *Pioraco* still preserves the traces of the ancient name. The Itinerary reckons 16 M. P. from Nuceria to Prolaqueum, and 15 from thence to Septempeda. (*Itin. Ant.* p. 312; Cluver. *Ital.* p. 614.) [E. H. B.]

PRO'MONA (Πρώμονα, Appian, *Illyr.* 12, 2—5—28; *Peut. Tab.*; Geogr. Rav. iv. 16), a town of the Liburni, situated on a hill, and, in addition to its natural defences strongly fortified. Octavianus, in the campaign of B. C. 34, surrounded it and the adjacent rocky heights with a wall for the space of 40 stadia, and defeating Tentimus, who had come to its relief, forced an entrance into the town, and obliged the enemy to evacuate the citadel. There is every reason to believe that Promona stood on the skirts of the craggy hills, which, with the neighbouring district, now bear the name of *Promina*. As the Peutinger Table places it on the road from Burnum to Salona, it must be looked for on the SW. side of the mountain of *Promina*, in the direction of *Dernis*. (Wilkinson, *Dalmatia*, vol. i. p. 206.) [E B. J.]

PRONAEA. [NEMESA.]

PRONI, PRONNI, or PRONE'SUS (Πρόννοι, Pol.; Προναῖοι, Thuc.; Πρωνῆσος, Strab.), one of the four towns of Cephallenia, situated upon the south-eastern coast. Together with the other towns of Cephallenia it joined the Athenian alliance in B. C. 431. (Thuc. ii. 30.) It is described by Polybius as a small fortress; but it was so difficult to besiege that Philip did not venture to attack it, but sailed against Pale. (Pol. v. 3.) [PALE.] Livy, in his account of the surrender of Cephallenia to the Romans in B. C. 189, speaks of the Nesiotae, Cranii, Palenses, and Samaei. Now as we know that Proni was one of the four towns of Cephallenia, it is probable that Nesiotae is a false reading for Pronesiotae, which would be the ethnic form of Pronesus, the name of the town in Strabo (x. p. 455). Proni or Pronesus was one of the three towns which continued to exist in the island after the destruction of Same. (Comp. Plin. iv. 12. s. 19.) The remains of Proni are found not far above the shore of *Liménia*, a harbour about 3 miles to the northward of *C. Kapri*. (Leake, *Northern Greece*, vol. iii. p. 66.)

PROPHTHA'SIA. [DRANGIANA.]

PROPONTIS (Προποντίς: *Sea of Marmora*), the sea between Thrace and Asia Minor, forming an intermediate sea between the Aegean and the Euxine, with the latter of which it communicates through the narrow strait of the Thracian Bosporus, and with the former through the Hellespont. Its ancient name Propontis describes it as "the sea before the entrance of the Pontus" or Euxine; while its modern name is derived from the island of *Marmora*, the ancient Proconnesus, near the western entrance of the sea. (Appul. *de Mund.* p. 6; Steph. B. *s. v.* Προποντίς.) The first authors who mention the Propontis under this name are Aeschylus (*Pers.* 876), Herodotus (iv. 85), and Scylax (pp. 28, 35); and Herodotus seems even to have made an accurate measurement of this sea, of which he states the length, to be 1400 stadia, and the breadth 500. Later writers such as Strabo (ii. p. 125) and Agathemerus (ii. 14), abandoning the correct view of their predecessor, state that the breadth of the Propontis is almost equal to its length, although, assuming the Propontis to extend as far as Byzantium, they include in its length a portion of the Thracian Bosporus. Modern geographers reckon about 120 miles from one strait to the other, while the greatest breadth of the Propontis from the European to the Asiatic coast does not exceed 40 miles. The form of the Propontis would be nearly oval, were it not that in its south-eastern part Mt. Arganthonius with the promontory of Poseidion forms two deep bays, that of Astacus [SINUS ASTACENUS] and that of Cius [CIANUS SINUS]. The most important cities on the coasts of the Propontis are: PERINTHUS, SELYMBRIA, BYZANTIUM, CHALCEDON, ASTACUS, CIUS, and CYZICUS. In the south-west there are several islands, as PROCONNESUS, OPHIUSA, and ALONE; at the eastern extremity, south of Chalcedon, there is a group of small islands called DEMONNESI, while one small island, Besbicus, is situated in front of the bay of Cius. (Comp. Polyb. iv. 39, 42; Strab. xii. p. 574, xiii. pp. 563, 583; Ptol. v. 2. § 1, vii. 5. § 3, viii. 11. § 2, 17. § 2; Agath. i. 13; Dionys. Per. 137; Pomp. Mela, i. 1, 3, 19, ii. 2, 7; Plin. iv. 24, v. 40; Kruse, *Ueber Herodots Ausmessung des Pontus Euxinus, &c.*, Breslau, 1820.) [L. S.]

PRO'SCHIUM (Πρόσχιον: *Eth.* Προσχιεύς), a town of Aetolia, between the Achelous and the Evenus, is said to have been founded by the Aeolians when they removed from the Homeric Pylene higher up into the country. [PYLENE.] Proschium also laid claim to high antiquity, since it possessed a shrine said to have been dedicated by Hercules to his cup-bearer Cyathus, whom he had unintentionally slain. It is clear, from a narrative of Thucydides, that Proschium lay west of Calydon and Pleuron, and at no great distance from the Achelous. Leake places it on the western part of *Mt. Zygos* (the ancient Aracynthus), near the monastery of *St. George* between *Anatoliko* and *Anghelokastro*. (Strab. x. p. 451; Athen. x. p. 411, a.; Thuc. iii. 102, 106; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. i. p. 119.)

PROSEIS. [ARCADIA, p. 192, b. No. 7.]

PROSOLENE. [PORDOSELENE.]

PROSPALTA. [ATTICA, p. 332, a.]

PROSYMNA (Πρόσυμνα: *Eth.* Προσυμναῖος, Steph. B. *s. v.*), an ancient town in the Argeia, in whose territory the celebrated Heraeum, or temple of Hera, stood. (Strab. viii. p. 373). Statius gives it the epithet "celsa" (*Theb.* iv. 44). Pausanias (ii. 17. § 2) mentions only a district of this name. (Leake, *Peloponnesiaca*, pp. 264, 269.) [See Vol. I. pp. 206, 207.]

PROTA (Πρῶτα), one of a group of small islands in the east of the Propontis, not far from Chalcedon. (Steph. B. *s. v.* Χαλκῖτις.) Its distance from Chalcitis was 40 stadia, and it is said still to bear the name of *Prote*. [L. S.]

PROTE (Πρώτη). 1. An island off the western coast of Messenia. [See Vol. II. p. 342, b.]

2. One of the Stoechades off the southern coast of Gaul. [STOECHADES.]

PROTUNICA, a place in Bithynia, on the road from Nicaea to Ancyra. (*Itin. Hieros.* p. 573.) It is possibly the same place as Protomacrae (Πρωτομάκραι) mentioned by Ptolemy (v. 1. § 13). [L. S.]

PROVI'NCIA. The part of Gallia which bordered on Italy and was bounded on the south by the Mediterranean was Gallia Provincia (Caes. *B. G.* i. 19), a term by which Caesar sometimes distinguishes this part of Gallia from the rest, which he calls "omnis Gallia" (*B. G.* i. 1) or "tota Gallia" (*B. G.* vii. 66). The Provincia in Caesar's time was bounded on the north by the Rhone from the western extremity of the Lacus Lemannus (*Lake of Geneva*) to the junction of the *Rhone* and the *Saône*. Geneva, which belonged to the Allobroges, was the furthest town in that direction [GENEVA]. Along the southern side of the *Lake of Geneva* the limit was the boundary between the Allobroges who were in the Provincia and the Nantuates who were not. (*B. G.* iii. 6.) The Alps were the eastern boundary. Ocelum [OCELUM] was in the Citerior Provincia or Gallia Cisalpina, and the country of the Vocontii was in the Ulterior Provincia or in the Provincia Gallia (*B. G.* i. 10). On the west the Mons Cevenna (*Cévennes*) southward from the latitude of Lugdunum (*Lyon*) was the boundary. The Volcae Arecomici were within the Provincia, and also the towns of Narbo (*Narbonne*), Carcaso (*Carcassone*), and Tolosa (*Toulouse*), as we see from a passage in Caesar (*B. G.* iii. 20). Part of the Ruteni, called Provinciales (*B. G.* vii. 7), were in the Provincia; and also the Helvii, who were separated from the Arverni by the Cevenna (*B. G.* vii. 8). The Ruteni who were not in the Provincia, the Gabali, Nitiobriges, and Cadurci bordered on it on the west.

The Roman troops were in this country during the Second Punic War when Hannibal was on his road to Italy; but the Romans first got a footing there through the people of Massilia, who called for their help B. C. 154. In B. C. 122 the Romans made a settlement, Aquae Sextiae (*Aix*), which we may consider to be the commencement of their occupation of the country east of the Rhone. [GALLIA, Vol. I. p. 953.] The conquest of the Salyes and Vocontii, and of the Allobroges, gave the Romans all the country on the east side of the Rhone. The settlement of Narbo (*Narbonne*) in B. C. 118, near the border of Spain and in a position which gave easy access to the basin of the *Garonne*, secured the Roman dominion on the west side of the Rhone as far as the Pyrenees. But the Romans had many a bloody battle to fight before they were safe on Gallic ground. The capture of Tolosa (*Toulouse*) in the country of the Volcae Tectosages by the consul Q. Servilius Caepio (B. C. 106) extended the limits of the Provincia as far as this rich town. (Dion Cass. *Fr.* 97, &c.) But the Roman dominion was not safe even in B. C. 58, when the proconsul Caesar received Gallia as one of his provinces. His subjugation of all Gallia finally secured the Romans on that side. [Vol. I. p. 954, &c.]

In the division of all Gallia by Augustus the Provincia retained its limits pretty nearly: and it was from this time generally called Narbonensis Provincia, and sometimes Gallia Braccata. The names which occur in the Greek writers are: Κελτογαλατία Ναρβωνησία (Ptol. ii. 10. § 1), ἡ Ναρβωνῖτις, Γαλατία ἡ Ναρβωνησία, and ἡ Γαλατία ἡ περὶ Νάρβωνα. There is no doubt that the name Braccata or Bracata is derived from the dress of the Galli ("eos hic sagatos bracatosque versari," Cic. *pro Fonteio*, c. 15), and the word "braca" is Celtic.

Strabo (iv. p. 178) says that the form of the Narbonensis resembles that of a parallelogram; but his comparison is of no use, and it is founded on an erroneous notion of the position of the Pyrenees. [Vol. I. p. 949.] Ptolemy determines the eastern boundary of the Provincia, by the west side of the Alps, from Mons Adulas (perhaps *Mont St. Gothard*) to the mouth of the Varus (*Var*), which separated Narbonensis from Italia. Part of the southern boundary was formed by that part of the Pyrenees which extended from the boundary of Aquitania to the promontory on the Mediterranean where the temple of Venus stood, by which Ptolemy means *Cap Creux* [PORTUS VENERIS]. The rest of the southern boundary was the sea, from the Aphrodisium to the mouth of the *Var*. The western boundary remained as it was in the time of Caesar, as it seems; for Carcaso and Tolosa are placed in Narbonensis by Ptolemy and Pliny (iii. c. 4). Ptolemy places Lugdunum or Convenae, which is on the *Garonne* and near the Pyrenees, within the limits of Aquitania, and he mentions no place in Aquitania east of Lugdunum [CONVENAE]. East of the Convenae and at the foot of the Pyrenees were the Consorani, part of whom were probably in Aquitania and part in Narbonensis [CONSORANI]. The western boundary of Narbonensis therefore ran from the Pyrenees northwards, and passed west of *Toulouse*. Perhaps it was continued northwards to the Tarnis (*Tarn*). We cannot determine the point where the *Cévennes* became the boundary; but if part of the Ruteni were still in the Narbonensis, the boundary may have run along the *Tarn* to the *Cévennes* and the Mons Lesura, one of the highest points of the range (*La Lozère*). From the *Lozère* northwards the mountain country borders the Rhone as far as Lugdunum, which was not in Narbonensis. The northern boundary of Narbonensis ran along the Rhone from Lugdunum to Geneva at the west end of the Leman lake. Pliny mentions the Gebenna (Cebenna) and the Jura as northern boundaries of the Provincia; but his notion of the direction of the Jura was not exact, though it is true that the range touches a part of the northern boundary. Ptolemy makes the Adulas the southern limit of the eastern boundary of Belgica (ii. 9. § 5); and Adulas is also the northern limit of the eastern boundary of Narbonensis. The southern boundary of Belgica from the Adulas westward was the northern boundary of Narbonensis. It is difficult to say whether the geographer is making a boundary of his own or following an administrative division; but we may certainly conclude that the Narbonensis contained the upper valley of the Rhone (the *Valais*), for the *Bernese Alps* which form the northern side of this great valley are a natural boundary, and the Helvetii were not in the *Valais* [HELVETII]. We may conclude then that the Seduni, Veragri, and Nantuates, who were not within the Provincia as defined by Caesar, were within the limits of the Narbonensis. One of the common roads to Italy was from Octodurus (*Martigny* in the *Valais*) over the Alpis Pennina (*Great St. Bernard*). The Narbonensis is thus a natural division comprehending the upper valley of the Rhone, the Leman lake and the countries south of it to the Alps, the country on the south side of the Rhone from the lake to

Lyon, and the country south of *Lyon*. The part of the Provincia south of *Lyon* is a valley between the Alps on the east and the *Cévennes* on the west, which becomes wider as we advance south. On the east side the lower Alps and the Alpine valleys cover a large part of the country. On the west, the *Cévennes* and the lower ranges connected with them leave a very narrow tract between the Rhone and the mountains till we come to the latitude of *Avignon* and *Nîmes*. The southern part of the Rhone valley between Massilia and the Pyrenees contains a large extent of level country. The southern part of this great valley is more Italian than Gallic in position, climate, and products. The Rhone, which cuts it into two parts, has numerous branches which join it from the Alps; but the mountain streams which flow into it from the *Cévennes* are few [RHODANUS].

The rivers of the Provincia west of the Rhone flow from the *Cévennes* and from the Pyrenees into the Mediterranean. They are all comparatively small. The Classius of Avienus is probably the *Caulazon*, so far as we can conclude from the name; the Ledus is the *Lez*, which flows by *Montpellier*; the Arauris (*Hérault*) flows past Agathe (*Agde*); the Libria or Liria may be the *Livron* [LIBRIA]; the Obris or Orbis (*Orbe*); the Narbo or Atax (*Aude*), which passes *Narbonne*; the Ruscino or Tetis (*Tet*), and the Tichis (*Tech*), which enters the Mediterranean a few miles north of Portus Veneris (*Port Vendre*). Between the *Var* and the Rhone there are very few streams, for the form of the surface is such that nearly all the drainage runs into the Rhone. There is the Argenteus (*Argens*), and a few insignificant streams between the Argenteus and the delta of the Rhone.

The extreme western part of the Provincia comprehends a portion of the basin of the *Garonne*, for *Toulouse* is on this river. The valley of the *Aude* between the *Cévennes* and the Pyrenees forms an easy approach from the Mediterranean to the waters of the *Garonne* and to the Atlantic,—a circumstance which facilitated the commerce between the Mediterranean and the Atlantic, and made this a commercial route at a very early period. [NARBO.]

The coast from the Pyrenaeum Promontorium to a point a few miles south of Massilia forms a great bay called the Gallicus Sinus: it is generally flat, and in many places it is lined by marshes and lakes. This part of the coast contains the Delta of the Rhone. East of Massilia the country is hilly and dry. The port of Massilia is naturally a poor place. East of it is the port of Telo Martius (*Toulon*), and a few other ports of little value. Mela's remark (ii. 5) is true: "On the shore of the Provincia there are some places with some names; but there are few cities, because there are few ports and all the coast is exposed to the Auster and the Africus." There are a few small islands along the eastern coast, the Stoechades, Planasia, Leron, and other rocky islets. The dimensions of the Provincia, according to Agrippa's measurement, are said to be 270 M. P. in length and 248 M. P. in breadth. But we neither know how the measures were taken, nor whether the numbers in Pliny's text (iii. 4) are correct. However we learn that this, like many other parts of the empire, was surveyed and measured under Agrippa's orders.

The length of the coast of Narbonensis is above 260 miles. The direct distance from *Toulouse* to the mouth of the *Var* is near 300 miles; and from the junction of the Rhone and the *Saône*, the direct distance to the sea measured along a meridian is about 180 miles. But these measures give only an imperfect idea of the area of the country, because the outline is irregular. Strabo (iv. pp. 178, 179) has preserved a measurement which has followed a Roman road from the Pyrenees to the *Var*. The distance from the temple of Aphrodite at the Pyrenees to Narbo is 63 Roman miles; thence to Nemausus 88; from Nemausus through Ugernum and Tarasco to the warm springs called Sextiae (Aquae Sextiae), which are near Massilia, 53; and thence to Antipolis and to the Varus, 73; the whole making 277 miles. Some reckon, he says, from the Aphrodisium to the Varus 2600 stadia, and some add 200 more, for they do not agree about the distance. Two thousand six hundred stadia are 325 Roman miles. When Strabo wrote, the distance along the road from Narbo to the Var was not measured, or he did not know it. The other great road which he describes is a road through the Vocontii and the territory of Cottius: "As far as Ugernum and Tarasco the road from Nemausus is the same as the route just described; but from Tarasco to the borders of the Vocontii over the Druentia and through Caballio (*Cavaillon* on the *Durance*) is 63 miles; and again, from Caballio to the other limit of the Vocontii toward the land of Cottius to the village Epebrodunum (Embrodunum, *Embrun*) is 99 miles; then 99 more through the village Brigantium (*Briançon*) and Scincomagus and the passage of the Alpes (the pass of *Mont Genèvre*) to Ocelum [OCELUM], the limit of the land of Cottius; the country from Scincomagus is reckoned a part of Italy, and from there to Ocelum is 27 miles." He says in another place (iv. p. 187) that this road through the Vocontii is the shorter, but though the other road along the Massiliotic coast and the Ligurian territory is longer, the passes over the hills into Italy are easier, for the mountains in those parts sink lower.

These were the two great roads in the Provincia. There was a road in the west from Narbo through Carcaso to Tolosa. There was also a road from Arelate (*Arles*) at the bifurcation of the Rhone northward on the east side of the Rhone, through Avenio, Arausio, Valentia, and Vienna (*Vienne*), to Lugdunum: this was one of Agrippa's roads (Strab. iv. p. 208). There was no road on the opposite side of the river, or no great road, the land on that side not being well adapted for the construction of a road. There were other roads over the Alps. There was a road from Lugdunum and Vienna up the valley of the Isara (*Isère*) to the Alpis Graia (*Little St. Bernard*), which in the time of Augustus was much used (Strab. iv. p. 208); and there was the road from Augusta Praetoria (*Aosta*) in Italy over the *Great St. Bernard* to Octodurus (*Martigny*) and Pennilucus, at the east end of the *Lake of Geneva*; and thence into the country of the Helvetii.

Within the limits of Narbonensis there is every variety of surface and climate, Alpine mountains and Alpine valleys, sterile rocky tracts and fertile plains, winter for nine months in the year and summer for as many months. Pliny says of it: "Agrorum cultu, virorum morumque dignatione, amplitudine opum, nulli provinciarum postferenda breviterque Italia verius quam provincia." (Pliny, iii. 4.) The climate is only mild in the south part and in the lowlands. As we descend the Rhone a difference is felt. About Arausio (*Orange*) the olive appears, a tree that marks a warm climate. "All

the Narbonitis," says Strabo, "has the same natural products as Italia; but as we advance towards the north and the Cemmenon (*Cévennes*), the land planted with the olive and the fig terminates, but all the other things are grown. The grape also does not ripen well as we advance further north" (iv. p. 178). Strabo's remark about the olive is true. As we advance from *Nîmes* by the great road to *Clermont Ferrand* in the *Auvergne*, we ascend gradually in a north-west direction to a rocky country well planted with vines, mulberry trees, and olives. After proceeding a few miles further the olives suddenly disappear, a sign that we have passed the limits of the temperature which they require. The country is now an irregular plateau, rocky and sterile, but in parts well planted with mulberries and vines; and there is a little wheat. Before descending to Andusia (*Anduse*), which is deep sunk in a gorge of the Vardo (*Gardon*), a few more olives are seen, but these are the last. We are approaching the rugged *Cévennes*.

The native population of the Provincia were Aquitani, Celtae, and Ligures. The Aquitani were in the parts along the base of the Pyrenees. The Ligures in the historical period occupied the south-east part of the Provincia, north and east of *Marseille*, and it is probable that they were once on the west side of the Rhone also. The Greeks were on the coast, east and west of the city of Massilia [MASSILIA]. After the country was reduced to the form of a Provincia, the Italians flocked to the Provincia to make money. They were petty dealers (mercatores), bankers, and money-lenders (negotiatores), sheep-feeders, agriculturists, and traders. (Cic. *pro P. Quintio*, c. 3, *pro M. Fonteio*, c. 5.) The wine of Italy was imported into the Provincia in Cicero's time, and a duty was levied on it, if not at the port, at least in its transit through the country (*pro Fonteio*, c. 9). Cicero sneeringly says, "We Romans are the most just of men, for we do not allow the Transalpine nations to plant the olive and the vine, in order that our olive plantations and vineyards may be worth more" (*de Re Publica*, iii. 9). It does not appear from Cicero when this selfish order was made. But the vine is a native of Narbonensis, and the Greeks made wine, as we might safely assume, and they sold it to the Galli. Posidonius, whom Cicero knew, and who had travelled in the country, says that the rich Galli bought Italian wine and wine from the Massaliots. (Posidonius, *ap. Athen.* iv. p. 152.) If any of the Galli got this wine, the Galli of the Provincia would have it.

This favourite province of the Romans was full of large cities, which under the Empire were ornamented with works both splendid and useful, amphitheatres, temples, theatres, and aqueducts. Many of these buildings have perished, but the magnificent monuments at *Arles* and *Nîmes*, and the less striking remains in other cities, show what this country was under Roman dominion.

The tribes or peoples within the limits of the Provincia are very numerous. Pliny has a long list. On the west side of the Rhone at the foot of the Pyrenees were the Consorani and Sordones or Sordi. North of them were the Volcae Tectosages, whose capital was Tolosa; and the Ruteni Provinciales. The Volcae Arecomici occupied the country east of the Tectosages and extended to the Rhone. The position of the Tasconi, a small people mentioned by Pliny, is only a matter of conjecture [TASCONI]. North of the Arecomici only one people is mentioned between the *Cévennes* and the Rhone, the Helvii [HELVII]. The *Ardèche* (a mountain stream from the *Cévennes*) flows through their country into the Rhone. It was by the valley of the *Ardèche* that Caesar got over the *Cévennes* into the country of the Arverni through the snow in the depth of winter (*B. G.* vii. 8). He could go no other way, for he tells us that he went through the territory of the Helvii.

East of the Rhone the tribes were very numerous for the surface is larger and full of valleys. It has been already observed that the Seduni, Veragri, and Nantuates must have been included in the Narbonensis of Augustus. The Allobroges occupied the country south-west of Geneva, to the *Isère* and the Rhone. Pliny's list of names in the Provincia comprises all Ptolemy's, with some slight variations, except the Commoni, Elicoci, and Sentii. Some of the names in Pliny are probably corrupt, and nothing is known about some of the peoples. The following are the principal peoples south of the Nantuates and Allobroges: the Centrones, Graioceli, Medulli, Caturiges, Tricorii, Segovellauni, Tricastini, Cavares, Vocontii, Vulgientes, Bodiontici, and Albici, all of them north of the Druentia or its branches. South of them were the Salyes or Salluvii, the neighbours of Massilia; the Suetri, Oxybii, Deciates, and the Nerusi, who were separated from Italy by the *Var*. [G. L.]

PRUSA (Προῦσα: *Eth.* Προυσαεύς), generally with the addition of ἐπὶ or πρὸς τῷ Ὀλύμπῳ, to distinguish it from another place of the same name, was situated at the northern foot of Mount Olympus, in Mysia. Pliny (v. 43) states that the town was built by Hannibal during his stay with Prusias, which can only mean that it was built by Prusias, whose name it bears, on the advice of Hannibal. According to the common text of Strabo (xii. p. 564), it was founded by one Prusias, who waged war against Croesus, for whom Stephanus B. (*s. v.*) substitutes Cyrus. As no such Prusias is known in the age of Croesus or Cyrus, various conjectures have been made upon the passage of Strabo, but without success. At all events, it is acknowledged by Dion Chrysostomus (*Orat.* xliii. p. 585), who was a native of the town, that it was neither very ancient nor very large. It was, however, as Strabo remarks, well governed, continued to flourish under the Roman emperors (Plin. *Epist.* x. 85), and was celebrated for its warm baths, which still exist, and bore the name of the "royal waters." (Athen. ii. p. 43; Steph. B. *s. v.* Θέρμα.) Under the Greek emperors it suffered much during the wars against the Turks (Nicet. Chon. pp. 186, 389); when at last it fell into their hands, it was for a time the capital of their empire under the name of *Brusa* or *Broussa*, which it still bears, for it still is one of the most flourishing towns in Asia Minor. (Browne's *Travels* in Walpole's *Turkey*, vol. ii. p. 108; Sestini, *Mon. Vet.* p. 70; Hamilton, *Researches*, i. p. 71, &c.)

Ptolemy (v. 1. § 13) and Pliny (v. 43) mention a town of the same name on the river Hyppius or Hypius, in Bithynia, which, according to Memnon (cc. 29, 42, 49), had formerly been called Cierus (Κίερος), and had belonged to the territory of Heracleia, but had been taken by Prusias, who changed its name. But there seems to be some confusion here between Cierus and Cius, the latter of which is known to have received the name of Prusias from the king of that name. (Strab. xii. pp. 563, 566.) [L. S.]

PRYMNE'SIA or PRYMNE'SUS (Πρυμνησία, Πρυμνησός: *Eth.* Πρυμνησιεύς), a small town in central Phrygia. (Ptol. v. 2. § 24; Hierocl. p. 677; *Conc. Chalced.* p. 673.) Pococke (*Travels*, iii. c. 15) found an inscription containing the name of this town near *Afiom Cara-hissar*. Leake (*Asia Minor*, p. 55) shows that the inscription does not refer to Prymnesia, but to some person whose name ended in menneas. No inference, therefore, can be drawn from it as to the site of that town. Franz (*Fünf Inschriften*, p .5) has proved, by incontrovertible arguments from other inscriptions, that Prymnesia must have been situated at *Seid-el-Ghazi*, between *Eski-Shehr* and *Coniah*, where a few remains of an ancient Greek town still exist. (Leake, *Asia Minor*, p. 21.) [L. S.]

PRY'TANIS (Πρύτανις), a small river in the east of Pontus, which has its sources in the Moschici Montes, and flows by the town of Abgabes. (Arrian, *Peripl. P. E.* p. 7; Anonym. *Peripl. P. E.* p. 15, where it is called Prytanes.) It is perhaps the same river as that called by Scylax (p. 32) Pordanis. [L. S.]

PSACUM (Ψάκον), a promontory on the NW. coast of Crete, forming the termination of Mt. Tityrus, now called *C. Spada*. (Ptol. iii. 15. § 8.)

PSAMATHUS. [TAENARUM.]

PSAPHIS. [ATTICA, p. 330, a.]

PSEBO'A or PSEBO (Ψεβώα, Strab. xvii. p. 822; Ψεβώ, Steph. B. *s. v.*), the modern *Tsana*, one of the enormous lakes S. of Meroë, which feed the principal tributaries of the Nile. The 10th parallel of N. latitude nearly bisects the lake Pseboa. According to Stephanus, it was five days' journey from Aethiopia, i. e. from Axume. In the centre of the lake was a populous island — a depôt of the ivory trade, and frequented also by the hunters of the Hippopotamus, the hides of which animal were exported to Aegypt, and employed as coverings for shields. On the E. and S. the lake was encompassed by lofty mountains, which abounded in mineral wealth (Theophrast. *de Lapid.* p. 695, ed. Schneider), and whose periodical torrents, according to Agatharchides (c. 5. *ap. Hudson*, *Geogr. Min.*) poured their waters over the plains of the Troglodytes. [W. B. D.]

PSELCIS (Ψελκίς, Strab. xvii. p. 820; *Itin. Anton.* p. 162; Ψέλχις, Aristid. *Aegin.* p. 512), was a town of the region Dodecaschoenus situated on the left bank of the Nile. Originally Pselcis was little more than a suburb of the older Aethiopian town Tachompso; but it speedily outgrew its parent, so that in process of time Tachompso was denominated Contra-Pselcis. In B. C. 23 the Aethiopian nation, alarmed by the approach of the Romans to their frontier, harassed the neighbourhood of Philae and Syene, and it became necessary to repel their incursions. C. Petronius, accordingly, who had succeeded Aelius Gallus in the government of Aegypt, undertook to drive them back, and Pselcis was one of the towns which submitted to him. (Strab. *l. c.*; Dion Cass. liv. 5.) So long as the Romans maintained their hold on Northern Aethiopia, Pselcis was the permanent head-quarters of a troop of German horse. The modern hamlet of *Dakkeh* occupies a portion of the site of the ancient Pselcis. [W. B. D.]

PSE'SSII, or PSESSI (Ψήσσιοι, Ptol. v. 9. § 17; Ψησσοί, Apollod. *ap.* Steph. B. *s. v.*; in Plin. vi. 7, the old editions have Psesii, but Sillig reads Psessi; it appears from an inscription that Psessi is the correct form, *Inscr. in* Jahn's *Jahrbücher*, vol. xxxvi. p. 225), a people in Sarmatia Asiatica, placed by Ptolemy between the lake Maeotis and the Hippici Montes after the Siraceni.

PSEUDOCE'LIS (Ψευδόκηλις), a town of the Elisari in Arabia Felix, identified by some modern writers with *Mochha*. (Ptol. vi. 7. § 7.)

PSEUDOPENIAS. [HESPERIDES.]

PSEUDO'STOMOS (Ψευδόστομος ποταμός, Ptol vii. 1. §§ 8, 33, 83, 85, 86), a stream of western India, which Ptolemy describes as flowing from Mt. Bettigo near *Coimbatore* to the sea near Muziris (*Mangalor*). It cannot with certainty be identified with any existing river, especially as along that coast, between lat. 10° and 15°, there are a great number of streams which, flowing but a short distance from mountains which approach the sea are little better than torrents. [V.]

PSILE, a small island, forming one of a cluster, off the coast of Ionia, opposite to Clazomenae. (Plin. v. 31. s. 38.)

PSILLIS (Ψίλλις), a small river on the coast of Phrygia, flowing into the Euxine between Artane and Calpe, and affording at its mouth a good road for small vessels (Strab. xii. p. 543; Ptol. v. 1. § 5; Anonym. *Peripl. P. E.* p. 2; Plin. vi. 1; Arrian, *Peripl. P. E.* p. 13, where it is called Psilis; Marician, p. 69, where it is written Psillius; comp. Steph. B. *s. v.* Ἀσκανία.) [L. S.]

PSOPHIS (Ψωφίς: *Eth.* Ψωφίδιος), a city in the NW. extremity of Arcadia, bounded on the N. by Arcadia, and on the W. by Elis. It was a very ancient place. It is said to have been originally called Erymanthus, and its territory to have been ravaged by the Erymanthian boar. (Paus. viii. 24. § 2; Hecat. *ap. Steph. B. s. v.* Ψωφίς; Apollod. ii. 5. § 4.) It afterwards received the name of Phegia or Phegeia (Φηγία, Φήγεια), apparently from the oaks (φηγοί), which are still found upon the site of the town; though the ancients, as usual, derived the name from an eponymous founder, Phegeus. (Steph. B. *s. vv.* Φήγεια, Ψωφίς; Paus. *l. c.*) It was called Psophis by Echephron and Promachus, sons of Hercules, who are said to have come from Sicily and given to the town this name after their mother Psophis. (Paus. *l. c.*) Psophis, while still called Phegia, was celebrated as the residence of Alcmaeon, who fled thither from Argos, after slaying his mother, and married Alphesiboea, the daughter of Phegeus. (Paus. viii. 24. § 8; *Dict. of Biogr. s. v.* ALCMAEON.) In consequence of their connection with Alcmaeon, the Psophidii took part in the second expedition against Thebes, and refused to join the other Greeks in the Trojan War. (Paus. viii. 24. § 10.)

Psophis is rarely mentioned in history. In B. C. 219 it was in possession of the Eleians, and was taken by Philip, king of Macedonia, who was then in alliance with the Achaeans. In narrating this event Polybius gives an accurate description of the town. "Psophis," he says, "is confessedly an ancient foundation of the Arcadians in the district Azanis. It is situated in the central parts of Peloponnesus, but in the western corner of Arcadia, and adjoining the Achaeans dwelling furthest towards the west. It also overhangs conveniently the country of the Eleians, with whom the city was then in close alliance. Philip marched thither in three days from Caphyae, and encamped upon the hills opposite to the city, where he could safely have a view of the whole city and the surrounding places. When the king observed the strength of the place, he was at a

loss what to do. On the western side of the town there is a rapid torrent, impassable during the greater part of the winter, and which, rushing down from the mountains, makes the city exceedingly strong and inaccessible, in consequence of the size of the ravine which it has gradually formed. On the eastern side flows the Erymanthus, a large and impetuous river, concerning which there are so many stories. As the western torrent joins the Erymanthus on the southern side of the city, its three sides are surrounded by rivers, and rendered secure in the manner described. On the remaining side towards the north a strong hill hangs over, surrounded by a wall, and serving the purpose of a well-placed citadel. The town itself also is provided with walls, remarkable for their size and construction." (Polyb. iv. 70.) From this description it is evident that the Erymanthus on the eastern side of the city is the river of *Sopotó;* and that the western torrent, which we learn from Pausanias (viii. 24. § 3) bore the name of Aroanius, is the river of *Ghermotzána*. About 300 feet below the junction of these rivers the united stream is joined by a third, smaller than the other two, called the river of *Lópesi* or *Skupi*, which rises on the frontiers of Cleitor, near Seirae. From these three rivers the place is now called *Tripótamo.* The banks of the Erymanthus and the Aroanius are precipitous, but not very high; and between them and the steep summit of the hill upon which the town stood there is a small space of level or gently-rising ground. The summit is a sharp ridge, sending forth two roots, one of which descends nearly to the angle of junction of the two streams, the other almost to the bank of the Erymanthus at the eastern extremity of the city. (Leake, *Morea*, vol. ii. p. 242.)

Philip, in his attack upon Psophis, crossed the bridge over the Erymanthus, which was probably in the same position as the modern bridge, and then drew up his men in the narrow space between the river and the walls. While the Macedonians were attempting to scale the walls in three separate parties, the Eleians made a sally from a gate in the upper part of the town. They were, however, driven back by the Cretans in Philip's army, who followed the fugitives into the town. Euripidas and the garrison then retreated into the citadel, and shortly afterwards surrendered to Philip. (Polyb. iv. 71, 72.)

Pausanias saw at Psophis a ruined temple of Aphrodite Erycina, heroa of Promachus and Echephron, the tomb of Alcmaeon, and near the Erymanthus a temple sacred to that stream. (Paus. viii. 24. § 7.) Leake also noticed a part of a theatre, not mentioned by Pausanias, on the side of the hill towards the Aroanius. Nine hundred feet above the junction of the two rivers, and near the walls on the bank of the Erymanthus, Leake also found some remains of a public building, 96 feet in length, below which there is a source of water in the bank. He conjectures that they may be the remains of the temple of Erymanthus.

Psophis was about 2 miles in circumference. The town-walls followed the crest of the ridge to the northward and the bank above the two rivers on the opposite side; and they are traceable nearly throughout the entire circuit of the place. On the north-eastern side of the town, which is the only part not protected by the two rivers or by the precipices at the back of the hill, there was a double inclosure. Leake could not trace the inclosure of the citadel.

At the distance of 30 stadia from Psophis was Seirae (Σειραί), which l

brought some of these people in his train when he led the way into the depths of the desert which skirts the Lesser Syrtis (Plut. *Cat. Min.* 56; Lucan, ix. 891); and Octavius made use of the services of these poison-suckers, it was said, in order to restore his victim, Cleopatra, to life. (Dion Cass. li. 14; comp. Lucan, ix. 925.) [E. B. J.]

PSY'LLIUM (Ψύλλιον, Ψύλλειον, or Ψύλλα), a fortified emporium on the coast of Bithynia, between Crenides and Tium. (Ptol. v. 1. § 7; Arrian, *Peripl. P. E.* 14; Anonym. *Peripl. P. E.* p. 5; Marcian. p. 70; Steph. B. *s. v.* Ψύλλα; *Tab. Peuting.* erroneously calls it Scylleum.) [L. S.]

PSYRA (Ψυρά), a small island in the Aegean sea, to the north-west of Chios, at a distance of 50 stadia from Cape Melaenae in Chios, and having only 40 stadia in circumference. It was a lofty, rocky island, and contained on its south-east coast a small town of the same name. (Strab. xiv. p. 645; Plin. v. 36; Steph. B. *s. v.*; Hom. *Od.* iii. 171.) Its modern name is *Ipsara.* [L. S.]

PSYTTALEIA (Ψυττάλεια), a small island off the Attic coast between Peiraeeus and Salamis. For details see SALAMIS.

PTANDARIS or PTANDARA, a place in Cappadocia on the south-west of Arabissus (*It. Ant.* pp. 178, 180, 210, 212, &c., where we sometimes read the ablative Ptandari, and sometimes Ptandaris.) [L. S.]

PTA'RENUS (Πτάρενος, Arrian, *Ind.* c. 4), a small tributary of the Upper Indus, which flows into that river a little above *Peshâwar.* Lassen conjectures that it is the present *Burrindu.* (Lassen, *Map of Anc. India.*) [V.]

PTE'LEA, an ancient name of Ephesus. (Plin. v. 29. s. 31.)

PTE'LEOS (Πτελέως), a small lake in Mysia, near Ophrynium on the coast of the Hellespont. (Herod. vii. 42; Strab. xiii p. 595; Schol. *ad Ptol.* v. 2. § 3.) [L. S.]

PTE'LEUM. 1. (Πτελεόν: *Eth.* Πτελεάτης, Πτελεούσιος, Πτελεεύς), a town of Thessaly, on the south-western side of Phthiotis, and near the entrance of the Sinus Pagasaeus. It stood between Antron and Halos, and was distant from the latter 110 stadia, according to Artemidorus. (Strab. ix. p. 433.) It is mentioned by Homer as governed by Protesilaus, to whom the neighbouring town of Antron also belonged. (*Il.* ii. 697.) In B. C. 192, Antiochus landed at Pteleum in order to carry on the war against the Romans in Greece (Liv. xxxv. 43). In B. C. 171, the town, having been deserted by its inhabitants, was destroyed by the consul Licinius. (Liv. xlii. 67.) It seems never to have recovered from this destruction, as Pliny speaks of Pteleum only as a forest ("nemus Pteleon," Plin. iv. 8. s. 15). The form Pteleos is used by Lucan (vi. 352) and Mela (ii. 3). Pteleum stood near the modern village of *Pteleó*, or *Ftelió*, upon a peaked hill crowned by the remains of a town and castle of the middle ages, called *Old Ftélio.* On its side is a large marsh, which, as Leake observes, was probably in the more flourishing ages of Greece a rich and productive meadow, and hence the epithet of λεχεποίην, which Homer (*l. c.*) has applied to Pteleum. (Leake, *Northern Greece*, vol. i. p. 341, seq.)

2. A town of Triphylia, in Elis, belonging to Nestor (Hom. *Il.* ii. 594), is said by Strabo to have been a colony from the Thessalian Pteleum. This town had disappeared in Strabo's time; but its uninhabited woody site was still called Pteleasimum. (Strab. viii. pp. 349, 350.)

3. A fortress in the territory of Erythrae, in Ionia. (Thuc. viii. 24, 31.) Pliny (v. 29. s. 31) mentions Pteleon, Helos, and Dorium as near Erythrae, but those places are confused by Pliny with the Triphylian towns in Homer (*l. c.*).

PTE'RIA (Πτερία), the name of a town and district in Cappadocia, mentioned only by Herodotus (i. 76), who relates that a great battle was fought in this district between Cyrus and Croesus. Stephanus B. mentions Pterium, a town of the Medes, and Pteria, a town of Sinope (*s. v.* Πτέριον).

PTEROS, one of four islands — the other three being Labatanis, Coboris, and Sambracate — lying off the coast of the Sabaei in Arabia, and corresponding in number, and the last of the four in name, with the *Sohar* islands. (Plin. vi. 28. s. 32; Forster, *Arabia*, vol. ii. p. 230.)

PTOLEDERMA (Πτολεδέρμα), a town of the Eutresii, in Arcadia, which was deserted in consequence of the removal of its inhabitants to Megalopolis. (Paus. viii. 27. § 3.)

PTOLEMA'IS. 1. (Πτολεμαΐς Ptol. iv. 5. § 57), a small town of the Arsinoite nome in Middle Aegypt. It was situated between Heracleopolis Magna and Arsinoë, near the point of junction between the *Bahr Jusef* and the Nile. The modern village of *El-Lahum* occupies a portion of the site of the Arsinoite Ptolemais.

2. PTOLEMAIS THERON (Πτολεμαῒς Θηρῶν, Ptol. i. 8. § 1, iv. 7. § 7, viii. 16. § 10; Πτολεμαΐς, Strab. xvii. pp. 768—76; Agatharch. *ap. Phot.* pp. 457—459, ed. Bekker; Ptolemais Epitheras, Plin. vi. 29. s. 34), was originally an Aethiopian village situated on the southern skirts of the forest which extended from the S. side of the Troglodytic Berenice to lat. 17° N. Its convenient situation on the coast of the Red Sea and in the heart of the region where elephants abounded induced Ptolemy Philadelphus (B. C. 282—246) to occupy, enlarge, and fortify the village, which thenceforward was named Ptolemais after its second founder. Philadelphus, indeed, before he colonised this outpost of his kingdom, used every effort to persuade the Aethiopian hunters [ELEPHANTOPHAGI] to abstain from the flesh of these animals, or to reserve a portion at least of them for the royal stables. But they rejected his offers, replying that for the kingdom of Aegypt they would not forego the pleasure of hunting and eating elephants. Hitherto the Aegyptians had imported these animals from Asia, the Asiatic breed being stronger and larger than the African. But the supply was precarious: the cost of importation was great; and the Aethiopian forests afforded an ample supply both for war and the royal household. As the depôt of the elephant trade, including that also in hides and ivory, Ptolemais attained a high degree of prosperity, and ranked among the principal cities of Aethiopia. From its market it is probable that Carthage also derived its supply of elephants, since about the period of Philadelphus' reign the Carthaginians employed these animals more frequently in war. (Liv. xvii. *Epit.*; Florus, ii. 2. § 28.) Ptolemais had, properly speaking, no harbour, and the Aegyptian vessels were compelled to run up to Berenice whenever the N. or E. winds prevailed: in the present day the Red Sea coast at this point is approachable only by boats. The roadstead of Ptolemais, however, was partially sheltered from the E. winds by an island covered with olive-trees. In its

neighbourhood the freshwater lake Monoleus afforded it a good supply of water and fish. The shell of the true land-tortoise was found at Ptolemais: it is described by Agatharchides (*ap. Geogr. Minor.* p. 40, Hudson; *Peripl. Mar. Erythr.* p. 17) as covered with small lozenge-shaped plates, of the whiteness of the pearl-oyster. To ancient geographers the position of Ptolemais was of great importance, being one of the points from which their computations of latitude were made. Modern geographers, however, are not agreed as to the degree in which it should be placed, some identifying it with *Ras-Assiz*, opposite the island of *Wellesley*, while others (Vincent, *Voyage of Nearchus*, vol. ii. p. 92) prefer a more southerly site, near the port of *Mirza-Mombarrik*. (Comp. Mannert, vol. x. 1. p. 48, seq.)

3. (Πτολεμαῒς ἡ Ἑρμείου, Ptol. i. 15. § 11, iv. 5. § 56; Πτολεμαϊκὴ πόλις Strab. xvii. p. 813), a city of Upper Aegypt, NW. of Abydus, and situated on the western side of the Nile. It can hardly be regarded, however, as an Aegyptian city, its population and civil institutions being almost exclusively Greek, and its importance derived entirely from the favour of the Ptolemies. The ruins of Ptolemais Hermii are supposed to be at the modern hamlet of *Mensieh*. (Champollion, *l'Egypte*, vol. i. p. 253, seq.) [W. B. D.]

PTOLEMA'IS (Πτολεμαῒς), a small town on the coast of Pamphylia, between the river Melas and the town of Coracesium, is mentioned only by Strabo (xiv. p. 667). Leake (*Asia Minor*, p. 197) conjectures that Ptolemais did not stand upon the coast, as it is not mentioned in the Stadiasmus, but occupied perhaps the situation of the modern town of *Alara*, where is a river, and upon its banks a steep hill crowned with a Turkish castle. (Comp. Richter, *Wallfahrten*, p. 334.) [L. S.]

PTY'CHIA. [CORCYRA, p. 671, b.]

PUBLICA'NOS, AD, in Gallia, is placed in the Itins. on a road which leads from Vienna (*Vienne*) on the *Rhone* to the Alpis Graia (*Little St. Bernard*). In following this road Ad Publicanos comes after Mantala [MANTALA], and its position is at the commencement of the territory of the Centrones or *La Tarentaise*. Wesseling observes that the name Ad Publicanos indicates a toll place at a bridge. [PONS AERARIUS]. D'Anville supposes that Ad Publicanos was at the point where the *Arli*, a tributary of the *Isère*, is crossed, near which there was an ancient Hospitium or Stabulum, as it was called, such as we find on several Roman roads. This place is now called *L'Hôpital de Conflans*, and is near the junction of the *Arli* and the *Isère*. Ad Publicanos was probably on the boundary of the Allobroges and Centrones, where some dues would be paid. These dues or customs were established in a period of Gallic history even anterior to the Roman conquest. (Strab. iv. p. 190.) Gallia was loaded with these imposts, which continued to the time of the French Revolution of 1789. The distance between Mantala and Ad Publicanos is marked xvi. in the Itins., which does not agree with the site fixed by D'Anville. Other geographers place Ad Publicanos at the village of *Des Fontaines*. [G. L.]

PU'CINUM (Πούκινον: *Duino*), a town of Venetia, in the territory of the Carni (Plin. iii. 18. s. 22), though Ptolemy assigns it to Istria (Ptol. iii. 1. § 28). It is placed by Pliny between the river Timavus and Tergeste, which leaves little doubt that it is the place called *Duino*, about 16 miles from *Trieste*, and less than 2 from the sources of the Timavus. It stands on the brow of a steep rocky ridge or slope facing the sea; and the neighbouring district is still noted for its wine, which was famous in the days of Pliny, and was reckoned particularly wholesome, so that Livia the wife of Augustus ascribed the great age to which she attained principally to her use of it. (Plin. xiv. 6. s. 8, xvii. 4. s. 3.) [E. H. B.]

PULCHRUM PROM. [APOLLINIS PROM.]

PULLA'RIAE I'NSULAE. [POLA.]

PULTO'VIA, a place in Upper Pannonia, on the south-west of Petovio, on the river *Pulska*. (*It. Hieros.* p. 561; comp. Muchar, *Noricum*, i. p. 240.) [L. S.]

PU'NICUM (*Sta Marinella*), a village or station on the coast of Etruria, mentioned only in the Tabula, which places it 6 miles beyond Pyrgi (*Sta Severa*) on the Via Aurelia; and this distance enables us to fix its site at the modern village or hamlet of *Sta Marinella*, where there are still some traces of a Roman port, and more extensive remains of a Roman villa in the immediate neighbourhood (*Tab. Peut.*; Nibby, *Dintorni di Roma*, vol. ii. p. 313; Dennis's *Etruria*, vol. ii. p. 7.) [E. H. B.]

PU'NICUM, called by Procopius (*de Aed.* iv. 6. p. 287) Πικνούς, a town of Moesia Superior, at the mouth of the Pingus (*Tab. Peut.*). [T. H. D.]

PUPLISCA, a town of the Liburni (Geogr. Rav. iv. 26), which has been identified with *Jablanatz* on the mainland facing the S. of the island of *Arbe*. (Neigebaur, *Die Sud-Slaven*, p. 225.) [E. B. J.]

PURA. [GEDROSIA.]

PURPURA'RIAE INS., islands off the coast of Mauretania, which are said to have been discovered by Juba (Plin. vi. 37), who established there a manufactory of purple. If his description of them as being 625 M. P. from the Fortunate Islands be received, they cannot be, as D'Anville supposed, *Lanzerote* or *Fuente Ventura*, the two nearest of the *Canaries* to the African continent. Still greater difficulties exist in supposing them to be *Madeira* and *Porto Santo*, which are too remote from Juba's kingdom to be the seat of a manufacture of purple carried on by him. Lelewel (*Endeckungen der Carthager und Griechen*, p. 140) considers them to be the islands of *Lanzarote Sta Clara*, with the smaller ones of *Graciosa* and *Alegranza*. (Kenrick, *Phoenicia*, p. 229; Humboldt, *Cosmos*, vol. ii. p. 129, trans.) [E. B. J.]

PUTE'OLI (Ποτεόλοι, Ptol. Dion Cass.; Ποτίολοι Strab., *Act. Apost.*: *Eth.* Puteolanus: *Pozzuoli*), a maritime city of Campania situated on the northern shore of the Sinus Cumanus or Crater and on the east side of the smaller bay known as the Sinus Baianus. It was originally a Greek city of the name of DICAEARCHIA (Δικαιαρχία, Strab.; Δικαιαρχεία, Steph. B.: *Eth.* Δικαιαρχεύς and Δικαιαρχείτης, Steph.), and was a colony of the neighbouring Cumae, to which it served as a port. (Strab. v. p. 245.) There can be little doubt of the accuracy of this statement, but Stephanus of Byzantium and Eusebius ascribe its foundation to a colony from Samos; and it is not improbable that in this as in many similar instances, the colony from Cumae was reinforced by a fresh band of emigrants from Samos (Steph. B. *s. v.* Ποτίολοι; Euseb. ii. p 129, ed.

Scal.). The date assigned to this Samian colony by Eusebius is as late as B. C. 521. No mention occurs of Dicaearchia in history previous to the conquest of Cumae by the Campanians: from its serving as the port of Cumae it could probably never have taken any active or independent part; but there seems no doubt that it must have become a populous and flourishing town. The name of Dicaearchia continued to be applied to it by Greek writers long after it had assumed the new appellation of Puteoli. (Diod. iv. 22, v. 13, &c.)

The period of this change is uncertain. It is generally said that the Romans bestowed on it the new name when they established their colony there; but there seems good reason to believe that it was considerably more ancient. The name of Puteoli is applied to the city by Livy during the Second Punic War (Liv. xxiv. 7), and there is much probability that the coins with the Oscan inscription "Phistlus," sometimes Graecised into Phistelia, belong to Puteoli during the period previous to the Roman colony. (Millingen, *Numism. de l'Anc. Italie*, p. 201; Friedländer, *Oskische Münzen*, p. 29.) According to the Roman writers the name of Puteoli was derived either from the stench arising from the numerous sulphureous springs in the neighbourhood, or (with more probability) from the wells (putei) or sources of a volcanic nature with which it abounded. (Varro, *L. L.* v. 25; Fest. *s. v. Puteoli;* Plin. xxxi. 2; Strab. v. p. 245; Steph. B. *s. v.* Ποτίολοι)

The first mention of Puteoli in history is during the Second Punic War, when it was fortified by Q. Fabius by order of the senate, and protected by a strong garrison to secure it from the attempts of Hannibal, B. C. 215. That general, indeed, in the following season made an attempt, though without success, to make himself master of the city, the possession of its port being an object of the greatest importance to him. (Liv. xxiv. 7, 12, 13.) Livy speaks of Puteoli as having first become frequented as a port in consequence of the war; and though this is not strictly correct, as we know that it was frequented long before under the name of Dicaearchia, it is probable that it then first rose to the high degree of commercial importance which it subsequently retained under the Romans. Thus in B. C. 212 it became the principal port where the supplies of corn from Etruria and Sardinia were landed for the use of the Roman army that was besieging Capua (Liv. xxv. 22); and the next year it was from thence that Claudius Nero embarked with two legions for Spain. (Id. xxvi. 17.) Towards the close of the war also (B. C. 203) it was at Puteoli that the Carthaginian ambassadors landed, on their way to Rome. (Id. xxx. 22.) It was doubtless the growing importance of Puteoli as a commercial emporium that led the Romans to establish a colony there in B. C. 194 (Liv. xxxiv. 45; Vell. Pat. i. 15): the date is confirmed by a remarkable inscription of B. C. 105 (Mommsen, *Inscr. R. N.* 2458), and it seems to have become before the close of the Republic, as it continued under the Empire, one of the most considerable places of trade in Italy. From its being the first really good port on the south of Rome (for Antium could never deserve that epithet) it became in a manner the port of the imperial city, although distant from it not less than 150 miles. Not only did travellers coming from the East to Rome frequently land at Puteoli and proceed from thence by land to the city, as in the well-known instances of St. Paul (*Act. Apost.* xxviii. 13) and Cicero on his return to Rome from his quaestorship in Sicily (Cic. *pro Planc.* 26), but the same course was pursued with the greater part of the merchandise brought from the East, especially with the costly wares sent from Alexandria, and even the supplies of corn from the same quarter. (Strab. xvii. p. 793; Suet. *Aug.* 98; Senec. *Ep.* 77.) Strabo speaks of Puteoli as one of the most important trading cities of his time (v. p. 245), and it is evident from the expressions of Seneca (*l. c.*) that this had not fallen off in the days of Nero. The trade with Alexandria indeed, important as it was, was only one branch of its extensive commerce. Among other things the iron of Ilva, after being smelted at Populonium, was brought to Puteoli (Diod. v. 13): and the city carried on also a great trade with the Turdetanians in the south of Spain, as well as with Africa. (Strab. iii. p. 145.) We learn also from an inscription still extant, that its trade with Tyre was of such importance that the Tyrians had a regular factory there (Boeckh, *C. I.* no. 5853); and another inscription mentions a number of merchants from Berytus as resident there. (Mommsen, *I. R. N.* 2488.) Indeed there seems no doubt that it was under the Roman Empire one of the greatest—if not *the* greatest—emporiums of foreign trade in all Italy For this advantage it was in a great measure indebted to the excellence of its port, which, besides being naturally well sheltered, was further protected by an extensive mole or pier thrown out into the bay and supported on stone piles with arches between them. Hence Seneca speaks of the population of Puteoli assembling on this mole (in pilis) to watch for the arrival of the ships from Alexandria. (Sen. *Ep.* 77.) Puteoli had peculiar facilities for the construction of this and similar works, from the excellent quality of its volcanic sand, which formed a mortar or cement of the greatest hardness and durability, and wholly proof against the influence of the sea-water. (Strab. v. p. 245; Plin. xxxv. 13. s. 47.) This kind of cement is still known by the name of *Pozzolana.*

It was from the extremity of the mole of Puteoli that Caligula carried his celebrated bridge across the bay to the opposite shores at Baiae. (Suet. *Cal.* 19, 32; Dion Cass. lix. 17; Joseph. *Ant.* xix. 1. § 1.) It is scarcely necessary to observe that this bridge was merely a temporary structure [BAIAE], and the remains still visible at *Pozzuoli* which are popularly known as the Bridge of Caligula are in fact the piles or piers of the mole of Puteoli. The construction of this mole is generally ascribed to Augustus, without sufficient authority; but it is probable that it dates from at least as early a period: and we learn that there were in his time extensive docks (navalia) at Puteoli, in which the huge ships that had been employed in bringing the obelisks from Egypt were preserved,—a sufficient proof of the magnitude of these establishments. (Plin. xxxvi. 9. s. 14.) Another proof of the importance of Puteoli is the fact that Claudius established there, as well as at Ostia, a cohort of troops to guard the city against fire, in the same manner as was done at Rome (Suet. *Claud.* 25). In A. D. 95 Domitian constructed a new line of road leading direct to Puteoli from Sinuessa, where it quitted the Appian Way. (Dion Cass. lxvii. 14; Stat. *Silv.* iv. 3.) Previous to that time its communication with Rome must have been by way of Capua, to which a branch road (not given in the Itineraries) led direct from Puteoli.

Puteoli certainly continued to enjoy under the Empire the rank of a colony. (Plin. iii. 5. s. 9; Orell. *Inscr.* 1694, 3697, &c.) In addition to the original "colonia civium" settled there, as already mentioned, in B. C. 194, it appears to have received a fresh colony under Sulla (Val. Max. ix. 3. § 8; Plut. *Sull.* 37; Zumpt, *de Colon.* p. 260), and certainly was again colonised by Augustus. (*Lib. Col.* p. 236.) The inhabitants had, as we learn from Cicero (*Phil.* ii. 41), warmly espoused the cause of Brutus and Cassius after the death of Caesar, which may have been one reason why Augustus sought to secure so important a point with a colony of veterans. But, as was often the case, the old inhabitants seem to have continued apart from the colonists, with separate municipal rights, and it was not till the reign of Nero that these also obtained admission into the colony. (Tac. *Ann.* xiv. 27.) In A. D. 69 the Puteolani zealously espoused the cause of Vespasian (Tac. *Hist.* iii. 67), and it was probably in consequence of this that the city afterwards assumed the honorary title of "Colonia Flavia Augusta Puteoli," by which we find it designated in inscriptions. (Orell. *Inscr.* 3698; Zumpt, *l. c.* p. 395; Mommsen, 2492, 2493.) It is not improbable, however, that it may at the same time have received a fresh accession of colonists.

In addition to its commercial importance, Puteoli, or rather its immediate neighbourhood, became, before the close of the Republic, a favourite resort of the Roman nobility, in common with Baiae and the whole of this beautiful district. Thus Cicero, as we learn from himself, had a villa there, to which he gave the name of Academia, but which he more often mentions merely as his Puteolanum. (Cic. *de Fat.* 1, *ad Att.* i. 4, xiv. 7, xv. 1, &c.) It passed after his death into the hands of Antistius Vetus, and the outbreak of a thermal spring there became the occasion of a well-known epigram, which has been preserved to us by Pliny. (Plin. xxxi. 2. s. 3.) This villa was situated between Puteoli and the lake Avernus; it was subsequently chosen as the place of burial of the emperor Hadrian. (Spart. *Hadr.* 25.)

We hear little of Puteoli in history during the later periods of the Roman Empire, but there is every reason to suppose that it continued to be a flourishing and populous town. Its mole and port were repaired by Antoninus Pius (Mommsen, *Inscr.* 2490), and numerous inscriptions have been found there, some of which belong to a late period, and attest the continued importance of the city down to the reign of Honorius. (Mommsen, 2494—2500.) But it shared to the full extent in the calamities of the declining empire: it was taken and plundered by Alaric in A. D. 410, and again by Genseric in 455, and by Totila in 545. Nor did it ever recover these repeated disasters. After having for some time been almost deserted, it partially revived in the middle ages; but again suffered severely, both from the ravages of war and from the volcanic eruptions of the *Solfatara* in 1198, and of the *Monte Nuovo* in 1538. At the present day *Pozzuoli*, though retaining its episcopal see, and about 8000 inhabitants, is a poor place, and suffers severely from malaria in summer.

It, however, retains many remains of its ancient greatness. Among these one of the most conspicuous is the amphitheatre, on the hill behind the town, which is of considerable size, being larger than that at Pompeii, and calculated to be capable

About a mile from *Pozzuoli* to the NE., on a hill between the town and the *Lago d' Angano*, is the remarkable spot now called the *Solfatara*, and in ancient times known as the FORUM VULCANI (Ἡφαίστου ἀγορά, Strab.). It is evidently the crater of an extinct volcano, retaining only so much of its former activity as to emit constantly sulphureous gases in considerable quantity, the deposit of which forms large accumulations of sulphur. It is well described by Strabo, in whose time it would seem to have been rather more active than at present, as well as in a more poetical style by Petronius (*Carm. B. Civ.* 67—75); and is noticed also by Lucilius, who justly points to the quantity of sulphur produced, as an evidence of igneous action, though long extinct. (Strab. v. p. 246; Lucil. *Aetn.* 431.) It does not seem to have ever broken out into more violent action, in ancient, any more than in modern, times; but in the middle ages on one occasion (in 1198) it broke into a violent eruption; and a stream of trachytic lava, which has flowed from the crater in a SE. direction, is probably the result of this outburst. The effect of the sulphureous exhalations on the soil of the surrounding hills is visible for some distance, and imparts to them a peculiar whiteness of aspect, whence they were called the LEUCOGAEI COLLES. (Plin. xviii. 11. s. 29, xxxv. 15. s. 50.) Pliny also mentions in connection with them some mineral springs, to which he gives the name of LEUCOGAEI FONTES. (Id. xxxi. 2. s. 8.) They are probably those now known as the *Pisciarelli*.

There were two ancient roads leading from Puteoli, the one to Capua, the other to Neapolis. Both of them may still be distinctly traced, and were bordered, for some distance after they quitted the city, with ranges of tombs similar to those found outside the gate of Pompeii, though of course in less perfect preservation. They are nevertheless in many respects of much interest. Pliny mentions the road (which he calls a Via Consularis) that led from Puteoli to Capua; it was the tract on the left of this towards Cumae that was the district properly called the CAMPI LABORINI, or LABORIAE, distinguished even above the rest of Campania for its surpassing fertility. (Plin. xviii. 11. s. 29.) Concerning the topography of Puteoli and ruins still remaining at *Pozzuoli*, see Mazzella, *Situs et Antiquitas Puteolorum* in Graevius and Burmann's *Thesaurus*, vol. ix. part iv.; Romanelli, *Viaggio a Pozzuoli*, 8vo. Naples, 1817; and Jorio, *Guida di Pozzuoli*, 8vo. Naples, 1830. [E. H. B.]

PUTEOLA'NUS SINUS. [CRATER.]

PUTPUT, a station in Africa Proper, 12 M. P. from Neapolis (*Nabel*) (*Itin. Anton.; Peut. Tab.*), which has been identified by Barth (*Wanderungen*, pp. 142, 143) with *Hámámât*. Sir G. Temple (*Excursions*, vol. ii. p. 10) considers it to be SIAGUL (Σιαγούλ, Ptol. iv. 3. § 9), because of the two inscriptions with "Civitas Siagitana," which Shaw found at *Hámámât*. (*Trav.* p. 169.) [E. B. J.]

PYCNUS (Πυκνός, Ptol. iii. 17. § 8), a river on the N. coast of Crete, a little W. of Cydonia.

PYDARAS. [ATHYRAS.]

PYDNA (Πύδνα, Scyl. p. 26; Scymn. Ch. 626; Ptol. iii. 13. § 15; Steph. B.; Plin. iv. 17), a town which originally stood on the coast of Pieria, in the Thermaic gulf. Themistocles was conducted by two Macedonian guides across the mountains, and found a merchant ship about to sail for Asia. (Thuc. ii. 137.) Pydna was blockaded by the Athenians, who, after prosecuting the siege in vain, concluded a convention with Perdiccas. (Thuc. i. 61.) It was taken B. C. 411 by Archelaus, who removed its site 20 stadia from the sea. (Diodor. xiii. 49.) Afterwards it was gained for Athens by Timotheus; but in the two first years of the disastrous Social War (358—356), Pydna, about the exchange of which for Amphipolis there had been a secret negotiation, was betrayed to Philip by a party of traitors in the town. (Demosth. *adv. Leptinem*, p. 476. § 71. *Olynth.* i. p. 10. § 5, *Olynth.* ii. p. 19. § 6; Ulpian, *ad loc.*; Theopompus, *Fr.* 189, ed Didot.) Several Athenian citizens were taken in Pydna, and sold into slavery, whom Demosthenes ransomed from his own funds. (Plut. *Vit. X. Orator.* p. 851, vol. ix. p. 381, ed. Reiske.) Towards the close of the year B. C. 316, Olympias retired to Pydna, where she was besieged by Cassander, and taken prisoner by him. (Diodor. xix. 49; Polyaen. iv. 11. § 3.) In the spring of B. C. 169, Perseus abandoning Dium, retreated before the consul Q. Marcius Philippus to Pydna. (Liv. xliv. 6.) After again occupying the strong line of the Enipeus, Perseus, in consequence of the dexterous flank movement of P. Scipio Nasica, was compelled to fall back upon Pydna. On the 22nd of June, B. C. 168 (an eclipse fixes the date, Clinton, *F. H.* vol. iii. p. 82), the fate of the Macedonian monarchy was decided in a plain near the town, which was traversed by a small river, and bordered by heights affording a convenient retreat and shelter to the light infantry, while the plain alone contained the level ground necessary for the phalanx. (Liv. xliv. 32—46; Plut. *Aemil.* 13—23.) The Epitomiser of Strabo and a Scholiast upon Demosthenes (*Olynth.* i. p. 10) assert that the Κίτρος of their time was the same place as Pydna; but their authority is of no great weight, and Colonel Leake (*Northern Greece*, vol. iii. pp. 429—435) has shown that the ancient site is better represented by *Ayán*, where there are Hellenic remains, and, on the slope towards the sea, two "tumuli," probably monuments of the battle. *Kitro*, it may be supposed, rose upon the decay of Pydna and Methone, between which it lies. For autonomous coins of Pydna, see Eckhel. vol. ii. p. 76. [E. B. J.]

PYDNAE or PYDNA (Πύδναι), a small town on the coast of Lycia, between the river Xanthus and Cape Hieron. (*Stadiasm. M. Magni*, p. 221.) It is probably the same place as the one called by Ptolemy (v. 3. § 5) Cydna, and which he places at the foot of Mount Cragus, where ruins of an ancient town were observed by Beaufort. (Leake, *Asia Minor*, p. 182.) [L. S.]

PY'GELA or PHY'GELA (Πύγελα, Φύγελα: *Eth.* Πυγελεύς), a small town on the coast of the Caystrian bay, a little to the south of Ephesus, was said to have been founded by Agamemnon, and to have been peopled with the remnants of his army; it contained a temple of Artemis Munychia. (Xenoph. *Hellen.* i. 2. § 2; Strab. xiv. p. 639; Steph. B. *s. v.*; Harpocrat. *s. v.*; Plin. v. 31; Scylax. p. 37; Pomp. Mela, i. 17; Liv. xxxvii. 1.) Dioscorides (v. 12) commends the wine of this town, which is still celebrated. Chandler (*Travels*, p. 176) observed its remains on a hill between Ephesus and *Scala Nova*. (Comp. Leake, *Asia Minor*, p. 261.) [L. S.]

PYLAE CILICIAE. [CILICIA.]

PYLAE SYRIAE. [AMANIDES; ISSUS.]

PYLAEA (Πυλαία), a suburb of Delphi, and

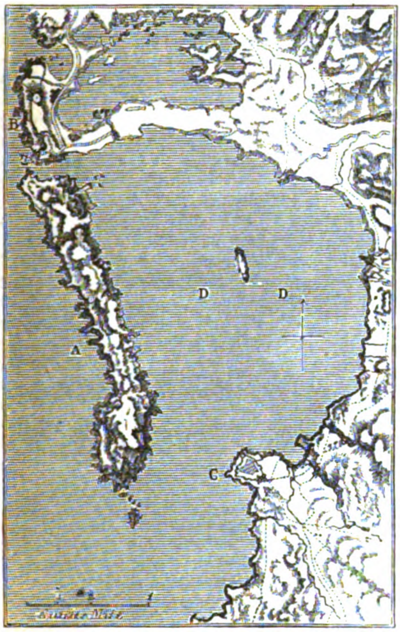
the place of meeting of the Amphictyonic Council [Delhi, p. 767, b.]

PYLE'NE (Πυλήνη: *Eth.* Πυλήνιος), an ancient town of Aetolia, between the Achelous and the Evenus, mentioned in the Homeric catalogue of the Grecian ships, is placed by Pliny on the Corinthian gulf. It would therefore seem to have existed in later times; although Strabo says that the Aeolians, having removed Pylene higher up, changed its name into Proschium. The site of Pylene is uncertain. (Hom. *Il.* ii. 639; Plin. iv. 3; *scopulosa Pylene*, Stat. *Theb.* iv. 102; Steph. B. *s. v.*)

PYLON (Πυλών), a town on the Via Egnatia, being the frontier town of Illyria and Macedonia. (Strab. vii. p. 323.) It is not mentioned in the Itineraries.

PYLO'RUS, a town in Crete, S. of Gortyn, now *Plóra*. (Plin. iv. 12. s. 20; Pashley, *Crete*, vol. i. p. 295.)

PYLUS (Πύλος: *Eth.* Πύλιος), the name of three towns on the western coast of Peloponnesus.



1. A town in hollow Elis, described by Pausanias as situated upon the mountain road leading from Elis to Olympia, and at the place where the Ladon flows into the Peneius (vi. 22. § 5). Strabo, in a corrupt passage, assigns to it the same situation, and places it in the neighbourhood of Scollium or Mt. Scollis (*μεταξὺ τοῦ Πηνειοῦ καὶ τοῦ Σελλήεντος ἐκβολῆς* [read *καὶ τῆς τοῦ Σελλήεντος ἐμβολῆς*] *Πύλος ᾠκεῖτο*, Strab. viii. p. 338). Pausanias (*l. c.*) says that it was 80 stadia from Elis. Diodorus (xiv. 17) gives 70 stadia as the distance, and Pliny (iv. 5. s. 6) 12 Roman miles. According to the previous description, Pylus should probably be identified with the ruins at *Agrápidho-khóri*, situated on a commanding position in the angle formed by the junction of the Peneius and Ladon. This site is distant 7 geographical miles from Elis, which sufficiently agrees with the 80 stadia of Pausanias. Leake, however, places Pylus further S., at the ruins at *Kuloglí*, mainly on the ground that they are not so far removed from the road between Elis and Olympia. But the fact of the ruins at *Agrápidho-khóri* being at the junction of the Peneius and Ladon seems decisive in favour of that position; and we may suppose that a road ran up the valley of the Peneius to the junction of the two rivers, and then took a bend to the right into the valley of the Ladon. (Leake, *Northern Greece*, vol. ii. p. 228, *Peloponnesiaca*, p. 219; Boblaye, *Récherches, &c.* p. 122; Curtius, *Peloponnesos*, vol. ii. p. 39.) The Eleian Pylus is said to have been built by the Pylon, son of Cleson of Megara, who founded the Messenian Pylus, and who, upon being expelled from the latter place by Peleus, settled at the Eleian Pylos. (Paus. iv. 36. § 1, vi. 22. § 5.) Pylus was said to have been destroyed by Hercules, and to have been afterwards restored by the Eleians; but the story of its destruction by Hercules more properly belongs to the Messenian Pylus. Its inhabitants asserted that it was the town which Homer had in view when he asserted that the Alpheius flowed through their territory (Ἀλφειοῦ, ὅστ' εὐρὺ ῥέει Πυλίων διὰ γαίης, *Il.* v. 545). On the position of the Homeric Pylus we shall speak presently; and we only observe here, that this claim was admitted by Pausanias (vi. 22. § 6), though its absurdity had been previously pointed out by Strabo (viii. p. 350, seq.). Like the other Eleian towns, Pylus is rarely mentioned in history. In B. C. 402 it was taken by the Spartans, in their invasion of the territory of Elis (Diod. xiv. 17); and in B. C. 366

C. The modern *Navarino*.
D D. Bay of Pylus (*Bay of Navarino*).

The chief discrepancy between the account of Thucydides and the existing state of the coast is found in the width of the two entrances into the bay of *Navarino*, the northern entrance being about 150 yards wide, and the southern not less than between 1300 and 1400 yards; whereas Thucydides states the former admitted only two triremes abreast, and the latter only eight or nine. Therefore not only is the actual width of the two entrances very much greater than is stated by Thucydides, but this width is not in the proportion of the number of triremes; they are not as 8 or 9 to 2, but as 17 to 2. To explain this difficulty Col. Leake supposes that Thucydides was misinformed respecting the breadth of the entrances to the harbour. But to this a satisfactory reply is given by Dr. Arnold, that not only could no common false estimate of distances have mistaken a passage of nearly 1400 yards in width for one so narrow as to admit only eight or nine ships abreast, but still less could it have been supposed possible to choke up such a passage by a continuous line of ships, lying broadside to broadside, which Thucydides tells us the Lacedaemonian commanders intended to do. Moreover the northern entrance has now a shoal or bar of sand lying across it, on which there are not more than 18 inches of water; whereas the narrative of Thucydides implies that there was sufficient depth of water for triremes to sail in unobstructed. The length of 17 stadia, which Thucydides ascribes to Sphacteria, does not agree with the actual length of *Sphagia*, which is 25 stadia. Lastly Thucydides, speaking of the bay of Pylus, calls it "a harbour of con-

b. Small channel connecting the *lagoon of Osmyn-Aga* with the *Bay of Navarino*.

siderable magnitude" (λιμένι ὄντι οὐ σμικρῷ); an expression which seems strange to be applied to the spacious *Bay of Navarino*, which was not only the largest harbour in Greece, but perfectly unlike the ordinary harbours of the Greeks, which were always closed artificially at the mouth by projecting moles when they were not sufficiently land-locked by nature.

In consequence of these difficulties Dr. Arnold raised the doubt whether the island now called *Sphagia* be really the same as the ancient Sphacteria, and whether the *Bay of Navarino* be the real harbour of Pylus. He started the hypothesis that the peninsula, on which the ruins of *Old Navarino* stand, is the ancient island of Sphacteria converted into a peninsula by an accumulation of sand at either side; and that the lagoon of *Osmyn-Aga* on its eastern side was the real harbour of Pylus, into which there was an opening on the north, at the port of *Voidhó-Kiliá*, capable of admitting two triremes abreast, and another at the south, where there is still a narrow opening, by which eight or nine triremes may have entered the lagoon from the

great harbour of *Navarino*. Upon this hypothesis Col. Leake observes, that in itself it is perfectly admissible, inasmuch as there is scarcely a situation in Greece on the low coasts, near the mouths of rivers, where, by the operation of waters salt or fresh, or both united, some change has not taken place since the times of ancient history; and that in the present instance, therefore, there is no great difficulty in imagining that the lagoon may be an ancient harbour converted into a lagoon by an accumulation of sand which has separated it from the sea. But, among the many difficulties which beset this hypothesis, there are two which seem quite fatal to it; one of which has been stated by Mr. Grote and the other by Col. Leake. The former writer remarks that, if the peninsula of *Old Navarino* was the real ancient Sphacteria, it must have been a second island situated to the northward of *Sphagia;* and that, consequently, there must have been *two* islands close together and near the scene. This, as Mr. Grote observes, is quite inconsistent with the narrative of Thucydides, which presupposes that there was only *one* island — Sphacteria, without any other near or adjoining to it. Thus the Athenian fleet under Eurymedon, on first arriving, was obliged to go back some distance to the island of Prote, because the island of Sphacteria was full of Lacedaemonian hoplites (Thuc. iv. 13); whereas, if the hypothesis of Dr. Arnold were admitted, there would have been nothing to prevent them from landing on Sphagia itself. It is true that Xenophon (*Hell.* vi. 2. § 3) speaks of Σφαγίαι in the plural, and that Pliny (iv. 12. s. 25) mentions "tres Sphagiae;" but two of them appear to have been mere rocks. The objection of Col. Leake is still more fatal to Dr. Arnold's hypothesis. He calls attention to the fact that the French Commission observed that the walls of the castle of *Old Navarino* stand in many parts on Hellenic foundations, and that in some places three courses of the ancient work remain, consisting of a kind of masonry which seems greatly to resemble that of Messene. Besides these remains of middle Hellenic antiquity, some foundations are traced of a more ancient inclosure at the northern end of the peninsula, with a descent to the little harbour of *Voidhó-Kiliá* by means of steps cut in the rock. Remains of walls of early date are to be seen likewise towards the southern extremity of the hill, among which is a tumulus; — all tending to prove that the entire peninsula of *Navarino* was occupied at a remote period of history by an ancient city. This peninsula could not, therefore, have been the ancient Sphacteria, which never contained any ancient town. The only way of reconciling the account of Thucydides with the present state of the coast is to suppose, with Mr. Grote and Curtius, that a great change has taken place in the two passages which separate *Sphagia* from the mainland since the time of Thucydides. The mainland to the south of *Navarino* must have been much nearer than it is now to the southern portion of *Sphagia*, while the northern passage also must have been both narrower and clearer. (Leake, *Morea*, vol. i. p. 401, seq., *Peloponnesiaca*, p. 190, seq.; Arnold, *Appendix to Thucydides*, vol. ii. p. 400, seq.; Grote, *Greece*, vol. vi. p. 427, seq.; Curtius, *Peloponnesos*, vol. ii. p. 173, seq.; Boblaye, *Récherches*, p. 113; *Expedition Scientifique de la Morée*, vol. i. pl. vii.)

It is unnecessary to relate here the events which followed the erection of the Athenian fort at Pylus, and which terminated with the capture of the Spartans in the island of Sphacteria, as they are given in every Grecian history. The following extract from Col. Leake illustrates the description of Thucydides in the most satisfactory manner: "The level and source of water in the middle where the Lacedaemonians encamped, — the summit at the northern end to which they retired, — the landing-places on the western side, to which the Helots brought provisions, — are all perfectly recognisable. Of the fort, of loose and rude construction on the summit, it is not to be expected that any remains should now exist; but there are some ruins of a signal-tower of a later age on the same site. The summit is a pile of rough rocks ending in a peak; it slopes gradually to the shore on every side, except to the harbour, where the cliffs are perpendicular, though here just above the water there is a small slope capable of admitting the passage of a body of men active in climbing among rocks and difficult places. By this pass it is probable the Messenians came upon the rear of the Lacedaemonians on the summit; for just at the southern termination of the pass there is a passage through the cliffs which border the greater part of the eastern shore of the island, so that by this opening, and along the pass under the rocks to the northward of it, the Messenians had the means of passing unseen from the centre of the island to the rear of the Lacedaemonians on the summit. Though this hill slopes gradually from its rocky peak to the shore on every side except towards the harbour, it does not admit of a landing at its foot, except in the calmest weather; nor is it easily assailed on any side by land, on account of the ruggedness of the summit, except by the means to which the Messenians resorted; so that the words of Thucydides respecting it are perfectly accurate (ἐκ θαλάσσης ἀπόκρημνον καὶ ἐκ τῆς γῆς ἥκιστα ἐπίμαχον). The southern extremity of the island is rocky, steep, and difficult of access, and forms a separate hill; in every other part the ground slopes from the cliffs on the side of the harbour to the western shore, which, though rocky, is low; so that when the weather is calm it is more easy in face of an opponent to land, and to make way into the island on that side than on the eastern shore, where the cliffs admit of an easy access only in two places, one towards the northern end, the other in the middle of the island, where an opening in the cliffs leads immediately into the most level part of it; exactly in the opening stands a small church of the *Panaghía*. There are also two small creeks adjacent to each other, near the southern end of the eastern side of the island, opposite to *Neókastro:* near these creeks there is a well. The principal source of water is towards the middle of the island, at an excavation in the rock 20 feet deep, which seems to be more natural than artificial; for below a shallow surface of soil, in which there is a circular peristomium of modern masonry, the excavation in the rock is irregular and slanting. In one or two places there are groves of high bushes, and there are low shrubs in every part of it. It often happens, as it did in the seventh summer of the Peloponnesian war, that a fire, occurring accidentally or of intention, clears the face of the island during the droughts of that season: the northern hill exhibits at this moment recent marks of a similar conflagration." (*Morea*, vol. i. 408, seq.)

The peninsula of Coryphasium is a precipice on

the eastern side or towards the lagoon; while on the western side or towards the open sea it slopes gradually, particularly on the SW., where Demosthenes succeeded in preventing the landing of Brasidas and the Lacedaemonians. The promontory is higher at the northern end. Below the ruined fortress at the northern end there is a fine cavern, called *Voidhó-Kiliá* (Βοϊδό-κοιλιά), "the ox's belly," which gives name to the small circular port immediately below it, which has been already spoken of. This cavern is 60 feet long, 40 wide, and 40 high, having a roof like a Gothic arch. The entrance is triangular, 30 feet long and 12 high; at the top of the cavern there is an opening in the surface of the hill above. This cave was, according to the Peloponnesian tradition, the one into which the infant Hermes drove the cattle he had stolen from Apollo. It is mentioned in the Homeric hymn to Hermes as situated upon the sea-side (v. 341); but in Antoninus Liberalis (c. 23) it is expressly said to have been at Coryphasium. In Ovid (*Met.* ii. 684) Mercury is represented as beholding from Mt. Cyllene the unguarded cattle proceeding into the fields of Pylus.

The bay of *Voidhó-Kiliá* is separated by a low semicircular ridge of sand from the large shallow lagoon of *Osmyn-Aga*. As neither Thucydides nor Pausanias says a word about this lagoon, which now forms so striking a feature in the topography of this district, we may confidently conclude, with Leake, that it is of recent formation. The peninsula must, in that case, have been surrounded with a sandy plain as Pausanias describes it; and accordingly, if we suppose this to have been the site of the Homeric Pylus, the epithet ἠμαθόεις, which the poet constantly gives to it, would be perfectly applicable.

The Athenians did not surrender their fortress at Pylus to the Lacedaemonians in accordance with the treaty made in B. C. 421 (Thuc. v. 35), but retained possession of it for fifteen years, and only lost it towards the close of the Peloponnesian War. (Diod. xiii. 64.) On the restoration of the Messenians to their country by Epaminondas, Pylus again appears in history. The remains of the walls already described belong to this period. On more than one occasion there was a dispute between the Messenians and Achaeans respecting the possession of this place. (Liv. xxvii. 30; Polyb. xviii. 25.) It was visited by Pausanias, who saw there a temple of Athena Coryphasia, the so-named house of Nestor, containing a picture of him, his tomb, and a cavern said to have been the stable of the oxen of Neleus and Nestor. He describes the latter as within the city; which must therefore have extended nearly to the northern end of the promontory, as this cave is evidently the one described above. (Paus. v. 36.) There are imperial coins of this city bearing the epigraph Πυλίων, belonging to the time of Severus. (Eckhel, vol. ii. p. 277.) It would appear from Leake that the restored city was also called Coryphasium, since he says that "at the time of the Achaean League there was a town of Coryphasium, as we learn from a coin, which shows that Coryphasium was a member of that confederacy." (*Peloponnesiaca*, p. 191.)

The modern name *Avarino*, corrupted, as already said, into *Navarino*, is probably due to the Avars, who settled there in the sixth century of the Christian era. The mediaeval castle was built by the widow of the Frankish chieftain William de la Roche. Her descendants sought a more convenient place for their residence, and erected on the southern side of the harbour the *Neókastro* or modern *Navarino*. It commanded the southern end of the harbour, which became more and more important as the northern entrance became choked up. Containing, as it does, the best harbour in the Peloponnesus, *Navarino* constantly appears in modern history. It was taken by the Turks in 1500. In 1685 it was wrested from them by the Venetian commander Morosini, and remained in the hands of the Venetians till 1715. In more recent times it is memorable by the great battle fought in its bay, on the 20th of October, 1827, between the Turkish fleet and the combined fleets of England, France, and Russia. (Curtius, *Peloponnesos*, vol. ii. p. 181.)

It remains to speak of the site of the Homeric Pylos. According to a generally received tradition, Neleus, the son of Poseidon, migrated from Iolcos in Thessaly, and founded on the west coast of Peloponnesus a kingdom extending westward as far as that of the Atridae, and northward as far as the Alpheius, or even beyond this river. Neleus incurred the indignation of Hercules for refusing to purify him after the murder of his son Iphitus. The hero took Pylus and killed Neleus, together with eleven of his twelve sons. But his surviving son Nestor upheld the fame of his house, and, after distinguishing himself by his exploits in youth and manhood, accompanied in his old age the Grecian chiefs in their expedition against Troy. Upon the invasion of Peloponnesus by the Dorians, three generations after Nestor, the Neleids quitted Pylus and removed to Athens, where they obtained the kingly power. The situation of this Pylus — the Πύλος Νηλήϊος, as it was called — was a subject of much dispute among the Grecian geographers and grammarians. Strabo (viii. p. 339) quotes a proverbial verse, in which three towns of this name were mentioned —

ἔστι Πύλος πρὸ Πύλοιο· Πύλος γέ μέν ἐστι καὶ ἄλλος,—

of which the former half — Ἔστι Πύλος πρὸ Πύλοιο — was at least as old as the time of Aristophanes, when Pylus became famous by the capture of the Spartans at Sphacteria. (Aristoph. *Equit.* 1059.) The claims of the Eleian Pylus to be the city of Nestor may be safely set on one side; and the choice lies between the towns in Triphylia and Messenia. The ancients usually decided in favour of the Messenian Pylos. This is the opinion of Pausanias (iv. 36), who unhesitatingly places the city of Nestor on the promontory of Coryphasium, although, as we have already seen, he agrees with the people of Elis that Homer, in describing the Alpheius as flowing through the land of the Pylians (*Il.* v. 545), had a view to the Eleian city. (Paus. vi. 22. § 6.) It is however, much more probable that the "land of the Pylians" was used by the poet to signify the whole kingdom of the Neleian Pylus, since he describes both Thryoessa on the Alpheius and the cities on the Messenian gulf as the extreme or frontier places of Pylus. (Θρυόεσσα πόλις . . . νεάτη Πύλου ἠμαθόεντος, *Il.* xi. 712; νέαται Πύλου ἠμαθόεντος, *Il.* ix. 153.) In this sense these expressions were understood by Strabo (viii. pp. 337, 350). It is curious that Pausanias, who paid so much attention to Homeric antiquities, does not even allude to the existence of the Triphylian Pylus. Pindar calls Nestor "the Messenian old man." (*Pyth.* vi. 35.) Isocrates

mentions Messenia as his birthplace (*Panath.* § 72); and Pherecydes (*ap.* Schol. *ad Hom. Od.* xi. 289) and Eustathius (*ad Od.* iii. p. 1454) describes the Messenian Pylus as the city founded by Peleus. This was also the opinion of Diodorus (xv. 66), and of many others. In opposition to their views, Strabo, following the opinion of the Ὁμηρικώτεροι, argues at great length that the Triphylian Elis was the city of Nestor. (Strab. viii. pp. 339, seq., 348, seq.) He maintains that the description of the Alpheius flowing through the land of the Pylians (*Il.* v. 545), which, as we have already seen, was the only argument which the Eleians could adduce for their claim, is applicable to the Triphylian Pylus; whereas the poet's mention of Nestor's exploits against the Epeians (*Il.* xi. 670, seq.) is fatal to the supposition of the Messenian city being his residence. Nestor is described as making an incursion into the country of the Epeians, and returning thence with a large quantity of cattle, which he safely lodges by night in the Neleian city. The third day the Epeians, having collected their forces on the Alpheius, Nestor marched forth from Pylus, and at the end of the first day halted at the Minyeius (subsequently called the Anigrus), where he passed the night; starting from thence on the following morning, he arrived at the Alpheius at noon. Strabo argues that neither of these events could have taken place if Nestor had marched from so distant a city as the one at Coryphasium, while they might easily have happened if the Neleian city had been situated at the Triphylian Pylus. Again he argues from the Odyssey that the Neleid Pylus could not have been on the sea-coast, since Telemachus, after he had disembarked at the temple of Poseidon and had proceeded to Pylus, sent a courier to his ship to fetch his companions (*Od.* iii. 423); and on his return from Sparta to Pylos, he desired Pisistratus to turn off to the sea-side, that he might immediately embark, as he wished not to be detained in the city by Nestor. (*Od.* xv. 199, seq.) These arguments, as well as others, adduced by Strabo, have convinced K. O. Müller (*Orchomenos*, p. 357, seq.), Thirlwall (*Hist. of Greece*, vol. i. p. 96), and several modern scholars; but Leake, Curtius, and others have adhered, with much greater probability, to the more common view of antiquity, that the Neleian Pylus was situated at Coryphasium. It has been shown that Pylus was frequently used by Homer to signify the Neleid kingdom, and not simply the city, as indeed Strabo himself had admitted when arguing against the claims of the Eleian Pylus. Moreover, even if it should be admitted that the account of Nestor's exploits against the Epeians agrees better with the claim of the Triphylian Pylus, yet the narrative of the journeys of Telemachus is entirely opposed to this claim. Telemachus in going from Pylus to Sparta drove his horses thither, without changing them, in two days, stopping the first night at Pherae (*Od.* iii. 485); and he returned from Sparta to Pylus in the same manner. (*Od.* xv. 182, seq.) Now the Messenian Pylus, Pherae, and Sparta, lie in a direct line, the distance from Pylus to Pherae being about 35 miles by the road, and from Pherae to Sparta about 28 miles. On the other hand, the road from the Triphylian Pylus to Sparta would have been by the valley of the Alpheius into that of the Eurotas; whereas Pherae would have been out of the way, and the distance to it would have been much more than a day's journey. superseded by that of DEMETRIUM, derived from the temple of Demeter, spoken of by Homer, and which Strabo describes as distant two stadia from Pyrasus. Demetrium is mentioned as a town of Phthiotis by Scylax (p. 24, Hudson), Livy (xxviii. 6), Stephanus B. (*s. v.* Δημήτριον), and Mela (ii. 3). Leake places Pyrasus at *Kókkina*, where there are vestiges of an ancient town, consisting of wrought quadrangular blocks, together with many smaller fragments, and an oblong height with a flat summit, partly if not wholly artificial. He also states that at *Kókkina* there is a circular basin full of water near the shore, which was once probably a small harbour, since there are traces of a mole not far from it. The exact site of the temple was probably at a spot, 5 minutes short of *Kókkina*, where exist many stones and some hewn blocks. (Leake, *Northern Greece*, vol. iv. p. 366.)

PYRENAEI MONTES (τὰ Πυρηναῖα ὄρη, Ptol. i. 15. § 2, viii. 4. § 2; Strab. ii. p. 71, iii. p. 161, &c.; Polyb. iii. 34), called also Pyrenaeus Mons (Mela, ii. 5; Plin. iii. 3. s. 4, &c.). Pyrenaeus Saltus (Liv. xxi. 23, &c.; Plin. iv. 19. s. 33), Pyrenaeum Jugum (Mela, iii. 1), and M. Pyrene (Πυρήνη, Strab. ii. p. 160, &c.; Sil. Ital. iii. 417; Aus. *Ep.* xxv. 51), the lofty chain of mountains which divides Spain from Gaul. It was fabled to derive its name from the Greek word πῦρ, *fire*, from a great conflagration which, through the neglect of some shepherds, destroyed its woods, and melted the ore of its mines, so that the brooks ran with molten silver. (Strab. iii. p. 147; Diod. v. 25; Arist. *Mir. Ausc.* 88; Sen. *Q. N.* 1.) Silius Italicus (*l. c.*) derives its name from Pyrene, a daughter of the king of the Bebryces; but its true etymology is probably from the Celtic word *byrin* or *bryn*, signifying a mountain. (Cf. Astruc. *Mém. de l'Hist. Nat. de Languedoc*, iii. 2.) Herodotus seems to have had some obscure intelligence respecting the Pyrenees, as he mentions (ii. 33), a place called Pyrene, near which the Ister had its source. Strabo (iii. pp. 137, 161) erroneously describes the chain as running from S. to N.; but its true direction, namely, from SE. to NW., is given by Pliny (iv. 20. s. 34), and Marcian (*Heracl.* p. 38). According to Diodorus (v. 35) it is 3000 stadia in length; according to Justin (xliv. 1) 600 Roman miles. After the Alps, and the mountains of Sarmatia, the Pyrenees were esteemed the highest mountains in Europe (Agathem. ii. 9, p. 47; Eustath. *ad Dionys.* 338; Diod. *l. c.*), whence they are sometimes described by the poets as covered with eternal snow. (Lucan. iv. 84, seq.) On the side of Gaul they are steep, rugged, and bare; whilst on the Spanish side they descend gradually to the plain, are thickly wooded, and intersected with delicious valleys. (Strab. iii. p. 161.) Their western prolongation along the Mare Cantabricum, was called "Saltus Vasconum," which derived its name from the Vascones, who dwelt there. (Plin. iv. 20. s. 34.) This portion now bears the names of *Sierra de Orcamo, S. de Augana* and *S. Sejos*. Still farther W. was Mons Vinnius or Vindius (Οὐίνδιον ὄρος, Ptol. vii. 1. § 21; Flor. iv. 12), which formed the boundary between the Cantabri and Astures. The Pyrenees form several promontories, both in the Mediterranean sea and the Atlantic ocean. (Strab. ii. p. 120, iii. p. 160, iv. p. 176, &c.; Mela, ii. 5; Sil. It. iii. 417, seq.) They were rich in mines of gold, silver, iron and lead (Strab. iii. p. 146; Plin. *l. c.*), and contained extensive forests, as well as the sources of the Garumna, the Iberus, and a number of smaller rivers. (Strab. *l. c.*, and iv. p 182.) Only three roads over them were known to the Romans; the most westerly, by Carasae (now *Garis*), not far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the *Bidasoa* by *Fuenterabia;* the most easterly, which was also the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now *Junquera*); and one which lay between these two, leading from Caesaraugusta to Benearnum (now *Barege*). (*Itin. Ant.* pp. 390, 452, 455; Strab. iii. p. 160; Liv. xxi. 23, &c.) Respecting the present condition of the Pyrenees, the reader may consult Miñano, *Diccionario*, vii. p. 38, seq.; Huber, *Skizzen aus Spanien*, Gött. 1833; and Ford, *Handbook of Spain*, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer watering-places and sensual, the Spanish side is rude, savage, and Iberian, the lair of the smuggler and wild bird and beast." [T. H. D.]

PYRENAEI PORTUS. [INDIGETES.]

PYRE'NES PROMONTO'RIUM. [HISPANIA, Vol. I. p. 1084.]

PY'RETUS (Πυρετός), called by the Scythians Πόρατα, described by Herodotus (iv. 48) as a large river of Scythia, flowing in an easterly direction and falling into the Danube. The modern *Pruth*.

PYRGI (Πύργοι: *Eth.* Pyrgensis: *Santa Severa*), a city on the coast of Etruria, situated between Alsium and Castrum Novum, and distant 34 miles from Rome. (*Itin. Ant.* p. 290.) It was rather more than 6 miles (50 stadia) from Caere, of which it served as the port (Strab. v. p. 226), but it is probable that it was not originally designed for that purpose, but grew up in the first instance around the temple of Eileithyia, for which it continued to be celebrated at a much later period. (Strab. *l. c.*; Diod. xv. 14.) The foundation of this temple is expressly ascribed to the Pelasgians, and the pure Greek form of the name certainly tends to corroborate this statement. It is probable that both Pyrgi and the neighbouring Caere were originally Pelasgian settlements, and that this was the cause of the close connection between the two, which led to Pyrgi ultimately passing into the condition of a dependency on the more powerful city of the interior. Virgil calls it an ancient city (Pyrgi veteres, *Aen.* x. 184), and represents it as one of the Tuscan cities that sent assistance to Aeneas. But the only mention of Pyrgi in history during the period of Etruscan independence is in B. C. 384, when the treasures of its temple attracted the cupidity of Dionysius of Syracuse, who made a piratical descent upon the coast of Etruria, and, landing his troops at Pyrgi in the night, surprised and plundered the temple, from which he is said to have carried off spoils to the value of 1000 talents. (Diod. xv. 14; Strab. v. p. 226; Arist. *Oecon.* ii. 21; Polyaen. v. 2. 21.) The amount of the booty seems incredible, but the temple was certainly very wealthy: and it would seem that the people of Pyrgi had given some excuse for the aggression, by themselves taking an active part in the piracies carried on at this period by the Etruscans in general. Servius, indeed, represents it as bearing the chief part in those depredations; but this may probably be an exaggeration. (Serv. *ad Aen.* x. 184.) It

could never have been a large town, and appears under the Romans to have sunk into comparative insignificance. It is indeed noticed by Livy, together with Fregenae and Castrum Novum, as one of the maritime colonies which in B.C. 191 contended in vain for exemption from military levies (Liv. xxxvi. 3); but we have no account of the time at which the colony was established there, nor does any subsequent mention of it occur in that capacity. Its name is mentioned by all the geographers among the towns on the coast of Etruria; but Strabo terms it only a small town (πολίχνιον), and Servius calls it in his time merely a fort (castellum), which would agree well with the character of the remains. (Strab. v. p. 225; Mel. ii. 4; Plin. iii. 5. s. 1; Ptol. iii. 1. § 4; Martial, xii. 2; Serv. *ad Aen. l. c.*) But in the time of Rutilius it had altogether sunk into decay, and its site was occupied only by a large villa. (Rutil. *Itin.* i. 223.) No subsequent notice of it is found until it reappears in the middle ages under the title of *Santa Severa.*

The Itineraries vary much in the distances they assign between Pyrgi and the other stations on the coast; but they agree in placing it between Alsium and Castrum Novum: and this circumstance, coupled with the distance of 50 stadia from Caere, given by Strabo, leaves no doubt that it is correctly identified with *Sta Severa.* (Strab. v. p. 226; *Itin. Ant.* pp. 290, 301; *Itin. Marit.* p. 498; *Tab. Peut.*) The site of the fortress of that name is unquestionably that of an ancient city. The walls of the present castle, which is of mediaeval date, are based on foundations of very ancient character, being constructed of polygonal blocks of stone of large size, neatly fitted together without cement, in the same manner as the walls of Cosa and Saturnia. The line of these foundations, which are undoubtedly those of the walls of the ancient city, may be traced throughout their whole extent, enclosing a quadrangular space of about half a mile in circuit, abutting on the sea. Some remains of Roman walls of later date occur at the extremities on the sea-coast; but no remains have been found of the celebrated temple which was probably situated within the enclosure; nor are there any traces of the ancient port, which must have been wholly artificial, there being no natural inlet or harbour. (Canina, in the *Ann. dell' Inst. Arch.* 1840, pp. 35—44; Dennis, *Etruria*, vol. ii. pp. 11—16.) The goddess to whom the temple was dedicated is called by Strabo Eileithyia, but several other writers call her Leucothea (Arist. *l. c.*; Polyaen. *l. c.*), who was identified with the Mater Matuta of the Romans. There is no doubt that the same deity is meant by both appellations. (Gerhard, *Gottheiten der Etrusker*, pp. 9, 25.) [E. H. B.]

PYRGUS or PYRGI. 1. (Πύργος, Her. Polyb.; Πύργοι, Strab., Steph. B. *s. v.*: *Eth.* Πυργίτης), the most southerly town of Triphylia in Elis, at the mouth of the river Neda, upon the Messenian frontier (Strab. viii. p. 348), and hence described by Stephanus B. (*s. v.*) as a Messenian town. It was one of the settlements of the Minyae. (Herod. iv. 148.) It opened its gates to Philip in the Social War. (Polyb. iv. 77, 80.) Leake places Pyrgi at some ancient remains upon the right bank of the Neda, not far from its mouth. (*Morea*, vol. i. p. 57, vol. ii. p. 207.)

2. A town in hollow Elis in a district named Perippia, which Polybius mentions in conjunction with Lasion. (Polyb. v. 102; comp. Liv. xxvii. 32.)

epigram of Xeinagoras, a Greek mathematician, who measured the height of Olympus from these parts (*ap.* Plut. *Aemil. Paul.* 15). Games were also celebrated here in honour of Apollo. (Steph. B. *s. v.* Πύθιον.) Pythium commanded an important pass across Mount Olympus. This pass and that of Tempe are the only two leading from Macedonia into the north-east of Thessaly. Leake therefore places Pythium on the angle of the plain between *Kokkinopló* and *Livádhi*, though no remains of the ancient town have been discovered there. (Liv. xlii. 53; Plut., Steph. B., *ll. cc.*; Ptol. iii. 13. § 42; Leake, *Northern Greece*, vol. iii. p. 341, seq.)

PYTHO. [DELPHI.]

PYTHO'POLIS. [MYTHEPOLIS.]

PYXIRATES. [EUPHRATES.]

PYXITES (Πυξίτης), a small river in the east of Pontus, emptying itself into the Euxine 60 stadia on the north-east of Prytanis. (Plin. vi. 4; Arrian, *Peripl. P. E.* p. 6; Anonym. *Peripl. P. E.* p. 15.) It is possibly the same as the Cissa mentioned by Ptolemy (v. 6. § 6), and is commonly identified with the modern *Vitzeh*. [L.S.]

PYXUS. [BUXENTUM.]

Q.

QUACERNI. [QUERQUERNI.]

QUADI (Κουάδοι), a great German tribe in the south-east of Bohemia, in Moravia and Hungary, between Mons Gabreta, the Hercynian and Sarmatian mountains, and the Danube. (Tac. *Germ.* 42, *Ann.* xii. 29, *Hist.* iii. 5, 21; Ptol. ii. 11. § 26; Plin. iv. 25.) They were surrounded on the north-west by the Marcomanni, with whom they were always closely connected, on the north by the Gothini and Osi, on the east by the Jazyges Metanastae, and on the south by the Pannonians. It is not known when they came to occupy that country, but it seems probable that they arrived there about the same time when the Marcomanni established themselves in Bohemia. At the time when the Marcomannian king Maroboduus and his successor Catualda, on being driven from their kingdom, implored the protection of the Romans, the latter in A. D. 19 assigned to them and their companions in exile the districts between the rivers Marus and Cusus, and appointed Vannius, a Quadian, king of the territory (Tac. *Ann.* ii. 63; Plin. iv. 25). This new kingdom of the Quadi, after the expulsion of Vannius, was divided between his nephews Vangio and Sido, who, however, continued to keep up a good understanding with the Romans. (Tac. *Ann.* xii. 29, 30.) Tacitus (*Germ. l. c.*) says that down to his own time the Marcomanni and Quadi had been governed by kings of the house of Maroboduus, but that then foreigners ruled over them, though the power of these rulers was dependent on that of the Roman emperors. At a later time the Quadi took an active part in the war of the Marcomanni against the Romans, and once nearly annihilated the whole army of M. Aurelius, which was saved only by a sudden tempest. (Dion Cass. lxxi. 8). Notwithstanding the peace then concluded with them, they still continued to harass the Romans by renewed acts of hostility, and the emperor was obliged, for the protection of his own dominions, to erect several forts both in and around their kingdom, in consequence of which the people were nearly driven to abandon their country. (Dion Cass. lxxi. 11, 13, 20.) In A. D. 180 the emperor Commodus renewed the peace with them (Dion Cass. lxxii. 2; Lamprid. *Com.* 3; Herodian, i. 6), but they still continued their inroads into the Roman empire (Eutrop. ix. 9; Vopisc. *Aurel.* 18; Amm. Marc. xvii. 12, xxix. 6). Towards the end of the fourth century the Quadi entirely disappear from history; they had probably migrated westward with the Suevi, for Quadi are mentioned among the Suevi in Spain. (Hieron. *Ep.* 9.) According to Ammianus Marcellinus (xvii. 12) the Quadi resembled in many respects the Sarmatians, for they used long spears and a coat of mail consisting of linen covered with thin plates of horn; they had in war generally three swift horses for every man, to enable him to change them, and were on the whole better as skirmishers than in an open battle in the field. Ptolemy (*l. c.*) mentions a considerable number of towns in their country, such as Eburodunum, Meliodunum, Caridorgis, Medoslanium, &c.; the Celtic names of which suggest that those districts previous to the arrival of the Quadi had been inhabited by Celts, who were either subdued by them or had become amalgamated with them. The name Quadi itself seems to be connected with the Celtic word col, cold, or coad, that is, a wood or forest, an etymology which receives support from the fact that Strabo (vii. p. 290), the first ancient author that notices them, mentions them under the name of Κόλδουοι. Tacitus evidently regards them as Germans, but Latham (*ad Tac. Germ.* p. 154) is inclined to treat them as Sarmatians. (Comp. Wilhelm, *Germanien*, p. 223, fol.) [L. S.]

QUADIA'TES. In the inscription on the arch of Susa, published by Maffei, there is a list of the Alpine peoples who were under the dominion of Cottius. The first name is the Seguvii, and the last is the Quadiates. There is nothing that enables us to fix the position of the Quadiates.

Pliny (iii. 4) mentions a people in Gallia Narbonensis under the name of Quariates. After naming the Oxybii and Lingauni [LINGAUNI], he adds: "Super quos Suetri, Quariates, Adunicates." The valley of *Queiras* on the left bank of the *Durance*, below *Briançon*, and a little above *Embrun*, is supposed to represent the position of the Quariates. D'Anville conjectures that the Quadiates of the inscription may be the same as the Quariates, for the R of the inscription, if it is not very clear, may have been taken for a D; or the complete name may have been Quadriates, the name of *Queiras* in old records being Quadriatium. [G. L.]

QUADRA'TA (sc. Castra). 1. A Roman fort in Upper Pannonia, on the river Savus, between the towns of Noviodunum and Siscia. (*It. Ant.* pp. 260, 274; Geogr. Rav. iv. 19; *Tab. Peut.*) No remains appear to be extant, and the site accordingly is unknown.

2. A fort in Upper Pannonia, on the road between Arrabona and Carnuntum, not far from the banks of the Danube. (*It. Ant.* p. 247.) Muchar (*Noricum*, p. 264) identifies it with a place between *Ovar* and *Oroszvar*, now occupied by a large farm of Count Zitsi. [L. S.]

QUADRA'TAE, a village or station in Gallia Cisalpina, on the road from Augusta Taurinorum to Ticinum. The Itineraries place it 22 or 23 miles from the former city and 16 or 19 from Rigomagus (*Itin. Ant.* pp. 340, 356; *Itin. Hier.* p. 557); but the latter station is itself of uncertain site. Quadratae must have been situated between *Chivasso*

and *Crescentino*, near the confluence of the *Dora Baltea* with the *Po*; but the exact site has not been determined. Though the name is not mentioned by any of the geographers, it would seem to have been in the later ages of the Empire a place or station of importance, as we learn from the Notitia that a body of troops (Sarmatae Gentiles) was permanently stationed there. (*Notit. Dign.* vol. ii. p. 121.) [E. H. B.]

QUADRIBU'RGIUM. Ammianus Marcellinus (xviii. 2) mentions Quadriburgium among the fortresses on the Rhine which Julian repaired: "Civitates occupatae sunt septem, Castra Herculis, Quadriburgium, Tricesimae, Novesium, Bonna, Antunnacum et Bingio." There is however some corruption in the passage (note of Lindenbrog). The places seem to be mentioned in order from north to south. D'Anville conjectures that Quadriburgium is the same place as Burginatium [BURGINATIUM], following Cluver and Alting. (Ukert, *Gallien*, p. 528.) Other geographers conjecture solely from the resemblance of name that it may be *Qualburg*, not far from *Clève*, which appears to have been a Roman place, for Roman coins and inscriptions have been found there. [G. L.]

QUARIA'TES. [QUADIATES.]

QUARQUERNI, a people in Istria, of uncertain site. (Plin. iii. 19. s. 23.)

QUARQUERNI. [QUERQUERNI.]

QUARTENSIS LOCUS, a place mentioned in the Not. Imp. as under the command of the governor of Belgica Secunda: "Praefectus classis Sambricae in loco Quartensi sive Hornensi." The place seems to be *Quarte* on the *Sambre*, which keeps the ancient name. The word *Quarte* indicates a distance of iv. from some principal place, it being usual for chief towns to reckon distances along the roads which led from them to the limits of their territory. This principal place to which Quartensis belonged was Bagacum (*Bavai*), and the distance from *Quarte* to *Bavai* is four Gallic leagues. The great Roman road from Durocortorum (*Reims*) to *Bavai* passed by *Quarte*. "Quartensis" is the adjective of a form "Quartus" or "Quarta," and Quarta occurs in an old record of the year 1125, "Altare de Quarta supra Sambram," which is the church of *Quarte*. [G. L.]

QUERQUERNI (Plin. iii. 3. s. 4; Quarquerni, *Inscr. ap. Gruter*, p. 245. 2; Quacerni, Κουακερνοί, Ptol. ii. 6. § 47), a people in the NW. of Hispania Tarraconensis, a subdivision of the Gallaeci Bracarii.

QUERQUE'TULA (*Eth.* Querquetulanus; Κορκοτουλανός, Dionys.), an ancient city of Latium, mentioned only by Pliny among the populi Albenses, or extinct communities of Latium, and by Dionysius among the the Latin cities which constituted the league against Rome. (Plin. iii. 5. s. 9; Dionys. v. 61.) Neither passage affords the slightest clue to its position, and the name is not elsewhere mentioned; indeed, it seems certain that the place was not in existence at a later period. It is undoubtedly erroneous to connect (as Gell has done) the name of the Porta Querquetulana at Rome with this city (Becker, *Handbuch*, vol. i. p. 170); and we are absolutely in the dark as to its position. It has been placed by Gell and Nibby at a place called *Corcollo*, about 3 miles NE. of Gabii and the same distance from Hadrian's villa near *Tivoli*; but this is a mere conjecture. (Gell, *Top. of Rome*, p. 369; Nibby, *Dintorni*, vol. ii. p. 668.) [E. H. B.]

QUINDA. [ANAZARBUS.]

QUINTA'NAE or AD QUINTA'NAS, a station on the Via Labicana or Latina, 15 miles from Rome, and at the foot of the hill occupied by the ancient city of Labicum, now *La Colonna*, from which it was about a mile distant. (*Itin. Ant.* p. 304; Gell, *Top. of Rome*, p. 5.) Under the Roman Empire it became the site of a village or suburb of Labicum, the inhabitants of which assumed the name of Lavicani Quintanenses. [LABICUM.] [E. H. B.]

QUINTIA'NA CASTRA, a fort in the east of Vindelicia, not far from the banks of the Danube, between Batava Castra and Augustana Castra. Its garrison consisted of a troop of Rhaetian horsemen. (*It. Ant.* p. 249; *Notit. Imp.*, where it is called Quartana Castra; comp. Eugipp. *Vit. S. Severini*, 15, 27.) Muchar (*Noricum*, p. 285) identifies its site with that of the modern village of *Künzen*. [L. S.]

QUIZA (Κουΐζα, also Βουΐζα, Ptol. iv. 2. § 3), a place on the coast of Mauretania Caesariensis, called by Ptolemy a colonia, and in the Antonine Itinerary a municipium, but in Pliny designated as "Quiza Xenitana preregrinorum oppidum." It was situated between Portus Magnus and Arsenaria, at the distance of 40 stadia from either. It is the modern *Giza* near *Oran*. (Ptol. *l. c.*; *It. Ant.* p. 13; Plin. v. 2; Mela, i. 6.)

R.*

RAAMAH. [RHEGMA.]

RAAMSES (Ῥαμεσσῆ, LXX., *Exod.* i. 11, xii. 37; *Numb.* xxxiii. 3, 5), was, according to D'Anville (*Mém sur l'Egypte*, p. 72), identical with Heroopolis in the Delta; but according to other writers (Jablonsky, *Opusc.* ii. p. 136; Winer, *Bibl. Realwörterbuch*, vol. ii. p. 351) the same as Heliopolis in the same division of Aegypt. [W.B.D.]

RABBATH-AMMON. [PHILADELPHIA.]

RABBATH-MOAB, a town in the country of Moab, stated by Stephanus, who is followed by Reland, Raumer, Winer, and other moderns, to be identical with Ar of Moab, the classical Areopolis. This identification is almost certainly erroneous; and indeed it is very doubtful whether a Rabbath did exist at all in the country of Moab All the notices of such a name in the Bible are identified with Rabbath-Ammon, except in Joshua (xiii. 25), where Aroer is said to be "before Rabbah," which may possibly be Rabbath-Ammon, and certainly cannot, in the absence of other ancient evidence, be admitted to prove the existence of a Rabbath in Moab. There is, however, some evidence that such a town may have existed in that country, in the modern site of *Rabba*, marked in Zimmerman's map about halfway between *Kerak* (Kir of Moab) and the *Mojeb* (Arnon), and by him identified with Areopolis, which last, however, was certainly identical with Ar of Moab, and lay further north, on the south bank of the Arnon, and in the extreme border of Moab (*Numb.* xxi. 15, xxii. 36). [AREOPOLIS.] *Rabba* is placed by Burckhardt 3 hours north of *Kerak* (*Syria*, p. 377), and is doubtless the site noticed in Abulfeda's *Tabula Syriae* as *Rabbath* and *Mab* (90). Irby and Mangles

* For those articles not found under RA-, RE-, RI-, &c., see RHA-, RHE-, RHI-, &c.

passed it two hours north of *Kerak.* "The ruins," they say, "are situated on an eminence, and present nothing of interest, except two old ruined Roman temples and some tombs. The whole circuit of the town does not seem to have exceeded a mile, which is a small extent for a city that was the capital of Moab, and which bore such a high-sounding Greek name." (*Journal*, June 5, p. 457.) They must not be held responsible for the double error involved in the last cited words, regarding the etymology of the name Areopolis, and its identity with Rabbath, which are almost universal. [G. W.]

RAGAE. [RHAGAE.]

RAGANDO or RAGINDO, a town in the south-east of Noricum, on the great road leading from Celeia to Poetovium, between the rivers Savus and Dravus. (*It. Ant.* p. 129; *It. Hieros.* p. 561; *Tab. Peut.*) Muchar (*Noricum*, p. 240) looks for its site near *Mount Studenitz;* but other geographers entertain different opinions, and nothing certain can be said. [L. S.]

RAGAU (Ῥαγαῦ, Isidor. *Stathm. Parth.* § 13), a town mentioned by Isidorus in the district of Parthia called Apavarctene. It is probably the same place as the Ragaea of Ptolemy (Ῥαγαία, vi. 5. § 4). It is not clear whether there exist at present any remains of this town, but it must have been situated to the E. of *Nisházpur*, between that town and *Herát.* [V.]

RAGIRAVA. [RAPAVA.]

RAMAH (Ῥαμά). 1. A city of the tribe of Benjamin, mentioned with Gibeon and Beeroth (*Josh.* xviii. 25), and elsewhere with Bethel, as in or near Mount Ephraim. (*Judges*, iv. 5.) From xix. 13 of Judges it would appear to have been not far north of Jerusalem, and lying near to Gibeah of Benjamin. Being a border city between the kingdoms of Israel and Judah, it was fortified by Baasha king of Israel, "that he might not suffer any to go out or come in to Asa, king of Judah." (1 *Kings*, xv. 17, comp. xii. 27.) It is placed by Eusebius 6 miles north of Jerusalem, over against Bethel (*Onomast. s. v.*), and by S. Jerome 7 miles from Jerusalem near Gabaa, and was a small village in his day. (*Comment. in Hos.* cap. v., *in Sophon.* cap. i.) Josephus places it 40 stadia from Jerusalem. (*Ant.* viii. 12. § 3.) Its site is still marked by the miserable village of *Er-Râm*, situated on a hill on the east of the *Nablús* road, 2 hours north of Jerusalem, and half an hour west of *Jeba'*, the ancient Gibeah. Its situation is very commanding, and it retains a few scattered relics of its ancient importance. (Robinson, *Bibl. Res.* vol. ii. pp. 315, 316.)

2. See also RAMATHA and RAMOTH. [G. W.]

RAMATH-LEHI, or simply LEHI (translated in LXX. Ἀναίρεσις σιαγόνος), where Samson slew the Philistines with the jaw-bone of an ass. (*Judges*, xv. 14—19.) The name *Ramleh* appears so like an abbreviation or contraction — perhaps a corruption —of this name, that it may well be identified as the scene of this slaughter. And here probably was the Ramah in the Thamnitic toparchy in which Eusebius and S. Jerome found the Ramathaim Sophim of Samuel, and the Arimathaea of the Evangelists, which they place near to Lydda in the plain. (*S. Matth.* xxvii. 57; *S. Mark*, xv. 42; *S. Luke*, xxiii. 50; *S. John*, xix. 38, Ἀριμαθαία; Eusebius, *Onomast. s.v. Armatha Sophim;* S. Jerome, *Epitaph. Paulae*, p. 673.) Dr. Robinson, indeed, controverts all these positions; but his arguments cannot prevail against the admitted facts, "that a place called Ramathem or Ramatha did anciently exist in this region, somewhere not far distant from Lydda" (*Bibl. Res.* vol. iii. p. 40), and that no other place can be found answering to this description but *Ramleh*, which has been regarded from very early times as the place in question. The facts of *Ramleh* having been built by Suliman, son of the khalif Abd-el-Melik, after the destruction of Lydda in the early part of the 8th century, and that the Arabic name signifies "the sand," will not seriously militate against the hypotheses with those who consider the great probability that the khalif would fix on an ancient, but perhaps neglected, site for his new town, and the common practice of the Arabs to modify the ancient names, to which they would attach no meaning, to similar sounds intelligible to them, and in this instance certainly not less appropriate than the ancient name; although the situation of the town "on a broad low swell in the sandy though fertile plain," would satisfy the condition required by its presumed ancient designation. (*Bibl. Res.* vol. iii. p. 25—43.) It may be questioned whether the *nomus* of Ramathem, mentioned with those of Apheirema and Lydda, as taken from Samaritis and added to Judaea (1 *Maccab.* xi. 34; Josephus, *Ant.* 2. § 3, 4. § 9), derived its name from this or from one of the other Ramahs, in Benjamin. [G. W.]

RAMATHA (Ῥαμαθά), the form in which Josephus represents the name of Samuel's native city, Ramathaim Sophim (LXX. Ἀρμαθαὶμ Σιφά) of Mount Ephraim (1 *Sam.* i. 1), perhaps identical with Ramah, where was his ordinary residence (vii. 17, viii. 4, xix. 18—24, xxv. 1), but distinct from the Ramah above named. Ancient tradition has fixed this city at *Neby Samwil*, i. e. "The Prophet Samuel," a village situated on a very high and commanding hill, two hours to the NNW. of Jerusalem, where the place of his sepulture is shown. Eusebius and S. Jerome, however, found it in the western plain, near Lydda (*Onomast. s. v. Armatha Sophim;* see RAMATH-LEHI). Dr. Robinson has stated his objections to the identification of Ramathaim Sophim with *Neby Samwil*, and has endeavoured to fix the former much further to the south, on the hill called *Sóba*, a little to the south of the *Jaffa* road, about 3 hours from Jerusalem; while Mr. Wolcott has carried it as far south as the vicinity of Hebron. (Robinson, *Bibl. Res.* vol. ii. pp. 139—144, 330—334, *Bibl. Sacra*, vol. i. pp. 44—52.) These objections are based on the hypothesis that the incidents attending Saul's unction to the kingdom, narrated in 1 *Sam.* ix. x., took place in Ramah of Samuel, of which, however, there is no evidence; and his difficulty would press almost with equal weight on *Sóba*, as the direct route from *Sóba* to Gibeah (*Jeba'*) would certainly not have conducted Saul by Rachel's sepulchre. Neither can the district of Mount Ephraim be extended so far south. Indeed, this last seems to be the strongest objection to *Neby Samwil*, and suggests a site further north, perhaps *Ram-Ullah*, in the same parallel of latitude as the other Ramah and Bethel, which were certainly in Mount Ephraim. (*Judges*, iv. 5.) On the other hand, the name Ramah, signifying "a height," is so remarkably applicable to *Neby Samwil*, which is evidently the site of an ancient town, which could not, as Dr. Robinson suggests, have been Mizpah, that it would be difficult to find a position better suited to Ramathaim Sophim than that which tradition has assigned it. [MIZPAH.] [G. W.]

RAMATHAIM-ZOPHIM. [RAMATHA.]

RAMBA'CIA (Ῥαμβακία, Arrian, *Anab.* vi. 21), a village of the Oritae, the first which was taken by Alexander the Great in his march westwards from the Indus. There can be no certainty as to its exact position, but the conjecture of Vincent seems well grounded that it is either the *Ram-nagar* or the *Ram-gur* of the *Ayín Akbari*. (Vincent, *Voyage of Nearchus*, vol. i. p. 185.) [V.]

RAME, a place in Gallia Narbonensis, which the Itins. fix on the road between Embrodunum (*Embrun*) and Brigantium (*Briançon*). D'Anville says that there is a place called *Rame* on this road near the *Durance*, on the same side as *Embrun* and *Briançon*, and at a point where a torrent named *Biesse* joins the *Durance*. [G. L.]

RAMISTA or REMISTA, a place in Upper Pannonia, on the road running along the river Savus to Siscia (*It. Hieros.* p. 561; Geogr. Rav. iv. 19; *Tab. Peut.*) Its site has not yet been ascertained with certainty. [L. S.]

RAMOTH, identical in signification with Râm and Ramah, equivalent in Hebrew to "an eminence," and hence a generic name for towns situated on remarkable heights, as so many in Palestine were. Besides those above named [RAMAH; RAMATHA] was a Ramah in the tribe of Asher, not far from Tyre; and another in Naphthali (*Josh.* xix. 29, 36) in the north. and a Ramath in the tribe of Simeon, appropriately called "Ramath of the South" (ver. 8.), to which David sent a share of the spoils of Ziklag (1 *Sam.* xxx. 27), and yet a Ramoth in Issachar, assigned to the Levites of the family of Gershom. (1 *Chron.* vi. 74.) More important than the foregoing was—

RAMOTH-GILEAD (Ῥαμὼθ ἐν Γαλαάδ), a city of the tribe of Gad, assigned as a city of refuge, first by Moses and subsequently by Joshua. (*Deut.* iv. 43; *Josh.* xx. 8, Ἀρημώθ.) It was also a Levitical city of the family of Merari. (*Josh.* xxi. 38.) The Syrians took it from Ahab, who lost his life in seeking to recover it. (1 *Kings*, xxii.) Eusebius places it 15 miles west of Philadelphia (*Onomast. s. v.*, where S. Jerome erroneously reads east; Reland, p. 966), in the Peraea, near the river *Jabok*. Its site is uncertain, and has not been recovered in modern times. [G. W.]

RANILUM, a town in the interior of Thrace. (*Tab. Peut.*) [T. H. D.]

RAPHANAEA (Ῥαφαναία), a maritime town of Syria, only once named by Josephus, who states that the Sabbatic river flowed between Arcaea and Raphanaea. (*B. J.* vii. 5. § 1.) [SABBATICUS.] [G. W.]

RAPHIA (Ῥαφία, Ῥάφεια), a maritime city in the extreme south of Palestine, between Gaza and Rhinocorura, a day's march from both, reckoned by Josephus, Polybius, and others, as the first city of Syria. (Joseph. *B. J.* iv. 11. § 5; Polyb. v. 80.) It was taken from the Egyptians by Alexander Jannaeus, and held by the Jews for some time. It was one of the ruined and depopulated cities restored by Gabinius. (*Ant.* xiii. 13. § 3, 15. § 4, xiv. 5. § 3.) It is mentioned also by Strabo (xvi. p. 759) and in the Itinerary of Antoninus, between the above-named towns. Coins of Raphia still exist, and it was represented by its bishop in the council of Ephesus, and in those of Constantinople, A. D. 536 and 553. (Reland, *s. v.* pp. 967, 968; Le Quien, *Oriens Christianus*, vol. iii. pp. 629, 630.) It was in the neighbourhood of this city that a great battle was fought between Ptolemy Philopator and Antiochus the Great, in which the latter was routed with immense loss. (3 *Maccab.* i. 2; Polyb. v. 80, &c.; Hieron. *ad Dan.* cap. xi.) Its site is still marked by the name *Refah*, and two ancient granite columns *in situ*, with several prostrate fragments, the remains apparently of a temple of considerable magnitude. (Irby and Mangles' *Journal*, October 8.) [G. W.]

RAPPIA'NA, a town on the river Margus in Moesia Superior, now *Alexinitza*. (*Itin. Hieros.* p. 566.) [T. H. D.]

RAPRAUA (Ῥάπραυα, Marcian, *Peripl.* ii. § 32, ed. Müller), a small place on the coast of Gedrosia, between the river Arabis and the Portus Mulierum. It is probably the same as that called by Ptolemy Ragirava (Ῥαγίραυα, vi. 21. § 2). It may be doubted whether it can now be recognised, unless indeed the name has been preserved in that of *Arabat*, a bay in the immediate neighbourhood. (See Müller, *ad Arrian. Indic.* § 26.) [V.]

RARA'PIA (*Itin. Ant.* p. 426, where the reading varies between Scalacia, Serapia, Sarapia, and Rarapia), a town of Lusitania, on the road from Ossonoba to Ebora, and 95 miles N. of the former place; now *Ferreira*. (Comp. Florez. *Esp. Sagr.* xiv. p. 202.) [T. H. D.]

RARASSA (Ῥαράσσα or Ἠράρασα, Ptol. vii. 1. § 50), a place which Ptolemy calls the metropolis of the Caspeiraei in India intra Gangem. Its exact situation cannot be determined; but there can be no doubt that it was in Western India, not far from the *Vindya Ms.* Lassen places it a little S. of *Ajmir*. [V.]

RA'SENA. [ETRURIA, pp. 855, 859.)

RATAE (*Itin. Ant.* pp. 477, 479: Ῥάτε, Ptol. ii. 3. § 20, where some read Ῥάγε), a town of the Coritani in the interior of Britannia Romana, and on the road from *London* to *Lincoln*. It is called Ratecorion in the Geogr. Rav. (v. 31). Camden (p. 537) identifies it with *Leicester*. [T. H. D.]

RATA'NEUM (Plin. iii. 22. s. 26; Ῥαίτινον, Dion Cass. lvi. 11), a town of Dalmatia, which was burnt by its inhabitants, when it was taken by Germanicus in the reign of Augustus. (Dion Cass. *l. c.*)

RATIA'RIA (Ῥατιαρία, Procop. *de Aed.* iv. 6. p. 290; Ῥατιαρία Μυσῶν, Ptol. iii. 9. § 4, viii. 11. § 5; Ῥαζαρία, Hierocl. p. 655; Ῥατηρία, Theophylact. i. 8; Ratiaris, Geogr. Rav. iv. 7), a considerable town in Moesia Superior on the Danube, and the head-quarters of a Roman legion; according to the Itinerary (p. 219), the Leg. XIV. Gemina, according to the Not. Imp. (c. 30), the Leg. XIII. Gemina. It was also the station of a fleet on the Danube (*ibid.*). Usually identified with *Arzar-Palanca*. [T. H. D.]

RATIA'TUM (Ῥατίατον), a town of the Pictones (Ptol. ii. 7. § 6). Ptolemy mentions it before Limonum, and places it north of Limonum, and further west. Some editions of Ptolemy place Ratiatum in the territory of the Lemovices, but this is a mistake. In the records of a council held at *Orléans* in A. D. 511, the bishop of the Pictavi signs himself "de civitate Ratiatica." The name was preserved in that of the Pagus Ratiatensis, from which comes the modern name of *Pays de Retz*. Gregory of Tours speaks of Ratiatum as "infra terminum Pictavorum qui adjacet civitati Namneticae." The district of *Retz* was taken from the diocese of *Poitiers* and attached to the diocese of *Nantes* in the time of Charles the Bald. Belley (*Mém. de l'Acad. des Inscript.* tom. xix. p. 729) fixes Ratiatum at the site of the two churches of *St. Pierre* and *St. Op-*

portune de Retz, which are near *Machecoul* and on the *Tenu*, a small river in the department of *La Vendée*. The *Tenu* enters the sea near *Bourgneuf*, opposite to the *Isle Noirmoutier* (D'Anville, *Notice, &c.*; Ukert, *Gallien*, p. 393). [G. L.]

RATOMAGUS. [ROTOMAGUS.]

RAUDA (Ῥαῦδα, Ptol. ii. 6. § 50), a town of the Vaccaei in Hispania Tarraconensis, on the road from Asturica to Caesar Augusta (*Itin. Ant.* p. 440), now *Roa*, on the *Douro*. (Comp. Florez. *Esp. Sagr.* vii. p. 274.) [T. H. D.]

RAU'DII CAMPI. [CAMPI RAUDII.]

RAVENNA (Ῥαουέννα, Strab.; Ῥάβεννα, Ptol. *et al.*: *Eth.* Ravennas -ātis: *Ravenna*), one of the most important cities of Gallia Cispadana, situated a short distance from the sea-coast, at the southern extremity of the extensive range of marshes and lagunes, which occupied the whole coast of Venetia from thence to Altinum. (Strab. v. p. 213; *Itin. Ant.* p. 126.) It was 33 miles N. of Ariminum. Though included within the limits of Cisalpine Gaul, according to the divisions established in the days of Strabo and Pliny, it does not appear to have ever been a Gaulish city. Strabo tells us that it was a Thessalian colony, which probably meant that it was a Pelasgic settlement, and was connected with the traditions that ascribed to the Pelasgi the foundation of the neighbouring city of Spina. [SPINA.] But they subsequently, according to the same writer, received a body of Umbrian colonists, in order to maintain themselves against the growing power of the Etruscans, and thus became an Umbrian city, to which people they continued to belong till they passed under the Roman government. (Strab. v. pp. 214, 217.) Pliny, on the other hand, calls it a *Sabine* city,—a strange statement, which we are wholly unable to explain. (Plin. iii. 15. s. 20.) It seems probable that it was really an Umbrian settlement, and retained its national character, though surrounded by the Lingonian Gauls, until it received a Roman colony. No mention of the name is found in history till a late period of the Roman Republic, but it appears to have been then already a place of some consequence. In B. C. 82, during the civil wars of Marius and Sulla, it was occupied by Metellus, the lieutenant of the latter, who made it the point of departure from whence he carried on his operations. (Appian, *B. C.* i. 89.) Again it was one of the places which was frequently visited by Caesar during his command in Gaul, for the purpose of raising levies, and communicating with his friends at Rome (Cic. *ad Att.* vii. 1, *ad Fam.* i. 9, viii. 1); and just before the outbreak of the Civil War it was there that he established his head-quarters; from whence he carried on negotiations with the senate, and from whence he ultimately set out on his march to Ariminum. (Id. *ib.* ii. 32; Caes. *B. C.* i. 5; Suet. *Caes.* 30; Appian, *B. C.* ii. 32.) Its name again figures repeatedly in the civil wars between Antony and Octavian, especially during the war of Perusia (Appian, *B. C.* iii. 42, 97, v. 33, 50, &c.); and it is evident that it was already become one of the most important towns in this part of Cisalpine Gaul.

It is uncertain at what period Ravenna received a Roman colony. Strabo speaks of it as having in his time, as well as Ariminum, received a body of Roman colonists (v. p. 217); but the date is not mentioned, and it certainly did not, like Ariminum, pass into the condition of a regular Colonia, numerous inscriptions being extant which give it the title of a Municipium. It is probable that the settlement alluded to by Strabo took place under Augustus, and it is certain that it was to that emperor that Ravenna was indebted for the importance which it subsequently enjoyed during the whole period of the Roman Empire. The situation of the city was very peculiar. It was surrounded on all sides by marshes, or rather lagunes, analogous to those which now surround the city of *Venice*, and was built, like that city, actually in the water, so that its houses and edifices were wholly constructed on piles, and it was intersected in all directions by canals, which were crossed either by bridges or ferries. The lagunes had a direct communication with the sea, so that the canals were scoured every day by the flux and reflux of the tides,—a circumstance to which Strabo attributes, no doubt with justice, the healthiness of the city, which must otherwise have been uninhabitable from malaria. (Strab. v. p. 213; Jornand. *Get.* 29; Sidon. Apoll. *Epist.* i. 5; Procop. *B. G.* i. 1; Claudian, *de VI. Cons. Hon.* 495.) The old city had a small port at the mouth of the river Bedesis, mentioned by Pliny as flowing under its walls (Plin. iii. 15. s. 20); but Augustus, having determined to make it the permanent station of his fleet in the Adriatic, constructed a new and spacious port, which is said to have been capable of containing 250 ships of war (Jornand. *l. c.*), and was furnished with a celebrated Pharos or lighthouse to mark its entrance. (Plin. xxxvi. 12. s. 18.) This port was near 3 miles distant from the old city, with which it was connected by a long causeway: a considerable town rapidly grew up around it, which came to be known by the name of PORTUS CLASSIS or simply CLASSIS; while between the two, but nearer to the city, there arose another suburb, scarcely less extensive, which bore the name of Caesarea. (Jornand. *l. c.*; Sidon. Apoll. *l. c.*; Procop. *B. G.* ii. 29; Geogr. Rav. iv. 31.) In addition to these works Augustus constructed a canal, called from him the Fossa Augusta, by which a part of the waters of the Padus were carried in a deep artificial channel under the very walls of Ravenna and had their outlet at the port of Classis. (Plin. iii. 16. s. 20; Jornand. *l. c.*)

From this time Ravenna continued to be the permanent station of the Roman fleet which was destined to guard the Adriatic or Upper Sea, as Misenum was of that on the Lower (Tac. *Ann.* iv. 5, *Hist.* ii. 100, iii. 6, 40; Suet. *Aug.* 49; Veget. *de R. Mil.* v. 1; *Not. Dign.* ii. p. 118); and it rose rapidly into one of the most considerable cities of Italy. For the same reason it became an important military post, and was often selected by the emperors as their head-quarters, from which to watch or oppose the advance of their enemies into Italy. In A. D. 193 it was occupied by Severus in his march upon Rome against Didius Julian (Spartian, *Did. Jul.* 6; Dion Cass. lxxiii. 17); and in 238 it was there that Pupienus was engaged in assembling an army to oppose the advance of Maximin when he received the news of the death of that emperor before Aquileia. (Herodian, viii. 6, 7; Capit. *Maximin.* 24, 25, *Max. et Balb.* 11, 12.) Its strong and secluded position also caused it to be selected as a frequent place of confinement for prisoners of distinction, such as the son of the German chieftain Arminius, and Maroboduus, chief of the Suevi. (Tac. *Ann.* i. 58, ii. 63; Suet. *Tib.* 20.) The same circumstances at a later period led to its selection by the feeble and timid Honorius as the place of his

residence: his example was followed by his successors; and from the year 404, when Honorius first established himself there, to the close of the Western Empire, Ravenna continued to be the permanent imperial residence and the place from whence all the laws and rescripts of the emperors were dated. (Jornand. *Get.* 29; Gibbon, c. 30.) Even before this period we are told that it was a very rich and populous city, as well as of great strength (Zosim. ii. 10): it was the capital of Picenum (as that name was then used) and the residence of the Consularis or governor of that province. (Orell. *Inscr.* 3649; Böcking, *ad Not. Dign.* ii. pp. 359, 443.) But the establishment of the imperial court there naturally added greatly to its prosperity and splendour, while its inaccessible situation preserved it from the calamities which at this period laid waste so many cities of Italy. Yet Ravenna as a place of residence must always have had great disadvantages. Sidonius Apollinaris, who visited it late in the fifth century, complains especially of the want of fresh water, as well as the muddiness of the canals, the swarms of gnats, and the croaking of frogs. (Sidon. Apoll. *Ep.* i. 5, 8.) Martial, at a much earlier period, also alludes to the scarcity of fresh water, which he jestingly asserts was so dear that a cistern was a more valuable property than a vineyard. (Martial, iii. 56, 57.)

After the fall of the Western Empire Ravenna continued to be the capital of the Gothic kings. Odoacer, who had taken refuge there after repeated defeats by Theodoric, held out for near three years, but was at length compelled to surrender. (Jornand. *Get.* 57; Cassiod. *Chron.* p. 649.) Theodoric himself established his residence there, and his example was followed by his successors, until, in 539, Vitiges was after a long siege compelled by famine to surrender the city to Belisarius. (Procop. *B. G.* ii. 28, 29.) It now became the residence of the governors who ruled a part of Italy in the name of the Byzantine emperors, with the title of exarchs, whence the whole of this province came to be known as the Exarchate of Ravenna. The Byzantine governors were in a state of frequent hostility with the Lombard kings, and were gradually stripped of a large portion of their dominions; but Ravenna itself defied their arms for more than two centuries. It was besieged by Liutprand about 750, and its important suburb of Classis totally destroyed (P. Diac. vi. 49); but it was not till the reign of his successor Astolphus that Ravenna itself fell into the hands of the Lombards. But the exact date, as well as the circumstances of its final conquest, are uncertain. (Gibbon, c. 49.)

The situation of Ravenna at the present day presents no resemblance to that described by ancient writers. Yet there is no doubt that the modern city occupies the same site with the ancient one, and that the change is wholly due to natural causes. The accumulation of alluvial deposits, brought down by the rivers and driven back by the waves and tides, has gradually filled up the lagunes that surrounded and canals that intersected the city; and the modern Ravenna stands in a flat and fertile plain, at a distance of 4 miles from the sea, from which it is separated by a broad sandy tract, covered in great part with a beautiful forest of stone pines. Though Ravenna is one of the most interesting places in Italy for its mediaeval and early Christian antiquities, it presents few remains of the Roman period, and those for the most part belong to the declining years of the Empire. A triumphal arch, known by the name of Porta Aurea, was destroyed in 1585: it stood near the modern gate called *Porta Adriana.* Several of the ancient basilicas date from the Roman period; as does also the sepulchral chapel containing the tomb of Galla Placidia, the sister of Honorius, and mother of Valentinian III. A portion of the palace of Theodoric still remains in its original state, and the mausoleum of that monarch, just without the walls, is a monument of remarkable character, though stripped of its external ornaments. An ancient basilica, still called *S. Apollinare in Classe,* about 3 miles from the southern gate of the city, preserves the memory and marks the site of the ancient port and suburb of Classis; while another basilica, which subsisted down to the year 1553, bore the name of *S. Lorenzo in Cesarea:* and thus indicated the site of that important suburb. It stood about a quarter of a mile from the south gate of the city, between the walls and the bridge now called *Ponte Nuovo.* This bridge crosses the united streams of the *Ronco* and *Montone,* two small rivers which previously held separate courses to the sea, but were united into one and confined within an artificial channel by Clement XII. in 1736. The *Ronco,* which is the southernmost of the two, is probably the same with the Bedesis of Pliny; indeed Cluverius says that it was in his time still called *Bedeso.* Hence the *Montone* must be identified with the VITIS of the same author. The Anemo, which he places next in order, is clearly the same now called the *Amone* or *Lamone,* which flows under the walls of *Faenza.* (Plin. iii. 15. s. 20; Cluver. *Ital.* p. 300.)

The natural causes which have produced these changes in the situation and environs of Ravenna were undoubtedly in operation from an early period. Already in the fifth century the original port constructed by Augustus was completely filled up, and occupied by orchards. (Jornand. *Get.* 29.) But Ravenna at that period had still a much frequented port, where the fleets of Belisarius and Narses could ride at anchor. The port of Classis itself is now separated from the sea by a strip of sandy and marshy plain about 2 miles broad, the greater part of which is occupied by a forest of stone pines, which extends for many miles along the seacoast both to the S. and N. of Ravenna. The existence of this remarkable strip of forest is attested as early as the fifth century, the name of Pineta being already found in Jornandes, who tells us that Theodoric encamped there when he besieged Odoacer in Ravenna. (Jornand. 57.) But it is probable that it has extended its boundaries and shifted its position as the land has gradually gained upon the sea.

The territory of Ravenna was always fertile, except the sandy strip adjoining the sea, and produced abundance of wine of good quality, but it was remarked that the vines quickly decayed. (Strab. v. p. 214; Plin. xiv. 2. s. 4.) Its gardens also are noticed by Pliny as growing the finest asparagus, while the adjoining sea was noted for the excellence of its turbot. (Plin. ix. 54. s. 79, xix. 4. s. 19.) [E. H. B.]

RAVIUS (Ῥαούιος, Ptol. ii. 2. § 4), a river on the W. coast of Hibernia, according to Camden (p. 1385) the *Trobis.* Others identify it with the *Guebara.* [T. H. D.]

RAURACI, or RAURICI (Ῥαυρικοί). The form Raurici appears in Ptolemy (ii. 9. § 18), in Pliny (iv

17), and in some inscriptions. Ptolemy mentions two towns of the Rauraci, Rauricorum Augusta and Argentovaria [AUGUSTA RAURACORUM; ARGENTARIA]. Augusta is *Augst* near *Bâle*, in the Swiss Canton of *Bâle*, and Argentovaria may be *Artzenheim*. The position of these places helps us to form a measure of the extent of the territory of the Rauraci, which may have nearly coincided with the bishopric of *Bâle*.

The Rauraci joined the Helvetii in their emigration, B. C. 58. [HELVETII.] [G. L.]

RAURANUM, in Gallia, is placed by the Table and the Antonine Itin. on a direct road from Mediolanum Santonum (*Saintes*) to Limonum (*Poitiers*). It is Raurana in the Table, but the name Rauranum occurs in a letter of Paulinus to Ausonius (*Ep. IV. ad Auson.* v. 249), who places it "Pictonicis in arvis." The place is *Rom* or *Raum*, near *Chenay*, nearly due south of *Poitiers*. (D'Anville, *Notice, &c.*; Ukert, *Gallien*, p. 392.) [G. L.]

RAURARIS. [ARAURIS.]

REA'TE (Ῥεάτε, Strab.; Ῥεάτος, Dionys.: *Eth.* Ῥεατῖνος, Reatinus: *Rieti*), an ancient city of the Sabines, and one of the most considerable that belonged to that people. It was situated on the Via Salaria, 48 miles from Rome (*Itin. Ant.* p. 306), and on the banks of the river Velinus. All writers agree in representing it as a very ancient city: according to one account, quoted by Dionysius from Zenodotus of Troezen, it was one of the original abodes of the Umbrians, from which they were expelled by the Pelasgi; but Cato represented it as one of the first places occupied by the Sabines when they descended from the neighbourhood of Amiternum, their original abode. (Dionys. ii. 49.) Whatever authority Cato may have had for this statement, there seems no reason to doubt that it was substantially true. The fertile valley in which Reate was situated lay in the natural route of migration for a people descending from the highlands of the central Apennines: and there is no doubt that both Reate and its neighbourhood were in historical times occupied by the Sabines. It was this migration of the Sabines that led to the expulsion of the Aborigines, who, according to Dionysius, previously occupied this part of Italy, and whose ancient metropolis, Lista, was only 24 stadia from Reate. (Dionys. i. 14, ii. 49.) Silius Italicus appears to derive its name from Rhea, and calls it consecrated to the Mother of the Gods; but this is probably a mere poetical fancy. (Sil. Ital. viii. 415.) No mention of Reate occurs in history before the period when the Sabines had been subjected to the Roman rule, and admitted to the Roman Franchise (B. C. 290); but its name is more than once incidentally noticed during the Second Punic War. In B. C. 211 Hannibal passed under its walls during his retreat from Rome, or, according to Coelius, during his advance upon that city (Liv. xxvi. 11); and in B. C. 205 the Reatini are specially mentioned as coming forward, in common with the other Sabines, to furnish volunteers to the armament of Scipio. (Id. xxviii. 45.) We are wholly ignorant of the reasons why it was reduced to the subordinate condition of a Praefectura, under which title it is repeatedly mentioned by Cicero, but we learn from the great orator himself, under whose especial patronage the inhabitants were placed, that it was a flourishing and important town. (Cic. *in Cat.* iii. 2, *pro Scaur.* 2. § 27, *de Nat. Deor.* ii. 2.) Under the Empire it certainly obtained the ordinary municipal privileges, and had its own magistrates (Zumpt, *de Col.* pp. 98, 188; Gruter, *Inscr.* p. 354. 3, &c.): under Vespasian it received a considerable number of veteran soldiers as colonists, but did not obtain the rank or title of a Colonia. (*Lib. Col.* p. 257; Orell. *Inscr.* 3685; Gruter, *Inscr.* p. 538. 2; &c.)

The territory of Reate included the whole of the lower valley of the Velinus, as far as the falls of that river; one of the most fertile, as well as beautiful, districts of Italy, whence it is called by Cicero the Reatine Tempe (*ad Att.* iv. 15.) But the peculiar natural character of this district was the means of involving the citizens in frequent disputes with their neighbours of Interamna. (Varr. *R. R.* iii. 2. § 3.) The valley of the Velinus below Reate, where the river emerges from the narrow mountain valley through which it has hitherto flowed, and receives at the same time the waters of the *Salto* and *Turano*, both of them considerable streams, expands into a broad plain, not less than 5 or 6 miles in breadth, and almost perfectly level; so that the waters of the Velinus itself, and those of the smaller streams that flow into it, have a tendency to stagnate and form marshes, while in other places they give rise to a series of small lakes, remarkable for their picturesque beauty. The largest of these, now known as the *Lago di Piè di Lugo*, seems to have been the one designated in ancient times as the LACUS VELINUS; while the fertile plains which extended from Reate to its banks were known as the ROSEI or more properly ROSEAE CAMPI, termed by Virgil the "Rosea rura Velini." (Virg. *Aen.* vii. 712; Cic. *ad Att.* iv. 15; Varro, *R. R.* i. 7. § 10, ii. 1. § 16, iii. 2. § 10; Plin. xvii. 4. s. 3.) But this broad and level valley is at an elevation of near 1000 feet above that of the Nar, into which it pours its waters by an abrupt descent, a few miles above Interamna (*Terni*); and the stream of the Velinus must always have constituted in this part a natural cascade. Those waters, however, are so strongly impregnated with carbonate of lime, that they are continually forming an extensive deposit of travertine, and thus tending to block up their own channel. The consequence was, that unless their course was artificially regulated, and their channel kept clear, the valley of the Velinus was inundated, while on the other hand, if these waters were carried off too rapidly into the Nar, the valley of that river and the territory of Interamna suffered the same fate. The first attempt to regulate the course of the Velinus artificially, of which we have any account, was made by M'. Curius Dentatus, after his conquest of the Sabines, when he carried off its waters by a deep cut through the brow of the hill overlooking the Nar, and thus gave rise to the celebrated cascade now known as the *Falls of Terni*. (Cic. *ad Att.* iv. 15; Serv. *ad Aen.* vii. 712.) From the expressions of Cicero it would appear that the Lacus Velinus, previous to this time, occupied a much larger extent, and that a considerable part of the valley was then first reclaimed for cultivation.

But the expedient thus resorted to did not fully accomplish its object. In the time of Cicero (B. C. 54) fresh disputes arose between the citizens of Reate and those of Interamna; and the former appealed to the great orator himself as their patron, who pleaded their cause before the arbiters appointed by the Roman senate. On this occasion he visited Reate in person, and inspected the lakes and the channels of the Velinus. (Cic. *pro Scaur*, 2. § 27, *ad Att.* iv. 15.) The result of the arbitration is

unknown: but in the reign of Tiberius the Reatines had to contend against a more formidable danger, arising from the project which had been suggested of blocking up the outlet of the Lacus Velinus altogether; a measure which, as they justly complained, would undoubtedly have inundated the whole valley. (Tac. *Ann.* i. 79.) Similar disputes and difficulties again arose in the middle ages; and in A. D. 1400 a new channel was opened for the waters of the Velinus, which has continued in use ever since.

No other mention occurs of Reate under the Roman Empire; but inscriptions attest its continued municipal importance: its name is found in the Itineraries (*Itin. Ant.* p. 306), and it early became the see of a bishop, which it has continued ever since. Throughout the middle ages it was, as it still continues to be, the capital of the surrounding country. No ancient remains are now visible at *Rieti.*

The territory of Reate was famous in ancient times for its breed of mules and asses; the latter were particularly celebrated, and are said to have been sometimes sold for a price as high as 300,000 or even 400,000 sesterces (Varr. *R.R.* ii. 8. § 3; Plin. viii. 43. s. 68), though it is difficult not to suppose some error in these numbers. Hence, Q. Axius, a friend of Varro, who had a villa on the Lacus Velinus, and extensive possessions in the Reatine territory, is introduced by Varro in his dialogues *De Re Rustica*, as discoursing on the subject of breeding horses, mules, and asses. (Varr. *R. R.* ii. 1. § 8; Strab. v. p. 228.) It was at the villa of this Q. Axius that Cicero lodged when he visited Reate. (Cic. *ad Att.* iv. 15.) The SEPTEM AQUAE, mentioned by him in the same passage, and alluded to also by Dionysius (i. 14), were evidently some springs or sources, which supplied one of the small lakes in the valley of the Velinus. [E. H. B.]

RECHIUS. [BOLBE.]

REDINTUINUM ('Ρεδιντούινον), a town in the northern part of the country occupied by the Marcomanni (*Bohemia*), is mentioned only by Ptolemy (ii. 11. § 29). Some geographers regard it as having occupied the site of the modern *Prague*, and others identify it with *Horziez;* but nothing certain can be said about the matter. [L. S.]

RE'DONES ('Ρήδονες, 'Ρηΐδονες), in the Celtogalatia Lugdunensis of Ptolemy (ii. 8. § 12), are placed by him west of the Senones and along the Liger. Their capital is Condate (*Rennes*). But the Redones were not on the *Loire.* Pliny (iv. 18) enumerates the Rhedones among the peoples of Gallia Lugdunensis: "Diablindi, Rhedones, Turones." After the bloody fight on the *Sambre* (B. C. 57) Caesar sent P. Crassus with a single legion into the country of the Veneti, Redones, and other Celtic tribes between the *Seine* and the *Loire*, all of whom submitted. (*B. G.* ii. 34.) Caesar here enumerates the Redones among the maritime states whose territory extends to the ocean. In B. C. 52 the Redones with their neighbours sent a contingent to attack Caesar during the siege of Alesia. In this passage also (*B. G.* vii. 75), the Redones are enumerated among the states bordering on the ocean, which in the Celtic language were called the Armoric States. D'Anville supposes that their territory extended beyond the limits of the diocese of *Rennes* into the dioceses of *St. Malo* and *Dol.* Their chief town, *Rennes*, is the capital of the department of *Ille-et-Vilaine.* [G. L.]

stands the modern town of *Frascati*. This crater, which resembles that of Gabii on a much smaller scale, being not more than half a mile in diameter, was drained by an artificial emissary as late as the 17th century: but its existence seems to have been unknown to Cluverius and other early writers, who adopted the lake or pool near *La Colonna* for the Lake Regillus, on the express ground that there was no other in that neighbourhood. (Cluver. *Ital.* p. 946; Nibby, *Dintorni*, vol. iii. pp. 8—10; Gell, *Top. of Rome*, pp. 186, 371.) Extensive remains of a Roman villa and baths may be traced on the ridge which bounds the crater, and an ancient road from Tusculum to Labicum or Gabii passed close by it, so that the site must certainly have been one well known in ancient times. [E. H. B.]

REGINA. [ERGINUS; REGIANA.]

REGINEA, in Gallia Lugdunensis, is placed in the Table on a road from Condate (*Rennes*). The first station is Fanum Martis, and the next is Reginea, 39 Gallic leagues from Condate. D'Anville fixes Reginea at *Erquies* on the coast, between *S. Brieuc* and *S. Malo*. [FANUM MARTIS.] [G. L.]

REGINUM, a town in the northern part of Vindelicia, on the southern bank of the Danube, on the road leading to Vindobona. This town, the modern *Ratisbon*, or *Regensburg*, is not mentioned by the Roman historians, but it was nevertheless an important frontier fortress, and, as we learn from inscriptions, was successively the station of the 1st, 3rd, and 4th Italian legions, and of a detachment of cavalry, the Ala II. Valeria. The town appears to have also been of great commercial importance, and to have contained among its inhabitants many Roman families of distinction. (*It. Ant.* p. 250; *Tab. Peut.*, where it is called Castra Regina; comp. Rayser, *Der Oberdonaukreis Bayerns*, iii. p. 38, &c.) [L. S.]

REGIO, a town of Thrace on the river Bathynias, and not far from Constantinople (*Itin. Hieros.* p. 570), with a roadstead, and handsome country houses. (Agath. v. p. 146; comp. Procop. *de Aed.* iv. 8; Theophan. p. 196.) Now *Koutschuk-Tzschekmetsche*. [T. H. D.]

REGIS VILLA (Ῥηγισούιλλα, Strab.), a place on the coast of Etruria, which, according to Strabo, derived its name from its having been the residence of the Pelasgic king or chief Maleas, who ruled over the neighbouring Pelasgi in this part of Etruria. (Strab. v. p. 225.) None of the other geographers mentions the locality; but Strabo places it between Cosa and Graviscae; and it is therefore in all probability the same place which is called in the Maritime Itinerary REGAE, and is placed 3 miles S. of the river Armenta (*Fiora*) and 12 miles from Graviscae. (*Itin. Marit.* p. 499.) The site is now marked only by some projecting rocks called *Le Murelle*. (Dennis's *Etruria*, vol. i. p. 398; Westphal, *Ann. d. Inst.* 1830, p. 30.) [E. H. B.]

REGISTUS or RESISTUS. [BISANTHE.]

RE'GIUM LE'PIDI or RE'GIUM LE'PIDUM (Ῥήγιον Λέπιδον, Strab.; Ῥήγιον Λεπίδιον, Ptol.: *Eth.* Regiensis: *Reggio*), sometimes also called simply REGIUM, a town of Gallia Cispadana, situated on the Via Aemilia, between Mutina and Parma, at the distance of 17 miles from the former and 18 from the latter city. (*Itin. Ant.* pp. 99, 127; Strab. v. p. 216.) We have no account of its foundation or origin; but the name would raise a presumption that it was founded, or at least settled and enlarged, by Aemilius Lepidus when he constructed the Aemilian Way; and this is confirmed by a passage of Festus, from which it appears that it was originally called Forum Lepidi. (Fest. *s. v. Rhegium*, p. 270.) The origin of the appellation of Regium, which completely superseded the former name, is unknown. It did not become a colony like the neighbouring cities of Mutina and Parma, and evidently never rose to the same degree of opulence and prosperity as those cities, but became, nevertheless, a flourishing municipal town. It is repeatedly mentioned during the civil war with M. Antonius, both before and after the battle of Mutina (Cic. *ad Fam.* xi. 9, xii. 5); and at a somewhat earlier period it was there that M. Brutus, the father of the murderer of Caesar, was put to death by Pompey in B. C. 79. (Oros. v. 22; Plut. *Pomp.* 16.) Its name scarcely occurs in history during the Roman Empire; but its municipal consideration is attested by inscriptions, and it is mentioned by all the geographers among the towns on the Via Aemilia, though ranked by Strabo with those of the second class. (Strab. v. p. 216; Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; Orell. *Inscr.* 3983, 4133; Tac. *Hist.* ii. 50; Phlegon, *Macrob.* 1.) Ptolemy alone gives it the title of a Colonia, which is probably a mistake; it was certainly not such in the time of Pliny, nor is it so designated in any extant inscription. Zumpt, however, supposes that it may have received a colony under Trajan or Hadrian. (Zumpt, *de Colon.* p. 403.) St. Ambrose notices Regium as well as Placentia and Mutina among the cities which had fallen into great decay before the close of the fourth century. (Ambros. *Ep.* 39.) It was not long before this that an attempt had been made by the emperor Gratian to repair the desolation of this part of Italy by settling a body of Gothic captives in the territory of Regium, Parma, and the neighbouring cities. (Ammian. xxxi. 9. § 4.) The continued existence of Regium at a late period is proved by the Itineraries and Tabula (*Itin. Ant.* pp. 283, 287; *Itin. Hier.* p. 616; *Tab. Peut.*), and it is mentioned long after the fall of the Western Empire by Paulus Diaconus among the "locupletes urbes" of Aemilia. (P. Diac. *Hist. Lang.* ii. 18.) In the middle ages it rose to a great degree of prosperity, and *Reggio* is still a considerable town with about 16000 inhabitants. Its episcopal see dates from the fifth century.

The tract called the CAMPI MACRI, celebrated for the excellence of its wool, was apparently included in the territory of Regium Lepidum. [E. H. B.]

REGNI (Ῥῆγνοι, Ptol. ii. 3. § 28), a people on the S. coast of Britannia Romana, seated between the Cantii on the E. and the Belgae on the W., in the modern counties of *Surrey* and *Sussex*. Their chief town was Noviomagus. (Comp. Camden, p. 179.) [T. H. D.]

REGNUM, a town of the Belgae in the S. of Britannia Romana, and seemingly a place of some importance, since there was a particular road to it. (*Itin. Ant.* p. 477.) Camden (p. 133) identifies it with *Ringwood* in *Hampshire*. Horsley, on the contrary (p. 441), conjectures it to have been *Chichester*; but, though Roman antiquities have been found at *Chichester*, its situation does not suit the distances given in the Itinerary. [T. H. D.]

REGU'LBIUM, a town of the Cantii on the E. coast of Britannia Romana, now *Reculver*. (*Not. Imp.*; comp. Camden, p. 236.) [T. H. D.]

REHOB (Ῥοώβ, *al.* Ῥαάβ, *al.* Ἐρεώ), a town in the tribe of Asher, occupied by the Canaanites. (*Josh.* xix. 28; *Judg.* i. 31.) A second city of the

same name is reckoned among the 22 cities of the same tribe (*Josh.* xix. 30); but neither of these can be identified with the Rhoob (Ῥοὼβ) noticed by Eusebius, 4 miles distant from Scythopolis. [G. W.]

REHOBOTH (translated εὐρυχωρία in LXX.), one of the wells dug by Isaac in the country of Gerar, — after Esek (contention) and Sitnah (hatred), — for which the herdsmen did not strive: so he called it Rehoboth: "And he said, For now the Lord hath made room for us, and we shall be fruitful in the land." (*Gen.* xxvi. 18, 20—22.) There was a town in the vicinity of the well, the traces of which were recovered, with the well itself, by Mr. Rowlands, in 1843. "About a quarter of an hour beyond *Sebâta*, we came to the remains of what must have been a very well-built city, called now *Rohébeh.* This is undoubtedly the ancient Rehoboth, where Abraham, and afterwards Isaac, digged a well. This lies, as Rehoboth did, in the land of Gerar. Outside the walls of the city is an ancient well of living and good water called *Bir-Rohébeh.* This most probably is the site, if not the well itself, digged by Isaac." (Williams's *Holy City*, vol. i. Appendix, i. p. 465.) [G. W.]

REII APOLLINA'RES (*Riez*), in Gallia Narbonensis. Among the Oppida Latina of Gallia Narbonensis, or those which had the Latinitas, Pliny (iii. c. 4) enumerates "Alebece Reiorum Apollinarium." The old reading, "Alebeceriorum Apollinarium," is a blunder made by joining two words together, which has been corrected from the better MSS., from the inscription COL. REIOR. APOLLINAR., and from the Table, which has Reis Apollinaris. The place may have taken its name from a temple of Apollo built after the town became Roman. The name Alebece may be corrupt, or it may be a variation of the form Albici or Albioeci. [ALBICI.] As Pliny calls the place an Oppidum Latinum, we might suppose that it was made a Colonia after his time, but the name Col. Jul. Aug. Apollinar. Reior., which appears in an inscription, shows it to have been a colony of Augustus.

Riez is in the arrondissement of *Digne* in the department of *Basses Alpes.* There are four columns standing near the town, which may be the remains of a temple. The bases and the capitals are marble: the shafts are a very hard granite, and about 18 feet high. There is also a small circular building consisting of eight columns resting on a basement, but it has been spoiled by modern hands. There now stands in it a rectangular altar of one block of white marble, which bears an inscription to the Mother of the Gods and the Great Goddess. At *Riez* there have been discovered an enormous quantity of fragments of granite columns; and it is said that there have been a circus and a theatre in the town. (*Guide du Voyageur*, Richard et Hocquart, p. 792.) [G. L.]

REMESIA'NA (Ῥεμεσίανα, Hierocl. p. 654; called Romesiana in *Tab. Peut.* and in Geogr. Rav. iv. 7; Ῥουμισίανα in Procopius, *de Aed.* iv. 1, p. 268, ed. Bonn), a town of Moesia Superior, between Naissus and Serdica. (*Itin. Ant.* p. 135.) Now *Mustapha Palanca.* [T. H. D.]

REMETODIA (called Remetodion in Geogr. Rav. iv. 7), a place in Moesia Superior on the Danube. (*Tab. Peut.*) [T. H. D.]

REMI (Ῥημοί), a people of Gallia Belgica (Ptol. ii. 9. § 12) along the Sequana (*Seine*). Their capital was Durocortorum (*Reims*). This is Ptolemy's description (ii. 9. § 12).

It evidently derived its name from the Rephaim, a family of the Amalekites (*Gen.* xiv. 5) settled in Ashteroth Karnaim, supposed by Reland to be of the race of the Gephyraei, who came with Cadmus from Phoenicia to Greece. (Herod. v. 57; Reland, *Palaest.* p. 141, comp. pp. 79, 355.) The Philistines who are said to have encamped there may have bequeathed their name to the valley. [G. W.]

REPHIDIM (Ῥαφιδείν), the eleventh encampment of the Israelites after leaving Egypt, the next before Sinai, "where was no water for the people to drink." (*Numb.* xxxiii. 14.) Moses was accordingly instructed to smite the rock in Horeb, which yielded a supply for the needs of the people, from whose murmurings the place was named Massah and Meribah. Here also it was that the Israelites first encountered the Amalekites, whom they discomfited; and here Moses received his father-in-law Jethro. (*Exod.* xvii.) Its position, Dr. Robinson surmises, must have been at some point in *Wady-esh-Sheikh*, not far from the skirts of Horeb (which he takes to be the name of the mountain district), and about a day's march from the particular mountain of Sinai. Such a spot exists where *Wady-esh-Sheikh* issues from the high central granite cliffs; which locality is more fully described by Burckhardt, and Dr. Wilson, who agrees in the identification, and names the range of rocky mountains *Wateiyah.* He says that "water from the rock in Horeb could easily flow to this place." (Robinson, *Bib. Res.* vol. i. pp. 178, 179; Burckhardt, *Travels in Syria, &c.* p. 488; Wilson, *Lands of the Bible*, vol. i. p. 254.) Dr. Lepsius controverts this position and proposes *El-Hessue*, only a mile distant from the convent-mountain of *Pharán*, as the Rephidim (= "the resting-place") of the Exodus. This is at the foot of *Gebel Serbal*, which he regards as the mountain of the law, and finds the stream opened by Moses "in the clear-running and well-flavoured spring of *Wádi Firán*, which irrigates the fertile soil of *El-Hessue*, and causes it to exhibit all the riches of the gardens of *Farán* for the space of half a mile." (Lepsius, *A Tour from Thebes to the Peninsula of Sinai*, pp. 74—82.) [G. W.]

RERIGO'NIUM (Ῥεριγόνιον, Ptol. ii. 3. § 7), a town of the Novantae in the province of Valentia in the SW. part of Britannia Barbara, which seems to have been seated at the S. extremity of the Sinus Rerigonius (*Loch Ryan*) near *Stanraer*. Camden identifies it with *Bargeny* (p. 1203). [T. H. D.]

RERIGONIUS SINUS (Ῥεριγόνιος κόλπος, Ptol. ii. 3. § 1), a bay in the country of the Novantae, so named from the town of Rerigonium (*q. v.*). Now *Loch Ryan*, formed by the *Mull of Galloway*. (Horsley, p. 375.) [T. H. D.]

RESAINA. [RHESAENA.]

RESAPHA *al.* REZEPH (Ῥησάφα), a city of Syria, reckoned by Ptolemy to the district of Palmyrene (v. 15. § 24), the Risapa of the Peutinger Tables, 21 miles from Sure; probably identical with the Rossafat of Abulfeda (*Tab. Syr.* p. 119), which he places near *Rakka*, not quite a day's journey from the Euphrates. It is supposed to be identical with the Rezeph of Scripture (Ῥαφις, LXX.), taken by Sennacherib, king of Assyria, as he boasts in his insulting letter to Hezekiah. (2 *Kings*, xix. 12.) It has been identified with Sergiopolis, apparently without sufficient reason. (Mannert, *Geographie von Syrien*, p. 413.) [G. W.]

REUDIGNI, a German tribe on the right bank of the river Albis, and north of the Longobardi, which may have derived its name from its inhabiting a marshy district, or from *reed* or *ried*. (Tac. *Germ.* 40.) Various conjectures have been hazarded about their exact abodes and their name, which some have wished to change into Reudingi or Deuringi, so as to identify them with the later Thuringi; but all is uncertain. [L. S.]

REVESSIO (Ῥύεσιον), in Gallia, is the city of the Vellavi, or Velauni, as the name is written in Ptolemy (ii. 7. § 20). Revessio is the name of the place in the Table. In the Not. Provinc. it is written Civitas Vellavorum. Mabillon has shown that the place called Civitas Vetula in the middle ages is *S. Paulien* or *Paulhan*, and the Civitas Vetula is supposed to be the ancient capital of the Vellavi. *S. Paulien* is in the department of *Haute Loire*, north of *Le Puy*. [G. L.]

RHA (Ῥᾶ ποταμός, Ptol. v. 9. §§ 12, 17, 19, 21, vi. 14. §§ 1, 4; Amm. Marc. xxii. 8. § 28; Ῥῶς, Agathem. ii. 10: *Volga*) a river of Asiatic Sarmatia, which according to Ptolemy (*l. c.*), the earliest geographer who had any accurate knowledge of this longest of European streams, had its twin sources in the E. and W. extremities of the Hyperborean mountains, and discharged itself into the Hyrcanian sea. The affluents which Ptolemy (vi. 14. § 4) describes as falling into it from the Rhymmici Montes, and which must not be confounded with the river Rhymmus [RHYMMUS], are the great accession made to the waters of the *Volga* by the *Kama* in the government of *Kasan.* Ammianus Marcellinus (*l. c.*) says that its banks were covered with the plant which bore the same name as the river — the "rha" or "rheon" of Dioscorides (ῥᾶ, ῥῆον, iii. 11) and "rhacoma" of Pliny (xxvii. 105), or officinal rhubarb. (Comp. Pereira, *Mat. Med.* vol. ii. pt. 1. p. 1343.) The old reading Rha in the text of Pomponius Mela (iii. 5. § 4) has been shown by Tzschucke (*ad loc.*) to be a mistake of the earlier editors, for which he substitutes Casius, a river of Albania. The OARUS (Ὄαρος, Herod. iv. 123, 124), where, according to the story of the Scythian expedition, the erection of eight fortresses was supposed to mark the extreme point of the march of Dareius, has been identified by Klaproth, and Schafarik (*Slav. Alt.* vol. i. p. 499)—who mentions that in the language of some tribes the *Volga* is still called "Rhau"—with that river. [E. B. J.]

RHAABE'NI (Ῥααβηνοί), a people of Arabia Deserta, next to the Agabeni, who were on the confines of Arabia Felix. (Ptol. v. 19. § 2.) Above them were the Masani; the Orcheni lay between them and the NW. extremity of the *Persian Gulf.* Mr. Forster justly remarks that "the description of Ptolemy rather indicates the direction, than defines the positions, of these several tribes." (*Geog. of Arabia*, vol. ii. p. 238.) [G. W.]

RHA'BDIUM (Ῥάβδιον, Procop. *B. P.* ii. 19, *de Aedif.* ii. 4), a strongly fortified height, in an inaccessible part of Mesopotamia, two days' journey from Dara in the direction of Persia. The works were placed on the brow of very steep rocks which overlook the surrounding country. Justinian added additional works to it. It has not been identified with any modern place. [V.]

RHACALA'NI. [ROXOLANI.]

RHACATAE (Ῥακάται), a German tribe mentioned by Ptolemy (ii. 11. § 26) as occupying, together with the Teracatriae, the country on the south of the Quadi, on the frontiers of Pannonia;

but nothing further is known about either of them. [L. S.]

RHACOTIS. [ALEXANDREIA, p. 95.]

RHAEBA (Ῥαίβα, Ptol. ii. 2. § 10), a town in the interior of Hibernia, according to Camden (p. 1357) *Rheban* in *Queen's County*. [T. H. D.]

RHAEDESTUS. [BISANTHE.]

RHAETEAE (Ῥαιτέαι), a place in the Arcadian district of Cynuria, at the confluence of the Gortynius and Alpheius. (Paus. viii. 28. § 3.)

RHAETIA (Ῥαιτία). The name of this country, as well as of its inhabitants, appears in ancient inscriptions invariably without the *h*, as Raetia and Raeti, while the MSS. of Latin authors commonly have the forms Rhaetia and Rhaeti,—a circumstance which goes far to show that the more correct spelling is without the *h*. Rhaetia was essentially an Alpine country, bordering in the north on Vindelicia, in the west on the territory inhabited by the Helvetii, in the south on the chain of the Alps from Mons Adula to Mons Ocra, which separated Rhaetia from Italy, and in the east on Noricum and Venetia; hence it comprised the modern *Grisons*, the *Tyrol*, and some of the northern parts of *Lombardy*. This country and its inhabitants did not attract much attention in ancient times until the reign of Augustus, who determined to reduce the Alpine tribes which had until then maintained their independence in the mountains. After a struggle of many years Rhaetia and several adjoining districts were conquered by Drusus and Tiberius, B. C. 15. Rhaetia, within the boundaries above described, seems then to have been constituted as a distinct province (Suet. *Aug.* 21; Vell. Pat. ii. 39; Liv. *Epit.* 136; Aurel. Vict. *Epit.* 1). Vindelicia, in the north of Rhaetia, must at that time likewise have been a separate province; but towards the end of the first century A. D. the two provinces appear united as one, under the name of Rhaetia, which accordingly, in this latter sense, extended in the north as far as the Danube and the Limes. At a still later period, in or shortly before the reign of Constantine, the two provinces were again divided, and ancient Rhaetia received the name Rhaetia Prima, its capital being called Curia Rhaetorum (*Chur*); while Vindelicia was called Rhaetia Secunda. The exact boundary line between the two is not accurately defined by the ancients, but it is highly probable that the Alpine chain extending from the *Lake af Constance* to the river *Inn* was the natural line of demarcation; it should, however, be observed that Ptolemy (ii. 12) includes under the name of Rhaetia all the country west of the river Licus as far as the sources of the Danubius and Rhenus, while he applies the name of Vindelicia to the territory between the Licus and Oenus.

Ancient Rhaetia or Rhaetia Proper was throughout an Alpine country, being traversed by the Alpes Rhaeticae and Mons Adula. It contained the sources of nearly all the Alpine rivers watering the north of Italy, such as the Addua, Sarius, Olbius, Cleusis, Mincius, and others; but the chief rivers of Rhaetia itself were the Athesis with its tributary the Isargus (or Ilargus), and the Aenus or Oenus. The magnificent valleys formed by these rivers were fertile and well adapted to agricultural pursuits; but the inhabitants depended mainly upon their flocks (Strab. vii. p. 316). The chief produce of the valleys was wine, which was not at all inferior to that grown in Italy; so that Augustus was particularly partial to it (Strab. iv. p. 206; Plin. xiv. 3, 5, 8; Virg. *Georg.* ii. 96; Colum. iii. 2; Martial, xiv. 100; Suet. *Aug.* 77).

Hor. *Carm.* iv. 14. 15). Like all mountaineers, they cherished great love of freedom, and fought against the Romans with rage and despair, as we learn from Florus (iv. 12), who states that the Rhaetian women, who also took part in the war, after having spent their arrows, threw their own children in the faces of the Romans. Still, however, they were obliged to yield, and in B. C. 15 they were finally subdued, and their country was made a Roman province. During the later period of the Empire their territory was almost entirely depopulated; but it somewhat recovered at the time when the Ostrogoths, under Theodoric, took possession of the country, and placed its administration into the hands of a Dux (Euipp. *Vit. S. Severini*, 29; Cassiod. *Var.* iv. 4). After the death of Theodoric, the Boioarii spread over Rhaetia and Noricum, and the river Licus became the boundary between the Alemanni in Vindelicia, and the Boioarii in Rhaetia. (Egin. *Vit. Carol. M.* 11.) The more important among the various tribes mentioned in Rhaetia, such as the LEPONTII, VIBERI, CALUCONES, VENNONES, SARUNETES, ISARCI, BRIXENTES, GENAUNI, TRIDENTINI, and EUGANEI, are discussed in separate articles. Tridentum was the most important among the few towns of the country; the others are known almost exclusively through the Itineraries, two roads having been made through Rhaetia by the Romans, the one leading from Augusta Vindelicorum to Comum, and the other from the same town to Verona; Paulus Diaconus, however, mentions a few towns of the interior which were not situated on these high-roads, such as the town of Maia, which was destroyed in the eighth century by the fall of a mountain, and the site of which is now occupied by the town of *Meran*. [L. S.]

RHAGAE (Ῥαγαί, Arrian, *Anab.* iii. 30; Strab. xi. pp. 514, 524; Ῥάγεια, Isidor. Char. § 7; ἡ Ῥάγα, Steph. B. *s. v.*; Ῥάγαια, Ptol. vi. 5. § 4; Rhages, *Tobit*, i. 14: *Eth.* Ῥαγηνός), a great town of Media Magna, the capital of the province of Rhagiana, which is first known to us in history as the place to which the Jewish exiles were sent. (*Tobit*, i. 14, iv. 20, ix. 2.) It was situated in the eastern part of the country towards Parthia, one day's journey from the Pylae Caspiae (Arrian, *Anab.* iii. 20) and 10 days' march from Ecbatana (*Hamadán*). The name of the place is stated by Strabo to have been derived from the frequent earthquakes to which it had been subject, but this is contrary to all probability (Strab. xi. p. 514); he adds, also, that, like many other places in the neighbourhood, it had been built (or rather rebuilt) by the Greeks (p. 524). In later times it appears to have been rebuilt by Seleucus Nicator, who called it Europus. (Strab. *l. c.*) Still later it appears to have been again rebuilt by one of the house of Arsaces, who named it in consequence Arsacia. (Strab. *l. c.*; Steph. B. *s. v.*) In modern times the ancient name has returned; and the ruins of *Rhey*, which have been visited and described by many travellers, no doubt represent the site of the ancient Rhagae. (Ker Porter, *Travels*, vol. i. p. 358.) Pliny mentions a town of Parthia, which he calls Apameia Rhagiane (vi. 14. § 17). Some geographers have contended that this is the same as Rhagae; but the inference is rather that it is not. [V.]

RHAGIA'NA. [RHAGAE.]

RHAMAE, a town in the interior of Thrace. (*Itin. Hieros.* p. 568.) [T. H. D.]

RHAMANI'TAE. 1. (Ῥαμανῖται, Strab. xvi. p. 782), supposed by Mr. Forster to be identical with the Rhabanitae of Ptolemy (Ῥαβανῖται, vi. 7. § 24), whom that geographer places under Mount Climax. He says "their common position, north of Mount Climax, concurs with the resemblance of the two names to argue the identity" (*Geog. of Arabia*, vol. i. p. 68, note); but it is by no means clear that the Rhamanitae lay near Mount Climax. All that Strabo says of them is, that Marsiaba, the limit of the expedition of Aelius Gallus, the siege of which he was forced to raise for want of water, lay in the country of the Rhamanitae; but nothing in geography is more difficult to determine than the situation of that town. [MARSYABA.]

2. A people of the same name is mentioned by Pliny, as existing on the Persian Gulf, identical with the Anariti of Ptolemy and the EPIMARANITAE. [G. W.]

RHAMIDAVA. [DACIA, p. 744, b.]

RHAMNUS. 1. (Ῥαμνοῦς, -οῦντος: *Eth.* Ῥαμνούσιος, fem. Ῥαμνουσία, Ῥαμνουσίς), a demus of Attica, belonging to the tribe Aeantis (Steph. B., Harpocr., Suid., *s. v.*), which derived its name from a thick prickly shrub, which still grows upon the site. (Ῥαμνοῦς, contr. of ῥαμνόεις from ῥάμνος.) The town stood upon the eastern coast of Attica, at the distance of 60 stadia from Marathon, and upon the road leading from the latter town to Oropus. (Paus. i. 33. § 2.) It is described by Scylax (p. 21) as a fortified place; and it appears from a decree in Demosthenes (*pro Cor.* p. 238, Reiske) to have been regarded as one of the chief fortresses in Attica. It was still in existence in the time of Pliny ("Rhamnus pagus, locus Marathon," iv. 7. s. 11). Rhamnus was the birthplace of the orator Antipho [*Dict. of Biogr. s. v.*]; but it was chiefly celebrated in antiquity on account of its worship of Nemesis, who was hence called by the Latin poets *Rhamnusia virgo* and *Rhamnusia dea*. (Catull. lxvi. 71; Claud. *B. Get.* 631; Ov. *Met.* iii. 406, *Trist.* v. 8. 9; Stat. *Silv.* iii. 5. § 5.) The temple of the goddess was at a short distance from the town. (Paus. *l. c.*; comp. Strab. ix. p. 399.) It contained a celebrated statue of Nemesis, which, according to Pausanias, was the work of Pheidias, and was made by him out of a block of Parian marble, which the Persians had brought with them for the construction of a trophy. The statue was of colossal size, 10 cubits in height (Hesych. *s. v.*; Zenob. *Prov.* v. 82), and on its basis were several figures in relief. Other writers say that the statue was the work of Agoracritus of Paros, a disciple of Pheidias. (Strab. ix. p. 396; Plin. xxxvi. 5. s. 4. § 17, Sillig.) It was however a common opinion that Pheidias was the real author of the statue, but that he gave up the honour of the work to his favourite disciple. (Suid. *s. v.*; Zenob. *l. c.*; Tzetz. *Chil.* vii. 960.) Rhamnus stood in a small plain, 3 miles in length, which, like that of Marathon, was shut out from the rest of Attica by surrounding mountains. The town itself was situated upon a rocky peninsula, surrounded by the sea for two-thirds of its circumference, and connected by a narrow ridge with the mountains, which closely approach it on the land side. It is now called *Ovrió-Kastro*. (Ὀβριό-Καστρο, a corruption of Ἑβραιόν-Καστρον, *Jews'-Castle*, a name frequently applied in Greece to the ruins of Hellenic fortresses.) It was about half a mile in circuit, and its remains are considerable. The principal gate was situated upon the narrow ridge already mentioned, and is still preserved; and adjoining it is the southern wall,

about 20 feet in height. At the head of a narrow glen, which leads to the principal gate, stand the ruins of the temple of Nemesis upon a large artificial platform, supported by a wall of pure white marble. But we find upon this platform, which formed the τέμενος or sacred enclosure, the remains of *two* temples, which are almost contiguous, and nearly though not quite parallel to each other. The larger building was a peripteral hexastyle, 71 feet long and 33 broad, with 12 columns on the side, and with a pronaus, cella, and posticum in the usual manner. The smaller temple was 31 feet long by 21 feet broad, and consisted only of a cella, with a portico containing two Doric columns *in antis*. Among the ruins of the larger temple are some fragments of a colossal statue, corresponding in size with that of the Rhamnusian Nemesis; but these fragments were made of Attic marble, and not of Parian stone as stated by Pausanias. It is, however, not improbable, as Leake has remarked, that the story of the block of stone brought by the Persians was a vulgar fable, or an invention of the priests of Nemesis by which Pausanias was deceived. Among the ruins of the smaller temple was found a fragment, wanting the head and shoulders, of a statue of the human size in the archaic style of the Aeginetan school. This statue is now in the British Museum. Judging from this statue, as well as from the diminutive size and ruder architecture of the smaller temple, the latter appears to have been the more ancient of the two. Hence it has been inferred that the smaller temple was anterior to the Persian War, and was destroyed by the Persians just before the battle of Marathon; and that the larger temple was erected in honour of the goddess, who had taken vengeance upon the insolence of the barbarians for outraging her worship. In front of the smaller temple are two chairs (θρόνοι) of white marble, upon one of which is the inscription Νεμέσει Σώστρατος ἀνέθηκεν, and upon the other Θέμιδι Σώστρατος ἀνέθηκεν, which has led some to suppose that the smaller temple was dedicated to Themis. But it is more probable that both temples were dedicated to Nemesis, and that the smaller temple was in ruins before the larger was erected. A difficulty, however, arises about the time of the destruction of the smaller temple, from the fact that the forms of the letters and the long vowels in the inscriptions upon the chairs clearly show that those inscriptions belong to an era long subsequent to the battle of Marathon. Wordsworth considers it ridiculous to suppose that these chairs were dedicated in this temple after its destruction, and hence conjectures that the temple was destroyed towards the close of the Peloponnesian War by the Persian allies of Sparta. (Leake, *Demi of Attica*, p. 105, seq., 2nd ed., *Northern Greece*, vol. ii. p. 434, seq.; Wordsworth, *Athens and Attica*, p. 34, seq.; *Unedited Antiquities of Attica*, c. vi. p. 41, seq.)

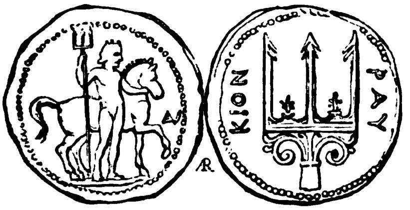
2. A harbour on the W. coast of Crete near the promontory Chersonesus. (Ptol. iii. 17. § 2.) Pliny, on the contrary, places it in the interior of the island (iv. 12. s. 20).

RHAPSII AETHIOPES. [RHAPTA.]

RHAPTA (τὰ Ῥαπτά, Ptol. i. 9. § 1, 14. § 4; *Peripl. Mar. Erythr.* p. 10), was, according to the author of the Periplus, the most distant station of the Arabian trade with Aegypt, Aethiopia, and the ports of the Red Sea. Its correct lat. is 15′ 5″. The name is derived from the peculiar boats in use there. These are termed by the natives dows (dáú), and, like the modern boats of *Pata* on the *Mozambique* coast, were frequently of 100 or 150 tons burden. But whether vessels of this size or merely canoes, all the craft at this part of the E. coast of Africa were formed of the hollowed trunks of trees and joined together by cords made of the fibres of the cocoa instead of iron or wooden pins, and hence the Greeks gave them, and the harbour which they principally frequented, the name of "the sewed" (τὰ ῥαπτά). Ptolemy speaks (i. 17. § 7, iv. 7. § 28, vii. 3. § 6, i. 17. § 12, &c.) of a promontory RHAPTUM, a river RHAPTUS, and a tribe of Aethiopians named RHAPSII. All these may probably be referred to the immediate neighbourhood of the town Rhapta, since the emporium was doubtless the most striking object to the caravans trading there and to the Greek merchants accompanying the caravans. The *promontory* was one of the numerous bluffs or headlands that give to this portion of the E. coast of Africa the appearance of a saw, the shore-line being everywhere indented with sharp and short projections. The *river* was one of the many streams which are broad inland, but whose mouths, being barred with sand or coral reefs, are narrow and difficult to be discovered. This portion of the coast, indeed, from lat. 2° S. to the mouth of the *Govind*, the modern appellation of the Rhaptus of Ptolemy and the Periplus, is bordered by coral reefs and islands,— e. g. the *Dundas* and *Jubah* islands,— generally a league or even less from the mainland. Some of these islands are of considerable height; and through several of them are arched apertures large enough to admit the passage of a boat. As the shore itself also is formed of a coral conglomerate, containing shells, madrepore, and sand, it is evident that there has been a gradual rising of the land and corresponding subsidence of the sea. The reefs also which have been formed on the main shore have affected materially the course of the rivers,— barring the mouths of many, among them the Rhaptus, and compelling others, e. g. the *Webbé*, to run obliquely in a direction parallel to the coast. Another result of the reefs has been that many rivers having no or insufficient outlets into the sea, have become marshes or shallow lakes; and, consequently, streams that in Ptolemy's age were correctly described as running into the ocean, are now meres severed from it by sand and ridges of coral.

Rhapta seems, from the account in the Periplus, to have been, not so much the name of a single town, as a generic term for numerous villages inhabited by the builders of the "seamed boats." These were probably situated nearly opposite the modern island of *Pata;* and whether it implies one or many places, Rhapta certainly was on the coast of Azania. The Rhapsii Aethiopes are described in the Periplus as men of lofty stature; and in fact the natives of E. Africa, at the present day, are generally taller than the Arabs. Each village had its chief, but there was a principal shiekh or chief to whom all were subject. This division into petty communities under a general head also still subsists. In the first century B. C. the Rhapsii were held in subjection by the shiekh and people of Muza, whence came ships with Arab masters, and pilots who understood the language of the Rhapsii and were connected with them by intermarriage. The Arabs brought to Rhapta spear-heads, axes, knives, buttons, and beads; sometimes also wine and wheaten bread, not so much indeed for barter, as for presents to the

Rhapsian chiefs. From Rhapta they exported ivory (inferior to that of Adulis), tortoise-shell (the next best in quality to that of India), rhinoceros-horn, and nauplius (a shell probably used in dyeing). These commercial features are nearly repeated at the present day in this region. The African still builds and mans the ship; the Arab is the navigator and supercargo. The ivory is still of inferior quality, being for the most part found in the woods, damaged by rain, or collected from animals drowned by the overflow of the rivers at the equinoxes. The hawksbill turtle is still captured in the neighbourhood of the river *Govind*, and on the shore opposite the island of *Pata*. (See Vincent, *Voyage of Nearchus*, vol. ii. pp. 169—183; Cooley, *Claudius Ptolemy and the Nile*, pp. 68—72.) [W. B. D.]



RHAPTUM PROMONTORIUM. [RHAPTA.]

RHAPTUS FLUVIUS. [RHAPTA.]

RHASTIA ('Ραστία), a town in the country of the Trocmi in Galatia, in Asia Minor, which is noticed only by Ptolemy (v. 4. § 9). [L. S.]

RHATOSTATHYBIUS ('Ρατοσταθύβιος, Ptol. ii. 3. § 3), a river on the W. coast of Britannia Romana, according to Camden (p. 733) the *Taf*. [T. H. D.]

RHAUCUS ('Ραῦκος, Scyl. p. 19; Polyb. xxxi. 1. § 1, xxxiii. 15. § 1: *Eth.* 'Ραύκιος, fem. 'Ραυκία, Steph. B. *s. v.*). From the story told about the Cretan bees by Antenor in his "Cretica" (*ap. Aelian. N. A.* xvii. 35; comp. Diodor. v. 70), it seems that there were two cities of this name in Crete. The existence of two places so called in the island might give rise to some such legend as that which he mentions. Pashley (*Crete*, vol. i. p. 235) fixes the site of one Rhaucus at *Hághio Mýro*, between Cnossus and Gortyna, and from its proximity to Mt. Ida infers that it is the more ancient. [E. B. J.]

COIN OF RHAUCUS.

RHEBAS ('Ρήβας), a very small river on the coast of Bithynia, the length of which amounts only to a few miles; it flows into the Euxine, near the entrance of the Bosporus, north-east of Chalcedon, and still bears the name of *Riva*. (Scylax, p. 34; Dionys. Per. 794; Ptol. v. 1. § 5; Arrian, *Peripl P. E.* p. 13; Marcian, p. 69; Plin. vi. 1; Steph. B. *s. v.*) This little river, which is otherwise of no importance, owes its celebrity to the story of the Argonauts. (Orph. *Arg.* 711; Apollon. Rhod. ii. 650, 789.) It also bore the names of Rhesaeus and Rhesus (Plin. *l. c.*; Solin. 43), the last of which seems to have arisen from a confusion with the Rhesus mentioned by Homer. [L. S.]

RHE'DONES. [REDONES.]

RHE'GIUM ('Ρήγιον: *Eth.* 'Ρηγῖνος, Rheginus: *Reggio*), an important city of Magna Graecia, situated near the southern end of the Bruttian peninsula, on the E. side of the Sicilian straits, and almost directly opposite to Messana in Sicily. The distance between the two cities, in a direct line, is only about 6 geog. miles, and the distance from Rhegium to the nearest point of the island is somewhat less. There is no doubt that it was a Greek colony, and we have no account of any settlement previously existing on the site; but the spot is said to have been marked by the tomb of Jocastus, one of the sons of Aeolus. (Heraclid. *Polit.* 25.) The foundation of Rhegium is universally ascribed to the Chalcidians, who had, in a year of famine, consecrated a tenth part of their citizens to Apollo: and these, under the direction of the oracle at Delphi, proceeded to Rhegium, whither they were also invited by their Chalcidic brethren, who were already established at Zancle on the opposite side of the strait. (Strab. vi. p. 257; Heraclid. *l. c.*; Diod. xiv. 40; Thuc. vi. 4; Scymn. Ch. 311.) With these Chalcidians were also united a body of Messenian exiles, who had been driven from their country at the beginning of the First Messenian War, and had established themselves for a time at Macistus. They were apparently not numerous, as Rhegium always continued to be considered a Chalcidic city; but they comprised many of the chief families in the new colony; so that, according to Strabo, the presiding magistrates of the city were always taken from among these Messenian citizens, down to the time of Anaxilas, who himself belonged to this dominant caste. (Strab. vi. p. 257; Paus. iv. 23. § 6; Thuc. vi. 4; Heraclid. *l. c.* 1.) The date of the foundation of Rhegium is uncertain; the statements just mentioned, which connect it with the First Messenian War would carry it back as far as the 8th century B.C.; but they leave the precise period uncertain. Pausanias considers it as founded after the end of the war, while Antiochus, who is cited by Strabo, seems to refer it to the beginning; but his expressions are not decisive, as we do not know how long the exiles may have remained at Macistus; and it is probable, on the whole, that we may consider it as taking place shortly after the close of the war, and therefore *before* 720 B. C. (Paus. *l. c.*; Antioch. *ap. Strab. l. c.*). In this case it was probably the most ancient of all the Greek colonies in this part of Italy. Various etymologies of the name of Rhegium are given by ancient authors; the one generally received, and adopted by Aeschylus (*ap. Strab. l. c.*), was that which derived it from the bursting asunder of the coasts of Sicily and Italy, which was generally ascribed to an earthquake. (Diod. iv. 85; Justin. iv. 1, &c.) Others absurdly connected it with the Latin *regium* (Strab. *l. c.*), while Heraclides gives a totally different story, which derived the name from that of an indigenous hero. (Heraclid. *Polit.* 25.)

There seems no doubt that Rhegium rose rapidly to be a flourishing and prosperous city; but we know almost nothing of its history previous to the time of Anaxilas. The constitution, as we learn from Heraclides, was aristocratic, the management of affairs resting wholly with a council or body of 1000 of the principal and wealthiest citizens. After the legislation of Charondas at Catana, his laws were adopted by the Rhegians as well as by the other Chalcidic cities of Sicily. (Heraclid. *l. c.*; Arist. *Pol.* ii. 12, v. 12.) The Rhegians are mentioned as affording shelter to the fugitive Phocaeans, who had been driven from Corsica, previous to the foundation of Velia. (Herod. i. 166, 167.) According to Strabo they extended their dominion over many of the adjoining towns, but these could only have been small places, as we do not hear of any colonies of importance founded by the Rhegians; and their territory extended only as far as the Halex on the E.,

where they adjoined the Locrian territory, while the Locrian colonies of Medma and Hipponium prevented their extension on the N. Indeed, from the position of Rhegium it seems to have always maintained closer relations with Sicily, and taken more part in the politics of that island than in those of the other Greek cities in Italy. Between the Rhegians and Locrians, however, there appears to have been a constant spirit of enmity, which might be readily expected between two rival cities, such near neighbours, and belonging to different races. (Thuc. iv. 1, 24.)

Rhegium appears to have participated largely in the political changes introduced by the Pythagoreans, and even became, for a short time after the death of Pythagoras, the head-quarters of his sect (Iambl. *Vit. Pyth.* 33, 130, 251); but the changes then introduced do not seem to have been permanent.

It was under the reign of Anaxilas that Rhegium first rose to a degree of power far greater than it had previously attained. We have no account of the circumstances attending the elevation of that despot to power, an event which took place, according to Diodorus, in B.C. 494 (Diod. xi. 48); but we know that he belonged to one of the ancient Messenian families, and to the oligarchy which had previously ruled the state. (Strab. vi. p. 257; Paus. iv. 23. § 6; Arist. *Pol.* v. 12; Thuc. vi. 4.) Hence, when he made himself master of Zancle on the opposite side of the straits, he gave to that city the name of Messana, by which it was ever afterwards known. [MESSANA.] Anaxilas continued for some years ruler of both these cities, and thus was undisputed master of the Sicilian straits: still further to strengthen himself in this sovereignty, he fortified the rocky promontory of Scyllaeum, and established a naval station there to guard the straits against the Tyrrhenian pirates. (Strab. vi. p. 257.) He meditated also the destruction of the neighbouring city of Locri, the perpetual rival and enemy of Rhegium, but was prevented from carrying out his purpose by the intervention of Hieron of Syracuse, who espoused the cause of the Locrians, and whose enmity Anaxilas did not choose to provoke. (Schol. *ad Pind. Pyth.* ii. 34.) One of his daughters was, indeed, married to the Syracusan despot, whose friendship he seems to have sought assiduously to cultivate.

Anaxilas enjoyed the reputation of one of the mildest and most equitable of the Sicilian rulers (Justin. iv. 2), and it is probable that Rhegium enjoyed great prosperity under his government. At his death, in B.C. 476, it passed without opposition under the rule of his two sons; but the government was administered during their minority by their guardian Micythus, who reigned over both Rhegium and Messana for nine years with exemplary justice and moderation, and at the end of that time gave up the sovereignty into the hands of the two sons of Anaxilas. (Diod. xi. 48, 66; Herod. vii. 170; Justin. iv. 2; Macrob. *Sat.* i. 11.) These, however, did not hold it long: they were expelled in B.C. 461, the revolutions which at that time agitated the cities of Sicily having apparently extended to Rhegium also. (Diod. xi. 76.)

The government of Micythus was marked by one great disaster: in B.C. 473, the Rhegians, having sent an auxiliary force of 3000 men to assist the Tarentines against the Iapygians, shared in the great defeat which they sustained on that occasion [TARENTUM]; but the statement of Diodorus that the barbarians not only pursued the fugitives to the gates of Rhegium, but actually made themselves masters of the city, may be safely rejected as incredible. (Diod. xi. 52; Herod. vii. 170; Grote's *Hist. of Greece*, vol. v. p. 319.) A story told by Justin, that the Rhegians being agitated by domestic dissensions, a body of mercenaries, who were called in by one of the parties, drove out their opponents, and then made themselves masters of the city by a general massacre of the remaining citizens (Justin. iv. 3), must be placed (if at all) shortly after the expulsion of the sons of Anaxilas; but the whole story has a very apocryphal air; it is not noticed by any other writer, and it is certain that the old Chalcidic citizens continued in possession of Rhegium down to a much later period.

We have very little information as to the history of Rhegium during the period which followed the expulsion of the despots; but it seems to have retained its liberty, in common with the neighbouring cities of Sicily, till it fell under the yoke of Dionysius. In B.C. 427, when the Athenians sent a fleet under Laches and Charoeades to support the Leontines against Syracuse, the Rhegians espoused the cause of the Chalcidic cities of Sicily, and not only allowed their city to be made the head-quarters of the Athenian fleet, but themselves furnished a considerable auxiliary force. They were in consequence engaged in continual hostilities with the Locrians. (Diod. xii. 54; Thuc. iii. 86, iv. 1, 24, 25.) But they pursued a different course on occasion of the great Athenian expedition to Sicily in B.C. 415, when they refused to take any part in the contest; and they appear to have persevered in this neutrality to the end. (Diod. xiii. 3: Thuc. vi. 44, vii. 1, 58.)

It was not long after this that the increasing power of Dionysius of Syracuse, who had destroyed in succession the chief Chalcidic cities of Sicily, became a subject of alarm to the Rhegians; and in B.C. 399 they fitted out a fleet of 50 triremes, and an army of 6000 foot and 600 horse, to make war upon the despot. But the Messenians, who at first made common cause with them, having quickly abandoned the alliance, they were compelled to desist from the enterprise, and made peace with Dionysius. (Diod. xiv. 40.) The latter, who was meditating a great war with Carthage, was desirous to secure the friendship of the Rhegians; but his proposals of a matrimonial alliance were rejected with scorn: he in consequence concluded such an alliance with the Locrians, and became from this time the implacable enemy of the Rhegians. (*Ib.* 44, 107.) It was from hostility to the latter that he a few years later (B.C. 394), after the destruction of Messana by the Carthaginians, restored and fortified that city, as a post to command the straits, and from which to carry on his enterprises in Southern Italy. The Rhegians in vain sought to forestal him; they made an unsuccessful attack upon Messana, and were foiled in their attempt to establish a colony of Naxians at Mylae, as a post of offence against the Messenians. (*Ib.* 87.) The next year Dionysius, in his turn, made a sudden attack on Rhegium itself, but did not succeed in surprising the city; and after ravaging its territory, was compelled to draw off his forces. (*Ib.* 90.) But in B.C. 390 he resumed the design on a larger scale, and laid regular siege to the city with a force of 20,000 foot, 1000 horse, and a fleet of 120 triremes. The Rhegians, however, opposed a vigorous resistance: the fleet of Dionysius suffered severely from a storm, and the approach of winter at length compelled him

to abandon the siege. (*Ib.* 100.) The next year (B. C. 389) his great victory over the confederate forces of the Italiot Greeks at the river Helorus left him at liberty to prosecute his designs against Rhegium without opposition: the Rhegians in vain endeavoured to avert the danger by submitting to a tribute of 300 talents, and by surrendering all their ships, 70 in number. By these concessions they obtained only a precarious truce, which Dionysius found a pretext for breaking the very next year, and laid siege to the city with all his forces. The Rhegians, under the command of a general named Phyton, made a desperate resistance, and were enabled to prolong their defence for eleven months, but were at length compelled to surrender, after having suffered the utmost extremities of famine (B. C. 387). The surviving inhabitants were sold as slaves, their general Phyton put to an ignominious death, and the city itself totally destroyed. (Diod. xiv. 106—108, 111, 112; Strab. vi. p. 258; Pseud.-Arist. *Oecon.* ii. 21.)

There is no doubt that Rhegium never fully recovered this great calamity; but so important a site could not long remain unoccupied. The younger Dionysius partially restored the city, to which he gave the name of Phoebias, but the old name soon again prevailed. (Strab. *l. c.*) It was occupied with a garrison by the despot, but in B. C. 351 it was besieged and taken by the Syracusan commanders Leptines and Callippus, the garrison driven out, and the citizens restored to independence. (Diod. xvi. 45.) Hence they were, a few years later (B. C. 345), among the foremost to promise their assistance to Timoleon, who halted at Rhegium on his way to Sicily, and from thence, eluding the vigilance of the Carthaginians by a stratagem, crossed over to Tauromenium. (Diod. xvi. 66, 68; Plut. *Timol.* 9, 10.) From this time we hear no more of Rhegium, till the arrival of Pyrrhus in Italy (B. C. 280), when it again became the scene of a memorable catastrophe. The Rhegians on that occasion, viewing with apprehension the progress of the king of Epirus, and distrusting the Carthaginians, had recourse to the Roman alliance, and received into their city as a garrison, a body of Campanian troops, 4000 in number, under the command of an officer named Decius. But these troops had not been long in possession of the city when they were tempted to follow the example of their countrymen, the Mamertines, on the other side of the strait; and they took advantage of an alleged attempt at defection on the part of the Rhegians, to make a promiscuous massacre of the male citizens, while they reduced the women and children to slavery, and established themselves in the sole occupation of the town. (Pol. i. 7; Oros. iv. 3; Appian, *Samnit.* iii. 9; Diod. xxii. *Exc. H.* p. 494, *Exc. Vales*, p. 562; Dion Cass. *Fr.* 40. 7; Strab. v. p. 258.) The Romans were unable to punish them for this act of treachery so long as they were occupied with the war against Pyrrhus; and the Campanians for some years continued to reap the benefit of their crime. But as soon as Pyrrhus had finally withdrawn from Italy, the Romans turned their arms against their rebellious soldiers; and in B. C. 270, being actively supported by Hieron of Syracuse, the consul Genucius succeeded in reducing Rhegium by force, though not till after a long siege. Great part of the Campanians perished in the defence; the rest were executed by order of the Roman people. (Pol. i. 6, 7; Oros. iv. 3; Dionys. *Fr. Mai.* xix. 1, xx. 7.)

Rhegium was now restored to the survivors of its former inhabitants (Pol. i. 7; Liv. xxxi. 31; Appian, *l. c.*); but it must have suffered severely, and does not seem to have again recovered its former prosperity. Its name is hardly mentioned during the First Punic War, but in the second the citizens distinguished themselves by their fidelity to the Roman cause, and repeated attempts of Hannibal to make himself master of the city were uniformly repulsed. (Liv. xxiii. 30, xxiv. 1, xxvi. 12, xxix. 6.) From this time the name of Rhegium is rarely mentioned in history under the Roman Republic; but we learn from several incidental notices that it continued to enjoy its own laws and nominal liberty as a "foederata civitas," though bound, in common with other cities in the same condition, to furnish an auxiliary naval contingent as often as required. (Liv. xxxi. 31, xxxv. 16, xxxvi. 42.) It was not till after the Social War that the Rhegians, like the other Greek cities of Italy, passed into the condition of Roman citizens, and Rhegium itself became a Roman Municipium. (Cic. *Verr.* iv. 60, *Phil.* i. 3, *pro Arch.* 3.) Shortly before this (B. C. 91) the city had suffered severely from an earthquake, which had destroyed a large part of it (Strab. vi. p. 258; Jul. Obseq. 114); but it seems to have, in great measure, recovered from this calamity, and is mentioned by Appian towards the close of the Republic as one of the eighteen flourishing cities of Italy, which were promised by the Triumvirs to their veterans as a reward for their services. (Appian, *B. C.* iv. 3.) Rhegium, however, had the good fortune to escape on this occasion by the personal favour of Octavian (*Ib.* 86); and during the war which followed between him and Sextus Pompeius, B. C. 38—36, it became one of the most important posts, which was often made by Octavian the head-quarters both of his fleet and army. (Strab. vi. p. 258; Appian, *B. C.* v. 81, 84; Dion Cass. xlviii. 18, 47.) To reward the Rhegians for their services on this occasion, Augustus increased the population, which was in a declining state, by the addition of a body of new colonists; but the old inhabitants were not expelled, nor did the city assume the title of a Colonia, though it adopted, in gratitude to Augustus, the name of Rhegium Julium. (Strab. *l. c.*; Ptol. iii. 1. § 9; Orell. *Inscr.* 3838.) In the time of Strabo it was a populous and flourishing place, and was one of the few cities which, like Neapolis and Tarentum, still preserved some remains of its Greek civilisation. (Strab. vi. pp. 253, 259.) Traces of this may be observed also in inscriptions, some of which, of the period of the Roman Empire, present a curious mixture of Greek and Latin, while others have the names of Roman magistrates, though the inscriptions themselves are in Greek. (Morisani, *Inscr. Reginae*, 4to. Neap. 1770, pp. 83, 126, &c.; Boeckh, *C. I.* 5760—5768.)

Its favourable situation and its importance, as commanding the passage of the Sicilian straits, preserved Rhegium from falling into the same state of decay as many other cities in the south of Italy. It continued to exist as a considerable city throughout the period of the Roman Empire (Plin. iii. 5. s. 10; Ptol. *l. c.*; *Itin. Ant.* pp. 112, 115, 490), and was the termination of the great highway which led through the southern peninsula of Italy, and formed the customary mode of communication with Sicily. In A. D. 410 Rhegium became the limit of the progress of Alaric, who after the capture of Rome advanced through Campania, Lucania,

and Bruttium, laying waste those provinces on his march, and made himself master of Rhegium, from whence he tried to cross over into Sicily, but, being frustrated in this attempt, retraced his steps as far as Consentia, where he died. (*Hist. Miscell.* xiii. p. 535.) Somewhat later it is described by Cassiodorus as still a flourishing place (*Var.* xii. 14), and was still one of the chief cities of Bruttium in the days of Paulus Diaconus. (*Hist. Lang.* ii. 17.) During the Gothic wars after the fall of the Western Empire, Rhegium bears a considerable part, and was a strong fortress, but it was taken by Totila in A. D. 549, previous to his expedition to Sicily. (Procop. *B. G.* i. 8, iii. 18, 37, 38.) It subsequently fell again into the hands of the Greek emperors, and continued subject to them, with the exception of a short period when it was occupied by the Saracens, until it passed under the dominion of Robert Guiscard in A. D. 1060. The modern city of *Reggio* is still a considerable place, with a population of about 10,000 souls, and is the capital of the province of *Calabria Ultra;* but it has suffered severely in modern times from earthquakes, having been almost entirely destroyed in 1783, and again in great part overthrown in 1841. It has no remains of antiquity, except a few inscriptions, but numerous coins, urns, mosaics, and other ancient relics have been brought to light by excavations.

Rhegium was celebrated in antiquity as the birthplace of the lyric poet Ibycus, as well as that of Lycus the historian, the father of Lycophron. (Suid. *s. v.* Ἴβυκος; Id. *s. v.* Λύκος.) It gave birth also to the celebrated sculptor Pythagoras (Diog. Laërt. viii. 1. § 47; Paus. vi. 4. § 4); and to several of the minor Pythagorean philosophers, whose names are enumerated by Iamblichus (*Vit. Pyth.* 267), but none of these are of much note. Its territory was fertile, and noted for the excellence of its wines, which were especially esteemed for their salubrity. (Athen. i. p. 26.) Cassiodorus describes it as well adapted for vines and olives, but not suited to corn. (*Var.* xii. 14.) Another production in which it excelled was its breed of mules, so that Anaxilas the despot was repeatedly victor at the Olympic games with the chariot drawn by mules (ἀπήνη), and his son Leophron obtained the same distinction. One of these victories was celebrated by Simonides. (Heraclid. *Polit.* 25; Athen. i. p. 3; Pollux, *Onomast.* v. 75.)

Rhegium itself was, as already mentioned, the termination of the line of high-road which traversed the whole length of Southern Italy from Capua to the Sicilian strait, and was first constructed by the praetor Popilius in B. C. 134. (Orell. *Inscr.* 3308; Mommsen, *Inscr. R. N.* 6276; Ritschel, *Mon. Epigr.* pp. 11, 12.) But the most frequented place of passage for crossing the strait to Messana was, in ancient as well as in modern times, not at Rhegium itself, but at a spot about 9 miles further N., which was marked by a column, and thence known by the name of COLUMNA RHEGINA. (*Itin. Ant.* pp. 98, 106, 111; Plin. iii. 5. s. 10; ἡ Ῥηγίνων στυλίς, Strab. v. p. 257.) The distance of this from Rhegium is given both by Pliny and Strabo at 12½ miles or 100 stadia, and the latter places it only 6 stadia from the promontory of Caenys or *Punta del Pezzo.* It must therefore have been situated in the neighbourhood of the modern village of *Villa San Giovanni,* which is still the most usual place of passage. But the distance from Rhegium is overstated by both geographers, the *Punta del Pezzo* itself being less than 10 miles from *Reggio.* On the other hand the inscription of *La Polla* (Forum Popilii) gives the distance from the place of passage, which it designates as "Ad Statuam," at only 6 miles. (Mommsen, *Inscr. R. N.* 6276.) Yet it is probable that the spot meant is really the same in both cases, as from the strong current in the straits the place of embarkation must always have been nearly the same. [E. H. B.]

COIN OF RHEGIUM.

RHEGMA (Ῥῆγμα), the name of a lake or lagune formed by the river Cydnus in Cilicia, at its mouth, about 5 stadia below Tarsus; the inhabitants of this city used it as their port. (Strab. xiv. p. 672; *Stadiasm. Mar. Mag.* §§ 155, 156, where it is called Ῥηγμοί; *It. Hieros.* p. 579.) The two last authorities place the Rhegma 70 stadia from Tarsus, which may possibly refer to a particular point of it, as the Rhegma was very extensive. [L. S.]

RHEGMA. [EPIMARANITAE.]

RHEI'MEA (Ῥειμέα, Böckh, *Inscr.* no. 4590), a town of Auranitis, as appears from an inscription found by Burckhardt (*Travels,* p. 69) at *Deir-el-Leben,* situated three-quarters of an hour from the modern village of *Rima-el-Luhf,* where there stands a building with a flat roof and three receptacles for the dead, with an inscription over the door. (Böckh, *Inscr.* 4587—4589; comp. Buckingham, *Arab Tribes,* p. 256.) [E. B. J.]

RHENEIA. [DELOS, p. 760.]

RHENUS (Ῥῆνος), one of the largest rivers in Europe, is not so long as the Danube, but as a commercial channel it is the first of European rivers, and as a political boundary it has been both in ancient and modern times the most important frontier in Europe. The Rhine rises in the mountains which belong to the group of the *St. Gothard* in Switzerland, about 46° 30′ N. lat. There are three branches. The *Vorder-Rhein* and the *Mittel-Rhein* meet at *Dissentis,* which is only a few miles from their respective sources. The united stream has an east by north course to *Reichenau,* where it is joined by the *Hinter-Rhein.* At *Chur* (Curia), which is below the junction of the *Hinter-Rhein,* the river becomes navigable and has a general northern course to the *Bodensee* or *Lake of Constanz,* the Lacus Brigantinus or Venetus. This lake consists of two parts, of which the western part or *Untersee,* is about 30 feet lower than the chief part, called the *Lake of Constanz.* The course of the Rhine from the *Untersee* is westward, and it is navigable as far as the falls of *Schaffhausen,* which are not mentioned by any of the ancient geographers. It is interrupted by a smaller fall at *Laufenburg,* and there is a rapid near *Rheinfelden,* 10 miles below *Laufenburg.* The course is still west to

Basle (Basilia), where the Rhine is about 800 feet above the sea, and here we may fix the termination of the Upper Rhine. The drainage of all that part of Switzerland which lies north of the *Lake of Geneva* and the Bernese Alps is carried to the Rhine by the *Aar*, which joins it on the left bank at *Coblenz*, one of the Roman Confluentes.

From *Basle* the Rhine has a general north course to *Bonn*, where it enters the low country which forms a part of the great plain of Northern Europe. This may be called the Middle Rhine. In this part of its course the river receives few streams on the left bank. The chief river is the *Mosel* (Mosella), which joins it at *Coblenz* (Confluentes). On the right bank it is joined by the *Neckar* (Nicer), the *Main* (Moenus), which joins it at *Mainz* (Moguntiacum), and the *Lahn* (Laugana), which joins it at *Niederlahnstein*.

Below *Bonn* the river has still a general north course past *Cologne* (Colonia Agrippinensis) as far as *Wesel*, where it is joined on the right bank by the *Lippe* (Luppia), and higher up by the *Roer* or *Ruhr* (Rura). Between *Cologne* and *Wesel* it is joined on the west side by the *Erft*. From *Wesel* its course is NW. and then west to *Pannerden* in the kingdom of the Netherlands. At *Pannerden* it divides into two branches, of which the southern is called the *Waal* (Vahalis), and the northern retains the name of Rhine. The *Waal* has the greater volume of water. It runs westward, and is joined at *Gorcum* on the left bank by the *Maas* (Mosa). The *Maas* itself divides several times after its junction with the *Waal*. The main branch is joined on the right side by the *Leck*, a branch which comes from the Rhine Proper at *Wyck* by *Duurstede*, and flows past *Rotterdam* into the *North Sea*.

The Rhine, which was divided at *Pannerden*, runs north to *Arnheim* (Arenacum), above which town it communicates with the *Yssel* at *Doesburg* by a channel which is supposed to be the Fossa Drusiana, the canal of Drusus. [FLEVO LACUS.] The *Yssel* runs north from *Doesburg* to the *Zuider Zee*, which it enters on the east side below the town of *Kampen*. The Rhine runs westward from *Arnheim*, and at *Wyck* by *Duurstede*, as already said, sends off the branch called the *Leck*, which joins the *Maas*. The Rhine divides again at *Utrecht* (Trajectum): one branch called the *Vecht* runs northward into the *Zuider Zee;* the other, the Rhine, or Old Rhine, continues its course with diminished volume, and passing by *Leiden* enters the *North Sea* at *Katwyck*. The whole course of the Rhine is estimated at about 950 miles.

The delta of the Rhine lies between the *Yssel*, which flows into the *Zuider Zee*, and the *Maas*, if we look at it simply as determined by mere boundaries. But all this surface is not alluvial ground, for the eastern part of the province of *Utrecht* and that part of Guelderland which is between the Rhine, the *Zuider Zee*, and the *Yssel* contains small elevations which are not alluvial.

This description of the Rhine is necessary in order to understand what the ancient writers have said of it.

The first description of the Rhine that we possess from any good authority is Caesar's, though he had not seen much of it. He says (*B. G.* iv. 15) that it rises in the Alpine regions of the Lepontii, and passes in a long course along the boundaries of the Nantuates, Helvetii, Sequani, Mediomatrici, Triboci, and Treviri, in a rapid course. The name Nantuates is corrupt [NANTUATES]. If we make the limits of the Treviri extend nearly to the Netherlands or the commencement of the low country, Caesar has shown pretty clearly the place where the Rhine enters the great plain. On approaching the ocean, he says, it forms many islands, and enters the sea by several mouths (capita). He knew that the Rhine divided into two main branches near the sea; and he says that one of the branches named the Vahalis (*Waal*) joined the Mosa (*Maas*), and formed the Insula Batavorum [BATAVORUM INSULA]. He speaks of the rapidity of the river, and its breadth and depth in that part where he built his wooden bridge over it. (*B. G.* iv. 17.) He made the bridge between *Coblenz* and *Andernach*, higher up than the place where the river enters the low country. He crossed the Rhine a second time by a bridge which he constructed a little higher up than the first bridge. (*B. G.* vi. 9.)

Those persons, and Caesar of course, who said that the Rhine had more than two outlets were criticised by Asinius Pollio (Strab. iv. p. 192); and Virgil (*Aen.* viii. 724, Rhenique bicornis) follows Pollio's authority. But if the Mosa divided as it does now, Caesar was right and Pollio was wrong.

Strabo, who had some other authorities for his description of the Rhine besides Caesar, and perhaps besides Caesar and Pollio, does not admit Pollio's statement of the Rhine having a course of 6000 stadia; and yet Pollio's estimate is much below the truth. Strabo says that the length of the river in a right line is not much above one-half of Pollio's estimate, and that if we add 1000 stadia for the windings, that will be enough. This assertion and his argument founded on the rapidity of the stream, show that he knew nothing of the great circuit that the Rhine makes between its source and *Basle*. He knew, however, that it flowed north, but unluckily he supposed the *Seine* also to flow north. He also made the great mistake of affirming that the county of *Kent* may be seen from the mouths of the Rhine. He says that the Rhine had several sources, and he places them in the Adulas, a part of the Alps. In the same mountain mass he places the source of the Aduas, or Addua (*Adda*), which flows south into the lake Larius (*Lago di Como*). [ADDUA.]

The most difficult question about the Rhine is the outlets. When Pliny and Tacitus wrote, Drusus the brother of Tiberius had been on the lower Rhine, and also Germanicus, the son of Drusus, and other Roman commanders. Pliny (iv. 14) speaks of the Rhenus and the Mosa as two distinct rivers. In another passage (iv. 15) he says that the Rhine has three outlets: the western, named Helium, flows into the Mosa; the most northerly, named Flevum, flows into the lakes (*Zuider Zee*); and the middle branch, which is of moderate size, retains the name Rhenus. He supposed that there were islands in the Rhine between the Helium and the Flevum; and the Batavorum Insula, in which were the Canninefates also, is one of them. He also places between these two branches the islands of the Frisii, Chauci, Frisiabones, Sturii, and Marsacii. The Flevum of Pliny corresponds to the Flevo of Mela [FLEVO LACUS], who mentions this branch and only another, which he calls the Rhenus, which corresponds to Pliny's Rhenus. Mela mentions no other outlets. He considered the third to be the Mosa, we may suppose, if he knew anything about it

Tacitus (*Ann.* ii. 6) observes that the Rhine

divides into two branches at the head of the Batavorum Insula. The branch which flows along the German bank keeps its name and its rapid course to the Ocean. The branch which flows on the Gallic bank is broader and less rapid: this is the Vahalis (*Waal*), which flows into the Mosa. (*Hist.* v. 23.) [BATAVORUM INSULA.] He knows only two outlets of the Rhine, and one of them is through the Mosa. The Rhine, as he calls the eastern branch, is the boundary between Gallia and Germania. East of this eastern branch he places the Frisii (*Ann.* iv. 72); and herein he agrees with Pliny, who places them between the Middle Rhine and the Flevum. Accordingly the Rhenus of Tacitus is the Rhenus of Mela and Pliny.

This third branch of the Rhine seems to be that which Tacitus calls the work of Drusus (*Ann.* ii. 6), and which Seutonius (*Claudius*, c. 1) mentions without saying where it was: "Drusus trans Rhenum fossas novi et immensi operis effecit, quae nunc adhuc Drusinae vocantur." Germanicus in his expedition against the northern Germans (Tac. *Ann.* ii. 6), ordered his fleet to assemble at the Batavorum Insula, whence it sailed through the Fossa Drusiana, and the lakes into the Ocean and to the river Amisia (*Ems*). This course was probably taken to avoid the navigation along the sea-coast of Holland. On a former occasion Germanicus had taken the same course (*Ann.* i. 60), and his father Drusus had done the same.

Ptolemy (ii. 9. § 4), who wrote after Tacitus and Pliny, is acquainted with three outlets of the Rhine. He places first the outlet of the Mosa in 24° 40′ long., 53° 20′ lat. He then comes to the Batavi and to Lugdunum, which town he places in 26° 30′ long., 53° 20′ lat. The western mouth of the Rhine is in 26° 45′ long., 53° 20′ lat. The middle mouth is in 27° long., 53° 30′ lat.; and the eastern in 28° long., 54° lat. His absolute numbers are incorrect, and they may be relatively incorrect also. His western outlet is a little east of Lugdunum, and this should be the Old Rhine or Rhine Proper. The middle mouth is further east, and the eastern mouth further east still. The eastern mouth may be the *Yssel*, but it is difficult to say what Ptolemy's middle mouth is. Gosselin supposes that Ptolemy's western mouth may have been about *Zandwoord*. He further supposes that the Middle Mouth according to his measures was about the latitude of *Bakkum*, about 4 leagues above *Zandwoord*, and he adds that this mouth was not known to those writers who preceded Ptolemy, and we may conjecture that it was little used, and was the first of the outlets that ceased to be navigable. The third mouth he supposes to correspond to the passage of the *Vlie*. But nothing can be more vague and unsatisfactory than this explanation, founded on Ptolemy's measurements and pure conjecture. So much as this is plain. Ptolemy does not reckon the Mosa as one of the outlets of the Rhine, as the Roman writers do; and he makes three outlets besides the outlet of the Mosa.

This country of swamps, rivers, and forests through which the Lower Rhine flowed has certainly undergone great changes since the Roman period, owing to the floods of the Rhine and the inundations of the sea, and it is very difficult, perhaps impossible, to make the ancient descriptions agree with the modern localities. Still it was a fixed opinion that the Rhine divided into two great branches, as Caesar says, and this was the division of the Rhine from

This article may be read with the articles BATAVORUM INSULA, FLEVO LACUS, FOSSA CORBULONIS, MOSA, MOSELLA, and GALLIA TRANSALPINA.

(D'Anville, *Notice, &c.*, "Rhenus"; *Penny Cyclopaedia*, art. "Rhine"; and Ukert, *Gallien*,—who has collected all the ancient and many modern authorities.) [G. L.]

RHENUS (*Reno*), a river of Gallia Cispadana, and one of the southern tributaries of the Padus. (Plin. iii. 16. s. 20.) It flowed within about a mile of the walls of Bononia (*Bologna*), on the W. side of the city, and is celebrated in history on account of the interview between Antony, Octavian, and Lepidus, which is generally believed to have taken place in a small island formed by its waters. [BONONIA.] It has its sources in the Apennines nearly 50 miles above *Bologna*, and is a considerable stream, though called by Silius Italicus "parvus," to distinguish it from its far greater namesake, the *Rhine*. (Sil. Ital. viii. 599.) In the time of Pliny it is probable that it discharged its waters into the principal channel of the Padus, but at the present day they are turned aside into an artificial channel before reaching that river, and are thus carried into the arm now known as the *Po di Primaro*. Hence the mouth of that branch of the *Po* is now called the *Foce del Reno*. Pliny tells us that the reeds which grew on the banks of the Rhenus were superior to all others for making arrows. (Plin. xvi. 36. s. 65.) [E. H. B.]

RHESAENA (Ῥέσαινα, Ptol. v. 18. § 13; Ῥέσινα, Steph. B. *s. v.*; Amm. Marc. xxxii. 5; Ressaina, *Tab. Peut.*; Rasin, *Notit. Imp.*: *Eth.* Ῥεσινάτης, Steph. B. *s. v.*), a town of considerable importance at the northern extremity of Mesopotamia; it was situated near the sources of the Chaboras (*Khabúr*), on the great road which led from Carrhae to Nicephorium, about 88 miles from Nisibis and 40 from Dara. (Procop. *B. P.* ii. 19, *de Aedif.* ii. 2.) It was near this town that Gordian the Younger fell in a battle with the Persians. (Amm. Marc. *l. c.*) A coin exists of the emperor Decius, bearing the legend CΕΠ. ΚΟΛ. ΡΗCΑΙΝΗCΙΩΝ., which may in all probability be referred to this town. In the Notit. Imp. the place is subject to the government of the Dux Osrhoenae (*Notit. Dign.* ed. Böcking, i. p. 400), and a bishop of Resaina is mentioned among those who subscribed their names at the Council of Nicaea. Under Theodosius, the town appears to have been partially rebuilt, and to have received the title of THEODOSIOPOLIS. (Hierocl. p. 793.) There can be no doubt that it is at present represented by *Ras-al-Ain*, a considerable entrepôt of commerce in the province of *Diarbekr*. It was nearly destroyed by the troops of *Timúr*, in A. D. 1393. (D'Herbelot, *Dict. Orient.* i. p. 140, iii. p. 112; Niebuhr, ii. p. 390.) [V.]

COIN OF RHESAENA.

RHETICO, a mountain of Germany, mentioned only by Pomp. Mela (iii. 3), along with Mount Taunus. As no particulars are stated it is impossible to identify it, and German writers are so divided in their opinions that some take Rhetico to be the name of the *Siebengebirge*, near *Bonn*, while others identify it with a mountain in the *Tirol*. [L. S.]

RHIDAGUS (Curt. vi. 4. § 7), a river of Hyrcania, which flows from the mountains NW. to the Caspian. Alexander crossed it on his march in pursuit of Dareius. It appears to be the same as the Choatres of Ammianus (xxiii. 24), and may perhaps be represented by the present *Adjisu*. [V.]

RHINOCORU'RA or RHINOCOLU'RA (Ῥινοκόρουρα, Polyb. Ptol. Joseph.; Ῥινοκόλουρα, Strab.: *Eth.* Ῥινοκουραῖρος, Ῥινοκουρουρίτης), a maritime city on the confines of Egypt and Palestine, and consequently reckoned sometimes to one country, sometimes to the other. Strabo, going south, reckons Gaza, Raphia, Rhinocolura (xvi. p. 759): Polybius, going north, reckons it to Egypt, calling Raphia the first city of Coelesyria (v. 80). Ptolemy also reckons it to Egypt, and places it in the district of Cassiotis (iv. 5. § 12), between Ostracine and Anthedon. The Itinerarium Antonini (p. 151) places it xxii. M.P. south of Rafia, and the same distance north of Ostracena. The following curious account of its origin and name is given by Diodorus Siculus. Actisanes, king of Aethiopia, having conquered Egypt, with a view to the suppression of crime in his newly-acquired dominion, collected together all the suspected thieves in the country, and, after judicial conviction, cut off their noses and sent them to colonise a city which he had built for them on the extremity of the desert, called, from their mishap, Rhinocolura (quasi ῥῖνος κόλουροι=*curti*, al. ῥ. κείρασθαι), situated on the confines of Egypt and Syria, near the shore; and from its situation destitute of nearly all the necessaries of life. The soil around it was salt, and the small supply of well water within the walls was bitter. Necessity, the mother of invention, led the inhabitants to adopt the following novel expedient for their sustenance. They collected a quantity of reeds, and, splitting them very fine, they wove them into nets, which they stretched for many stadia along the sea-shore, and so snared large quantities of quails as they came in vast flights from the sea (i. 60). Strabo copies this account of its origin (*l. c.*); Seneca ascribes the act to a Persian king, and assigns the city to Syria (*de Ira*, iii. 20). Strabo (xvi. p. 781) mentions it as having been the great emporium of Indian and Arabian merchandise, which was discharged at Leuce Come, on the eastern coast of the Red Sea, whence it was conveyed, viâ Petra, to Rhinocolura, and thence dispersed to all quarters. In his day, however, the tide of commerce flowed chiefly down the Nile to Alexandria. The name occurs in Josephus, but unconnected with any important event. It is known to the ancient ecclesiastical writers as the division between the possessions of the sons of Noah. S. Jerome states that the "River of Egypt" flowed between this city and Pelusium (Reland, *Palaest.* pp. 285, 286, 969—972); and in one passage the LXX. translate "the River of Egypt" by Rhinocorura. (*Isaiah*, xxvii. 12.) It is remarkable that this penal colony, founded for mutilated convicts, should have become fruitful in saints; and its worthy and exemplary bishop Melas, in the time of the Arian persecution, who was succeeded by his brother Solon, became the founder of a succession of religious men, which, according to the testimony of Sozomen, continued to his time. (*Hist. Eccles.* vii. 31.) Rhinocorura is now *El-Arish*, as the

River of Egypt is *Wady-el-Arish.* The village is situated on an eminence about half a mile from the sea, and is for the most part enclosed within a wall of considerable thickness. There are some Roman ruins, such as marble columns, &c., and a very fine well of good water. (Irby and Mangles, *Travels*, p. 174, October 7.) [G. W.]

RHIPE. [ENISPE.]

RHIPAEI MONTES (τὰ Ῥιπαῖα ὄρη), a name applied by Grecian fancy to a mountain chain whose peaks rose to the N. of the known world. It is probably connected with the word ῥιπαί, or the chill rushing blasts of Βορέας, the mountain wind or "tramontana" of the Greek Archipelago, which was conceived to issue from the caverns of this mountain range. Hence arose the notion of the happiness of those living beyond these mountains — the only place exempt from the northern blasts. In fact they appear in this form of Ῥιπαί, in Alcman (*Fragm.* p. 80, ed. Welcker), a lyric poet of the 7th century B. C., who is the first to mention them. The contemporary writers Damastes of Sigeum (*ap. Steph. B. s. v.* Ὑπερβόρεοι) and Hellanicus of Lesbos (*ap. Clem. Alex. Strom.* i. p. 305) agree in their statements in placing beyond the fabled tribes of the N. the Rhipaean mountains from which the north wind blows, and on the other side of these, on the sea-coast, the Hyperboreans. The legends connected with this imagined range of mountains lingered for a long period in Grecian literature, as may be seen from the statements of Hecataeus of Abdera (*ap. Aelian. H. A.* xi. 1) and Aristotle (*Met.* i. 13; comp. Soph. *Oed. Col.* 1248; Schol. *ad loc.*; Strab. vii. pp. 295, 299.) Herodotus knows nothing of the Rhipaean mountains or the Alps, though the positive geography of the N. begins with him. It would be an idle inquiry to identify the Rhipaean range with any actual chain. As the knowledge of the Greeks advanced, the geographical "mythus" was moved further and further to the N. till it reached the 48th degree of latitude N. of the Maeotic lake and the Caspian, between the *Don*, the *Volga*, and the *Jaik*, where Europe and Asia melt as it were into each other in wide plains or steppes. These "mountains of the winds" followed in the train of the meteorological "mythus" of the Hyperboreans which wandered with Heracles far to the W. Geographical discovery embodied the picture which the imagination had formed. Poseidonius (*ap. Athen.* vi. p. 223, d.) seems to have considered this range to be the Alps. The Roman poets, borrowing from the Greeks, made the Rhipaean chain the extreme limit to the N. (Virg. *Georg.* i. 240; Propert. i. 6. 3; Sil. It. xi. 459); and Lucan (iii. 273) places the sources of the Tanais in this chain. (Comp. Mela, i. 19. § 18; Plin. iv. 24; Amm. Marc. xxii. 8. § 38; Procop. *B. G.* iv. 6; Sid. Apoll. ii. 343; Jornand. *Get.* 16; Oros. i. 2.) In the earlier writers the form is Ripaei, but with Pliny and those who followed him the *p* becomes aspirated. In the geography of Ptolemy (iii. 5. §§ 15, 19) and Marcian (*Peripl.* § 39, ed. Didot) the Rhipaean chain appears to be that gently rising ground which divides the rivers which flow into the Baltic from those which run to the Euxine. [E. B. J.]

RHISPIA (Ῥισπία), a place in Upper Pannonia, of uncertain site (Ptol. ii. 15. § 4; Orelli, *Inscript.* n. 4991), though it is commonly identified with *Czur.* (Schönwisner, *Antiquitates Sabariae*, p. 41.) [L. S.]

RHIZONICUS SINUS. [RHIZON.]

RHIZO'PHAGI AETHIOPES (Ῥιζοφάγοι, Diodor. iii. 23; Strab. xvii. p. 770, seq.; Ptol. iv. 8. § 29), one of the numerous tribes of Aethiopia, whom the Greeks named after the diet peculiar to them. The root-eating Aethiopians dwelt above Meroë, on either bank of the Astaboras (*Tacazzé*), and derived their principal sustenance from a kind of cake or *polenta*, made from the reeds and bulrushes that covered that alluvial region. The roots were first scrupulously cleansed, then powdered between stones, and the pulp thus obtained was dried in the sun. The Rhizophagi are described as a mild and harmless race, living in amity with their neighbours, and, probably because they had nothing to lose, unmolested by them. Their only foes were lions, who sometimes committed the greatest havoc among this unarmed race; and their best friends, according to Diodorus (comp. Agatharch. *ap. Hudson, Geog. Graec. Min.* p. 37), were a species of gnat, or more probably gadfly, which at the summer solstice (ὑπὸ τὴν ἀνατολὴν τοῦ κυνὸς) assailed the lions in such numbers, that they fled from the marshes, and permitted the Rhizophagi to recruit their losses. The site of this obscure tribe probably corresponds with that of the *Shihos* (Bruce, *Travels*, vol. iii. pp. 69—72), who now occupy the southern part of the territory of *Taka* or *Atbara*, on the upper *Tacazzé*. [W. B. D.]

RHIZUS (Ῥιζοῦς), a port-town of Pontus, at the mouth of the river Rhizius, about 120 stadia to the east of the river Calus, and 30 stadia west of the mouth of the Ascurus. In the time of Procopius (*Bell. Goth.* iv. 2) the place had risen to considerable importance, so that Justinian surrounded it with strong fortifications. The Table mentions on its site a place under the name of Reila, which is probably only a corruption of the right name, which still exists in the form of *Rizeh*, though the place is also called *Irrish*. (Comp. Procop. *de Aed.* iii. 4; Ptol. v. 6. § 6.) [L. S.]

RHIZUS (Ῥιζοῦς: *Eth.* Ῥιζούντιος), a town of Magnesia in Thessaly, whose inhabitants were transported to Demetrias upon the foundation of the latter city. (Strab. ix. pp. 436, 443; Steph. B. *s. v.*; Plin. iv. 9. s. 16.) We learn from Scylax (p. 24) that Rhizus was outside the Pagasaean gulf upon the exterior shore; but its exact position is uncertain. Leake places it at the ruins eastward of *Nekhóri* (*Northern Greece*, vol. iv. p. 383).

RHOCCA (Ῥόκκα), a town of Crete, where there was a temple to Artemis Rhoccaea (Aelian, *N. A.* xii. 22). Pococke (vol. ii. p. 247) found remains at the village which still bears the name of *Rhokka*, to the S. of the ancient Methymna; and there can be little doubt but that this is the site of Rhocca, which, as is shown by Aelian (*N. A.* xiv. 20), was near Methymna (Höck, *Kreta*, vol. i. p. 391; Pashley, *Crete*, vol. ii. p. 41.) [E. B. J.]

RHODA or RHODUS (Ῥόδη, Steph. B. *s. v.*; Rhoda, Mela, ii. 6; Liv. xxxiv. 8; Ῥόδος, Strab. xiv. p. 654; Eustath. *ad Dion. Per.* 504; called by Ptol. ii. 6. § 20, Ῥοδίπολις, where we should probably read Ῥόδη πόλις), a Greek emporium on the coast of the Indigetae in Hispania Tarraconensis, founded according to Strabo (*l. c.*) by the Rhodians, and subsequently taken possession of by the Massiliots. It is the modern *Rosas*; but tradition says that the old town lay towards the headland at *San Pedro de Roda*. (Ford, *Handbook of Spain*, p. 249; comp. Meurs. *Rhod.* i. 28; Marca, *Hisp.* ii. 18; Martin, *Hist. des Gaules*, p. 218; Florez, *Med.* iii. p. 114; Mionnet, i. p. 148.) [T. H. D.]

RHO'DANUS (Ῥοδανός: *Rhône*). The Rhone rises in Switzerland, in a glacier west of the pass of *St. Gothard* and south of the *Gallenstock*, a mountain above 12,000 feet high. It has a general course, first SW., then W. by S. as far as *Martigny*, the Octodurus of Caesar (*B. G.* iii. 1). The course from *Martigny* to the *Lake of Geneva* forms nearly a right angle with the course of the river above *Martigny*. The length of the valley through which the Rhone flows to the *Lake of Geneva* is above 90 miles. This long valley called Wallis, or the *Vallais*, is bounded by the highest Alpine ranges: on the north by the Bernese Alps, which contain the largest continuous mass of snow and ice in the Swiss mountains, and on the south by the Lepontian and Pennine Alps. The *Lake of Geneva*, the Lacus Lemannus of the Romans [LEMANUS], which receives the Rhone at its eastern extremity, is more than 1200 feet above the surface of the Mediterranean.

The *Lake of Geneva* lies in the form of a crescent between Switzerland and Savoy. The convex part of the crescent which forms the north side is above 50 miles in length; the concave or southern side is less than 50 miles in length. The widest part, which is about the middle, is 8 or 9 miles. The greatest depth, which is near some high cliffs on the south coast, is stated variously by different authorities, some making it as much as 1000 feet. The Rhone enters the lake at the east end a muddy stream, and the water flows out clear at the western extremity past Geneva, an ancient city of the Allobroges. [GENEVA.]

Below Geneva the Rhone runs in a rapid course and in a SW. direction past *Fort l'Ecluse*. *Fort l'Ecluse* is at the point described by Caesar (*B. G.* i. 9) where the Jura overhangs the course of the Rhone. [HELVETII.] The river then runs south past *Seyssel*, and making a bend turns north again, and flowing in an irregular western course to *Lyon* (Lugdunum) is joined there by the *Saône*, the ancient Arar [ARAR; LUGDUNUM]. The length of the course of the Rhone from the *Lake of Geneva* to *Lyon* is about 130 miles. The *Saône*, as Caesar says, is a slow river, but the current is seen very plainly under the bridges in *Lyon*. The Rhone is a rapid stream, and violent when it is swelled by the rains and the waters from the Alpine regions.

From *Lyon* the Rhone flows in a general southern course. The direct distance is about 150 miles from *Lyon* to *Arles* (Arelate) where the river divides into two large branches which include the isle of *Carmague*. The whole course of the Rhone from the ice-fields of Switzerland to the low shores of the Mediterranean is above 500 miles.

The valley of the Rhone below *Lyon* is narrow on the west bank as far as the junction of the *Ardèche*, and it is bounded by high, bare, and rocky heights. Some of the hill slopes are planted with vines. All the rivers which flow into the Rhone from the highlands on the west are small: they are the *Ardèche*, *Cèze*, *Gardon* (Vardo), and some smaller streams. The left bank of the Rhone from

Lyon downwards is generally flat, but there are several parts where the rocks rise right above the water, and in these places the railway from *Lyon* to *Marseille* is cut in the rocks close to the river. At *St. Andeol*, a small town on the west bank above the *Ardèche*, the plain country begins on the west side of the Rhone. On the east side the hills are seen in the distance. From one of the middle-age towers built on the amphitheatre of *Arles*, there is a view of the great plain which lies all round that city to the north, west, and east, and stretches southward to the coast of the Mediterranean. The two large affluents of the Rhone on the east side are the *Isère* (Isara) and the *Durance* (Druentia).

The Rhone was earlier known to the Greeks and Romans than any other of the large rivers of Western Europe. The oldest notices of this river must have come from the Phocaeans and the Greeks of Massilia. What Avienus has collected from some source (*Or. Marit.* 623—690) is unintelligible. Pliny (iii. 4) very absurdly derives the name Rhodanus from a town which he names Rhoda; but the name Rhodanus is older than any city, and, like the names of other European rivers, it is one of the oldest memorials that we have of the languages of the West. Polybius (iii. 47) supposed that the Rhone rose further east than it does, but he knew that it flowed down a long valley (αὐλών) to the west, though he does not mention the *Lake of Geneva*. Ptolemy (ii. 10), the latest of the classical geographers, had no exact notion of the sources of the Rhone, though the Romans long before his time must have known where to look for them. He makes the sources of the Arar come from the Alps, by which the Jura is meant, and in this statement and what he says of the course of the Arar and Dubis he may have followed Strabo (iv. p. 186), as it has been supposed. The blunders about the sources of this river are singular. Mela (iii. 3) mentions the Danubius and Rhodanus among the rivers of Germany; and in another passage he says that it rises not far from the sources of the Ister and the Rhenus (ii. 5).

There is much difference in the statements about the number of the mouths of the Rhone. Timaeus, quoted by Strabo (p. 183), says that there were five outlets, for which Polybius reproves Timaeus, and says there were only two. Polybius (iii. 41) names the eastern branch the Massaliotic. Artemidorus, as cited by Strabo, made five mouths. Strabo does not state how many he supposed that there were. He says that above the mouths of the Rhone, not far from the sea, is a lake called Stomalimne, which some make one of the outlets of the Rhone, and those particularly do who enumerate seven outlets of the river. But he shows that this was a mistaken opinion. Caesar built ships at Arelate when he was going to besiege Massilia, and he brought them down the river to that city, and by the eastern branch, as we may assume.

The Rhone was navigated by the people on its banks at the time when Hannibal with his army came to cross it, and much earlier. Polybius is the earliest extant writer who has given us any precise information about this river. Hannibal (B.C. 218) crossed it at a point above the division of the stream, and of course higher than *Arles*, for we assume that the bifurcation was not higher than that city in his time, if it ever was. (Polyb. iii. 43.) He probably crossed the river at *Beaucaire* and below the junction of the *Gardon*. He then marched northwards on the east side of the river to the Insula. [INSULA ALLOBROGUM.] Much has been written on this passage of Polybius and on Livy (xxi.), who also describes the same passage. (*The March of Hannibal from the Rhone to the Alps*, by H. L. Long, Esq., 1831; Ukert, *Gallien*, p. 561, &c.; and the modern writers quoted by each.)

Pliny (iii. 4) enumerates three mouths of the Rhone. He calls the two smaller "Libyca" (if the reading is right): one of these is the Hispaniense os, which we may assume to be the nearest to Spain; the other is Metapinum, and the third and largest is the Massaliot. Some modern maps represent three mouths of the river. Ptolemy (ii. 10) mentions only a western and an eastern mouth, and he makes a mistake in placing the Fossae Marianae [FOSSAE MARIANAE] west of the western mouth. The channels of the Rhone below *Arles* may have been changed in some parts, even in historical periods, and the bed of the river above *Arles* has not always been where it is now. But there is no evidence for any great changes in the river's course since the time when Polybius wrote, though it is certain that the alluvium brought down the river must have enlarged the Delta of the Rhone.

The canal of Marius, which was on the east side of the eastern outlet of the Rhone, is described under FOSSA MARIANA; and the stony plain is described under LAPIDEI CAMPI. [G. L.]

RHODANU'SIA. Pliny (iii. 4) mentions Rhoda in Gallia Narbonensis as a colony of the Rhodii. He places it on the coast east of Agathe (*Agde*), and says that it gave the name to the Rhodanus. [RHODANUS.] Hieronymus, in his Prologue to the Second Epistle to the Galatians, copies Pliny. This may be the place which Stephanus (*s. v.* Ῥοδανουσία) names Rhodanusia, and calls "a city in Massalia;" by which the Massiliotic territory must be meant. The passage in Strabo (iv. p. 180) τὴν δὲ Ῥόην Ἀγαθὴν τοῖς, in which he intends to speak of one of the Massiliotic settlements, is corrupt. Casaubon (*Comment. in Strab.* p. 83) sometimes thought that we ought to read τὴν δὲ Ῥόδην καὶ Ἀγαθὴν τοῖς. Groskurd (*Strab.* Transl. i. p. 310) thinks that Pliny has called this place Rhoda because he confounded it with Rhode or Rhodus in Iberia, which he does not mention. He observes that Scymnus (v. 208), Stephanus, and Sidonius Apollinaris (i. 5) rightly name it Rhodanusia; and he has no doubt that Strabo wrote it so. But it is by no means certain that Strabo did write it so. Groskurd's argument is this: there never was a town Rhoda in Gallia, and Strabo mentions the Iberian Rhode or Rhodus. Since then Strabo is acquainted with both places, he has not made a mistake like Pliny; rather must we with Vossius (*Note on Mela*, ii. 6) alter the corrupt Ῥόην into Ῥοδανουσίαν; and Koray is mistaken in rejecting Ῥόην altogether as not genuine. We know nothing of this Gallic Rhode or Rhodanusia. The place is gone and has left no trace. [G. L.]

RHODE. [RHODANUSIA.]

RHODE FLUVIUS. [SAGARIS.]

RHO'DIA (Ῥοδία: *Eth.* Ῥοδιεύς), a town of Lycia, situated in the mountains on the north of Corydallus. (Steph. B. *s. v.*; Ptol. v. 3. § 6; Phot. *Cod.* 176.) At the time when Col. Leake wrote his work on Asia Minor (p. 186) the site of this town was not yet ascertained, and Sir C. Fellows did not examine the district; but the inscriptions which have since been found fix its site at the place now called *Eski Hissar*. (Spratt and Forbes, *Tra-*

vels in Lycia, i. pp. 166, 181.) The town had a temple of Asclepius, and its citizens are not called, as Stephanus Byz. asserts, Ῥοδιεῖς, but Ῥοδιαπολῖται or Ῥοδιοπολῖται, whence it appears that Pliny (v. 28) correctly calls the town Rhodiopolis. A plan of the numerous remains of this town is given by Spratt, according to whom it was not surrounded by walls: the theatre stands nearly in the centre, and is small, having a diameter of only 136 feet; but many of the seats remain, and the basement of the proscenium is perfect. In the front of it is a terrace, with seats along the parapet. Remains of churches show that the place was inhabited in Christian times. There are also traces of an aqueduct. The town being situated on a lofty eminence, commands an extensive southern prospect. [L. S.]

RHODIO'RUM REGIO. [PERAEA.]

RHO'DIUS (Ῥόδιος), a river of Troas, having its sources in Mount Ida, a little above the town of Astyra; it flows in a north-western direction, and after passing by Astyra and Cremaste, discharges itself into the Hellespont between Dardanus and Abydus. (Hom. *Il.* xii. 20, xx. 215; Hesiod, *Theog.* 341; Strab. xii. p. 554, xiii. pp. 595, 603; Plin. v. 33.) Strabo (xiii. p. 595) states that some regarded the Rhodius as a tributary of the Aesepus; but they must have been mistaken, as the river is mentioned on the coins of Dardanus. (Sestini, *Geog. Numis.* p. 39.) Pliny (*l. c.*) states that this ancient river no longer existed; and some modern writers identify it with the Pydius mentioned by Thucydides (viii. 106; comp. Hesych. and Phavorin. *s. v.* Πύδιον). Richter (*Wallfahrten*, p. 457) describes its present condition as that of a brook flowing into the *Dardanelles* by many mouths and marshes. [L. S.]

RHO'DOPE (Ῥοδόπη, Herod. vi. 49; Thuc. ii. 96; Polyb. xxxiv. 19; Strab. iv. p. 208, vii. pp. 313, 329, 331; Mela, ii. 2. § 2; Plin. iii. 29, iv. 5. s. 17; Amm. Marc. xxi. 10. § 3; Malchus, *ap. Exc. de Leg. Rom.* p. 90), a mountain chain forming the W. continuation of Haemus, and the frontier between Thrace and Macedonia, of which little more is known than the name. On its desolate heights, the lurking places of the fierce Satrae, was the great sanctuary and oracle of the Thracian Dionysus. As the Strymon took its sources in Rhodope (Strab. viii. p. 331) the high ridges round *Dúpnitza* and *Ghiustendíl* must be assigned to Rhodope, which may roughly be said to belong to the central of the three continuous chains, which under the name of the *Despoto Dagh* branches out to the S. of the *Balkan* (Haemus) at about 23° E. long. [E. B. J.]

RHODU'NTIA (Ῥοδουντία: *Eth.* Ῥοδούντιος), a fortress on Mt. Callidromus, defending one of the passes to Thermopylae. (Strab. ix. p. 428; Liv. xxxvi. 16, 19; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. pp. 10, 62, 64.)

RHODUS (Ῥόδος: *Eth.* Ῥόδιος: *Rhodes*), one of the chief islands of the Aegean, or more properly of that part of the Aegean which is called the Carpathian sea, about 9 or 10 miles from the coast of Caria. In the earliest times it is said to have borne the names of Ophiussa (Steph. B. *s. v.* Ῥόδος), Stadia, Telchinis (Strab. xvi. p. 653), Asteria, Aethraea, Trinacria, Corymbia, Poieessa, Atabyria, Macaria, and Oloëssa. (Plin. v. 36.) It extends from south to north, and is 920 stadia in circumference (Strab. xiv. p. 605), or, according to Pliny, 125 Roman miles, though others reduced it to 103. The island is traversed from north to south by a chain of mountains, the highest point of which was called Atabyris or Atabyrion, and the towns were all situated on the coast. Mount Atabyris is 4560 feet above the level of the sea, and on the top of it stood a temple of Zeus Atabyrius. Rhodes was believed to have at one time risen out of the sea, and the Telchines, its most ancient inhabitants, are said to have immigrated from Crete. (Pind. *Olymp.* vii. 23, &c.; Plin. ii. 87; Aristid. *Orat.* xliii. p. 653, ed. Dind.; Strab. *l. c.*; Diod. v. 55.) The Telchines, about whom many fabulous stories are related, are said to have been nine in number, and their sister Halia or Amphitrite became by Poseidon the mother of six sons and one daughter, Rhodos, from which in the end the island received the name it still bears. Others, however, with better reason, derive the name Rhodus from ῥόδον, a rose, for the rose appears as a symbol on coins of the island, so that Rhodus would be "the island of Roses." (Eckhel, vol. ii. p. 602; Sestini, *Num. Vet.* p. 382.) These most ancient and fabulous Telchines are said to have perished or been driven from the island during an inundation, and Helios then created a new race of inhabitants, who were called after him Heliadae; they were seven in number, and became ancestors of seven tribes, which partly peopled Rhodus itself and partly emigrated to Lesbos, Cos, Caria, and Egypt. The Heliadae are said to have greatly distinguished themselves by the progress they made in the sciences of astronomy and navigation. (Pind. *l. c.* 160, &c.; Diod. v. 56; Conon, *Narrat.* 47; Strab. xiv. p. 654.) After this various immigrations from foreign countries are mentioned: Egyptians under Danaus, Phoenicians under Cadmus, Thessalians and Carians, are each said to have furnished their contingent to the population of Rhodes. Whatever we may think of these alleged immigrations, they can have but little affected the national character of the Rhodians, which in fact did not become fixed until a branch of the Doric race took possession of the island, after which event the Doric character of its inhabitants became thoroughly established. Some Dorians or Heracleidae appear to have been settled there as early as the Trojan War, for the Heracleid Tlepolemus is described as having sailed to Troy with nine ships. (*Il.* ii. 653; Diod. iv. 58, v. 59; Apollod. ii. 8. § 2.) After the Trojan War Aethaemenes, a Heracleid from Argos, led other settlers to Rhodus. (Strab. xiv. p. 653; Diod. xv. 59; Apollod. iii. 2. § 1; comp. Thuc. vii. 57; Aristid. *Orat.* xliv. p. 839.) After this time the Rhodians quietly developed the resources of their island, and rose to great prosperity and affluence.

The three most ancient towns of the island were LINDUS, IALYSUS, and CAMIRUS, which were believed to have been founded by three grandsons of the Heliad Ochimus bearing the same names, or, according to others, by the Heracleid Tlepolemus. (Diod. iv. 58, v. 57.) These three towns, together with Cos, Cnidus, and Halicarnassus, formed what was called the Doric hexapolis, which had its common sanctuary on the Triopian headland on the coast of Caria, Apollo being the tutelary deity of the confederation. (Herod. i. 144.) The rapid progress made by the Rhodian towns at a comparatively early period is sufficiently attested by their colonies in the distant countries of the west. Thus they founded settlements in the Balearic islands, Rhode on the coast of Spain, Parthenope, Salapia, Siris, and Sybaris in Italy, and Gela in

Sicily; while the countries nearer home were not neglected, for Soli in Cilicia, and Gagae and Corydalla in Lycia, were likewise Rhodian colonies. But notwithstanding this early application to navigation and commerce, for which Rhodes is so admirably situated between the three ancient continents, the Rhodians were not ranked with the great maritime powers of Greece. Herodotus speaks of them only as forming a part of the Doric confederacy, nor does Thucydides mention their island more frequently. The Rhodians, in fact, did not attain to any political eminence among the states of Greece until about B. C. 408, when the three ancient towns conjointly built the city of Rhodes at the northern extremity of the island, and raised it to the rank of a capital. During the first period of the Peloponnesian War the towns of Rhodes paid tribute to Athens, and were reluctantly compelled to serve against Syracuse and Gela in Sicily (Thuc. vii. 57); but in B. C. 412 they joined the Peloponnesians. The popular party being favourable to Athens, soon afterwards attempted a reaction, but it was crushed (Diod. xiii. 38, 45). In B. C. 396, however, when Conon appeared with his fleet in the waters of Rhodes, the Rhodians again embraced the cause of Athens (Diod. xiv. 79; Paus. vi. 7. § 6); but the democracy which was now established was ill managed, and did not last long; and as early as B. C. 390, the exiled aristocrats, with the assistance of Sparta, recovered their former ascendancy. (Aristot. *Polit.* v. 4. 2; Xenoph. *Hellen.* iv. 8. § 20, &c.; Diod. xiv. 97.) The fear of Sparta's growing power once more threw Rhodes into the hands of the Athenians, but soon after the battle of Leuctra a change again took place; at least the Thebans, in B. C. 364, were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and Byzantium over to their own side. During the Social War, from B. C. 357 to 355, the Rhodians were arrayed against Athens, being instigated by the dynast of Caria and his successor Artemisia. But as they became alarmed by the growing power of the Carian dynasty, they solicited the protection of Athens through the eloquence of Demosthenes. (Demos. *de Libert. Rhodior.*) The form of government throughout this period was oligarchical, which accounts for the insolent conduct of Hegesilochus, as described in Athenaeus (x. p. 444). Rhodes furnished Darius, the last king of Persia, with one of his bravest and ablest generals in the person of Memnon, who, if he had had the sole direction of affairs, might have checked the victorious career of Alexander, and saved the Persian empire. But as it was, Rhodes, like the rest of Greece, lost its independence, and received a Macedonian garrison (Curt. iv. 5). The expulsion of this garrison after the death of Alexander was the beginning of a glorious epoch in the history of Rhodes; for during the wars against the successors of Alexander, and especially during the memorable siege of the city of Rhodes by Demetrius Poliorcetes, the Rhodians gained the highest esteem and regard from all the surrounding princes and nations. During the period which then followed, down to the overthrow of the Macedonian monarchy, Rhodus, which kept up friendly relations with Rome, acted a very prominent part, and extended its dominion over a portion of the opposite coasts of Caria and Lycia—a territory which is hence often called the Περαία τῶν Ῥοδίων [PERAEA]—and over several of the neighbouring islands, such as Casus, Carpathus, Telos, and Chalce. After the defeat of Perseus the Romans deprived the Rhodians of a great amount of territory and power, under the pretext that they had supported Macedonia; but the anger of Rome was propitiated, and in the war against Mithridates the Rhodians defended themselves manfully against the Pontian king. During the civil war between Caesar and Pompey they sided with the former, and their adherence to him led them, after his death, to resist Cassius; but the republican, after defeating them in a naval engagement, entered the city of Rhodes by force, and having put to death the leaders of the hostile party, carried off all the public property, even the offerings and ornaments of the temples (Appian, *Bell. Civ.* iv. 72; Plut. *Brut.* 30; Dion Cass. xlvii. 32). This calamity in B. C. 42 broke the power of the Rhodians, but it still remained one of the great seats of learning. Tiberius, before his accession to the imperial throne, resided at Rhodes for several years. The emperor Claudius deprived it of all political independence (Dion Cass. lx. 24); but although he afterwards restored its liberty, it was at all times a very precarious possession, being taken away and given back as circumstances or the caprices of the emperors suggested (Tac. *Ann.* xii. 58; comp. Suet. *Vesp.* 8; Eutrop. vii. 13). In the arrangements of Constantine, Rhodus, like other islands, belonged to the Provincia Insularum, of which it was the metropolis (Hierocles, p. 685, &c.). During the middle ages it continued to enjoy a considerable degree of prosperity, and was the last place in Western Asia that yielded to the Mohammedans.

The great prosperity which the Rhodians enjoyed during the best period of their history was owing in the first place to their extensive navigation and commerce, and in the second to their political institutions. In respect to the former they were particularly favoured by the situation of their island, and during the Macedonian and Roman periods no Greek state could rival them in the extent and organisation of their commerce; their sailors were regarded as the best, and their laws relating to navigation were thought models worthy of being adopted by the Romans. The form of government of the Rhodians was indeed founded upon a popular basis, but their democracy was tempered by an admixture of oligarchy. Such at least we find it during the Macedonian period, at a time when the ancient Doric institutions had given way to a form of government more suited to the actual circumstances. (Strab. xii. p. 575, xiv. p. 652; Cic. *de Re Publ.* i. 31; Dion Chrys. *Orat.* xxxi.; Aristid. *Orat.* xliv. p. 831.) The sovereign power belonged to the assembly of the people, which had the final decision of everything; but nothing was brought before it which had not previously been discussed by the senate or βουλή. (Polyb. xvi. 35, xxiii. 3, xxvii. 6, xxviii. 15. xxix. 5; Cic. *de Re Publ.* iii. 35.) The executive was in the hands of two magistrates called πρυτάνεις, each of whom governed for six months in the year as eponymus. Next to these, the admirals (ναύαρχοι) possessed the most extensive power. Other officers are mentioned in inscriptions, but their character and functions are often very uncertain. The Rhodian constitution had its safest foundation in the character and habits of the people, who, although the vicinity of Asia had a considerable influence and created a love of splendour and luxury, yet preserved many of their ancient Doric peculiarities, such as earnestness, perseverance, valour, and patriotism, combined with an

active zeal for literature, philosophy, and art. The intellectual activity maintained itself in Rhodes long after it had died away in most other parts of Greece.

The island of Rhodes, which appears even in the earliest traditions as extremely wealthy (Hom. *Il.* ii. 670; Pind. *Olymp.* vii. 49; Philostr. *Imag.* ii. 27), is in many parts indeed rough and rocky, especially the coast near the city of Rhodes, and the district about Lindus, but on the whole it was extremely fertile: its wine, dried raisins and figs, were much esteemed, and its saffron, oil, marble, achate, sponges, and fish, are often spoken of. The most important productions of Rhodian industry were ships, arms, and military engines. Besides the places already mentioned, the ancients notice Ixia and Mnasyrium, two forts in the south, and a place called Achaia.

By far the most important place was the city of Rhodus at the north-eastern extremity of the island. It was built in B. C 408 upon a regular plan formed by the architect Hippodamus, the same who built the walls of Peiraeeus. (Strab. xiv. p. 654; Diod. xix. 45, xx. 83; Harpocrat. *s. v.*; Ἱπποδάμεια.) It was constructed in the form of an amphitheatre rising from the coast, and was protected by strong walls and towers, while nature provided it with two excellent harbours. The acropolis rose at the south-western extremity, and on the slope of it was the theatre. According to Strabo, Rhodus surpassed all other cities for the beauty and convenience of its ports, streets, walls, and public edifices, all of which were adorned with a profusion of works of art both in painting and sculpture. The principal statues were in the temple of Dionysus and the gymnasium; but the most extraordinary statue, which is described as one of the seven wonders of the ancient world, was the brazen statue of Helios, commonly called the Colossus of Rhodes. It was the work of Chares of Lindus, who employed upon its execution twelve years. It cost 300 talents, and was 70 cubits in height: its gigantic size may be inferred from the fact that few men were able to encompass one of its thumbs with their arms. (Plin. xxxiv. 18; Strab. *l. c.*) The Colossus stood at the entrance of one of the ports, but the statement that it stood astride over the entrance, and that the largest ships could sail between its legs, is in all probability a mere fable. It was overthrown by an earthquake, 56 years after its erection, that is, in B. C. 224, or according to others a few years later. Ptolemy promised the Rhodians, among other things, 3000 talents for its restoration (Polyb. v. 89), but it is said not to have been attempted in consequence of an oracle (Strab. *l. c.*). Later authorities, however, speak of it as standing erect: the emperor Commodus is said to have ordered his own bust to be put upon it; and Cedrenus relates that a king of the Saracens sold the fragments to a merchant who employed upwards of 900 camels to carry them away. Notwithstanding the great splendour of the city, the number of its inhabitants does not appear to have been very great, for during the siege of Demetrius Poliorcetes no more than 6000 citizens capable of bearing arms are mentioned. (Diod. xx. 84.) But Rhodus has nevertheless produced many men of eminence in philosophy and literature, such as Panaetius, Stratocles, Andronicus, Eudemus, Hieronymus, Peisander, Simmias, and Aristides; while Poseidonius, Dionysius Thrax, and Apollonius, surnamed the Rhodian, resided in the island for a considerable time. The present town of Rhodes contains very few remains of the ancient Greek city. (Comp. P. D. Paulsen, *Descriptio Rhodi Maced. Aetate*, Göttingen, 1818; H. Rost, *Rhodus, ein Hist. Arch. Fragment*, Altona, 1823; Th. Menge, *Vorgeschichte von Rhodus*, Cöln, 1827; Rottier, *Descript. des Monuments de Rhodes*, Bruxelles, 1828; Ross, *Reisen auf den Griech. Inseln*, iii. pp. 70—113, which contains a good account of the middle-age history and the present condition of the island and city with maps and plans; Sestini, *Mon. Vet.* p. 91.) [L. S.]

COIN OF RHODUS.

RHODUSSA, an island off the southern coast of Caria, near the entrance of the port of Panormus. (Plin. v. 35; *Stadiasm. Mar. Mag.* p. 248, where the name is written Ῥοποῦσα.) It is marked in modern charts by the name of *Limosa* or *Karagash*. [L. S.]

RHODUSSAE, a group of small islands in the Propontis, south of Pityussa, is mentioned only by Pliny (v. 44). [L. S.]

RHOE (Ῥόη), a place on the coast of Bithynia, 20 stadia to the east of Calpe, on a steep promontory, contained a road fit only for small vessels. (Arrian, *Peripl. P. E.* p. 13; Anonym. *Peripl. P. E.* p. 3.) [L. S.]

RHOETACES. [ALBANIA, p. 89, b.]

RHOETEUM (τὸ Ῥοίτειον or Ῥοίτιον ἄκρον), a promontory, or rather a rocky headland, running out in several points in Mysia or Troas, at the entrance of the Hellespont, north of Ilion; it contained a small town of the same name situated on an eminence. The place is very often mentioned by the ancients. (Herod. vii. 43; Scylax, p. 35; Strab. xiii. p. 595; Steph. B. *s. v.*; Pomp. Mela, i. 18; Plin. v. 33; Thucyd. iv. 52, viii. 101; Apollon. Rhod. i. 929; Tryphiod. 216; Virg. *Aen.* vi. 595; Liv. xxxvii. 37.) The promontory is now called *Intepeh*, and the site of the ancient town is believed to be occupied by *Paleo Castro*, near the village of *It-ghelmes*. (Richter, *Wallfahrten*, p. 475; Leake, *Asia Minor*, p. 275.) [L. S.]

RHOGANA (Ῥόγανα, Ptol. vi. 8. § 7; Marcian, *Peripl.* i. § 28, ed. Müller), a small place on the coast of Carmania, between the promontories of Carpella and Alambater. It is perhaps the same place as the Gogana of Arrian. [GOGANA.] [V.]

RHOGANDA'NI (Ῥογανδανοί, Ptol. vii. 4. § 9), a tribe of ancient *Ceylon*, at the southern end of the island. Ptolemy mentions that in this part of the island were the best pastures for the elephants, which is the case, too, at the present time. [V.]

RHOGE (Ῥώγη), an island off the coast of Lycia, not far from the entrance of the Phoenicus Portus. (Plin. v. 35; Steph. B. *s. v.*; *Stadiasm. Mar. Mag.* §§ 217, 218, where it is called Rhope, Ῥώπη.) [L. S.]

RHO'GONIS (Ῥώγονις, Arrian, *Ind.* c. 39), a river of ancient Persis, which flows into the Persian

Gulf in lat. 29° 20′, long. 48° 25′ E. It was little better than a torrent, and is now doubtless marked by the present *Bender-rik*. Ptolemy (vi. 4. § 2) and Ammianus (xxiii. 6) call it Rhogomanis (Ῥογομάνις), and Marcianus (*Peripl.* i. § 24, ed Müller) Rhogomanius (Ῥογομάνιος). (Vincent, vol. i. p. 401: Thevenot, v. p. 535.) [V.]

RHOSCOPUS (Ῥοσκόπους), a place on the coast of Pamphylia, near the mouth of the Cestrus, is mentioned only in the Stadiasmus (§§ 199, 200). [L. S.]

RHOSOLOGIACUM or RHOSOLOGIA (Ῥοσολογία), a small place in the country of the Tectosages in Galatia, on the road from Ancyra to Caesareia Mazaca, not far from the river Halys. (*It. Ant.* pp. 143, 206; Ptol. v. 4. § 8, where some read Ὀροσυλογία or Ὀροσολαγιακόν; *It. Hieros.* p. 575, where it is called Rosolodiacum.) [L. S.]

RHOSUS. [ISSUS.]

RHOXOLA'NI. [ROXOLANI.]

RHUANA (Ῥουάνα al. Ῥάβανα βασίλειον), an inland town of Arabia, placed by Ptolemy (vi. 7. § 33) in long. 87°, lat. 22°. Apparently not far distant from the SW. bay of the *Persian Gulf*, and on the river *Lar*. [G. W.]

RHUBON, RHUDON (Ῥούβωνος ἐκβ., Ptol. iii. 5. § 2; Ῥουδῶνος ἐκβ., Marcian. Heracl. *Peripl.* § 39, ed. Müller), a river of European Sarmatia which took its source in the Alani Montes and discharged itself into the Venedicus Sinus. Schafarik (*Slav. Alt.* vol. i. p. 497) has identified it with the *Düna*, which, taking a direction generally W., falls into the *Gulf of Riga* below *Fort Dünamunde*, after a course of 655 miles. This same ethnologist connects the mythic Eridanus, and the trees that wept amber, with the Rhudon of Marcian (Rhubon appears to be a corrupted form), which Sabinus, a commentator upon Virgil, A. D. 1544, calls Rhodanus. The amber could be brought by land, or by water from the coasts where it was collected to the *Düna*, and thence by boats conveyed to the Borysthenes and the coasts of the Euxine. The name "Eri-danus," closely connected with Rhodanus, is composed of the words "Rha" and "Don," roots which, in several of the Indo-European languages, signify "water," "river," as for instance in "Rha," the old name for the *Volga*, and Danubius, Tanais, Danapris, Danastris, and the like. [E. B. J.]

RHUBRICATUS (Ῥουβρίκατος, Ptol. iv. 3. § 5), a river of Numidia, the same as the UBUS of the Peut. Tab., which flowed 5 M. P. to the E. of Hippo Regius, now called the *Seibouse* (Barth, *Wanderungen*, p. 70). [E. B. J.]

RHU'DIAE or RU'DIAE (Ῥουδία, Ptol.; Ῥωδίαι, Strab.: *Eth.* Rudinus: *Rugge*), an ancient city of the Salentines, in the interior of the Roman province of Calabria, and in the immediate vicinity of Lupiae (*Lecce*). (Strab. vi. p. 281: Ptol. iii. 1. § 76.) Strabo calls it a *Greek* city (πόλις Ἑλληνίς); but we have no other indication of this fact, and all the other notices we find of it would lead us to infer that it was a native Salentine or Messapian town. Under the Romans it appears to have enjoyed municipal rank (an inscription has "Municipes Rudini," Orell. 3858); but in other respects it was a place of little importance, and derived its sole celebrity from the circumstance of its being the birthplace of the poet Ennius. (Strab. *l. c.* Mel. ii. 4. § 7; Sil. Ital. xii. 393; Cic. *de Or.* iii. 42.) That author is repeatedly termed *a Calabrian* (Hor. *Carm.* iv. 8; Ovid. *A. A.* iii. 409; Sil. Ital. *l. c.*; Acron, *ad Hor. l. c.*), and these passages confirm the accuracy of Ptolemy, who assigns Rhudiae to the Salentines, and therefore to the Calabrians according to the Roman use of the name. Pliny and Mela, on the contrary, enumerate Rudiae among the towns of the Pediculi together with Barium and Egnatia, and the latter author expressly excludes it from Calabria (Plin. iii. 11. s. 16; Mel. *l. c.*). But it seems impossible to reconcile this statement with that of Strabo, who places it near Lupiae, in the interior of the peninsula, or with the actual situation of Rudiae, which is clearly ascertained at a place still called *Rugge*, though now uninhabited, about a mile from *Lecce*, where the inscription above cited was discovered, as well as several others in the Messapian dialect, and many vases and other objects of antiquity. The identity of this place with the municipal town of Rudiae can therefore admit of no doubt; nor is there any reason to question the fact that this was also the birthplace of Ennius: but considerable confusion has arisen from the mention in the Tabula of a place called "Rudae," which it places 12 miles W. of Rubi, on the road to Canusium. As this place would have been within the limits of the Pediculi or Peucetii, it has been supposed by some writers to be the same with the Rudiae of Pliny and Mela, and therefore the birthplace of Ennius; but the claims of *Rugge* to this distinction appear unquestionable. (Galateo, *de Sit. Iapyg.* p. 77; Romanelli, vol. ii. pp. 93—102; Mommsen, *Unter Ital. Dialekte*, p. 58.)

The Rudae or Rudiae of the Tabula, which is otherwise quite unknown, must have been situated somewhere in the neighbourhood of the modern *Andria*. [E. H. B.]

RHUS. [MEGARA, p. 313, b.]

RHU'SIUM (Ῥούσιον, Anna Comn. vii. pp. 210, 215), a town in Thrace on the road from Siracellae to Aenos. Now *Ruskoi*. [T. H. D.]

RHUTUPIAE [RUTUPIAE.]

RHY'MMICI MONTES (Ῥυμμικὰ ὄρη, Ptol. vi. 14. §§ 4, 10, 11), a mountain chain of Asiatic Sarmatia, of which no nearer indication can be given than that it belongs to the great meridian chain, or rather assemblage of nearly parallel mountain chains, of the *Ural*.

The river RHYMMUS (Ῥυμμὸς ποταμός, Ptol. vi. 14. §§ 2, 4), which has been a sore puzzle to geographers, took its source in these mountains and discharged itself into the Caspian between the Rha (*Volga*) and the Daix (*Ural*). In the present day there is, W. of the *embouchure* of the *Ural* to the great delta of the *Volga*, only one small stream which reaches the Caspian, under the name of the *Naryn Chara* (Goebel, *Reise in die Steppen*, vol. ii. p. 342). This river is probably the Rhymmus of Ptolemy. (Humboldt, *Asie Centrale*, vol. ii. p. 187.) [E. B. J.]

RHY'NDACUS (Ῥυνδακός), an important river in the province of Hellespontus, which has its sources at the foot of Mount Olympus in Phrygia Epictetus, near the town of Azani. (Scylax, p. 35; Plin. v. 40; Pomp. Mela, i. 19; Strab. xii. p. 576.) According to Pliny, it was at one time called Lycus, and had its origin in the lake of Miletopolis: but this notion is incorrect. The river flows at first in a north-western direction, forming the boundary between Mysia and Bithynia, through the lake of Apollonia, and in the neighbourhood of Miletopolis receives the river Megistus, and discharges itself into the Propontis opposite the island of Besbicus.

The Scholiast on Apollonius Rhodius (i. 1165) states that in later times the Rhyndacus, after receiving the waters of the Megistus, was itself called Megistus; but Eustathius (*ad Hom. Il.* xiii. 771) assures us that in his time it still bore the name of Rhyndacus. According to Valerius Flaccus (iii. 35) its yellow waters were discernible in the sea at a great distance from its mouth. In B. C. 73 Lucullus gained a victory over Mithridates on the banks of this river. (Plut. *Luc.* 11; comp. Polyb. v. 17; Ptol. v. 1. §§ 4, 8; Steph. B. *s. v.*) The Rhyndacus is now called *Lupad*, and after its union with the Megistus (*Susughirli*) it bears the name of *Moha'idsh* or *Micalitza*. (See Hamilton's *Researches*, i. p. 83, &c.) [L. S.]

RHYPES (Ῥύπες, Ῥύπαι, Steph. B. *s. v.*: *Eth.* Ῥύψ, Ῥύπος), a city of Achaia, 30 stadia W. of Aegium, was originally one of the twelve Achaean cities. It had ceased to be a member of the League in the time of Polybius, who mentions Leontium in its place. Rhypes, however, continued to exist down to the time of Augustus; but this emperor transferred its inhabitants to Patrae, and its territory (Ῥυπίς, or ἡ Ῥυπική) was divided between Aegium and Pharae. Its ruins were seen by Pausanias at a short distance from the main road from Aegium to Patrae. We learn from Strabo that this town was mentioned by Aeschylus as κεραυνίας Ῥύπας, or "Rhypes stricken by the thunderbolt." It was the birthplace of Myscellus, the founder of Croton. (Herod. i. 145; Paus. vii. 6. § 1, vii. 18. § 7, vii. 23. § 4; Strab. viii. pp. 386, 387.) In the territory of Rhypes there was a demus called LEUCTRUM (Λεῦκτρον, Strab. p. 387), and also a seaport named ERINEUM (Ἐρινεόν, or Ἐρινεὸς λιμήν), which is mentioned by Thucydides, and which is described by Pausanias as 60 stadia from Aegium. (Thuc. vii. 34; Paus. vii. 22. § 10; Plin. iv. 6.)

The geographers of the French Commission place Rhypes at some ruins on the right bank of the river *Tholo*, where it issues into the plain; and the distance of the position on the *Tholo* from *Vostitza* (Aegium) is that which Pausanias assigns as the interval between Aegium and Rhypes. But Leake, thinking it highly improbable that two of the chief cities of Achaia should have been only 30 stadia from each other, suspects the accuracy of Pausanias or his text, as to the distance between Rhypes and Aegium. He accordingly places Rhypes further W. on the banks of the river of *Salmeníko*, and supposes Erineum to have been its port and to have been situated immediately above it at the harbour of *Lambíri*. The position of *Lambíri* answers very well to that of Erineum; but the reason given by Leake does not appear sufficient for rejecting the express statement of Pausanias as to the distance between Aegium and Rhypes. (Leake, *Peloponnesiaca*, p. 408, seq.; comp. Curtius, *Peloponnesos*, vol. i. p. 458, seq.)

RHY'TIUM (Ῥύτιον, Steph. B.; Plin. iv. 20: *Eth.* Ῥυτιεύς), a town of Crete which Homer (*Il.* ii. 648) couples with Phaestus as "well-peopled cities." The city belonged to the Gortynians (Strab. x. p. 479; Nonnus, *Dionys.* xiii. 233.) The corrupt reading Ῥυθίμνη in Steph. B. (*s. v.* Στῆλαι) should be emended into Ῥύτιον. (Höck, *Kreta*, vol. i. p. 414.) The city must have existed somewhere on or close to the route which leads from *Kastelianá* to *Haghius Dhéka*; but Pashley (*Crete*, vol. i. p. 293) could find no vestiges of antiquity in the neighbourhood. [E. B. J.]

RIBLAH (Ῥαβλαάμ), a city "in the land of Hamath," where Jehoahaz or Shallum was cast into chains by Pharaoh Necho, and where Nebuchadnezzar subsequently gave judgment on Zedekiah. (2 *Kings*, xxiii. 33, xxv. 6.) We find Nebuchadnezzar there again, after an interval of ten years, when the last remnant was carried captive and slain there. (*Jerem.* lii. 27.) [G. W.]

RICCIACUM, in North Gallia. The Table has a road from Divodurum (*Metz*) to Augusta Trevirorum (*Trier*). From Divodurum to Caranusca is xlii., from Caranusca to Ricciacum x., and from Ricciacum to Augusta x. D'Anville guessed Ricciacum to be *Remich* on the *Mosel*; but it is only a guess. There is evidently an error in the Table in the distance between Divodurum and Ricciacum, which is a great deal too much. The geographers have handled this matter in various ways. [CARANUSCA.] (See also Ukert, *Gallien*, p. 512, and the note.) [G. L.]

RICINA. 1. (*Eth.* Ricinensis: Ru. near *Macerata*), a municipal town of Picenum, situated on a hill above the right bank of the river Potentia (*Potenza*), about 15 miles from the sea. Pliny is the only geographer that mentions it (iii. 13. s. 18); but the "ager Ricinensis" is noticed also in the Liber Coloniarum (p. 226), and we learn from an inscription that it received a colony under the emperor Severus, and assumed in consequence the title of "Colonia Helvia Ricina" (Orell. *Inscr.* 915; Cluver. *Ital.* p. 739.) Its ruins are still visible, and include the remains of a theatre and other buildings. They are situated about 3 miles from *Macerata*, and 6 from *Recanati*, which has preserved the traces of the ancient name, though it does not occupy the ancient site. (Holsten. *Not. ad Cluver.* p. 137.) The Tabula correctly places it at a distance of 12 miles from Septempeda (*S. Severino.*) (*Tab. Peut.*)

2. A small town on the coast of Liguria, mentioned only in the Tabula, which places it on the coast to the E. of *Genoa*. It is commonly identified with *Recco*, a town about 12 miles from *Genoa*, but the Tabula gives the distance as only 7, so that the identification is very doubtful. (*Tab. Peut.*; Geogr. Rav. iv. 32.) [E. H. B.]

RICINA (Ῥικίνα, Ptol. ii. 2. § 11), one of the Ebudae insulae or *Hebrides*. [T. H. D.]

RIDUNA, one of the islands off that part of the Gallic coast which was occupied by the Armoric states. As the Marit. Itin. mentions Caesarea (*Jersey*), Sarnia (*Guernsey*), and Riduna, it is concluded that Riduna is *Aurigny* or *Alderney* off *Cap de la Hague*. [G. L.]

RIGODULUM, a place on the Mosella (*Mosel*), "protected either by mountains or the river." (Tacitus, *Hist.* iv. 71.) In the war with Civilis this place was occupied by Valentinus with a large force of Treviri. Civilis, who was at *Mainz*, marched to Rigodulum in three days (tertiis castris) and stormed the place. On the following day he reached Colonia Trevirorum (*Trier*). It is supposed that Rigodulum may be *Reol* on the *Mosel*. Lipsius assumes Rigodulum to be *Rigol* near Confluentes (*Coblenz*), but that is impossible. Ammianus Marcellinus (xvi. 6) places Rigodulum near Confluentes, but his authority is small; and there may be some corruption in the text. [G. L.]

RIGODU'NUM (Ῥιγόδουνον, Ptol. ii. 3. § 16), a town of the Brigantes in the N. of Britannia Romana. Camden (p. 974) conjectures it might have

been *Ribble-chester* or *Rixton;* others identify it with *Richmond.* [T. H. D.]

RIGOMAGUS, a village of Cisalpine Gaul, forming a station on the road from Ticinum (*Pavia*) to Augusta Taurinorum (*Turin.*) It is placed by the Itineraries 36 M. P. from Laumellum (*Lomello*), and 36 M. P. from Augusta or Taurini: these distances coincide with the site of *Trino Vecchio*, a village a little to the S. of the modern town of *Trino*, on the left bank of the *Po* (*Itin. Ant.* p. 339; Cluver. *Ital.* p. 234; Walckenaer, *Géogr. des Gaules*, vol. iii. p. 23). [E. H. B.]

RIGOMAGUS (*Remagen*), on the Rhine. The Table places it between Bonna (*Bonn*) and Antunnacum (*Andernach*), viii. from Bonna and ix. from Antunnacum. The Antonine Itin., which omits Rigomagus, makes the distance xvii. from Bonna to Antunnacum. *Remagen* is on the Rhine and on the north side of the *Ahr* near its junction with the Rhine. Ukert (*Gallien*, p. 518, note) speaks of a milestone found at *Remagen* with the inscription "a Col. Agripp. M. P. XXX." [G. L.]

RIMMON (Ἐρεμμὼν), a city of the tribe of Simeon (*Josh.* xix. 7), mentioned by Zechariah as the extremity of the land of Judah (xiv. 10). Placed by Eusebius S. of Daroma, 16 miles from Eleutheropolis. (*Onomast. s. vv.* Ἐρεμβὼν, Ῥεμμὰ.) He places another town of the same name 15 miles north of Jerusalem. (*Ib. s. v.* Ῥεμμοῦς.) [G. W.]

RIOBE, in North Gallia, a name which appears in the Table on a road which passes from Augustomagus (*Senlis*) through Calagum (*Chailli*). Riobe comes after Calagum, but the distance is not given. A road, which appears to be in the direction of a Roman road, runs from *Chailli* to *Orbi*, a few miles north of the *Seine;* and D'Anville thinks that the name *Orbi* and the distance from Riobe to Condate (*Montereau-sur-Yonne*) enable us to fix Riobe at *Orbi.* [CONDATE, No. 2; CALAGUM.] [G. L.]

RIPA (Plin. iii. 1. s. 3, according to the Codex Reg., though the common reading is Ripepora), a place in Hispania Baetica, which according to Rezzonico (*Disquisit. Plin.* ii. p. 11) occupied the site of the modern *Castro del Rio.* (Comp. Ukert, vol. ii. part i. p. 380.) [T. H. D.]

RIRA, a river on the E. coast of Thrace. (Plin. iv. 11. s. 18.) Reichards conjectures it to be the *Kamczik.* [T. H. D.]

RISARDIR (Polyb. *ap. Plin.* v. 1), a harbour on the W. coast of Mauretania, which may be identified with the ACRA of the Ship-journal of Hanno (Ἄκρα, *Peripl.* § 5, ed. Müller). It now bears the name of *Agader*, signifying in the Berber language (Paradis, *Dictionnaire Berbère*, p. 110) "a fortress,' and is described as being the best roadstead along t e coast of *Marocco. Agader* or *Santa Cruz*, which was called Guertguessem in the time of Leo Africanus, was walled round and strengthened by batteries in 1503 by Emanuel, king of Portugal; but was taken from the Portuguese by the Moors in 1536. (Jackson, *Marocco*, p. 113; *Journ. of Geogr. Soc.* vol. vi. p. 292.) [E. B. J.]

RITHYMNA. [RHITHYMNA.]

RITTIUM (Ῥίττιον), a place in the south-east of Lower Pannonia, situated close to the Danube, and on the road leading to Taurunum. (*It. Ant.* p. 242; Ptol. ii. 16. § 5; *Tab. Peut.*) It contained a garrison of Dalmatian cavalry. (*Not. Imp.*, where the name is mis-spelt Rictium.) According to Muchar (*Noricum*, i. p. 265), its site is now occupied by the town of *Titel.* [L. S.]

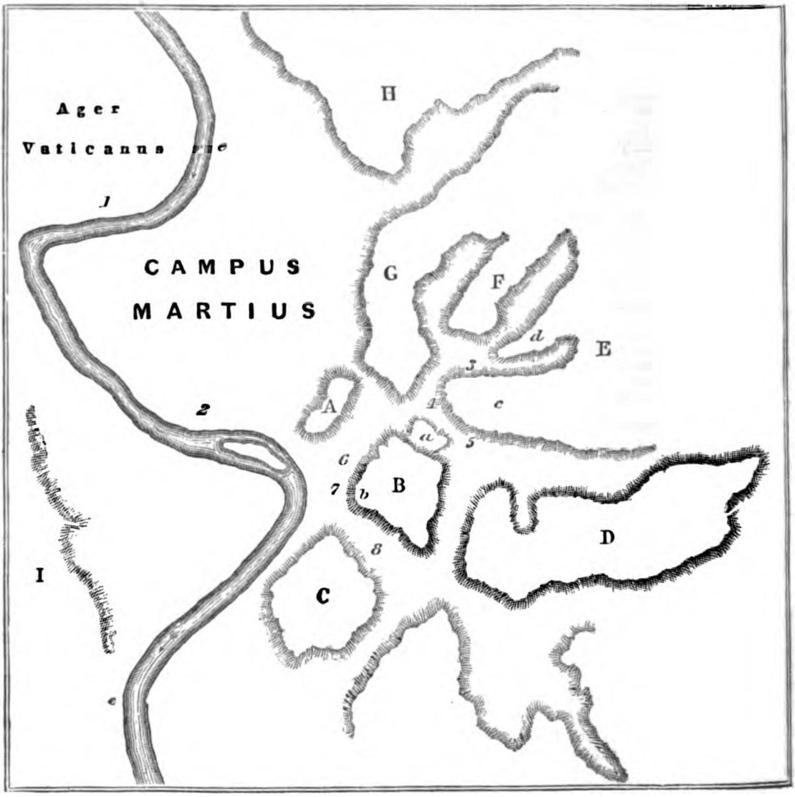
CONTENTS.

SITUATION.

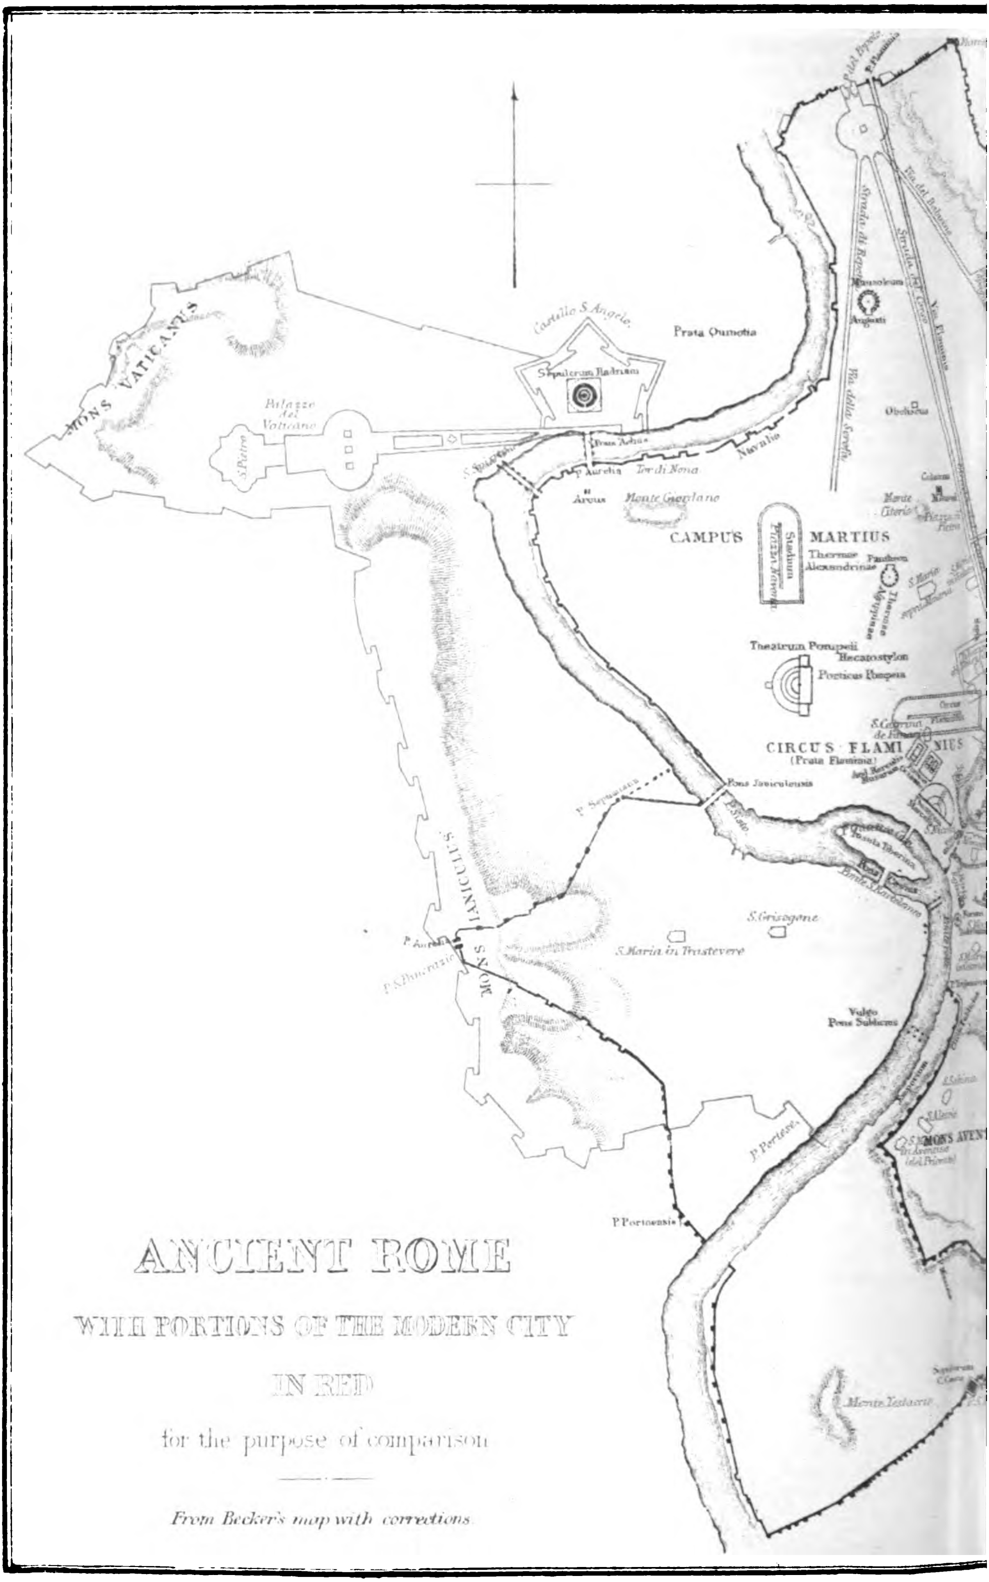
Rome was seated on the Tiber, and principally on its left bank, at a distance of about 15 miles from its mouth. The observatory of the *Collegio Romano*, which is situated in the ancient Campus Martius, lies in 41° 53′ 52″ N. lat., and 12° 28′ 40″ long. E. of Greenwich.



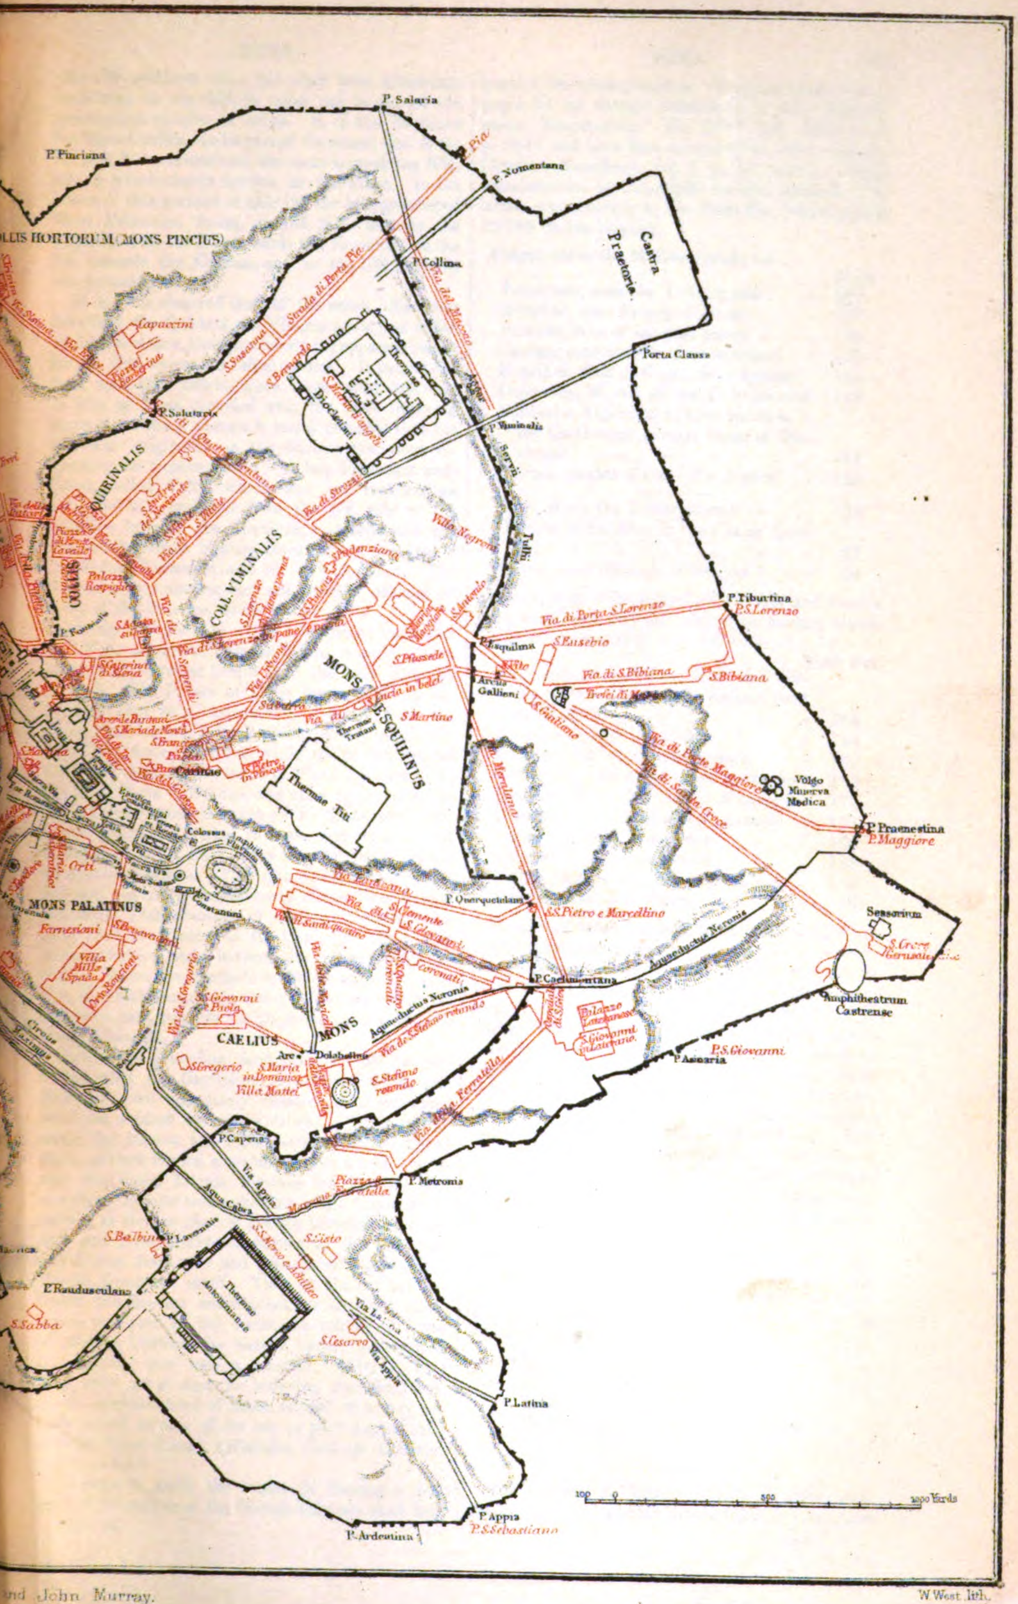
Rome lies in the vast plain now called the *Campagna*, which extends in a south-easterly direction about 90 miles from *Cape Linaro*, a little S. of *Cività Vecchia*, to the Circaean promontory; whilst its breadth is determined by the mountains on the NE. and by the Mediterranean on the SW., in which direction it does not exceed about 27 miles in its greatest extent. Looking from any of the heights of Rome towards the E., the horizon is bounded from the N. almost to the S. by a nearly continuous chain of mountains, at a distance varying from about 10 to 20 miles. This side offers a prospect of great natural beauty, which, to the lover of antiquity, is still further enhanced by the many objects of classical interest which it presents. In the extreme north, at a distance of about 20 miles, lies the round and isolated mass of Soracte. Then follows the picturesque chain of the Sabine Apennines, in which the peaked and lofty summit of Lucretilis, now *Monte Gennaro*, forms a striking feature. A few miles farther S., at the spot where the Anio precipitates its waters through the chain, lies Tibur, embosomed in its grey and sombre groves of olives. More southward still, and seated on the last declivities of the Sabine mountains, is the "frigidum Praeneste," celebrated for its Sortes and its temple of Fortune (Cic. *Div.* ii. 41), and, like the neighbouring Tibur, one of the favourite resorts of Horace. (*Od.* iii. 4.) A plain of 4 or 5 miles in breadth now intervenes, after which the horizon is again intercepted by the noble form of Mons Albanus (*Monte Cavo*), which closes the line of mountains towards the S. This mass is clearly of volcanic origin, and totally unconnected with the Apennines. The mountain awakens many historical recollections. Its summit was crowned by the temple of Jupiter Latiaris, the common sanctuary and meeting place of the Latin cities, conspicuous from the surrounding plain, and even visible to the mariner. Beneath lay Alba Longa with its lake; at its southern foot Lanuvium, and on its northern declivity Tusculum, consecrated by the genius and philosophy of Cicero. To the S. and SW. of Mons Albanus there is nothing to obstruct the view over the undulating plain till it sinks into the sea; but on the W. and NW. the prospect is bounded to a very narrow compass by the superior elevation of Mons Janiculus and Mons Vaticanus.

The plain marked out by these natural boundaries is intersected by two considerable rivers, the Tiber and the Anio. The former, at first called Albula, and afterwards Tiberis or Tibris (Liv. i. 3; Plin. iii. 5. s. 9; Virg. *Aen.* viii. 330, &c.), entering the plain between Soracte and the Sabine chain before described, bends its yellow course to the S. At a distance of about 3 miles from Rome, it receives the Anio flowing from the eastward, and then with increased volume passes through the city and discharges itself into the sea at Ostia. The course of the Tiber marked the limits of Etruria: the angular territory between it and the Anio is attributed to the Sabines; whilst on the southern side the line of the Anio and of the Tiber formed the boundary of Latium.

The *Campagna* of Rome consists of undulating ridges, from which scanty harvests are gathered; but the chief use to which it is applied is the pasturing of vast herds of cattle. These, with the picturesque herdsmen, mounted on small and half wild horses and armed with long poles or lances, are almost the only objects that break the monotony of a scene where scarce a tree is visible, and where even the solitary houses are scattered at wide intervals. Yet anciently the *Campagna* must have presented a very different aspect. Even within sight of Rome it was thickly studded with cities at first as flourishing as herself; and in those times, when "every rood of ground maintained its man," it must have presented an appearance of rich cultivation.



Such is the nature of the country in the immediate neighbourhood of Rome. The celebrated group of



seven hills — the site on which the eternal city itself was destined to rise — stands on the left bank of the Tiber. To the N. of them is another hill, the Mons Pincius or Collis Hortorum, which was excluded from the ancient city, but part of it was enclosed in the walls of Aurelian. The Tiber, at its entrance into Rome, very nearly approaches the foot of this hill, and then describes three bold curves or reaches; first to the SW., then to the SE., and again to the SW. The distance from the spot where the Tiber enters the city to the SW. point of the Aventine is, in a direct line, about 2 miles. At the extremity of the second, or most eastern reach, it divides itself for a short space into two channels and forms an island, called the Insula Tiberina. At this spot, at about 300 paces from its eastern bank, lies the smallest but most renowned of the seven hills, the Mons Capitolinus. It is of a saddle-back shape, depressed in the centre, and rising into two eminences at its S. and N. extremities. On its N. or rather NE. side, it must in ancient times have almost touched the Collis Quirinalis, the most northerly of the seven, from which a large portion was cut away by Trajan, in order to construct his forum. The Quirinalis is somewhat in the shape of a hook, running first to the SW., and then curving its extreme point to the S. Properly speaking, it is not a distinct hill, but merely a tongue, projecting from the same common ridge which also throws out the adjoining Viminal and the two still more southern projections of the Esquiline. It will be seen from the annexed plan, without the help of which this description cannot be understood, that the Quirinal, and the southernmost and most projecting tongue of the Esquiline, almost meet at their extremities, and enclose a considerable hollow — which, however, is nearly filled up by the Viminal, and by the northern and smaller tongue of the Esquiline. These two tongues of the Esquiline were originally regarded as distinct hills, under the names of Cispius, the northern projection, and Op-

pius the southern one; but they were afterwards considered as one hill, in order not to exceed the prescriptive number of seven. S. of the Esquiline lies Mons Caelius, the largest of the seven; and to the W. of it Mons Aventinus, the next largest, the NW. side of which closely borders on the Tiber. In the centre of this garland of hills lies the lozenge-shaped Mons Palatinus, facing on the NW. towards the Capitoline, on the NE. towards the Esquiline, on the SE. towards the Caelian, and on the SW. towards the Aventine.

It may be observed that, of the seven hills above described, the Quirinal and Viminal are styled *colles*, whilst the others, though without any apparent reason for the distinction, are called *montes*. It cannot depend upon their height, since those called *colles* are as lofty as those dignified with the more imposing name of *montes*; whence it seems probable that the difference originated in the ancient traditions respecting the Septimontium. A less important eminence, called Velia, which was not reckoned as a distinct hill, projected from the NE. side of the Palatine towards the Esquiline, and separated the two valleys which in after times became the sites of the Forum Romanum and of the Colosseum. The Germalus was another but still smaller offshoot, or spur, of the Palatine, on its western side.

On the opposite bank of the Tiber, Mons Vaticanus and Mons Janiculus rise, as before remarked, to a considerably greater height than the hills just described. The former of these lies opposite to the Pincian, but at a considerable distance from the river, thus leaving a level space, part of which was called the Ager Vaticanus, whilst the portion nearest the river obtained the name of Prata Quinctia. To the S. of Mons Vaticanus, and close to the river, at the extreme western point of its first reach, the Mons Janiculus begins to rise, and runs almost straight to the S. till it sinks into the plain opposite to Mons Aventinus. The open space between this hill and the southernmost curve of the Tiber formed the Regio Transtiberina. The sinuous course of the river from the Pincian to the Capitoline left a still more extensive plain between its left bank and the hills of Rome, the northern and more extensive portion of which formed the Campus Martius, whilst its southern part, towards the Capitoline, was called the Prata Flaminia.

From the preceding description it will be perceived that the Capitoline, Aventine, Caelian, and Palatine were completely isolated hills, separated from one another by narrow valleys. Those valleys which lay nearest the Tiber seem, in their original state, to have formed a marsh, or even a lake. Such was the Vallis Murcia, between the Palatine and Aventine, in later times the seat of the Circus Maximus; as well as the low ground between the Palatine and river, afterwards known as the Velabrum and Forum Boarium; and perhaps even part of the Forum Romanum itself. Thus, in the combat between the Romans and Sabines, on the spot afterwards occupied by the forum, the affrighted horse of Mettius Curtius, the Sabine leader, is described as carrying him into a marsh. (Liv. i. 12.) Nay, there are grounds for believing that the Tiber, in the neighbourhood of Rome, formed at a very remote period an arm of the sea, as pure marine sand is often found there. (Niebuhr, *Lect. on Ethnogr.* vol. ii. p. 39.)

In order to assist the reader in forming a clear idea of the nature of the Roman hills, we shall here insert a few measurements. They are taken from a paper by Sir George Schukburg in the "Philosophical Transactions," An. 1777 (vol. lxvii. pt. 2. p. 594), and have been esteemed the most accurate. (Becker, *Handbuch*, vol. i. p. 83, note.) Other measurements by Calandrelli are also annexed. The latter are according to the Paris foot, which equals 12·785 inches English.

Height above the Mediterranean:—

	Feet.
Janiculum, near the *Villa Spada*	260
Aventine, near *Priory of Malta*	117
Palatine, floor of imperial palace	133
Caelian, near the Claudian aqueduct	125
Esquiline, floor of *S. Maria Maggiore*	154
Capitoline, W. end of the Tarpeian rock	118
Viminal and Quirinal at their junction, in the Carthusian church, baths of Diocletian	141
Pincian, garden of the *Villa Medici*	165
Tiber, above the Mediterranean	33
Convent of St. Clare in the *Via de' Specchi*	27
Forum, near the arch of Severus	34

Measurements from Calandrelli, in his and Conti's *Opuscoli astronomici e fisici* (ap. Sachse, *Gesch. der Stadt Rom*, vol. i. p. 697):—

	Paris feet
Janiculum, floor of the church of *S. Pietro in Montorio* (not the highest point of the hill)	185
Aventine, floor of *S. Alessio*	146
Palatine, floor of *S. Bonaventura*	160
Caelian, floor of *S. Giovanni Laterano*	158
Esquiline, floor of *S. Maria Maggiore*	177
Capitol, floor of *S. Maria d' Araceli*	151
Viminal, floor of *S. Lorenzo*	160
Quirinal, *Palazzo Quirinale*	148
Pincian, floor of *S. Trinità de' Monti*	150
Vatican, floor of *S. Pietro*	93

In ancient times, however, the hills must have appeared considerably higher than they do at present, as the valleys are now raised in many places from 15 to 20 feet above their former level, and in some parts much more. (Lumisden, *Ant. of Rome*, p. 137.) This remark is more particularly applicable to the forum, which is covered with rubbish to a great depth; a circumstance which detracts much from the apparent height of the Capitoline; whose sides, too, must formerly have been much more abrupt and precipitous than they now are. The much superior height of the Janiculum to that of any of the hills on the W. bank of the Tiber, will have been remarked. Hence it enjoyed a noble prospect over the whole extent of the city and the *Campagna* beyond, to the mountains which bound the eastern horizon. The view has been celebrated by Martial (iv. 64), and may be still enjoyed either from the terrace in front of *S. Pietro in Montorio*, or from the spot where the *Fontana Paolina* now pours its abundant waters:—

> "Hinc septem dominos videre montes
> Et totam licet aestimare Romam,
> Albanos quoque Tusculosque colles
> Et quodcunque jacet sub urbe frigus."

Climate.

The climate of Rome appears to have been much colder in ancient times than it is at pre-

sent. Dionysius (xii. 8) records a winter in which the snow lay more than 7 feet deep at Rome, when houses were destroyed and men and cattle perished. Another severe winter, if it be not the same, is mentioned by Livy (v. 13) as occurring B.C. 398, when the Tiber was frozen over and the roads rendered impassable. (Cf. xl. 45, &c.) A very severe winter is also alluded to by St. Augustin (*de Civ. Dei*, iii. 17). That such instances were rare, however, appears from the minuteness with which they are recorded. Yet there are many passages in the classics which prove that a moderate degree of winter cold was not at all unusual, or rather that it was of ordinary occurrence. Thus Pliny (xvii. 2) speaks of long snows as being beneficial to the corn; and allusions to winter will be found in Cicero (*ad Qu. Fr.* ii. 12), Horace (*Od.* i. 9, iii. 10), Martial (iv. 18), and in numerous other passages of ancient writers. At the present time the occurrence of even such a degree of cold as may be inferred from these passages is extremely rare. One or two modern instances of severe winters are indeed recorded; but, generally speaking, snow seldom falls, and never lies long upon the ground. This change of climate is accounted for by Dr. Arnold as follows: "Allowing that the peninsular form of Italy must at all times have had its effect in softening the climate, still the woods and marshes of Cisalpine Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighbourhood of Rome. Besides, even in the Apennines, and in Etruria and in Latium, the forests occupied a far greater space than in modern times; this would increase the quantity of rain, and consequently the volume of water in the rivers; the floods would be greater and more numerous, and before man's dominion had completely subdued the whole country, there would be a large accumulation of water in the low grounds, which would still further increase the coldness of the atmosphere." (*Hist. of Rome*, vol. i. p. 449.)

But if the Roman climate is ameliorated with regard to the rigour of its winters, there is no reason to believe that the same is the case with respect to that unhealthy state of the atmosphere called *malaria*. In ancient times, Rome itself appears to have been tolerably free from this pestilence, which was confined to certain tracts of the surrounding country. This may have been partly owing to its denser population; for it is observed that in the more thickly inhabited districts of Rome there is even at present but little *malaria*. Strabo, speaking of Latium, observes that only a few spots near the coast were marshy and unwholesome (v. p. 231), and a little further on gives positive testimony to the healthiness of the immediate neighbourhood of Rome (ἐφεξῆς δ' ἐστὶ πεδία, τὰ μὲν πρὸς τὴν Ῥώμην συνάπτοντα καὶ τὰ προάστεια αὐτῆς, τὰ δὲ πρὸς τὴν θάλατταν· τὰ μὲν οὖν πρὸς τὴν θάλατταν ἧττόν ἐστιν ὑγιεινά, τὰ δὲ ἄλλα εὐάγωγά τε καὶ παραπλησίως ἐξησκημένα, ib. p. 239). To the same purpose is the testimony of Livy, who represents Camillus describing the hills of Rome as "saluberrimos colles;" and of Cicero (*de Rep.* ii. 6): "locumque delegit et fontibus abundantem et in regione pestilenti salubrem: colles enim sunt, qui cum perflantur ipsi, tum afferunt umbram vallibus." It is surprising how Becker (*Handbuch*, p. 82) can interpret Cicero's meaning in this passage to be that the lower parts of Rome were unhealthy, when it is

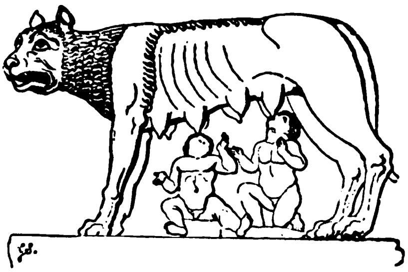
before the Trojan



settled on the Palatine hill seems also to have been sometimes accepted by those who referred the real foundation of Rome to a much later period. The tradition respecting this settlement is interesting to the topographer, as the names of certain places at Rome were said to be derived from circumstances connected with it. The Palatium, or Palatine hill, itself was thought to have been named after the Arcadian town of Pallantium, the *n* and one *l* having been dropped in the course of time; though others derived the appellation in different ways, and especially from Pallas, the grandson of Evander by his daughter Dyna and Hercules (Paus. viii. 43; Dionys. i. 32.) So, too, the Porta Carmentalis of the Servian city derived its name from a neighbouring altar of Carmentis, or Carmenta, the mother of Evander. (Dionys. *l. c.*; Virg. *Aen.* viii. 338.) Nothing indeed can be a more striking proof of the antiquity of this tradition, as well as of the deep root which it must have taken among the Roman people, than the circumstance that to a late period divine honours continued to be paid to Carmenta, as well as to Evander himself. Another indication of a similar tendency was the belief which prevailed among the Romans, and was entertained even by such writers as Livy and Tacitus, that letters and the arts of civilisation were first introduced among them by Evander. (Liv. i. 7; Tac. *Ann.* xi. 14; Plut. *Q. R.* 56.)

The greater part of those who held the second opinion regarded Aeneas, or one of his immediate descendants, as the founder of Rome. This theory was particularly current among Greek writers. Sometimes the Trojans alone were regarded as the founders; sometimes they are represented as uniting in the task with the Aborigines. Occasionally, however, Greeks are substituted for Trojans, and the origin of Rome is ascribed to a son of Ulysses and Circe; nay, in one case Aeneas is represented as coming into Italy in company with Ulysses. But though this view was more particularly Grecian, it was adopted by some Latin writers of high repute. Sallust (*Cat.* 6) ascribes a Trojan origin to Rome; and Propertius (iv. 1), without expressly naming Aeneas as the founder, evidently refers its origin to him:—

> "Hoc quodcunque vides, hospes, qua maxima Roma est,
> Ante Phrygem Aenean collis et herba fuit;"

though in the same passage he also refers to the occupation of the Palatine hill by Evander. One very prevalent form of this tradition, which appears to have been known to Aristotle (Dionys. i. 72), represents either a matron or a female slave, named Romé, as burning the ships after the Trojans had landed. They were thus compelled to remain; and when the settlement became a flourishing city, they named it after the woman who had been the cause of its foundation.

The third form of tradition, which ascribed the origin of Rome to Romulus, was by far the most universally received among the Romans. It must be regarded as ultimately forming the national tradition; and there is every probability that it was of native growth, as many of its incidents serve to explain Roman rites and institutions, such as the worship of Vesta, the Lupercalia, Larentalia, Lemuria, Arval Brothers, &c. (Lewis, vol. i. p. 409.) The legend was of high antiquity among the Romans, although inferior in this respect to some of the Greek accounts. It was recorded in its present form by Fabius Pictor, one of the earliest Roman annalists, and was adopted by other ancient antiquarians and historians (Dionys. i. 79). Nay, from the testimony of Livy we may infer that it prevailed at a much earlier date, since he tells us (x. 23) that an image of the she-wolf suckling the two royal infants was erected near the Ficus Ruminalis by the curule aediles, B. C. 296.* The story is too well known to be re-

THE CAPITOLINE WOLF.

peated here. We shall merely remark that although according to this tradition Aeneas still remains the mythical ancestor of the Romans, yet that the building of two cities and the lapse of many generations intervene between his arrival in Italy and the foundation of Rome by his descendant Romulus. Aeneas himself founds Lavinium, and his son Ascanius Alba Longa, after a lapse of thirty years. We are little concerned about the sovereigns who are supposed to have reigned in the latter city down to the time of Numitor, the grandfather of Romulus, ex-

* It has been conjectured that this was probably the same statue mentioned by Cicero (*de Div.* i. 12, *Cat.* iii. 8), and described as having been struck by lightning; but this can hardly be the case, as the image described by Cicero stood in the Capitol. A bronze statue answering Cicero's description is still preserved in the Capitoline Museum at Rome, which is regarded by Niebuhr as a genuine relic (*Hist.* vol. i. p. 210), and has been immortalised in the verse of Byron. A modern critic finds it a production too clumsy for the state of Roman art at the time assigned by Livy, and thinks that the holes in the hind-leg of the wolf were not produced by lightning, but arise from a defect in the casting. (Braun, *Ruins and Museums of Rome*, p. 81.) Fabius Pictor, however, who mentions this statue in the passage cited from his work by Dionysius (*l. c.*), expressly remarks the primitive nature of its workmanship,—χάλκεα ποιήματα παλαιᾶς ἐργασίας,—though considerably less than a century must have elapsed between his time and the date of its erection. It was rude, therefore, even when compared with the state of Roman art towards the end of the third century B. C., though it had been erected only at the beginning of that century. Mommsen is inclined to believe that the Capitoline wolf is the genuine one erected by the Ogulnii and described by Livy, from the circumstance of its having been found near the arch of Severus. (*De Comitio Rom.*, in the *Annali dell' Instituto*, 1844, vol. xvi. p. 300.) Whoever has seen the group will perhaps at all events agree with Winckelmann that the twins are evidently of a different period from the wolf.

cept in so far as they may serve to ascertain the era of Rome. The account which has the most pretensions to accuracy is that given by Dionysius (i. 65, 70, 71) and by Diodorus (*Fr.* lib. viii. vol. iv. p. 21, Bipont). The sum of the reigns here given, allowing five years for that of Aeneas, who died in the seventh year after the taking of Troy, is 432 years — that is, down to the second year of Numitor, when Rome was founded by Romulus, in the first year of the 7th Olympiad. Now this agrees very closely with Varro's era for the foundation of Rome, viz., 753 B. C. For Troy having been taken, according to the era of Eratosthenes, in 1184 B. C., the difference between 1184 and 753 leaves 431 years for the duration of the Alban kingdom.

Varro's date for the foundation of Rome is that generally adopted. Other authorities place it rather later: Cato, in 751 B. C.; Polybius, in 750; Fabius Pictor, in 747.

This is not the place to enter into the question whether these dates of the Alban kings were the invention of a later age, in order to satisfy the requirements of chronology. It will suffice to remark that the next most prevalent opinion among those Romans who adopted the main points of this tradition assigned only three centuries to the Alban kings before the foundation of Rome. This was the opinion of Virgil (*Aen.* i. 272),—

"Hic jam tercentum totos regnabitur annos,"

— of Justin, of Trogus Pompeius (xliii. 1), and of Livy (i. 29), who assigns a period of 400 years for the existence of Alba, and places its destruction a century after the foundation of Rome. At all events the preponderance of testimony tends very strongly to show that Rome was not founded till several centuries after the Trojan War. Timaeus seems to have been the first Greek writer who adopted the account of the foundation of Rome by Romulus. (Niebuhr, *Hist.* vol. i. p. 218.)

II. The City of Romulus.

The Roman historians almost unanimously relate that Rome originally consisted of the city founded by Romulus on the Palatine. (Liv. i. 7; Vell. i. 8; Tac. *Ann.* xii. 24; Dionys. i. 88; Gell. xiii. 14; Ov. *Tr.* iii. 1. 29, &c.) The ancient settlement of Evander on the same hill, as well as a city on the Capitoline called Saturnia (Varr. *L. L.* v. § 42, Müll.; Festus, p. 322, Müll.), and another on Mons Janiculus called Aenea or Antipolis (Dionys. i. 73; Plin. iii. 9), must be supposed to have disappeared at the time of its foundation, if indeed they had ever existed. It seems probable enough, as Dionysius says, that villages were previously scattered about on the seven hills; but the existence of a place called Vatica or Vaticum, on the right bank of the Tiber, and of a Quirium on the Quirinal, rests solely on the conjecture of Niebuhr (*Hist.* vol. i. p. 223, seq., 289, seq., Eng. Trans.)

Pomoerium.—Tacitus has given in the following passage the fullest and most authentic account of the circuit of the Romulean city: "Sed initium condendi, et quod pomoerium Romulus posuerit, noscere haud absurdum reor. Igitur a foro Boario, ubi aereum tauri simulacrum adspicimus, quia id genus animalium aratro subditur, sulcus designandi oppidi coeptus, ut magnam Herculis aram amplecteretur. Inde certis spatiis interjecti lapides, per ima montis Palatini ad aram Consi, mox ad Curias Veteres, tum ad sacellum Larum; forumque Romanum et

Veteres were not seat
the Palatine and Ca

scribing the 10th Regio, or Palatium, marks the boundaries as follows, taking the reverse direction of that followed by Tacitus: "Continet casam Romuli, aedem Matris Deum et Apollinis Rhamnusii, Pentapylum, domum Augustinianam et Tiberianam, Auguratorium, aream Palatinam, aedem Jovis Victoris, domum Dionis, Curiam Veterem, Fortunam Respicientem, Septizonium Divi Severi, Victoriam Germanicianam, Lupercal." The Curiae Veteres are here mentioned in the singular number; but there is some authority for this deviation. Thus Ovid (*Fast.* iii. 139) says:—

> "Janua tunc regis posita viret arbore Phoebi;
> Ante tuas fit idem, Curia prisca, fores,"

where the Curia Prisca is identified with the Curiae Veteres by the following passage in Macrobius:—"Eodem quoque ingrediente mense tam in *Regia Curiis*que atque flaminum domibus, laureae veteres novis laureis mutabantur." (*Sat.* i. 12.) Now, in order to determine the precise situation of the Curia Vetus of the *Notitia*, it must be borne in mind that the "Domus Augustiniana," or palace of Augustus, occupied a considerable portion of the NE. side of the Palatine, commencing at the N. corner, as will be shown in treating the topography of the later city, and ending probably opposite to the arch of Titus, where the entrance was situated. Proceeding eastward, along the same side of the hill, we find enumerated the Auguratorium and Area Palatina. Then follows the temple of Jupiter Victor, which we must not confound, as Becker does (*Handb.* p. 100, cf. p. 422, note 847; see Preller, *Regionen*, p. 186), with that of Jupiter Stator, since the latter, according to the *Notitia*, lay rather more northwards in the 4th Regio, and probably on or near the Summa Sacra Via. That of Jupiter Victor, then, must have lain to the E. of the palace, and, as there is but a short space left on this side of the hill, it is probable that the Domus Dionis must be placed at least at its extreme NE. angle, if not on the side facing the Caelian. The Curia Vetus, of course, lay more to the S., and perhaps towards the middle of the E. side of the Palatine. Its site near the temple (or statue) of Fortuna Respiciens is confirmed by the *Basis Capitolina*, which mentions in the 10th Regio a "Vicus Curiarum" near to another of Fortuna Respiciens. (Gruter, *Inscr.* ccl.) The fourth point mentioned by Tacitus—the Aedes Larum—lay on the Summa Sacra Via, and therefore at about the middle of the NE. side of the Palatine hill. ("Aedem Larum in Summa Sacra Via," *Mon. Ancyr.*; "Ancus Martius (habitavit) in Summa Sacra Via, ubi aedes Larum est," Solin. i. 24.) At this point the historian finishes his description of the pomoerium of Romulus, and proceeds to say that the forum and Capitol were believed to have been added to the city not by that monarch but by Titus Tatius. Hence he is charged with leaving about a third of the pomoerium undefined; and, in order to remedy this defect, Becker (*de Muris, &c.* p. 14, *Handb.* p. 102), not without the sanction of other critics and editors, proposes to alter the punctuation of the passage, and to read "tum ad sacellum Larum forumque Romanum; et Capitolium non a Romulo," &c. But in truth little is gained by this proceeding—only the short space from the arch of Titus to the N. point of the Palatine, whilst the remaining part of the line from thence to the Forum Boarium still remains undescribed. But what is worse, even this little is gained at the expense of truth; since, strictly speaking, a line drawn from the Aedes Larum to the forum would include the temple of Vesta (*S. Maria Liberatrice*), which, as we learn from Dionysius (ii. 65), lay *outside* the walls of Romulus. Moreover, according to the emended punctuation, it might be doubtful whether Tacitus meant that the forum was included in the Romulean city, or not; and it was apparently to obviate this objection that Becker proposed to insert *hoc* before *et* (hoc et Capitolium). But these are liberties which sober criticism can hardly allow with the text of such a writer. Tacitus was not speaking like a common topographer or regionary, who is obliged to identify with painful accuracy every step as he proceeds. It is more consistent with his sententious style that, having carried the line thus far, he left his readers to complete it from the rough indication—which at the same time conveyed an important historical fact—that the forum and Capitol, which skirted at some distance the northern angle of the hill, were added by Tatius, and lay therefore outside the walls of Romulus. His readers could not err. It was well known that the original Rome was square; and, having indicated the *middle point* in each of the sides, he might have been charged with dulness had he written, "tum ad sacellum Larum, inde ad forum

Boarium." Bunsen, however, has assumed from the omission that the line of wall never proceeded beyond the Sacellum Larum, and that, indeed, it was not needed; the remaining space being sufficiently defended by a marsh or lake which surrounded it. (*Beschr.* vol. i. p. 138.) But, as the Sacellum Larum lay on high ground, on the top of the Velian ridge, this could not have been a reason for not carrying the wall farther; and even if there was a marsh lower down, we cannot but suppose, as Becker observes (*de Mur.* p. 14), that the pomoerium must have been carried on to its termination. Indeed the Porta Romanula, one of the gates of the Romulean city, lay, as we shall presently see, on the NW. side, a little to the N. of the spot whence Tacitus commences his description; and if there was a gate there, *à fortiori* there was a wall.

The line described by Tacitus is that of the furrow, not of the actual wall; but, in the case at least of a newly founded city, the wall must have very closely followed this line. The space between them — the wall being inside — was the pomoerium, literally, "behind the wall" (post moerum = murum); and this space could not be ploughed or cultivated. The line of the furrow, or boundary of the pomoerium, was marked by stones or *cippi*. The name pomoerium was also extended to another open space within the walls which was kept free from buildings. The matter is very clearly explained by Livy in the following passage: — "Pomoerium, verbi vim solum intuentes, postmoerium interpretantur esse. Est autem magis circa murum locus, quem in condendis urbibus olim Etrusci, qua murum ducturi essent, certis circa terminis inaugurato consecrabant: ut neque interiore parte aedificia moenibus continuarentur, quae nunc vulgo etiam conjungunt; et extrinsecus puri aliquid ab humano cultu pateret soli. Hoc spatium, quod neque habitari neque arari fas erat, non magis quod post murum esset, quam quod murus post id, pomoerium Romani appellarunt: et in urbis incremento semper, quantum moenia processura erant, tantum termini hi consecrati proferebantur" (i. 44). Every city founded, like Rome, after the Etruscan manner, had a pomoerium. The rites observed in drawing the boundary line, called "primigenius sulcus" (Paul. Diac. p. 236, Müll.), were as follows: the founder, dressed in Gabinian fashion (cinctu Gabino), yoked to a plough, on an auspicious day, a bull and a cow, the former on the off side, the latter on the near side, and, proceeding always to the left, drew the furrow marking the boundary of the pomoerium. There was a mystical meaning in the ceremony. The bull on the outside denoted that the males were to be dreadful to external enemies, whilst the cow inside typified the women who were to replenish the city with inhabitants. (Joann. Lydus, *de Mens.* iv. 50.) The furrow represented the ditch; the clods thrown up, the wall; and persons followed the plough to throw inwards those clods which had fallen outwards. At the places left for the gates, the plough was lifted up and carried over the profane space. (Varr. *L. L.* v. § 143, Müll.; Plut. *Q. R.* 27, *Rom.* 11.) The whole process has been summed up in the following vigorous words of Cato: — "Qui urbem novam condet, tauro et vacca aret; ubi araverit, murum faciat; ubi portam vult esse, aratrum sustollat et portet, et portam vocet." (*ap. Isidor.* xv. 2, 3.)

The religious use of the pomoerium was to define the boundary of the auspicia urbana, or city auspices. (Varr. *l. c.*) So Gellius, from the books of

p. 106), we should infer from these words that the Rome alluded to was not on the Palatine, but on some other hill. Plutarch, indeed, also alludes to the same tradition (*Rom.* 9), and describes Romulus as building this Roma Quadrata and afterwards enlarging it. We also find some obscure hints to the same purpose in Latin authors. Thus Solinus: "Nam ut affirmat Varro, auctor diligentissimus, Romam condidit Romulus, Marte genitus et Rhea Silvia, vel ut nonnulli, Marte et Ilia, dictaque est primum Roma quadrata, quod ad aequilibrium foret posita. Ea incipit a silva, quae est in area Apollinis, et ad supercilium scalarum Caci habet terminum, ubi tugurium fuit Faustuli" (i. 2). Now we must not take the whole of this account to be Varro's, as Becker does. (*De Muris, &c.* p. 18, seq., *Handb.* p. 106.) All that belongs to Varro seems to be taken from a passage still extant respecting the parentage of Romulus (*L. L.* v. § 144, Müll.), and the words after "vel ut nonnulli," &c. belong to Solinus himself. Varro, therefore, is not, as Becker asserts, a witness to Rome having been called *quadrata*. The following passage in Festus, however, manifestly alludes to another sense of Roma Quadrata, namely, as a certain hallowed place which every city built with Etruscan rites possessed, and in which were deposited such things as were considered of good omen in founding a city, and which are described by Ovid (*Fasti*, iv. 821; cf. Plut. *Rom.* 11): "Quadrata Roma in Palatio ante templum Apollinis dicitur, ubi reposita sunt quae solent boni ominis gratia in urbe condenda adhiberi, quia saxo munitus est initio in speciem quadratam. Ejus loci Ennius meminit, cum ait: 'et quis est erat Romae regnare quadratae'" (p. 258, Müll.). The place here described was, in fact, the *mundus* of the Romulean city. The words of Solinus, though we are ignorant of the exact position of the places which he mentions, seem to denote too large an area to be reconciled with the description of Festus. In confirmation of the latter, however, Becker (*Handb.* p. 107) adduces a fragment of the Capitoline plan (Bellori, *Tab.* xvi.), with the imperfect inscription REA APO (area Apollinis), and, on the space beside it, a plan of a square elevation with steps at two of its sides. This, he observes, exactly answers to the description of Festus, being a "locus saxo munitus in speciem quadratam;" and the area Apollinis was naturally before his temple. That *the whole* of the Romulean city, however, was also called *quadrata*, is evident, not only from a passage of Dionysius before cited, where he speaks of the temple of Vesta being outside of the Rome called Quadrata (*ὅτι τῆς τετραγώνου καλουμένης Ῥώμης, ἣν ἐκεῖνος ἐτείχισεν, ἐκτός ἐστιν*, ii. 65), but also from the mutilated fragment of Ennius, quoted by Festus in the passage just cited. It is without sense as it stands, and Müller's emendation appears certain:—

"Et qui se sperat Romae regnare quadratae,"

where the meaning is inapplicable to a mere *mundus*, and must be referred to the entire city.

Gates of the Palatine city.— It was required that in a town built, like Rome, with Etruscan rites, there should be at least three gates and three temples, namely, to Jupiter, Juno, and Minerva (Serv. *ad Aen.* i. 422); and we learn from Pliny (iii. 9) that the city of Romulus had, in fact, three if not four gates. In the time of Varro, three gates existed at Rome besides those of the Servian walls, and two of these can be referred with certainty to the Palatine city. "Praeterea intra muros video portas dici. In palatio Mucionis, a mugitu, quod ea pecus in bucita circum antiquom oppidum exigebant. Alteram Romanulam ab Roma dictam, quae habet gradus in Nova Via ad Volupiae sacellum. Tertia est Janualis dicta ab Jano; et ideo ibi positum Jani signum; et jus institutum a Pompilio, ut scribit in Annalibus Piso, ut sit aperta semper, nisi quom bellum sit nusquam." (*L. L.* v. §§ 164, 165, Müll.) The gate here called Mucio by Varro is the same as that called Mugio by other writers, by an ordinary interchange of *c* and *g*, as in Caius for Gaius, Cermalus for Germalus, &c. Thus Varro himself, as cited by Nonius (xii. 51. p. 531, M.) is made to call it Mugio. In Paulus Diaconus (p. 144, Müll.) we find the adjective form Mugionia, erroneously formed, however, from Mugius, the name of a man; and lastly, the form Mugonia in Solinus (i. 24).

The most important passage for determining the situation of this gate is Livy's description (i. 12) of the battle between the Sabines and Romans. The former occupy the Capitoline hill, the latter are arrayed in the valley beneath. The Romans mount to the attack, but are repulsed and driven back towards the "old gate" ("ad veterem portam") of the Palatium. Romulus, who is stationed on the high ground near it (the summit of the Velia), vows to erect on this spot a temple to Jupiter, under the name of "Stator," if he arrest the flight of the Romans. At this time the Sabines had driven back the Romans to the extremity of what was afterwards the forum, and their leader Metius Curtius had even penetrated nearly to the gate of the Palatium. The Romans, however, rally; the Sabines are repulsed, and the combat is renewed in the valley between the two hills. Dionysius confirms the site of the gate by describing it as leading to the Palatium from the Summa Sacra Via; which street, as will be seen when we come to describe the topography of the later city, crossed the ridge of the Velia at this spot (*Ῥώμυλος μὲν Ὀρθωσίῳ Διὶ (ἱερὸν ἱδρύσατο) παρὰ ταῖς καλουμέναις Μυκώνισι πύλαις, αἳ φέρουσιν εἰς τὸ Παλάτιον ἐκ τῆς ἱερᾶς ὁδοῦ*, ii. 50). The spot is further identified by a graphic passage in Ovid, where the citizen who serves as *Cicerone* to his book conducts it from the fora of the Caesars along the Sacra Via, and, having crossed the eastern extremity of the Forum Romanum, arrives at the temple of Vesta; then proceeding onwards up the Sacra Via, first points out the former residence of Numa, and then, *turning to the right*, indicates the gate of the palace:—

"Paruit et ducens, 'Haec sunt fora Caesaris, inquit;
Haec est a sacris quae via nomen habet.
Hic locus est Vestae, qui Pallada servat et ignem;
Hic fuit antiqui regia parva Numae.'
Inde petens dextram, 'Porta est, ait, ista Palati:
Hic Stator; hoc primum condita Roma loco
est.'" (*Trist.* iii. 1. 27.)

The site of the temple of Jupiter Stator here given is confirmed by other writers. Thus it is described by Livy (i. 41) as near the palace of Tarquinius Priscus, from the windows of which, overhanging the Nova Via, Tanaquil addressed the people. Now, as will be shown in its proper place, the Nova Via ran for some distance parallel with the Sacra Via, and between it and the Palatine, and, at its highest point near this gate, was called "Summa," like the Sacra Via. Thus Solinus (i. 24): "Tarquinius Priscus ad Mugoniam Portam supra Summam

Novam Viam (habitavit)." The site of the temple of Jupiter Stator near the Summa Sacra Via is sufficiently certain without adopting the proof adduced by Becker from the equestrian statue of Cloelia, the history of which he completely misunderstands. The passage from Pliny (xxxiv. 13) which he quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publicola, who disputed with Cloelia the honour of having swum the Tiber, and escaped from the custody of Porsena. Indeed, the two rival legends seem to have created some confusion among the ancients themselves; and it was a disputed point in the time of Plutarch whether the existing statue was that of Cloelia or Valeria. (*Popl.* 19.) Becker confounds these two statues, and asserts (note 155) that Pliny, as well as Dionysius, speaks of the statue of Cloelia as no longer existing in his time. But Pliny, on the contrary, in the very chapter quoted, mentions it as still in being: "Cloeliae etiam statua *est* equestris." It was the statue of Valeria that had disappeared, if indeed it had ever existed except in the account of Annius Fetialis. Pliny, therefore, must share the castigation bestowed by Becker on Plutarch and Servius for their careless topography: whose assertion as to the existence of the statue in their time he will not believe, though the latter says he had seen it with his own eyes (*ad Aen.* viii. 646). The only ground which Becker has for so peremptorily contradicting these three respectable authorities is a passage in Dionysius (v. 35); who, however, only says that when he was at Rome the statue no longer stood in its place (*ταύτην ἡμεῖς μὲν οὐκ ἔτι κειμένην εὕρομεν*), and that on inquiry he was told that it had been destroyed (*ἠφανίσθη*) in a fire that had raged among the surrounding houses. But Dionysius may have been misinformed; or perhaps *ἠφανίσθη* is to be taken in its literal sense, and the statue was only removed for a while out of sight. We may assume, therefore, that it had been restored to its original position in the period which elapsed between Dionysius and Pliny, and that it continued to adorn the Summa Sacra Via for some centuries after the time of the former writer.

The preceding passages abundantly establish the site of the Porta Mugionis at that spot of the Palatine which faces the Summa Sacra Via, or present arch of Titus; nor does it seem necessary, by way of further proof, to resort to the far-fetched argument adduced by Becker from the nature of the ground (*Handb.* p. 113), namely, that this is the only spot on the NE. face of the hill which offers a natural ascent, by the road (*Via Polveriera*) leading up to the Convent of *S. Bonaventura*. That road, indeed, has all the appearance of being an artificial rather than a natural ascent, and may have been made centuries after the time of Romulus. Unfortunately, too, for Becker's round assertion on this subject (*Handb.* p. 109), that we must *ab initio* embrace as an incontrovertible principle that gates are to be sought only where the hill offers natural ascents, we find that the only other known gate, the Porta Romanula, was, on his own showing, accessible only by means of steps. For the situation of this gate Varro is again our principal authority. We have seen in the passage before quoted from that author that it opened into the Nova Via, near the Sacellum Volupiae, by means of steps. Varro again alludes to it in the following passage: "Hoc sacrificium (to Acca Larentia) fit in Velabro, qua in Novam Viam exitur, ut aiunt quidam, ad sepulcrum Accae, ut quod ibi prope faciunt Diis Manibus Servilibus sacerdotes: qui uterque locus extra urbem antiquam fuit non longe a Porta Romanula, de qua in priore libro dixi." (*L. L.* vi. § 24, Müll.) The site of the Sacellum Volupiae cannot be determined; but the Velabrum is one of the most certain spots in Roman topography, and is still indicated by the church which bears its name, *S. Giorgio in Velabro*. We learn from both these passages of Varro—for Scaliger's emendation of Nova Via for Novalia in the former is incontestable—the exact site of the Porta Romanula; for as the sacrifice alluded to was performed in the Velabrum near the spot where the Nova Via entered it, and as the P. Romanula was not far from this place, it follows that it must have been at the lower end of the street or in the *infima Nova Via*. Varro's account is confirmed by Festus (p. 262, Müll.), who, however, calls the gate *Romana* instead of *Romanula*: "Sed porta Romana instituta est a Romulo infimo clivo Victoriae, qui locus gradibus in quadram formatus est: appellata autem Romana a Sabinis praecipue, quod ea proximus aditus erat Romam." Here the same steps are alluded to that are mentioned by Varro. The Clivus Victoriae was that part of the NW. declivity of the Palatine which overhung the Nova Via. It was so named either from a temple of Victory seated on the top of the hill ("in aedem Victoriae, quae est in Palatio, pertulere deam," Liv. xxix. 14), or more probably — as this temple was not dedicated by L. Postumius till B. C. 295—from an ancient grove, sacred to Victory, on this side of the Palatine, near the Lupercal (Dionys. i. 32), the tradition of which, though the grove itself had long disappeared, probably led to the temple being founded there.

The Romulean city must undoubtedly have had at least a third gate, both from the testimony of Pliny and because it cannot be supposed that its remaining two sides were without an exit; but there is no authority to decide where it lay. Becker thinks that it was seated at the southernmost point of the hill; but this, though probable enough, is nothing more than a conjecture. The Porta Janualis, the third gate mentioned by Varro, was most probably as old as the time of Romulus, though it certainly never belonged to the Palatine city. Its situation and true nature will be discussed presently. We find, however, a gate called Ferentina mentioned by Plutarch (*Rom.* 20), who relates that Romulus, after the murder of Tatius, which was followed by visible signs of the divine anger, purified Rome and Laurentum by rites which still continued to be observed at that gate. We also find an account in Festus (p. 213) of a Porta Piacularis, which was so called "propter aliqua piacula quae ibidem fiebant;" and some have assumed (v. Müller, *ad Fest. l. c.*) that these two gates were identical. It is well known that the Roman gates had sometimes two names; and this seems especially probable in the case of those which had some religious ceremony connected with them. Becker (*Handb.* p. 177) rejects, however, with something like indignation the idea that such a gate could have belonged to the Romulean city, and would therefore either place it in the Lucus Ferentinae, or alter the text of Plutarch, his usual expedient. Altogether, however, it does not seem quite so improbable that it may have been the third and missing gate of Romulus, since its name indicates its site near the S. extremity of the Palatine, just where we are in want of one.

III. Progress of the City till the Time of Servius Tullius.

We can only pretend to give a probable account of the progress of the city under the first five kings. The statements on the subject in ancient authors are divergent, though the contradiction is often rather apparent than real. In the course of his reign Romulus added to his original city on the Palatine, the Capitoline hill, then called Saturnius, the Caelian, then called Querquetulanus, and the Aventine. But we must distinguish the nature of these additions. Dionysius (ii. 37) represents the Capitoline and Aventine as enclosed by Romulus with a strong fortification consisting of a ditch and palisades, chiefly as a protection for herdsmen and their flocks, and not as surrounded with a wall, like the Palatine. Yet it is evident from the account of the attack by the Sabines on the Capitoline (Liv. i. 11) that it must have been regularly fortified, and have had a gate. Romulus had already marked it out as the *arx* or citadel of his future city; and when he had defeated the Caeninenses and slain their king, he carried thither and dedicated the first spolia opima at an oak-tree held sacred by the shepherds, but which now became the site of the temple of Jupiter Feretrius (Ib. c. 10). When Livy tells us that this was the first temple consecrated at Rome, he probably means with the exception of those which were usually erected at the foundation of every city. That the Capitoline was a much more important hill in the time of Romulus than the Aventine and Caelian is also shown by the fact of his opening upon it the asylum for slaves and fugitives, in order to increase the population of his city. This asylum was situated somewhere in the hollow between the two eminences of the Capitoline, and the site retained till a late period the name of "Inter duos lucos" (Ib. c. 10; Dionys. ii. 15; Strab. v. 230; Plut. *Rom.* 9; Ov. *Fast.* iii. 431, &c.).

The Capitoline hill, or Mons Saturnius, appears then to have been a real addition to the Romulean city; but the Aventine seems to have remained down to the time of Ancus Martius a mere rudely fortified enclosure for the protection of the shepherds. Various etymologies, all perhaps equally unsatisfactory, have been invented for the name of Aventinus. One legend derived it from an Alban king so called, who was buried on the hill (Liv. i. 3; Varr. *L. L.* v. § 43, Müll.; Paul. Diac. p. 19, Müll.), another from a descendant of Hercules, mentioned by Virgil (*Aen.* vii. 656). Servius in his commentary on this passage makes Aventinus a king of the Aborigines, but adds from Varro that the Aventine was assigned by Romulus to the Sabines, who named it after the Avens, one of their rivers. This account is not found in the remains which we possess of Varro, who, however (*l. c.*), adds a few more etymologies to that already given. One of them, taken from Naevius, derives the name of the hill from the birds (aves) that resorted thither from the Tiber, to which Virgil also seems to allude (*Aen.* viii. 233). Varro himself thinks that it was so called "ab adventu," because, being formerly separated from the other hills by a marsh or lake, it was necessary to go to it in boats: whilst others derived the name "ab adventu hominum," because, having upon it a temple of Diana common to all the Latin people, it was a place of great resort. But these various etymologies only prove that nothing certain was known.

The preponderance of authority tends to show that the Caelian hill was also colonised in the time of Romulus. Caelius Vibennus, or Caeles Vibenna, an Etruscan general who came to the assistance of Romulus against Tatius and the Sabines, had this hill assigned to him and settled upon it with his army; whence it derived its name of "Caelius," it having been previously called Querquetulanus from its woods of oak. (Varr. *L. L.* v. § 46. Müll.; Dionys. ii. 36; Paul. Diac. p. 44, Müll.) The traditions respecting the incorporation of this hill are, however, very various. Some authors relate that it was added by Tullus Hostilius (Liv. i. 30: Eutrop. i. 4; Aur. Vict. *Vir. Ill.* 4), others by Ancus Martius (Cic. *Rep.* ii. 18; Strab. v. p. 234): whilst some, again, place the arrival of Caeles as low down as the reign of Tarquinius Priscus. (Tac. *Ann.* iv. 65; Festus, p. 355, Müll.) The last account probably arose from some confusion between the arrival of the Tuscans under Romulus, and a subsequent one under the Tuscan king Tarquinius. But the sacred books relating to the Argive chapels established by Numa mention the hill under the name of Caelius (Varr. *ib.* § 47), and it therefore seems probable that the arrival of Vibenna must be placed under Romulus. This Tuscan settlement appears, however, not to have been permanent. After the death of their leader a portion of his followers incurred the suspicion of the Romans, and were removed from the hill to a less defensible position on the plain, apparently between the Palatine and Capitoline, where they founded the Vicus Tuscus; whilst the remainder were transferred to the adjoining hill called Caeliolus (Varr. *ib.* § 46). Whence also Propertius:—

> "Et tu, Roma, meis tribuisti praemia Tuscis
> Unde hodie vicus nomina Tuscus habet;
> Tempore quo sociis venit Lycomedius armis,
> Atque Sabina feri contudit arma Tati."—
> (iv. 2. 49.)

Here the Tuscan general is named Lycomedius, which seems to be derived from Lucumo, the name given to him by Dionysius (ii. 42, 43), and which was probably only an appellative for an Etruscan prince. The hill having been vacated by this removal of the Tuscans, was again colonised under a subsequent king, which in some degree reconciles the conflicting accounts: but all we shall say further about it at present is, that in the reign of Tiberius an attempt was made to change its name again, and to call it Mons Augustus, either because Tiberius had laid out a great deal of money there in repairing the damage occasioned by a fire, or from a decree of the senate, which appointed that name to be used because a statue of Tiberius had been saved from the flames. (Tac. *Ann.* iv. 64; Suet. *Tib.* 48.) But this name never came into common use.

Legend of Tarpeia.—Porta Janualis and Temple of Janus.—The story of Tarpeia involves two or three points of topographical interest. It shows that the Capitoline hill was regularly fortified, and had a gate. The deed of Tarpeia, whether treacherous or patriotic, for there are two versions of her history, occasioned a change in the name of the hill. It had previously been called Mons Saturnius, from Saturn, to whom it was sacred (Fest. p. 322); and there was a tradition that some Eleans, who had obtained their dismissal from the army of Hercules on his return from his western expedition, had been attracted to settle upon it by the resemblance of its name to that of Κρόνιος, a mountain of their own country. (Dionys. i. 34.) After the foundation of the Capitol

its appellation, as we shall have occasion to relate further on, was again altered to that which it ever afterwards continued to bear; yet one part of the southern portion of the hill still retained the name of Rupes Tarpeia, from the vestal having been buried on it. (Varr. *L.L.* v. § 41, Müll.) Dionysius (ii. 40) adopted the account of Piso, who attributed the death of Tarpeia to a patriotic attempt to deceive the Sabines, in preference to that of Fabius, which brands her with disloyalty. The latter, however, seems to have obtained most currency among the Romans; and Propertius even derives the name of the hill from her father, Tarpeius, who commanded the Roman garrison,—"A duce Tarpeio mons est cognomen adeptus" (v. 4. 93),—whilst he brands the tomb of the vestal with infamy. ("Tarpeiae turpe sepulcrum," v. 4. 1). The obscure legend of the Porta Pandana, which existed somewhere on the Capitol in the time of Varro (*L.L.* v. § 42), is also connected with the story of Tarpeia; and Tatius is said to have stipulated, in the treaty which he made with Romulus, that this gate should always be left open. (Fest. p. 363, and Paul. Diac. p. 220, Müll.) According to an incredible account in Solinus (i. 13), it was a gate of the old Saturnian city, and was originally called Porta Saturnia; nor is the version of Polyaenus more satisfactory (*Stratag.* viii. 35), who refers the story of the Porta Pandana to the treaty with the Gauls, by which the Romans engaged always to leave one gate open, but, in order to evade the consequences, built it in an inaccessible place.

After peace had been concluded between Romulus and Tatius, they possessed two distinct but united cities,—the former reigning on the Palatine, the latter on the Capitoline, and dwelling on the spot where the temple of Juno Moneta afterwards stood (Plut. *Rom.* 2; Sol. i. 21.) When Tacitus says, in the passage before cited, that Tatius added the Capitoline to the city, we are perhaps therefore to understand that he built upon it and made it habitable, whilst previously it had been only a sort of military outpost. The valley between the two hills formed a kind of neutral ground, and served as a common market-place. The gate called Janualis, mentioned by Varro in the passage cited from him when treating of the Romulean gates, seems undoubtedly to have belonged to the Sabine town. Niebuhr, who is followed by Bunsen (*Beschr.* vol. i. p. 145), is of opinion (*Hist.* i. 292) that it was built by the two cities as a barrier of their common liberties; that it was open in time of war in order that succour might pass from one to the other, and shut during peace, either to prevent the quarrels which might arise from unrestricted intercourse, or as a token that the cities, though united, were distinct. Becker, on the other hand, denies that it ever was a gate at all, maintaining that it only got that name *catachrestically*, from the temple which it subsequently formed being called "Porta Belli" (pp. 118, 119, and note 167). But there seems to be ample evidence that it was originally a gate. Varro, in the passage cited, evidently considered it as such; and it is also mentioned by Macrobius as a real gate, though the situation which he assigns to it will hardly be allowed even by those who give the greatest extention to the walls of the Romulean city ("Cum bello Sabino—Romani portam, quae sub radicibus collis Viminalis erat, quae postea ex eventu *Janualis* vocata est, claudere festinarent," *Sat.* i. 9). Janus was not situated in the place here assigned to it, but in the Forum Olitorium outside the Porta Carmentalis. As the opinion of so distinguished a scholar as Mommsen is entitled to great attention, we shall here briefly review his arguments. They may be stated as follows. That the temple of Janus was in the Forum Olitorium may be shown from Tacitus: "Et Jano templum, quod apud Forum Olitorium C. Duilius struxerat (dedicavit Tiberius)," (*Ann.* ii. 49); and also from Festus: "Religioni est quibusdam porta Carmentali egredi et in aede Jani, quae est extra eam, senatum haberi, quod ea egressi sex et trecenti Fabii apud Cremeram omnes interfecti sunt, cum in aede Jani S. C. factum esset, ut proficiscerentur" (p. 285, Müll.). But this temple was undoubtedly the same as the famous one founded by Numa, and Duilius could only have *restored*, not *built* it; since it can be shown that there was only one Temple of Janus at Rome before the time of Domitian. Thus Ovid (as may be seen in the passage before quoted) asks Janus,—

"Cum tot sint Jani cur stas sacratus, *in uno*,
Hic ubi juncta foris templa duobus habes?"

The same thing appears from the following passage of Martial (x. 28. 2), which shows that, before Domitian erected the Janus Quadrifrons in the Forum Transitorium, the god had only one little temple:—

"Pervius exiguos habitabas ante Penates
Plurima qua medium Roma terebat iter."

The same situation of this only temple is also testified by Servius (*ad Aen.* vii. 607): "Sacrarium (Jani) Numa Pompilius fecerat—Quod Numa instituerat, translatum est ad Forum Transitorium." And again "Sacrarium hoc Numa Pompilius fecerat circa imum Argiletum juxta theatrum Marcelli." Thus the situation of the sole temple of Janus is proved by the preponderance of the best authority, and does not rest on mere conjecture.

In these remarks of Mommsen's we miss that accuracy of interpretation which is so necessary in treating questions of this description. The word "struxerat," used by Tacitus, denotes the erection of a new building, and cannot be applied to the mere restoration of an ancient one. Nor, had there been no other temple of Janus, would it have been necessary to designate the precise situation of this by the words "apud Forum Olitorium." Again, the words of Ovid refer, not to one temple, but to one Janus, which, however, as we have seen, was converted into a sort of small temple. "When there are so many Jani, why is your image consecrated only in one?" This, then, was not a temple in the larger sense of the word; that is, a building of such a size as to be fit for assemblies of the senate, but merely the little sacellum described by Ovid. Let us hear Mommsen's own description of it, drawn from this passage, and from that of Martial just quoted: "Fuit enim Jani aedes (quod luculentissime apparet ex Ovidii verbis supra laudatis) non nisi Janus aliquis, sive bifrons sive quadrifrons, Dei statua ornatus, Ea, quam Numa fecit, fornix erat pervius ad portam Carmentalem applicatus, quo transibant omnes qui a Campo Martio Foroque Olitorio venientes Boarium Romanumve petebant" (p. 307). But—overlooking the point how the building of Numa could have been attached to a gate erected in the time of Servius—how is it possible to conceive that, as Mommsen infers from the words of Festus, the senate could have been assembled in a little place of this description, the common thoroughfare of the Romans? Besides, we have the express testimony of Livy, that the Senatus Consultum, sanctioning the departure of the Fabii, was made in the usual place for the meetings of the senate,—the Curia Hostilia. "Consul e Curia egressus, comitante Fabiorum agmine, qui in vestibulo curiae, senatus consultum exspectantes, steterant, domum rediit" (ii. 48). Livy is certainly a better witness on such a point than Festus; whose account, therefore, is overthrown, not only by its inherent improbability, but also by the weight of superior authority. All that we can infer from his words is, that the temple of Janus, outside the Porta Carmentalis, was sufficiently large to hold an assembly of the senate; but this circumstance itself is sufficient proof that it could not have been the original little temple, or sacellum, of Numa. There are other objections to the account of Festus. It was not ominous, as he says, to go out at the Carmental gate, but to go out through the right arch of the gate ("infelici via dextro Jano portae Carmentalis profecti, ad Cremeram flumen perveniunt," Ib. c. 49). If the whole gate had been accursed, how could a sacred procession like that of the virgins from the temple of Apollo to that of Juno Regina, described by Livy (xxvii. 37), have passed through it? Nor can it be told whether the relative *ea* refers to the Porta Carmentalis, as sense, or to aedes Jani, as grammar, requires. Further, it would be contrary to the usual custom, as Becker correctly remarks (*Handbuch*, p. 139, note), for the senate to assemble outside of the gates to deliberate on a domestic matter of this nature. Then, with reference to Ovid's description, he could not have mentioned the sacellum of Janus as adjoining two fora, had it stood where Mommsen places it, where it would have been separated from the Forum Romanum by the whole length of the Vicus Jugarius. Besides, it is plain from the passage of the Fasti before quoted that the original temple stood at the foot of a clivus, or descent from the Capitoline. Yet Mommsen puts it at the very top of the hill over the Carmental gate ("in ipso monte," p. 310, vide his plan at the end of the volume), where the hill is most abrupt, and where there could not possibly have been any clivus, and the Porta Janualis at the bottom. We should remark, too, that the reading, "arduus in valles *et* fora clivus erat," is not a mere conjecture of Becker, as Mommsen seems to think (p. 310), but the common reading; and that to substitute "*per* fora" instead would make evident nonsense. Nor in that case do we see how the temple could have been "apud Forum Olitorium," as Tacitus says, even if *apud* only means *near*, not *at*: and still less how it could have adjoined the theatre of Marcellus ("juxta theatrum Marcelli"), as indicated by Servius. What has been said will also be sufficient to refute the last named commentator in stating this to be the *original* temple. He has evidently confounded the two.

We can therefore only agree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this occasion. "At quod somniavit de aede Jani sine simulacro (p. 259), quod Festum, quod Servium gravissimi erroris incusavit (p. 139, n. 254, seq.), id vix condono homini philologo" (p. 307). It appears, we trust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The explanation we have already given, that Ovid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we

see no reason why Janus, a very ancient Latin divinity, and to whom the Mons Janiculus appears to have been sacred before the building of Rome, should not have been honoured with a regular temple besides the little affair which was the index of peace and war. As the question, however, is connected with the situation of the Argiletum and Forum Caesaris, we shall have occasion to revert to it, and have mentioned it here only because the legend of Tarpeia, and consequent building of the temple, are closely connected with the history of the city.

Romulus, after his mysterious disappearance, was deified under the name of Quirinus, and his successor, Numa, erected a temple to the new God on the Quirinal. (Dionys. ii. 63; Ov. *Fast.* ii. 509). This hill, which was previously named Agonus (Fest. p. 254; Dionys. ii. 37), appears in the time of Numa to have been divided into four distinct eminences, each named after some deity, namely, Quirinalis, Salutaris, Mucialis, and Latiaris (Varr. *L. L.* v. § 51, Müll.); but from what deity the name of Mucialis was derived remains inexplicable. The name of Quirinalis, which, however, some derive from the Quirites, who had come with Tatius from Cures, and settled on the hill (Varr. and Fest. *ll. cc.*), ultimately swallowed up the other three. The temple of Quirinus probably stood near the present church of *S. Andrea del Noviziato*. This question, however, as well as that concerning the sites of the other three temples, will recur when treating of the topography of the city. Numa, who was himself a Sabine, also founded a capitol (Hieron. i. p. 298), subsequently called, by way of distinction, "vetus Capitolium," on the Quirinal, which hill had been chiefly colonised by his countrymen. Of course the name of "Capitolium" could not have been applied to it till after the foundation of the Roman Capitol, and originally it was the *arx* of the city, containing the three usual temples of Jupiter, Juno, and Minerva. (Varr. *L.L.* v. § 158, Müll.) This ancient temple of Jupiter is alluded to by Martial (v. 22. 4), and probably stood on the southern part of the Quirinal on the present height of *Magnanapoli*.

Tullus Hostilius is said to have added the Caelian hill to the city after the destruction of Alba Longa, when the population of Rome was doubled by the inhabitants of Alba being transferred thither; and in order to render the Caelian still more thickly inhabited Tullus chose it for his own residence. (Liv. i. 30; Eutrop. i. 4; Victor, *Vir. Ill.* 4.) The two accounts of the incorporation of this hill by Romulus and Tullus contain, as we have before remarked, nothing contradictory; otherwise, Dionysius Halicarnassensis would hardly have committed himself by adopting them both (ii. 36, 50, iii. 1). The first Tuscan settlement had been transferred to another place. But when Cicero (*de Rep.* ii. 18) and Strabo (v. p. 234) state that the Caelian was added to the city by Ancus Martius, this is a real divergence for which we cannot account; as the hill could hardly have been incorporated by Tullus and again by Ancus.

Ancus is also said, by the two authorities just quoted, to have added the Aventine; and there is no improbability in this, for Romulus never made it a proper part of his city, and we learn from Plutarch (*Num.* 15) that it was uninhabited in the time of Numa. We must remember that the earlier enclosures were made rather to assert a future claim to the ground when the number of citizens was increased, than that they were absolutely wanted at the time of making them ("Crescebat interim urbs, munitionibus alia atque alia appetendo loca; quum in spem magis futurae multitudinis, quam ad id quod tum hominum erat, munirent," Liv. i. 8). The account of Ancus having added the Aventine is confirmed by Dionysius (iii. 43) and by Livy (i. 33), who state that it was assigned to the citizens of the conquered Politorium. Yet the history of the Aventine is more mysterious than that of any other of the Roman hills. At the end of the third century of the city we find it, as an *ager publicus*, taken possession of by the patricians, and then, after a hard contest, parcelled out among the plebeians by a Lex Icilia (Dionys. x. 31, 32; cf. Liv. iii. 31, 32), by whom it was afterwards principally inhabited. It remained excluded from the pomoerium down to the time of Claudius, though the most learned Romans were ignorant of the reason. After some further victories over the Latins, Ancus brought many thousands more of them to Rome; yet we can hardly understand Livy's account (*l. c.*) that he located them in the Vallis Murcia; not only because that spot seems too limited to hold so large a number, but also because the Circus Maximus seems already to have been designed, and even perhaps begun, at that spot. (Dionys. iii. 68.) At all events they could not have remained there for any length of time, since Livy himself mentions that the circus was laid out by Tarquinius Priscus (i. 35). The fortifying of the Janiculum on the right bank of the Tiber, the building of the Sublician bridge to connect it with Rome, and the foundation of the port of Ostia at the mouth of the river, are also ascribed to Ancus Martius, as well as the fortification called the Fossa Quiritium. (Liv. i. 33; Dionys. 44, 45; Victor, *Vir. Ill.* 5; Flor. i. 4.)

The circuit of Rome, then, at the time of the accession of Tarquinius Priscus, appears to have embraced the Quirinal, Capitoline, Palatine, Aventine, and Caelian hills, and the Janiculum beyond the Tiber. The Viminal and Esquiline are not mentioned as having been included, but there can be no doubt that they were partially inhabited. Whether the first named hills were surrounded with a common wall it is impossible to say; but the fortifications, whatever their extent, seem to have been of a very rude and primitive description (*τείχη—αὐτοσχέδια καὶ φαῦλα ταῖς ἐργασίαις ὄντα*, Dionys. iii. 67). Tarquinius does not appear to have made any additions to the city, but he planned, and perhaps partly executed, what was of much more utility, a regular and connected wall to enclose the whole city. (Liv. i. 36, 38; Dionys. iii. 67.) Nay, according to Victor (*Vir. Ill.* 6), he actually completed this wall, and Servius only added the *agger* (*Ib.* c. 7.) The reign of Tarquin was indeed a remarkable epoch in the architectural progress of the city. We must remember that he was of Tuscan birth, and even of Greek descent; and therefore it is natural to suppose that his knowledge of architecture and of the other arts of civilised life was far superior to that of the Romans and Latins; and hence the improvements which he introduced at Rome. It is satisfactory to discover and point out undesigned coincidences of this description, which greatly add to the credibility of the narratives of ancient writers, since there is too much disposition at the present day to regard them as the inventors or propagators of mere baseless fables. Tarquin also constructed those wonderful sewers for draining the Velabrum and

forum which exist even to the present day; he improved the Circus Maximus, planned the temple of the Capitoline Jupiter, and erected the first porticoes and tabernae around the forum (Liv. i. 35, 38; Dionys. iii. 67—69; Tac. *Hist.* iii. 72); in short, he must be regarded as the founder of the subsequent architectural splendour of Rome.

The additional space included by Servius Tullius in the line of wall which he completed is variously stated in different authors. Dionysius (iv. 13) and Strabo (v. p. 234) relate that he added the Viminal and Esquiline hills: Livy states that the hills which he added were the Quirinal and Viminal, and that he enlarged or improved the Esquiline ("auget Esquilias," i. 44); while Victor (*Vir. Ill.* 7) mentions that he added all three. It is possible that Livy means all that back or eastern portion of the Quirinal and Esquiline which run together into one common ridge, and which was fortified by the agger of Servius Tullius; and in this way we may account for his expression of "auget Esquilias," which alludes to this extension of the hill, and the consequent amalgamation of its previously separate tongues, the Oppius and Cispius. Hence there is but little real contradiction in these apparently divergent statements. Though the elder Tarquin may dispute with Servius the honour of having built the walls of Rome, yet the construction of the agger is unanimously ascribed to Servius, with the single exception of Pliny (iii. 9), who attributes it to Tarquin the Proud. The custom, however, has prevailed of ascribing not only this, but the walls also, to Servius. A description of these walls and of their gates, and an inquiry into the circumference of the Servian city, will be found in the second part of this article; but there are two other points, in some degree connected with one another, which require investigation here, namely, the Regiones of Servius and the Septimontium.

Regions of Servius. — Servius divided the city into four *political* districts or regions, which, however, were not commensurate with its extent. Their number seems to have been connected with that of the city tribes; but there are many particulars concerning them which cannot be explained. Our knowledge of them is chiefly derived from Varro (*L. L.* § 45, seq., Müll.), from whom we learn that they were: I. the *Suburana*, the limits of which cannot be precisely determined, but which embraced the Caelian hill, the valley of the Colosseum, and part of the Sacra Via, that western portion of the southern tongue of the Esquiline (Mons Oppius) known as the Carinae, the Ceroliensis,—which seems to have been the valley or part of the valley between the Esquiline and Caelian,—and the Subura, or valley north of the Oppius. II. The *Esquilina* or *Esquiliae*, which comprehended the smaller or N. tongue of the Esquiline (Mons Cispius) and its eastern back or ridge, as far as the rampart or agger of Servius, and perhaps also the eastern back of the Oppius. III. The *Collina*, so called from its embracing the Quirinal and Viminal hills, which, as we have before said, were called *colles*, in contradistinction to the other hills called *montes*. The intervening valleys were, of course, included. IV. The *Palatina* or *Palatium*, embraced that hill with its two spurs or offshoots, Velia and Germalus.

When we compare these regions with the map of Rome we are immediately struck with some remarkable omissions. Thus, the Capitoline hill, with the valley to the E. (forum), and valley to the S. (Velabrum and Forum Boarium), together with the Aventine, are entirely excluded. Various conjectures have been proposed to account for these omissions. Some have imagined that the Capitol was excluded because the division of Servius regarded only the plebeian tribes, and that the Capitol was inhabited solely by patricians. Becker (*Handb.* p. 386) rightly rejects this hypothesis; but another, which he prefers to it, seems hardly better founded, namely, that the hill, as being the citadel, was occupied with public buildings to the exclusion of all private ones, or, at all events, as being common to all, could not be incorporated with any one region. But this would have been a better reason for the exclusion of the Quirinal, which was at that time the proper capitol of the city; nor does it seem to be a fact that private buildings were excluded from the Capitol. Various reasons have also been assigned for the exclusion of the Aventine; the principal of which are, the unfavourable auguries which had appeared upon it to Remus, and the circumstance of its containing a temple of Diana, which was common to all the Latin nation, and therefore prevented the hill from being made a portion of the city.

But if we attentively read the account given by Varro of the Servian Regions (*L. L.* v. §§ 41—54, Müll.), we shall perceive that the division was entirely guided by the distribution of the Argive chapels, instituted probably by Numa; though Varro does not explain why they should have had this influence. Thus, after giving an account of the Capitoline and Aventine, he proceeds to say (§ 45): "Reliqua urbis loca olim discreta, quom Argeorum sacraria in septem et xx. partis urbis sunt disposita. Argeos dictos putant a principibus qui cum Hercule Argivo venere Romam et in Saturnia subsederunt. E quîs prima est scripta Regio Suburana, secunda Exquilina, tertia Collina, quarta Palatina." He then proceeds to enumerate the sacraria or chapels in each regio, mentioning six in each, or twenty-four in all, though he had called them twenty-seven in the passage just quoted.

The obvious meaning of this passage is, that "the other parts of the city were formerly separated (i. e. from the Capitoline and Aventine) at the time when the Argive chapels were distributed into twenty-seven parts of the city." It would hardly, perhaps, be necessary to state this, had not some eminent scholars put a different interpretation on the passage. Thus Bunsen (*Beschreibung der Stadt Rom*, vol. i. p. 147), whose general view of the matter seems to be approved of by Becker (*Handb.* p. 127, note 183), takes Varro's meaning to be, that the remaining parts of the city did not originally form each a separate district, like the Capitol and Aventine, but were divided into smaller parts, with different names. This view has been already condemned by Müller (*ad loc.*), and indeed its improbability is striking; but it requires a somewhat minute examination of the passage to show that it is altogether untenable. Livy also mentions these chapels as follows: "Multa alia sacrificia locaque sacris faciendis, quae Argeos pontifices vocant, dedicavit (Numa)." (i. 21.) Now Bunsen is of opinion that the statements of Livy and Varro are inconsistent, and that whilst the former under the name of *Argei* means *places*, the latter alludes to *men*. In conformity with this view he proceeds to construe the passage in Varro as follows: "The name of *Argives* is derived from the *chiefs* who came with the *Argive Hercules* to Rome and settled in Saturnia. *Of these parts of the city* we find first described (viz. in the Sacris Argeorum)

the Suburan Region, as second, &c." ("Den Namen Argeer leitet man ab von den Anführern die mit dem Argiver Hercules nach Rom kamen, und sich in Saturnia niederliessen. Von diesen Stadttheilen findet sich zuerst verzeichnet (nämlich in den Sacris Argeorum) die Suburanische Region, als zweite, &c." (*Beschr.* i. 690, cf. p. 148.) But to say that the name of Argives was derived from other Argives can hardly be what the author intended. Besides, the sense is disjointed; for the relative *quis* (wrongly translated "of these parts of the city") cannot be made to refer to an antecedent that is separated from it by a long sentence. As the text stands, *quis* must necessarily refer to *Argeos* in the sentence immediately preceding. It might be thought that this sentence has been interpolated, since Varro called an Argive *Argus*, not *Argivus*. "Itaque dicimus 'hic Argus' cum hominem dicimus; cum oppidum, Graecanice 'hoc Argos,' cum Latine, 'Argei.' (*L. L.* ix. § 89, Müll.) We see from this passage that the more ancient Latin name for the town of Argos was *Argei* (*masc. plur.*), and hence it might be inferred to be Livy's meaning that the chapels were called *Argos* or *Argoses*, not *Argives*. But *Argei*, in still more ancient Latin than that of Varro, was also the name for *Argives* as we find from a verse which he quotes from Ennius (vii. § 44):—

"Libaque, fictores, Argeos et tutulatos;"

whence we are disposed to think that the name of *Argives*, however anomalous the usage may appear, was really applied to these chapels, just as a modern Italian calls a church *S. Pietro* or *S. Paolo*, and that the meaning of Varro in the second sentence of the passage quoted, is: "It is thought that these Argei (i. e. the *sacraria* so called) were named after the chiefs who came to Rome with the Argive Hercules;" in which manner Varro would coincide with Livy in making these Argei *places*. How else, too, shall we explain Ovid (*Fast.* iii. 791):—

"Itur ad Argeos, *qui* sint sua pagina dicet?"

And in like manner Masurius Sabinus, quoted by Gellius (*N. A.* x. 15): "Atque etiam cum (Flaminica) it ad Argeos." A passage in Paulus Diaconus throws a gleam of light upon the matter; though, with more grammatical nicety than knowledge of antiquity, he has adopted, apparently from the Greek, a neuter form unknown to any other writer: "Argea loca appellantur Romae, quod in his sepulti essent quidam Argivorum illustres viri," (p. 19, Müll.) Hence it appears that these chapels were the (reputed) burial places of these Argive heroes, and their *masculine* appellation thus gains still further probability. "E quis," &c. would mean, therefore, that the different Servian Regions were marked off and named according to these chapels.

We have already remarked that though Varro mentions 27 of these chapels, he enumerates only 24. Hence Becker (*Handb.* p. 386), as well as Bunsen, are of opinion that the three odd ones were upon the Capitol. The only reason assigned for this conjecture is that the hill had three natural divisions — two heights with a depression between them. But if we have rightly explained Varro's meaning, it is impossible that the Capitol should have had any of these chapels. Bunsen, however, goes still further, and, connecting the chapels with the Argive men of straw which were annually precipitated into the Tiber, thinks that their number might have been 30, allotting the remaining three to the ancient Capitol on the Quirinal, although Varro had already accounted for his usual number of six in that district. (*Beschr.* i. 149.) However, it is not at all improbable that the tradition of the Argive mannikins was connected with that of the chapels, since it may be inferred from the context of the passage in Varro, explaining the line of Ennius before quoted, that they were instituted by Numa. Thus the preceding line (§ 43), "mensas constituit idemque ancilia," refers to Numa's institutions, who is again alluded to in § 45, "eundem Pompilium ait fecisse flamines." In § 44 Varro describes the custom regarding the men of straw as follows: "Argei ab Argis; Argei fiunt e scirpeis, simulacra hominum xxiiii.; ea quotannis de ponte sublicio a sacerdotibus publice deici solent in Tiberim." The origin of the custom is variously explained; but the most probable account is that it was intended to commemorate the abolition by the Argives of human sacrifices once offered to Saturn, for which these men of straw were substituted. None of the MSS. of Varro, however, gives the number of 27 or 30; though the latter was introduced into the text by Aldus from the account of Dionysius (i. 38). Hence it would perhaps be more in accordance with the principles of sound criticism to reduce the number of chapels given by Varro (v. § 45) from 27 to 24, instead of increasing them to 30; as they would then not only correspond with the number of these Argive mannikins, but also with that of the chapels which Varro separately enumerates.

Septimontium.—The *Septimontium* seems also to be in some degree connected with these Argive chapels and the Servian divisions of the city. The word Septimontium had two meanings; it signified both the complex of seven hills on which Rome stood, and a festival (Septimontiale sacrum, Suet. *Dom.* 4) celebrated in commemoration of the traditions connected with them. Now it is remarkable that Antistius Labeo, quoted by Festus (p. 348, Müll.) in his account of the places where this festival was celebrated, omits all mention of the Capitoline and Aventine, just as they seem to have been left out of Numa's town and the regions of Servius subsequently formed according to it: "Septimontium, ut ait Antistius Labeo, hisce montibus feriae: Palatio, cui sacrificium quod fit, Palatuar dicitur. Veliae, cui item sacrificium Fagutali, Suburae, Cermalo, Oppio Caelio monti, Cispio monti." There were Argive chapels at all these places, and hence a strong presumption that the festival of the Septimontium was founded by Numa, the author of most of the ancient Roman solemnities. That Labeo considered the places he enumerates to be hills is evident, not only as a direct inference from the term Septimontium itself, but also from his express words, "hisce montibus feriae,"—"there are holidays on the hills here recited." Moreover, we know as a certainty that five of the places mentioned *were* hills, namely, the Palatium, Velia, Oppius, Cispius, and Caelius,—a strong presumption that the others also were heights. Yet Niebuhr (*Hist.* i. 389), Bunsen, (*Beschr.* i. 685), and Becker (*Handb.* p. 124), assume that one or two of them were no hills at all. The places about which there can be any doubt are Fagutal and Germalus. Respecting Subura there can be no doubt at all; it was certainly a valley. Now the Fagutal was a ridge of the Esquiline containing the Lucus Fagutalis. It was the residence of Tarquinius Superbus: "Esquiliis (habitavit) supra clivum Pullium, ad Fagutalem lucum" (Solin. i. 25). But if the grove was above the clivus it must

have been on a height. Servius had occupied a residence not far from it, over the Clivus Urbius (*Ib.*; Liv. i. 48), and it was probably situated at or near the spot now occupied by the church of *S. Martina*. There is not the slightest ground for Niebuhr's assumption (*Hist.* i. 390) that the Fagutal was what he calls "the plain" between the Caelian and Palatine. The Cermalus or Germalus — for originally *c* and *g* were the same letter — was, like the Velia, only a distinct portion of the Palatine hill. ("Huic (Palatio) Cermalum et Velias conjunxerunt," Varr. v. § 64, Müll.) Preller (*Regionen*, p. 180) considers the Germalus to be that side of the Palatine which overhangs the Velabrum between the modern churches of *S. Giorgio in Velabro* and *S. Anastasia*; and it is not improbable, as Becker conjectures (p. 418), that the hill formerly projected further to the W. than it now does, and descended in shelves or ledges. It does not appear on what grounds Niebuhr (*l. c.*) assumed the Germalus to be a "spot *at the foot* of the Palatine." It contained the Lupercal, which, being a cave or grotto, must have been excavated in a hill or cliff, as indeed Dionysius states in his description of it: ἦν δὲ τὸ ἀρχαῖον, ὡς λέγεται σπήλαιον ὑπὸ τῷ λόφῳ μέγα (i. 32).

All the places, then, enumerated by Labeo appear to have been heights, with the exception of the Subura. But on counting the names, we find that he mentions eight places instead of seven, or one more than is required to make a Septimontium. Hence Niebuhr (*Ib.* p. 389) omitted the Subura, — not, however, because it was situated in the plain, — and was followed by Bunsen (*Beschr.* i. 141), who afterwards altered his mind, and struck out the Caelius (*Ib.* p. 685); and this last opinion is also followed by Becker (*Handb.* p. 124) and Müller (*ad Fest.* p. 341). The chief reason assigned for this view is that a principal part of the first regio (Suburana) was called Caelimontium, — a name afterwards preserved as that of one of the regions of Augustus; and on comparing this name with that of Septimontium it is inferred that, like the latter, it must have indicated a distinct and independent city union, and could not therefore have been included in any ante-Servian union. But if there had been any distinct and independent township of this kind, we must surely have heard of it in some of the ancient authors. We do not know when the term *Caelimontium* first came into use; but it is not improbable that it arose from another small hill, the Caelius Minor or Caeliolum, having been annexed to the larger one. Martial mentions them both in the following lines:—

> "Dum per limina te potentiorum
> Sudatrix toga ventilat, vagumque
> Major Caelius et minor fatigat."—(xii. 18.)

We learn from Varro that the junction of these two hills had taken place in or before his time: "Caeliolus cum Caelio *nunc* conjunctum" (*L. L.* v. § 46, Müll.), though popular use, as we see from the lines of Martial, sometimes still continued to regard them as distinct; nor can we tell for what purpose they had been united. Little can be inferred from the order in which the hills are mentioned in the text of Festus, as local sequence is entirely disregarded; or from the circumstance that Cispius is called "mons" and Oppius not, unless we leave out "Caelio;" or from the omission of Caelius in *some* of the MSS. of Paulus Diaconus. On the whole it seems most probable that *Suburae* may be the redundant word; unless indeed we might suppose that there were two Fagutals or groves of Jupiter, and that Suburae was inserted here to define the place of the one which overhung it.

Becker regards the Septimontium not as a proper city festival, but as commemorating traditions connected with the site of Rome long previous to the building of the city. In confirmation of this he refers (*Handb.* p. 125) to a passage in Varro (*L. L.* v. § 41, Müll.) and to another in Festus (p. 321), where it is said that a people of Reate, called Sacrani, drove the Ligurians and Sicilians out of Septimontium; and a third passage is adduced from Servius (*ad Aen.* xi. 317) to prove that the Sicilians once occupied the site of Rome; that they were expelled thence by the Ligurians, and the Ligurians in their turn by the Sacrani. Now, without entering into the historical questions connected with these obscure traditions, it may be allowed in general to be probable enough that such traditions were afloat; and when, as we have ventured to assume, Numa instituted the festival, he made them the basis of it; just as he instituted the Argive chapels and the twenty-four mannikins to commemorate the tradition of the Argive chiefs and their abolishment of human sacrifices. But the festival, nevertheless, was a proper city festival. Becker urges (*Handb.* p. 124) that the Septimontium described by Labeo could not have been in commemoration of a city union immediately preceding that of Servius, because it included the Oppius and Cispius, which were first added to the city by Servius. A great deal depends upon what we understand by the words "added to the city" ("zur Stadt gezogen"). To say that they were not included in the wall and agger afterwards completed by Servius would be a mere puerility; but they must have been inhabited and formed part of the city before his time, since there were Argive chapels upon them (Varr. v. § 50); and these chapels, as we have seen, formed the basis of the city union formed by him. The festival must certainly have been *post-Romulean*, since some of the names of places where it was celebrated were not known before the time of Romulus. Caelius occupied the Caelian hill in his reign; the name of Germalus is said to be derived from the twins (germani) Romulus and Remus, who were landed there (Varr. v. § 54); whilst Oppius and Cispius are said by Festus (p. 348, Müll.), on the authority of Varro, not to have been so named till the reign of Tullus Hostilius. But as they are mentioned by those names in the sacred books of the Argives (Varr. v. § 50) it is probable that they were so called at least as early as the time of Numa.

Such, then, was the ancient Septimontium. The walls of Servius included a different group of seven hills which came to be regarded by the later Romans as the real Septimontium. They are those already described at the beginning of this article, namely, the Quirinal, Viminal, Esquiline, Caelian, Aventine, Capitoline, and Palatine.

IV. Progress of the City till the Time of Augustus.

Having thus brought down the history of the city to the foundation of the Servian walls, we shall proceed to sketch its progress to the time of Augustus, and then till the walls of Aurelian. The former walls marked the rise and consolidation of a city, which,

though soon to become formidable to its neighbours, was not yet secure from their attacks. The latter, enclosing an area more than twice as large as that defended by the Servian walls, betokened the capital of a large state, which, after becoming the mistress of the world, was beginning to totter under the weight of its own greatness, and found itself compelled to resort to the same means of defence which had protected its infancy — no longer, however, to ward off the attacks of its immediate neighbours, but those of the remotest tribes of Asia and Europe. Thus the history of the city, during this period of eight centuries, reflects in some degree the history of the Roman people, and exhibits the varying fortunes of the greatest of all human empires. Unfortunately, however, the materials even for a slight sketch of so vast a subject and so long a period are scanty and inadequate; nor, even were they more abundant, would our present limits allow more than an attempt to draw such an outline as may serve to illustrate the topography of the city.

Tarquin the Proud, the last of the Roman kings, seems to have effected little for the city, except by completing or improving the works of his predecessors. Of these the most important was the temple of the Capitoline Jove, the description of which will be found in the second part of this article. The expulsion of the Tarquins (B. C. 510) restored to the Roman people the use of the Campus Martius. This ground, which from the earliest times had probably been sacred to Mars (Dionys. v. 13), had been appropriated by the Tarquins, and at the time of their expulsion was covered with the crops which they had sown. The unholy nature of this property prevented its distribution among the people, like that of the other royal goods. The corn was ordered to be cut down and thrown into the Tiber; and according to the legend its quantity was so great that it caused the island afterwards known as the Insula Tiberina, or that of Aesculapius. (Liv. ii. 5; Dionys. *l. c.* Plut. *Publ.* 8.)

The defeat of the Etruscans under Aruns, who had espoused the royal cause, was, according to the usual principle of the Romans of incorporating the vanquished nations, the means of adding a fresh supply of citizens, as there will be occasion to relate in another place.

We have little or nothing to record respecting the history of the city from this period till its capture by the Gauls B. C. 390. After the fatal battle at the Allia, the Romans returned dispirited. The city, together with the older inhabitants, was abandoned to its fate; many families escaped to Veii and other neighbouring towns; whilst the men of an age to bear arms occupied the Capitol, which they prepared to defend. The flight of the Vestal virgins, who succeeded in escaping to Caere, is connected with a topographical legend. Being unable to carry away all their sacred utensils, they buried some of them in casks (*doliolis*), in a chapel near the house of the Flamen Quirinalis; whence the place, which seems to have been near the Cloaca Maxima, in the Forum Boarium, obtained the name of *Doliola*, and was held so sacred that it was forbidden to spit upon it. (Liv. v. 40; Val. Max. i. 1. § 10.) Varro, however (*LL.* v. § 157, Müll.), did not recognise this story, but attributed the name either to some bones having been deposited there, or to the burial at an earlier period of some sacred objects belonging to Numa Pompilius.

The Gauls entered the city unopposed, and through the open Porta Collina. (Liv. v. 41.) The time during which they held it is variously given at from six to eight months. (Polyb. ii. 22; Flor. i. 13; Plut. *Cam.* 30; Serv. *Aen.* viii. 652.) Their attempt on the Capitol is alluded to elsewhere. They set fire to and otherwise devastated the city; but perhaps we are not to take literally the words of Livy and other writers, to the effect that they completely destroyed it (v. 42, 43; Flor. i. 13; Plut. *Cam.* 21). It is at least apparent, from Livy's own narrative (c. 55), that the Curia Hostilia was spared; and it seems probable that the Gauls would have preserved some of the houses for their own sakes. We may, however, conclude that the destruction was very great and terrible, as otherwise the Romans would not have discussed the project of emigrating to Veii. The firmness and judicious advice of Camillus persuaded them to remain. But the pressing necessity of the case, which required the new buildings to be raised with the greatest haste, was fatal to the beauty and regularity of the city. People began to build in a promiscuous manner, and the materials, afforded at the public expense, were granted only on condition that the houses should be ready within a year. No general plan was laid down; each man built as it suited him; the ancient lines of streets were disregarded, and houses were erected even over the cloacae. Hence down to the time of Augustus, and perhaps later, the city, according to the forcible expression of Livy (v. 55), resembled in arrangement rather one where the ground had been seized upon than where it had been distributed. It may be inferred from a statement of Cornelius Nepos, as quoted by Pliny, that the greater part of the city was roofed with shingles. ("Scandula contectam fuisse Romam, ad Pyrrhi usque bellum, annis CCCCLXX., Cornelius Nepos auctor est," xvi. 15.) Livy indeed mentions the public distribution of tiles, but these perhaps may have been applied to other purposes besides roofing, such as for making the floors, &c.; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more extensively used in building than is customary in modern times. Within a year the new city was in readiness; and it must have been on a larger scale than before the Gallic invasion, since it had acquired a great accession of inhabitants from the conquered towns of Veii, Capena, and Falisci. Those Romans who, to avoid the trouble of building, had occupied the deserted houses of Veii were recalled by a decree by which those who did not return within a fixed time were declared guilty of a capital offence. (Liv. vi. 4.) The walls of Rome seem to have been left uninjured by the Gauls, notwithstanding Plutarch's assertion to the contrary. (*Cam.* 32.) We nowhere read of their being repaired on this occasion, though accounts of subsequent restorations are frequent, as in the year B. C. 351 (Liv. vii. 20), and again in 217, after the defeat at Trasimene. (Id. xxii. 8.) Nothing can convey a higher notion of Roman energy than the fact that in the very year in which the city was thus rising from its ashes, the Capitol was supported by a substructure of square and solid masonry, of such massiveness as to excite wonder even in the Augustan age. (Liv. *l. c.*; Plin. xxxvi. 24. s. 2.)

The censorship of Appius Claudius Caecus, B. C. 312, forms a marked epoch in the progress of the city. By his care Rome obtained its first aqueduct, and its first regularly constructed high-road, the Aqua and Via Appia. (Liv. ix. 29.) But the

war with Pyrrhus which soon ensued, and afterwards the still larger and more destructive ones waged with the Carthaginians, prevented the progress which might have been anticipated from these beginnings. The construction of a second aqueduct, the Anio Vetus, in the censorship of Man. Curius Dentatus and L. Papirius Cursor, B. C. 272, testifies, however, that the population of the city must have continued to increase. In the year B. C. 220 we find the censor C. Flaminius constructing the Flaminian Way, as well as the circus which bore his name. (Liv. *Epit.* xx.; Paul Diac. p. 89.) But it was the conquests of the Romans in Lower Italy, in Sicily, and Greece, which first gave them a taste for architectural magnificence. The first basilica was erected at Rome in the year B. C. 184, and was soon followed by others, as there will be occasion to relate when we come to speak of the forum. But it was not till ten years later that the city was first paved by the care of the censors Q. Fulvius Flaccus and A. Postumius Albinus. They also paved the public highways, constructed numerous bridges, and made many other important improvements, both in the city and its neighbourhood. (Liv. xli. 27.) Yet, notwithstanding these additions to the public convenience and splendour, the private houses of the Romans continued, with few exceptions, to be poor and inconvenient down to the time of Sulla. The house of Cn. Octavius, on the Palatine, seems to have exhibited one of the earliest examples of elegant domestic architecture. (Cic. *de Off.* i. 39.) This was pulled down by Scaurus in order to enlarge his own house. The latter seems subsequently to have come into the possession of Clodius (Ascon. *ad Cic. Mil. Arg.*), and its magnificence may be inferred from the circumstance that he gave 14,800,000 sesterces for it, or about 130,000*l.* (Plin. xxxvi. 24. s. 2.) Indeed, as we approach the imperial times, the dwellings of the leading Romans assume a scale of extraordinary grandeur, as we see by Pliny's description of that of Crassus the orator, who was censor in B. C. 92. It was also on the Palatine, and was remarkable for six magnificent lotus-trees, which Pliny had seen in his youth, and which continued to flourish till they were destroyed in the fire of Nero. It was also distinguished by four columns of Hymettian marble, the first of that material erected in Rome. Yet even this was surpassed by the house of Q. Catulus, the colleague of Marius in the Cimbrian war, which was also on the Palatine; and still more so by that of C. Aquilius on the Viminal, a Roman knight, distinguished for his knowledge of civil law. (Plin. xvii. 1.) M. Livius Drusus, tribune of the people in B. C. 93, also possessed an elegant residence, close to that of Catulus. After his death it came into the possession of the wealthy M. Crassus, of whom it was bought by Cicero for about 30,000*l.* (*ad Fam.* v. 6). It seems to have stood on the N. side of the Palatine, on the declivity of the hill, not far from the Nova Via, so that it commanded a view of the forum and Capitol. It was burnt down in the Clodian riots, and a temple of Freedom erected on the spot; but after the return of Cicero was restored to him, rebuilt at the public expense. (Cic. *ad Att.* ii. 24, *Fam.* v. 6.; Vell. Pat. ii. 45; Dion Cass. xxxviii. 17, xxxix. 11, 20; App. *B. C.* ii. 15, &c.) The house of Lepidus, consul in B. C. 77, was also remarkable for its magnificence, having not only columns, but even its thresholds, of solid Numidian marble. (Plin. xxxvi. 8.) The luxury of private residences at Rome seems to have attained its acme in those of Sallust and Lucullus. The distinguishing feature of the former, which lay on the Quirinal, was its gardens (Horti Sallustiani), which probably occupied the valley between the Quirinal and Pincian, as well as part of the latter hill. (Becker, *Handb.* p. 583.) The house of Lucullus, the conqueror of Mithridates and Tigranes, was situated on the Pincian, and was also surrounded with gardens of such remarkable beauty, that the desire of possessing them, which they awakened in the breast of Messalina, caused the death of their subsequent owner, P. Valerius Asiaticus. (Tac. *Ann.* xi. 1; Dion Cass. lx. 31.) From this period they formed one of the most splendid possessions of the imperial family. (Plut. *Lucull.* 39.)

The ambitious designs entertained by the great leaders of the expiring Republic led them to court public favour by the foundation of public buildings rather than to lay out their immense wealth in adorning their own residences. The house inhabited by Pompey in the Carinae was an hereditary one; and though, after his triumph over Mithridates and the pirates, he rebuilt it on a more splendid scale and adorned it with the beaks of ships, yet it seems even then to have been far from one of the most splendid in Rome. (Plut. *Pomp.* 40, seq.) On the other hand, he consulted the taste and convenience of the Romans by building a theatre, a curia, and several temples. In like manner Caesar, at the height of his power, was content to reside in the ancient Regia; though this indeed was a sort of official residence which his office of Pontifex Maximus compelled him to adopt. (Suet. *Caes.* 46.) But he formed, and partly executed, many magnificent designs for the embellishment of the city, which his short tenure of power prevented him from accomplishing. Among these were a theatre of unexampled magnitude, to be hollowed out of the Tarpeian rock; a temple of Mars, greater than any then existing; the foundation of two large public libraries; the construction of a new forum; besides many other important works, both at Rome and in the provinces. (Suet. *Caes.* 26, 44; App. *B. C.* ii. 102, &c.)

The firm and lengthened hold of power enjoyed by Augustus, and the immense resources at his disposal, enabled him not only to carry out several of his uncle's plans, but also some new ones of his own; so that his reign must be regarded as one of the most important epochs in the history of the city. The foundation of new temples and other public buildings did not prevent him from repairing and embellishing the ancient ones; and all his designs were executed with so much magnificence that he could boast in his old age of having found Rome of brick and left it of marble. (Suet. *Aug.* 28.) In these undertakings he was assisted by the taste and munificence of his son-in-law Agrippa, who first founded public and gratuitous baths at Rome (Dion Cass. liv. 29); but as we shall have occasion to give an account of these works, as well as of those executed by Pompey and Caesar, in the topographical portion of this article, it will not be necessary to enumerate them here; and we shall proceed to describe the important municipal reforms introduced by Augustus, especially his new division of the city into Vici and Regions.

Regions of Augustus.—Although Rome had long outgrown its limits under Servius Tullius, yet the municipal divisions of that monarch subsisted till the time of Augustus, who made them his model, so far as the altered circumstances of the city would

permit. Servius had formed the different Vici into religious corporations somewhat analogous with our parishes, with an appointed worship of the Lares, and proper feasts or Compitalia. During the Republic these corporations became a kind of political clubs, and were often made the engines of designing demagogues. (Preller, *Regionen*, p. 81.) Augustus, in his new distribution, also adopted the scheme of embodying the Vici as religious corporations, and for this purpose erected chapels in the crossways, and set up images of the gods *vicatim*, as the Apollo Sandaliarius and the Jupiter Tragoedus. (Suet. *Aug.* 57.) Many bases of these statues have been discovered. By the term *Vicus* we are to understand a certain collection of houses insulated by streets running round all its sides; whence the term came also to be applied to the streets themselves ("altero vici appellantur, cum id genus aedificiorum definitur, quae continentia sunt in oppidis, quaeve itineribus regionibusque distributa inter se distant, nominibusque dissimilibus discriminis causa sunt dispartita," Fest. p. 371, et ibi Müll). *Compitum*, which means properly a cross-road, was also, especially in ancient times, only another name for Vicus; and thus we find Pliny describing Rome as divided into Compita Larum instead of Vici (iii. 9). The Vici and Compita, regarded as streets, were narrrower than the Viae and Plateae. (Suet. *Aug.* 45; Amm. Marc. xxviii. 4. § 29.) They were named after temples and other objects. The Vici were composed of two classes of houses called respectively *insulae* and *domus*. The former were so called because, by a law of the XII. Tables, it was ordained that they should be separated from one another by an interval of 2½ feet, called *ambitus*, and by later authors *circuitus* (Varr. *L. L.* v. § 22, Müll.; Paul. Diac. p. 16, 111 Müll.) This law, which seems to have been designed for purposes of health and for security against fire, was disregarded during the Republic, but again enforced by Nero when he rebuilt the city (Tac. *Ann.* xv. 43); and there is an ordinance on the subject by Antoninus and Verus (*Dig.* viii. 2. 14). By *insulae*, therefore, we are to understand single houses divided by a small space from the neighbouring ones, not a complex of houses divided by streets. The latter division formed a *Vicus*. Yet some insulae were so large and disposed in such a manner that they almost resembled Vici (vide Fest. p. 371. et ibi Müll). The insulae were inhabited by the middling and lower classes, and were generally let out in floors ("coenacula meritoria," *Dig.* xix. 2. 30). It appears from the same authority that they were farmed by persons who underlet them; but sometimes the proprietors kept stewards to collect their rents. Insulae were named after their owners, who were called "domini insularum" (Suet. *Caes.* 41, *Tib.* 48). Thus we hear of the insula Eucarpiana, Critonia, Arriana, &c. (vide Gruter, 611. 13; Murat. 948. 9.) Rent was high (Juv. iii. 166), and investments in houses consequently profitable, though hazardous, since the principle of insurance was altogether unknown. (Gell. xv. 1, 2.) Crassus was a great speculator in houses, and was said to possess nearly half Rome. (Plut. c. 2.) The *domus*, on the contrary, were the habitations or palaces of the rich and great, and consequently much fewer in number than the insulae, the proportion in each Region being as 1 to 25 or 30. The domus were also commonly insulated, but not by any special law, like the insulae. They were also composed of floors or stages, but were occupied by a single family (Petron. 77); though parts of them, especially the postica, were sometimes let out (Plaut. *Trin.* i. 2. 157; Suet. *Nero*, 44, *Vitell.* 7).

The number of insulae and domus in each Vicus would of course vary. Augustus appointed that each should be under the government of magistrates elected from its plebeian inhabitants ("magistri e plebe cujusque viciniae lecti,"—where *vicinia* has its original meaning of the householders composing a Vicus, Suet. *Aug.* 30). Hence Livy calls them "infimum genus magistratuum" (xxxiv. 7). They were called Magistri, Magistri Vicorum, Curatores Vicorum, and Magistri Larum, and their number varied from two to four in each Vicus. In the *Basis Capitolina* each Vicus has 4 Magistri; but the *Notitia* and *Curiosum* mention 48 Vico-magistri in each Region, without reference to the number of Vici. On certain days, probably the Compitalia (Ascon. *in Cic. Pis.* p. 7), these magistrates were allowed to assume the *toga praetexta*, and to be attended by two lictors; and the public slaves of each Region were at their command, who were commonly at the disposal of the aediles in case of fire. (Dion Cass. lv. 8; Liv. *l. c.*) The principal duties of their office were to attend to the worship of the Lares, recensions of the people, &c. For Augustus restored the Ludi Compitalicii and the regular worship of the Lares in spring and summer (Suet. *Aug.* 31), and caused his own Genius to be added to the two Lares which stood in the aedicula or chapel of each compitum. (Ov. *Fast.* v. 145.) The Vicomagistri likewise superintended the worship of the popular deities Stata Mater and Vulcanus Quietus, to whom, as protectors against fire, chapels were erected, first in the forum, and afterwards in the different streets. (Fest. p. 317, Müll.; cf. Preller, *Regionen*, p. 84.)

A certain number of Vici, varying according to the *Notitia* and *Curiosum* from 7 to 78 constituted a *Regio*; and Augustus divided Rome into 14 of these Regions. The 4 Servian Regions were followed in the first 6 of Augustus. In determining the boundaries of the Regions Augustus seems to have caused them to be measured by feet, as we see them enumerated in the *Notitia* and *Curiosum*. The limits appear to have been marked by certain public buildings, not by *cippi*. We may safely assume that Augustus included the suburbs in his city, but not within a pomoerium, since the Porticus Octaviae is mentioned, as being outside of the pomoerium, although it lay far within the 9th Region. (Dion Cass. liv. 8.) The Regions appear at first to have been distinguished only by numbers; and officially they were perhaps never distinguished otherwise. Some of the names of Regions found in the *Notitia* and *Curiosum* are post-Augustan, as those of Isis and Serapis and Forum Pacis. The period when names were first applied to them cannot be determined. They are designated only by numbers in Tacitus and Frontinus, and even in the *Basis Capitolina* which belongs to the time of Hadrian. We find, indeed, in Suetonius "Regio Palatii" (*Aug.* 5, *Ill. Gramm.* 2); but so also he says "Regio Martii Campi," which never was a Region (*Caes.* 39, *Nero*, 12); and in these instances *Regio* seems to be used in its general sense.

The boundaries of the Regions cannot be traced with complete accuracy; but, as it is not our intention to follow those divisions when treating of the topography of the city, we shall here insert such a general description of them as may enable the reader to form some notion of their situation and relative size. *Regio I.*, or *Porta Capena*, embraced the

suburb lying outside of that gate, to the E. of the baths of Antoninus. It contained 10 Vici, and among its principal objects were, the temple of Mars, the arch of Drusus, and the sepulchre of the Scipios. *Regio II.*, or *Caelimontana*, lay to the N. of this, and comprehended the whole extent of the Caelian hill. It had 7 Vici, and among its monuments may be mentioned the Arcus Dolabellae and the aqueduct of Nero. *Regio III.*, called *Isis and Serapis*, lay to the N. of the Caelimontana, and embraced the valley of the Colosseum, and that southern portion of the Esquiline anciently known as Mons Oppius. It comprehended 12 Vici, and its principal objects were the baths of Titus and the Flavian amphitheatre or Colosseum. *Regio IV.*, called *Templum Pacis* and *Sacra Via*, was situated to the W. of that of Isis and Serapis, and comprehended the Velian ridge and the greater part of the valley between the Palatine, Esquiline, Viminal, and Quirinal, to the exclusion, however, of that western portion which lay immediately under the Capitoline. Yet it embraced the buildings on the N. side of the forum, including the temple of Faustina, the Basilica Paulli, and the Area Vulcani. Its eastern boundary ran close to the Colosseum, since it included the Colossus and the Meta Sudans, both which objects stood very near that building. Its principal monuments, besides those already mentioned, were the temple of Venus and Rome, and the basilica of Constantine. It embraced the Subura, the greater portion of the Sacra Via, and the Forum Transitorium, and contained 8 Vici. *Regio V.*, or *Esquilina*, included the northern portion of the Esquiline (Mons Cispius) and the Viminal, besides a vast tract of suburbs lying to the E. of the Servian walls and agger. Thus it extended so far as to embrace the Amphitheatrum Castrense, which adjoins the modern church of *S. Croce in Gerusalemme*, and the so-called temple of Minerva Medica, near the *Porta Maggiore*. It had 15 Vici, and among its remaining principal objects were the gardens of Maecenas, the arch of Gallienus, and the Nymphaeum of Alexander Severus. *Regio VI.*, called *Alta Semita*, embraced the Quirinal, and extended to the E. so as to include the Praetorian camp. It had 17 Vici, and its chief objects were the baths of Diocletian, the house and gardens of Sallust, and the ancient Capitol. *Regio VII.*, or *Via Lata*, was bounded on the E. by the Quirinal, on the N. by the Pincian, on the S. by the Servian wall between the Quirinal and Capitoline, and on the W. by the road called Via Lata till it joined the Via Flaminia—a point which cannot be accurately ascertained. The Via Lata was the southern portion of the modern *Corso*, and probably extended to the N. nearly as far as the Antonine column. The Region comprehended 15 Vici. Being without the Servian walls, part of this district was anciently a burying place, and the tomb of Bibulus is still extant. *Regio VIII.*, or *Forum Romanum Magnum*, was one of the most important and populous in Rome. The ancient forum obtained the name of "Magnum" after the building of that of Caesar. (Dion Cass. xliii. 22.) This Region, which formed the central point of all the rest, embraced not only the ancient forum, except the buildings on its N. side, but also the imperial fora, the Capitoline hill, and the valley between it and the Palatine as far as the Velabrum. It contained 34 Vici, among which were the densely populated ones Jugarius and Tuscus. The monuments in this district are so numerous and well known that it is unnecessary to specify them. *Regio IX*, called *Circus Flaminius*, comprehended the district lying between the Via Lata on the E., the Tiber on the W., the Capitoline hill and Servian wall on the S.; whilst on the N. it seems to have extended as far as the present *Piazza Navona* and *Piazza Colonna*. It contained 35 Vici, and among its objects of interest may be named the circus from which it derived its name, the three theatres of Balbus, Pompey, and Marcellus, the Pantheon, and many other celebrated monuments. The Campus Martius, or northern part of the area between the hills and the Tiber, was not comprehended in any of the 14 Regions. *Regio X.*, or *Palatium*, consisted of the Palatine hill and its declivities. It had 20 Vici. Its boundaries are so well marked that we need not mention its numerous and well-known monuments till we come to describe its topography. *Regio XI.*, or *Circus Maximus*, derived its name from the circus, which occupied the greater part of it. It comprehended the valley between the Palatine and Aventine, and also apparently the northern declivities of the latter hill, as far as the Porta Trigemina. On the N., where it met the Region of the Forum Romanum, it seems to have included the Velabrum. It contained 19 Vici according to the *Notitia*, 21 according to the *Curiosum*. *Regio XII.*, called *Piscina Publica*, was bounded on the W. by the Aventine, on the N. by the Caelian, on the E. by *Regio I.* or *Porta Capena*, and on the S. it probably extended to the line of the Aurelian walls. It had 17 Vici, and its most remarkable monument was the baths of Caracalla. *Regio XIII.*, or *Aventinus*, included that hill and the adjoining banks of the Tiber. It had 17 Vici according to the *Notitia*, 18 according to the *Curiosum*. *Regio XIV.*, *Transtiberina*, or *Transtiberim*, comprehended all the suburb on the W., or right bank of the Tiber, including the Vatican, the Janiculum, with the district between them and the river, and the Insula Tiberina. This, therefore, was by far the largest of all the Regions, and contained 78 Vici.

Municipal Regulations of Augustus.—All these Regions were under the control of magistrates chosen annually by lot. (Suet. *Aug.* 30.) The government of the Regions was not corporative, like that of the Vici, but administrative; and one or more Regions seem to have been intrusted to a single magistrate chosen among the aediles, tribunes, or praetors. (Preller, *Regionen*, p. 77.) The supreme administration, however, was vested in the Praefectus Urbi. At a later period other officers were interposed between the praefect and these governors. Thus the *Basis Capitolina* mentions a Curator and Denunciator in each Region. Subsequently, however, the latter office seems to have been abolished, and the *Notitia* and *Curiosum* mention two curators in each Region. There were also subordinate officers, such as *praecones* or criers, and a number of imperial slaves, or libertini, were appointed to transact any necessary business concerning the Regions. (Preller, p. 79.)

One of the chief objects of Augustus in establishing these Regions seems to have been connected with a reform of the city police. For this purpose he established 7 Cohortes Vigilum, whose stations were so disposed that each cohort might be available for two Regions. Each was under the command of a tribune, and the whole was superintended by a Praefectus Vigilum. (Suet. *Aug.* 30;

Dion Cass. lv. 26; Paulus, *de Offic. Praef. Vigil.*, *Dig.* i. 15.) As these stations were necessarily near the borders of Regions, we find them frequently mentioned in the *Notitia* and *Curiosum*. They seem to have been a sort of barracks. But besides the 7 principal stations, the *Breviarium* mentions 14 *excubitoria*, or outposts, which seem to have been placed in the middle of each region. The *corps* of which they were composed were probably supplied from the main stations. The duties of the vigiles were those of a night-police, namely, to guard against fires, burglaries, highway robberies, &c. The first of these duties had anciently been performed by certain triumviri, called from their functions Nocturni, who were assisted by public slaves stationed at the gates and round the walls. The same office was, however, sometimes assumed by the aediles and tribunes of the people. (Paulus, *l. c.*) The vigiles were provided with all the arms and tools necessary for their duties; and from a passage in Petronius (c. 79) seem to have possessed the power of breaking into houses when they suspected any danger. The numbers of the vigiles amounted at last to 7000 men, or 1000 in each cohort. Augustus also established the Cohortes Praetoriae, or imperial guard, of which 9 cohorts were disposed in the neighbourhood of Rome, and 3 only, the Cohortes Urbanae, were permitted within the city. (Tac. *Ann.* iv. 5; Suet. *Aug.* 49.) These cohorts of Augustus were under the command of the Praefectus Urbi. (Tac. *Hist.* iii. 64.) It was his successor, Tiberius, who, by the advice of Sejanus, first established a regular Praetorian camp at Rome, a little to the eastward of the agger of Servius, and placed the bands under the command of a Praefectus Praetorio. (Tac. *Ann.* iv. 2; Suet. *Tib.* 37.)

Augustus also paid considerable attention to the method of building, and revived the regulations laid down by P. Rutilius Rufus with regard to this subject in the time of the Gracchi (Suet. *Aug.* 89); but all we know of these regulations is, that Augustus forbade houses to be built higher than 70 feet, if situated in a street. (Strab. v. p. 235.) The height was subsequently regulated by Nero and Trajan, the last of whom fixed it at 60 feet. (Aur. Vict. *Epit.* c. 13.) Yet houses still continued to be inconveniently high, as we see from the complaints of Juvenal, in the time, probably, of Domitian, and dangerous alike in case of fire or falling, especially to a poor poet who lived immediately under the tiles: —

> "Nos urbem colimus tenui tibicine fultam
> Magna parte sui; nam sic labentibus obstat
> Villicus, et veteris rimae quum texit hiatum
> Securos pendente jubet dormire ruina.
> Vivendum est illic ubi nulla incendia, nulli
> Nocte metus. Jam poscit aquam, jam frivola transfert
> Ucalegon: tabulata tibi jam tertia fumant:
> Tu nescis; nam si gradibus trepidatur ab imis
> Ultimus ardebit, quem tegula sola tuetur
> A pluvia, molles ubi reddunt ova columbae."
> (iii. 193.)

Augustan Rome. — Strabo, who visited Rome in the reign of Augustus, and must have remained there during part of that of Tiberius, has left us the following lively picture of its appearance at that period: "The city, having thus attained such a size, is able to maintain its greatness by the abundance of provisions and the plentiful supply of wood and stone for building, which the constant fires and continual falling and pulling down of houses render necessary; for even pulling down and rebuilding in order to gratify the taste is but a sort of voluntary ruin. Moreover the abundant mines and forests, and the rivers which serve to convey materials, afford wonderful means for these purposes. Such is the Anio, flowing down from Alba (Fucensis), a Latin city lying towards the territory of the Marsians, and so through the plain till it falls into the Tiber: also the Nar and the Tenea, which likewise join the Tiber after flowing through Umbria; and the Clanis, which waters Etruria and the territory of Clusium. Augustus Caesar took great care to obviate such damages to the city. To guard against fires he appointed a special corps composed of freedmen; and to prevent the falling down of houses he ordained that no new ones should be built, if they adjoined the public streets, of a greater height than 70 feet. Nevertheless the renovation of the city would have been impossible but for the before-mentioned mines and forests, and the facility of transport.

"Such, then, were the advantages of the city from the nature of the country; but to these the Romans added those which spring from industry and art. Although the Greeks are supposed to excel in building cities, not only by the attention they pay to the beauty of their architecture and the strength of their situation, but also to the selection of a fertile country and convenient harbours, yet the Romans have surpassed them by attending to what they neglected, such as the making of high-roads and aqueducts, and the constructing of sewers capable of conveying the whole drainage of the city into the Tiber. The high-roads have been constructed through the country in such a manner, by levelling hills and filling-up hollows, that the waggons are enabled to carry freight sufficient for a vessel; whilst the sewers, vaulted with hewn blocks of masonry, are sometimes large enough to admit the passage of a hay-cart. Such is the volume of water conveyed by the aqueducts that whole rivers may be said to flow through the city, which are carried off by the sewers. Thus almost every house is provided with water-pipes, and possesses a never-failing fountain. Marcus Agrippa paid particular attention to this department, besides adorning the city with many beautiful monuments. It may be said that the ancient Romans neglected the beauty of their city, being intent upon greater and more important objects; but later generations, and particularly the Romans of our own day, have attended to this point as well, and filled the city with many beautiful monuments. Pompey, Julius Caesar, and Augustus, as well as the children, friends, wife and sister of the last, have bestowed an almost excessive care and expense in providing these objects. The Campus Martius has been their special care, the natural beauties of which have been enhanced by their designs. This plain is of surprising extent, affording unlimited room not only for the chariot races and other equestrian games, but also for the multitudes who exercise themselves with the ball or hoop, or in wrestling. The neighbouring buildings, the perpetual verdure of the grass, the hills which crown the opposite banks of the river and produce a kind of scenic effect, all combine to form a spectacle from which it is difficult to tear oneself. Adjoining this plain is another, and many porticoes and sacred groves, three theatres, an amphitheatre, and temples

so rich and so close to one another that they might appear to exhibit the rest of the city as a mere supplement. Hence this place is considered the most honourable and sacred of all, and has been appropriated to the monuments of the most distinguished men and women. The most remarkable of these is that called the Mausoleum, a vast mound near the river raised upon a lofty base of white stone, and covered to its summit with evergreen trees. On the top is a bronze statue of Augustus: whilst under the mound are the tombs of himself, his relatives, and friends, and at the back of it a large grove, affording delightful promenades. In the middle of the Campus is an enclosed space where the body of Augustus was burnt, also constructed of white stone, surrounded with an iron rail, and planted in the interior with poplar trees. Then if we proceed to the ancient forum, and survey the numerous basilicae, porticoes, and temples which surround it, and view the Capitol and its works, as well as those on the Palatine and in the portico of Livia, we might easily be led to forget all other cities. Such is Rome" (v. pp. 235, 236).

In spite, however, of this glowing picture, or rather perhaps from the emphasis which it lays on the description of the Campus Martius, whilst the remainder of the city is struck off with a few light touches, it may be suspected that in the time of Augustus the ancient part of Rome, with the exception of the immediate vicinity of the forum and Capitol, did not present a spectacle of any great magnificence. The narrowness and irregularity of the streets, the consequence of the hasty manner in which the city was rebuilt after its destruction by the Gauls, still continued to disfigure it in the time of Augustus, as is shown by a passage in Livy (v. 55), already cited (cf. Tacitus, *Ann.* xv. 38: "Obnoxia urbe artis itineribus, hucque et illuc flexis, atque enormibus vicis, qualis *vetus* Roma fuit"—that is, before the fire). This defect was not remedied till the great fire in the reign of Nero, which forms the next remarkable epoch in the history of the city.

V. The City till the Time of Aurelian.

Fire under Nero.—There had been a destructive fire in the reign of Tiberius, which burnt down all the buildings on the Caelian hill (Tac. *Ann.* iv. 64); but this was a mere trifle compared with the extensive conflagration under Nero. The latter, the most destructive calamity of the kind that had ever happened at Rome, is unequivocally said by Suetonius (*Nero*, 38) to have been caused by the wilful act of the emperor, from disgust at the narrow and winding streets. Nero is represented by that historian as contemplating the flames with delight from the tower of Maecenas on the Esquiline, and as converting the awful reality into a sort of dramatic spectacle, by singing as the fire raged, in proper scenic attire, the Sack of Troy; nor does the more judicious Tacitus altogether reject the imputation (*Ann.* xv. 38, seq.) The fire commenced at the lower part of the Circus Maximus, where it adjoins the Caelian and Palatine, in some shops containing combustible materials. Thence it spread through the whole length of the circus to the Forum Boarium, and northwards over the whole Palatine till it was arrested at the foot of the Esquiline. It lasted six days and seven nights, and its extent may be judged from the fact that out of the fourteen Regions three were completely destroyed, and seven very nearly so, whilst only three escaped altogether untouched. The three Regions utterly destroyed must have been the xith, xth, and ivth, or those called Circus Maximus, Palatium, and Templum Pacis. The forum must have suffered considerably, but the Capitol seems to have escaped, as the Capitoline temple, after its first destruction in the time of Sulla, remained entire till burnt by the Vitellians. The narrow and crooked streets, and the irregular Vici of which ancient Rome was composed, rendered it impossible to arrest the conflagration. Nero was at Antium when it broke out, and did not return to Rome till the flames were threatening his own palace, which he had not the power to save. This was the *Domus Transitoria*, the domain of which he had extended from the Palatine to the gardens of Maecenas on the Esquiline. What chiefly directed suspicion against Nero, as having wilfully caused the fire, was the circumstance of its breaking out afresh in the Aemilian property of his minion Tigellinus.

Much irreparable loss was occasioned by this fire, such as the destruction of several time-honoured fanes, of many master-pieces of Greek art, besides a vast amount of private property. Among the venerable temples which perished on this occasion, were that of Luna, erected by Servius Tullius, the altar and fane of Hercules in the Forum Boarium, the temple of Jupiter Stator, founded by Romulus, those of Vesta and of the Penates Populi Romani, and the Regia of Numa. Yet, on the other hand, the fire made room for great improvements. Nero caused the town to be rebuilt on a regular plan, with broad streets, open spaces, and less lofty houses. All the buildings were isolated, and a certain portion of each was constructed with Alban or Gabinian stone, so as to be proof against fire; to guard against which a plentiful supply of water was laid on. As a means of escape and assistance in the same calamity, as well as for the sake of ornament, Nero also caused porticoes to be built at his own expense along the fronts of the insulae. He supplied the proprietors with money for building, and specified a certain time by which the houses were to be completed (Tac. *Ann.* xv. 38—43; Suet. *Nero*, 38). Thus Rome sprung a second time from her ashes, in a style of far greater splendour than before. The new palace, or *domus aurea*, of the emperor himself kept pace with the increased magnificence of the city. Its bounds comprehended large parks and gardens, filled with wild animals, where solitude might be found in the very heart of the city; a vast lake, surrounded with large buildings, filled the valley in which the Flavian amphitheatre was afterwards erected; the palace was of such extent as to have triple porticoes of a thousand feet; in the vestibule stood a colossal figure of Nero himself, 120 feet in height; the ceilings were panelled, the chambers gilt, and inlaid with gems and mother-of-pearl; and the baths flowed both with fresh and sea water. When this magnificent abode was completed, Nero vouchsafed to honour it with his qualified approbation, and was heard to observe, "that he was at last beginning to lodge like a man." (Suet. *Nero*, 31; Mart. *de Spect.* 2.)

Changes under subsequent Emperors. — The two predecessors of Nero, Caligula and Claudius, did not effect much for the city; and the short and turbulent reigns of his three successors, Galba, Otho, and Vitellius, were characterised rather by destruction than improvement. Caligula indeed perfected some of the designs of Tiberius (Suet. *Cal.*

21); and the reign of Claudius was distinguished by the completion of two aqueducts and the construction of several beautiful fountains (Id. *Claud.* 20). The factious struggles between Otho and Vitellius were marked by the ominous burning of the Capitol. At length the happier era of the public-spirited Vespasian was distinguished alike by his regard for the civil liberties of the Romans, and for their material comforts, by the attention which he paid to the improvement of the city, and by his restoring to the public use and enjoyment the vast space appropriated by Nero for his own selfish gratification. The bounds of the imperial palace were again restricted to the limits of the Palatine, and on the site of Nero's lake rose a vast amphitheatre destined for the amusement of so many thousands of the Roman people, whose ruins we still gaze at with wonder and admiration. Vespasian was likewise the founder of the temple of Peace, near the Forum, and of a temple to Claudius on the Caelian hill. Titus pursued the popular designs of his father, and devoted a large portion of the former imperial gardens on the Esquiline to the foundation of public baths. (Suet. *Tit.* 7; Mart. iii. 20. 15.) Under this emperor another destructive fire raged for three days and nights at Rome, and again laid a great part of the city in ashes. (Suet. *Tit.* 8.) The chief works of Domitian were the rebuilding of the temple of Jupiter Capitolinus, which had again been burnt, on the mere external gilding of which he is said to have expended 12,000 talents, or nearly three millions sterling; and the foundation of a new forum, which, however, was not finished till the time of Nerva, whose name it bore. (Id. *Dom.* 5.) Trajan constructed the last of the imperial fora, with which was connected the Basilica Ulpia. (Dion Cass. lxix. 4.) Rome probably attained its highest pitch of architectural splendour under the reign of his successor Hadrian. That emperor had a passion for building, and frequently furnished his own designs, which, however, were not always in the best taste. His most remarkable works were the Mausoleum on the right bank of the Tiber, now the *Castello di S. Angelo*, the Temple of Venus and Rome near the Colosseum, and the enormous villa whose ruins may still be seen at the foot of the ascent which leads to *Tivoli*. (Spart. *Hadr.* 19; Procop. *B. G.* i. 22.)

It would be tedious and unprofitable to recount the works of succeeding emperors down to the time of Aurelian; and it may suffice to mention that those who most contributed to renovate or adorn the city were Septimius Severus, Caracalla, and Alexander Severus. During this period Rome betrayed unequivocal symptoms of her approaching decline and fall. Large bodies of the barbarians had already penetrated into Italy, and, in the reign of the accomplished but feeble Gallienus, a horde of the Alemanni had menaced and insulted Rome itself. After a lapse of eight centuries its citizens again trembled for the safety of their families and homes; and the active and enterprising Aurelian, whilst waging successful wars in Egypt and the East, found himself compelled to secure his capital by fortifying it with a wall.

This great undertaking, commenced A. D. 271, was completed in the reign of Probus, the successor of Aurelian. (Vopisc. *Aur.* 21, 39; Aur. Vict. *Caes.* 35; Eutrop. ix. 15; Zosim. i. 49). The accounts of the circumference of this wall are discrepant and improbable. Vopiscus (*Aurel.* c. 39) mentions the absurd and extravagant measure of nearly 50 miles; which, however, has been adopted by Lipsius and Isaac Vossius, as well as by Nibby (*Mura, &c.* p. 120, seq.). The walls of Aurelian were repaired by Honorius, and with the exception of that part beyond the Tiber, and some modern additions by the Popes, are substantially the same as those which now exist, as appears from the inscriptions on the gates. Without the additions referred to, their circumference would be between 11 and 12 miles, thus reducing the city to about the same dimensions as those given by Pliny in the time of Vespasian; nor is there any reason to believe that, in the sinking state of the Empire, the city would have received any increase of inhabitants. Another measurement by Ammon, the geometrician, just before the siege of the city by Alaric, gave a circumference of 21 miles (Phot. *Bibl.* 80, p. 63, ed. Bekk.); but this number, though adopted by Gibbon, and nearer to the truth, cannot be accepted any more than that of Vopiscus. (Gibbon, *Decl. and Fall*, vol. ii. p. 17, ed. Smith, and notes.) Piale suggested that Vopiscus meant *pedes* instead of *passus*, and other emendations of both the passages have been proposed; but without discussing the merit of these, it is sufficient to know that the texts are undoubtedly either corrupt or erroneous. This may be briefly but decisively shown from the following considerations, which will, for the most part, apply to both the statements:— 1st, the incredible extent of the work; 2nd, the absence of any traces of such walls; 3rd, or of any buildings within their supposed limits, such as would naturally belong to a city; 4th, the fact that the extant inscriptions ascribe to Honorius the *restoration* of an old line of walls and towers, not the *construction* of a new one. (Bunbury, in *Class. Mus.* iii. p. 368.)

VI. Decline and Fall of the City.

The history of the city from the time of Aurelian presents little more than a prospect of its rapid decline. The walls of that emperor were ominous of its sinking fortunes; but the reign of Diocletian forms the first marked aera of its decay. The triumph of that emperor and of his colleague Maximian, A. D. 303, was the last ever celebrated at Rome, but was distinguished by the trophies of an important Persian victory. (Eutrop. ix. 27.) The Roman emperors had long ceased to be of Roman extraction; Diocletian, the descendant of slaves, was born in Dalmatia; Maximian, the son of a peasant, was his fellow countryman; and thus neither was wedded by any ties of birth or patriotism to the ancient glories of the eternal city. These were the first emperors who deserted the capital to fix their residence in the provinces. Maximian established his court at Milan, whilst Diocletian resided at Nicomedia, on the embellishment of which he lavished all the treasures of the East, in endeavouring to render it a rival worthy of Rome. His only visit to the ancient capital seems to have been on the occasion of his triumph; it was not prolonged beyond two months, and was closed with unexpected precipitation and abruptness. (Lact. *Mort. Pers.* c. 17.) Yet his reign is distinguished as having conferred upon the city one of the latest, but most magnificent of its monuments,—the baths on the Quirinal which bear his name, by far the largest at Rome, whose enormous ruins may still be traced, and afford room enough for various churches, convents, and gardens. (Vopisc. *Prob.* 2; Orell. *Inscr.* 1056.) Subsequently, indeed, Maxentius,

the partner and rival of Constantine, resided at Rome during the six years of his reign, and affected to prize the elegance of the ancient metropolis; whilst his lust and tyranny, supported by squandering its treasures, created more disgust among the Romans than the absence of their former sovereigns. Maxentius, however, adorned the city which he polluted by his vices, and some of his works are among the last monuments worthy to be recorded. He restored the temple of Venus and Rome, which had been damaged by a fire, and erected that magnificent basilica, afterwards dedicated in the name of Constantine, whose three enormous arches may still be viewed with admiration. (Aur. Vict. *Caes.* c. 40. § 26.) The final transfer of the seat of empire to Byzantium by Constantine gave the last fatal blow to the civic greatness of Rome. Yet even that emperor presented the city — we can hardly say adorned it — with a few monuments. One of them, the arch which records his triumph over Maxentius, still subsists, and strikingly illustrates the depth of degradation to which architectural taste had already sunk. Its beauties are derived from the barbarous pillage of former monuments. The superb sculptures which illustrated the acts and victories of Trajan, were ruthlessly and absurdly constrained to typify those of Constantine; whilst the original sculptures that were added, by being placed in juxtaposition with those beautiful works, only serve to show more forcibly the hopeless decline of the plastic arts, which seem to have fallen with paganism.

Rome in the Time of Constantius II. — From this period the care of the Romans was directed rather towards the preservation than the adornment of their city. When visited by the Second Constantius, A. D. 357, an honour which it had not received for two and thirty years, Rome could still display her ancient glories. The lively description of this visit by Ammianus Marcellinus, though written in a somewhat inflated style, forms a sort of pendant to Strabo's picture of Rome in the age of Augustus, and is striking and valuable, both as exhibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age regarded its monuments as a kind of Titanic relics, which it would be hopeless any longer to think of imitating. "Having entered Rome," says the historian, "the seat of empire and of every virtue, Constantius was overwhelmed with astonishment when he viewed the forum, that most conspicuous monument of ancient power. On whatever side he cast his eyes, he was struck with the thronging wonders. He addressed the senate in the Curia, the people from the tribunal; and was delighted with the applause which accompanied his progress to the palace. At the Circensian games which he gave, he was pleased with the familiar talk of the people, who, without betraying pride, asserted their hereditary liberty. He himself observed a proper mean, and did not, as in other cities, arbitrarily terminate the contests, but, as is customary at Rome, permitted them to end as chance directed. When he viewed the different parts of the city, situated on the sides of the seven hills and in the valleys between them, he expected that whatever he first saw must be superior to everything else: such as the temple of the Tarpeian Jove, whose excellence is like divine to human; the baths which occupy whole districts; the enormous mass of the amphitheatre, built of solid Tiburtine stone, the height of which almost baffles the eye; the Pantheon, which may be called a circular Region, vaulted with lofty beauty; the high, but accessible mounds, bearing the statues of preceding princes; the temple of Rome, the forum of Peace; the theatre of Pompey, the odeum, the stadium, and other similar ornaments of the eternal city. But when he came to the forum of Trajan, which we take to be a structure unparalleled in the whole world, he was confounded with astonishment as he surveyed those gigantic proportions, which can neither be described nor again imitated by man. Wherefore, laying aside all hope of attempting anything of the kind, he merely expressed the power and the wish to imitate the horse of Trajan, on which that prince is seated, and which stands in the middle of the Atrium. Hereupon prince Hormisda, who stood near him, exclaimed with national gesticulation: 'First of all, emperor, order such a stable to be made for it, if you can, that the horse you propose making may lodge as magnificently as the one we behold.' The same prince being asked his opinion of Rome said that the only thing which displeased him was to perceive that men died there as well as in other places. So great was the emperor's surprise at all these sights that he complained that rumour, which commonly magnifies everything, had here shown itself weak and malignant, and had given but a feeble description of the wonders of Rome. Then, after much deliberation, he resolved that the only way in which he could add to the ornaments of the city would be by erecting an obelisk in the Circus Maximus" (xvi. 10).

The same historian from whom the preceding topographical picture has been transcribed has also left some lively and interesting notices of the manners of the Romans at this period. These have been paraphrased in the eloquent language of Gibbon, to whose work the reader is referred for many interesting particulars concerning the state of Rome at this time (vol. iv. pp. 70—89, ed. Smith). We may here observe with surprise that whilst Alaric, like another Hannibal, was threatening her gates, her nobles were revelling in immoderate wealth, and squandering the revenues of provinces on objects of pomp and luxury, though, as we have seen, the arts had fallen to so low an ebb that there was no longer any hope of rivalling the works of their ancestors. The poorer citizens, few of whom could any longer boast a pure Roman descent, resembled the inmates of a poorhouse, except that their pleasures were provided for as well as their wants. A liberal distribution of corn and bacon, and sometimes even of wine, relieved their necessities, whilst health and recreation were promoted by gratuitous admittance to the baths and public spectacles. Yet Rome was now struggling for her existence. We have already mentioned the restoration of the walls by Honorius. It was under the same emperor that the first example occurs of that desecration by which the Romans stripped and destroyed their own monuments. If we may credit Zosimus (v. 38), Stilicho was the first to lay violent hands on the temple of the Capitoline Jove, by stripping off the plates of gold which lined its doors, when the following inscription was found beneath them: "Misero regi servantur." In after times this example was but too frequently followed; and it may be said with truth that the Romans themselves were the principal destroyers of their own city.

The Barbarians at Rome. — After two sieges, or rather blockades, in 408 and 409, by the Goths

under Alaric, Rome was captured and sacked on a third occasion in 410 (A. U. C. 1163) — the first time since the Gallic invasion that the city had actually been in the hands of an enemy. But though it was plundered by the Goths, it does not appear to have sustained much damage at their hands. They evacuated it on the sixth day, and all the mischief they seem to have done was the setting fire to some houses near the Salarian gate, by which they had entered, which unfortunately spread to and destroyed the neighbouring palace of Sallust (Procop. *B. V.* i. 2.) Nearly half a century later, in the reign of Maximus, Rome was again taken, and sacked by the Vandals, under Genseric, A. D. 455. This time the pillage lasted a fortnight; yet the principal damage inflicted on the monuments of the city was the carrying off by Genseric of the curious tiles of gilt bronze which covered the temple of the Capitoline Jupiter (*Ib.* 5). That edifice, with the exception, perhaps, of the spoliation by Stilicho, appears to have remained in much the same state as after its last rebuilding by Domitian; and though paganism had been abolished in the interval, the venerable fane seems to have been respected by the Roman Christians. Yet, as may be perceived from an edict of the emperor Majorian, A. D. 457, the inhabitants of Rome had already commenced the disgraceful practice of destroying the monuments of their ancestors. The zeal of the Christians led them to deface some of the temples; others, which had not been converted into Christian churches, were suffered to go to ruin, or were converted into quarries, from which building materials were extracted. Petitions for that purpose were readily granted by the magistrates; till Majorian checked the practice by a severe edict, which reserved to the emperor and senate the cognisance of those cases in which the destruction of an ancient building might be allowed, imposed a fine of 50 lbs. of gold (2000*l.* sterling) on any magistrate who granted a license for such dilapidations, and condemned all subordinate officers engaged in such transactions to be whipped, and to have their hands amputated (*Nov. Major.* tit. vi. p. 35: "Antiquarum aedium dissipatur speciosa constructio; et ut earum aliquid reparetur magna diruuntur," &c.)

In the year 472, in the reign of Olybrius, Rome was for the third time taken and sacked by Ricimer; but this calamity, like the two former ones, does not appear to have been productive of much damage to the public monuments. These relics of her former glory were the especial care of Theodoric, the Ostrogoth, when he became king of Italy, who, when he visited the capital in the year 500, had surveyed them with admiration. "The Gothic kings, so injuriously accused of the ruin of antiquity, were anxious to preserve the monuments of the nation whom they had subdued. The royal edicts were framed to prevent the abuses, the neglect, or the depredations of the citizens themselves; and a professed architect, the annual sum of 200 lbs. of gold, 25,000 tiles, and the receipt of customs' from the Lucrine port, were assigned for the ordinary repairs of the walls and public edifices. A similar care was extended to the statues of metal or marble, of men or animals. The spirit of the horses, which have given a modern name to the Quirinal, was applauded by the barbarians; the brazen elephants of the Via Sacra were diligently restored; the famous heifer of Myron deceived the cattle as they were driven through the forum of Peace; and an officer was created to protect those works of art, which Theodoric considered as the noblest ornament of his kingdom." (Gibbon, *Decline and Fall*, vol. v. p. 21, ed. Smith; cf. *Excerpt. de Odoac. Theod.* 67.) The letters of Cassiodorus, the secretary of Theodoric, show that Rome had received little or no injury from its three captures. The Circus Maximus was uninjured, and the Ludi Circenses were still exhibited there (*Variar.* iii. 51); the thermae and aqueducts were intact (*Ib.* vii. 6); the Claudian aqueduct was still in play, and discharged itself on the top of the Aventine as if it were a valley (*Ib.*). That the aqueducts were perfect also appears from Procopius (*B. G.* i. 19), who says that in the subsequent siege under Vitiges, the Goths broke them down, to deprive the inhabitants of their supply of water. The theatres had suffered only from the effects of time, and were repaired by Theodoric (Cassiod. *ib.* iv. 51.)

In the year 536 the Gothic garrison, with the exception of their commander Leuderis, who preferred captivity to flight, evacuated Rome on the approach of Belisarius, the lieutenant of Justinian. Belisarius entered by the Asinarian gate, and, after an alienation of sixty years, Rome was restored to the imperial dominion. But in a few months the city was beleaguered by the numerous host of Vitiges, the newly elected king of the Goths; and its defence demanded all the valour and ability of Belisarius. For this purpose he repaired the walls, which had again fallen into decay. Regular bastions were constructed; a chain was drawn across the Tiber; the arches of the aqueducts were fortified; and the mole of Hadrian was converted into a citadel. That part of the wall between the Flaminian and Pincian gates, called *muro torto*, was alone neglected (Procop. *B. G.* i. 14, sqq.), which is said to have been regarded both by Goths and Romans as under the peculiar protection of St. Peter. As we have before said, the Goths invested the city in six divisions, from the Porta Flaminia to the Porta Praenestina; whilst a seventh encampment was formed near the Vatican, for the purpose of commanding the Tiber and the Milvian bridge. In the general assault which followed, a feint was made at the Salarian gate, but the principal attacks were directed against the mole of Hadrian and the Porta Praenestina. It was on this occasion that at the former point the finest statues, the works of Praxiteles and Lysippus, were converted into warlike missiles, and hurled down upon the besiegers. When the ditch of St. Angelo was cleansed in the pontificate of Urban VIII., the Sleeping Faun of the Barberini Palace was discovered, but in a sadly mutilated state. (Winckelmann, *Hist. de l'Art*, vol. ii. p. 52, seq.) But the assault was not successful, and after a fruitless siege, which lasted a year, the Goths were forced to retire.

After the recall of Belisarius the Goths recovered strength and courage, and, under Totila, once more threatened the walls of Rome. In 544 Belisarius was again despatched into Italy, to retrieve the faults of the generals who had succeeded him; but on this occasion he was deserted by his usual fortune, and, after a fruitless attempt to relieve the city, was compelled to retreat to Ostia. (Procop. *B. G.* iii. 19.) In December, 546, the Goths were admitted into the city by the treachery of some Isaurian sentinels posted at the Asinarian gate. Rome was again subjected to pillage, and appears to have suffered more than on any former occasion. A third part of the walls was destroyed in different places, and a great many houses were burnt.

(Procop. *ib.* c. 22; Marcell. *Chron.* p. 54.) Totila threatened to destroy the finest works of antiquity, and even issued a decree that Rome should be turned into a pasture. Yet he was not deficient in magnanimity and clemency, and was diverted from these designs by the remonstrances of Belisarius, who warned him not to sully his fame by such wanton barbarity. Upon Totila's marching into Lucania, Belisarius, at the head of 1000 horse, cut his way through the Goths who had been left to guard the city. He repaired with rude and heterogeneous materials the walls which had been demolished; whilst the gates, which could not be so suddenly restored, were guarded by his bravest soldiers. Totila returned to Rome by forced marches, but was thrice repulsed in three general assaults. Belisarius, however, being commanded by Justinian to proceed into Lucania, left a garrison of 3000 of his best troops at Rome under the command of Diogenes. The city was again betrayed by some Isaurians in 549, who opened the gate of St. Paul to Totila and his Goths. Totila, who seems now to have considered himself as in confirmed possession of Italy, no longer exhibited any desire to destroy the edifices of Rome, which he regarded as the capital of his kingdom, and he even exhibited the equestrian games in the Circus. (Procop. *B. G.* iv. 22.) But in 552 he was defeated and slain by the eunuch Narses in the battle of Tagina. Narses then marched to Rome, and once more sent its keys to Justinian, during whose reign the city had been no fewer than five times taken and recovered. (*Ib.* 26—35; Theoph. *Chron.* vol. i. p. 354, ed. Bonn.)

Rome under the Popes.— Towards the close of the sixth century Rome had touched the lowest point of degradation. The Roman citizens lived in continual fear of the attacks of the Lombards; the inhabitants of the surrounding country, who no longer dared to devote themselves to the pursuits of agriculture, took refuge within the walls; and the *Campagna* of Rome became a desert, exhaling infectious vapours. The indigence and the celibacy of a great part of the inhabitants produced a rapid decrease of population, though their scanty numbers did not protect them from famine. The edifices of Rome fell into decay; and it is commonly believed that Pope Gregory the Great, who filled the papal chair from 590 to 604, purposely defaced the temples and mutilated the statues,—a charge, however, which rests on doubtful evidence, and which has been strenuously repelled by Gregory's biographer Platina (ap. Bayle, *Grégoire Ier.*). Bargaeus, in his epistle on the subject (in Graevius, *Thesaur. Ant.* vol. iv.), says that the Circus Maximus, the baths and theatres, were certainly overthrown designedly, and that this is particularly evident in the baths of Caracalla and Diocletian (p. 1885). He attributes this, *as a merit*, to Gregory and one or two subsequent popes, and assigns as a reason that the baths were nothing but schools of licentiousness (p. 1889, seq.). It seems more probable, however, that the destruction of the baths arose from the failure of the aqueducts — a circumstance which would have rendered them useless — and from the expense of keeping them up. Bargaeus himself attributes the ruin of the aqueducts to the latter cause (p. 1891); but they must also have suffered very severely in the Gothic wars. Hence perhaps the huge foundations of the thermae, having become altogether useless, began to be used as stone quarries, a circumstance which would account for the appearance of wilful damage. That ruin had made great progress at Rome before the time of Gregory, is manifest from some passages in his own works in which he deplores it. Thus in one of his homilies he says: "Qualis remanserit Roma, conspicimus. Immensis doloribus multipliciter attrita, desolatione civium, impressione hostium, *frequentia ruinarum.*" And again: "Quid autem ista de hominibus dicimus, cum ruinis crebrescentibus ipsa quoque destrui aedificia videmus?" (*Hom.* 18 *in Ezech.* ap. Donatum, *de Urbe Roma*, i. 28, sub fin.) He would hardly have written thus had he himself been the cause of these ruins. The charge probably acquired strength from Gregory's avowed antipathy to classical literature.

Whilst the dominion of Italy was divided between the Lombards and the exarchs of Ravenna, Rome was the head of a duchy of almost the same size as her ancient territory, extending from Viterbo to Terracina, and from Narni to the mouth of the Tiber. The fratricide Constans II. is said to have entertained the idea of restoring the seat of empire to Rome (A. D. 662). (*Hist. Misc.* ap. Muratori, *Scrip. R. I.* iii. pt. i. p. 137.) But the Lombard power was too strong; and, after a visit of a few days to the ancient capital, he abandoned it for ever, after pillaging the churches and carrying off the bronze roof of the Pantheon. (Schlosser, *Gesch. d. bilder-stürmenden Kaiser*, p. 80.) In the eighth century the Romans revived the style of the Republic, but the Popes had become their chief magistrates. During this period Rome was constantly harassed and suffered many sieges by the Lombards under Luitprand, Astolphus, and other kings. In 846 the various measure of its calamities was filled up by an attack of the Saracens — as if the former mistress of the world was destined to be the butt of wandering barbarians from all quarters of the globe. The disciples of Mahomet pillaged the church of St. Peter, as well as that of St. Paul outside the Porta Ostiensis, but did not succeed in entering the city itself. They were repulsed by the vigilance and energy of pope Leo IV., who repaired the ancient walls, restored fifteen towers which had been overthrown, and enclosed the quarter of the Vatican; on which in 852 he bestowed his blessing and the title of *Città Leonina*, or Leonine city (now the *Borgo di S. Pietro*). (Anastasius, *V. Leon. IV.*) In the period between 1081 and 1084 Rome was thrice fruitlessly besieged by the emperor Henry IV., who, however, by means of corruption at last succeeded in gaining possession of it; but the ruins of the Septizonium, defended by the nephew of Pope Gregory VII., resisted all the attacks of Henry's forces. Gregory shut himself up in the castle of S. Angelo, and invoked the assistance of his vassal, Robert Guiscard. Henry fled at the approach of the warlike Norman; but Rome suffered more at the hands of its friends than it had ever before done from the assaults of its enemies. A tumult was excited by the imperial adherents, and the Saracens in Robert's army, who despised both parties, seized the opportunity for violence and plunder. The city was fired; a great part of the buildings on the Campus Martius, as well as the spacious district from the Lateran to the Colosseum, was consumed, and the latter portion has never since been restored. (Malaterra, iii. c. 37; Donatus, iv. 8.)

But Rome has suffered more injury from her own citizens than from the hands of foreigners; and its ruin must be chiefly imputed to the civil dissensions

of the Romans, and to the use which they made of the ancient monuments to serve their own selfish and mercenary purposes. The factions of the Guelphs and Ghibelines, of the Colonna and Ursini, which began in the tenth century and lasted several hundred years, must have been very destructive to the city. In these sanguinary quarrels the ancient edifices were converted into castles; and the multitude of the latter may be estimated from the fact that the senator Brancaleone during his government (1252—1258) caused 140 towers, or fortresses, the strongholds of the nobility, to be demolished in Rome and its neighbourhood; yet subsequently, under Martin V., we still hear of forty-four existing in one quarter of the city alone. (Matthew Paris, *Hist. Maj.* p. 741, seq.) Some of these were erected on the most celebrated buildings, as the triumphal monuments of Caesar, Titus, and the Antonines. (Montfaucon, *Diar. Ital.* p. 186; Anonymus, *ib.* p. 285.) But still more destructive were the ravages committed on the ancient buildings during times of peace. The beautiful sculptures and architectural members, which could no longer be imitated, were seized upon and appropriated to the adornment of new structures. We have seen that this barbarous kind of spoliation was exercised as early as the reign of Constantine, who applied the sculptures of some monument of Trajan's to adorn his own triumphal arch. In after ages Charlemagne carried off the columns of Rome to decorate his palace at Aix-la-Chapelle (Sigebert, *Chron.* in Bouquet, *Historiens de France*, v. p. 378); and several centuries later Petrarch laments that his friend and patron, Robert, king of Sicily, was following the same pernicious example. ("Itaque nunc, heu dolor! heu scelus indignum! de vestris marmoreis columnis, de liminibus templorum (ad quae nuper ex orbe toto concursus devotissimus fiebat), de imaginibus sepulcrorum sub quibus patrum vestrorum venerabilis cinis erat, ut reliquas sileam, desidiosa Napolis adornatur," Petrar. *Opp.* p. 536, seq.) It would be endless to recount the depredations committed by the popes and nobles in order to build their churches and palaces. The abbé Barthélemi (*Mém. de l'Acad. des Inscr.* xxviii. p. 585) mentions that he had seen at Rome a manuscript letter relating to a treaty between the chiefs of the factions which desolated Rome in the 14th century, in which, among other articles, it is agreed that the Colosseum shall be *common* to all parties, who shall be at liberty to take stones from it. (De Sade; *Vie de Pétrarque*, i. 328, note.) Sixtus V. employed the stones of the Septizonium in building St. Peter's. (Greg. Leti, *Vita di Sisto V.* iii. p. 50.) The nephews of Paul III. were the principal destroyers of the Colosseum, in order to build the Farnese palace (Muratori, *Ann. d' Italia*, xiv. p. 371); and a similar reproach was proverbially applied to those of Urban VIII. ("Quod non fecerunt Barbari, fecere Barberini," Gibbon, viii. p. 284, note.) But even a worse species of desecration than this was the destruction of the most beautiful marble columns, by converting them into lime. Poggio complains (A. D. 1430) that the temple of Concord, which was almost perfect when he first came to Rome, had almost disappeared in this manner. ("Capitolio contigua forum versus superest porticus aedis Concordiae, quam cum primum ad urbem accessi, vidi fere integram, opere marmoreo admodum specioso; Romani postmodum, ad calcem, aedem totam et porticûs partem, disjectis columnis, sunt demoliti," *de Var. Fort.* p. 12.) And the same practice is reprobated in the verses of Aeneas Sylvius, afterwards Pope Pius II.:—

> "Sed tuus hic populus, muris defossa vetustis,
> Calcis in obsequium marmora dura coquit.
> Impia tercentum si sic gens egerit annos
> Nullum hic indicium nobilitatis erit."
> (In Mabillon, *Mus. Ital.* i. 97.)

The melancholy progress of the desolation of Rome might be roughly traced from some imperfect memorials. The account of the writer called the Anonymus Einsiedlensis, who visited Rome early in the 9th century, which has been published by Mabillon (*Anal.* iv. p. 502), and by Hänel (*Archiv. f. Philol. u. Pädag.* i. p. 115), exhibits a much more copious list of monuments than that of another anonymous writer, who compiled a book *De Mirabilibus Romae*, in the 12th or 13th century. (Montfaucon, *Diar. Ital.* p. 283, seq.; Nibby, *Effem. Lett. di Roma*, 1820, Fasc. i.—iv.) Several passages in the works of Petrarch exhibit the neglected and desolate state of Rome in the 14th century,—the consequence of the removal of the holy see to Avignon. Thus, in a letter to Urban V., he says: "Jacent domus, labant maenia, templa ruunt, sacra pereunt, calcantur leges." And a little after: "Lateranum humi jacet et Ecclesiarum mater omnium tecto carens ventis patet ac pluviis," &c. (Cf lib. ix. ep. 1.) Yet the remains of ancient Roman splendour were still considerable enough to excite the wonder and admiration of Manuel Chrysoloras at the commencement of the 15th century, as may be seen in his epistle to the emperor John Palaeologus. (subjoined to Codinus, *de Antiq. C. P.* p. 107, seq.) Much destruction must have been perpetrated from this period to the time, and even during the life, of Poggio. But the progress of desolation seems to have been arrested subsequently to that writer, whose catalogue of the ruins does not exhibit a great many more remains than may yet be seen. Care is now taken to arrest as far as possible even the inevitable influence of time; and the antiquarian has at present nothing to regret except that more active means are not applied to the disinterment of the ancient city. The funds devoted to the re-erection of a magnificent basilica far without the walls, and on so unwholesome a site that the very monks are forced to desert it during the heats of summer, might, in the eye at least of transmontane taste, have been more worthily devoted to such an object.

VII. Population of Rome.

Before we close this part of the subject it will be expected that we should say something respecting the probable amount of the population of Rome. The inquiry is unfortunately involved in much obscurity, and the vagueness of the *data* upon which any calculation can be founded is such that it is impossible to arrive at any wholly satisfactory conclusion. The latitude hence allowed may be judged from the fact that the estimates of some of the best modern scholars are about four times as great as those of others; and whilst Dureau de la Malle, in his *Economie politique des Romains* (i. p. 340, seq.), sets down the population at 562,000 souls, Höck, in his *Römische Geschichte* (vol. i. pt. ii. p. 383, seq.), estimates it at 2,265,000; nay Lipsius, in his work *De Magnitudine Romana* (iii. 3), even carried it up to the astounding number of 8,000,000. But this is an absurd exaggeration; whilst, on the

other hand, the estimate of Dureau de la Malle is undoubtedly much too low.

The only secure *data* which we possess on the subject are the records of the number of citizens who received the *congiaria* or imperial largesses, for it is only during the imperial times that we can profess to make any calculation. We learn from the *Monumentum Ancyranum* that Augustus, in his 12th consulate, distributed a pecuniary gift to 320,000 of the *plebs urbana*. ("Consul XII. trecentis et viginti millibus plebei urbanae sexagenos denarios viritim dedi," tab. iii.) The recipients of this bounty were all males, and probably formed the whole free male population of Rome, with the exception of the senators, knights, and aliens. Women and boys of a tender age did not participate in these distributions. It had been customary for the latter to be admitted to participation after the age of ten; but Augustus appears to have extended his liberality to still younger children. ("Ne minores quidem pueros praeteriit, quamvis nonnisi ab undecimo aetatis anno accipere consuessent," Suet. *Aug.* 41.) The distributions of corn seem to have been regulated on stricter principles, as these were regular, not extraordinary like the largesses. From these the children were probably excluded, and there was, perhaps, a stricter inquiry made into the titles of the recipients. Thus we learn from the *Mon. Ancyranum* that those who received corn in the 13th consulate of Augustus amounted to rather more than 200,000. (Cf. Dion Cass. lv. 10.) From the same document it appears that three largesses made by Augustus, of 400 sesterces per man, were never distributed to fewer than 250,000 persons. ("Quae mea congiaria pervenerunt ad hominum millia nunquam minus quinquaginta et ducenta," *Ib.*, where Höck, *Röm. Gesch.* i. pt. ii. p. 388, by erroneously reading *sestertium* instead of *hominum*, has increased the number of recipients to 625,000.) From a passage in Spartian's life of Septimius Severus (c. 23) it would seem that the number entitled to receive the distributions of corn had increased. That author says that Severus left at his death wheat enough to last for seven years, if distributed according to the regular canon or measure of 75,000 *modii* daily. Now, if we calculate this distribution according to the system of Augustus, of five modii per man monthly, and reckon thirty days to the month, then this would leave the number of recipients at 450,000 (75,000 × 30 = 2,250,000 ÷ 5 = 450,000). According to these statements we can hardly place the average of the male plebeian population of Rome during the first centuries of the Empire at less than 350,000; and at least twice as much again must be added for the females and boys, thus giving a total of 1,050,000. There are no very accurate *data* for arriving at the numbers of the senators and knights. Bunsen (*Beschr.* i. p. 184), without stating the grounds of his calculation, sets them down, including their families, at 10,000. But this is evidently much too low an estimate. We learn from Dionysius Halicarnassensis (vi. 13) that in the annual procession of the knights to the temple of Castor they sometimes mustered to the number of 5000. But this must have been very far from their whole number. A great many must have been absent from sickness, old age, and other causes; and a far greater number must have been in the provinces and in foreign countries, serving with the armies, or employed as *publicani*, and in other public capacities. Yet their families would probably, for the most part, reside at Rome. We see from the complaints of Horace how the equestrian dignity was prostituted in the imperial times to *liberti* and aliens, provided they were rich enough for it. (*Epod.* iv. in Menam; cf. Juv. i. 28.) We should, perhaps, therefore be below the mark in fixing the number of knights and senators at 15,000. If we allow a wife and one child only to each, this would give the number of individuals composing the senatorial and equestrian families at 45,000, which is a small proportion to 1,050,000 freemen of the lower class. It may be objected that marriage was very much out of fashion with the higher classes at Rome during the time of Augustus; but the omission was supplied in another manner, and the number of kept women and illegitimate children, who would count as population just as well as the legitimate ones, must have been considerable. In this calculation it is important not to underrate the numbers of the higher classes, since they are very important factors in estimating the slave population, of which they were the chief maintainers. The preceding sums, then, would give a total of 1,095,000 free inhabitants of Rome, of all classes. To these are to be added the aliens residing at Rome, the soldiers, and the slaves. The first of these classes must have been very numerous. There must have been a great many provincial persons settled at Rome, for purposes of business or pleasure, who did not possess the franchise, a great many Greeks, as tutors, physicians, artists, &c., besides vast numbers of other foreigners from all parts of the world. The Jews alone must have formed a considerable population. So large, indeed, was the number of aliens at Rome, that in times of scarcity we sometimes read of their being banished. Thus Augustus on one occasion expelled all foreigners except tutors and physicians. (Suet. *Aug.* 42.) According to Seneca, the greater part of the inhabitants were aliens. "Nullum non hominum genus concurrit in urbem et virtutibus et vitiis magna praemia ponentem. Unde domo quisque sit, quaere; videbis majorem partem esse, quae relictis sedibus suis venerit in maximam quidem et pulcherrimam urbem, non tamen suam." (*Cons. ad Helv.* c. 6.) In this there is no doubt some exaggeration; yet we find the same complaints reiterated by Juvenal:—

> "Jam pridem Syrus in Tiberim defluxit Orontes."
>
> . . . .
>
> "Hic alta Sicyone, ast hic Amydone relicta,
> Hic Andro, ille Samo, hic Trallibus aut Alabandis,
> Esquilias dictumque petunt a Vimine collem,
> Viscera magnarum domuum, dominique futuri" (iii. 62, seq.).

It would perhaps, then, be but a modest estimate to reckon the aliens and foreigners resident at Rome, together with their wives and families, at 100,000. The soldiers and the *vigiles*, or police, we can hardly estimate at less than 25,000; and as many of these men must have been married, we may reckon them, with their families, at 50,000. Hence 100,000 aliens and 50,000 military, &c., added to the foregoing sum of 1,095,000, makes 1,245,000 for the total miscellaneous free population of Rome.

There are great difficulties in the way of estimating the slave population, from the total absence of any accurate data. We can only infer generally that it must have been exceedingly numerous—a fact that is evident from many passages of the ancient authors

The number of slaves kept as domestic servants must have been exceedingly large. Horace mentions (*Sat.* i. 3. 12) that the singer Tigellius had sometimes as many as 200 slaves; but when he was taken with a sudden fit of economy, he reduced them to the very modest number of 10. No doubt, however, he was a first-rate vocalist, and, like his brethren in modern times, a man of fortune. Tillius the praetor, who was a stingy churl, when he went to Tibur, had 5 slaves at his heels to carry his cooking utensils and wine. (*Ib.* i. 6. 107.) Horace himself, who of course was not so rich a man as Tigellius, when he sat down to his frugal supper of cakes and vegetables, was waited upon by 3 slaves; and we may presume that these did not compose his entire household. (*Ib.* v. 115.) In the reign of Nero, 400 slaves were maintained in the palace of Pedanius Secundus, who were all put to death, women and children included, because one of them had murdered his master. (Tac. *Ann.* xiv. 42, seq.) The slaves no longer consisted of those born and bred on the estates of their masters, but were imported in multitudes from all the various nations under the wide-spread dominion of the Romans. ("Postquam vero nationes in familiis habemus, quibus diversi ritus, externa sacra, aut nulla sunt, colluviem istam non nisi metu coercueris." (*Ib.* c. 44.) The case of Pedanius, however, was no doubt an extraordinary one. It cannot be imagined that the plebs urbana, who received the public rations, were capable of maintaining slaves; nor probably are many to be assigned to the aliens. But if we place the patrician and equestrian families at 15,000, and allow the moderate average number of 30 slaves to each family, this would give a total number of 450,000. Some also must be allowed to the richer part of the *plebs*—to persons who, like Horace, were not patrician nor equestrian, yet could afford to keep a few slaves; as well as to the aliens resident at Rome, so that we can hardly compute the number of domestic slaves at less than 500,000. To these must be added the public slaves at the disposal of the various municipal officers, also those employed in handicraft trades and manufactures, as journeymen carpenters, builders, masons, bakers, and the like. It would not perhaps be too much to estimate these at 300,000, thus making the total slave population of Rome 800,000. This sum, added to that of the free inhabitants, would give a total of 2,045,000.

The *Notitia* and *Curiosum* state the number of *insulae* at Rome at 46,602, and the number of *domus* at 1790, besides *balnea*, *lupanaria*, military and police stations, &c. If we had any means of ascertaining the average number of inhabitants in each *insula*, it would afford a valuable method of checking the preceding computation. But here again we are unfortunately reduced to uncertainty and conjecture. We may, however, pretty surely infer that each *insula* contained a large number of inmates. In the time of Augustus the yearly rent of the *coenacula* of an *insula* ordinarily produced 40,000 sesterces, or between 300*l.* and 400*l.* sterling. (*Dig.* 19. tit. 2. s. 30, ap. Gibbon, ch. 31, note 70.) Petronius (c. 95, 97), and Juvenal (*Sat.* iii. passim) describe the crowded state of these lodgings. If we take them at an average of four stories, each accommodating 12 or 13 persons, this would give say 50 persons in each insula; and even then the inmates, men, women and boys, would be paying an average yearly rent of about 7*l.* per head. The inmates of each *domus* can hardly be set down at less, since the family, with tutors and other hangers on, may perhaps be fairly estimated at 10, and the slaves in each *domus* at 40. We learn from Valerius Maximus (iv. 4. § 8), that sixteen men of the celebrated Gens Aelia lived in one small house with their families; but this seems to have been an exceptional case even in the early times, and cannot be adopted as a guide under the Empire. Now, taking the *insulae* actually inhabited at 40,000—since some must have been to let, or under repair—and the inhabited *domus* at 1500 = 41,500, and the number of inmates in each at 50, we should have a total population of 2,075,000, a sum not greatly at variance with the amount obtained by the previous method. But the reader will have seen on what data the calculation proceeds, and must draw his own conclusions accordingly. (Cf. Bunsen, *Beschreibung der Stadt Rom*, i. p. 183, seq.; Dureau de la Malle, *Economie politique des Romains* i. p. 340. seq.; Mommsen, *Die Römischen Tribus*, p. 187, seq.; Höck, *Römische Geschichte*, i. pt. ii. p. 383, seq.; Zumpt, *Ueber den Stand der Bevölkerung im Alterthum*, Berlin, 1841; Gibbon, *Decline and Fall*, vol. iv. p. 87, seq., with the note of Smith.)

PART II. TOPOGRAPHY.

Having thus given an account of the rise and progress, the decline and fall of the Roman city, we shall now proceed to describe its topography. In treating this part of the subject we shall follow those divisions which are marked out either by their political importance or by their natural features rather than be guided by the arbitrary bounds laid down in the Regions of Augustus. The latter, however convenient for the municipal purposes which they were intended to serve, would be but ill calculated to group the various objects in that order in which they are most calculated to arrest the attention of the modern reader, and to fix them in his memory. We shall therefore, after describing the walls of Servius Tullius and those of Aurelian, proceed to the Capitol, one of the most striking objects of ancient Rome, and then to the Forum and its environs, the remaining hills and their valleys, with the various objects of interest which they present.

I. Walls and Gates of Servius Tullius.

At the commencement of the Roman Empire the walls of Servius Tullius could no longer be traced. Instead of dreading the assaults of the surrounding petty nations of Italy, Rome had now extended her frontiers to the Euphrates and the Atlantic; her ancient bulwarks were become entirely useless, and the increase of her population had occasioned the building of houses close to and even over their remains; so that in the time of Dionysius of Halicarnassus, who came to Rome in the reign of Augustus, it was difficult to discover their course (iv. 13). To attempt now to trace their exact outline would therefore be a hopeless task. The remains of the *agger* of Servius are still, however, partly visible, and the situation of a few of the ancient gates is known with certainty, whilst that of others may be fixed with at least some approach to accuracy from notices of them contained in ancient authors. It is from these materials that we must endeavour to reconstruct the line of the Servian walls, by first determining the probable sites of the gates, and by then drawing the

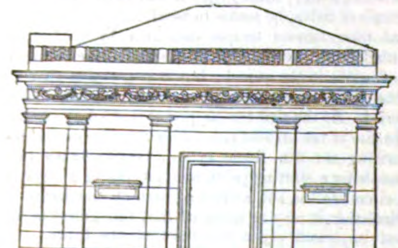
ny in the passage just cited,
from the plural (montibus)
n one hill. This is merely,
general mode of expression;
erved that Pliny's own ac-
ll crowned the hills. Lastly,
upon them, it is difficult to see how there could have been gates; yet we find Becker himself placing gates at spots where, according to his *theoretical* view, there could have been no wall. Niebuhr (*l. c.*), who, like Becker, does not confine the escarpment to the Capitol, but thinks that the greater part of the city was fortified solely by the steepness of its hills, places towers, walls, and gates just at the different ascents; but this view, improbable in itself, and unsupported by any authority, cannot be maintained against the express testimony of Cicero. There seems, however, to have been an *interior* fortification on the E. side of the Capitoline, protecting the ascent by the *clivus*, as we shall see in the sequel. It was probably intended to secure the citadel, in case an enemy succeeded in forcing the external walls. We have seen before that the hill was fortified by Romulus; but whether these ancient fortifications, as well as those on the Palatine, were retained by Servius, it is impossible to say.

We may assume then that the wall of Servius, or his predecessor,—which seems to have been built of stone ("muro lapideo," Liv. i. 15),—surrounded the whole city, with the exception of the Capitoline hill and a small part defended by the Tiber,—thus justifying the noble lines of Virgil (*Georg.* ii. 533.):—

> "rerum facta est pulcerrima Roma
> Septemque una sibi muro circumdedit arces."



Our next task will be to determine the outline of this wall by means of the site of the different gates; though, of course, where the outline of the hills is well defined this alone will be a guide. The situation of two of the gates may be considered certain,—that of the PORTA COLLINA, at the N. extremity of the *agger*, and that of the Esquiline at its southern end. Taking, therefore, the former as a starting-point, and proceeding continually to the left, we shall make the circuit of the whole city, till we again arrive at the Porta Collina.

This, the most northerly of all the gates, lay near the point where the Via Salaria branches off from the Via Nomentana. From this spot the first gate to the W. was probably the Porta Salutaris, so named, apparently, from its being on that division of the Quirinal which in the time of Numa and in the sacred books of the Argives was called Collis Salutaris, from an ancient sacellum of Salus which stood upon it (Varr. *L. L.* v. § 51). When Paulus Diaconus tells us (p. 327, Müll.) that it was named after the temple of Salus, he seems to be alluding to the later and more famous temple dedicated by C. Junius Bubulcus in B. C. 303, which we shall have occasion to describe in the sequel: but it is probable that it obtained its name, as we have said, at a much earlier period. As the new temple probably stood at or near the site of the ancient one, and as the *Notitia* in describing the 6th Regio, or Alta Semita, takes this temple for a starting point, and, proceeding always in a circuit to the left, arrives at last at the baths of Diocletian, it may be assumed that this gate was the first important object westward of the baths. It seems to have spanned a Clivus Salutis, which Canina (*Roma Antica*, p. 187) places, with much probability in the *Via delle Quattro Fontane*, where it ascends from the *Piazza Barberina*. (Cf. Preller, *Regionen*, p. 134.)

The next gate to the left seems to have been the PORTA SANQUALIS, so named from the temple of Sancus. (Paul. Diac. p. 345, Müll.) This was the same

divinity as Deus Fidius (Fest. p. 241, Müll.), whose sacellum is mentioned by Livy (viii. 20) as situated near the temple of Quirinus. It is also recorded in the fragments of the Argive books as seated on the Collis Mucialis (Varr. *L.L.* v. § 62, Müll.), which hill comes next in order after the Collis Salutaris. We have already mentioned the temple of Quirinus as having been situated near the present church of *S. Andrea* and it may therefore be assumed that the Porta Sanqualis spanned the ascent to it at or near the modern *Via della Dataria.*

Between the Porta Sanqualis and the Capitoline hill there were probably two gates; at all events there must undoubtedly have been one in the very narrow ravine which in early times separated the Capitoline from the Quirinal, and which afforded the only outlet from the neighbourhood of the forum. This was, perhaps, the PORTA RATUMENA, which we learn from Pliny (viii. 65: "unde postea nomen *est*") and Plutarch (*Popl.* 13: παρὰ τὴν πύλην, ἣν νῦν Ῥατουμέναν καλοῦσιν) was still existing in their time. Becker, indeed, disputes the inference of its existence from Pliny's words, and disbelieves the assertion of Plutarch. But there is nothing at all incredible in the fact, and therefore no reason why we should disbelieve it. We know, from the example of London and other cities, that a gate, and especially the name of a gate marking its former site, may remain for ages after the wall in which it stood has been removed. Even the local tradition of its name would have sufficed to mark its site; but it seems highly probable, from the nature of the ground where it stood, that the gate itself had been preserved. The road through so narrow a gorge could never have been disturbed for building or other purposes; and it is probable that the gate remained standing till the ravine was enlarged by cutting away the Quirinal in order to make room for Trajan's forum. We learn from the passages just cited, as well as from Festus (p. 274), that the gate derived its name from a charioteer, who, returning victorious from the Circensian games at Veii, was thrown out of his chariot and killed at this spot, whilst the affrighted horses, thus freed from all control, dashed up the Capitoline hill, and, as the legend runs, did not finish their mad career till they had thrice made the circuit of the temple of Jupiter Capitolinus. (Plin. viii. 65.) So remarkable an omen would have been quite a sufficient ground in those days for changing the name of the gate. But it matters little what faith we may be disposed to place in the legend; for

Piazza di Venezia, as Urlichs assumes (*Beschr*. vol. v. p. 17), since in that case the portico must have crossed the road leading out of the Porta Ratumena.

A little beyond the last named gate the wall must have joined the Capitoline hill, along which, as we have said, there was no other fortification but the precipitous nature of the ground, rendered here and there still more abrupt by escarpment. At the SW. extremity of the hill the wall must have been resumed, and must undoubtedly have run in a direct line across the short space between the Capitoline hill and the Tiber. Between this spot and the Aventine the wall was discontinued; and this is the part alluded to by Dionysius (*l. c.*) as sufficiently defended by the river. The piece of wall just mentioned must have shut out the Forum Olitorium and Circus Flaminius, since Asconius (*ad Cic. Tog. Cand.* p. 90, Orell.) mentions a temple of Apollo, which was situated between those places, as being outside the PORTA CARMENTALIS. This gate lay just at the foot of the Capitol, and is one of the most certain entrances to the Servian city. It was named after a fane or altar of Carmenta, the mother of Evander, which stood near it. This altar is mentioned by Dionysius (i. 32), and appears to have existed long after his time, since it was seen by A. Gellius (xviii. 7) and by Servius (*ad Virg. Aen.* viii. 337.) The street called Vicus Jugarius ran from the Porta Carmentalis round the base of the Capitoline to the Forum, as we learn from Livy's description (xxvii. 37) of the procession of the virgins to the temple of Juno Regina on the Aventine, when two white heifers were led from the temple of Apollo before mentioned through the Porta Carmentalis and Vicus Jugarius to the forum. The exact site of the gate was probably a little to the NW. of the church of *S. Omobono*.

The principal gates of Rome had commonly more than one thoroughfare. These archways, or passages, were called Fornices and Jani. Cicero's etymology of the latter word shows the meaning attached to it, though the etymology itself is absurd ("Ab eundo nomen est ductum: ex quo transitiones perviae Jani, foresque in liminibus profanarum aedium *januae* nominantur," *Nat. Deor.* ii. 27). We have already said that the right *Janus* of the Porta Carmentalis, on going out of the town, was regarded as ill-omened, and branded with the name of *Porta Scelerata*, from its having been that through which the Fabii passed on their fatal expedition to the Cremera. (Liv. ii. 49.) So Ovid (*Fast* i. 201):—

"Carmentis portae dextro via proxima Jano est:
Ire per hanc noli, quisquis es, omen habet."

Festus (p. 285, Müll.), Servius (*Aen.* viii. 337), and Orosius (ii. 5) have completely misunderstood these passages in applying the epithet *scelerata* to the whole gate, as we have before remarked.

In the short piece of wall between the Capitoline hill and the Tiber there must have been at least another gate besides the Carmentalis, namely the PORTA FLUMENTANA. It is mentioned by Cicero (*ad Att.* vii. 3), and its situation near the river may be inferred not only from its name, but also from passages in Livy, which mention it in connection with inundations (xxxv. 9, 21). Plutarch also (*Otho*, 4) records a great inundation which had caused much damage in the corn-market, at that time held in the Porticus Minucia Frumentaria, near the Forum Olitorium (*Not. Reg.* ix.); but the words of Paulus Diaconus are incomprehensible, who says that a part of the Tiber once actually flowed through this gate ("Flumentana Porta Romae appellata, quod Tiberis partem ea fluxisse affirmant," p. 89, Müll.) The site is further confirmed by a passage in Varro alluding to the populousness of the suburb just outside the gate: "Nam quod extra urbem est aedificium, nihilo magis ideo est villa, quum eorum aedificia qui habitant extra portam Flumentanam, aut in Aemilianis" (*R. R.* iii. 2). This neighbourhood had early become very thickly inhabited, as is evident from the many porticoes, theatres, temples and other buildings, which are mentioned there (see Preller, *Regionen*, p. 156, seq.) But Livy's narrative of the trial of Manlius (vi. 20) is one of the most striking proofs of the situation of the P. Flumentana, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. summit of the Capitoline hill. A spot near the place where the Circus Flaminius afterwards stood was at that time used for the assemblies of the Comitia Centuriata, by which Manlius was tried. From this place both the Capitol and the Arx were visible; and Manlius had produced a great effect upon his judges by calling upon them to pronounce their verdict in the sight of those very gods whose temple he had preserved: "Ut Capitolium atque arcem intuentes, ut ad deos immortales versi, de se judicarent." In order to deprive him of this appeal the tribunes adjourned the assembly to a spot just outside the Porta Flumentana, called "lucus Poetelinus," whence the Capitol could not be seen ("unde conspectus in Capitolium non esset"). A glance at any map of Rome will show that this was the only spot in the Campus Martius where the temple, from its being hidden by the SW. summit, which we assume to have been the Arx, was concealed from view. The tribunes would doubtless have been glad to conceal the Arx also, had it been in their power; but an appeal to the Arx alone would have lacked the effect of the *religio* which swayed so much with the superstitious Romans. They were no longer in the presence of those rescued deities in whose sight Manlius had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's text, by reading Frumentaria for Flumentana, or seek to place the scene of the trial at another spot, since the Comitia Centuriata were usually assembled in the Campus.

The ancient topographers, as well as the modern Italians (Nibby, *Mura, &c.* p. 132; Canina, *Indicazione Topografica*, pp. 34, 632, ed. 1850), place another gate, the PORTA TRIUMPHALIS, between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequently mentioned in classical authors, but unfortunately in such a manner that no decided inference can be drawn respecting its situation. Hence various theories have been advanced on the subject, which have led to warm controversies. The German school of topographers, though not united among themselves, have agreed in departing from the Italian view, chiefly because it appears to them absurd to imagine that there could have been three gates in so short a piece of wall. If, however, as it will be shown to be probable, the Porta Triumphalis was opened only on occasions of state, there really seems to be very little force in this objection. Bunsen and his followers allow that it formed a real entrance into the city, but strangely enough make it lead into the Circus Maximus; whilst Becker, on the other hand, holds that it was no gate at all properly

so called, but a mere triumphal arch situated in the Campus Martius. The theory of Bunsen necessarily rests on the assumption of a different line of wall from that laid down in the preceding account: and as another line is also adopted by Niebuhr (*Hist.* i. p. 397, *Ethnogr.* ii. p. 49), it will be necessary to examine this point before proceeding to the question of the gate. Niebuhr and Bunsen are, however, far from coinciding. The line drawn by the former proceeds along the banks of the river; that drawn by the latter runs from the Porta Carmentalis to the N. angle of the Circus Maximus, and, adopting the NW. front of the circus, or what was called the *Oppidum*, as part of the line, proceeds onwards to the Aventine, thus shutting the greater part of the Forum Boarium out of the city. Both these theories, however, agree in so far as they assume an *enceinte continue*, or continued line of wall; and therefore, if this notion can be shown to be false, both fall to the ground. Now it can be proved on the very best evidence that there was no wall in this part of the city, which was defended solely by the Tiber. We have already adduced a passage from Dionysius in confirmation of this statement; and the same author in another passage repeats the same thing in so plain a manner that there can be no reasonable doubt of the fact: *ἐδέησεν ἡ πόλις ἁλῶναι κατὰ κράτος ἀτείχιστος οὖσα ἐκ τῶν παρὰ τὸν ποταμὸν μερῶν* (v. 23). But Dionysius does not stand alone. We have Livy also as a voucher for the same fact, who, in narrating the enterprise of Porsena against Rome, observes that the citizens regarded some parts of their city as secured by the wall, and other parts by the Tiber: "Alia muris, alia Tiberi objecto videbantur tuta" (ii. 10). The same fact appears, though not in so direct a manner, from the same author's account of the procession of the virgins from the temple of Apollo, outside the Carmental gate, to that of Juno Regina on the Aventine, to which we have before briefly alluded. The route is described as follows: "A porta (Carmentali) Jugario vico in forum venere. Inde vico Tusco Velabroque per Boarium forum in clivum Publicium atque aedem Junonis Reginae perrectum" (xxvii. 37). Now the small space allotted by Bunsen to the Forum Boarium must have been *inside* of the wall, since the temples of Fortune and Mater Matuta, which stood upon it (Liv. xxxiii. 27), were within the Porta Carmentalis (Id. xxv. 7). The procession, then, after passing through that forum, must have gone out of the city at another gate,—Bunsen's Flumentana,—and have entered it again by the Trigemina, before it could reach the Clivus Publicius,—facts which are not mentioned by Livy in his very precise description of the route.

Having thus shown on the best evidence that no wall existed at this point, it would be a mere waste of time to refute arguments intended to show that it possibly might have existed,—such as whether a wall with a gate would keep out an inundation, whether the Fabii went over the Sublician bridge, and others of the like sort, which would have puzzled an ancient haruspex. We will therefore proceed to examine Becker's hypothesis, that the Porta Triumphalis was, in fact, no gate at all, but merely an arch in the Campus Martius, a theory which is also adopted, though with some little variation, by Preller (*Regionen*, p. 162, and Anhang, p. 239).

Becker places this arch at the spot where the Campus Martius joins the Regio called Circus Flaminius, and takes it to be the same that was rebuilt by Domitian (of course he must mean *rebuilt*, though it is not very clearly expressed. *De Muris*, p. 92, *Handb.* p. 153). His conjecture is founded on the following lines in a poem of Martial's (viii. 65) in which he describes the erection of this arch and of some other buildings near it:—

> "Haec est digna tuis, Germanice, porta triumphis,
> Hos aditus urbem Martis habere decet."

Becker, however, is totally unable to prove that this arch and the temple of Fortuna Redux near it were even in the Campus Martius at all. Thus he says (*Handb.* p. 642): "It is not indeed expressly said that the Ara of Fortuna Redux was in the Campus Martius; but it *becomes probable* from the circumstance that Domitian built here, and, as we have *conjectured* at p. 153, close to the Porta Triumphalis, a temple to the same goddess." The argument then proceeds as follows: "We *know* from Martial that Domitian built a temple to Fortuna Redux where her altar formerly stood, and also a triumphal arch near it. We do *not know* that this altar was in the Campus Martius; but it is *probable* that it was, because Domitian built this temple close to it, and also close to the arch, which, as *I conjectured*, was the Porta Triumphalis!"

There is, however, another passage of Martial, either overlooked or ignored by Becker, which tends very strongly to show that this arch of Domitian's really was in the Campus Martius, but at quite a different spot from that so conveniently fixed upon by him. It is the following (x. 6):—

> "Felices quibus urna dedit spectare coruscum
> Solibus Arctois sideribusque ducem.
> Quando erit ille dies quo Campus et arbor et omnis
> Lucebit Latia culta fenestra nuru?
> Quando morae dulces, longusque a Caesare pulvis,
> Totaque Flaminia Roma videnda via?"

There can be no doubt that these lines refer to the same triumphal entry of Domitian's as those quoted by Becker; and they pretty plainly show, as Canina, without any view to the present question, justly observes (*Indicazione, &c.* p. 437), that the arch and other monuments stood on the Via Flaminia, and therefore at a very considerable distance from the spot assigned to them by Becker.

This arch having broken down, Preller comes to the rescue, and places the Porta Triumphalis near the Villa Publica and temple of Bellona, close to the Via Lata. For this site he adduces several plausible arguments: near the temple of Bellona was the piece of ager hostilis, where the Fetiales went through the formalities of declaring war; as well as the Columna Bellica, whence a lance was thrown when the army was going to take the field; also a Senaculum "citra aedem Bellonae," in which audience was given to foreign ambassadors whom the senate did not choose to admit into the city. The Villa Publica also served for the reception of the latter, and probably also of Roman generals before their triumph, and of all who, being cum imperio, could not cross the pomoerium, and therefore in the ordinary course took up their abode there. After this ceased to exist, the Diribitorium was used in its stead, in which Claudius passed some nights, and in which probably Vespasian and Titus slept before their triumph. This

spot therefore had the significance of a kind of outpost of the city.

As this theory is evidently framed with a view to the triumph of Vespasian and Titus, and as the account of that triumph is also one of the main arguments adduced by Becker for his Porta Triumphalis, it will be necessary to examine it. The narrative of Josephus runs as follows (*Bell. Jud.* vii. 5. § 4, p. 1305, Huds.): "The emperor and his son Titus spent the night preceding their triumph in a public building in the Campus Martius, near the temple of Isis, where the army was assembled and marshalled. At break of day the emperors came forth and proceeded to the Porticus Octaviae (near the theatre of Marcellus), where, according to ancient custom, the senate were assembled to meet them. Vespasian, after offering the usual prayer, and delivering a short address, dismissed the troops to their breakfast, whilst he himself *returned* to the gate named after the triumphal processions that used to pass through it. Here the emperor breakfasted, and, having put on the triumphal dress, and sacrificed to the gods whose shrines were at the gate, caused the pageant to proceed through the circi." Becker concludes from this narrative that the Porta Triumphalis must have been outside the town, in the Campus Martius, and near the public building where the emperor had slept. A further proof is, he contends, that the procession went through the *circi*, which must mean the Circus Flaminius and Circus Maximus; and that this was so may be shown from Plutarch (*Aem. Paull.* 32), who says that Paullus went through the Circi, and in another passage expressly relates (*Lucull.* 37) that Lucullus adorned the Circus Flaminius with the arms, &c. which he had taken, which it would be absurd to suppose he would have done unless the procession passed through that circus. Then comes the supposition we have already noticed, that the procession of Vespasian passed through the arch re-erected by his younger son Domitian some years after his father's death. After passing through the Circus Flaminius, Becker thinks that the procession went through the P. Carmentalis, and by the Vicus Jugarius to the forum, along the latter *sub Veteribus*, and finally through the Vicus Tuscus, the Velabrum, and Forum Boarium, into the Circus Maximus. Having conducted the emperors thus far, Becker takes leave of them, and we remain completely in the dark as to the manner in which they got out of the circus and found their way back again to the forum and Capitol, the usual destination of triumphant generals.

Admitting that Becker has here given a true interpretation of the text of Josephus as it stands, we shall proceed to examine the conclusions that have been drawn from it, beginning with those of Preller. That writer has very properly assumed (*Regionen*, p. 240) that if the triumphal arch did not actually cross the pomoerium it led at all events into a territory subject to the jurisdiction of the city, into which it was unlawful for a general cum imperio to pass without the permission of the senate. Had not this been so the whole business would have been a mere vain and idle ceremony. The account of Vespasian's triumph seems indeed a little repugnant to this view, since he met the senate in the Porticus Octaviae, which on this supposition was considerably beyond the boundary, and which he had therefore crossed before he had obtained authority to do so. Still more repugnant is Dion's account of the triumph of Tiberius, who, we are told, assembled the senate at the same place precisely on the ground that it was outside of the pomoerium, and that consequently he did not violate their privileges by assembling them there (ἔς τε τὸ Ὀκταούειον τὴν βουλὴν ἤθροισε διὰ τὸ ἔξω τοῦ πωμηρίου αὐτὸ εἶναι, lv. 8). But as these instances occurred in the imperial times, when it may be said with Becker (*Handb.* p. 151, note) that the ceremony no longer had any meaning, we will go back for an example to the early ages of the Republic. First, however, we must demand the acknowledgment that the triumphal gate passed by Vespasian was the same, or at least stood on the same spot, as that which had been in use from time immemorial. We cannot allow it to be shifted about like a castle on a chessboard, to suit the convenience of commentators: and we make this demand on the authority of Josephus himself in the very passage under discussion, who tells us that it took its name from the circumstance that the triumphal processions had *always* passed through it (ἀπὸ τοῦ πέμπεσθαι δι' αὐτῆς ἀεὶ τοὺς θριάμβους τῆς προσηγορίας ἀπ' αὐτῶν τετυχυῖαν). Now Livy, in his account of the triumph of the consuls Valerius and Horatius, relates that they assembled the senate in the Campus Martius to solicit that honour; but when the senators complained that they were overawed by the presence of the military, the consuls called the senate away into the Prata Flaminia, to the spot occupied in the time of the historian by the temple of Apollo. ("Consules ex composito eodem biduo ad urbem accessere, senatumque in Martium Campum *evocavere*. Ubi quum de rebus a se gestis agerent, questi primores Patrum, senatum inter milites dedita opera terroris causa haberi. Itaque inde Consules, ne criminationi esset locum, in prata Flaminia, ubi nunc aedes Apollinis (jam tum Apollinare appellabant) *avocavere* senatum," iii. 63.) This temple was situated close to the Porticus Octaviae (Becker, *Handb.* p. 605), and therefore considerably nearer the city than the spot indicated either by Becker or Preller. The consuls therefore must have already passed beyond the Porta Triumphalis before they began to solicit the senate for leave to do so!

Becker, however, has been more careful, and has not extended the jurisdiction of the city beyond the walls of Servius, at this part of the Campus, before the time of the emperor Claudius. But what results from his view? That the whole affair of the Porta Triumphalis was mere farce, — that it led nowhere, — that the triumphant general, when he had passed through it by permission of the senate, was as much outside the city boundary as he was before. But that it afforded a real entrance into the town clearly appears from the passage in Cicero's oration against Piso (c. 23): "Cum ego Caelimontana porta introisse dixissem, sponsione me, ni Esquilina introisset, homo promtissimus lacessivit. Quasi vero id aut ego scire debuerim, aut vestrum quispiam audierit, aut ad rem pertineat qua tu porta introieris, modo ne triumphali; quae porta Macedonicis semper proconsulibus ante te patuit." The Porta Triumphalis being here put on a level with the Caelimontana and Esquilina, the natural conclusion is that, like them, it afforded an actual, though not customary, entrance within the walls. We further learn from the preceding passage that this same Porta Triumphalis had been open to every proconsul of Macedonia before Piso, including of course L. Aemilius Paullus, who triumphed over Perseus B. C. 167

(Liv. xlv. 39), thus establishing the identity of the gate to at least that period.

But to return to Becker's explanation of the passage of Josephus. Admitting Plutarch's account of the triumphs of Paullus and Lucullus, namely, that they passed through the Circus Flaminius, yet what does this prove? how is it connected with the Porta Triumphalis? Those generals may have marshalled their processions in the Campus and passed through the Circus Flaminius in their way to the Porta Triumphalis. The procession would have been equally visible in the Circus as in the streets of Rome, just as the Lord Mayor's show may, or might, be seen at Westminster as well as in the city. It is possible indeed that in the case of Vespasian there was no procession till he arrived at the gate; but it does not necessarily follow that the same line was always precisely observed. In truth we may perceive a difference between the expressions of Josephus and those of Plutarch. The former says that Vespasian went διὰ τῶν θεάτρων; whilst Plutarch says, of Paullus, that the people assembled ἐν τοῖς ἱππικοῖς θεάτροις, ἃ Κίρκους καλοῦσιν; of Lucullus, that he adorned τὸν Φλαμίνειον ἱππόδρομον. Here the circi are precisely designated as *hippodromes*; but Josephus uses the general term θεάτρων, which may include theatres of all kinds. Now we will suggest a more probable route than that given by Becker, according to which the pageant must have crossed the forum twice. After coming out at the further end of the circus, Vespasian turned down to the left, between the Palatine and Caelian, the modern *Via di S. Gregorio*. This would bring him out opposite his own magnificent amphitheatre, the Colosseum, then in course of construction. Even if it had not risen much above its foundations, still its ample area by means of scaffoldings, would have accommodated a vast number of spectators; and as to Vespasian personally, it would have imparted no small relish to his triumph to pass through so magnificent a work of his own creation. Hence his road lay plain and direct over the Summa Sacra Via to the forum and Capitol.

Now, taking all these things into consideration, we will venture to suggest a very slight change in the text of Josephus, a change not so great as some of those often proposed by Becker upon much smaller occasions, and which will release us from a great deal of perplexity. The alteration is that of an N into a Π, a very slight one in the uncial character; and, by reading ἀπεχώρει for ἀνεχώρει, we would make Vespasian depart from the Porticus Octaviae towards the gate which had always been used for triumphs, instead of retracing his steps towards one of which nobody can give any account. But whatever may be thought of the individual case of Vespasian, still we hold it to be incontestable that the ancient Porta Triumphalis, against which the sole objection seems to be that it was near two other gates, is to be sought in that part of the Servian wall between the P. Carmentalis and the P. Flumentana. The objection just alluded to would indeed have some force, if we could assume, with Becker (*Handb.* p. 154), that the Porta Triumphalis, just like an ordinary one, lay always open for common traffic. But it is surprising how anybody could come to that conclusion after reading the passages which Becker has himself cited from Suetonius, Tacitus, and Dion Cassius, or that in Cicero's oration against Piso before quoted. The first of these authors relates that after the death of Augustus the senate voted, or proposed to vote, that, as an extraordinary mark of honour, his funeral should pass through the triumphal gate, preceded by the statue of Victory which stood in the curia: "Ut censuerint quidam funus triumphali porta ducendum, praecedente Victoria, quae est in Curia" (*Aug.* 100; cf. Tac. *Ann.* i. 8); and Dion says (lvi. 42) that this was actually done, and the body burned in the Campus Martius. Now if the Porta Triumphalis had been an ordinary gate and common thoroughfare, what honour would there have been in passing through it? or how should the spectator have discovered that any distinction had been conferred? Wherefore Preller (*Regionen*, p. 240) has rightly come to the conclusion that it was usually kept shut.

Between the Capitoline and the Aventine, along the banks of the river, the wall, as we have shown, was discontinued, but it was recommenced at the spot where the latter hill approaches the Tiber. This may be shown from the well-ascertained position of the PORTA TRIGEMINA, which, as we learn from a passage in Frontinus, lay just under the Clivus Publicius, at the northernmost point of the hill ("incipit distribui Appia (aqua) imo Publicio Clivo ad Portam Trigeminam," *Aq.* 3); and the Clivus Publicius, as we know from a passage in Livy respecting the procession of the virgins before alluded to, formed the ascent to the Aventine from the Forum Boarium ("inde vico Tusco Velabroque per Boarium forum in clivum Publicium atque aedem Junonis Reginae perrectum," xxvii. 37). There are some difficulties connected with the question of this gate, from its being mentioned in conjunction with the Pons Sublicius; but there will be occasion to discuss the situation of that bridge in a separate section; and we shall only remark here that the narratives alluded to seem to show that it was at no great distance from the gate. It is probable that the latter derived its name from its having three Jani or archways.

A little beyond the Porta Trigemina most topographers have placed a PORTA NAVALIS, which is mentioned only once, namely, by P. Diaconus in the following passage: "Navalis Porta a vicinia Navalium dicta" (p. 179, Müll.), where we are told that it derived its name from the vicinity of the government dockyards. It has been assumed that these docks lay to the S. of the Aventine, in the plain where *Monte Testaccio* stands: but Becker has the merit of having shown, as will appear in its proper place, that they were in the Campus Martius. There was, however, a kind of emporium or merchant dock, between the Aventine and Tiber, and, as this must have occasioned considerable traffic, it is probable that there was a gate leading to it somewhere on the W. side of the hill, perhaps near the *Priorato*, where there seems to have been an ascent, but whether it was called Porta Navalis it is impossible to say. The writer of this article is informed by a gentleman well acquainted with the subject, that traces of the Servian wall have very recently been discovered at the NW. side of the Aventine, below *S. Sabina* and *S. Alessio*.

The line of wall from this point to the Caelian hill cannot be determined with any certainty. Round the Aventine itself it doubtless followed the configuration of the hill; but its course from the S. point of the Aventine has been variously laid down. Hence the question arises whether it included the nameless height on which the churches of *S. Sabina*

and *S. Saba* now stand. It seems probable that it must, at all events, have included a considerable portion of it, since, had it proceeded along the valley, it would have been commanded by the hill; and indeed the most natural supposition is that it enclosed the whole, since the more extended line it would thus have described affords room for the several gates which we find mentioned between the Porta Trigemina and the Porta Capena near the foot of the Caelian.

Among these we must, perhaps, assume a PORTA MINUCIA or MINUTIA, which is twice mentioned by Paulus (pp. 122, 147), and whose name, he says, was derived from an ara or sacellum of Minucius, whom the Romans held to be a god. We hear nowhere else of such a Roman deity; but we learn from Pliny (xviii. 4) that a certain tribune of the people, named Minutius Augurinus, had a statue erected to him, by public subscription, beyond the Porta Trigemina, for having reduced the price of corn. This occurred at an early period, since the same story is narrated by Livy (iv. 13—16) B. C. 436, with the additional information that it was Minutius who procured the condemnation of the great corn monopoliser, Maelius, and that the statue alluded to was a gilt bull. It is possible therefore that the gate may have been named after him; and that from the extraordinary honours paid to him, he may have come in process of time to be vulgarly mistaken for a deity. If there is any truth in this view, the gate may be placed somewhere on the S. side of the Aventine.

In the mutilated fragment which we possess of Varro's description of the Roman gates (*L.L.* v. § 163, Müll.) he closes it by mentioning three, which it is impossible to place anywhere except in the line of wall between the Aventine and Caelian. He had been speaking of a place inhabited by Ennius, who lived on the Aventine (Hieron. *Chron.* 134, vol. i. p. 369, Ronc.), and then mentions consecutively a PORTA NAEVIA, PORTA RAUDUSCULA, and PORTA LAVERNALIS. He must therefore be enumerating the gates in the order from W. to E., since it would be impossible to find room for three more gates, besides those already mentioned, on the Aventine. The P. Naevia, therefore, probably lay in the valley between that hill and the adjoining height to the E. It could not have been situated on the Aventine itself, since the *Basis Capitolina*, mentions in the 12th Regio, or Piscina Publica, a vicus Porta Naevia, as well as another of Porta Rauduscula. But the exact position of the latter gate, as well as of the Porta Lavernalis, it is impossible to determine further than that they lay in the line of wall between the Aventine and Caelian.

After so much uncertainty it is refreshing to arrive at last at a gate whose site may be accurately fixed. The PORTA CAPENA lay at the foot of the Caelian hill, at a short distance W. of the spot where the Via Latina diverged from the Via Appia. The latter road issued from the P. Capena, and the discovery of the first milestone upon it, in a vineyard a short distance outside of the modern *Porta di S. Sebastiano*, has enabled the topographer accurately to determine its site to be at a spot now marked by a post with the letters P. C., 300 yards beyond the *Via S. Gregorio*, and 1480 within the modern gate. That it was seated in the valley, appears from the fact that the Rivus Herculaneus, probably a branch of the Aqua Marcia, passed over it; which we are expressly told, lay too low to supply the Caelian hill. (Front. *Aq.* 18.) Hence Juvenal (iii. 11):—

"Substitit ad veteres arcus madidamque Capenam,"

where we learn from the Scholia that the gate, which in later times must have lain a good way within the town, was called "Arcus Stillans." So Martial (iii. 47).:—

"Capena grandi porta qua pluit gutta."

A little way beyond this gate, on the Via Appia, between its point of separation from the Via Latina and the *P. S. Sebastiano*, there still exists one of the most interesting of the Roman monuments — the tomb of the Scipios, the site of which is marked by a solitary cypress.

From the Porta Capena the wall must have ascended the Caelian hill, and skirted its southern side; but the exact line which it described in its progress towards the agger can only be conjectured. Becker (*Handb.* p. 167), following Piale and Bunsen, draws the line near the *Ospedale di S. Giovanni*, thus excluding that part of the hill on which the Lateran is situated, although, as Canina observes (*Indicazione*, p. 36), this is the highest part of the hill. There was perhaps a gate at the bottom of the present *Piazza di Navicella*, but we do not know its name; and the next gate respecting which there is any certainty is the PORTA CAELIMONTANA. Bunsen (*Beschr.* i. p. 638) and Becker, in conformity with their line of wall, place it by the hospital of *S. Giovanni*, now approached by the *Via S. S. Quattro Coronati*, the ancient street called Caput Africae. The PORTA QUERQUETULANA, if it was really a distinct gate and not another name for the Caelimontana, must have stood a little to the N. of the latter, near the church of *S. S. Pietro e Marcellino*, in the valley which separates the Caelian from the Esquiline. This gate, which was also called Querquetularia, is several times mentioned, but without any more exact definition. (Plin. xvi. 15; Festus, p. 261.) The Caelian hill itself, as we have before remarked, was anciently called Querquetulanus. From this point the wall must have run northwards in a tolerably direct line till it joined the southern extremity of the agger, where the PORTA ESQUILINA was situated, between which and the Querquetulana there does not appear to have been any other gate. The Esquilina, like the others on the agger, is among the most certain of the Roman gates. We learn from Strabo (v. p. 237) that the Via Labicana proceeded from it; whilst at a little distance the Praenestina branched off from the Labicana. It must therefore have lain near the church of *S. Vito* and the still existing arch of Gallienus; but its exact site is connected with the question respecting the gates in the Aurelian wall which corresponded with it, and cannot therefore at present be determined. The site of the PORTA COLLINA, the point from which we started, is determined by the fact mentioned by Strabo (*Ib.* p. 228) that both the Via Salaria and Via Nomentana started from it; and it must consequently have stood near the northern corner of the baths of Diocletian at the commencement of the present *Via del Macao*. We learn from Paulus Diaconus (p. 10) that this gate was also called Agonensis and Quirinalis. Agonus, as we have said, was the ancient name of the Quirinal hill.

The Porta Collina, then, and the Porta Esquilina were seated at the northern and southern extremities

of the agger. But besides these, Strabo (*Ib.* p. 234) mentions another lying between them, the PORTA VIMINALIS; which is also recorded by Festus (p.376) and by Frontinus (*Aq.* 19). It must have lain behind the SE. angle of the baths of Diocletian, where an ancient road leads to the rampart, which, if prolonged, would run to the PORTA CLAUSA of the walls of Aurelian, just under the southern side of the Castra Praetoria. It is clear from the words of Strabo, in the passage just cited (ὑπὸ μέσῳ δὲ τῷ χώματι τρίτη ἐστὶ πύλη ὁμώνυμος τῷ Οὐϊμιναλίῳ λόφῳ), that there were only three gates in the agger, though some topographers have contrived to find room for two or three more in this short space, the whole length of the agger being but 6 or 7 stadia (Strab. *l. c.*; Dionys. ix. 68), or about ¾ of a mile. Its breadth was 50 feet, and below it lay a ditch 100 feet broad and 30 feet deep. Remains of this immense work are still visible near the baths of Diocletian and in the grounds of the *Villa Negroni*, especially at the spot where the statue of Roma now stands.

Survey under Vespasian and Circumference of the City.—In the preceding account of the gates in the Servian wall we have enumerated twenty, including the Porta Triumphalis. Some topographers have adopted a still greater number. When we consider that there were only nine or ten main roads leading out of ancient Rome, and that seven of these issued from the three gates Capena, Esquilina, and Collina alone, it follows that five or six gates would have sufficed for the main entrances, and that the remainder must have been unimportant ones, destined only to afford the means of convenient communication with the surrounding country. Of those enumerated only the Collina, Viminalis, Esquilina, Caelimontana, Capena, Trigemina, Carmentalis, and Ratumena seem to have been of any great importance. Nevertheless it appears from a passage in Pliny (iii. 9) that in his time there must have been a great number of smaller ones, the origin and use of which we shall endeavour to account for presently. As the passage, though unfortunately somewhat obscure, is of considerable importance in Roman topography, we shall here quote it at length: "Urbem tres portas habentem Romulus reliquit, aut (ut plurimas tradentibus credamus) quatuor. Moenia ejus collegere ambitu Imperatoribus Censoribusque Vespasianis anno conditae DCCCXXVII. pass. XIIIM.CC. Complexa montes septem, ipsa dividitur in regiones quatuordecim, compita Larium CCLXV. Ejusdem spatium, mensura currente a milliario in capite Romani fori statuto, ad singulas portas, quae sunt hodie numero triginta septem, ita ut duodecim semel numerentur, praetereanturque ex veteribus septem, quae esse desierunt, efficit passuum per directum XXXM.DCCLXV. Ad extrema vero tectorum cum castris Praetoriis ab eodem milliario per vicos omnium viarum mensura colligit paulo amplius septuaginta millia passuum." Now there seems to be no reason for doubting the correctness of this account. Pliny could have had no reason for exaggeration, against which, in the account of the Romulean gates, he carefully guards himself. Again, he seems to have taken the substance of it from the official report of a regular survey made in his own time and in the reign of Vespasian. The only room for suspicion therefore seems to be that his text may have been corrupted, and that instead of thirty-seven as the number of the gates we should insert some smaller one. But an examination of his figures does not tend to show that they are incorrect. The survey seems to have been made with a view to the three following objects: 1. To ascertain the actual circumference of the city, including all the suburbs which had spread beyond the walls of Servius. It is well known that *moenia* signifies the buildings of a city as well as the walls ("muro moenia amplexus est," Flor. i. 4, &c.), and therefore this phrase, which has sometimes caused embarrassment, need not detain us. Now the result of this first measurement gave 13,200 *passus*, or 13⅕ Roman miles—a number to which there is nothing to object, as it very well agrees with the circumference of the subsequent Aurelian walls. 2. The second object seems to have been to ascertain the actual measure of the line of street within the old Servian walls. The utility of this proceeding we do not immediately recognise. It may have been adopted out of mere curiosity; or more probably it may have been connected with questions respecting certain privileges, or certain taxes, which varied according as a house was situated within or without the walls. Now the sum of the measurements of all these streets, when put together as if they had formed a straight line ("per directum"), amounted to 30,765 *passus*, or 30 Roman miles and about ¾. Such we take to be the meaning of "per directum;" though some critics hold it to mean that the distance from the milliarium to these gates was measured in a straight line, as the crow flies, without taking into the calculation the windings of the streets. But in that case it would surely have been put earlier in the sentence —"mensura currente per directum ad singulas portas." This, however, would have been of little consequence except for the distinction drawn by Becker (*Handb.* p. 185, note 279), who thinks that the measurement proceeds on two different principles, namely *per directum*, or as the crow flies, from the milliarium to the Servian gates, and, on the contrary, by all the windings of the streets from the same spot to the furthest buildings outside the walls. Such a method, as he observes, would afford no true ground of comparison, and therefore we can hardly think that it was adopted, or that such was Pliny's meaning. Becker was led to this conclusion because he thought that "per vicos omnium viarum" stands contrasted with "per directum;" but this contrast does not seem necessarily to follow. By *viae* here Pliny seems to mean all the roads leading out of the thirty-seven gates; and by "ad extrema tectorum per vicos omnium viarum" is signified merely that the measure was further extended to the end of the streets which lined the commencements of these roads. Such appears to us to be the meaning of this certainly somewhat obscure passage. Pliny's account may be checked, roughly indeed, but still with a sufficient approach to accuracy to guarantee the correctness of his text. If a circumference of 13⅕ miles yielded 70 miles of street, and if there were 30 miles of street within the Servian walls, then the circumference of the latter would be to the former as 3 to 7, and would measure rather more than 5⅗ miles. Now this agrees pretty well with the accounts which we have of the size of the Servian city. Becker, following the account of Thucydides (ii. 13), but without allowing for that part of the walls of Athens described as unguarded, with the whole circuit of which walls Dionysius (iv. 13, and ix. 68) compares those of ancient Rome, sets the latter down at 43 stadia, or 5⅜ miles. On Nolli's great plan of Rome they are given at a mea-

surement equal to 10,230 English yards (Burgess, *Topography and Antiquities of Rome*, vol. i. p. 458), which agrees as nearly as possible with the number above given of 5¾ miles. Nibby, who made a laborious but perhaps not very accurate attempt to ascertain the point by walking round the presumed line of the ancient walls, arrived at a considerably larger result, or nearly 8 miles. (*Mura, &c.* p. 90.)

False and doubtful Gates. — But our present business is with the gates of the Servian town; and it would really appear that in the time of Vespasian there were no fewer than thirty-seven outlets from the ancient walls. The seven old gates to which Pliny alludes as having ceased to exist, may possibly have included those of the old Romulean city and also some in the Servian walls, which had been closed. In order to account for the large number recorded by Pliny, we must figure to ourselves what would be the natural progress of a city surrounded with a strong wall like that of Servius, whose population was beginning to outgrow the accommodation afforded within it. At first perhaps houses would be built at the sides of the roads issuing from the main gates; but, as at Rome these sites were often appropriated for sepulchres, the accommodation thus afforded would be limited. In process of time, the use of the wall becoming every day more obsolete, fresh gates would be pierced, corresponding with the line of streets inside, which would be continued by a line of road outside, on which houses would be erected. Gradually the walls themselves began to disappear; but the openings that had been pierced were still recorded, as marking, for fiscal or other purposes, the boundary of the city wards. Hence, though Augustus had divided the city and suburbs into fourteen new Regions, we find the ancient boundary marked by these gates still recorded and measured in the time of Vespasian; and indeed it seems to have been kept up for a long while afterwards, since we find the same number of thirty-seven gates recorded both in the *Notitia* and *Curiosum*.

Hence we would not tamper with the text of Pliny, as Nibby has done with very unfortunate success (*Mura, &c.* p. 213, seq.) — a remedy that should never be resorted to except in cases of the last necessity. Pliny's statement may be regarded as wholly without influence with respect to the *original* Servian gates, the number of which we should rather be inclined to reduce than to increase. We find, indeed, more names mentioned than those enumerated, but some of them were ancient or obsolete names; and, again, we must remember that "porta" does not always signify a city gate. Of the former kind was the PORTA AGONENSIS, which, as we learn from Paulus Diaconus (p. 10), was another appellation for the Porta Collina. The same author (p. 255) also mentions a PORTA QUIRINALIS as a substantive gate; though possibly, like Agonensis, it was only a duplicate name for one of the gates on the Quirinal. The term "porta" was applied to any arched thoroughfare, and sometimes perhaps to the arch of an aqueduct when it spanned a street in the line of wall; in which case it was built in a superior manner, and had usually an inscription. Among internal thoroughfares called "portae" were the STERCORARIA on the Clivus Capitolinus, the LIBITINENSIS in the amphitheatre, the FENESTELLA, mentioned by Ovid (*Fast.* vi. 569) as that by which Fortuna visited Numa, &c. The last of these formed the entrance to Numa's regia, as we learn from Plutarch (*de Fort. Rom.* 10). Among the arches of aqueducts to which the name of gate was applied, may perhaps be ranked that alluded to by Martial (iv. 18): —

"Qua vicina pluit Vipsanis porta columnis," &c.

Respecting the gates called FERENTINA and PIACULARIS we have before offered a conjecture. [See p. 728.] The PORTA METIA rests solely on a false reading of Plautus. (*Cas.* ii. 6. 2, *Pseud.* i. 3. 97.) On the other hand, a PORTA CATULARIA seems to have really existed, which is mentioned by Paulus Diaconus (p. 45; cf. Festus, p. 285) in connection with certain sacrifices of red-coloured dogs. This must be the sacrifice alluded to by Ovid (*Fast.* iv. 905), in which the entrails of a dog were offered by the flamen in the Lucus Robiginis. It is also mentioned in the *Fasti Praenestini*, vii. Kal. Mai, which date agrees with Ovid's: "Feriae Robigo Via Claudia, ad miliarium v., ne robigo frumentis noceat." But this is at variance first, with Ovid, who was returning to Rome by the Via Nomentana, not the Via Claudia, and, secondly, with itself, since the Via Claudia did not branch off from the Via Flaminia till the 10th milestone, and, consequently, no sacrifice could be performed on it at a distance of 5 miles from Rome. However this discrepancy is to be reconciled, it can hardly be supposed that one of the Roman gates derived its name from a trifling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to sacerdotal customs, as seems to have been sometimes the case, and in the present instance to denote the gate leading to the spot where the annual rite was performed. Paulus Diaconus also mentions (p. 37) a PORTA COLLATINA, which he affirms to have been so called after the city of Collatia, near Rome. But when we reflect that both the Via Tiburtina and the Via Praenestina issued from the Porta Esquilina, and that a road to Collatia must have run between them, the impossibility of a substantive Porta Collatina is at once apparent. The DUODECIM PORTAE are placed by Bunsen (*Beschr.* i. p. 633) in the wall of the Circus Maximus; but as it appears from Pliny (*l. c.*) that they stood on the ancient line of wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not see the force of Piale's celebrated discovery that the Duodecim Portae must have been *a place* at Rome, because Julius Obsequens says that a mule brought forth there; which it might very well have done at one of the gates. Becker's opinion (*Handb.* p. 180) that it was an arch, or arches, of the Aqua Appia seems as unfounded as that of Bunsen (vide Preller, *Regionen*, p. 193). It is mentioned by the *Notitia* in the 11th Regio, and therefore probably stood somewhere near the Aventine; but its exact site cannot be determined. It seems probable, as Preller remarks, that it may have derived its name from being a complex of twelve arched thoroughfares like the 'Εννεάπυλον of the Pelasgicon at Athens.

Transtiberine Wall. — Ancus Marcius, as we have related, fortified the JANICULUM, or hill on the right bank of the Tiber commanding the city. Some have concluded from Livy (i. 33: "Janiculum quoque adjectum, non inopia locorum, sed ne quando ea arx hostium esset. Id non muro solum, sed etiam ob commoditatem itineris ponte Sublicio tum primum in Tiberi facto conjungi urbi

placuit"), that a wall was built from the fortress on the top of the hill down to the river, but the construction of *conjungi* in this passage may be a zeugma. It seems strange that Ancus should have built a wall on the *right* bank of the Tiber when there was yet none on the *left* bank; and it is remarkable that Dionysius (iii. 45), in describing the fortification of the Janiculum, makes no mention of a wall, nor do we hear of any gates on this side except that of the fortress itself. The existence of a wall, moreover, seems hardly consistent with the accounts which we have already given from the same author of the defenceless state of the city on that side. Niebuhr (*Hist.* i. p. 396) rejected the notion of a wall, as utterly erroneous, but unfortunately neglected to give the proofs by which he had arrived at this conclusion. The passage from Appian (Κλαύδιον δ' Ἄππιον χιλίαρχον τειχοφυλακοῦντα τῆς Ῥώμης τὸν λόφον τὸν καλούμενον Ἰάνουκλον εὖ ποτε παθόντα ὑφ' ἑαυτοῦ τῆς εὐεργεσίας ἀναμνήσας ὁ Μάριος, ἐς τὴν πόλιν ἐσῆλθεν, ὑπανοιχθείσης αὐτῷ πύλης, *B. C.* i. 68) which Becker (p. 182, note) seems to regard as decisive proves little or nothing for the earlier periods of the city; and, even had there been a wall, the passing it would not have afforded an entrance into the city, properly so called.

II. Walls and Gates of Aurelian and Honorius.

In the repairs of the wall by Honorius all the gates of Aurelian vanished; hence it is impossible to say with confidence that any part of Aurelian's wall remains; and we must consider it as represented by that of Honorius. Procopius (*B. G.* iii. 24) asserts that Totila destroyed all the gates; but this is disproved by the inscriptions still existing over the *Porta S. Lorenzo*, as well as over the closed arch of the *Porta Maggiore;* and till the time of Pope Urban VIII. the same inscription might be read over the Ostiensis (*P. S. Paolo*) and the ancient Portuensis. It can hardly be imagined that these inscriptions should have been preserved over restored gates. The only notice respecting any of the gates of Aurelian on which we can confidently rely is the account given by Ammianus Marcellinus (xvii. 4. § 14) of the carrying of the Egyptian obelisk, which Constantius II. erected in the Circus Maximus, through the Porta Ostiensis. It may be assumed, however, that their situation was not altered in the new works of Honorius. By far the greater part of these gates exist at the present day, though some of them are now walled up, and in most cases the ancient name has been changed for a modern one. Hence the problem is not so much to discover the sites of the ancient gates as the ancient names of those still existing; and these do not admit of much doubt, with the exception of the gates on the eastern side of the city.

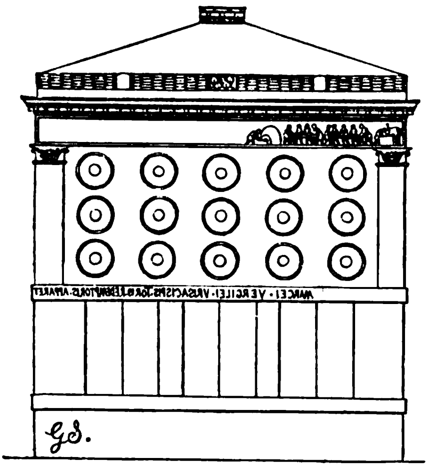
Procopius, the principal authority respecting the gates in the Aurelian (or Honorian) wall, enumerates 14 principal ones, or πύλαι, and mentions some smaller ones by the name of πυλίδες (*B. G.* i. 19). The distinction, however, between these two appellations is not very clear. To judge from their present appearance, it was not determined by the size of the gates; and we find the Pinciana indifferently called πυλίς and πύλη. (Urlichs, *Class. Mus.* vol. iii. p. 196.) The conjecture of Nibby (*Mura*, &c. p. 317) may perhaps be correct, that the πύλαι were probably those which led to the great highways. The unknown writer called the Anonymus Einsiedlensis, who flourished about the beginning of the ninth century, also mentions 14 gates, and includes the Pinciana among them; but his account is not clear.

Unlike Servius, Aurelian did not consider the Tiber a sufficient protection: and his walls were extended along its banks from places opposite to the spots where the walls which he built from the Janiculum began on the further shore. The wall which skirted the Campus Martius is considered to have commenced not far from the *Palazzo Farnese*, from remains of walls on the right bank, supposed to have belonged to those of the Janiculum; but all traces of walls on the left bank have vanished beneath the buildings of the new town. It would appear that the walls on the right and left banks were connected by means of a bridge on the site of the present *Ponte Sisto* — which thus contributed to form part of the defences; since the arches being secured by means of chains drawn before them, or by other contrivances, would prevent an enemy from passing through them in boats into the interior of the city: and it is in this manner that Procopius describes Belisarius as warding off the attacks of the Goths (*B. G.* i. 19).

From this point, along the whole extent of the Campus Martius, and as far as the Porta Flaminia, the walls appear, with the exception of some small posterns mentioned by the Anonymous of Einsiedlen to have had only one gate, which is repeatedly mentioned by Procopius under the name of Porta Aurelia (*B. G.* i. c. 19, 22, 28); though he seems to have been acquainted with its later name of Porta Sti Petri, by which it is called by the Anonymous (*Ib.* iii. 36). It stood on the left bank, opposite to the entrance of the Pons Aelius (*Ponte di S. Angelo*), leading to the mausoleum of Hadrian. The name of Aurelia is found only in Procopius, and is somewhat puzzling, since there was another gate of the same name in the Janiculum, spanning the Via Aurelia, which, however, is called by Procopius (*Ib.* i. 18) by its modern name of Pancratiana; whilst on the other hand the Anonymous appears strangely enough to know it only by its ancient appellation of Aurelia. The gate by the bridge, of which no trace now remains, may possibly have derived its name from a Nova Via Aurelia (Gruter, *Inscr.* cccclvii. 6), which passed through it; but there is a sort of mystery hanging over it which it is not easy to clear up. (Becker, *Handb.* p. 196, and note.)

The next gate, proceeding northwards, was the Porta Flaminia, which stood a little to the east of the present *Porta del Popolo*, erected by Pope Pius IV. in 1561. The ancient gate probably stood on the declivity of the Pincian (ἐν χώρῳ κρημνώδει, Procop. *B. G.* i. 23), as the Goths did not attack it from its being difficult of access. Yet Anastasius (*Vit. Gregor. II.*) describes it as exposed to inundations of the Tiber; whence Nibby (*Mura*, &c. p. 304) conjectures that its site was altered between the time of Procopius and Anastasius, that is, between the sixth and ninth centuries. Nay, in a great inundation which happened towards the end of the eighth century, in the pontificate of Adrian I., the gate was carried away by the flood, which bore it as far as the arch of M. Aurelius, then called *Tres Faccicellae*, and situated in the Via Flaminia, where the street called *della Vite* now runs into the *Corso*. (*Ib*). The gate appears to have retained its ancient name of Flaminia as late as the 15th century, as appears from a life of Martin V. in Muratori (*Script. Rer. Ital.* t. iii. pt. ii. col.

864). When it obtained its present name cannot be determined; its ancient one was undoubtedly derived from the Via Flaminia, which it spanned In the time of Procopius, and indeed long before, the wall to the east had bent outwards from the effects of the pressure of the Pincian hill, whence it was called *murus fractus* or *inclinatus*, just as it is now called *muro torto*. (Procop. *B. G.* i. 23.)



The next gate, proceeding always to the right, was the PORTA PINCIANA, before mentioned, which was already walled up in the time of the Anonymous of Einsiedlen. It of course derived its name from the hill on which it stood. Belisarius had a house near this gate (Anastas. *Silverio*, pp. 104, 106); and either from this circumstance, or from the exploits performed before it by Belisarius, it is supposed to have been also called *Belisaria*, a name which actually occurs in one or two passages of Procopius (*B. G.* i. 18, 22; cf. Nibby, *Mura, &c.* p. 248). But the Salaria seems to have a better claim to this second appellation as the gate which Belisarius himself defended; though it is more probable that there was no such name at all, and that Βελισαρία in the passages cited is only a corruption of Σαλαρία. (Becker, *de Muris*, p. 115; Urlichs in *Class. Mus.* vol. iii. p. 196.)

Respecting the two gates lying between the Porta Pinciana and the Praetorian camp there can be no doubt, as they stood over, and derived their names from, the Via Salaria and Via Nomentana. In earlier times both these roads issued from the Porta Collina of the Servian wall; but their divergence of course rendered two gates necessary in a wall drawn with a longer radius. The PORTA SALARIA still subsists with the same name, although it has undergone a restoration. Pius IV. destroyed the PORTA NOMENTANA, and built in its stead the present *Porta Pia*. The inscription on the latter testifies the destruction of the ancient gate, the place of which is marked with a tablet bearing the date of 1564. A little to the SE. of this gate are the walls of the Castra Praetoria, projecting considerably beyond the rest of the line, as Aurelian included the camp in his fortification. The PORTA DECUMANA, though walled up, is still visible, as well as the PRINCIPALES on the sides.

The gates on the eastern tract of the Aurelian walls have occasioned considerable perplexity. On this side of the city four roads are mentioned, the Tiburtina, Collatina, Praenestina, and Labicana, and two gates, the PORTA TIBURTINA and PRAENESTINA. But besides these gates, which are commonly thought to correspond with the modern ones of *S. Lorenzo* and *Porta Maggiore*, there is a gate close to the Praetorian camp, about the size of the Pinciana, and resembling the Honorian gates in its architecture, which has been walled up from time immemorial, and is hence called PORTA CLAUSA, or *Porta Chiusa*. The difficulty lies in determining which were the ancient Tiburtina and Praenestina. The whole question has been so lucidly stated by Mr. Bunbury that we cannot do better than borrow his words: "It has been generally assumed that the two gates known in modern times as the *Porta S. Lorenzo* and the *Porta Maggiore* are the same as were originally called respectively the Porta Tiburtina and Praenestina, and that the roads bearing the same appellations led from them directly to the important towns from which they derived their name. It is admitted on all hands that they appear under these names in the *Anonymus;* and a comparison of two passages of Procopius (*B. G.* i. 19, *Ib.* p. 96) would appear to lead us to the same result. In the former of these Procopius speaks of the part of the city attacked by the Goths as comprising *five* gates (πύλαι), and extending from the Flaminian to the Praenestine. That he did not reckon the Pinciana as one of these seems probable, from the care with which, in the second passage referred to, he distinguishes it as a πυλίς, or minor gate. Supposing the closed gate near the Praetorian camp to have been omitted for the same reason, we have just the five required, viz., Flaminia, Salaria, Nomentana, Tiburtina (*Porta S. Lorenzo*), and Praenestina (*Maggiore*). On this supposition both these ancient ways (the Tiburtina and Praenestina) must have issued originally from the Esquiline gate of the Servian walls. Now we know positively from Strabo that the Via Praenestina did so, as did also a third road, the Via Labicana, which led to the town of that name, and afterwards rejoined the Via Latina at the station called Ad Pictas (v. p. 237). Strabo, on the other hand, does not mention from what gate the road to Tibur issued in his time. Niebuhr has therefore followed Fabretti and Piale in assuming that the latter originally proceeded from the Porta Viminalis, which, as we have seen, stood in the middle of the agger of Servius, and that it passed through the walls of Aurelian by means of a gate now blocked up, but still extant, just at the angle where those walls join on to the Castra Praetoria. . . . . . .
Assuming this to have been the original Tiburtina, Niebuhr (followed by MM. Bunsen and Urlichs) considers the *Porta S. Lorenzo* to have been the Praenestina, and the *Porta Maggiore* to have been the Labicana; but that when the gate adjoining the Praetorian camp was blocked up, the road to *Tivoli* was transferred to the *Porta S. Lorenzo*, and that to Praeneste to the gate next in order, which thus acquired the name of Praenestina instead of its former one of Labicana (*Beschreibung*, i. p. 657, seq). To this suggestion there appear to be two principal objections brought forward by M. Becker, neither of which M. Urlichs has answered: the first, that, supposing the Via Tiburtina to have been so transferred, which taken alone might be probable enough, there is no apparent reason why the Via Praenestina should have been also shifted, instead of the two thenceforth issuing together from the same gate, and diverging immediately afterwards; and secondly, that there is no authority for the existence of such a *gate* called the Labicana at all. The passage of Strabo, already cited, concerning the *Via* Labicana, certainly seems to imply that that road in his time separated from the Praenestina immediately after leaving the Esquiline gate; but there is no improbability in the suggestion of M. Becker, that its course was altered at the time of the construction of the new walls, whether under Aurelian or Honorius, in order to avoid an unnecessary increase of the number of gates. Many such changes in the direction of the principal roads may have taken place at that time, of which we have no account, and on which it is impossible to speculate. Westphal, in his *Römische Campagne* (p. 78), has adopted nearly the same view of the case: but he considers the Via Labicana to have originally had a gate assigned to it, which was afterwards walled up, and the road carried out of the same gate with the Via Praenestina. The only real difficulty in the ordinary view of the subject, supported by M. Becker, appears to

be that, if the Via Tiburtina always issued from the *Porta S. Lorenzo*, we have no road to assign to the now closed gate adjoining the Praetorian camp, nor yet to the Porta Viminalis of the Servian walls, a circumstance certainly remarkable, as it seems unlikely that such an opening should have been made in the agger without absolute necessity. On the other hand, the absence of all mention of that gate prior to the time of Strabo would lead one to suspect that it was not one of the principal outlets of the city; and a passage from Ovid, quoted by M. Becker, certainly affords some presumption that the road from Tibur, in ancient times, actually entered the city by the Porta Esquilina (*Fast.* v. 684). This is, in fact, the most important, perhaps the only important, point of the question: for if the change in the names had already taken place as early as the time of Procopius, which Niebuhr himself seems disposed to acknowledge, it is hardly worth while to inquire whether the gates had borne the same appellations during the short interval from Honorius to Justinian" (*Class. Mus.* vol. iii. p. 369, seq.).

The Porta Tiburtina (*S. Lorenzo*) is built near an arch of the Aquae Marcia, Tepula, and Julia, which here flow over one another in three different canals. The arch of the gate corresponds with that of the aqueduct, but the latter is encumbered with rubbish, and therefore appears very low, whilst the gate is built on the rubbish itself. As the inscription on it appeared on several of the other gates, we shall here insert it: *S.P.Q.R. Impp. DD. NN. invictissimis principibus Arcadio et Honorio victoribus et triumphatoribus semper Augg. ob instauratos urbis aeternae muros portas ac turres egestis immensis ruderibus ex suggestione V.C. et inlustris comitis et magistri utriusque militiae Fl. Stilichonis ad perpetuitatem nominis eorum simulacra constituit curante Fl. Macrobio Longiniano V.C Praef. Urbi D. N. M. Q. eorum.* In like manner the magnificent double arch of the Aqua Claudia and Anio Novus, which flow over it, was converted into the Porta Praenestina (*Maggiore*). The right arch, from the city side, is walled up, and concealed on the outside by the Honorian wall. Just beyond the gate is the curious tomb of Eurysaces, the baker, sculptured with the instruments of his trade, which was brought to light in 1838, by the pulling down of a tower which had been built over it in the middle ages. Over the closed Honorian arch was the same inscription as over the Porta Tiburtina. On the aqueduct are three inscriptions, which name Claudius as its builder, and Vespasian and Titus as its restorers. The gate had several names in the middle ages.

TOMB OF EURYSACES.

Hence the wall follows for some distance the line of the Aqua Claudia, till it reaches its easternmost point; when, turning to the S. and W., and embracing the curve of what is commonly called the Amphitheatrum Castrense, it reaches the ancient PORTA ASINARIA, now replaced by the *Porta di S. Giovanni*, built a little to the E. of it in 1574, by Pope Gregory XIII. It derived its name from spanning the Via Asinaria (Festus, p. 282, Müll.), and is frequently mentioned by Procopius. (*B. G.* i. 14, iii. 20, &c.) In the middle ages it was called Lateranensis from the neighbouring palace of the Lateran.

After this gate we find another mentioned, which has entirely vanished. The earliest notice of it appears in an epistle of Gregory the Great (ix. 69), by whom it is called PORTA METRONIS; whilst by Martinus Polonus it is styled Porta Metroni or Metronii, and by the Anonymous, Metrovia. (Nibby, *Mura, &c.* p. 365.) It was probably at or near the point where the *Marrana* (Aqua Crabra) now flows into the town. (Nibby, *l. c.*; Piale, *Porte Merid.* p. 11.)

The two next gates were the PORTA LATINA and PORTA APPIA, standing over the roads of those names, which, as we have before said, diverged from one another at a little distance outside the Porta Capena, for which, therefore, these gates were substitutes. The Porta Latina is now walled up, and the road to Tusculum (*Frascati*) leads out of the *Porta S. Giovanni* The Porta Appia, which still retained its name during the middle ages, but is now called *Porta di S. Sebastiano*, from the church situated outside of it, is one of the most considerable of the gates, from the height of its towers, though the arch is not of fine proportions. Nibby considers it to be posterior to the Gothic War, and of Byzantine architecture, from the Greek inscriptions and the Greek cross on the key-stone of the arch. (*Mura, &c.* p. 370.) A little within it stands the so-called arch of Drusus.

A little farther in the line of wall to the W. stands an arched gate of brick, ornamented with half columns, and having a heavy architrave. The Via Ardeatina (Fest. p. 282, Müll.) proceeded through it, which issued from the Porta Raudusculana of the Servian walls. (Nibby, p. 201, seq.) We do not find this gate named in any author, and it was probably walled up at a very early period. The last gate on this side is the PORTA OSTIENSIS, now called *Porta di S. Paolo*, from the celebrated basilica about a mile outside of it, now in course of reconstruction in the most splendid manner. The ancient name is mentioned by Ammianus Marcellinus (xvii. 4), but that of S. Pauli appears as early as the sixth century. (Procop. *B. G.* iii. 36.) It had two arches, of which the second, though walled up, is still visible from the side of the town, though hidden from without by a tower built before it. Close to it is the pyramid, or tomb, of Cestius, one of the few monuments of the Republic. It is built into the wall. From this point the walls ran to the river, inclosing *Monte Testaccio*, and then northwards along its

banks, till they reached the point opposite to the walls of the Janiculum. Of this last portion only a few fragments are now visible.

On the other side of the Tiber only a few traces of the ancient wall remain, which extended lower down the stream than the modern one. Not far from the river lay the PORTA PORTUENSIS, which Urban VIII. destroyed in order to build the present *Porta Portese*. This gate, like the Ostiensis and Praenestina, had two arches, and the same inscription as that over the Tiburtina. From this point the wall proceeded to the height of the Janiculum, where stood the PORTA AURELIA, so named after the Via Aurelia (vetus) which issued from it. We have already mentioned that its modern name (*Porta di S. Pancrazio*) was in use as early as the time of Procopius; yet the ancient one is found in the Anonymous of Einsiedlen, and even in the *Liber de Mirabilibus*. The walls then again descended in a NE. direction to the river, to the point opposite to that whence we commenced this description, or between the *Farnese Palace* and *Ponte Sisto*. It is singular that we do not find any gate mentioned in this portion of wall, and we can hardly conceive that there should have been no exit towards the Vatican. Yet neither Procopius (*B. G.* i. 19, 23) nor the writers of the middle ages recognise any. We find, indeed, a Transtiberine gate mentioned by Spartianus (*Sever.* 19) as built by Septimius Severus, and named after him (Septimiana); but it is plain that this could not have been, originally at least, a city gate, as there were no walls at this part in the time of Severus. Becker conjectures (*de Muris*, p. 129, *Handb.* p. 214) that it was an archway belonging to some building erected by Severus, and that it was subsequently built into the wall by Aurelius or Honorius; of the probability of which conjecture, seeing that it is never once mentioned by any author, the reader must judge.

III. THE CAPITOL.

In attempting to describe this prominent feature in the topography of Rome, we are arrested on the threshold by a dispute respecting it which has long prevailed and still continues to prevail, and upon which, before proceeding any further, it will be necessary to declare our opinion. We have before described the Capitoline hill as presenting three natural divisions, namely, two summits, one at its NE. and the other at its SW. extremity, with a depression between them, thus forming what is commonly called a saddle-back hill. Now the point in dispute is, which of these summits was the Capitol, and which the Arx? The unfortunate ambiguity with which these terms are used by the ancient writers, will, it is to be feared, prevent the possibility of ever arriving at any complete and satisfactory solution of the question. Hence the conflicting opinions which have prevailed upon the subject, and which have given rise to two different schools of topographers, generally characterised at present as the German and the Italian school. There is, indeed, a third class of writers, who hold that both the Capitol and Arx occupied the same, or SW. summit; but this evidently absurd theory has now so few adherents that it will not be necessary to examine it. The most conspicuous scholars of the German school are Niebuhr, and his followers Bunsen, Becker, Preller, and others; and these hold that the temple of Jupiter Capitolinus was seated on the SW. summit of the hill. The Italian view, which is directly contrary to this, was first brought into vogue by Nardini in the last century, and has since been held by most Italian scholars and topographers. It is not, however, so exclusively Italian but that it has been adopted by some distinguished German scholars, among whom may be named Göttling, and Braun, the present accomplished Secretary of the Archaeological Institute at Rome.

Every attempt to determine this question must now rest almost exclusively on the interpretation of passages in ancient authors relating to the Capitoline hill, and the inferences to be drawn from them; and the decision must depend on the preponderance of probability on a comparison of these inferences. Hence the great importance of attending to a strict interpretation of the expressions used by the classical writers will be at once apparent; and we shall therefore preface the following inquiry by laying down a few general rules to guide our researches.

Preller, who, in an able paper published in Schneidewin's *Philologus*, vol. i., has taken a very moderate and candid view of the question, consoles himself and those who with him hold the German side, by remarking that no passage can be produced from an ancient and trustworthy writer in which Capitolium is used as the name of *the whole hill*. But if the question turns on this point — and to a great extent it certainly does — such passages may be readily produced. To begin with Varro, who was both an ancient and a trustworthy writer. In a passage where he is expressly describing *the hills* of Rome, and which will therefore admit neither of misapprehension nor dispute, Varro says: "Septimontium nominatum *ab tot montibus*, quos postea urbs muris comprehendit. E *quis Capitolium* dictum, quod hic, quom fundamenta foderentur aedis Jovis, caput humanum dicitur inventum. Hic *mons* ante Tarpeius dictus," &c. (*L.L.* v. § 41, Müll.) Here Capitolium can signify nothing but the Capitoline hill, just as Palatium in § 53 signifies the Palatine. In like manner Tacitus, in his description of the Romulean pomoerium before cited: "Forumque Romanum et Capitolium non a Romulo sed a Tito Tatio additum urbi credidere" (*Ann.* xii. 24), where it would be absurd to restrict the meaning of *Capitolium* to the Capitol properly so called, for Tatius dwelt on the Arx. So Livy in his narrative of the exploit of Horatius Cocles: "Si transitum a tergo reliquissent, jam plus hostium in Palatio Capitolioque, quam in Janiculo, fore" (ii. 10), where its union with Palatium shows that the hill is meant; and the same historian, in describing Romulus consecrating the spolia opima to Jupiter Feretrius a couple of centuries before the Capitoline temple was founded, says, "in Capitolium escendit" (i. 10). The Greek writers use τὸ Καπιτώλιον in the same manner: Ῥώμυλος μὲν τὸ Παλάτιον κατέχων — Τάτιος δὲ τὸ Καπιτώλιον. (Dionys. ii. 50.) Hence we deduce as a first general rule that the term *Capitolium* is sometimes used of the whole hill.

Secondly, it may be shown that the whole hill, when characterised generally as the Roman citadel, was also called *Arx*: "Atque ut ita munita arx circumjectu arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate horribili Gallici adventus incolumis atque intacta permanserit." (Cic. *Rep.* ii. 6.) "Sp. Tarpeius Romanae praeerat arci." (Liv. i. 11.) But there is no need to multiply examples on this head, which is plain enough.

But, thirdly, we must observe that though the terms Capitolium and Arx are thus used generally

was nearest to the river. "Cominius in Capitolium evadit" is here equivalent to "Romulus in Capitolium escendit," in a passage before cited. (Liv. i. 10.) Hence, to mark the spot more precisely, the historian inserts "ad Carmentis" in the following chapter. There is nothing in the other authorities cited in Becker's note (no. 750) which yields a conclusion either one way or the other. We might, with far superior justice, quote the following passage of Cicero, which we have adduced on another occasion, to prove that the attempt of the Gauls was on the *Arx* or citadel: "Atque ut ita munita Arx circumjectu arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate horribili Gallici adventus incolumis atque intacta permanserit" (*De Rep.* ii. 6). But, though we hold that the attempt was really on the Arx, we are nevertheless of opinion that Cicero here uses the word only in its general sense, and thus as applicable to the whole hill, just as Livy uses *Capitolium* in the preceding passage. Hence, Mr. Bunbury (*Class. Mus.* vol. iv. p. 430) and M. Preller (*l. c.*) have justly regarded this narrative as affording no evidence at all, although they are adherents of the German theory. We may further observe, that the house of Manlius was on the Arx; and though this circumstance, taken by itself, presents nothing decisive, yet, in the case of so sudden a surprise, it adds probability to the view that the Arx was on the southern summit.

We now proceed to the next illustration, which is drawn from the account given by Tacitus of the attack of the Vitellians on the Capitol. Becker's interpretation of this passage is so full of errors, that we must follow him sentence by sentence, giving, first of all, the original description of Tacitus. It runs as follows: "Cito agmine forum et imminentia foro templa praetervecti erigunt aciem per adversum collem usque ad primas Capitolinae arcis fores. Erant antiquitus porticus in latere clivi, dextrae subeuntibus: in quarum tectum egressi saxis tegulisque Vitellianos obruebant. Neque illis manus nisi gladiis armatae; et arcessere tormenta aut missilia tela longum videbatur. Faces in prominentem porticum jecere et sequebantur ignem; ambustasque Capitolii fores penetrassent, ni Sabinus revulsas undique statuas, decora majorum in ipso aditu vice muri objecisset. Tum diversos Capitolii aditus invadunt, juxta lucum asyli, et qua Tarpeia rupes centum gradibus aditur. Improvisa utraque vis: propior atque acrior per asylum ingruebat. Nec sisti poterant scandentes per conjuncta aedificia, quae, ut in multa pace, in altum edita solum Capitolii aequabant. Hic ambigitur, ignem tectis oppugnatores injecerint, an obsessi, quae crebrior fama est, quo nitentes ac progressos depellerent. Inde lapsus ignis in porticus appositas aedibus: mox sustinentes fastigium aquilae vetere ligno traxerunt flammam alueruntque. Sic Capitolium clausis foribus indefensum et indireptum conflagravit." (*Hist.* iii. 71.)

"The attack," says Becker, "is directed solely against the Capitol; that is, the height containing the temple, which latter is burnt on the occasion" (p. 390). This is so far from being the case, that the words of Tacitus would rather show that the attack was directed against the Arx. The temple is represented as having been shut up, and neither attacked nor defended: "clausis foribus, indefensum et indireptum conflagravit." Such a state of things is inconceivable, if, as Becker says, the attack was directed solely against the Capitol. That part of the hill was evidently deserted, and left to its fate; the besieged had concentrated themselves upon the Arx, which thus became the point of attack. By that unfortunate ambiguity in the use of the word Capitolium, which we have before pointed out, we find Tacitus representing the gates of the Capitolium as having been burnt ("ambustasque Capitolii fores") which, if Capitolium meant the same thing in the last sentence, would be a direct contradiction, as the gates are there represented as shut. But in the first passage he means the gates of the fortification which enclosed the whole summit of the hill; and in the second passage he means the gates of the temple. The meaning of Tacitus is also evident in another manner; for if the Vitellians were attacking the temple itself, and burning its gates, they must have already gained a footing on the height, and would consequently have had no occasion to seek access by other routes — by the steps of the Rupes Tarpeia, and by the Lucus Asyli. Becker proceeds: "Tacitus calls this (*i. e.* the height with the temple), indifferently Capitolina Arx and Capitolium." This is quite a mistake. The Arx Capitolina may possibly mean the *whole summit* of the hill; but if it is to be restricted to one of the two eminences, it means the Arx proper rather than the Capitol. "The attacking party, it appears, first made a lodgment on the Clivus Capitolinus. Here the portico *on the right* points distinctly to the SW. height. Had the portico been to the right of a person ascending in the contrary direction, it would have been separated from the besieged by the street, who could not therefore have defended themselves from its roof." If we thought that this argument had any value we might adopt it as our own: for we also believe that the attack was directed against the SW. height, but with this difference, that the Arx was on this height, and not the Capitol. But, in fact, there was only one *principal* ascent or clivus,—that leading towards the western height; and the only thing worth remarking in Becker's observations is that he should have thought there might be *another* Clivus Capitolinus leading in the opposite direction. We may remark, by the way, that the portico here mentioned was probably that erected by the great-grandson of Cn. Scipio. (Vell. Pat. ii. 3.) "As the attack is here fruitless, the Vitellians abandon it, and make another attempt at two different approaches ("diversos aditus"); at the Lucus Asyli, that is, on the side where at present the broad steps lead from the *Palazzo de' Conservatori* to *Monte Caprino*, and again where the Centum Gradus led to the Rupes Tarpeia. Whether these Centum Gradus are to be placed by the church of *Sta Maria della Consolazione*, or more westward, it is not necessary to determine here, since that they led to the *Caffarelli* height is undisputed. On the side of the asylum (*Palazzo de' Conservatori*) the danger was more pressing. Where the steps now lead to *Monte Caprino*, and on the whole side of the hill, were houses which reached to its summit. These were set on fire, and the flames then caught the adjoining portico, and lastly the temple."

Our chief objection to this account is, its impossibility. If the Lucus Asyli corresponded to the steps of the present *Palazzo de' Conservatori*, which is seated in the depression between the two summits, or present *Piazza del Campidoglio*, then the besiegers must have forced the passage of the Clivus Capitolinus, whereas Tacitus expressly says that they were repulsed. Being repulsed they must have retreated

downwards, and renewed the attempt at lower points; at the foot of the Hundred Steps, for instance, on one side, and at the bottom of the Lucus Asyli on another; on both which sides they again attempted to mount. The *Palazzo de' Conservatori*, though not the highest point of the hill, is *above* the clivus. Becker, as we have shown, has adopted the strangely erroneous opinion that the "Capitolinae arcis fores" belonged to the Capitol itself (note 752), and that consequently the Vitellians were storming it from the *Piazza del Campidoglio* (note 754). But the portico from which they were driven back was on the clivus, and consequently they could not have reached the top of the hill, or *piazza*. The argument that the temple must have been on the SW. height, because the Vitellians attempted to storm it by mounting the Centum Gradus (Becker, *Warnung*, p. 43), may be retorted by those who hold that the attack was directed against the Arx. The precise spot of the Lucus Asyli cannot be indicated; but from Livy's description of it, it was evidently somewhere on the *descent* of the hill ("locum qui nunc septus *descendentibus* inter duos lucos est, asylum aperit," i. 8). It is probable, as Preller supposes (*Philol.* p. 99), that the "aditus juxta lucum Asyli" was on the NE. side of the hill near the present arch of Severus. The Clivus Asyli is a fiction; there was only one clivus on the Capitoline.

We have only one more remark to make on this narrative. It is plain that the fire broke out near the Lucus Asyli, and then spreading from house to house, caught at last the *front* of the temple. This follows from Tacitus' account of the portico and the eagles which supported the *fastigium* or pediment, first catching fire. The back-front of the Capitoline temple was plain, apparently a mere wall; since Dionysius (iv. 61) does not say a single word about it, though he particularly describes the front as having a triple row of columns and the sides double rows. But as we know that the temple faced the south, such an accident could not have happened except it stood on the NE. height, or that of *Araceli*.

We might, therefore, by substituting *Caffarelli* for *Araceli*, retort the triumphant remark with which Becker closes his explanation of this passage: "To him, therefore, who would seek the temple of Jupiter on the height of *Caffarelli*, the description of Tacitus is in every respect inexplicable."

Becker's next argument in favour of the W. summit involves an equivocation. It is, "that the temple was built *on that summit* of the hill which bore the name of Mons Tarpeius." Now it is notorious — and as we have already established it, we need not repeat it here — that before the building of the Capitol the *whole hill* was called Mons Tarpeius. The passages cited by Becker in note 755 (Liv. i. 55; Dionys. iii. 69) mean nothing more than this; indeed, the latter expressly states it (ὃς [λόφος] τότε μὲν ἐκαλεῖτο Ταρπήϊος, νῦν δὲ Καπιτωλῖνος). Capitolium gradually became the name for the whole hill; but who can believe that the name of Tarpeia continued to be retained at that very portion of it where the Capitoline temple was built? The process was evidently as follows: the northern height, on which the temple was built, was at first alone called Capitolium. Gradually its superior importance gave name to the whole hill; yet a particular portion, the most remote from the temple, retained the primitive name of Rupes Tarpeia. And thus Festus in a mutilated fragment, — not however so mutilated but that the sense is plain — "Noluerunt funestum locum [cum altera parte] Capitoli conjungi" (p. 343), where Müller remarks, "non multum ab Ursini supplemento discedere licebit."

Becker then proceeds to argue that the temple of Juno Moneta was built on the site of the house of M. Manlius Capitolinus, which was on the Arx (Liv. v. 47; Plut. *Cam.* 36; Dion Cass. *Fr.* 31, &c.); and we learn from Ovid (*Fast.* i. 637) that there were steps leading from the temple of Concord, to that of Juno Moneta. Now as the former temple was situated under the height of *Araceli*, near the arch of Severus, this determines the question of the site of Juno Moneta and the Arx. Ovid's words are as follows: —

> "Candida, te niveo posuit lux proxima templo
> Qua fert sublimes alta Moneta gradus;
> Nunc bene prospicies Latiam, Concordia, turbam," &c.

This is very obscure; but we do not see how it can be inferred from this passage that there were steps from one temple to the other. We should rather take it to mean that the temple of Concord was placed close to that of Moneta, which latter was approached by a flight of lofty steps. Nor do we think it very difficult to point out what these steps were. The temple of Juno was on the Arx; that is, according to our view, on the SW. summit; and the lofty steps were no other than the Centum Gradus for ascending the Rupes Tarpeia, as described by Tacitus in the passage we have just been discussing. Had there been another flight of steps leading up to the top of the Capitoline hill, the Vitellians would certainly have preferred them to clambering over the tops of houses. But it will be objected that according to this view the temple of Concord is placed upon the Arx, for which there is no authority, instead of on the forum or clivus, for which there is authority. Now this is exactly the point at which we wish to arrive. There were several temples of Concord, but only two of any renown, namely, that dedicated by Furius Camillus, B. C. 367, and rededicated by Tiberius after his German triumph, which is the one of which Ovid speaks; and another dedicated by the consul Opimius after the sedition and death of Gracchus. Appian says that the latter temple was *in* the forum: ἡ δὲ βουλὴ καὶ νεὼν Ὁμονοίας αὐτὸν ἐν ἀγορᾷ προσέταξεν ἐγεῖραι (*B.C.* i. 26). But in ordinary language the clivus formed part of the forum; and it would be impossible to point out any place in the forum, strictly so called, which it could have occupied. It is undoubtedly the same temple alluded to by Varro in the following passage: "Senaculum supra Graecostasim ubi aedis Concordiae et basilica Opimia" (*L.L.* v. p. 156, Müll.); from which we may infer that Opimius built at the same time a basilica, which adjoined the temple. Becker (*Handb.* p. 309) denied the existence of this basilica; but by the time be published his *Warnung* he had grown wiser, and quoted in the Appendix (p. 58) the following passage from Cicero (*p. Sest.* 67): "L. Opimius cujus monumentum celeberrimum in foro, sepulcrum desertissimum in littore Dyrrachino est relictum;" maintaining, however, that this passage related to Opimius' temple of Concord. But Urlichs (*Röm. Top.* p. 26), after pointing out that the epithet *celeberrimum*, "very much frequented," suited better with a basilica than with a temple, produced

two ancient inscriptions from Marini's *Atti de' Fratelli Arvali* (p. 212); in which a basilica Opimia is recorded; and Becker, in his *Antwort* (p. 33), confessing that he had overlooked these inscriptions, retracted his doubts, and acknowledged the existence of a basilica. According to Varro, then, the Aedis Concordiae and baslica of Opimius were close to the senaculum; and the situation of the senaculum is pointed out by Festus between the Capitol and forum: "Unum (Senaculum) ubi nunc est aedis Concordiae, inter Capitolium et Forum" (p. 347, Müll.). This description corresponds exactly with the site where the present remains of a temple of Concord are unanimously agreed to exist: remains, however, which are supposed to be those of the temple founded by Camillus, and not of that founded by Opimius. According to this supposition there must have been two temples of Concord on the forum. But if these remains belong to that of Camillus, who shall point out those of the temple erected by Opimius? Where was its site? What its history? When was it demolished, and its place either left vacant or occupied by another building? Appian. as we have seen, expressly says that the temple built by Opimius was in the forum; where is the evidence that the temple of Camillus was also in the forum? There is positively none. Plutarch, the only direct evidence as to its site, says no such thing but only that it looked down upon the forum: *ἐψηφίσαντο τῆς μὲν Ὁμονίας ἱερὸν, ὥσπερ ηὔξατο ὁ Κάμιλλος, εἰς τὴν ἀγορὰν καὶ εἰς τὴν ἐκκλησίαν ἄποπτον ἐπὶ τοῖς γεγενημένοις ἱδρύσασθαι* (*Camill.* 42). Now **ἀφοράω** means *to view from a distance*, and especially *from a height.* It is equivalent to the Latin *prospicere*, the very term used by Ovid in describing the same temple:—

"Nunc bene prospicies Latiam, Concordia, turbam."

These expressions, then, like Ovid's allusion to the "sublimes gradus" of Moneta, point to the Arx as the site of the temple. It is remarkable that Lucan (*Phars.* i. 195) employs the same word when describing the temple of Jupiter Tonans, erected by Augustus, also situated upon the Arx, or Rupes Tarpeia:—

"—— O magnae qui moenia prospicis urbis
Tarpeia de rupe Tonans."

This temple indeed, has also been placed on the clivus, on the authority of the pseudo-Victor, and against the express evidence of the best authorities. Thus an inscription in Gruter (lxxii. No. 5), consisting of some lines addressed to Fortuna, likewise places the Jupiter Tonans on the Tarpeian rock:—

"Tu quae Tarpeio coleris vicina Tonanti
Votorum vindex semper Fortuna meorum," &c.

Suetonius (*Aug.* c. 29 and 91), Pliny (xxxvi. 6) and the *Mon. Ancyranum*, place it "in Capitolio," meaning the Capitoline hill. It has been absurdly inferred that it was on the clivus, because Dion says that those who were going up to the great temple of Jupiter met with it first,— *ὅτι πρώτῳ οἱ ἀνιόντες ἐς τὸ Καπιτώλιον ἐνετύγχανον* (liv. 4), which they no doubt would do, since the clivus led first to the western height.

On these grounds, then, we are inclined to believe that the temple of Concord erected by Camillus stood on the Arx, and could not, therefore, have had any steps leading to the temple of Juno Moneta. The latter was likewise founded by Camillus, as we learn from Livy and Ovid:—

"Arce quoque in summa Junoni templa Monetae
Ex voto memorant facta, Camille, tuo:
Ante domus Manli fuerant" (*Fast.* vi. 183):

and thus these two great works of the dictator stood, as was natural, close together, just as the temple of Concord and the basilica subsequently erected by Opimius also adjoined one another on or near the clivus. It is no objection to this view that there was another small temple of Concord on the *Arx*, which had been vowed by the praetor Manlius in Gaul during a sedition of the soldiers. The vow had been almost overlooked, but after a lapse of two years it was recollected, and the temple erected in discharge of it. (Liv. xxii. 33.) It seems, therefore, to have been a small affair, and might very well have coexisted on the Arx with another and more splendid temple.

But to return to Becker's arguments. The next proof adduced is Caligula's bridge. "Caligula," he says, as Bunsen has remarked, "caused a bridge to be thrown from the Palatine hill over the temple of Augustus (and probably the Basilica Julia) to the Capitoline temple, which is altogether inconceivable if the latter was on the height of *Araceli*, as in that case the bridge must have been conducted over the forum" (p. 393). But here Becker goes further than his author, who merely says that Caligula threw a bridge from the Palatine hill to the Capitoline: "Super templum Divi Augusti ponte transmisso, Palatium Capitoliumque conjunxit." (Suet. *Cal.* 22.) Becker correctly renders Palatium by the "Palatine hill," but when he comes to the other hill he converts it into a temple. Suetonius offers a parallel case of the use of these words in a passage to which we had occasion to allude just now, respecting the temple of Jupiter Tonans: "Templum Apollinis in Palatio (extruxit), aedem Tonantis Jovis in Capitolio" (*Aug.* 29); where, if Becker's view was right, we might by analogy translate,—"he erected a temple of Apollo in the palace."

The next proof is that a large piece of rock fell down from the Capitol ("ex Capitolio") into the Vicus Jugarius (Liv. xxxv. 21); and as the Vicus Jugarius ran under the S. summit, this shows that the Capitoline temple was upon it. But pieces of rock fall down from hills, not from buildings, and, therefore, Capitolium here only means the hill. In like manner when Livy says (xxxviii. 28), "substructionem super Aequimelium in Capitolio (censores locaverunt)," it is plain that he must mean the hill; and consequently this passage is another proof of this use of the word. The Aequimelium was in or by the Vicus Jugarius, and could not, therefore, have been on the Capitol properly so called, even if the latter had been on the SW. height. Becker wrongly translates this passage,—"a substruction *of the Capitol* over the Aequimelium" (p. 393.) Then comes the passage respecting the statue of Jupiter being turned towards the east, that it might behold the forum and curia; which Becker maintains to be impossible of a statue erected on the height of *Araceli.* Those who have seen the ground will not be inclined to coincide in this opinion. The statue stood on a column (Dion Cass. xxxvii. 9; Cic. *Div.* i. 12; cf. Id. *Cat.* iii. 8), and most probably *in front* of the temple—it could hardly have been placed *behind* it; and, therefore, if the temple was on the S. height, the statue must have been at the extremity of it; a site which certainly would not afford a very good view of the forum. Next the direction

of the Clivus Capitolinus is adduced, which ran to the Western height, and must have led directly to the temple, whence it derived its name. But this is a complete begging of the question, and the clivus more probably derived its name from the hill. If the direction of the clivus, however, proves anything at all—and we are not disposed to lay much stress upon it—it rather proves the reverse of Becker's case. The clivus was a continuation of the Sacra Via, by which, as we shall have occasion to show when treating of that road, the augurs descended from the Arx after taking the auguries, and by which they carried up their new year's offerings to king Tatius, who lived upon the Arx: and hence in sacerdotal language the clivus itself was called Sacra Via. (Varro, *L.L.* v. § 47, Müll.; Festus, p. 290, id.). Lastly, "the confined height of *Araceli* would not have afforded sufficient room for the spacious temple of Jupiter, the Area Capitolina, where meetings of the people were held, and at the same time be able to display so many other temples and monuments." There is some degree of truth in this observation, so far at least as the Area Capitolina is concerned. But when we come to describe the temple of Jupiter Capitolinus, an acquaintance with which is necessary to the complete understanding of the present question, though Becker has chosen to omit it, "as lying out of the plan of his book" (p 396), we shall endeavour to show how this objection may be obviated. Meanwhile, having now discussed all Becker's arguments in favour of the SW. summit as the site of the Capitoline temple, it will be more convenient shortly to review the whole question, and to adduce some reasons which have led us to a directly contrary conclusion. In doing this we do not presume to think, with Becker, that we have "completely decided" the question. It is one, indeed, that will not admit of complete demonstration; but we venture to hope that the balance of probability may be shown to predominate very considerably in favour of the NE. height.

The greater part of Becker's arguments, as we trust that we have shown, prove nothing at all, while the remainder, or those which prove something, may be turned against him. We must claim as our own the proof drawn from the storm of the Capitol by the Vitellians, as described by Tacitus, as well as that derived from Mons Tarpeius being the name of the SW. height, and that from the westerly direction of the Clivus Capitolinus. Another argument in favour of the NE. height may be drawn from Livy's account of the trial of Manlius Capitolinus, to which we have already adverted when treating of the Porta Flumentana [supra, p. 751], and need not here repeat. To these we shall add a few more drawn from probability.

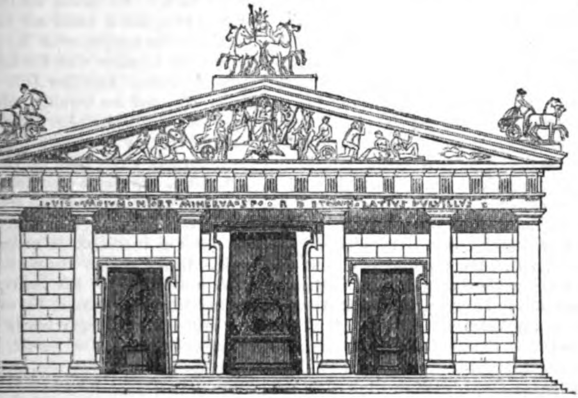
Tatius dwelt on the Arx, where the temple of Juno Moneta afterwards stood. (Plut. *Rom.* 20; Solinus, i. 21.) "This," says Becker (p. 388), "is the height of *Araceli*, and always retained its name of Arx after the Capitol was built, since certain sacred customs were attached to the place and appellation." He is here alluding to the Arx being the auguraculum of which Festus says: "Auguraculum appellabant antiqui quam nos arcem dicimus, quod ibi augures publice auspicarentur" (p. 18, where Müller observes: "non tam *arcem* quam *in arce* fuisse arbitror auguraculum"). The templum, then, marked out from the Arx, from which the city auspices were taken, was defined by a peculiar and appropriate form of words, which is given by Varro, (*L.L.* vii. § 8, Müll.) It was bounded on the left hand and on the right by a distant tree; the tract between was the *templum* or *tescum* (country region) in which the omens were observed. The augur who inaugurated Numa led him to the Arx, seated him on a stone, with his face turned towards the South, and sat down on his left hand, capite velato, and with his lituus. Then, looking forwards over the city and country—"prospectu in urbem agrumque capto"—he marked out the temple from east to west, and determined in his mind the sign (signum) to be observed as far as ever his eyes could reach: "quo longissime conspectum oculi ferebant." (Liv. i. 18; cf. Cic. *de Off.* iii. 16.) The great extent of the prospect required may be inferred from an anecdote related by Valerius Maximus (viii. 2. § 1), where the augurs are represented as ordering Claudius Centumalus to lower his lofty dwelling on the Caelian, because it interfered with their view from the Arx,—a passage, by the way, which shows that the auguries were taken from the Arx till at all events a late period of the Republic. Now, supposing with Becker, that the Arx was on the NE. summit, what sort of prospect would the augurs have had? It is evident that a large portion of their view would have been intercepted by the huge temple of Jupiter Capitolinus. The SW. summit is the only portion of the hill which, in the words of Livy, would afford a noble prospect, "in urbem agrumque." It was doubtless this point to which the augur conducted Numa, and which remained ever afterwards the place appointed for taking the auguries. Preller is of opinion that Augustus removed them to a place called the Auguratorium on the Palatine. (*Philologus*, i. p. 92.) But the situation laid down for that building scarcely answers to our ideas of a place adapted for taking the auguries, and it seems more probable that it was merely a place of assembly for the college of augurs.

Another argument that has been adduced in favour of the SW. summit being the Arx, is drawn from its proximity to the river, and from its rocky and precipitous nature, which made it proper for a citadel. But on this we are not inclined to lay any great stress.

Other arguments in favour of the Italian view may be drawn from the nature of the temple itself; but in order to understand them it will first be necessary to give a description of the building. The most complete account of the TEMPLUM JOVIS CAPITOLINI is that given by Dionysius (iv. 61), from which we learn that it stood upon a high basis or platform, 8 plethra, or 800 Greek feet square, which is nearly the same in English measure. This would give about 200 feet for each side of the temple, for the length exceeded the breadth only by about 15 feet. These are the dimensions of the original construction; and when it was burnt down a generation before the time of Dionysius,—that is, as we learn from Tacitus (*Hist.* iii. 72), in the consulship of L. Scipio and Norbanus (B. C. 83),—it was rebuilt upon the same foundation. The materials employed in the second construction were, however, of a much richer description than those of the first. The front of the temple, *which faced the south*, had a portico consisting of three rows of columns, whilst on the flanks it had only two rows: and as the back front is not said to have had any portico, we may conclude that there was nothing on this side but a plain wall. The interior contained three cells

parallel to one another with common walls, the centre one being that of Jove, on each side those of Juno and Minerva. In Livy, however (vi. 4), Juno is represented as being in the same cella with Jupiter. But though the temple had three cells, it had but one *fastigium*, or pediment, and a single roof.

TEMPLE OF JUPITER CAPITOLINUS.
(From a Coin of Vespasian.)



Now the first thing that strikes us on reading this description is, that the front being so ornamented, and the back so very plain, the temple must have stood in a situation where the former was very conspicuous, whilst the latter was but little seen. Such a situation is afforded only by the NE. summit of the Capitoline. On this site the front of the temple, being turned to the south, would not only be visible from the forum, but would also present its best aspect to those who had ascended the Capitoline hill; whilst on the other hand, had it stood on the SW. summit, the front would not have been visible from the forum, and what is still worse, the temple would have presented only its nude and unadorned back to those who approached it by the usual and most important ascent, the Clivus Capitolinus. Such a state of things, in violation of all the rules which commonly regulate the disposition of public buildings, is scarcely to be imagined.

We will now revert to Becker's objection respecting the AREA CAPITOLINA. It must be admitted that the dimensions of the temple would have allowed but little room for this area on the height of *Araceli*, especially as this must have contained other small temples and monuments, such as that of Jupiter Feretrius, &c. Yet the Area Capitolina, we know, was often the scene not only of public meetings but even of combats. There are very striking indications that this area was not confined to the height on which the temple stood, but that it occupied part at least of the extensive surface of lower ground lying between the two summits. One indication of this is the great height of the steps leading up to the vestibule of the temple, as shown by the story related by Livy of Annius, the ambassador of the Latins; who being rebuked by Manlius and the fathers for his insolence, rushed frantically from the vestibule, and falling down the steps, was either killed or rendered insensible (viii. 6). That there was a difference in the level of the Capitol may be seen from the account given by Paterculus of Scipio Nasica's address to the people in the sedition of the Gracchi. Standing apparently on the same lofty steps,—"ex *superiore parte Capitolii* summis gradibus insistens" (ii. 3),—Nasica incited by his eloquence the senators and knights to attack Gracchus, who was standing in the area below, with a large crowd of his adherents, and who was killed in attempting to escape down the Clivus Capitolinus. The area must have been of considerable size to hold the catervae of Gracchus; and the same fact is shown by several other passages in the classics (Liv. xxv. 3, xlv. 36, &c.). Now all these circumstances suit much better with a temple on the NE. summit than with one on the opposite height. An area in front of the latter, besides being out of the way for public meetings, would not have afforded sufficient space for them; nor would it have presented the lofty steps before described, nor the ready means of escape down the clivus. These, then, are the reasons why we deem the NE. summit the more probable site of the Capitoline temple.

We have already mentioned that this famous temple was at least planned by the elder Tarquin: and according to some authors the foundation was completely laid by him (Dionys. iv. 59), and the building continued under Servius (Tac. *Hist.* iii. 72). However this may be, it is certain that it was not finished till the time of Tarquinius Superbus, who tasked the people to work at it (Liv. i. 56): but the tyrant was expelled before it could be dedicated, which honour was reserved for M. Horatius Pulvillus, one of the first two consuls of the Republic (Polyb. iii. 22; Liv. ii. 8; Plut. *Popl.* 14). When the foundations were first laid it was necessary to exaugurate the temples of other deities which stood upon the site destined for it; on which occasion Terminus and Juventas, who had altars there, alone refused to move, and it became necessary to enclose their shrines within the temple; a happy omen for the future greatness of the city! (Liv. v. 54; Dionys. iii. 69.) It is a well-known legend that its name of Capitolium was derived from the finding of a human head in digging the foundation (Varr. *L. L.* v. § 41, Müll.; Plin. xxviii. 4, &c.) The image of the god, originally of clay, was made by Turanius of Fregellae, and represented him in a sitting posture. The face was painted with vermilion, and the statue was probably clothed in a tunica palmata and toga picta, as the costume was borrowed by triumphant generals. On the acroterium of the pediment stood a quadriga of earthenware, whose portentous swelling in the furnace was also regarded as an omen of Rome's future greatness (Plin. xxviii. 4; Plut. *Popl.* 13). The brothers C. & Q. Ogulnius subsequently placed a bronze quadriga with a statue of Jupiter on the roof; but this probably did not supersede that of clay, to which so much ominous importance was attached. The same aediles also presented a bronze threshold, and consecrated some silver plate in Jupiter's cella (Liv. x. 23; cf. Plaut. *Trin.* i. 2. 46.) By degrees the temple grew exceedingly rich. Camillus dedicated three golden *pateras* out of the spoils taken from the Etruscans (Liv. vi. 4), and the dictator Cincinnatus placed in the temple a statue of Jupiter Imperator, which he had carried off from Praeneste (Id. vi. 29). At length the pediment and columns became so encumbered with shields, ensigns, and other offerings that the censors M. Fulvius Nobilior and M. Aemilius Lepidus were compelled to rid the temple of these superfluous ornaments (Id. xl. 51).

As we have before related, the original building lasted till the year B. C. 83, when it was burnt down in the civil wars of Sulla, according to Tacitus by design ("privata fraude," *Hist.* iii. 72). Its restoration was undertaken by Sulla, and subsequently confided to Q. Lutatius Catulus, not without the opposition of Caesar, who wished to obliterate the name of Catulus from the temple, and to substitute

It was again destroyed soon after Vespasian's death in a great fire which particularly desolated the 9th Region, and was rebuilt by Domitian with a splendour hitherto unequalled. (Suet. *Dom.* 15; Dion Cass. lxvi. 24.) Nothing further is accurately known of its history; but Domitian's structure seems to have lasted till a very late period of the Empire.

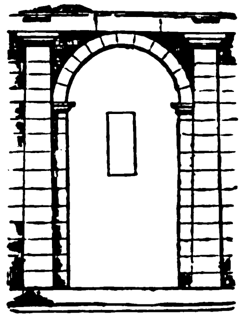
They had both been vowed after the battle at the Trasimene lake and were consecrated two years afterwards by Q. Fabius Maximus and T. Otacilius Crassus. (Liv. xxii. 10, xxiii. 51; Cic. *N. D.* ii. 23.) A temple of VENUS CAPITOLINA and VENUS VICTRIX are also mentioned, but it is not clear whether they were separate edifices. (Suet. *Cal.* 7, *Galb.* 18; *Fast. Amit. VIII. Id. Oct.*) We also hear of two temples of JUPITER (Liv. xxxv. 41), and a temple of OPS (xxxix. 22). It by no means follows, however, that all these temples were on the Capitol, properly so called, and some of them might have been on the other summit, Capitolium being used generally as the name of the hill. This seems to have been the case with the temple of FORTUNE, respecting which we have already cited an ancient inscription when discussing the site of the temples of Concord and Jupiter Tonans. It is perhaps the temple of Fortuna Primigenia mentioned by Plutarch (*Fort. Rom.* 10) as having been built by Servius on the Capitoline, and alluded to apparently by Clemens. (*Protrept.* iv. 51. p. 15. Sylb.) The temple of HONOS AND VIRTUS, built by C. Marius, certainly could not have been on the northern eminence, since we learn from Festus (p. 34, Müll.) that he was compelled to build it low lest it should interfere with the prospect of the augurs, and he should thus be ordered to demolish it. Indeed Propertius (iv. 11. 45) mentions it as being on the Tarpeian rock, or southern summit: —

> "Foedaque Tarpeio conopia tendere saxo
> Jura dare et statuas inter et arma Mari."

Whence we discover another indication that the auguraculum could not possibly have been on the NE. height; for in that case, with the huge temple of Jupiter before it, there would have been little cause to quarrel with this bagatelle erected by Marius. It must have stood on a lower point of the



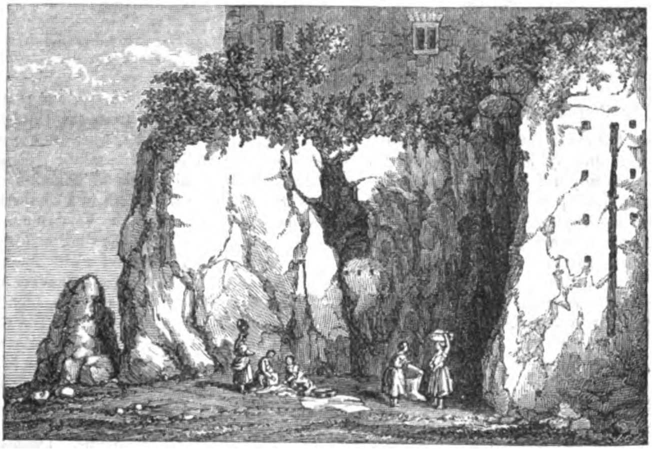
hill than the auguraculum, and probably near its declivity. The building of it by Marius is testified by Vitruvius (iii. 2, 5), and from an inscription (Orelli, 543) it appears to have been erected out of the spoils of the Cimbric and Teutonic war. We learn from Cicero that this was the temple in which the first senatus consultum was made decreeing his recall. (*Sest.* 54, *Planc.* 32, *de Div.* i. 28.)

We have already had occasion to allude to the temple erected by Augustus to JUPITER TONANS. Like that of Fortune it must have stood on the SW. height and near the top of the ascent by the Clivus, as appears from the following story. Augustus dreamt that the Capitoline Jove appeared to him and complained that the new temple seduced away his worshippers; to which having answered that the Jupiter Tonans had been merely placed there as his janitor or porter, he caused some bells to be hung on the pediment of the latter temple in token of its janitorial character. (Suet. *Aug.* 91.) That the same emperor also erected a temple to MARS ULTOR on the Capitoline, besides that in his forum, seems very doubtful, and is testified only by Dion Cassius (lv. 10). Domitian, to commemorate his preservation during the contest with the Vitellians, dedicated a sacellum to JUPITER CONSERVATOR, or the Preserver, in the Velabrum, on the site of the house of the aedituus, or sacristan, in which he had taken refuge; and afterwards, when he had obtained the purple, a large temple to JUPITER CUSTOS on the Capitoline, in which he was represented in the bosom of the god. (Tac. *H.* iii. 74; Suet. *Dom.* 5.) We also hear of a temple of BENEFICENCE (Εὐεργεσία) erected by M. Aurelius. (Dion, lxxi. 34.)

But one of the most important temples on the SW. summit or Arx was that of JUNO MONETA, erected, as we have said, in pursuance of a vow made by Camillus on the spot where the house of M. Manlius Capitolinus had stood. (Liv. vii. 28.) The name of Moneta, however, seems to have been conferred upon the goddess some time after the dedication of the temple, since it was occasioned by a voice heard from it after an earthquake, advising (monens) that expiation should be made with a pregnant sow. (Cic. *de Div.* i. 45.) The temple was erected in B. C. 345. The Roman mint was subsequently established in it. (Liv. vi. 20; cf. Suidas, Μονῆτα.) It was rebuilt B. C. 173. (Liv. xlii. 7.) Near it, as we have before endeavoured to establish, must be placed the temple of Concord erected by Camillus and restored by Tiberius; as well as the other smaller temple to the same deity, of no great renown, dedicated during the Second Punic War, B. C. 217. (Liv. xxii. 33.)

Such were the principal temples which occupied the summit of the Capitoline hill. But there were also other smaller temples, besides a multitude of statues, sacella, monuments, and offerings. Among these was the temple of VEJOVIS, which stood in the place called "inter duos lucos" between the Capitol and the Tarpeian height. An ara JOVIS PISTORIS and aedes VENERIS CALVAE must also be reckoned among them. (Ovid. *F.* vi. 387; Lactant. i. 20.) Among the statues may be mentioned those of the ROMAN KINGS in the temple of Fides (App. *B. C.* i. 16; Dion, xliii. 45), and on the hill the two colossal statues of APOLLO and JUPITER. The former of these, which was 30 cubits high, was brought by M. Lucullus from Apollonia in Pontus. The Jupiter was made by Sp. Carvilius out of the armour and helmets of the conquered Samnites, and was of such a size that it could be seen from the temple of Jupiter Latiaris on the Alban Mount. (Plin. xxxiv. 18.) It would be useless to run through the whole list of objects that might be made out. It will suffice to say that the area Capitolina was so crowded with the statues of illustrious men that Augustus was compelled to remove many of them into the Campus Martius. (Suet. *Cal.* 34.)

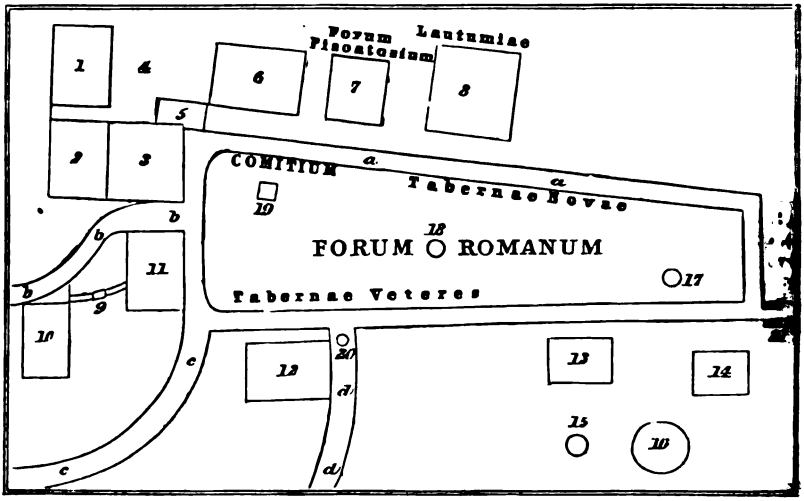
We know only of one profane building on the summit of the Capitoline hill—the TABULARIUM, or record office. We cannot tell the exact site of the original one; but it could not have stood far from the Capitoline temple, since it appears to have been burnt down together with the latter during the civil wars of Sulla. Polybius (iii. 26) mentions the earlier one, and its burning, alluded to by Cicero (*N. D.* iii. 30, *pro Rabir. Perd.* 3), seems to have been effected by a private hand, like that of the Capitol itself. (Tac. *Hist.* iii. 72.) When rebuilt by Q. Lutatius Catulus it occupied a large part of the eastern side of the depression between the two summits of the Capitoline, behind the temple of Concord, and much of it still exists under the *Palazzo Senatorio*. In the time of Poggio it was converted into a salt warehouse, but the inscription recording that it was built by Catulus, at his own expense (de suo) was still legible, though nearly eaten away by the saline moisture. (*De Variet. Fort.* lib. i. p. 8.) This inscription, which was extant in the time of Nardini, is also given by him (*Rom. Ant.* ii. p. 300) and by Gruter (clxx. 6; cf. Orell. 31), with slight variations, and shows that the edifice, as rebuilt by Catulus, must have lasted till the latest period of the Empire. It is often called *aerarium* in Latin authors. (Liv. iii. 69 &c.)



ARCH OF TABULARIUM.

We shall now proceed to consider some of the most remarkable spots on the hill and its declivities. And first of the ASYLUM. Becker (*Handb.* p. 387) assumes that it occupied the whole depression between the two summits, and that this space, which by modern topographers has been called by the unclassical name of *Intermontium*, was called "inter duos lucos." But here his authorities do not bear him out. Whether the whole of this space formed the original asylum of Romulus, it is impossible to say; but it is quite certain that this was not the asylum of later times. It would appear from the description of Dionysius (ii. 15) that in its *original* state (ἦν τότε, κ.τ.λ.) the grove may have extended from one summit to the other; but it does not appear that it occupied the whole space. It was convenient for Becker to assume this, on account of his interpretation of the passage in Tacitus respecting the

assault of the Vitellians, where he makes them storm the SW. height from the grove of the asylum, which he places where the steps now lead up to the *Palazzo de' Conservatori*. But, first, it is impossible to suppose that in the time of Vitellius the whole of this large area was a grove. Such an account is inconsistent with the buildings which we know to have been erected on it, as the Tabularium, and also with the probable assumption which we have ventured to propose, that a considerable part of it was occupied by the Area Capitolina. But, secondly, the account of Tacitus, as we have already pointed out, is quite incompatible with Becker's view. The Vitellians, being repulsed near the summit of the Clivus, retreat *downwards*, and attempt two other ascents, one of which was by the Lucus Asyli. And this agrees with what we gather from Livy's description of the place: "Locum, qui nunc septus *descendentibus* inter duos lucos est, asylum aperit" (i. 8.) Whence we learn that the place called "inter duos lucos" contained the ancient asylum, the enclosure of which asylum was seen by those who *descended* the "inter duos lucos." Thirdly, the asylum must have been near the approach to it; and this, on Becker's own showing (*Handb.* p. 415), was under the NE. summit, namely, between the carcer and temple of Concord and behind the arch of Severus. This ascent has been erroneously called Clivus Asyli, as there was only one clivus on the Capitoline hill. But it is quite impossible that an ascent on this side of the hill could have led to a Lucus Asyli where the *Palazzo de' Conservatori* now stands. It was near the asylum, as we have seen, that the fire broke out which destroyed the temple of Jupiter Capitolinus; and the latter, consequently, must have been on the NE. summit. With respect to the asylum, we need only further remark, that it contained a small temple, but to what deity it was dedicated nobody could tell (*ναὸν ἐπὶ τούτῳ κατασκευασάμενος· ὅτῳ δὲ ἄρα θεῶν ἢ δαιμόνων οὐκ ἔχω σαφὲς εἰπεῖν*, Dionys. ii. 15); and he was therefore merely called the divinity of the asylum (*θεὸς ἀσύλαιος*, Plut. *Rom.* 9).



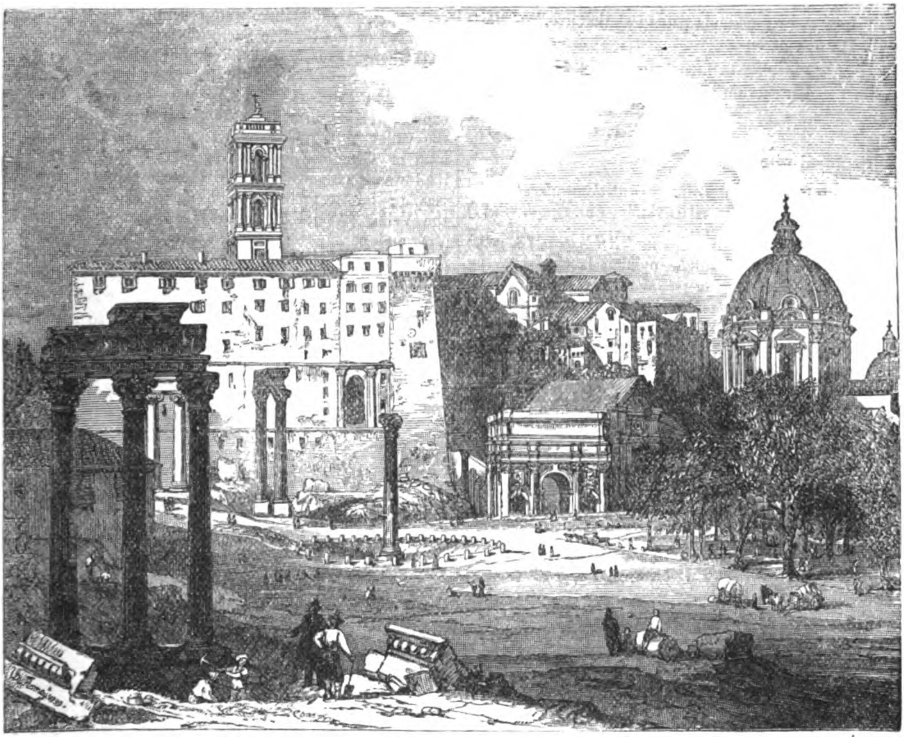
Another disputed point is the precise situation of the Rupes Tarpeia, or that part of the summit whence criminals were hurled. The prevalent opinion among the older topographers was that it was either at that part of the hill which overhangs the *Piazza Montanara*, that is, at the extreme SW. point, or farther to the W., in a court in the *Via di Tor de' Specchi*, where a precipitous cliff, sufficiently high to cause death by a fall from it, bears at present the name of *Rupe Tarpea*. That this was the true Tarpeian rock is still the prevalent opinion, and has been adopted by Becker. But Dureau de la Malle (*Mémoire sur la Roche Tarpéienne*, in the *Mém. de l'Acad.*, 1819) has pointed out two passages in Dionysius which are totally incompatible with this site. In describing the execution of Cassius, that historian says that he was led to the precipice *which overhangs the forum*, and cast down from it *in the view of all the people* (*τοῦτο τὸ τέλος τῆς δίκης λαβούσης, ἀγαγόντες οἱ ταμίαι τὸν ἄνδρα ἐπὶ τὸν ὑπερκείμενον τῆς ἀγορᾶς κρημνὸν, ἁπάντων ὁρώντων, ἔρριψαν κατὰ τῆς πέτρας*, viii. 78, cf. vii. 35, seq.). Now this could not have taken place on the side of the *Tor de' Specchi*, which cannot be seen from the forum; and it is therefore assumed that the true Rupes Tarpeia must have been on the E. side, above *S. Maria della Consolazione*. The arguments adduced by Becker to controvert this assumption are not very convincing. He objects that the hill is much less precipitous here than on the other side. But this

SUPPOSED TARPEIAN ROCK

proves nothing with regard to its earlier state. Livy, as we have seen, records the fall of a vast mass of rock into the Vicus Jugarius. Such landslips must have been frequent in later times, and it is precisely where the rock was most precipitous that they would occur. Thus, Flavius Blondus (*Inst. Rom.* ii. 58) mentions the fall in his own time of a piece as large as a house. Another objection advanced by Becker is that the criminal would have fallen into the Vicus Jugarius. This, however, is absurd; he would only have fallen at the back of the houses. Nothing can be inferred from modern names, as that of a church now non-extant, designated as *sub Tarpeio*, as we have already shown that the whole S. summit was Mons Tarpeius. Becker's attempt to explain away the words *ἁπάντων ὁρώντων* is utterly futile. On the whole, it seems most probable that the rock was on the SE. side, not only from the express testimony of Dionysius, which it is difficult or impossible to set aside, but also from the inherent pro-

bability that among a people like the Romans a public execution would take place at a public and conspicuous spot. The Centum Gradus, or Hundred Steps, were probably near it; but their exact situation it is impossible to point out. The other objects on the Clivus and slopes of the hill will be described in the next section.

PLAN OF THE FORUM DURING THE REPUBLIC.



1. Basilica Opimia.
2. Aedes Concordiae.
3. Senaculum.
4. Vulcanal.
5. Graecostasis.
6. Curia.
7. Basilica Porcia.
8. Basilica Aemilia.
9. Porta Stercoraria.
10. Schola Xantha.
11. Templum Saturni.
12. Basilica Sempronia.
13. Aedes Castoris.
14. Regia.
15. Fons Juturnae.
16. Aedes Vestae.
17. Puteal Libonis.
18. Lacus Curtius.
19. Rostra.
20. Signum Vertumni.
21. Fornix Fabianus.

a a. Sacra Via.
b b b. Clivus Capitolinus.
c c. Vicus Jugarius.
d d. Vicus Tuscus.

IV. The Forum and its Environs.

The forum, the great centre of Roman life and business, is so intimately connected with the Capitol that we are naturally led to treat of it next. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Velia begins to ascend, by the remains of the temple of Antoninus and Faustina. At the time of the battle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, however, have been neither a thick wood nor an absolute swamp, or the battle could not have taken place. After the alliance between the Sabines and Romans this spot formed a sort of neutral ground or common meeting-place, and was improved by cutting down the wood and filling up the swampy parts with earth. We must not, indeed, look for anything like a regular forum before the reign of Tarquinius Priscus; yet some of the principal lines which marked its subsequent extent had been traced before that period. On the E. and W. these are marked by the nature of the ground; on the former by the ascent of the Velia, on the latter by the Capitoline hill. Its northern boundary was traced by the road called Sacra Via. It is only of late years, however, that these boundaries have been recognised. Among the earlier topographers views equally erroneous and discordant prevailed upon the subject; some of them extending the forum lengthways from the Capitoline hill to the summit of the Velia, where the arch of Titus now stands; whilst others, taking the space between the Capitoline and temple of Faustina to have been its breadth, drew its length in a southerly direction, so as to encroach upon the Velabrum. The latter theory was adopted by Nardini, and prevailed till very recently. Piale (*Del Foro Romano*, Roma, 1818, 1832) has the merit of having restored the correct general view of the forum, though his work is not always accurate in details. The proper limits of the forum were established by excavations made between the Capitol and Colosseum in 1827, and following years, when M. Fea saw opposite to the temple of Antoninus and Faustina, a piece of the pavement of the Sacra Via, similar to that which runs under the arch of Severus. (Bunsen, *Le For. Rom. expliqué*, p. 7.) A similar piece had been previously discovered during excavations made in the year 1742, before the church of *S. Adriano*, at the eastern corner of the *Via Bonella*, which Ficoroni (*Vestigie di Roma antica*, p. 75) rightly considered to belong to the Sacra Via. A line prolonged through these two pieces towards the arch of Severus will therefore give the direction of the street, and the boundary of the forum on that side. The southern side was no less satisfactorily determined by the excavations made in 1835, when the Basilica Julia was discovered; and in front of its

steps another paved street, enclosing the area of the forum, which was distinguishable by its being paved with slabs of the ordinary silex. This street continued eastwards, past the ruin of the three columns or temple of Castor, as was shown by a similar piece of street pavement having been discovered in front of them From this spot it must have proceeded eastwards, past the church of *Sta. Maria Liberatrice*, till it met that portion of the Sacra Via which ran in a southerly direction opposite the temple of Faustina (*S. Loernzo in Miranda*), and formed the eastern boundary of the forum. Hence, according to the opinion now generally received, the forum presented an oblong or rather trapezoidal figure, 671 English feet in length, by 202 at its greatest breadth under the Capitol, and 117 at its eastern extremity. (Bunsen, *Les Forum de Rome*, p. 15.)

THE FORUM IN ITS PRESENT STATE.

Sacra Via.—The SACRA VIA was thus intimately connected with the forum; and as it was both one of the most ancient and one of the most important streets of Rome. it will demand a particular description. Its origin is lost in obscurity. According to some accounts it must have been already in existence when the battle before alluded to was fought, since it is said to have derived its name of the "Sacred Way" from the treaty concluded upon it between Romulus and Tatius. (Dionys. ii. 46; Festus, p. 290, Müll.) This, however, seems highly improbable; not only because the road could hardly have existed at so early a period, when the site of the forum itself was in so rude a state, but also because a public highway is not altogether the place in which we should expect a treaty of peace to be concluded. The name of the comitium has also been derived, perhaps with no greater probability, from the same event. It is more likely that the road took its origin at a rather later period, when the Sabine and Roman cities had become consolidated. Its name of Sacra Via seems to have been derived from the sacred purposes for which it was used. Thus we learn from Varro (*L. L.* § 47, Müll.) that it began at the sacellum of the goddess Strenia, in the Carinae; that it proceeded thence as far as the arx, or citadel on the Capitoline hill; and that certain sacred offerings, namely, the white sheep or lamb (ovis idulis), which was sacrificed every ides to Jove (Ovid, *F.* i. 56; Macrob. *S.* i. 15; Paul. Diac. p. 104, Müll.), were borne along it monthly to the arx. It was also the road by which the augurs descended from the arx when, after taking the auguries, they proceeded to inaugurate anything in the city below. It likewise appears that Titus Tatius instituted the custom that on every new year's day the augurs should bring him presents of verbenae from the grove of Strenia, or Strenua, to his dwelling on the arx ("ab exortu poene urbis Martiae Streniarum usus adolevit, auctoritate regis Tatii, qui verbenas felicis arboris ex luco Strenuae anni novi auspicia primus accepit," Symm. *Epist.* x. 35). This custom seems to have been retained in later times in that known as the augurium salutis. (Cic. *Leg.* ii. 8; Tac. *Ann.* xii. 23; Lucian, *Pseudol.* 8.) Hence perhaps the appellation of 'sacra;" though the

whole extent of road was called Sacra Via only in sacerdotal language, between which and the common usage we have already had occasion to note a diversity when giving an account of the Servian gates. In common parlance only that portion of the road was called Sacra Via which formed the ascent of the Velia, from the forum to its summit ("Hujus Sacrae Viae pars haec sola vulgo nota quae est a foro eunti primore clivo," Varr, *l. c.*). Hence by the poets it is sometimes called "Sacer Clivus:" "Inde sacro veneranda petes Palatia clivo." (Mart. i. 70. 5); and—

> "—— quandoque trahet feroces
> Per sacrum clivum, imerita decorus
> Fronde, Sicambros."
> (Hor. *Od.* iv. 2. 34.)

compared with—

> "Intactus aut Britannus ut *descenderet*
> Sacra catenatus via." (Id. *Epod.* vii. 7.)

(Comp. Ambrosch, *Studien und Andeut.* p. 78, seq.) The origin of the vulgar opinion is explained by Festus in the following passage: "Itaque ne eatenus quidem, ut vulgus opinatur, sacra appellanda est, a regia ad domum regis sacrificuli; sed etiam a regis domo ad sacellum Streniae, et rursus a regia usque in arcem" (p. 290, Müll.). Whence it appears that only the part which lay between the Regia, or house of the pontifex maximus, and that of the rex sacrificulus, was commonly regarded, and probably for that very reason, as "sacra." This passage, however, though it shows plainly enough that there must have been a space between these two residences, has caused some embarrassment on account of a passage in Dion Cassius (liv. 27), in which he says that Augustus presented the house of the rex sacrificulus (τοῦ βασιλέως τῶν ἱερῶν) to the Vestals because it adjoined their residence (ὁμότοιχος ἦν); and as we know from Pliny (*Ep.* vii. 19) that the vestals dwelt close to the temple, it seems impossible, if Dion is right, that there should have been a street lying between the two places mentioned. But the matter is plain enough; though Becker (*de Muris*, pp. 30—35, *Handb.* pp. 226—237) wastes several pages in most far-fetched reasonings in order to arrive at a conclusion which already lies before us in a reading of the text of Dion for which there is actually MS. authority. Augustus was chosen pontifex maximus (ἀρχιερεύς), not rex sacrificulus, as Dion himself says in this passage. But the two offices were perfectly distinct ("Regem sacrificulum creant. Id sacerdotium pontifici subjecere," Liv. ii. 2). Augustus would hardly make a present of a house which did not belong to him; and therefore in Dion we must read, with some MSS., τοῦ βασιλέως τῶν ἱερέων, for ἱερῶν: Dion thus, in order perhaps to convey a lively notion of the office to his Greek readers, designating the Roman pontifex maximus as "king of the priests," instead of using the ordinary Greek term ἀρχιερεύς. The matter therefore lies thus. Varro says that in ordinary life only the clivus, or ascent from the forum to the Summa Sacra Via, obtained the name of Sacra Via. Festus repeats the same thing in a different manner; designating the space so called as lying between the Regia, or house of the pontifex maximus, and that of the rex sacrificulus. Whence it follows that the latter must have been on the Summa Sacra Via. It can scarcely be doubted that before the time of Augustus the Regia was the residence of the pontifex maximus. The building appears to have existed till a late period of the Empire. It is mentioned by the younger Pliny (*Ep.* iv. 11) and by Plutarch (*Q. R.* 97, *Rom.* 18) as extant in their time, and also probably by Herodian (i. 14) in his description of the burning of the temple of Peace under Commodus. After the expulsion of the kings, the rex sacrificulus, who succeeded to their sacerdotal prerogatives, was probably presented with one of the royal residences, of which there were several in the neighbourhood of the Summa Sacra Via: that being the spot where Ancus Marcius, Tarquinius Priscus, and Tarquinius Superbus had dwelt. (Liv. i. 41; Solin. i. 23, 24; Plin. xxxiv. 13.) We cannot tell the exact direction in which the Sacra Via traversed the valley of the Colosseum and ascended to the arch of Titus, nor by what name this part of the road was commonly called in the language of the people; but it probably kept along the base of the Velia. At its highest point, or Summa Sacra Via, and perhaps on the site afterwards occupied by the temple of Venus and Rome, there seems to have been anciently a market for the sale of fruit, and also probably of nick-nacks and toys. "Summa Sacra Via, ubi poma veneunt." (Varr. *R. R.* i. 2.) Hence Ovid (*A. A.* ii. 265.):—

> "Rure suburbano poteris tibi dicere missa
> Illa, vel in Sacra sint licet emta Via."

Whilst the nick-nacks are thus mentioned by Propertius (iii. 17. 11.):—

> "Et modo pavonis caudae flabella superbae
> Et manibus dura frigus habere pila,
> Et cupit iratum talos me poscere eburnos
> Quaeque nitent Sacra vilia dona Via."

The direction of the Sacra Via is indicated by Horace's description of his stroll: "Ibam forte Via Sacra," &c. (*S.* i. 9.) He is going down it towards the forum, having probably come from the villa of Maecenas, on the Esquiline, when he is interrupted by the eternal bore whom he has pilloried. The direction of his walk is indicated by his unavailing excuse that he is going to visit a sick friend over the Tiber (v. 17) and by the arrival at the temple of Vesta (v. 35); the Sacra Via having been thus quitted and the forum left on the right. The two extremities of the street, as commonly known, are indicated in the following passage of Cicero: "Hoc tamen miror, cur tu huic potissimum irascere, qui *longissime* a te *abfuit*. Equidem, si quando ut fit, jactor in turba, non *illum* accuso, *qui est in Summa Sacra Via*, cum *ego ad Fabium Fornicem impellor*, sed eum qui in me ipsum incurrit atque incidit" (*p. Planc.* 7). The Fornix Fabius, as it will be seen hereafter, stood at the eastern extremity of the forum; and Cicero has made the most of his illustration by taking the whole length of the street. Beyond this point, where it traversed the N. side of the forum, we are at a loss to tell what its vulgar appellation may have been; and if we venture to suggest that it may have been called "Janus," this is merely a conjecture from Horace (*Epist.* i. 1. 54), where "haec Janus summus ab imo" seems to suit better with a street — just as we should say, "all Lombard street" — than with two Jani, as is commonly interpreted, or than with a building containing several floors let out in counting houses. (Cf. *Sat.* ii. 3. 18.) This view is supported by the Scholia on the first of these passages, where it is said:

"Janus autem hic *platea* dicitur, ubi mercatores et foeneratores sortis causa convenire solebant." In fact it was the Roman Change. The ascent from the forum to the summit of the Capitoline hill, where the Sacra Via terminated, was, we know, called Clivus Capitolinus.

It only remains to notice Becker's *dictum* (*de Muris*, p. 23) that the name of this street should always be written Sacra Via, and not in reversed order Via Sacra. To the exceptions which he noted there himself, he adds some more in the *Handbuch* (p. 219, note), and another from Seneca (*Controv.* xxvii. p. 299, Bip.) in his *Addenda;* and Urlichs (*Röm. Topogr.* p. 8) increases the list. On the whole, it would seem that though Sacra Via is the more usual expression, the other cannot be regarded as unclassical.

Vicus Jugarius. — Of the name of the street which ran along the south side of the forum we are utterly ignorant; but from it issued two streets, which were among the most busy, and best known, in Rome. These were the Vicus Jugarius and Vicus Tuscus. We have before had occasion to mention that the former ran close under the Capitoline hill, from the forum to the Porta Carmentalis. It was thought to derive its name from an altar which stood in it to Juno Juga, the presiding deity of wedlock. (Paul. Diac. p. 104, Müll.) It does not appear to have contained any other sacred places in ancient times; but Augustus dedicated in it altars to Ceres and Ops Augusta. (*Fast. Amit. IV. Id. Aug.*) At the top of the street, where it entered the forum, was the fountain called Lacus Servilius, which obtained a sad notoriety during the proscriptions of Sulla, as it was here that the heads of the murdered senators were exposed. (Cic. *Rosc. Am.* 32; Senec. *Prov.* 3.) M. Agrippa adorned it with the effigy of a hydra (Festus, p. 290, Müll.). Between the Vicus Jugarius and Capitoline hill, and close to the foot of the latter, lay the Aequimaelium (Liv. xxxviii. 28), said to have derived its name from occupying the site of the house of the demagogue, Sp. Maelius, which had been razed (Varr. *L.L.* v. 157, Müll.; Liv. iv. 16). It served as a market-place, especially for the sale of lambs, which were in great request for sacrifices, and probably corresponded with the modern *Via del Monte Tarpeo.* (Cic. *Div.* ii. 17.)

Vicus Tuscus.—In the imperial times the Vicus Jugarius was bounded at its eastern extremity by the Basilica Julia; and on the further side of this building, again, lay the Vicus Tuscus. According to some authorities this street was founded in B. C. 507, being assigned to such of the Etruscans in the vanquished host of Aruns as had fled to Rome, and felt a desire to settle there (Liv. ii. 15; Dionys. v. 36); but we have before related, on the authority of Varro and Tacitus, that it was founded in the reign of Romulus. These conflicting statements may, perhaps, be reconciled, by considering the later settlement as a kind of second or subsidiary one. However this may be, it is with the topographical facts that we are here more particularly concerned, about which Dionysius communicates some interesting particulars. He describes the ground assigned to the Tuscans as a sort of hollow or gorge situated between the Palatine and Capitoline hills; and in length nearly 4 stadia, or half a Roman mile, from the forum to the Circus Maximus (v. 36). We must presume that this measurement included all the windings of the street; and even then it would seem rather exaggerated, as the whole NW. side of the Palatine hill does not exceed about 2 stadia. We must conclude that it was continued through the Velabrum to the circus. Its length as Canina observes (*For. Rom.* pt. i. p. 67) is a proof that the forum must have extended from NW. to SE., and not from NE. to SW.; as in the latter case, the space for the street, already too short, would have been considerably curtailed. This street, probably from the habits of its primitive colonists, became the abode of fishmongers, fruiterers, bird-fanciers, silk-mercers, and perfumers, and enjoyed but an indifferent reputation ("Tusci turba impia vici," Hor. *S.* ii. 3. 29.) It was here, however, that the best silks in Rome were to be procured ("Nec nisi prima velit de Tusco serica vico," Mart. xi. 27. 11). In fact, it seems to have been the great shopping street of Rome; and the Roman gentlemen, whose ladies, perhaps, sometimes induced them to spend more than what was agreeable there, vented their ill humour by abusing the tradesmen. According to the scholiast on the passage of Horace just cited, the street was also called Vicus Turarius. This appellation was doubtless derived from the frankincense and perfumes sold in it, whence the allusion in Horace (*Ep.* i. 1. 267):—

> "Ne capsa porrectus aperta
> Deferar in vicum vendentem tus et odores,
> Et piper, et quicquid chartis amicitur ineptis."

Being the road from the forum to the circus and Aventine, it was much used for festal processions. Thus it was the route of the Pompa Circensis, which proceeded from the Capitol over the forum, and by the Vicus Tuscus and Velabrum to the circus. (Dionys. vii. 72.) We have seen that the procession of the virgins passed through it from the temple of Apollo outside the Porta Carmentalis to that of Juno Regina on the Aventine. Yet notwithstanding these important and sacred uses, it is one of the charges brought by Cicero against Verres that he had caused it to be paved so villanously that he himself would not have ventured to ride over it. (*Verr.* i. 59.) We see from this passage that a statue of Vertumnus, the national Etruscan deity, stood at the end of the street next the forum. Becker (*Handb.* p. 308) places him at the other extremity near the Velabrum. But all the evidence runs the other way; and the lines of Propertius (iv. 2. 5), who puts the following words into the god's mouth, are alone sufficient to decide the matter (*Class. Mus.* vol. iv. p. 444):—

> "Nec me tura juvant, nec templo laetor eburno
> Romanum satis est posse videre forum."

Comitium.—Having thus described the streets which either encircled the forum or afforded outlets from it, we will now proceed to treat of the forum itself, and the objects situated upon and around it, and endeavour to present the reader with a picture of it as it existed under the Kings, during the Republic, and under the Empire. But here, as in the case of the Capitol, we are arrested in the outset by a difficult investigation. We know that a part of the forum, called the comitium, was distinguished from the rest by being appropriated to more honourable uses; but what part of the forum it was has been the subject of much dispute. Some, like Canina, have considered it to be a space running parallel with the forum along its whole southern extent; whilst others, like Bunsen and Becker, have thought that it formed

a section of the area at its eastern extremity, in size about one-third of the whole forum. An argument advanced by Becker himself (*Handb.* p. 278) seems decisive against both these views, namely, that we never hear any building on the S. side of the forum spoken of as being on the comitium. Yet in spite of this just remark, he ends by adopting the theory of Bunsen, according to which the comitium began at or near the ruin of the three columns and extended to the eastern extremity of the forum: and thus both the temple of Vesta and the Regia must have stood very close to it. The two chief reasons which seem to have led him to this conclusion are, the situation of the rostra, and that of the Tribunal Praetoris. Respecting the former, we shall have occasion to speak further on. The argument drawn from the latter, which is by far the more important one, we shall examine at once. It proceeds as follows (*Handb.* p. 280): "The original Tribunal Praetoris was on the comitium (Liv. vi. 15, xxix. 16; Gell. xx. 1, 11, 47 (from the XII. Tables); Varro, *L. L.* v. 32. p. 154; Plaut. *Poen.* iii. 6. 11; Macrob. *Sat.* ii. 12), which, however, is also mentioned as being merely on the forum. (Liv. xxvii. 50, xl. 2, 44.) But close to the tribunal was the Puteal Libonis or Scribonianum, and this is expressly mentioned as being near the Fornix Fabius, the Atrium Vestae, the rostra, and lastly the aedes Divi Julii (Porphyr. *ad Hor. Ep.* i. 19. 8; Schol. Cruq. *Ib.* Id. *ad Sat.* ii. 6. 35; Fest. p. 333; Schol. *ad Pers. Sat.* iv. 49); consequently the comitium also must have been close to all these objects."

We presume that Becker's meaning in this passage is, that the *first* or *original* tribunal was on the comitium, and that it was afterwards moved into the forum. It could hardly have been both on the comitium and forum, though Becker seems to hint at such a possibility, by saying that it is "also mentioned as being merely on the forum;" and indeed there seems to be no physical impossibility in the way, since it is evident that the tribunal at first was merely a movable chair ("dictator — stipatus ea multitudine, sella in comitio posita, viatorem ad M. Manlium misit: qui — agmine ingenti ad tribunal venit," Liv. vi. 15). But if that was his meaning, the passages he cites in proof of it do not bear him out. In the first Livy merely says that a certain letter was carried *through* the forum to the tribunal of the praetor, the latter of course being on the comitium ("eae literae per forum ad tribunal praetoris latae," xxvii. 50). The other two passages cited contain nothing at all relative to the subject, nor can there be any doubt that in the early times of the Republic the comitium was the usual place on which the praetor took his seat. But that the tribunal was moved from the comitium to the forum is shown by the scholiasts on Horace whom Becker quotes. Thus Porphyrio says: "Puteal autem Libonis sedes praetoris fuit prope Arcum Fabianum, dictumque quod a Libone illic primum tribunal et subsellia locata sint." *Primum* here is not an adjective to be joined with *tribunal* — i. e. "that the first or original tribunal was placed there by Libo;" but an adverb — "that the tribunal was first placed there by Libo." The former version would be nonsense, because Libo's tribunal could not possibly have been the first. Besides the meaning is unambiguously shown by the Schol. Cruq.: "puteal Libonis; tribunal: Quod autem ait *Libonis*, hinc sumsit, quod *is primus* tribunal *in foro statuerit*." If the authority of these scholiasts is suspicious as to the fact of this removal, though there are no apparent grounds for suspicion, yet Becker at all events is not in a condition to invalidate their testimony. He has quoted them to prove the situation of the puteal; and if they are good for that, they are also good to prove the removal of the tribunal. Yet with great inconsistency, he tacitly assumes that the tribunal had always stood in its original place, that is, on the comitium, and by the puteal, contrary to the express evidence that the latter was on the forum. ("Puteal locus erat *in foro*," Sch. Cruq. *ad Sat.* ii. 6. 35.) Libo flourished about a century and a half before Christ. [See *Dict. of Biogr.* Vol. II. p. 779.] Now all the examples cited by Becker in which the tribunal is alluded to as being on the comitium, are previous to this date. The first two in note 457 might be passed over, as they relate not to the praetor but to the dictator and consuls; nevertheless, they are both anterior to the time of Libo, the first belonging to the year B. C. 382 and the second to 204. The passage from Gellius "ad praetorem in comitium," being a quotation from the XII. Tables, is of course long prior to the same period. The passage in Varro (v. § 155, Müll.), which derives the name of comitium from the practice of coming together there (coire) for the decision of suits, of course refers to the very origin of the place. A passage from Plautus can prove nothing, since he died nearly half a century before the change effected by Libo. The passage alluded to in Macrobius (ii. 12) must be in the quotation from the speech of C. Titius in favour of the Lex Fannia: "Inde ad comitium vadunt, ne litem suam faciant; veniunt in comitium tristes, &c." But the Lex Fannia was passed in B. C. 164 (Macrob. ii. 13): or even if we put it four years later, in B. C. 160, still before the probable date of Libo's alteration; who appears to have been tribune in B. C. 149. Thus the argument does not merely break down, but absolutely recoils against its inventor; for if, as the Scholia Cruquiana inform us, Libo moved the tribunal from the comitium to the forum, and placed it near the puteal, then it is evident that this part of the area could not have been the comitium.

The comitium, then, being neither on the south nor the east sides of the forum, we must try our fortune on the north and west, where it is to be hoped we shall be more successful. The only method which promises a satisfactory result is, to seek it with other objects with which we know it to have been connected. Now one of these is the Vulcanal. We learn from Festus that the comitium stood *beneath* the Vulcanal: "in Volcanali, quod est supra Comitium" (p. 290, Müll.). In like manner Dionysius describes the Vulcanal as standing a little above the forum, using, of course, the latter word in a general sense for the whole area, including the comitium: *καὶ τὰς συνόδους ἐνταῦθα ἐποιοῦντο, ἐν Ἡφαίστου χρηματίζοντες ἱερῷ, μικρὸν ἐπανεστηκότι τῆς ἀγορᾶς* (ii. 50). Where *ἱερόν* is not to be taken of a proper temple (*ναός*), but signifies merely an area consecrated to the god, and having probably an altar. It was a rule that a temple of Vulcan should be outside the town (Vitruv. i. 7); and thus in later times we find one in the Campus Martius ("tactam de caelo aedem in campo Vulcani," Liv. xxiv. 10). That the Vulcanal was merely an open space is manifest from its appellation of *area*, and from the accounts we read of rain falling upon it (Liv. xxxix. 46, xl. 19), of buildings being

erected upon it (Id. ix. 46), &c. But that it had an altar appears from the circumstance that sacrifices of live fish taken in the Tiber were here made to Vulcan, in propitiation for human souls. (Festus in *Piscatorii Ludi*, p. 238, Müll.) Another fact which shows it to have been an open space, and at the same time tends to direct us to its site, is the lotus-tree which grew upon it, the roots of which are said to have penetrated as far as the forum of Caesar, which, as we shall show in its proper section, lay a little N. of the Forum Romanum. "Verum altera lotos in Vulcanali, quod Romulus constituit ex victoria de decumis, aequaeva urbi intelligitur, ut auctor est Masurius. Radices ejus in forum usque Caesaris per stationes municipiorum penetrant." (Plin. xvi. 86.) From which passage — whatever may be thought of the tale of the tree — we deduce these facts: that the Vulcanal existed in the time of Pliny; that it had occupied the same spot from time immemorial; that it could not have been at any very great distance from the forum of Caesar, otherwise the roots of the tree could not possibly have reached thither. Let those consider this last circumstance who hold with Canina that the comitium was on the south side of the forum; or even with Bunsen and Becker that it was on the east. The Vulcanal must originally have occupied a considerable space, since it is represented as having served for a place of consultation between Romulus and Tatius, with their respective senates. (Dionys. ii. 50; Plut. *Rom.* 20.) Its extent, however, seems to have been reduced in process of time, since the Graecostasis was taken out of its area; a fact which appears from Livy mentioning the Aedes Concordiae, built by Flavius, as being "in area Vulcani" (ix. 46); whilst Pliny says that it was on the Graecostasis ("aediculam aeream (Concordiae) fecit in Graecostasi, quae *tunc* supra comitium erat," xxxiii. 6): whence the situation of the Vulcanal may be further deduced; since we know that the Graecostasis adjoined the curia, and the latter, as will be shown presently, lay on the N. side of the forum. Hence the Vulcanal also must have been close to the curia and forum; whence it ran back in a N. direction towards the spot subsequently occupied by the Forum Caesaris. This site is further confirmed by the *Notitia*, which places the Area Vulcani, as well as the Templum Faustinae and Basilica Paulli in the 4th Regio. Preller indeed says (*Regionen*, p. 128), that the area cannot possibly be mentioned in its right place here, because it stood immediately over the forum in the neighbourhood of the temple of Faustina, where the old Curia Hostilia stood; but his only reason for this assertion is Becker's dictum respecting the Vulcanal at p. 286, of which we have already seen the value. The comitium, then, would occupy that part of the forum which lay immediately under the Vulcanal, or the W. part of its N. side; a situation which is confirmed by other evidence. Dionysius says that, as the judgment-seat of Romulus, it was in the most conspicuous part of the forum (ἐν τῷ φανερωτάτῳ τῆς ἀγορᾶς, ii. 29), a description which corresponds admirably with the site proposed. Livy (i. 36) says that the statue of Attius Navius was on the steps of the comitium on *the left* of the curia, whence it may be inferred that the comitium extended on both sides of the curia. Pliny (xxxiv. 11) speaking of the same statue, says that it stood *before* the curia, and that its basis was burnt in the same fire which consumed that building when the body of Clodius was burnt there.

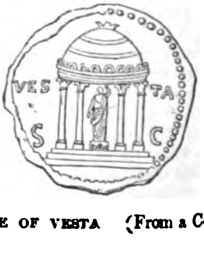
Hence, we are led to suppose that the comitium occupied a considerable part of the N. side of the forum; but its exact limits, from the want of satisfactory evidence, we are unable to define. It must have been a slightly elevated place, since we hear of its having steps; and its form was probably curvilinear, as Pliny (xxxiv. 12) speaks of the statues of Pythagoras and Alcibiades being at *its horns* ("in cornibus Comitii"); unless this merely alludes to the angle it may have formed at the corner of the forum. It has been sometimes erroneously regarded as having a roof; a mistake which seems to have arisen from a misinterpretation of a passage in Livy, in which that author says that in B. C. 208 the comitium was covered for the first time since Hannibal had been in Italy ("Eo anno primum, ex quo Hannibal in Italiam venisset, comitium tectum esse, memoriae proditum est," xxvii. 36). Hence, it was thought, that from this time the comitium was covered with a permanent roof. But Piale (*del Foro Rom.* p. 15, seq.) pointed out that in this manner there would be no sense in the words "for the first time since Hannibal was in Italy," which indicate a repeated covering. The whole context shows that the historian is alluding to a revived celebration of the Roman games, in the usual fashion; and that the covering is nothing more than the *vela* or canvas, which on such occasions was spread over the comitium, to shade the spectators who occupied it from the sun. That the comitium was an open place is evident from many circumstances. Thus, the prodigious rain, which so frequently falls in the narrative of Livy, is described as wetting it (Liv. xxxiv. 45; Jul. Obseq. c. 103), and troops are represented as marching over it. It was here, also, that the famous Ruminalis Arbor grew (Tac. *Ann.* xiii. 58), which seems to have been transplanted thither from the Palatine by some juggle of Attius Navius, the celebrated augur (Plin. xv. 20; ap. Bunsen, *Les Forum de Rom.* p. 43, seq.), though we can by no means accede to Bunsen's emendation of that passage.

The principal destination of the comitium was for holding the comitia curiata, and for hearing lawsuits ("Comitium ab eo quod coibant eo, comitiis curiatis, et litium causa," Var. *L. L.* v. § 155, Müll.), and it must, therefore, have been capable of containing a considerable number of persons. The comitia centuriata, on the other hand, were held in the Campus Martius; and the tributa on the forum proper. The curiata were, however, sometimes held on the Capitol before the Curia Calabra. The comitium was also originally the proper place for *contiones*, or addresses delivered to the assembled people. All these customs caused it to be regarded as more honourable and important than the forum, which at first was nothing more than a mere market-place. Hence, we frequently find it spoken of as a more distinguished place than the forum; and seats upon it for viewing the games were assigned to persons of rank. Its distinction from the forum, as a place of honour for the magistrates, is clearly marked in the following passage of Livy, describing the alarm and confusion at Rome after the defeat at Trasimene: "Romae ad primum nuntium cladis ejus cum ingenti terrore ac tumultu concursus *in forum* populi est factus. Matronae vagae per vias, quae repens clades adlata, quaeve fortuna exercitus esset, obvios percontantur. Et quum frequentis contionis modo *turba in comitium et curiam versa magistratus vocaret*," &c. (xxii. 7). When not oc-

cupied by the magistrates it appears to have been open to the people. Thus, the senate being assembled in the curia to hear the ambassadors of those made prisoners at the battle of Cannae, the people are represented as filling the comitium: "Ubi is finem fecit, extemplo ab ea turba, quae in comitio erat, clamor flebilis est sublatus, manusque ad curiam tendentes, &c." (Id. xxii. 60.) Being the place for the contiones it of course had a suggestum, or rostra, from which speeches were delivered; but we shall have occasion to describe this and other objects on and around the comitium and forum when we arrive at them in their chronological order.

It was not till after the preceding account of the comitium had been committed to paper that the writer of it met with the essay on the comitium by Mommsen in the *Annali dell' Instituto* (vol. xvi.), to which reference has before been made. The writer was glad to perceive that his general view of the situation of the comitium had been anticipated, although he is unable to concur with Mommsen respecting some of the details; such as the situation of the Curia Hostilia, of the temple of Janus, of the Forum Caesaris, and some other objects. In refuting Becker's views, Mommsen has used much the same arguments, though not in such detail, as those just adduced; but he has likewise thought it worth while to refute an argument from a passage in Herodian incidentally adduced by Becker in a note (p. 332). As some persons, however, may be disposed to attribute more weight to that argument than we do ourselves, we shall here quote Mommsen's refutation: "Minus etiam probat alterum, quod à Beckero, p. 332, n. 612, affertur, argumentum desumtum ex narratione Herodiani, i. 9, Severum in somnio vidisse Pertinacem equo vectum *διὰ μέσης τῆς ἐν Ῥώμῃ ἱερᾶς ὁδοῦ*; qui cum venisset *κατὰ τὴν ἀρχὴν τῆς ἀγορᾶς, ἔνθα ἐπὶ δημοκρατίας πρότερον δῆμος συνιὼν ἐκκλησίαζεν*, equum eo excusso subiisse Severo eumque vexisse *ἐπὶ τῆς ἀγορᾶς μέσης*. Non intelligo cur verba *ἔνθα — ἐκκλησίαζεν* referantur ad *τὴν ἀρχὴν* neque ad *τῆς ἀγορᾶς*, quod multo est simplicius. Nam ut optime quasi in foro insistere videtur qui rerum Romanarum potiturus est, ita de comitio eo tempore inepte haec dicerentur; accedit quod, si ad *τὴν ἀρχὴν τῆς ἀγορᾶς* omen pertineret, Severus ibi constiturus fuisset, neque in foro medio.—Nullis igitur idoneis argumentis topographi Germani comitium eam partem fori esse statuerunt quae Veliis subjacet" (p. 289).

So much for the negative side of the question: on the positive side Mommsen adduces (p. 299) an argument which had not occurred to the writer of the present article in proof of the position above indicated for the comitium. It is drawn from the Sacrum Cluacinae. That shrine, Mommsen argues, stood by the Tabernae Novae, that is, near the arch of Severus, as Becker has correctly shown (*Handb.* p. 321) from Livy iii. 48; but he has done wrong in rejecting the result that may be drawn from the comparison of the two legends; first, that the comitium was so called because Romulus and Tatius met upon it after the battle (p. 273); second, that the Romans and Sabines cleansed themselves, after laying aside their arms, at the spot where the statue of Venus Cluacina afterwards stood (Plin. xv. 18. s. 36); whence it follows that the statue was on the comitium. A fresh confirmation, Mommsen continues, may be added to this discovery of the truth. For that the Tabernae were on the comitium, and not on the forum, as Becker supposes, is pretty clearly shown by Dionysius (*τήν τε ἀγορὰν ἐν ᾗ δικάζουσι καὶ ἐκκλησιάζουσι, καὶ τὰς ἄλλας ἐπιτελοῦσι πολιτικὰς πράξεις, ἐκεῖνος ἐκόσμησεν, ἐργαστηρίοις τε καὶ τοῖς ἄλλοις κόσμοις περιλαβών*, iii. 67).



We are not, however, disposed to lay any great stress on this argument. We think, as we have already said, that Varro's etymology of the comitium, from the political and legal business transacted there rendering it a place of great resort, is a much more probable one; since, as the forum itself did not exist at the time when Romulus and Tatius met after the battle, it is at least very unlikely that any spot should afterwards have been marked out upon it commemorative of that event. It is, nevertheless, highly probable that the statue of Cluacina stood on the comitium, but without any reference to these traditions. We do not, however, think that the tabernae occupied the comitium. By *ἀγορά* Dionysius means the whole forum, as may be inferred from *περιλαβών*.

The Forum under the Kings.—In the time of Romulus, then, we must picture the forum to ourselves as a bare, open space, having upon it only the altar of Saturn at about the middle of its western side, and the Vulcanal on its NW. side. Under Numa Pompilius it received a few improvements. Besides the little temple of Janus, which

TEMPLE OF JANUS. (From a Coin)

did not stand far from the forum, but of which we have already had occasion to speak, when treating of the Porta Janualis in the first part of this article, Numa built near it his Regia, or palace, as well as the celebrated temple of Vesta. Both these objects stood very near together at the SE. extremity of the forum. The AEDES VESTAE was a round building (Festus, p. 262; Plut. *Num.* 11), but no temple in the Roman sense of the word; since it had been purposely left uninaugurated, because, being the resort of the vestal virgins, it was not deemed right that the senate should be at liberty to meet in it (Serv. *Aen.* vii. 153). Its site may be inferred from

TEMPLE OF VESTA (From a Coin.)

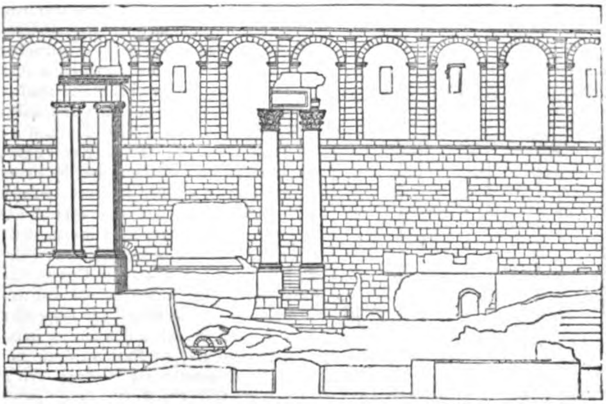
several passages in ancient authors. Thus we learn from Dionysius (ii. 66) that it was in the forum, and that the temple of the Dioscuri, whose site we shall point out further on, was subsequently built close to it (Id. vi. 13; Mart. i. 70. 2). It is also said to have been near the lake, or fountain, of Juturna. (Val. Max. i. 8. 1; Ov. *F.* i. 707.) All these circumstances indicate its site to have been near the present church of *St. Maria Liberatrice;* where, indeed the graves of twelve vestal virgins, with inscriptions, were discovered in the 16th century. (Aldroandus, *Memorie*, n. 3; Lucio Fauno, *Antich. di Roma*, p. 206.) In all its subsequent restorations the original round form was retained, as symbolical of the earth, which Vesta represented (Ov. *F.* vi. 265). The temple itself did not immediately abut upon the forum, but lay somewhat back towards the Palatine; whilst the Regia, which lay in front, and a little to the E. of it, marked the boundary of the forum on that side. The latter, also called Atrium Vestae, and Atrium Regium, though but a small building, was originally inhabited by Numa. (Ov. *ib.* 265; Plut. *Num.* 14, &c.). That it lay close to the forum is shown by the account of Caesar's body being burnt before it (App. *B. C.* ii. 148); and, indeed, Servius says expressly that it lay "in radicibus Palatii finibusque Romani fori" (*ad Aen.* viii. 363). At the back of both the buildings must have been a sacred grove which ran towards the Palatine. It was from this grove that a voice was heard before the capture of the city by the Gauls, bidding the Romans repair their walls and gates. The admonition was neglected; but this impiety was subsequently expiated by building at the spot an altar or sacellum to Aius Loquens. (Cic. *Div.* i. 45.)

Tullus Hostilius, after the capture of Alba Longa, adorned the forum with a curia or senate-house, which was called after him the Curia Hostilia, and continued almost down to the imperial times to be the most usual place for holding assemblies of the senate. (Varr. *L. L.* v. § 155, Müll.; Liv. i. 30.) From the same spoils he also improved the comitium: "Fecitque idem et sepsit de manubiis comitium et curiam" (Cic. *Rep.* ii. 17); whence we can hardly infer that he surrounded the comitium with a fence or wall, but more probably that he marked it off more distinctly from the forum by raising it higher, so as to be approached by steps. The Curia Hostilia, which from its pre-eminence is generally called simply curia, must have adjoined the eastern side of the Vulcanal. Niebuhr (*Beschr.* vol. iii. p. 60) was the first who indicated that it must have stood on the N. side of the forum, by pointing out the following passage in Pliny, in which the method of observing noon from it is described:—"Duodecim tabulis ortus tantum et occasus nominantur; post aliquot annos adjectus est meridies, accenso consulum id pronuntiante, cum a curia inter rostra et graecostasim prospexisset solem." (vii. 60.) Hence, since the sun at noon could be observed from it, it must have faced the south. If its front, however, was parallel with the northern line of the forum, as it appears to have been, it must have looked a little to the W. of S.; since that line does not run due E., but a few degrees to the S. of E. Hence the necessity, in order to observe the true meridian, of looking between the Graecostasis and rostra. Now the Graecostasis—at a period of course long after Tullus Hostilius, and when mid-day began to be observed in this manner—was a lofty substruction on the *right* or W. side of the curia; and the rostra were also an elevated object situated directly *in its front.* This appears from the passage in Varro just alluded to:—"*Ante hanc* (curiam) rostra: quojus loci id vocabulum, quod ex hostibus capta fixa sunt rostra. *Sub dextra hujus* (curiae) a comitio locus substructus, ubi nationum subsisterent legati, qui ad senatum essent missi. Is graecostasis appellatus, a parte ut multa. Senaculum supra Graecostasim, ubi aedis Concordiae et Basilica Opimia." (*L. L.* v. § 155, 156.) When Varro says that the Graecostasis was *sub dextra curiae*, he is of course looking towards the south, so that the Graecostasis was on his right. This appears from his going on to say that the senaculum lay above the Graecostasis, and towards the temple of Concord; which, as we have had occasion to mention, was seated on the side of the Capitoline hill. It further appears from this passage that the Graecostasis was a substruction, or elevated area (locus substructus) at the side of, or adjoining the comitium (comp. Plin. xxxiii. 6); and must have projected in front of the curia. The relative situation of these objects, as here described, is further proved by Pliny's account of observing midday, with which alone it is consistent. For, as all these objects faced a little to the W. of S., it is only on the assumption that the Graecostasis lay to the W. of the curia, that the meridian sun could be observed with accuracy from any part of the latter between the Graecostasis and rostra.

A singular theory is advanced by Mommsen respecting the situation of the Curia Hostilia, which we cannot altogether pass over in silence. He is of opinion (*l. c.* p. 289, seq.) that it lay on the Capitoline hill, just above the temple of Concord, which he thinks was built up in front of it; and this he takes to be the reason why the curia was rebuilt on the forum by Sulla. His only authority for this view is the following passage in Livy: "(Censores) et clivum Capitolinum silice sternendum curaverunt et porticum ab aede Saturni in Capitolium ad Senaculum ac super id Curiam" (xli. 27). From these words, which are not very intelligible, Mommsen infers (p. 292) that a portico reached from the temple of Saturn to the senaculum, and thence to the curia above it, which stood on the Capitol on the spot afterwards occupied by the Tabularium (p. 292). But so many evident absurdities follow from this view, that Mommsen, had he given the subject adequate consideration, could hardly, we think, have adopted it. Had the curia stood behind the temple of Concord, the ground plan of which is still partly visible near the arch of Severus, it is quite impossible that, according to the account of Pliny, mid-day could have been observed from it between the rostra and Graecostasis, since it would have faced nearly to the east. Mommsen, indeed (p. 296), asserts the contrary, and makes the Carcer Mamertinus and arch of Titus lie almost due N. and S., as is also shown in his plan at the end of the volume. But the writer can affirm from his own observation that this is not the fact. To a person standing under the Capitol at the head of the forum, and opposite to the column of Phocas, the temple of Faustina bears due E. by the compass, and the arch of Titus a few degrees to the S. of E. To a person standing by the arch of Severus, about the assumed site of the curia, the arch of Titus would of course bear a little more S. still. Something must be allowed for variation of the

compass, but these are trifles. The correct bearings are given in Canina's large plan and in Becker's map, and are wholly at variance with those laid down by Mommsen. Again, it is not to be imagined that Opimius would have built up his temple of Concord immediately in front of the ancient curia, thus screening it entirely from the view of the forum and comitium; a state in which it must have remained for nearly half a century, according to the hypothesis of Mommsen. Another decisive refutation of Mommsen's view is that the Basilica Porcia, as we shall see further on, was situated on the forum close by the curia, whilst according to Mommsen the two buildings were separated by a considerable interval. We hold it, therefore, to be quite impossible that the curia could have stood where Mommsen places it; but at the same time we confess our inability to give a satisfactory explanation of the passage in Livy. A word, or several words, seem to have dropped out, as is the case frequently in the very same sentence, where the gaps are marked in the editions with asterisks. Such a corrupt sentence, therefore, does not suffice as authority for so important a change, in the teeth of all evidence to the contrary.

We shall only further observe that the preceding passages of Varro and Pliny thus appear, when rightly interpreted, mutually to support and explain one another, and show the Graecostasis to have stood to the W. of the curia, first from its proximity to the senaculum and temple of Concord, and secondly, from the mid-day line falling between it and the rostra. That the curia was considerably raised appears from the circumstance that Tarquin the Proud nearly caused the death of Servius Tullius by hurling him down the steps in front of it, which led to the comitium. (Dionys. iv. 38; Liv. i. 48.) It was an inaugurated temple in order that the senate might hold their meetings in it, but not a sacred one. (Liv. i. 30; Varr. *l. c.*) In the reign of Tullus the forum was adorned with the trophy called Pila Horatiana, consisting of the spoils won from the Curiatii; but where it stood cannot be determined. (Dionys. iii. 22; Liv. i. 26.)

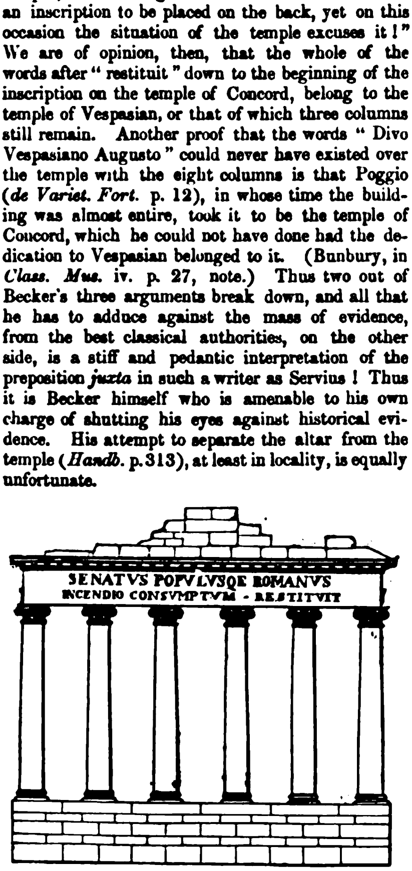


The Senaculum referred to in the preceding account appears to have been a raised and open area, adjoining the Graecostasis and curia, on which the senators were accustomed to assemble before they entered the curia in order to deliberate. Thus Varro: "Senaculum vocatum ubi senatus aut ubi seniores consisterent: dictum ut Gerusia apud Graecos" (v. § 156, Müll.). Valerius Maximus gives a still more explicit account: "Senatus assiduam stationem eo loci peragebat qui hodieque Senaculum appellatur: nec exspectabat ut edicto contraheretur, sed inde citatus protinus in Curiam veniebat" (ii. 2. § 6). Festus mentions that there were three Senacula in all; namely, besides the one alluded to, another near the Porta Capena, and a third by the temple of Bellona, in the Campus Martius. But as his account is in some respects contradictory of the two preceding authorities, we shall here insert it: "Senacula tria fuisse Romae, in quibus senatus haberi solitus sit, memoriae prodidit Nicostratus in libro qui inscribitur de senatu habendo: unum, ubi nunc est aedis Concordiae inter Capitolium et Forum; in quo solebant magistratus D. T. cum Senioribus deliberare; alterum ad portam Capenam; tertium, citra aedem Bellonae, in quo exterarum nationum legatis, quos in urbem admittere nolebant, senatus dabatur" (p. 347, Müll.). Here the senaculum is represented, not as a place in which the senate assembled previously to deliberation, but as one in which it actually deliberated. It is impossible, however, that this could have been so. For in that case what would have been the use of the curia? in which the senate is constantly represented as assembling, except in cases where they held their sittings in some other temple. Besides we have no accounts of the senaculum being an inaugurated place, without which it would have been unlawful for the senate to deliberate in it. Nicostratus therefore, who, from his name, seems to have been a Greek, probably confounded the senacula with the curia, and other temples in which the senate assembled: and at all events his account cannot be set against the more probable one of Varro and Valerius Maximus. There is, however, one part in the account of Festus, which seems to set the matter in a different point of view. The words, "in quo solebant magistratus D.T. cum senioribus deliberare," seem to point to the senaculum not as a place where the senators deliberated among themselves, but where they conferred with the magistrates; such magistrates we may suppose as were not entitled to enter the curia. Such were the tribunes of the people, who, during the deliberations of the senate, took their seats before the closed doors of the curia; yet as they had to examine and sign the decrees of the Fathers before they became laws, we may easily imagine that it was sometimes necessary for the tribunes and senators to confer together, and these conferences may have taken place at the senaculum ("Tribunis plebis intrare curiam non licebat: ante valvas autem positis subselliis, decreta patrum attentissima cura examinabant; ut, si qua ex eis improbassent, rata esse non sinerent. Itaque veteribus senatus consultis T. litera subscribi solebat: eaque nota significabatur, ita tribunos quoque censuisse," Val. Max. ii. 2. § 7.) In this manner the senacula would have answered two purposes; as places in which the senators met previously to assembling in the curia, and as a sort of neutral ground for conferences with the plebeian magistrates.

With regard to the precise situation of the senaculum belonging to the Curia Hostilia, we can hardly assume, with Mommsen, that it occupied the spot on which the temple of Concord was afterwards actually built; nor do the words of Varro and Festus,—"Senaculum ubi aedis Concordiae"—seem to require so very rigorous an interpretation. It is sufficient if it adjoined the temple; though it is not improbable that the latter may have encroached upon some part of its area. After the temple was erected there still appears to have been a large open space in front of it, part of the ancient senaculum, but which now seems to have obtained the name of "Area Concordiae." Its identity with the senaculum appears from its adjoining the Vulcanal, like the latter: "In area Vulcani et Concordiae sanguinem pluit." (Liv. xl. 19.) "In area Vulcani per biduum, in area Concordiae totidem diebus sanguinem pluit." (Jul. Obseq. 59.) The temple of Concord became a very usual place for assemblies of the senate, as appears from many passages in ancient authors. (Cic. *Phil.* ii. 7; Lampr. *Alex.* 6, &c.) From the area a flight of steps led up to the vestibule of the temple: "(Equites Romani) qui frequentissimi in gradibus Concordiae steterunt." (Cic. *Phil.* viii. 8.) According to Macrobius the temple of Saturn also had a senaculum

("Habet aram et ante senaculum," i. 8). This must have been near the senaculum of the Curia Hostilia, but could hardly have been the same. If Macrobius is right, then Festus is wrong in limiting the senacula to three; and it does not seem improbable that the areae near temples, where the senate was accustomed to meet, may have been called senacula.

To Ancus Marcius we can only ascribe the CARCER MAMERTINUS, or prison described by Livy as overhanging the forum (" media urbe, imminens foro," i. 33). It is still to be seen near the arch of Severus, under the church of *S. Giuseppe dei Falegnami.*



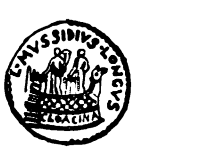
We have before remarked that a new architectural era began at Rome with the reign of Tarquinius Priscus; and if he had not been interrupted by wars, he would doubtless have carried out many of those grand schemes which he was destined only to project. He may almost be called the founder of the forum, since it was he who first surrounded it with private houses and shops. According to Varro (*ap. Macrob.* § i. 8), he also founded the TEMPLE OF SATURN on the forum at the spot where the altar stood; though, according to another account, it was begun by Tullus Hostilius. At all events, it does not seem to have been dedicated before the expulsion of the kings (Macrob. *l. c.*), and according to Livy (ii. 21), in the consulship of Sempronius and Minucius, B. C. 497. According to Becker (*Handb.* p. 312) the ruin of the three columns under the Capitol are remains of it, and this, he asserts, is a most decided certainty, which can be denied only by persons who prefer their own opinion to historical sources, or wilfully shut their eyes. It appears to us, however, judging from these very historical sources, that there is a great deal more authority for the Italian view than for Becker's; according to which the temple of Saturn is the ruin of the eight columns, at the foot of the clivus. All the writers who speak of it mention it as being at the lower part of the hill, and *beneath* the clivus, while the three columns are a good way up, and *above* the clivus. Thus Servius (*Aen.* ii. 115, viii. 319) says that the temple of Saturn was " ante clivum Capitolinum;" and in the *Origo gentis Romanae* (c. 3) it is said to be " sub clivo Capitolino." In like manner Varro (*L. L.* v. § 42, Müll.) places it " in faucibus (montis Saturni);" and Dionysius, παρὰ τῇ ῥίζῃ τοῦ λόφου, κατὰ τὴν ἄνοδον τὴν ἀπὸ τῆς ἀγορᾶς φέρουσαν εἰς τὸ Καπιτώλιον (i. 34). Festus (p. 322, Müll.) describes the ara as having been " in imo clivo Capitolino." Moreover, the miliarium aureum, which stood at the top of the forum (Plin. iii. 9) was *under* the temple of Saturn: " ad miliarium aureum, sub aedem Saturni" (Tac. *H.* i. 27); "sub aedem Saturni, ad miliarium aureum" (Suet. *Otho.* c. 6.) Further, the *Monumentum Ancyranum* mentions the Basilica Julia as " inter aedem Castoris et aedem Saturni." Now what has Becker got to oppose to this overwhelming mass of the very best evidence? His objections are, first, that Servius (*Aen.* ii. 116) mentions the temple of Saturn as being "*juxta* Concordiae templum;" and though the eight columns are near the temple of Concord, yet they cannot, without awkwardness, be called *juxta!* Secondly, the *Notitia*, proceeding from the Carcer Mamertinus, names the temples in the following order: Templum Concordiae et Saturni et Vespasiani et Titi. Now, as the three columns are next to the temple of Concord, it follows that they belong to the temple of Saturn. The whole force of the proof here adduced rests on the assumption that the *Notitia* mentions these buildings precisely in the order in which they actually occurred. But it is notorious that the authority of the *Notitia* in this respect cannot be at all depended on, and that objects are named in it in the most preposterous manner. We need no other witness to this fact than Becker himself, who says of this work, " Propterea cavendum est diligenter, ne, quoties plura simul templa nominantur, eodem ea ordine juncta fuisse arbitremur." (*De Muris,* &c., p. 12, note.) But thirdly, Becker proceeds: " This argument obtains greater certainty from the inscriptions collected by the Anonymous of Einsiedlen. Fortunately, the entire inscriptions of all the three temples are preserved, which may be still partly read on the ruins. They run as follows: 'Senatus populusque Romanus incendio consumptum restituit Divo Vespasiano Augusto‖. S. P. Q. R. impp. Caess. Severus et Antoninus pii felic Aug. restituerunt.‖S.P.Q.R. aedem Concordiae vetustate collapsam in meliorem faciem opere et cultu splendidiore restituerunt." Now as the whole of the first inscription, with the exception of the last three words, " Divo Vespasiano Augusto," are still to be read over the eight columns, and the letters ESTITVER, a fragment of " restituerunt" in the second inscrip-

TABULARIUM AND TEMPLES OF VESPASIAN, SATURN AND CONCORD.

tion, over the three columns, Becker regards the order of the *Notitia* as fully confirmed, and the three temples to be respectively those of Concord, Vespasian and Titus, and Saturn.

With regard to these inscriptions all are agreed that the third, as here divided, belongs to the temple of Concord; but with regard to the proper division of the first two, there is great difference of opinion. Bunsen and Becker divide them as above, but Canina (*Foro Rom.* p. 179) contends that the first finishes at the word "restituit," and that the words from "Divo Vespasiano" down to "restituerunt" form the second inscription, belonging to the temple of Vespasian and Titus. In the original codex containing the inscriptions, which is in the library of Einsiedlen, they are written consecutively, without any mark where one begins and another ends; so that the divisions in subsequent copies are merely arbitrary and without any authority. Now it may be observed that the first inscription, as divided by Canina, may still be read on the architrave of the eight columns, which it exactly fills, leaving no space for any more words. Becker attempts to evade this difficulty by the following assertion: "There is no room," he says (*Handb.* p. 357), "for the dedication 'Divo Vespasiano,' on the front of the temple; and although it is unusual for one half of an inscription to be placed on the back, yet on this occasion the situation of the temple excuses it!" We are of opinion, then, that the whole of the words after "restituit" down to the beginning of the inscription on the temple of Concord, belong to the temple of Vespasian, or that of which three columns still remain. Another proof that the words "Divo Vespasiano Augusto" could never have existed over the temple with the eight columns is that Poggio (*de Variet. Fort.* p. 12), in whose time the building was almost entire, took it to be the temple of Concord, which he could not have done had the dedication to Vespasian belonged to it. (Bunbury, in *Class. Mus.* iv. p. 27, note.) Thus two out of Becker's three arguments break down, and all that he has to adduce against the mass of evidence, from the best classical authorities, on the other side, is a stiff and pedantic interpretation of the preposition *juxta* in such a writer as Servius! Thus it is Becker himself who is amenable to his own charge of shutting his eyes against historical evidence. His attempt to separate the altar from the temple (*Handb.* p. 313), at least in locality, is equally unfortunate.

TEMPLE OF SATURN.



The remains of the temple of Saturn, or the portico with the eight columns at the head of the forum, are in a rude and barbarous style of art, some of the columns being larger in diameter than others. Hence Canina infers that the restoration was a very late one, and probably subsequent to the removal of the seat of empire to Constantinople. From the most ancient times the temple of Saturn served as an *aerarium*, or state treasury, where the public money, the military ensigns, and important documents were preserved (Liv. iii. 69; Plut. *Q. R.* 42; Macrob. i. 8; Solin. i. 12, &c.). On account of its Grecian origin sacrifices were performed at the altar of Saturn after the Greek rite, that is, capite aperto, instead of capite velato as among the Romans (Macrob. *l. c.*).

Adjoining the temple of Saturn was a small cella or Aedes of Ops, which served as a bank for the public money. The *Fasti Amiternini* and *Capranicorum* mention it as being "ad Forum," and "in Vico Jugario," which determines its position here (*Calend. Amit. Dec.*; *Cal. Capran. Aug.*). It is several times alluded to by Cicero: "Pecunia utinam ad Opis maneret" (*Phil.* i. 7, cf. ii. 14). Before the temple stood a statue of Silvanus and a sacred fig-tree, which it was necessary to remove in B. C. 493, as its roots began to upset the statue (Plin. xv. 20). Behind the temple, in a small lane or Angiportus, and about midway up the ascent of the clivus, was the Porta Stercoraria, leading to a place where the ordure from the temple of Vesta was deposited on the 15th of June every year. (Varr. *L. L.* vi. § 32, Müll.; Festus, p. 344.) This custom seems to have been connected with the epithet of Stercutus applied to Saturn by the Romans, as the inventor of applying manure to the fields (Macrob. *Sat.* i. 7.) Close to the Ara Saturni there was a Sacellum Ditis, in which wax masks were suspended during the Saturnalia. (*Ib.* 11.)

But the most important alteration made by Tarquinius Priscus with regard to the forum was the causing of porticoes and shops to be erected around it (Liv. i. 35; Dionys. iii. 67). This gave the forum a fixed and unalterable shape. We may wonder at the smallness of its area when we reflect that this was the great centre of politics and business for the mistress of the world. But we must recollect that its bounds were thus fixed when she herself was not yet secure against the attempts of surrounding nations. As her power and population gradually increased various means were adopted for procuring more accommodation — first, by the erection of spacious basilicae, and at last, in the imperial times, by the construction of several new fora. But at first, the structures that arose upon the forum were rather of a useful than ornamental kind; and the *tabernae* of Tarquin consisted of butchers' shops, schools, and other places of a like description, as we learn from the story of Virginia. These Tabernae were distinguished by the names of *Veteres* and *Novae*, whence it seems probable that only the former were erected in the time of Tarquin. The two sides of the forum, lengthways, derived their names from them, one being called *sub Veteribus*, the other *sub Novis*. A passage in Cicero, where he compares these tabernae with the old and new Academy, enables us to determine their respective sites: "Ut ii, qui sub Novis solem non ferunt, item ille cum aestu aret, veterum, ut Maenianorum, sic Academicorum umbram secutus est" (*Acad.* iv. 22). Hence it appears that the *Novae*, being exposed to the sun, must have been on the northern side of the forum,

and the *Veteres* of course on the south side. This relative situation is also established by the accounts which we have of basilicae being built either on or near their sites, as will appear in the sequel. Their arrangement cannot be satisfactorily ascertained, but of course they could not have stood before the curia and comitium. In process of time the forum began to put on a better appearance by the conversion of the butchers' shops into those of silversmiths ("Hoc intervallo primum forensis dignitas crevit, atque ex tabernis lanienis argentariae factae," Varro *in Non.* p. 532, M.). No clue, however, is given to the exact date of this change. The earliest period at which we read of the *argentariae* is in Livy's description of the triumph of Papirius Cursor, B. C. 308 (ix. 40). When the comitia were declared it seems to have been customary for the argentarii to close their shops. (Varr. *L. L.* vi. § 91, Müll.) The tabernae were provided with *Maeniana* or balconies, which extended beyond the columns supporting the porticoes, and thus formed convenient places for beholding the games on the forum (Festus, p. 134, Müll.; Isid. *Orig.* xv. 3, 11.) These Maeniana appear to have been painted with subjects. Thus Cicero: "Demonstravi digito pictum Gallum in Mariano scuto Cimbrico sub Novis" (*de Or.* ii. 66). Pliny mentions another picture, or rather caricature, of a Gaul *sub Veteribus*, and also a figure of an old shepherd with a stick. The latter appears to have been considered by the Romans as a valuable work, as some of them asked a German ambassador what he valued it at? But the barbarian, who had no taste for art, said he would not have it as a gift, even if the man was real and alive (xxxv. 8). According to Varro, quoted by the same author (*Ib.* 37), the Maeniana sub Veteribus were painted by Serapion.

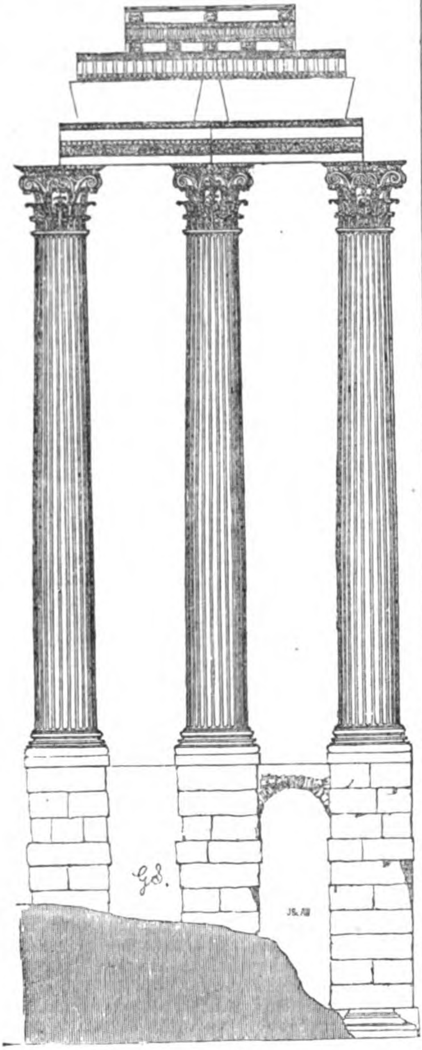
Another service which Tarquin indirectly rendered to the forum was by the construction of his cloacae, which had the effect of thoroughly draining it. It was now that the LACUS CURTIUS, which had formerly existed in the middle of the forum, disappeared ("Curtium in locum palustrem, qui tum fuit in foro, antequam cloacae sunt factae, secessisse," Piso *ap. Varr. L. L.* v. § 149, seq. Müll.) This, though not so romantic a story as the self-immolation of Curtius, is doubtless the true representation; but all the three legends connected with the subject will be found in Varro (*l. c.*) It was perhaps in commemoration of the drainage that the shrine or sacellum of VENUS CLUACINA was erected on the N. side of the forum, near the Tabernae Novae, as appears from the story of Virginius snatching the butcher's knife from a

SHRINE OF CLUACINA. (From a Coin.)

shop close to it. (Liv. iii. 48; cf. Plin. xv. 36.) The site of the Lacus Curtius after its disappearance was commemorated in another manner. Having been struck with lightning, it seems to have been converted into a dry *puteal*, which, however, still continued to bear the name of Lacus Curtius (cf. Varr. v § 150):

"Curtius ille lacus, siccas qui sustinet aras,
Nunc solida est tellus, sed lacus ante fuit."
(Ov. *Fast.* vi. 397.)

Every year the people used to throw pieces of money into it, a sort of augurium salutis, or new year's gift for Augustus. (Suet. *Aug.* 57.) Close to it grew a fig-tree, a vine, and an olive, which had been fortuitously planted, and were sedulously cultivated by the people; and near them was an altar, dedicated to Vulcan, which was removed at the time of the gladiatorial games given at Caesar's funeral. (Plin. xv. 20; cf. Gruter, *Inscr.* lxi. 1, 2.)



Servius Tullius probably carried on and completed the works begun by his predecessor around the forum, just as he finished the wall; but he does not appear to have undertaken anything original excepting the adding of a lower dungeon, called after him TULLIANUM, to the Mamertine prison. ("In hoc (carcere) pars quae sub terra Tullianum, ideo quod additum a Tullio rege," Varr. *L. L.* v. § 151.) This remains to the present day, and still realises to the spectator the terrible description of Sallust (*Cat.* 55).

The Roman *Ciceroni* point out to the traveller the SCALAE GEMONIAE inside the Mamertine prison, where there are evident remains of an ancient staircase. But it appears from descriptions in ancient authors that they were situated in a path leading down from the Capitol towards the prison, and that they were visible from the forum. (Dion Cass. lviii. 5; Valer. Max. vi. 9. § 13; Tac. *Hist.* iii. 74.) Traces of this path were discovered in the 16th century (Luc. Fauno, *Ant. di Roma*, p. 32), and also not many years ago in excavating the ground by the arch of Severus.

It does not appear that any additions or improvements were made in the forum during the reign of Tarquinius Superbus.

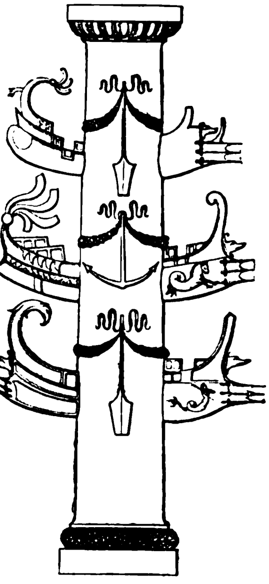
The Forum during the Republic. — One of the earliest buildings erected near the forum in the republican times was the temple of CASTOR AND POLLUX. After the battle at lake Regillus, the Dioscuri, who had assisted the Romans in the fight, were seen refreshing themselves and their horses, all covered with dust and sweat, at the little fountain of Juturna, near the temple of Vesta. (Dionys. vi. 13; Val. Max. i. 8. § 1; Cic. *N. D.* ii. 2, &c.) A temple had been vowed to those deities during the Latin War by Postumius the dictator; and the spot where this apparition had been observed was chosen for its site. It was dedicated by the son of Postumius B. C. 484. (Liv. ii. 42.) It was not a temple of the largest size; but its conspicuous situation on the forum made it one of the best known in Rome. From the same circumstance the flight of steps leading up to it served as a kind of suggestum or rostra from which to address the people in the forum; a purpose to which it seems to have been sometimes applied by Caesar. (Dion Cass. xxxviii. 6; cf. Cic. *p. Sest.* 15; Appian, *B. C.* iii. 41.) The temple served for assemblies of the senate, and for judicial business. Its importance is thus described by Cicero: "In aede Castoris, celeberrimo clarissimoque monumento, quod templum in oculis quotidianoque conspectu populi Romani est positum; quo saepenumero senatus convocatur; quo maximarum rerum frequentissimae quotidie advocationes fiunt" (*in Verr.* i. 49). Though dedicated to the twin gods, the temple was commonly called only *Aedes Castoris*, as in the preceding passage; whence Bibulus, the colleague of Caesar in the aedileship, took occasion to compare himself to Pollux, who, though he shared the temple in common with his brother, was never once named. (Suet. *Caes.* 10.) It was restored by

Metellus Dalmaticus (Cic. *Scaur.* 46, et ibi Ascon), and afterwards rebuilt by Tiberius, and dedicated in his and Drusus's name, A. D. 6. (Suet. *Tib.* 20; Dion Cass. lv. 27.) Caligula connected it with his palace by breaking through the back wall, and took a foolish pleasure in exhibiting himself to be adored between the statues of the twin deities. (Suet. *Cal.* 22; Dion Cass. lix. 28.) It was restored to its former state by Claudius (Id. lx. 6). We learn from Dionysius that the Roman knights, to the number sometimes of 5000, in commemoration of the legend respecting the foundation of the temple, made an annual procession to it from the temple of Mars, outside of the Porta Capena. On this occasion, dressed in their state attire and crowned with olive, they traversed the city and proceeded over the

COLUMNS OF THE TEMPLE OF CASTOR AND POLLUX.

forum to the temple (vi. 13). Its neighbourhood was somewhat contaminated by the offices of certain persons who trafficked in slaves of bad character, who might be found there in shoals. ("Num moleste feram si mihi non reddiderit nomen aliquis ex his, qui ad Castoris negotiantur, nequam mancipia ementes vendentesque, quorum tabernae pessimorum servorum turba refertae sunt," Senec. *de Sapient.* 13; cf. Plaut. *Curc.* iv. 1. 20.) The three elegant columns near the forum, under the Palatine, are most probably remains of this temple. We have seen in the preceding account that it stood close to the forum, as well as to the temple of Vesta, a position which precisely agrees with that of the three columns. None of the other various appropriations of this ruin will bear examination. Poggio (*de Var. Fort.* p. 22) absurdly considered these columns to be remains of Caligula's bridge. By the earlier Italian topographers they were regarded as belonging to the temple of Jupiter Stator; but it has been seen that this must have stood a good deal higher up on the Velia. Nardini thought they were remains of the comitium, and was followed by Nibby (*Foro Rom.* p. 60) and Burgess (*Antiq. of Rome*, i. p. 366). We have shown that the comitium was not at this side of the forum. Canina takes them to have belonged to the Curia Julia (*Foro Rom.* parte i. p. 132), which, however, as will appear in its proper place, could not have stood here. Bunsen (*Les Forum de Rome*, p. 58) identifies them with a temple of Minerva, which, as he himself observes (p. 59), is a "*dénomination entièrement nouvelle*," and indeed, though new, not true. It arises from his confounding the Chalcidicum mentioned in the *Monumentum Ancyranum* with the Atrium Minervae mentioned by the *Notitia* in the 8th Region. But we have already observed that the curia and Chalcidium, which adjoined it, would be quite misplaced here. The *Curiosum*, indeed, under the same Region, mentions besides the Atrium Minervae a Templum Castorum et Minervae, but this does not appear in the *Notitia*. Bunsen was more correct in his previous adoption of the opinion of Fea, that the columns belonged to the temple of Castor. (*Bullettino dell' Inst.* 1835; cf. Bunbury in *Class. Mus.* iv. p. 19.)

The capture of the city by the Gauls, B. C. 390, which, as we have before said, inflicted so much injury that the Romans entertained serious thoughts of migrating to Veii, must of course have occasioned considerable damage in the vicinity of the forum. The Curia Hostilia, however, must have escaped, since Livy represents the senate as debating in it respecting this very matter (v. 5). Such shops and private houses as had been destroyed were probably restored in the fashion in which they had previously existed. It was now that the little temple to AIUS LOQUENS, or LOCUTIUS, to which we have before alluded, was erected on the Nova Via, not far from the temple of Vesta (*Ib.* 50). From this period the forum must have remained without any important alterations down to the time of M. Porcius Cato, when basilicae first began to be erected. During this interval all that was done was to adorn it with statues and other ornaments, but no building was erected upon it; for the small ex voto temple to Concord, which appears to have been made of bronze, erected on the Vulcanal by the aedile C. Flavius, B. C. 303 (Id. ix. 46), can hardly come under that denomination. It was probably also during this period that the GRAECOSTASIS,



or elevated area, which served as a waiting-place for foreign ambassadors before they were admitted to an audience of the senate, was constructed on the Vulcanal close to the curia, as before described. The adornment of the suggestum or oratorical platform on the comitium with the beaks of the ships taken from the Antiates, forms, from the connection of this celebrated object with the history of republican Rome, and the change of name which it underwent on the occasion, a sort of epoch in the history of the forum. This occurred B. C. 337. (Plin. xxxiv. 11.) The ROSTRA at this time stood, as we have said, on the comitium before the curia — a position which they continued to occupy even after the time that new ones were erected by Julius Caesar. (Dion Cass. xliii. 49; Ascon. *ad Cic. Milon.* 5.) The rostra were a templum, or place consecrated by auguries ("Rostrisque earum (navium) suggestum in foro extructum, adornari placuit: Rostraque id templum appellatum," Liv. viii. 14; comp. Cic. *in Vatin.* 10.) They are distinguished by Dion Cassius (lvi. 34) from those erected by Caesar, by the epithet of βῆμα δημηγορικόν, and by Suetonius by that of *vetera*. (Suet. *Aug.* 100.) It may be inferred from a passage in a letter of Fronto's to the emperor Antoninus, that the rostra were not raised to any very great height above the level of the comitium and forum ("Nec *tantulo* superiore, quanto rostra foro et comitio excelsiora; sed altiores antemnae sunt prora vel potius carina," lib. i. ep. 2). When speaking from the rostra it was usual in the more ancient times for the orator to turn towards the comitium and curia,—a custom first neglected by C. Licinius Crassus in the consulship of Q. Maximus Scipio and L. Mancinus, who turned towards the forum and addressed himself to the people (Cic. *Am.* 25); though, according to Plutarch (*Gracch.* 5), this innovation was introduced by C. Gracchus.

ROSTRA. (From a Coin.)

The erecting of columns in honour of military achievements came very early into use at Rome, and seems to have preceded the triumphal arch. The first monument of this sort appears to have been the column on the forum called the COLUMNA MAENIA, commemorative of the victory gained by C. Maenius over the Latins, B. C. 338. (Liv. viii. 13.) Livy, indeed, in the passage cited says that the monument was an equestrian statue; whilst Pliny on the other hand (xxxiv. 11) states that it was a column, which is also mentioned by Cicero. (*Sest.* 58.) Niebuhr would reconcile both accounts, by assuming that the statue was on a column. (*Hist.* vol. iii. p. 145.) Pliny in another place (vii. 60) says that the column afforded the means of determining the last hour of the day ("A columna Maenia ad carcerem inclinato sidere supremam pronuntiabat (accensus)"); but it is very difficult to see how a column standing on the forum could have thrown a shadow towards the carcer in the evening.

Another celebrated monument of the same kind was the Duilian column, also called COLUMNA ROSTRATA, from its having the beaks of ships sculptured upon it. It was erected in honour of C. Duilius, who gained a great naval victory over the Carthaginians, B. C. 260. According to Servius (*Georg.* iii. v. 29) there were two of these columns, one on or near the rostra, the other in front of the circus. Pliny, indeed (xxxiv. 11), and Quintilian (*Inst.* i. 7) speak of it as "in foro;" but *forum* is a generic name, including the comitium as a part, and therefore, as used by these authors, does not invalidate the more precise designation of Servius. The basis of this column was found at no great distance from the arch of Severus (Ciacconio, *Columnae Rostratae Inscrip. Explicatio*, p. 3, ap. Canina, *Foro Rom.* p. 301, note), a fact which confirms the position which we have assigned to the comitium and curia. The inscription in a fragmentary state is still preserved in the *Palazzo de' Conservatori.*

COLUMNA DUILIA.

On the forum in front of the rostra stood the statue of MARSYAS with uplifted hand, the emblem of civic liberty. (Serv. *ad Aen.* iv. 58; cf. Macrob. *Sat.* iii. 12.) Here was the great resort of the *causidici*, and also of the Roman courtesans. Hence Martial (ii. 64. 8): —

"Ipse potest fieri Marsya causidicus."

Horace (*Sat.* i. 6. 120) has converted the pointed finger of the Satyr into a sign of scorn and derision against an obnoxious individual: —

"—— obeundus Marsya, qui se
Vultum ferre negat Noviorum posse minoris."

It was here that Julia, the daughter of Augustus, held her infamous orgies, in company with the

vilest of the Roman prostitutes. (Senec. *Ben.* vi. 32; Plin. xxi. 6.) The account given by Servius of this statue has been the subject of much discussion, into which the limits of this article will not permit us to enter. The whole question has been exhausted by Creuzer. (*Stud.* ii. p. 282, seq.; cf. Savigny, *Gesch. des Röm. Rechts*, i. 52.)

Near the rostra were also the statues of the THREE SIBYLS (Plin. xxxiv. 11), which are apparently the same as the three Μοῖραι or Fates, mentioned by Procopius. (*B. Goth.* i. 25.) These also were at the head of the forum, towards the temple of Janus, a position which points to the same result as the Duilian column with respect to the situation of the comitium.

Livy's description of a great fire which broke out about the forum B.C. 211 affords some topographical particulars: "Interrupit hos sermones nocte, quae pridie Quinquatrus fuit, pluribus simul locis circa forum incendium ortum. Eodem tempore septem Tabernae, quae postea quinque, et argentariae, quae nunc Novae appellantur, arsere. Comprehensa postea privata aedificia, neque enim tum basilicae erant: comprehensae Lautumiae, forumque piscatorium, et atrium regium. Aedis Vestae vix defensa est" (xxvi. 27). As the fire, wilfully occasioned, broke out in several places, and as the Curia Hostilia does not seem to have been endangered, we may perhaps conclude that the Septem Tabernae here mentioned were on the S. side of the forum. The argentariae afterwards called Novae were undoubtedly on the N. side, and, for the reason just given, they perhaps lay to the E. of the curia, as the fire seems to have spread to the eastward. It was on the N. side that the greatest damage was done, as the fire here spread to the Lautumiae and Forum Piscatorium. The Septem Tabernae appear to have been the property of the state, as they were rebuilt by the censors at the public expense, together with the fish-market and Atrium Regium ("Locaverunt inde reficienda quae circa forum incendio consumpta erant, *septem* tabernas, macellum, atrium regium," Id xxvii. 11). This passage would seem to show that the reading *quinque* (tabernae) in that previously cited is corrupt. Muretus has observed that one codex has "quae postea *vet.*," which in others was contracted into v., and thus taken for a numeral. (Becker, *Handb.* p. 297, notes). Hence we may infer that the Veteres Tabernae on the S. side of the forum were seven in number, and from the word *postea* applied to them, whilst *nunc* is used of the Novae, it might perhaps be inferred that the distinctive appellation of *Veteres* did not come into use till after this accident.

It also appears from this passage, that there were no basilicae at Rome at this period. It was not long afterwards, however, namely B.C. 184, that the first of these buildings was founded by M. Porcius Cato in his censorship, and called after him BASILICA PORCIA. In order to procure the requisite ground, Cato purchased the houses of Maenius and Titius in the Lautumiae, and four tabernae. (Liv. xxxix 44.) Hence we may infer that the Lautumiae lay close at the back of the forum; which also appears from the circumstance that Maenius, when he sold his house, reserved for himself one of its columns, with a balcony on the top, in order that he and his posterity might be able to view from it the gladiatorial shows on the forum. (Ps. Ascon. *ad Cic. Div. in Caecil.* 16; cf. Schol. *ad Hor. Sat.* i. 3. 21.) This column must not be confounded with the monument called the Columna Maenia, which stood on the forum. The Basilica Porcia must have stood close to the curia, since it was destroyed by the same fire which consumed the latter, when the body of Clodius was burnt in it (Ascon. *ad Cic. pro Mil. Arg.* p. 34, Orell.); but it must have been on the eastern side, as objects already described filled the space between the curia and the Capitoline hill. The FORUM PISCATORIUM stood close behind it, since Plautus describes the unsavoury odours from that market as driving away the frequenters of the basilica into the forum:—

> "Tum piscatores, qui praebent populo pisces foetidos
> Qui advehuntur quadrupedanti crucianti canterio
> Quorum odos subbasilicanos omnes abigit in forum."
> (*Capt.* iv. 2. 33.)

In the time of Cicero, the tribunes of the people held their assemblies in the Basilica Porcia. (Plut. *Cato Min.* 5.) After its destruction by fire at the funeral of Clodius it does not appear to have been rebuilt; at all events we do not find any further mention of it.

The state of the forum at this period is described in a remarkable passage of Plautus; in which, as becomes a dramatist, he indicates the different localities by the characters of the men who frequented them (*Curc.* iv. 1):—

> "Qui perjurum convenire volt hominem mitto in comitium;
> Qui mendacem et gloriosum, apud Cloacinae sacrum
> Ditis damnosos maritos sub basilica quaerito;
> Ibidem erunt scorta exoleta, quique stipulari solent;
> Symbolarum collatores apud Forum Piscarium;
> In foro infimo boni homines atque dites ambulant,
> In medio propter canalem, ibi ostentatores meri;
> Confidentes garrulique et malevoli supra lacum,
> Qui alteri de nihilo audacter dicunt contumeliam
> Et qui ipsi sat habent, quod in se possit vere dicier.
> Sub Veteribus ibi sunt, qui dant quique accipiunt foenere;
> Pone aedem Castoris ibi sunt, subito quibus credas male,
> In Tusco Vico ibi sunt homines, qui ipsi sese venditant.
> In Velabro vel pistorem, vel lanium, vel aruspicem,
> Vel qui ipsi vortant, vel qui aliis ut vorsentur praebeant.
> [Ditis damnosus maritos apud Leucadiam Oppiam]."

This is such a picture as Greene might have drawn of Paul's, or Ben Jonson of Moor Fields. The good men walking quietly by themselves in the obscurest part of the forum, whilst the flash gentlemen without a denarius in their purses, are strutting conspicuously in the middle; the *gourmands* gathering round the fishmarket and clubbing for a dinner; the gentlemen near the Lacus Curtius, a regular set of scandal-mongers, so ready to speak ill of others, and so wholly unconscious that they live in glass-houses themselves; the perjured witness prowling about the comitium, like the man in Westminster Hall in former days with a straw in his shoe; the tradesman in the Vicus Tuscus, whose spirit of trading is so in-bred that he would sell his very self; all these sketches from life present a picture of manners in "the good old times" of the Roman Republic, when Cato himself was censor, which shows that human nature is very much the same thing in all ages and countries. In a topographical point of view there is little here but

what confirms what has been already said respecting the forum and its environs; except that the usurers *sub Veteribus* show that the bankers' shops were not confined to the N. side of the forum. What the *canalis* was in the middle of the forum is not clear, but it was perhaps a drain. The passage is, in some places, probably corrupt, as appears from the two obscure lines respecting the *mariti Ditis*, the second of which is inexplicable, though they probably contain some allusion to the Sacellum Ditis which we have mentioned as adjoining the temple of Saturn. Mommsen, however (*l. c.* p. 297), would read "dites damnosos marito," &c., taking these "dites" to be the rich usurers who resorted to the basilica and lent young men money for the purpose of corrupting city wives. But what has tended to throw doubts upon the whole passage is the mention of the basilica, since, according to the testimony of Cicero (*Brut.* 15), Plautus died in the very year of Cato's censorship. Yet the basilica is also alluded to in another passage of Plautus before quoted; so that we can hardly imagine but that it must have existed in his lifetime. If we could place the basilica in Cato's aedileship instead of his censorship, every difficulty would vanish; but for such a view we can produce no authority.

Mommsen (*Ib.* p. 301) has made an ingenious, and not improbable attempt to show, that Plautus, as becomes a good poet, has mentioned all these objects on the forum in the order in which they actually existed; whence he draws a confirmation of the view respecting the situation of the comitium. That part of the forum is mentioned first as being the most excellent. Then follows on the *left* the Sacrum Cluacinae, the Basilica Porcia, and Forum Piscatorium, and the Forum Infimum. Returning by the middle he names the canalis, and proceeds down the forum again on the *right*, or southern side. In the "malevoli supra lacum" the Lacus Servilius is alluded to at the top of the Vicus Jugarius. Then we have the Veteres Tabernae, the temple of Castor, the Vicus Tuscus, and Velabrum.

The Basilica Porcia was soon followed by others. The next in the order of time was the Basilica Fulvia, founded in the censorship of M. Aemilius Lepidus, and M. Fulvius Nobilior, B.C. 179. This was also "post Argentarias Novas" (Liv. xl. 51), and must therefore have been very close to the Basilica Porcia. From the two censors it was sometimes called Basilica Aemilia et Fulvia. (Varr. *L.L.* vi. § 4, Müll.) All the subsequent embellishments and restorations appear, however, to have proceeded from the Gens Aemilia. M. Aemilius Lepidus, consul with Q. Lutatius in B.C. 78, adorned it with bronze shields bearing the effigies of his ancestors. (Plin. xxxv. 4.) It appears to have been entirely rebuilt by L. Aemilius Paullus, when aedile, B.C. 53. This seems to have been the restoration alluded to by Cicero (*ad Att.* iv. 16), from which passage — if the punctuation and text are correct, for it is almost a locus desperatus — it also appears that Paullus was at the same time constructing another new and magnificent basilica. Hence a difficulty arises respecting the situation of the latter, which we are unable to solve, since only one Basilica Paulli is mentioned by ancient authors; and Plutarch (*Caes.* 29) says expressly that Paullus expended the large sum of money which he had received from Caesar as a bribe in building on the forum, in place of the Basilica Fulvia, a new one which bore his own name. (Cf. Appian, *B. C.* ii. 26.) It is certain at least that we must not assume with Becker (*Handb.* p. 303) that the latter was but a poor affair in comparison with the new one because it was built with the ancient columns. It is plain that in the words "nihil gratius illo monumento, nihil gloriosius," Cicero is alluding to the restoration of the ancient basilica, since he goes on to mention it as one which used to be extolled by Atticus, which would not have been possible of a new building; and the employment of the ancient columns only added to its beauty. The building thus restored, however, was not destined to stand long. It seems to have been rebuilt less then twenty years afterwards by Paullus Aemilius Lepidus (Dion Cass. xlix. 42); and in about another twenty years this second restoration was destroyed by a fire. It was again rebuilt in the name of the same Paullus, but at the expense of Augustus and other friends (Id. liv. 24), and received further embellishments in the reign of Tiberius, A. D. 22. (Tac. *Ann.* iii. 72.) It was in this last phase that Pliny saw it when he admired its magnificence and its columns of Phrygian marble (xxxvi. 24).

BASILICA AEMILIA. (From a Coin.)

The third building of this kind was the Basilica Sempronia, erected by T. Sempronius Gracchus in his censorship, B.C. 169. For this purpose he purchased the house of Scipio Africanus, together with some adjoining butchers' shops, behind the Tabernae Veteres, and near the statue of Vertumnus, which, as we have said, stood near the forum at the end of the Vicus Tuscus. (Liv. xliv. 16.) This, therefore, was the first basilica erected on the S. side of the forum. We hear no further mention of it, and therefore it seems probable that it altogether disappeared, and that its site between the Vicus Tuscus and Vicus Jugarius was subsequently occupied in the imperial times by the Basilica Julia.

The Lautumiae, of which we have had occasion to speak when treating of the Basilica Porcia, was not merely the name of a district near the forum, but also of a prison which appears to have been constructed during the Republican period. The Lautumiae are first mentioned after the Second Punic War, and it seems very probable, as Varro says (*L. L.* v. § 151, Müll.), that the name was derived from the prison at Syracuse; though we can hardly accept his second suggestion, that the etymology is to be traced at Rome, as well as in the Sicilian city, to the circumstance that stone quarries formerly existed at the spot. The older topographers, down to the time of Bunsen, assumed that Lautumiae was only another appellation for the Carcer Mamertinus, a misconception perhaps occasioned by the abruptness with which Varro (*l. c.*) passes from his account of the Tullianum to that of the Lautumiae. We read of the latter as a place for the custody of hostages and prisoners of war in Livy (xxxii. 26, xxxvii. 3); a purpose to which neither the size nor the dungeon-like con-

struction of the carcer would have adapted it. That the Lautumiae was of considerable size may also be inferred from the circumstance that when the consul Q. Metellus Celer was imprisoned there by the tribune L. Flavius, Metellus attempted to assemble the senate in it. (Dion Cass. xxxvii. 50.) Its distinctness from the Carcer Mamertinus is also shown by Seneca (*Controv.* 27, p. 303, Bipont).

An important alteration in the arrangement of the forum, to which we have before alluded, was the removal of the TRIBUNAL PRAETORIS from the comitium to the eastern end of the forum by the tribune L. Scribonius Libo, apparently in B. C. 149. It now stood near the Puteal, a place so called from its being open at the top like a well, and consecrated in ancient times either from the whetstone of the augur Navius having been buried there, or from its having been struck by lightning. It was repaired and re-dedicated by Libo; whence it was afterwards called PUTEAL LIBONIS, and PUTEAL SCRIBONIANUM. After this period, its vicinity to the judgment-seat rendered it a noted object at Rome, and we find it frequently alluded to in the classics. (Hor. *Ep.* i. 19. 8, *Sat.* ii. 6. 35; Cic. *p.*

PUTEAL LIBONIS OR SCRIBONIANUM.

Sest. 8, &c.) The tribunal of the praetor urbanus seems, however, to have remained on the comitium. Besides these we also find a TRIBUNAL AURELIUM mentioned on the forum, which seems to have stood near the temple of Castor (Cic. *p. Sest.* 15, *in Pis.* 5, *p. Cluent.* 34), and which, it is conjectured, was erected by the consul M. Aurelius Cotta B. C. 74. These tribunals were probably constructed of wood, and in such a manner that they might be removed on occasion, as for instance, when the whole area of the forum was required for gladiatorial shows or other purposes of the like kind; at least it appears that the tribunals were used for the purpose of making the fire in the curia when the body of Clodius was burnt in it. (Ascon. *ad Cic. Mil. Arg.* p. 34.)

In the year B. C. 121 the TEMPLE OF CONCORD was built by the consul L. Opimius on the Clivus Capitolinus just above the senaculum (Varr. *L. L.* v. § 156, Müll.); but, as we have already had occasion to discuss the history of this temple when treating of the Capitol and of the senaculum, we need not revert to it here. At the same time, or a little afterwards, he also erected the BASILICA OPIMIA, which is mentioned by Varro in close connection with the temple of Concord, and must therefore have stood on its northern side, since on no other would there have been space for it. Of this basilica we hear but very little, and it seems not improbable that its name may have been afterwards changed to that of "Basilica Argentaria," perhaps on account of the silversmiths' and bankers' shops having been removed thither from the *tabernae* on the forum. That a Basilica Argentaria, about the origin of which nobody can give any account, existed just at this spot is certain, since it is mentioned by the *Notitia*, in the 8th Regio, when proceeding from the forum of Trajan, as follows: "Cohortem sextam Vigilum, Basilicam Argentariam, Templum Concordiae, Umbilicum Romae," &c. The present *Salita di Marforio*, which runs close to this spot, was called in the middle ages "Clivus Argentarius;" and a whole plot of buildings in this quarter, terminating, according to the *Mirabilia* (Montf. *Diar. Ital.* p. 293), with the temple of Vespasian, which, as we shall see in the sequel, stood next to the temple of Concord, bore the name of "Insula Argentaria" (Becker, *Handb.* p. 413, seq.).

In the same year the forum was adorned with the triumphal arch called FORNIX FABIUS or FABIANUS, erected by Q. Fabius Allobrogicus in commemoration of his triumph over the Allobroges. This was one of the earliest, though not precisely the first, of this species of monuments at Rome, it having been preceded by the three arches erected by L. Stertinius after his Spanish victories, of which two were situated in the Forum Boarium and one in the Circus Maximus. (Liv. xxxiii. 27.) We may here remark that fornix is the classical name for such arches; and that the term arcus, which, however, is used by Seneca of this very arch (*Const. Sap.* 1), did not come into general use till a late period. The situation of this arch is indicated by several passages in Roman authors. We have already cited one from Cicero (*p. Planc.* 7), and in another he says that Memmius, when coming down to the forum (that is, of course, down the Sacra Via), was accustomed to bow his head when passing through it ("Ita sibi ipsum magnum videri Memmium, ut in forum descendens caput ad fornicem Fabii demitteret," *de Orat.* ii. 66). Its site is still more clearly marked by the Pseudo-Asconius (*ad Cic. Verr.* i. 7) as being close to the Regia, and by Porphyrio (*ad Hor. Epist.* i. 19. 8) as near the Puteal Libonis.

The few other works about the forum during the remainder of the Republican period were merely restorations or alterations. Sulla when dictator seems to have made some changes in the curia (Plin. xxxiv. 12), and in B. C. 51, after its destruction in the Clodian riots, it was rebuilt by his son Faustus. (Dion Cass. xl. 50.) Caesar, however, caused it to be pulled down in B. C. 45, under pretence of having vowed a temple to Felicitas, but in reality to efface the name of Sulla. (Id. xliv. 5.) The reconstruction of the Basilica Fulvia, or rather the superseding of it by the Basilica Paulli, has been already mentioned.

It now only remains to notice two other objects connected with the Republican Forum, the origin of which cannot be assigned to any definite period. These were the SCHOLA XANTHA and the JANI. The former, which lay back considerably behind the temple of Saturn and near the top of the Clivus Capitolinus, consisted of a row of arched chambers, of which three are still visible. They appear from inscriptions to have been the offices of the scribes, copyists, and *praecones* of the aediles, and seem to be alluded to by Cicero. (*Philipp.* ii. 7, *p. Sest.* 12.) Another row was discovered in 1835 at the side of the temple of

Vespasian and against the wall of the Tabularium, with a handsome though now ruined portico before them, from which there was an entrance into each separate chamber. From the fragments of the architrave an inscription could still be deciphered that it was dedicated to the twelve Dei Consentes. (Canina, *Foro Rom.* p. 207, *Bullet. d. Inst.* 1835.) This discovery tallies remarkably with the following passage in Varro: "Et quoniam (ut aiunt) Dei facientes adjuvant, prius invocabo eos; nec ut Homerus et Ennius, Musas, sed XII. deos consentis; neque tamen eos urbanos, *quorum imagines ad forum auratae stant*, sex mares et feminae totidem, sed illos XII. deos, qui maxime agricolarum duces sunt" (*R. R.* i. 1). We may, however, infer that the inscription was posterior to the time of Varro, probably after some restoration of the building; since in his *De Lingua Latina* (viii. § 71) he asks: "Item quaerunt, si sit analogia, cur appellant omnes aedes Deum Consentum et non Deorum Consentium?" whereas in the inscription in question we find it written "Consentium." We may further remark that the former of these passages would sanction the including of the whole Clivus Capitolinus under the appellation of "forum."

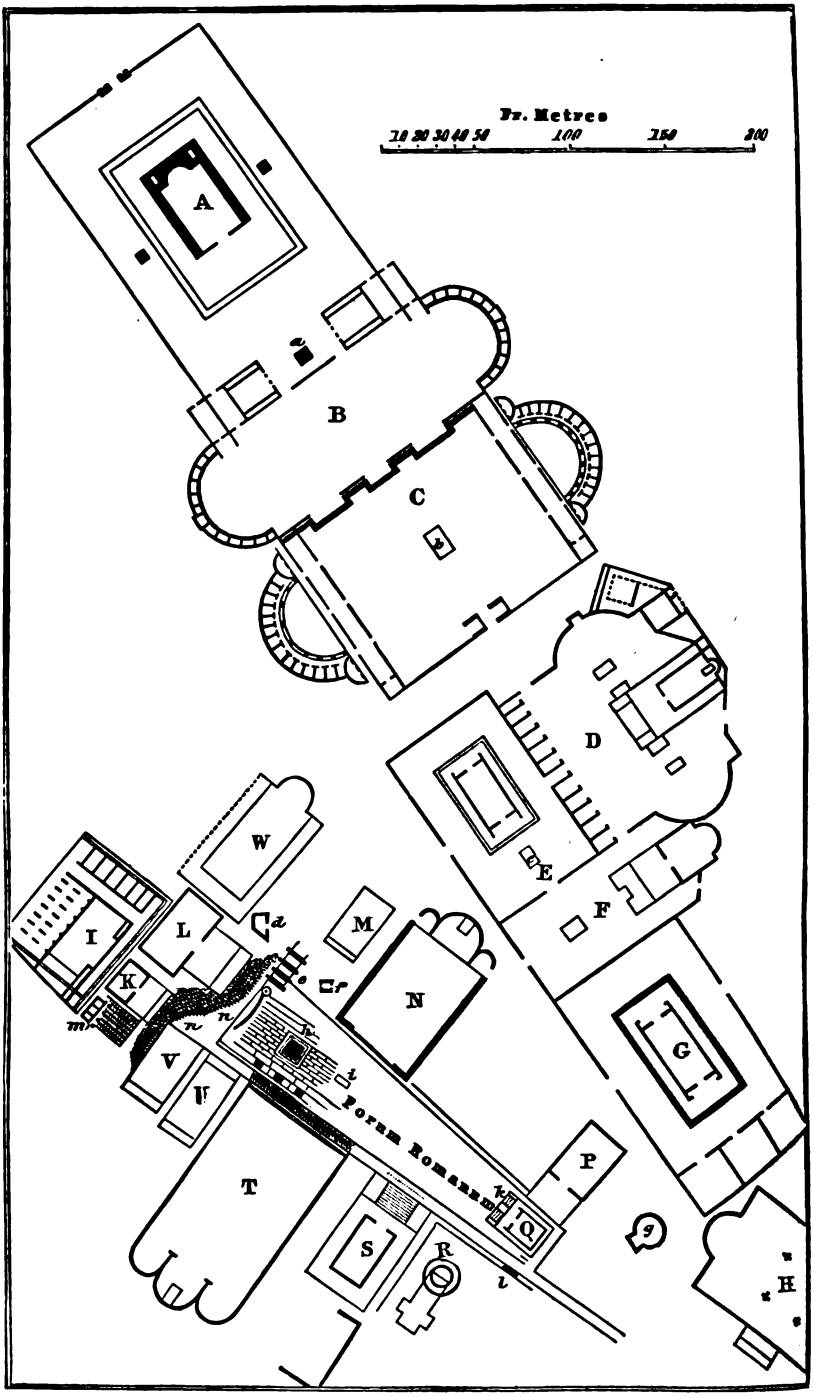
With respect to the Jani on the forum, it seems rather problematical whether there were three of them. There appear to have been two Jani before the Basilica Paulli, to which the money-lenders chiefly resorted. (Schol. *ad Hor. Ep.* i. 1. 54.) But when Horace (*Sat.* ii 3. 18) says —

> "—— postquam omnis res mea Janum
> Ad medium fracta est,"

he probably means, as we said before, the middle of the street, and not a Janus which lay between two others, as Becker thinks must necessarily follow from the use of the word *medius*. (*Handb.* p. 327, note.)

The Forum under the Empire. — The important alterations made by Julius Caesar in the disposition of the forum were the foundation of its subsequent appearance under the Empire. These changes were not mere caprices, but adaptations suited to the altered state of political society and to Caesar's own political views. But the dagger of the assassin terminated his life before they could be carried out, and most of them were left to be completed by his successor Augustus. One of the most important of these designs of Caesar's was the building of a new curia or senate-house, which was to bear his name. Such a building would be the badge of the senate's servitude and the symbol of his own despotic power. The former senate-house had been erected by one of the kings; the new one would be the gift of the first of the emperors. We have mentioned the destruction of the old curia by fire in the time of Sulla, and the rebuilding of it by his son Faustus; which structure Caesar caused to be pulled down under a pretence, never executed, of erecting on its site a temple of Felicitas.

The curia founded by Pompey near his theatre in the Campus Martius—the building in which Caesar was assassinated — seems to have been that commonly in use; and Ovid (*Met.* xv. 801), in describing that event, calls it simply Curia:—



> "—— neque enim locus ullus in urbe
> Ad facinus diramque placet, nisi Curia, caedem."

We may suppose that when Caesar attained to supreme power he was not well pleased to see the meetings of the senate held in a building dedicated by his great rival.

A new curia was voted a little before Caesar's death, but he did not live to found it; and the *Monumentum Ancyranum* shows that it was both begun and completed by Octavianus.

Respecting the site of the CURIA JULIA the most discordant opinions have prevailed. Yet if we accept the information of two writers who could not have been mistaken on such a subject, its position is not difficult to find. We learn from Pliny that it was erected on the comitium: "Idem (Augustus) in Curia quoque quam in Comitio consecrabat, duas tabulas impressit parieti" (xxxv. 10); and this site is confirmed by Dion Cassius: *τὸ βουλευτήριον τὸ Ἰούλιον, ἀπ' αὐτοῦ κληθὲν παρὰ τῷ Κομιτίῳ ὠνομασμένῳ ᾠκοδόμουν, ὥσπερ ἐψήφιστο* (xlvii. 19). It is impossible to find any other spot for it on the comitium than that where the old curia stood. Besides the author last quoted expressly informs us that in consequence of some prodigies that occurred in the year before Caesar's murder it had been resolved to rebuild the Curia Hostilia (*καὶ διὰ τοῦτο τό τε βουλευτήριον τὸ Ὀστίλιον ἀνοικοδομηθῆναι ἐψηφίσθη*, *Ib.* xlv. 17.) At the time when this decree was made Caesar was himself pontifex maximus; it would have been a flagrant breach of religion to neglect a solemn vow of this description; and we cannot therefore accept Becker's assertion that this vow was never accomplished. (*Handb.* p. 331, note 608.) We cannot doubt that the curia erected by Augustus was in pursuance of this decree, for Caesar did not live even to begin it ("Curiam et continens ei Chalcidicum — feci," *Mon. Ancyr*); but though the senate-house was rebuilt, it was no longer named Hostilia, but, after its new founder, Julia. Now what has Becker got to oppose to all this weight of testimony? Solely a passage in Gellius,— which, however, he misapprehends,— in which it is said, on the authority of Varro, that the new curia had to be inaugurated, which would not have been the case had it stood on the ancient spot ("Tum adscripsit (Varro) de locis in quibus senatus consultum fieri jure posset, docuitque confirmavitque, nisi in loco per augures constituto, quod templum appellaretur, senatusconsultum factum esset, justum id non fuisse. Propterea et in Curia Hostilia et in Pompeia, *et post in Julia*, cum profana ea loca fuissent, templa esse per augures constituta," xiv. 7. § 7.) But Becker has here taken only a half view of these augural rites. As a temple could not be built without being first inaugurated, so neither could it be pulled down without being first exaugurated. This is evident from the accounts of the exauguration of the fanes in order to make room for the temple of the Capitoline Jupiter. ("Et, ut libera a caeteris religionibus area esset tota Jovis templique ejus, quod inaedificaretur, exaugurare fana sacellaque statuit, quae aliquot ibi a Tatio rege, consecreta inaugurataque postea fuerant," Liv. i. 55, cf. v. 54; Dion. Halic. iii. 69.) When Caesar, therefore, pulled down the curia of Faustus he first had it exaugurated, by which the site again became a *locus profanus*, and would of course require a fresh inauguration when a new temple was erected upon it. The curia in use in the time of Propertius (iv. 1. 11) must have been the Curia Julia; and the following lines seem to show that it had risen on the site of the ancient one:—

> "Curia praetexto quae nunc nitet alta Senatu
> Pellitos habuit, rustica corda, Patres."

THE FORUM ROMANUM UNDER THE EMPIRE, AND THE IMPERIAL FORA.

i. Equus Domitiani.
k. Rostra Julia.
l. Fornix Fabii.
m. Schola Xantha.
n n. Clivus Capitolinus.

A further confirmation that the new curia stood on the ancient spot is found in the fact that down to the latest period of the Empire that spot continued to be the site of the senate-house. The last time that mention is made of the Curia Julia is in the reign of Caligula ("Consensit (senatus) ut consules non in Curia, quia Julia vocabatur, sed in Capitolium convocarent," Suet. *Cal.* 60); and as we know that the curia was rebuilt by Domitian, the Julia must have been burnt down either in the fire of Nero, or more probably in that which occurred under Titus. It is not likely, as Becker supposes (*Handb.* p. 347), that Vespasian and Titus would have suffered an old and important building like the curia to lie in ashes whilst they were erecting their new amphitheatre and baths. The new structure of Domitian, called *Senatus* in the later Latin ("Senatum dici et pro loco et pro hominibus," Gell. xviii. 7, 5), is mentioned by several authorities (Hieronym. an. 92. i. p. 443, ed. Ronc.; Cassiod. *Chron.* ii. p. 197; *Catal. Imp. Vienn.* p. 243.) The place of this senatus is ascertained from its being close to the little temple of Janus Geminus, the index belli pacisque (*ἔχει δὲ τὸν νεὼν (ὁ Ἰανὸς) ἐν τῇ ἀγορᾷ πρὸ τοῦ βουλευτηρίου*, Procop. *B. G.* i. 25); and hence from its proximity to Numa's sacellum it was sometimes called "Curia Pompiliana" (Vopisc. *Aurel.* 41, *Tacit.* 3.) The same situation is confirmed by other writers. Thus Dion Cassius mentions that Didius Julianus, when he first entered the curia as emperor, sacrificed to the Janus which stood before the doors (lxxiii. 13). In the same manner we find it mentioned in the *Notitia* in the viiith Region. That it occupied the site of the ancient church of *S. Martina*, subsequently dedicated to and now known as *S. Luca*, close to the arch of Severus, appears from an inscription (Gruter, clxx. 5) which formerly existed in the Ambo, or hemicycle, of *S. Martina*, showing that this hemicycle, which was afterwards built into the church, originally formed the Secretarium Senatus (Urlichs, *Röm. Top.* p. 37, seq.; Preller, *Regionen*, p. 142.) The Janus temple seems to have been known in the middle ages under the appellation of *templum fatale*, by which it is mentioned in the *Mirabilia Urbis*. ("Juxta eum templum fatale in S. Martina, juxta quod est templum refugii, i. e., S. Adrianus," *Ib.*) In the same neighbourhood was a place called in the later ages "Ad Palmam," which also connects the senatus with this spot, as being both near to that place and to the Arcus Severi. Thus Ammianus: "Deinde ingressus urbem Theodoricus, venit ad Senatum, et ad Palmam populo alloquutus," &c. (*Excerpt. de Odo.* 66.) And in the *Acta SS.*, Mai. vii. p. 12: "Ligaverunt ei manus a tergo et decollaverunt extra Capitolium et extrahentes jactaverunt eum juxta arcum triumphi ad Palmam." (cf. Anastas. *V. Sist.* c. 45.) The appellation "ad Palmam" was derived from a statue of Claudius II. clothed in the tunica palmata, which stood here: "Illi totius orbis judicio in Rostris posita est columna cum palmata statua superfixa." (Treb. Pollio, *Claud.* c. 2.)

We cannot doubt, therefore, that the curia or senatus built by Domitian was near the arch of Severus; which is indeed admitted by Becker himself (*Handb.* p. 355). But, from his having taken a wrong view of the situation of the comitium, he is compelled to maintain that this was altogether a new site for it; and hence his curia undergoes no fewer than three changes of situation, receiving a new one almost every time that it was rebuilt, namely, first, on the N. side of his comitium, secondly on the S. side, and thirdly near the Arcus Severi, for which last site the evidence is too overwhelming to be rejected. We trust that our view is more consistent, in which the senate-house, as was most probable, appears to have always retained its original position. And this result we take to be no slight confirmation of the correctness of the site which we have assigned to the comitium. In their multitudinous variations, Bunsen and Becker are sore puzzled to find a place for their second curia—the Julia—on their comitium, to which the passages before cited from Pliny and Dion inevitably fix them. Bunsen's strange notions have been sufficiently refuted by Becker (*Handb.* p. 333), and we need not therefore examine them here. But though Becker has succeeded in overthrowing the hypothesis of his predecessor, he has not been able to establish one of his own in its place. In fact he gives it up. Thus he says (p. 335) that, in the absence of all adequate authority, he will not venture to fix the site of the curia; yet he thinks it probable that it may have stood where the three columns are; or if that will not answer, then it must be placed on the (his) Vulcanal. But his complaint of the want of authorities is unfounded. If he had correctly interpreted them, and placed the comitium in its right situation, and if he had given due credit to an author like Dion Cassius when he says (*l. c.*) that it was determined to rebuild the Curia Hostilia, he had not needed to go about seeking for impossible places on which to put his Curia Julia.

There are three other objects near the forum into which, from their close connection with the Basilica Julia, we must inquire at the same time. These are the Chalcidicum, the Imperial Graecostasis, and a Temple of Minerva. We have already seen that the first of these buildings is recorded in the *Monumentum Ancyranum* as erected by Augustus adjoining the curia; and the same edifice is also mentioned by Dion Cassius among the works of Augustus: *τό τε Ἀθήναιον καὶ τὸ Χαλκιδικὸν ὠνομασμένον, καὶ τὸ βουλευτήριον, τὸ Ἰουλίειον, τὸ ἐπὶ τοῦ πατρὸς αὐτοῦ τιμῇ γενόμενον, καθιέρωσεν* (li. 22). But regarding what manner of thing the Chalcidicum was, there is a great diversity of opinion. It is one of those names which have never been sufficiently explained; but it was perhaps a sort of portico, or covered walk (deambulatorium), annexed to the curia. Bunsen, as we have mentioned when treating of the temple of Castor in the preceding section, considers the Athenaeum and Chalcidicum to have been identical; and as the *Notitia* mentions an Atrium Minervae in the 8th Region, and as a Minerva Chalcidica is recorded among the buildings of Domitian, he assumes that these were the same, and that the unlucky ruin of the three columns, which has been so transmuted by the topographers, belonged to it. In all which we can only wonder at the uncritical spirit that could have suggested such an idea; for in the first place the *Monumentum Ancyranum* very distinctly separates the aedes Minervae, built by Augustus, from the Chalcidicum, by mentioning it at a distance of five lines apart; secondly, the aedes Minervae is represented to be on the Aventine, where we find one mentioned in the *Notitia* (cf. Ov. *Fast.* vi. 728; Festus, *v. Quinquatrus*, p. 257, Müll.), and consequently a long way from the curia and its adjoining Chalcidicum; thirdly, they are also mentioned separately by Dion Cassius in the passage

before cited, whose text is not to be capriciously meddled with by reading, *τό τε Ἀθήναιον τὸ καὶ Χαλκιδικὸν ὠνομασμένον*, in order to prop a theory which cannot support itself. We need not, therefore, enter further into this view. That of Becker (*Handb.* p. 335) seems probable enough, that the Chalcidicum usurped the place of the senaculum of the curia, though we should be more inclined to say that of the Graecostasis, as the position of the latter seems at all events to have been shifted about this period. We learn from Pliny (xxxiii. 6) that in his time it no longer stood "supra Comitium." Yet such a place seems to have existed to the latest period, and is mentioned in the *Notitia* (Regio viii.) under the altered name of Graecostadium, close to the Basilica Julia, though the MSS. vary with regard to the position. It had probably, therefore, been removed before the time of Pliny to the south side of the forum, and perhaps at the time when the new curia and Chalcidicum were built. If this was so, it would tend to prove that the comitium did not extend across the whole breadth of the forum. The Atrium Minervae of the *Notitia* must have been of a later period.

Another change in the disposition of the forum, with reference to the politics of the times, which was actually carried out by Caesar in his lifetime, was the removal of the ancient rostra. The comitium, which may be called the aristocratic part of the forum, had become in a great measure deserted. The popular business was now transacted at the lower end of the forum; and Caesar, who courted the mob, encouraged this arrangement. The steps of the temple of Castor had been converted into a sort of extempore rostra, whence the demagogues harangued the people, and Caesar himself had sometimes held forth from them. (Dion Cass. xxxviii. 6; cf. Cic. *p. Sest.* 15; App. *B. C.* iii. 41.) Dion Cassius expressly mentions that the ROSTRA were changed by Caesar (xliii. 49). The change is also mentioned by Asconius: "Erant enim tunc rostra non eo loco quo nunc sunt, sed ad Comitium prope juncta Curiae" (*ad Cic. Mil.* 5), where, by this absolute and unqualified mention of the curia, he must of course have meant the curia *existing* in his time, which was the Julia; and this shows that it stood on the ancient site of the Hostilia. Another proof that the rostra were moved in Caesar's lifetime may be derived from Livy (*Epit.* cxvi.): "Caesaris corpus a plebe ante Rostra crematum est." For, as Appian (*B. C.* ii. 148) indicates the place in another manner, and says that the burning of the body took place before the Regia, it is plain that the rostra mentioned in the *Epitome* just cited must have been very near the Regia. But we have seen that the ancient rostra were on the comitium, at the other end of the forum. There are other passages from which we may arrive at the exact situation of the new rostra. Thus Suetonius, in his account of the funeral of Augustus, says that a panegyric was pronounced upon him by Drusus from the rostra under the Tabernae Veteres ("pro Rostris sub Veteribus," *Aug.* 100; cf. Dion Cass. lvi. 34). It should be stated, however, that the common reading of this passage is "pro Rostris veteribus," that is, from the old rostra on the comitium; and we shall see further on that the old rostra appear to have existed after the erection of the new. It is not, however, probable that they would be used on this occasion, even if they were ever used at all; and we see from Dion Cassius's account of the funeral of Octavia, the sister of Augustus, that Drusus also on that occasion pronounced a panegyric from the new rostra, or those commonly used, as we must conclude from Dion's mentioning them without any distinctive epithet (*ἐπὶ τοῦ βήματος*). Canina (*Foro Rom.* p. 129) adopted the common reading, with the omission of *sub*, because he imagined that "sub Veteribus" must mean "under some old building," instead of its being a designation for the S. side of the forum. And Cicero, when pronouncing one of his invectives against Antony from the rostra, bids his audience look *to the left* at the gilt equestrian statue of Antony, which, as appears from what Cicero says a little further on, stood before the temple of Castor. (*Phil.* vi. 5.) From a comparison of all these passages we may state with precision that the new rostra were established by Caesar on the SE. side of the forum, between the temple of Castor and the Regia, a spot which, as we have said, had previously become the regular place for the contiones. But, as this spot was on Becker's comitium,—his lower end of the forum being our upper end,—he could not of course admit that this was the place on which the new rostra were erected, and he is therefore obliged to place them a great deal higher up towards the Capitol, and to the W. of the temple of Castor. As, however, in questions of this sort, one error always begets another, he is thus puzzled to account for the circumstance how Cicero, speaking from these rostra, could allude to the statue of Antony as being on his left (*Handb.* p. 337); and, in order to avoid this contradiction, asserts that Dion Cassius was mistaken, in saying that the rostra were removed in Caesar's lifetime. It must be the old rostra, those on the (his) comitium, before which Caesar's body was burnt, and then everything goes right. Unfortunately, however, the testimony of Dion is confirmed by the expressive silence of the *Monumentum Ancyranum*. That record, in which Augustus so ostentatiously recites his buildings, his repairs, and his alterations, says not a word about the rostra. We have seen a little while ago that Becker contradicts Dion respecting the Curia Julia, and now he contradicts both that author and the *Monumentum Ancyranum*, and solely because he has adopted a wrong site for his comitium. How shall we characterise a topographical system which at every turn comes into collision with the best authorities? On the other hand, if there is any truth in the system we have adopted, all the merit we can claim for it is derived from paying due respect to these authorities, and implicitly following what they say, without presuming to set our own opinion above their teaching. Before we quit this subject it may be as well to say that, though these new rostra of Caesar's became the ordinary *suggestum*, or platform, for the orators, yet the old ones do not appear to have been demolished. We have before seen, from a passage in Trebellius Pollio, that the old rostra *ad Palmam*, or near the arch of Severus, existed in the time of Claudius II.; and the *Notitia* and *Curiosum* expressly mention three rostra on the forum.

In a bas-relief on the arch of Constantine Canina has correctly recognised a representation of this part of the forum, with the buildings on the Clivus Capitolinus. Constantine is seen addressing the people from a raised platform or *suggestum*, provided with a balustrade, which is undoubtedly intended for the ancient rostra. Canina is further of opinion

that an elevated terrace, presenting the segment of a circle, which was excavated at this part of the forum some years ago, is the actual rostra (*Indicazione*, p. 270, ed. 1850, and his Dissertation "*Sui Rostri del Foro Romano*" in the *Atti dell' Accademia Rom. di Archeologia*, viii. p. 107, seq.; cf. Becker, *Handbuch*, p. 359). It seems also to have been here that Augustus received the homage of Tiberius, when the latter was celebrating his German triumph: "Ac priusquam in Capitolium flecteret, descendit e curru, seque praesidenti patri ad genua submisit." (Suet. *Tib.* 20.) The scene is represented on the large Vienna Cameo. (Eckhel, *Pierres gravées*, 1; Mongez, *Iconogr. Rom.* 19, vol. ii. p. 62.) If these inferences are just the ancient rostra would appear to have been used occasionally after the erection of the new ones.

The STATUES OF SULLA AND POMPEY, of which the former appears to have been a gilt equestrian one, were re-erected near the new rostra, as they had formerly stood by the old ones. After the battle of Pharsalus they were both removed, but Caesar replaced them. Besides these there were two STATUES OF CAESAR, and an equestrian STATUE OF OCTAVIAN. (Dion Cass. xlii. 18, xliii. 49, xliv. 4; Suet. *Caes.* 75; App. *B. C.* i. 97.)

Caesar also began the large basilica on the S. side of the forum, called after him the BASILICA JULIA; but, like most of his other works, he left it to be finished by Augustus ("Forum Julium et Basilicam quae fuit inter aedem Castoris et aedem Saturni, coepta profligataque opera à patre meo perfeci," *Mon. Ancyr.*). Its situation is here so accurately fixed that it cannot possibly be mistaken, namely, between the temple of Saturn, which, as we have seen, stood at the head of the forum, and the temple of Castor, which lay near that of Vesta; and the *Notitia* indicates the same position; so that it must have been situated between the Vicus Jugarius and Vicus Tuscus. It has been seen before that this was the site of the ancient Basilica Sempronia, a building of which we hear no more during the imperial times; whence it seems probable that it was either pulled down by Caesar in order to erect his new basilica upon the site, or that it had previously gone to ruin. And this is confirmed by the fact that, in the excavations made in 1780, it was ascertained that the basilica was erected upon another ancient foundation, which Canina erroneously supposes to have been that of the comitium. (Fredenheim, *Exposé d'une Découverte faite dans le Forum Romain*, Strasbourg, 1796; Fea, *Varietà di Notizie e della Basilica Giulia ed alcuni Siti del Foro Romano*, ap. Canina, *Foro Romano*, p. 118.) In some excavations made in 1835 near the column of Phocas, another proof of the site of the basilica was discovered. It was the following fragment of an inscription, which taken by itself seems too mangled and imperfect to prove anything: ... A ... ASILICA ... ER REPARATAE ... SET ADIECIT. It was recollected, however, that this must be the fragment of an inscription discovered in the 16th century at this spot, which is recorded by Gruter (clxxi. 7) and by Panvinius in his *Descriptio Urbis Romae* (Graevius, iii. p. 300). The two inscriptions, when put in juxta-position, appear as follows:—

. . . . A . . .	GABINIUS VETTIUS
. . . . . . ASILICA .	PROBIANUS . V. C. PRAEF. VRB
. . . . ER	STATUAM QVAE BASILICAE
REPARATAE . . .	IVLIAE A SE NOVITER
. . . . SET ADIECIT	REPARATAE . ORNAMENTO
. . . .	ESSET ADIECIT
	DEDIC . XV. KAL . FEBRVARI
	. . . . . PVBLICORVM
	CORNELIO ANNVLINO II / ET. AVFID . FRONTONE COS.

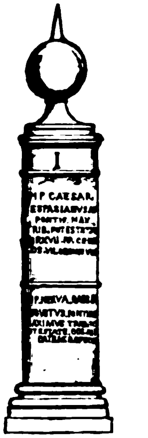
thus leaving no doubt that they were the same. (*Bullettino dell' Inst. Marzo*, 1835) Panvinius, whose work was written in 1558, as appears from the dedicatory epistle, says that the inscription was found "paulo ante in foro Romano prope columnam," that is, the column of Phocas. The basis on which it stood must therefore have been again covered with rubbish, till the inscription was re-discovered in its more imperfect form after a lapse of nearly three centuries. Anulinus and Fronto were consuls A. D. 199, and consequently in the reign of Septimius Severus, when the basilica appears to have been repaired.

Altogether, therefore, the site of the basilica may be considered as better ascertained than those of most of the imperfect monuments. It must have been bounded on the E. and W., like the basilica Sempronia, by the Vicus Tuscus and the Vicus Jugarius. It appears from the *Monumentum Ancyranum* that the original building, begun by Caesar, and completed by Augustus, was burnt down during the reign of the latter, and again rebuilt by him on a larger scale, with the design that it should be dedicated in the names of his grandsons Caius and Lucius ("Et eandem basilicam consumptam incendio ampliato ejus solo sub titulo nominis filiorum [meorum] inchoavi et, si vivus non perfecissem, perfici ab heredibus [meis jussi]." But, from a supplement of the same inscription recently discovered, it appears that Augustus lived to complete the work ("Opera fecit *nova*—forum Augustum, Basilicam Juliam," etc.; Franz, in Gerhard's *Archäolog. Zeit.* No. ii. 1843). Nevertheless it seems to have anciently borne the names of his grandsons: "Quaedam etiam opera sub nomine alieno, nepotum scilicet et uxoris sororisque fecit: ut porticum basilicamque Lucii et Caii, &c." (Suet. *Aug.* 29). The addition which Augustus mentions having made to the building ("ampliato ejus solo") may probably have been the portico here mentioned. In A. D. 282 it was again destroyed by fire, and was rebuilt by Diocletian (*Catal. Imp. Vienn.* p. 247, Ronc.)

The Basilica Julia was chiefly used for the sittings of law-courts, and especially for the causae centumvirales (Plin. *Epist.* v. 21, ii. 14.) Its immense size may be inferred from another passage in Pliny (vi. 33), from which we learn that 180 judices, divided into 4 concilia, or courts, with 4 separate tribunals, and numerous benches of advocates, besides a large concourse of spectators, both men and women, were accustomed to assemble here. The 4 tribunals are also mentioned by Quintilian (*In. Or.* xii. 5, 6).

The funeral of Caesar was also that of the Republic. After his death and apotheosis, first an ALTAR and then an AEDES DIVI JULIA were erected to him, on the spot where his body had been burnt (*βωμόν τινα ἐν τῷ τῆς πυρᾶς χωρίῳ ἱδρυσάμενοι*, Dion Cass. xliv. 51; *καὶ ἡρῷόν οἱ ἔν τε τῇ ἀγορᾷ καὶ ἐν τῷ τόπῳ ἐν ᾧ ἐκέκαυτο προκατεβάλλοντο*, Id. xlvii. 18; "Aedem Divi Juli—feci," *Mon. Ancyr.*) We also find mention of a column of Numidian marble nearly 20 feet high, erected to him on the forum by the people, with this inscription: "Parenti Patriae," (Suet. *Caes.* 88.) This, however, seems to have been the same monument sometimes called *ara*; for Suetonius goes on to say that the people continued for a long while to offer sacrifice and make vows at it ("Apud eandem longo tempore sacrificare, vota suscipere, controversias quasdam interposito per Caesarem jurejurando distrahere perseveravit"). This *ara* or *columna* was afterwards overthrown by Dolabella (Cic. *Phil.* i. 2, *ad Att.* xiv. 15). We have before seen that Caesar's body was burnt on the forum, before the Regia and the new rostra which he had erected, and we must therefore conclude that this was the spot where the altar was set up by the people, and subsequently the temple by Augustus. But this has been the subject of a warm controversy. Bunsen placed the temple on the Velian ridge, so that its front adjoined the Sacra Via where it crosses the eastern boundary of the forum, whilst Becker (*Handb.* p. 336) placed it on the forum itself, so that its back adjoined the same road. The authorities are certainly in favour of the latter view; and the difficulties raised by Urlichs (*Röm. Top.* p. 21, seq.), who came to the rescue of Bunsen's theory, arise from the mistake shared alike by all the disputants, that this end of the forum was the comitium. Urlichs might have seen that this was not so from a passage he himself quotes (p. 22) from the *Fasti Amiternini, XV. Kal. Sept.*, showing that the temple stood on the forum ("Divo Julio ad Forum"). He seeks, however, to get rid of that passage by an unfortunate appeal to the *Schol. Cruq. ad Hor. S.* i. 6. 35, in order to show that after the time of Caesar there was no longer any distinction made between the forum and comitium, since the puteal is there named as being on the forum, instead of on the comitium as Urlichs thinks it should be. But this is only trying to support one error by another, since we have already shown that the puteal really was on the forum and not on the comitium. We need not therefore meddle with this controversy, which concerns only those who have taken a wrong view of the comitium.

We will, however, remark that the passage adduced by Becker in his *Antwort*, p. 41, from the Scholiast on Persius (iv. 49), where the puteal is mentioned as "in porticu Julia ad Fabianum arcum," confirms the sites of these places: from which passage we also learn that the temple had a portico. Vitruvius says (iii. 3) that the temple, which must have been a small one, was of the order called *peripteros pycnostylos*, that is, having columns all round it, at a distance of one diameter and a half of a column from one another. It must have been raised on a lofty base or substruction, with its front towards the Capitol, as we see from the following lines of Ovid (*Met.* xv. 841): —



> "—— ut semper Capitolia nostra forumque
> Divus ab excelsa prospectet Julius aede."

The same circumstance, as well as its close proximity to the temple of Castor, are indicated in the following verses of the same poet (*Ex Pont.* ii 285): —

> "Fratribus assimilis, quos proxima templa tenentes
> Divus ab excelsa Julius aede videt."

This substruction, or *κρηπίς*, as it is called by Dion, served, as we have seen, for a third rostra and, after the battle of Actium, was adorned by Augustus with the beaks of the captured Egyptian ships, from which time it was called ROSTRA JULIA. (Dion Cass. li. 19.)

Such were the alterations made by Julius Caesar in the forum, and by Augustus in honour of his adoptive father. The latter also made a few other additions. He erected at the head of the forum, under the temple of Saturn, the MILIARIUM AUREUM, which we have before had occasion to mention. (Dion Cass. liv. 8; Suet. *Otho*, 6; Tac. *H.* i. 27.) It was in shape like a common milestone, but seems to have been of bronze gilt. Its use is not very

THE MILIARIUM.

clear, as the milestones along the various roads denoted the distances from the gates. But when we recollect that Augustus included a great extent of new streets in his Regions, it seems not improbable that it was intended as a measure of distances within the city; and indeed we find that it was made the starting point in the survey of the city under Vespasian. (Plin. iii. 9.) Hence it might be regarded, as Plutarch says (*Galb.* 24), the common centre at which all the roads of Italy terminated. The UMBILICUS ROMAE which Becker confounds with it (p. 344) appears to have been a different thing, as the *Notitia* mentions both of them separately under Regio viii. The piece of column excavated near the arch of Severus must have belonged to this umbilicus, or to some other monument, not to the miliarium, which appears from the *Notitia* and *Curiosum* to have retained till a late period its original position near the temple of Saturn at the head of the forum.

We also read of a FORNIX AUGUSTI or triumphal arch erected on the forum in honour of Augustus, but its position is nowhere accurately defined; though from some Scholia on Virgil (*Aen.* viii. v. 606) edited by Mai, it is supposed to have been near the temple of Julius (Canina, *Foro Rom.* p. 139 note.)

The Arcus Tiberii, another triumphal arch, dedicated to Tiberius, was erected at the foot of the Clivus Capitolinus near the temple of Saturn, in commemoration of the recovery of the Roman standards lost with the army of Varus. (Tac. *Ann.* ii. 41.) Tiberius also restored the temple of Castor in the name of himself and of his brother Drusus, as well as the temple of Concord, as we have before had occasion to remark.

Under the following emperors down to the time of Domitian we do not read of many alterations on the forum. The fire of Nero seems to have chiefly destroyed its lower part, where the temple of Vesta and the Regia lay; the upper portion and the Capitol appear to have escaped. The Curia Julia was probably burnt down in the fire which occurred in the reign of Titus; at all events it was certainly rebuilt by Domitian. The celebrated Statue of Victory, consecrated in the curia by Augustus, appears, however, to have escaped, since Dion Cassius expressly says that it existed in his time, and we find it mentioned even later. (Suet. *Aug.* 100; Dion Cass. li. 22; Herodian, v. 5.) It was this statue, or more correctly perhaps the altar which stood before it, that occasioned so warm a contention between the Christian and heathen parties in the senate in the time of Theodosius and Valentinian II., the former being led by Ambrosius, the latter by Symmachus, the praefectus urbi. (Symmach. *Epist.* x. 61; cf. Ambros. *Epist. ad calcem Symm.* ed. Par. i. p. 740, ii. pp. 473, 482; Gibbon, *Decline and Fall*, vol. iii. p. 409, seq., ed. Smith.) Ambrose is said to have obtained its removal; though this, perhaps, relates only to the altar, since the statue is mentioned by Claudian as still existing in the time of Honorius. (*De VI. Cons. Hon.* v. 597):—

> " Adfuit ipsa suis ales Victoria templis
> Romanae tutela togae: quae divite penna
> Patricii reverenda fovet sacraria coetus."

Domitian had a peculiar predilection for two deities, Janus and Minerva. He erected so many archways all over the city that an ancient pasquinade, in the form of a Greek pun, was found inscribed upon one of them: " Janos arcusque cum quadrigis et insignibus triumphorum per Regiones urbis tantos ac tot extruxit ut cuidam Graece inscriptum sit, ἀρκεῖ." (Suet. *Dom.* 13; cf. Dion Cass. lxvii. 1.) Among other temples of Minerva he is said by some authorities to have erected one on the forum between those of Vesta and Castor. (Becker, *Handb.* p. 356.) But there seems to have been hardly room for one at this spot; and, as we have before remarked, the *Notitia* does not mention it. Domitian also built, in honour of his father and brother, the Temple of Vespasian and Titus, next to the temple of Concord. The three columns on the Clivus Capitolinus most probably belong to it. The opinion that the eight Ionic columns are remains of this temple has been already discussed.

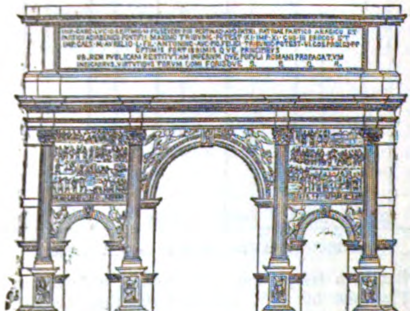
Such was the state of the forum when the colossal equestrian Statue of Domitian was erected on it near the Lacus Curtius. Statius (*Silvae* i. 1) has written a small poem on this statue, and his description of it affords many interesting topographical particulars, which fully confirm what has been already said respecting the arrangement of the forum:—

> " Quae superimposito moles geminata colosso
> Stat Latium complexa forum? coelone peractum
> Fluxit opus? Siculis an conformata caminis
> Effigies, lassum Steropem Brontemque reliquit?
> . . . . .
> Par operi sedes. Hinc obvia limina pandit,
> Qui fessus bellis, adscitae munere prolis,
> Primus iter nostris ostendit in aethera divis.
> . . . . .
> At laterum passus hinc Julia tecta tuentur
> Illinc belligeri sublimis regia Paulli.
> Terga pater blandoque videt Concordia vultu.
> Ipse autem puro celsum caput aere septus
> Templa superfulges, et prospectare videris
> An nova contemptis surgant palatia flammis
> Pulcrius; an tacita vigilet face Troïcus ignis
> Atque exploratas jam laudet Vesta ministras," &c.

The statue, therefore, must have faced the east, with the head slightly inclined to the right, so as to behold the temple of Vesta and the Palatine. Directly in front of it rose the temple of Divus Julius; on the right was the Basilica Julia, on the left the Basilica Aemilia; whilst behind, in close juxtaposition, were the temples of Concord and of Vespasian and Titus. The site of the statue near the Lacus Curtius is indicated in the poem (v. 75, seq.).

The next important monument erected on the forum after the time of Domitian appears to have been the Temple of Antoninus and Faustina, considerable remains of which still exist before and in the walls of the modern church of *S. Lorenzo in Miranda*. It stood at the eastern extremity of the N. side of the forum. These remains, which are now sunk deep in the earth, consist of the *pronaos* or vestibule, composed of eight columns of cipollino marble supporting an architrave, also part of the cella, built of square blocks of piperino. The architrave is ornamented with arabesque candelabra and griffins. On the front the inscription is still legible:—

DIVO . ANTONINO . ET
DIVAE . FAVSTINAE . EX . S . C .



TEMPLE OF ANTONINUS AND FAUSTINA.

But as a temple was decreed both to Antoninus Pius and his wife, the elder Faustina (Capitol. *Anton. P.* c. 6, 13), and to the younger Faustina, their daughter (*Ib.* c. 26), and as divine honours were also rendered after his death to M. Aurelius Antoninus, the husband of the latter, it becomes doubtful to which pair the temple is to be referred (Nibby, *Foro Rom.* p. 183). It seems, however, most probable that it was dedicated to Antoninus Pius and the elder Faustina. It is stated by Pirro Ligorio (ap. Canina, *Foro Rom.* p. 192) that in the excavations made here in 1547, the basis of a

statue was discovered with an inscription purporting that it was erected by the guild of bakers to Antoninus Pius. In the time of Palladio the temple was a great deal more perfect than it is at present, and had an atrium in front, in the middle of which stood the bronze equestrian statue of M. Aurelius, which now adorns the Capitol. (*Architettura*, lib. iv. c. 9.) The inscription in Gruter (cclix. 6) probably belonged to the pedestal of this statue. It was found in the Sacra Via in 1562. Some difficulty, however, arises with regard to this account, since from various other sources we learn that the statue stood for a long while before the church of St. John Lateran. From Palladio's account of the *cortile*, or court, it would appear that the building lay some distance back from the Sacra Via.

In the reign of Commodus a destructive fire, which lasted several days, occasioned much damage in the neighbourhood of the forum, and destroyed among other things the temple of Vesta. (Herodian, i. 14.) According to Dion Cassius the same fire extended to the Palatine and consumed almost all the records of the empire (lxxii. 24). It was on the same occasion that the shop of Galen, which stood on the Sacra Via, was burnt down, and also the Palatine Library, as he himself assures us. (*De Compos. Medicam.* i. c. 1.)

This damage seems to have been repaired by Septimius Severus, the munificent restorer of the Roman buildings, who with a rare generosity commonly refrained from inscribing his own name upon them, and left their honours to the rightful founders ("Romae omnes aedes publicas, quae vitio temporum labebantur, instauravit; nusquam prope suo nomine inscripto, servatis tamen ubique titulis conditorum," Spart. *Sever.* c. ult.). Of the original monuments erected by that emperor the principal one was the Arcus Severi or triumphal arch, which still exists in good preservation at the top of the Roman forum. The inscription informs us that it was dedicated to Severus, as well as to his two sons, Caracalla and Geta, in his third consulate and the 11th year of his reign, consequently in A. D. 203. Between the temple of Concord and the arch, the church of *SS. Sergio e Bacco* was built in the middle ages, with its tower

ARCH OF SEPTIMIUS SEVERUS.

resting upon the arch. It appears from a medal of Caracalla that a chariot with six horses and persons within it stood on the summit of the arch, and other persons on horseback at the sides, supposed to be the emperor's sons. It was erected partly in front of the temple of Concord, so as in some degree to conceal the view of that building, and thus to dis-

121, Blanch; "In ecclesia vero beatorum Cosmae et Damiani in tribus Fatis," &c. Id. *V. Hadr. ib.* p. 254.) Hence perhaps the name of *templum fatale* applied to the temple of Janus.

The last object which we shall have to describe on the forum is the COLUMN OF PHOCAS. Whilst the glorious monuments of Julius and Augustus, the founders of the empire, have vanished, this pillar, erected in the year 608 by Smaragdus, exarch of Ravenna, to one of the meanest and most hateful of their successors, still rears its head to testify the low abyss to which Rome had fallen. It appears from the inscription, which will be found in Canina (*Foro Rom.* p. 213) and Bunsen (*Beschr.* vol. iii. p. 271), that a gilt statue of Phocas stood upon the summit. The name of Phocas has been erased from this column, probably by Heraclius; but the date sufficiently shows that it must have been dedicated to him. Previously to the discovery of this inscription, which happened in 1813, it was thought that the column belonged to some building; and indeed it was probably taken from one, as the workmanship is much superior to what could have been executed in the time of Phocas. Byron alludes to it as the "nameless column with a buried base." In the excavations made in 1816, at the expense of the duchess of Devonshire, the pedestal was discovered to be placed on a raised basis with steps of very inferior workmanship. (Murray's *Handbook of Rome*, p. 62.) It may be remarked that this column proves the forum to have been in its ancient state, and unencumbered with rubbish, at the commencement of the 7th century. Between this pillar and the steps of the Basilica Julia are three large bases intended for statues.

V. THE IMPERIAL FORA.

Forum Julium.—As Rome increased in size, its small forum was no longer capable of accommodating the multitudes that resorted to it on mercantile or legal business; and we have seen that attempts were early made to afford increased accommodation by erecting various basilicae around it. Under the Empire, when Rome had attained to enormous greatness, even these did not suffice, and several new fora were constructed by various emperors; as the Forum Caesaris or Julium, the Forum Augusti, the Forum Nervae or Transitorium, and lastly the Forum Trajani. The political business, however, was still confined to the ancient forum, and the principal use of the new fora was as courts of justice. Probably another design of them was that they should be splendid monuments of their founders. In most cases they did not so much assume the aspect of a forum as that of a temple within an enclosed space, or τέμενος,—the forum of Trajan being the only one that possessed a basilica. From this characteristic of them, even the magnificent temple of Peace, erected by Vespasian without any design of its being appropriated to the purposes of a forum, obtained in after times the names of Forum Vespasiani and Forum Pacis.

The first foundation of this kind was that of Caesar, enclosing a TEMPLE OF VENUS GENITRIX, which he had vowed before the breaking out of the Civil War. After the battle of Pharsalus the whole plan of it was arranged. It was dedicated after his triumph in B. C. 45, before it was finished, and indeed so hastily that it was necessary to substitute a plaster model for the statue of Venus, which afterwards occupied the cella of the temple. (Plin. xxxv. 45.) Caesar did not live to see it completed, and it was finished by Augustus, as we learn from the *Monumentum Ancyranum.* We are told by Appian (*B. C.* ii. 102) that the temple was surrounded with an open space, or τέμενος, and that it was not destined for traffic but for the transaction of legal business. As it stood in the very heart of the city Caesar was compelled to lay out immense sums in purchasing the area for it, which alone is said to have cost him "super H. S. millies," or about 900,000*l.* sterling. (Suet. *Caes.* 26; Plin. xxxvi. 24.) Yet it was smaller than the ancient forum, which now, in contradistinction to that of Caesar, obtained the name of Forum Magnum. (Dion Cass. xliii. 22.)

No vestige of the Forum Julium has survived to modern times, and very various opinions have been entertained with regard to its exact site; although most topographers have agreed in placing it behind the N. side of the Forum Romanum, but on sites varying along its whole extent. Nardini was the first who pointed to its correct situation behind the church of *Sta Martina*, but it was reserved for Canina to adduce the proof.

We must here revert to a letter of Cicero's (*ad Att.* iv. 16), which we had occasion to quote when speaking of the restoration of the Basilica Aemilia under the forum of the Republic. It has an important passage with regard to the situation of the Forum Julium, but unfortunately so obscurely worded as to have proved quite a *crux* to the interpreters. It appears to have been written in B. C. 54, and runs as follows: "Paullus in medio foro basilicam jam paene texuit iisdem antiquis columnis; illam autem quam locavit facit magnificentissimam. Quid quaeris? nihil gratius illo monumento, nihil gloriosius. Itaque Caesaris amici (me dico et Oppium, dirumparis licet) in monumentum illud, quod tu tollere laudibus solebas, ut forum laxaremus et usque ad atrium Libertatis explicaremus, contempsimus sexcenties H. S. Cum privatis non poterat transigi minore pecunia. Efficiemus rem gloriosissimam: nam in Campo Martio septa tributis comitiis marmorea sumus et tecta facturi eaque cingemus excelsa porticu," &c. Of these words Becker has given two different interpretations. He first imagined (*Handb.* p. 302, seq.) that Cicero was speaking only of two buildings: the Basilica Aemilia, which Paullus was restoring, and a new basilica, which the same person was building with Caesar's money, and which was afterwards named the Basilica Julia. But before he had finished his work he altered his mind, and at p. 460 pronounces his opinion that Cicero was speaking of no fewer than four different edifices: 1st, the Basilica Paulli ("Paullus—Columnis"); 2nd, the Basilica Julia ("illam—gloriosius"); 3rd, the Forum Julium ("Itaque —pecunia"); 4th, the Septa Julia ("Efficiemus," &c.). With all these views, except the second, we are inclined to agree; but we do not think it probable that Paullus would be constructing two basilicae at the same time; nor do we perceive how a new one only then in progress could have been a monument that Atticus had been accustomed to praise. The chief beauty of the basilica of Paullus was derived from its columns ("Nonne inter magnifica dicamus basilicam Paulli columnis e Phrygibus mirabilem," Plin. xxxvi. 24. s. 1); and though it had undergone two or three subsequent restorations before the time of Pliny, we are nevertheless inclined to think that the columns praised by him were the very same

which Atticus had so often admired. However this may be, we see through the obscurity of Cicero's letter the rough sketch of a magnificent design of Caesar's, which had not yet been perfectly matured. The whole space from the back of the Basilica Aemilia as far as the Septa Julia in the Campus Martius was to be thrown open; and perhaps even the excavation of the extremity of the Quirinal, ultimately executed by Trajan, may have been comprised in the plan. Cicero is evidently half ashamed of this vast outlay in favour of Caesar, and seeks to excuse it with Atticus by leading him to infer that it will place his favourite monument in a better point of view. When Cicero wrote the plan was evidently in a crude and incipient state. The first pretence put forth was probably a mere extension of the Forum Romanum; but when Caesar a few years later attained to supreme power the new foundation became the Forum Julium. In his position some caution was requisite in these affairs. Thus the curia of Faustus was pulled down under pretence of erecting on its site a temple of Felicitas—a compliment to the boasted good fortune of Sulla, and his name of Felix. But instead of it rose the Curia Julia. The discrepancy in the sums mentioned by Cicero and Suetonius probably arose from the circumstance that as the work proceeded it was found necessary to buy more houses. If this buying up of private houses was not for the Forum Julium, for what purpose could it possibly have been? The Curia Julia stood on the site of the Curia Hostilia, the Basilica Julia on that of the Sempronia, and we know of no other buildings designed by Caesar about the forum.

With regard to the situation of the ATRIUM LIBERTATIS, to which Cicero says the forum was to be extended, we are inclined to look for it, with Becker, on that projection of the Quirinal which was subsequently cut away in order to make room for the forum of Trajan. The words of Livy, "Censores extemplo in atrium Libertatis *escenderunt*" (xliii. 16), seem to point to a height. A fragment of the Capitoline plan, bearing the inscription LIBERTATIS, seems to be rightly referred by Canina to the Basilica Ulpia. (*Foro Rom.* p. 185; cf. Becker, *Antwort, &c.* p. 29.) Now, if our conjecture respecting the site of the Atrium Libertatis is correct, it would have been occupied by the forum of Trajan and its appurtenances; and it therefore appears probable that the Atrium was comprehended in the Basilica Ulpia. Nor is this a mere unfounded guess, since it appears from some lines of Sidonius Apollinaris (*Epig.* 2), that in his time the Basilica Ulpia was the place where slaves received their manumission. And that the old Atrium Libertatis was devoted to manumission and other business respecting slaves appears from several passages of ancient authors. Thus Livy: "Postremo eo descensum est, ut ex quatuor urbanis tribubus unam palam in Atrio Libertatis sortirentur, in quam omnes, qui servitutem servissent, conjicerent" (xlv. 15). And Cicero: "Sed quaestiones urgent Milonem, quae sunt habitae nunc in Atrio Libertatis: Quibusnam de servis?" &c. (*Mil.* 22). Lastly, it may be mentioned that the following fragment of an inscription was found near the church of *S. Martina*, and therefore near this spot: —

SENATVS . POPVLVSQVE [ROMANVS]
LIBERTATI.

(Canina, *Foro Rom.* p. 391).

The preceding letter of Cicero's points to the Forum Julium as closely adjoining the Basilica Aemilia, and there are other circumstances that may be adduced in proof of the same site. Ovid (*Fast.* i. 258) alludes to the temple of Janus as lying between two fora, and these must have been the Forum Romanum and the Forum Caesaris. Pliny's story (xvi. 86) of the lotus-tree on the Vulcanal, the roots of which penetrated to the forum of Caesar, whatever may be its absolute truth, must at all events have possessed sufficient probability to be not actually incredible; and there is no situation for Caesar's forum which tallies with that story better than that here assigned to it with relation to the site of the Vulcanal, as established in the preceding pages. Our Vulcanal need not have been distant more than about 30 yards from the Forum Julium; that of Becker lies at about five times that distance from it, and would render Pliny's account utterly improbable.

Palladio mentions that in his time considerable remains of a temple were discovered behind the place where the statue of Marforio then stood, near the church of *S. Martina*, which, from the cornice being adorned with sculptures of dolphins and tridents, he took to be one dedicated to Neptune. But as we have no accounts of a temple of Neptune in this neighbourhood, and as these emblems would also suit the sea-born goddess, it seems probable that the remains belonged to the temple of Venus Genitrix. This is still more strikingly confirmed by Palladio's account of its style of architecture, which was pycnostyle, as we know that of Venus to have been. (*Archit.* lib. iv. 31; comp. Vitruv. iii. 23.)

We can hardly doubt, therefore, that the forum of Caesar lay on this spot, as is indicated by so many various circumstances. The only objection that has been urged against it is the following passage of Servius, which places the ARGILETUM, a district which undoubtedly adjoined the Forum Julium, in quite a different part of the town: "Sunt geminae belli portae—Sacrarium hoc Numa Pompilius fecerat circa imum Argiletum juxta theatrum Marcelli, quod fuit in duobus brevissimis templis. Duobus autem propter Janum bifrontem. Postea captis Faliscis, civitate Tusciae, inventum est simulacrum Jani cum frontibus quatuor. Unde quod Numa instituerat translatum est ad forum Transitorium et quatuor portarum unum templum est institutum" (*ad Virg. Aen.* vii. 607). That the Argiletum adjoined the forum of Caesar is evident from the following epigram of Martial's (i. 117. 8): —

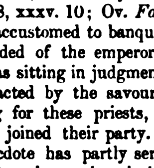
> "Quod quaeris propius petas licebit
> Argi nempe soles subire letum:
> Contra Caesaris est forum taberna
> Scriptis postibus hinc et inde totis
> Omnes ut cito perlegas poetas.
> Illinc me pete, ne roges Atrectum;
> Hoc nomen dominus gerit tabernae."

Hence, if Servius is right, the forum of Caesar could not have been where we have placed it, but on the S. side of the Capitoline hill; and this opinion has found some defenders (Mommsen, *Annali dell' Instit.* vol. xvi. p. 311, seq.) We trust, however, that the situation of the small temple of Janus, the index belli pacisque, has been clearly established by what we have said in the former part of this article. Servius is evidently confounding this little temple with the larger one near the theatre of Marcellus; and indeed the whole passage is a heap of trash. For how can we connect such remote events as the

taking of Falisci, or rather Falerii, and the erection of a Janus Quadrifrons on the Forum Transitorium, which did not exist till many centuries afterwards? Livy also indicates the Janus-temple of Numa as being in the Argiletum ("Janum ad infimum Argiletum indicem pacis bellique fecit," i. 19); whence we must conclude that it was a district lying on the N. side of the forum. We do not think, however, with Becker (*Handb.* p. 261), that any proof can be drawn from the words of Virgil (*Aen.* viii. 345, seq.), where, with a poetical license, the various places are evidently mentioned without regard to their order. But how far the district called Argiletum may have been encroached upon by the imperial fora it is impossible to say.

The forum of Caesar must have been very splendid. Before the temple of Venus stood a statue of the celebrated horse which would suffer nobody but Caesar to mount him, and whose fore-feet are said to have resembled those of a human being (Suet. *Caes.* 61; Plin. viii. 64). The temple was adorned with pictures by the best Greek artists, and enriched with many precious offerings (Plin. vii. 38, ix. 57, xxxvii. 5, &c.). It was one of the three fora devoted to legal business, the other two being the Forum Romanum and Augusti: —

> "Causas, inquis, agam Cicerone disertius ipso
> Atque erit in triplici par mihi nemo foro."
> (Mart. iii. 38. 2.)



Whether it was ever used for assemblies of the senate seems doubtful; at all events the passage cited by Becker (*Handb.* p. 369) from Tacitus (*Ann.* xvi. 27) proves nothing, as the word *curia* there seems to point to the Curia Julia. Of the subsequent history of the Forum Caesaris but little is known. It appears to have escaped the fire of Nero; but it is mentioned among the buildings restored by Diocletian after the fire under Carinus ("Opera publica arserunt Senatum, Forum, Caesaris patrimonium, Basilicam Juliam et Graecostadium, *Catal. Imp. Vienn.* where, according to Preller, *Reg.* p. 143, we must read "Forum Caesaris, Atrium Minervae.") It is mentioned in the *Ordo Romanus*, in the year 1143, but may then have been a ruin.

Forum Augusti.— This forum was constructed for the express purpose of affording more accommodation for judicial business, which had now increased to such an extent that the Forum Romanum and Forum Julium did not suffice for it. It included in its area a TEMPLE OF MARS ULTOR, vowed by Augustus in the civil war which he had undertaken to avenge his father's death:—

> "Mars ades, et satia scelerato sanguine ferrum,
> Stetque favor causa pro meliore tuus.
> Templa feres, et, me victore, vocaberis Ultor.
> Voverat, et fuso laetus ab hoste redit."
> (Ov. *Fast.* v. 575, seq.)

This temple was appointed to be the place where the senate should consult about wars and triumphs, where provinces cum imperio should be conferred, and where victorious generals should deposit the insignia of their triumphs (Suet. *Aug.* 29). The forum was constructed on a smaller scale than Augustus had intended, because he could not obtain the consent of some neighbouring householders to part with their property (*Ib.* 56). It was opened for business before the temple was finished, which was dedicated B. C. 1 (*Ib.* 29; Vell Pat. ii. 100). The forum extended on each side of the temple in a semicircular shape (Palladio, *Archit.* iv.), with porticoes, in which Augustus erected the statues of the most eminent Roman generals. On each side of the temple were subsequently erected triumphal arches in honour of Germanicus and Drusus, with their statues (Tac. *Ann.* ii. 64). The temple is said to have been very splendid (Plin. xxxvi. 54), and was adorned, as well as the forum, with many works of art (*Ib.* vii. 53, xxxiv. 18, xxxv. 10; Ov. *Fast.* v. 555, &c.). The Salii were accustomed to banquet here; and an anecdote is recorded of the emperor Claudius, that once when he was sitting in judgment in this forum, he was so attracted by the savoury odour of the dinner preparing for these priests, that he quitted the tribunal and joined their party. (Suet. *Claud.* 33.) This anecdote has partly served to identify the site of the temple, an inscription having been discovered on one of the remaining walls in which the Salii and their *Mansiones* are mentioned (Canina, *Foro Rom.* p. 150).

The remains of three of the columns, with their entablature, of the temple of Mars Ultor are still to be seen near the place called the *Arco de' Pantani.* It must therefore have adjoined the back of the Forum Caesaris. These three columns, which are tall and handsome, are of the Corinthian order. All we know respecting the history of the Forum Augusti is that it was restored by Hadrian (Spart. *Hadr.* 19). The church of *S. Basilio* was probably built on the site of the temple (*Ordo Rom.* 1143; Mabill. *Mus. Ital.* ii. p. 143).

TEMPLE OF MARS ULTOR.

Forum Transitorium or Forum Nervae.—This forum was begun by Domitian, but completed and dedicated by Nerva (Suet. *Dom.* 5; Aur. Vict. *Caes.* 12). We have said that Domitian had a particular predilection for Minerva, and he founded a large AEDES MINERVAE in this forum ("Dedicato prius foro, quod appellatur Pervium, quo aedes Minervae eminentior consurgit et magnificentior," A. Vict. *Ib.*). From this circumstance it was also called Forum Palladium ("Limina post Pacis Palladiumque forum," Mart. i. 2. 8); besides which it also had the name of Pervium or Transitorium, apparently because it was traversed by a street which connected the N. and S. sides of the city, which was not the case with the other fora (Niebuhr, in the *Beschreibung Roms*, iii. p. 282). Thus Lampridius (*Alex. Sev.* 28): "In foro Divi Nervae, quod Transitorium dicitur;" and Aurelius Victor in the passage just cited. From the line of Martial's before quoted, it appears to have adjoined the temple of Peace, erected by Vespasian, which we shall have occasion to describe in another section. There appears to have stood upon it a temple, or rather perhaps fourfold archway of Janus Quadrifrons, probably somewhat resembling that which still exists near *S. Georgio in Velabro*, connecting the roads which led to the four different forums, namely, the Forum Romanum, Forum Caesaris, Forum Nervae, and Forum Pacis, as Vespasian's temple of Peace was sometimes called. The passage

before quoted from Servius (*ad Aen.* vii. 607), however absurd in other respects, may at least be received as evidence of the existence of such a Janus here, especially as it is confirmed by other writers. Thus Joannes Lydus: καὶ τοιοῦτον αὐτοῦ ἄγαλμα (τετράμορφον) ἐν τῷ φόρῳ τοῦ Νερβᾶ ἐτὶ καὶ νῦν λέγεται σεσωσμένον (*de Mens.* iv. 1). So also Martial:—

> "Nunc tua Caesareis cinguntur limina donis
> Et fora tot numeros, Jane, quot ora geris"
> (x. 28. 5).

In the middle ages this Janus-temple appears to have borne the name of *Noah's Ark*.

In the time of Pope Paul V. considerable remains existed of the *pronaos*, or vestibule of this temple of Minerva, consisting of several columns with their entablature, with the following inscription: IMP. NERVA. CAESAR. AVG. PONT. MAX. TRIB. POT. II. IMP. II. PROCOS. (Canina, *Foro Rom.* p. 171.) Paul took these columns to adorn his fountain, the *Acqua Paolo*, on the Janiculum. In the *Via Alessandrina* there are still remains of the wall of peperino which formed the enclosure of the forum, together with two large Corinthian columns half buried in the earth, now called the *Colonnacce*. Their entablature is covered with mutilated reliefs, and over them is an Attic, with a figure of Minerva, also in relief. The situation of the forum of Nerva, and the remains of it existing in his time, are decribed by Palladio (*Architettura*, lib. iv.), also by Du Pérac (tom. vi.), who observes, that it was then the most complete ruin of a forum in Rome. The *Colonnacce* are represented by Gamucci, *Antichità di Roma*, p. 55; Desgodetz, p. 159, seq.; Overbeke, pl. 39. There is a good description of the fora of Augustus and Nerva by Niebuhr in the *Beschreibung Roms*, vol. iii. p. 275.

Forum Trajani. — Thus between the Capitoline and Palatine hills, the Velian ridge and the ascent of the Quirinal, the valley was almost filled with a splendid series of public places, which we might imagine could hardly be surpassed. Yet it was reserved for Trajan to complete another forum, still more magnificent than any of the preceding ones, for the construction of which the Quirinal itself was forced to yield up part of its mass. Previously to the time of Trajan that hill was connected with the Capitoline by a sort of isthmus, or slender neck; the narrow and uneven defile between them was covered with private houses, and traversed only by a single road of communication between the forum and Campus Martius. But on the western side of this defile lay one of the handsomest quarters of Rome, containing the Septa Julia, the Flaminian circus, the theatres of Balbus, Pompey, and Marcellus, together with those temples and porticoes which so much excited the admiration of Strabo, and which he has described in a passage quoted in the former part of this article. The design of the forum of Trajan was, therefore, to connect this quarter of the town with the imperial fora in a manner not unworthy of the magnificent structures on either side of it. This gigantic work, a portion of which still remains, though the greater part has disappeared under the united influences of time and barbarism, is supposed to have been projected, and even begun, by Domitian. (Aur. Vict. *Caes.* 13; Hieron. i. p. 443, Ronc.; Cassiod. *Chron.* ii. p. 197.) It was, however, executed by Trajan, with the assistance of the celebrated architect Apollodorus of Damascus. (Dion Cass. lxix. 4.) But no ancient author has left us a satisfactory description of it, and we are obliged to make out the plan, as best we may, from what we can trace of the remains; a task somewhat aided by the excavations made by the French when they had possession of Rome at the commencement of the present century. (See Tournon, *Etudes Statist. Rome*, tom. ii. p. 253, pl. 28, 29; Fea, *Notizie degli scavi nell' Anfiteatro Flavio e nel Foro Traiano*, Rom. 1813; Bunsen, *Les Forums de Rome*, ii^{de} partie, p. 24, seq.) This immense work consisted of the following parts:—

1. The forum, properly so called, a large open area immediately adjoining the NW. sides of the fora of Caesar and Augustus, and filling the whole space between the Capitoline and Quirinal, — much of the latter hill, indeed, and some of the former, having been cut away in order to make room for it. This part, which was called the area or atrium fori (Gell. xiii. 24; Amm. Marc. xvi. 10), contained, in the middle, an equestrian statue of Trajan, and was adorned with many other statues. The SW. and NE. sides of this square, where the ground had been cut away from the hills, was occupied with semicircular buildings. There are still large remains of that under the Quirinal, which are vulgarly called the baths of Paullus Aemilius. The lower part of this edifice, which has only been laid open within the last few years, consists of quadrangular niches, which probably served as little shops; above them was a vaulted portico, with rooms and staircases leading to the upper floors. Piranesi and other topographers conjectured that there was another similar building on the side of the Capitol, at the place called the *Chiavi d' Oro*; but Canina was the first to demonstrate its existence in his *Indicazione Topografica*. Along the front of each of the crescents thus formed there seems to have been a portico, which gave the forum its proper rectangular form. The forum was thus divided into three parts, through both the exterior ones of which there was a road for carriages, as appears from traces of pavement; whilst the square, or middle division was paved with flag-stones. In the middle of the SE. side there seems to have been a triumphal arch, vestiges of which were discovered in the time of Flaminio Vacca (*Memorie*, no. 40), forming the principal entrance on the side of the imperial fora.

FORUM TRAJANI.

2. Next to the forum on the NW. side lay the Basilica Ulpia, which extended across it lengthways, and thus served to form one of its sides. The basilica was called Ulpia from Trajan's family name. The plan of the middle part is now laid entirely open. It seems to have been divided internally by four rows of columns, thus forming five aisles, with circular *absides* or *chalcidica* at each end. During the ex-

cavations the bases of these columns were discovered partly in their original situation. But it is doubtful whether the fragments of columns of gray granite now seen there belonged to the interior of the basilica; it is more probable that it had columns of *giallo antico* and *paonezzato*, remains of which have been found (Nibby, *For. Trajano*, p. 353). The floor was paved with slabs of the same marbles. It is supposed from the authority of two passages in Pausanias to have had a bronze roof (v. 12, x. 5). On the side which faced the forum were three magnificent entrances, a large one in the middle and two smaller on each side, decorated with columns, as may be seen on medals.

BASILICA ULPIA.

On the NW. side of the basilica stood, and still stands, the COLUMN OF TRAJAN, the finest monument of the kind in the world. This column was intended to answer two purposes: to serve as a sepulchre for Trajan, and to indicate by its height the depth of soil excavated in order to make room for the forum and its buildings. The latter object is expressed by the inscription, which runs as follows:—

SENATVS . POPVLVSQVE . ROMANVS .
IMP. CAESARI . DIVI . NERVAE . F. NERVAE
TRAIANO . AVG. GERM. DACICO . PONTIF.
MAXIMO . TRIB. POT. XVII. IMP. VI. COS. VI. P. P.
AD . DECLARANDVM . QVANTAE . ALTITVDINIS
MONS . ET . LOCVS . TANT[IS . OPERI]BVS . SIT
[EGESTVS.

(Cf. Aur. Vict. *Epit.* 13; Dion Cass. lxviii. 16). The height of the column, including the pedestal, is 127½ English feet. The diameter at the base is between 12 and 13 feet, and rather more than a foot less at the top. The shaft consists of 19 cylindrical pieces of white marble, in which steps are cut for ascending the interior. On the top was a statue of Trajan, now replaced by that of St. Peter, erected by Pope Sixtus V. When the tomb beneath was opened by the same pontiff, in 1585, it was discovered to be empty. Round the column runs a spiral band of admirable reliefs, representing the wars of Trajan against Decebalus, and containing no fewer than 2500 human figures. The height of the reliefs at the bottom is 2 feet, increasing to nearly double that size at the top; thus doing away with the natural effect of distance, and presenting the figures to the spectator of the same size throughout. The best descriptions of this magnificent column will be found in Fabretti, *De Columna Trajani*, Rome, 1690, with plates by Pietro Santi Bartoli; Piranesi, *Trofeo, o sia magnifica Colonna Coclide, &c.*, with large folio drawings; De Rossi, *Colonna Trajana designata*.

The column stood in an open space of no great extent, being 66 feet long and 56 broad. This space was bounded on its two sides by porticoes with double columns. In the NW. side of the ba-

COLUMN OF TRAJAN.

silica,* on either side of the column, were two libraries, the BIBLIOTHECA GRAECA AND LATINA, as indicated by Sidonius:—

"Cum meis poni statuam perennem
Nerva Trajanus titulis videret
Inter auctores utriusque fixam
Bibliothecae."—(ix. *Epigr.* 16.)

* It is remarkable, however, that the library is called by A. Gellius, "Bibliotheca *templi* Trajani" (xi. 17).

3. There are evident traces that Trajan's forum extended still farther to the NW., though it is doubtful whether this extension was owing to Trajan himself or to Hadrian. Excavations in this direction have brought to light enormous granite pillars belonging probably to the temple which Hadrian dedicated to Trajan (Spart. *Hadr.* 19), and which

TEMPLE OF TRAJAN.

TEMPLE OF TRAJAN.

is mentioned in the *Notitia* in conjunction with the column. This is further confirmed by some inscriptions bearing the name of Hadrian which have been discovered in this quarter. (Bunsen, *Les Forum Romains*, iide partie, p. 35.) Thus the space occupied by these noble structures extended from the fora of Caesar and Augustus almost to the Via Lata, or to the modern *Piazza degli Apostoli*.

How long the forum of Trajan existed is uncertain. The Anonymous of Einsiedlen mentions it in the way from Porta Nomentana to the Forum Romanum. In the *Mirabilia* it seems to be spoken of as a thing that has disappeared.

VI. The Palatine and Velia.

After the Capitol and forum, the Palatine hill is undoubtedly the most interesting spot at Rome, both from its having been the cradle of the eternal city, and also the seat of its matured power—the residence of the emperors when those emperors ruled the world, or, in the words of Tacitus, "ipsa imperii arx" (*H.* iii. 70),—a circumstance from which it has given name to the residences of subsequent princes. (Dion Cass. liii. 16.) In treating of the topography of this region, and indeed of that of the remainder of the city, we shall not endeavour to observe a chronological order, as was desirable in treating of the forum, in order that the reader might gain a clear idea of its appearance in the various periods of Roman history; but shall follow the most convenient method without regard to the dates of the different objects mentioned. We have already described the situation and height of the hill. The latter, however, cannot be very accurately given, as the soil is covered to a great depth with rubbish, the sole remains of those magnificent edifices which once stood upon it. On the side of the Circus Maximus, indeed, in the *Vigna del Collegio Inglese*, these ruins assume something of a more definite form; but the gigantic arches and terraces at that part, though they may still excite our wonder, are not sufficiently perfect to enable us to trace any plan of the buildings which they once formed. However, they must all have been subsequent to the time of Nero; since the ravages of the fire under that emperor were particularly destructive on the Palatine hill. Hence the chief topographical interest attaches to the declivities of the hill, which present more facilities for ascertaining spots connected with and sanctified by the early traditions of the city,—of which several have already been discussed, as the Porta Romanula and Clivus Victoriae, the Porta Mugionis, the Curiae Veteres, &c.

We have already seen that the declivity towards the Capitoline hill was called Germalus or Cermalus; but though in ancient times this was regarded as a separate hill, the reason is not clear, since it by no means presents any distinct features, like the Velia. Here was the Lupercal, according to tradition a grotto sacred to Pan ever since the time of the Arcadians (Dionys. i. 32, 79), and near it the Ficus Ruminalis, or sacred fig-tree, under which Romulus and Remus were discovered suckled by the wolf. It is difficult to determine the exact spot of the Lupercal. Evander points it out to Aeneas as lying "gelida sub rupe" (Virg. *Aen.* viii. 343), and Dionysius (*l. c.*) describes it as *on the road* (κατὰ τὴν ὁδὸν) leading to the Circus Maximus; and his authority is preferable to that of Servius, who describes it as "in Circo" (*ad Aen.* viii. 90). Its most probable site therefore is at the western angle of the hill, towards the circus. Its situation is in some degree connected with that of the Casa Romuli. The description of the 10th Regio, or Palatine, in the *Notitia* begins at the Casa Romuli, and proceeding round the base of the hill to the N. and E. ends, in coming from the circus, with the Lupercal; whence it is plain that the Casa Romuli must have stood a little to the N. of it. Plutarch notices the Casa Romuli, which was also called Tugurium Faustuli, in the following manner: Ῥωμύλος δὲ (ᾤκει) παρὰ τοὺς λεγομένους Βαθμοὺς Καλῆς Ἀκτῆς· οὗτοι δέ εἰσι περὶ τὴν εἰς τὸν ἱππόδρομον τὸν μέγαν ἐκ Παλαντίου κατάβασιν (*Rom.* 20). Here the expression Καλὴ Ἀκτή is puzzling, as an equivalent name does not occur in any Latin author. Properly ἀκτή signifies *the sea-shore*, and cannot therefore be applied to the banks of the Tiber; nor, in prose at least, to an inland bank. Hence Preller is inclined to think that it is merely Plutarch's awkward translation of the Roman name for a place called *Pulcra Rupes*, which obtained this appellation after the Lupercal had been restored by Augustus and adorned with architectural elevations. (*Regionen*, p. 181.) But Plutarch was surely master of his own language; and though he may not have been a very profound Latin scholar, yet as he lived some time in Rome and occupied himself with studying the history and manners of the people, we may perhaps give him credit for knowing the difference between *rupes* and *littus*. It seems more probable therefore that the Roman

name of the place alluded to was PULCRUM LITTUS than *Pulcra Rupes* (though unfortunately we do not find it mentioned in any Latin author), and that, like the Casa Romuli and Lupercal, it was a traditionary name, as old as the story of Romulus and Remus itself. According to that story, we must recollect that the Tiber had overflowed its banks and formed a lake here, and that the cradle was washed ashore at the foot of the Palatine; whence the name *littus*, which is frequently used of the shores of a lake, might without impropriety be applied to this spot. The *βαθμοί* or steps mentioned by Plutarch in the preceding passage were of course a more recent work, but their date cannot be fixed. Propertius (v. 1. 9) seems to allude to them in the following passage as existing even in the time of Romulus and Remus:—

> "Qua gradibus domus ista Remi se sustulit olim
> Unus erat fratrum maxima regna focus."

But though we can hardly imagine their existence at that time, yet the passage at all events suffices to prove the existence of the steps in the time of Augustus. Becker, however, will by no means allow this. (*Handb.* p. 420 and note.) Plutarch goes on to say that in the neighbourhood of the Casa Romuli stood the cherry-tree said to have sprung from the lance hurled by Romulus from the Aventine to the Palatine; and that the tree withered and died from the roots having been injured when Caius Caesar (Caligula) caused the steps to be made there. (*Γαΐου δὲ Καίσαρος, ὥς φασι, τὰς ἀναβάσεις ἐπισκευάζοντος καὶ τῶν τεχνιτῶν περιορυττόντων τὰ πλησίον, ἔλαθον αἱ ῥίζαι κακωθεῖσαι παντάπασι, καὶ τὸ φυτὸν ἐμαράνθη.*) Hence Becker draws the conclusion that this was the origin of the steps, and that they did not exist before the time of Caligula. But this is by no means a necessary consequence from Plutarch's words, since *ἐπισκευάζω* often signifies *to repair* or *make better*. We find the same steps mentioned by Solinus under the name of Scalae Caci: "Ad supercilium scalarum Caci habet terminum (Roma Quadrata), ubi tugurium fuit Faustuli. Ibi Romulus mansitavit," &c. (i. 18). It cannot be doubted that these are the same steps mentioned by Propertius and Plutarch. Gerhard proposed to *emend* this passage by reading Caii for Caci; an emendation of which Becker of course approved, as it suits his view that the steps did not exist before the time of Caligula. But unfortunately he was not aware of a passage in Diodorus Siculus which also mentions these steps in a manner confirmatory of the account of Solinus and Propertius: *τοῦ δὲ Κακίου ἐν τῷ Παλατίῳ καταβασίς ἐστιν ἔχουσα λιθίνην κλίμακα τὴν ὀνομαζομένην ἀπ' ἐκεινοῦ Κακίαν* (iv. 21). And as Diodorus wrote in the age of Augustus, the existence of the steps before the time of Caligula is thus proved.

An AEDES ROMULI is also mentioned on the Germalus in the sacred books of the Argives quoted by Varro (*L. L.* v. § 54, Müll.); but it is not found in any other author, and hence it may appear doubtful whether it is not the same as the Casa Romuli. The round church of *S. Teodoro* on the W. side of the Palatine has frequently been identified with this Aedes Romuli, and it is very probable that it was built over the remains of some ancient temple; but it is too far from the circus to have been the Casa Romuli, which lay more towards *S. Anastasia*. Besides the Casa seems to have been nothing more than a little thatched hut; of which, as we have seen, there appears to have been a duplicate on the Capitol.

In the dearth of any more accurate information we cannot fix the situation of these venerable relics of Roman antiquity more precisely than may be gathered from the preceding general indications. M. Valerius Messala and C. Cassius Longinus, who were censors in B.C. 154, projected, and even began, a theatre at this spot, which was to extend from the Lupercal on the Germalus towards the Palatine. But this scheme was opposed by the rigid morality of Scipio Nasica, and all the works were put up to auction and sold. (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Appian, *B. C.* i. 28.) The Lupercal is mentioned in the *Monumentum Ancyranum*, as reconstructed by Augustus; whence Canina infers that the ancient one must have been destroyed when this theatre was commenced. (*Indicazione Topogr.* p. 460, 1850.) The Casa Romuli is represented by Fabius Pictor, as translated by Dionysius of Halicarnassus (i. 79), to have been carefully preserved in his time, the damage occasioned by age or tempests being made good according to the ancient pattern. Whether the building mentioned in the *Notitia* was still the same it is impossible to say.

We have already noticed, when treating of the city of Romulus, the SANCTUARY OF VICTORIA—most probably a sacred grove—and the CLIVUS VICTORIAE on the NW. slope of the Palatine. At or near this spot an AEDES MATRIS DEUM was erected B. C. 191, to contain the image of the Mater Idaea, which Scipio Nasica had brought from Asia thirteen years before. (Liv. xxxvi. 35; Cic. *Har. R.* 12.) It must have been to the N. of the Casa Romuli, since it is mentioned after it in the *Notitia*, when proceeding in that direction, yet at some distance from the N. point of the hill, between which and the temple the Domus Tiberiana must have intervened. It is recorded as having been twice burnt down; once in B. C. 110, when it was rebuilt by Metellus (Jul. Obs. 99), and again in A. D. 2, in the same fire which destroyed the palace of Augustus, by whom it was restored. (Val. Max. i. 8. § 11; Dion Cass. lv. 12; *Mon. Ancyr.*). It must also have been destroyed in the conflagration under Nero, and again rebuilt. Becker (*Handb.* p. 421) observes that its front must have faced the E., as the statue of the Magna Mater Idaea is described by Dion Cassius as looking that way (xlvi. 43). But this relates only to the statue; and we fancy that there is some reason to believe, from a passage in Martial, that the temple was a round one, and could not therefore be properly said to face any way. In this passage two temples are mentioned (i. 70. 9):—

> "Flecte vias hac qua madidi sunt tecta Lyaei
> Et Cybeles picto stat Corybante tholus."

Becker observes (p. 422) that the age and situation of the temples here mentioned cannot be determined, as they occur nowhere else; and this seems to be true of the temple of Bacchus; but there appears to be no reason why the THOLUS CYBELES—which Becker writes *Torus*, without any apparent meaning—may not have been the Aedes Matris Deum before referred to. The description of the road to the house of Proculus given in this epigram suits the situation of this temple; and the house itself is mentioned as "nec propior quam Phoebus amat." Now, the temple of Apollo, built by Augustus, lay close to that of the Idaean Mother, as we shall see presently; and,

indeed, they are mentioned in one breath in the *Notitia*. ("Aedem Matris Deum et Apollinis Rhamnusii.") That this Tholus Cybeles may have been the temple which once occupied the site of the present circular church of *S. Teodoro* before referred to, we can only offer a conjecture; its situation, at least, admirably corresponds with that of the temple of the Idaean Mother.

We find a temple of this deity, as well as one of JUVENTAS mentioned in the *Monumentum Ancyranum* (tab. iv. l. 8) as erected by Augustus on the Palatine. The first of these may, however, have been only a restoration of the ancient temple. We can hardly conclude from the word *feci* that it was an entirely new and separate structure; since we find the same word used in that record with relation to other edifices which were among the most ancient in Rome, and of which it is not likely that there should have been duplicates: such as the temple of Jupiter Feretrius on the Capitol, that of Quirinus, that of Juno Regina on the Aventine, and others. In these cases it seems probable that the edifices were in such a ruinous state from long neglect that Augustus found it necessary to rebuild them from their foundations; which would justify the use of the word *feci* instead of *refeci*, but hardly the regarding of them as entirely new temples. The great care used by Augustus in restoring the ancient temples is alluded to by Horace (*Od.* iii. 6). The temple of Juventas may possibly have been new; at all events it could hardly have been the one dedicated by C. Licinius Lucullus about the same time as that of the Mater Magna Idaea, since the former was in the Circus Maximus. (Liv. xxxvi. 36; cf. Cic. *Brut.* 18, *ad Att.* i. 18.)

What the PENTAPYLUM may have been which is mentioned in the *Notitia* between the temple of Apollo and the palace of Augustus, it is difficult to say, except that it was probably a building with five gates. Preller (*Regionen*, p. 183) cites a passage from an anonymous describer of the Antiquities of Constantinople in Banduri (*Imp. Orient.* i. p. 21), in which a building in that city called *Tetrapylum*, which was used for depositing and bewailing the corpse of the emperor, or of that of any member of his family, is mentioned; and as this building is said to have been imitated from one at Rome, Preller thinks it highly probable that the Pentapylum in question may have afforded the model, and been used for a similar purpose.

Of the temples of JUPITER VICTOR and JUPITER STATOR — the former near the Nova Via and Porta Mugionis, the latter farther off towards the Sacra Via — we have already spoken when describing the Romulean city; besides which there seems to have been a temple of JUPITER PROPUGNATOR, probably of the time of the Antonines, known only from an inscription. (Gruter. ccc. 2; Orell. 42; Canina, *Indicazione*, p. 469.) We have also had occasion to mention the CURIAE VETERES and the sacellum of FORTUNA RESPICIENS. Other ancient buildings and shrines on the Palatine, the sites of which cannot be exactly determined, were the CURIA SALIORUM (Palatinorum), where the ancilia and the lituus Romuli were preserved, probably not far from the temple of Vesta (Dionys. ii. 70; Cic. *Div.* i. 17; Gruter, *Inscr.* clxiii. 5; Orell. 2244); a fanum, or ARA FEBRIS (Cic. *Leg.* ii. 11; Val. Max. ii. 5. § 6; Plin. ii. 5), an ancient sacellum of the DEA VIRIPLACA, the appeasing deity of connubial quarrels (Val. Max. ii. 1. § 6); and an Ἀφροδίσιον, or TEMPLE OF VENUS (Dion Cass. lxxiv. 3).

When the Romans began to improve their domestic architecture, and to build finer houses than those which had contented their more simple ancestors, the Palatine, from its excellent and convenient situation, early became a fashionable quarter. We have already alluded slightly to some of the more noted residences on this hill. The house of VITRUVIUS VACCUS is one of the most ancient which we find mentioned in this quarter. It was pulled down in B. C. 330 in consequence of the treasonous practices of its owner; after which the site remained unbuilt upon, and obtained the name of VACCI PRATA (Liv. viii. 19; Ps. Cic. *p. Dom.* 38); but how long it remained in this state it is impossible to say. The PORTICUS CATULI rose on the Palatine from a similar cause. Its site had previously been occupied by the house of M. Fulvius Flaccus, who perished in the sedition of C. Gracchus: the house was then razed, and the ground on which it stood called FLACCIANA AREA, till this portico was erected on it by Q. Lutatius Catulus, after his Cimbric victory. (Val. Max. vi. 3. § 1; Ps. Cic. *p. Dom.* 43.) Near it stood the HOUSE OF CICERO which he bought of Crassus, — probably not the celebrated orator, — the fate of which we have already related. It seems to have been on the NE. side of the Palatine, as Cicero is described by Plutarch as traversing the Sacra Via in order to arrive at the forum (*Cic.* 22): and Vettius calls Cicero "vicinum consulis," that is, of Caesar, who then dwelt in the Regia (*ad Att.* ii. 24). CATILINE'S HOUSE was also on the Palatine, and was annexed by Augustus to his residence. (Suet. *Ill. Gramm.* 17.) Here also was a HOUSE OF ANTONIUS, which Augustus presented to Agrippa and Messala (Dion Cass. liii. 27); and also the HOUSE OF SCAURUS, famed for its magnificence. (Cic. *Scaur.* 27; Plin. xxxvi. 3.)

With the reign of Augustus a new era commenced for the Palatine. It was now marked out for the imperial residence; and in process of time, the buildings erected by successive emperors monopolised the hill, and excluded all private possessions. Augustus was born in this Region, at a place called AD CAPITA BUBULA, the situation of which we are unable to determine (Suet. *Aug.* 5). In early manhood he occupied the house of the orator C. Licinius Calvus "juxta forum super scalas anularias" (*Ib.* 72); but neither can the site of this be more definitely fixed. Hence he removed to the Palatine, where he at first occupied the HOUSE OF HORTENSIUS, a dwelling conspicuous neither for size nor splendour. (*Ib.*) After his victory over Sextus Pompeius, he appears to have purchased several houses adjoining his own, and to have vowed the TEMPLE OF APOLLO, which he afterwards built (Vell. Pat. ii. 81; Dion Cass. lxix. 15.) This temple, the second dedicated to that deity at Rome — the earlier one being in the Circus Flaminius — does not, however, appear to have been begun till after the battle of Actium, or at all events the plan of it was extended after that event. It is well known that after that victory Augustus dedicated a temple to the Leucadian Apollo near Actium, and in like manner the new structure on the Palatine was referred to the same deity; whence the phrases "Actius Apollo" (Virg. *Aen.* viii. 704; Prop. iv. 6. 67), and "Phoebus Navalis" (—"ubi Navali stant sacra Palatia Phoebo," Prop. iv. 1. 3). It was dedicated in B. C. 27. It was surrounded with a portico containing the BIBLIOTHECAE GRAECA

ET LATINA (Suet. *Aug.* 29; Dion Cass. liii. 1; *Mon. Ancyr.*) These far-famed libraries were quite distinct institutions, as appears from monumental inscriptions to slaves and freedmen attached to them, who are mentioned as "a Bibliotheca Latina Apollinis," or, "a Bibliotheca Graeca Palatina" (Panvinius in Graevius, *Thes.* iii. col. 305; Orell. *Inscr.* 40, 41). In them were the busts or *clipeatae imagines* of distinguished authors. (Tac. *Ann.* ii. 83.) Propertius, in a short poem (iii. 29), has given so vivid a description of the whole building, that we cannot do better than insert it:—

"Quaeris cur veniam tibi tardior? Aurea Phoebo
Porticus a magno Caesare aperta fuit.
Tota erat in speciem Poenis digesta columnis
Inter quas Danai femina turba senis.
Hic equidem Phoebo visus mihi pulchrior ipso
Marmoreus tacita carmen hiare lyra.
Atque aram circum steterant armenta Myronis
Quatuor artificis, vivida signa, boves.
Tum medium claro surgebat marmore templum
Et patria Phoebo carius Ortygia.
In quo Solis erat supra fastigia currus
Et valvae Libyci nobile dentis opus.
Altera dejectos Parnassi vertice Gallos
Altera moerebat funera Tantalidos.
Deinde inter matrem deus atque inter sororem
Pythius in longa carmina veste sonat."

Hence we learn that the columns of the portico were of African marble, and between them stood statues of the fifty daughters of Danaus (cf. Ovid. *Amor.* ii. 2. 4.) According to Acron, fifty equestrian statues of the sons of Danaus also stood in the open space. (Schol. *ad Pers.* ii. 56.) The temple itself was of solid white marble from Luna (*Carrara*). (Serv. Virg. *Aen.* viii. 720.) The statue alluded to by Propertius as "Phoebo pulchrior ipso" was that of Augustus himself, which represented him in the dress and attitude of Apollo. (Schol. Cruq. *ad Hor. Ep.* i. 3, 17: Serv. *ad Virg. Ec.* iv. 10.) In the library was also a colossal bronze statue of Apollo, 50 feet in height (Plin. xxxiv. 18), as well as many precious works of art. (Ib. xxxiv. 8, xxxvii. 5, &c.) The Sibylline books were preserved in the temple (Suet. *Aug.* 31; Amm. Marc. xxiii. 3) before which was the spacious place called the AREA APOLLINIS.

From all these notices we may gather some idea of the splendour of this celebrated temple; but its exact site, as well as that of the PALACE OF AUGUSTUS, is nowhere clearly intimated. From several passages, however, which have been cited when discussing the situation of the Porta Mugionis, we may infer pretty accurately that the latter must have stood at the NE. side of the Palatine, between the arch of Titus and the temple of Vesta. (*S. Maria Liberatrice.*) It appears from a passage in Ovid ("Inde tenore pari," &c., *Trist.* iii. 1. 59), that the temple must have lain some way beyond the palace, and there seems to be no reason why we may not place it near *S. Teodoro*, though it stood perhaps on the summit of the hill. This seems to be the spot indicated in the *Notitia.* The temple is there called "aedis Apollinis *Rhamnusii*"—an epithet not easily explained, notwithstanding the attempt of Preller (*Regionen*, p. 182); although there can be no doubt that the temple built by Augustus is meant.

In the same document a DOMUS TIBERIANA, or palace of Tiberius, is mentioned as distinct from that of Augustus; a house, indeed, which he probably inherited, as he was born on the Palatine. (Suet. *Tib.* 5.) In his youth, when he lived in a quiet, retired manner, he first inhabited the house of Pompey in the Carinae, and afterwards that of Maecenas on the Esquiline (*Ib.* 15); but when he became emperor, it is most probable that he resided on the Palatine, till he secluded himself in the island of Capreae. The Domus Tiberiana must have stood near the NW. corner of the Palatine, since it is described as affording an exit into the Velabrum ("per Tiberianam domum in Velabrum," Tac. *Hist.* i. 27). Suetonius, speaking of the same departure of Otho, says that he hastened out at the back of the palace ("proripuit se a postica parte Palatii," *Otho*, 6); from which passages it would appear that the two palaces were connected together, that of Augustus being the more conspicuous towards the forum, whilst that of Tiberius formed the back front. It was from the latter that Vitellius surveyed the storming of the Capitol. (Suet. *Vit.* 15.) At a later period of the Empire we find a BIBLIOTHECA mentioned in the palace of Tiberius, which had probably superseded the Palatine Library, as the latter is no longer mentioned. (A. Gell. xiii. 19; Vopisc. *Prob.* 2.) All these buildings must, of course, have been destroyed in the fire of Nero; but we must assume that, after they were rebuilt, the Domus Augusti et Tiberii still continued to be distinguished, as they are mentioned as separate buildings in the *Notitia;* and indeed Josephus expressly says that the different parts of the complex of buildings forming the imperial palace were named after their respective founders. (*Ant. Jud.* xix. 1. § 15).

On or near the Palatine we must also place the TEMPLUM AUGUSTI — one of the only two public works which Tiberius undertook at Rome, the other being the *scena* of the theatre of Pompey. Even these he did not live to finish, but left them to be completed and dedicated by Caligula. (Tac. *Ann.* vi. 45; Suet. *Tib.* 47, *Cal.* 21.) The circumstance of Caligula using this temple as a sort of pier for his bridge to the Capitoline makes it doubtful whether it could have stood on the Palatine hill. (Suet. *Ib.* 22.) Yet Pliny (xii. 42) alludes to it as "in Palatii templo;" and if it was not exactly on the summit of the hill, it could not have been very far from it. Becker conjectures that the BRIDGE OF CALIGULA passed over the Basilica Julia; but the only proof is, that Caligula was accustomed to fling money to the people from the roof of the basilica, which he might have ascended without a bridge. (Suet. *Cal.* 37, Jos. *Ant. Jud.* xix. 1. § 11.) The bridge, perhaps, did not stand very long. Caligula seems to have made extensive alterations in the imperial palace, though we cannot trace them accurately. ("Bis vidimus urbem totam cingi domibus principum Caii et Neronis," Plin. xxxvi. 24. s. 5.) We have already mentioned that he connected the temple of Castor with it. Yet in his time there must have been still some private dwellings on the NE. side of the Palatine, as Pliny mentions that the lotus-trees belonging to the house of Crassus at that spot lasted till the fire of Nero. (Ib. xvii. 1.) The enormous buildings of the last-named emperor probably engrossed the whole of the Palatine; at all events we hear no more of private houses there after the commencement of his reign. We have already adverted to Nero's two palaces. The first of these, or DOMUS TRANSITORIA, with its gardens, though not finished in the same style of splendour

as its successor, the *domus aurea*, seems to have occupied as large an extent of ground, and to have reached from the Palatine to the gardens of Maecenas and the agger of Servius on the Esquiline. (Suet. *Nero*, 31; Tac. *Ann.* xv. 39.) The Aurea Domus was a specimen of insane extravagance. Its atrium or vestibule was placed on the Velia, on the spot where the temple of Venus and Rome afterwards stood, and in it rose the colossal Statue of Nero, 120 feet high, the base of which is still visible at the NW. side of the Colosseum. We may gain an idea of the vastness of this residence by comparing the prose description of Suetonius with the poetical one of Martial, when we shall see that the latter has not abused the privilege of his calling. (Suet. *Nero*, 31; Mart. *de Spect.* 2). It was never perfectly finished, and Vespasian, as we have said, restored the ground to the public. We know but little of the arrangement of the buildings on the Palatine itself under Nero, except that the different parts appear to have retained their former names. Domitian added much to the palace, now again confined to this hill, and fitted it up in a style of extraordinary magnificence; but, though we frequently hear of single parts, such as baths, *diaetae*, a portico called *Sicilia*, a dining-room dignified with the appellation of *Coenatio Jovis*, &c., yet we are nowhere presented with a clear idea of it as a whole (cf. Plut. *Popl.* 15; Plin. xxxv. 5. s. 38; Capit. *Pert.* 11; Mart. viii. 36; Stat. *Silv.* iii. 4. 47, iv. 2. 18, &c.) The anxiety and terror of the tyrant are strikingly depicted in the anecdote told by Suetonius (*Dom.* 14), that he caused the walls of the portico in which he was accustomed to walk to be covered with the stone, or crystallised gypsum, called *phengites*, in order that he might be able to see what was going on behind his back. It is uncertain where the Adonaea, or gardens of Adonis, lay, in which Domitian received Apollonius of Tyana, and which are marked on a fragment of the Capitoline plan (Bellori, tab. xi.) Of the history of the palace little more is known. Several accounts mention the domus aurea as having been burnt down in the reign of Trajan (Oros. vii. 12; Hieron. an. 105, p. 447, Ronc.), and the palace which succeeded it appears to have been also destroyed by fire in the reign of Commodus (Dion Cass. lxxii. 24; Herodian, i. 14.)

At the southern extremity of the Palatine, Septimius Severus built the Septizonium, considerable remains of which existed till near the end of the 16th century, when Pope Sixtus V. caused the pillars to be carried off to the Vatican. Representations of the ruins will be found in Du Pérac (tav. 13) and Gamucci (*Antichità di Roma*, p. 83, *Speculum Rom. Magnificentiae*, t. 45). The name of the building, which, however, is very variously written in the MSS. of different authors, is by some supposed to have been derived from its form, by others from the circumstance of seven roads meeting at this spot. It seems not improbable that a similar place existed before the time of Severus, since Suetonius mentions that Titus was born near the Septizonium (c. 2); though topographers, but without any adequate grounds, have assigned this to the 3rd Region. It has been inferred from the name that the building had seven rows of columns, one above another, but this notion seems to be without foundation, as the ruins never exhibited traces of more than three rows. The tomb of Severus must not be confounded with it, which, as we learn from Spartianus, was on the Via Appia, and built so as to resemble the Septizonium. The same author informs us (*Sev.* 24) that the design of Severus was to make the Septizonium an atrium of the palace, so that it should be the first object to strike the eyes of those coming from Africa, his native country. But the true nature and destination of the building remain enigmatical.

THE SEPTIZONIUM.

We know of no other alterations in the palace except some slight ones under the emperors Elagabalus and Alexander Severus. The former consecrated there the Temple of Heliogablus (Lampr. *Heliog.* 3; Herodian, v. 5), and opened a public bath, also destined apparently as a place of licentiousness (Lampr. *Ib.* 8). Of the buildings of Alexander Severus we hear only of a *diaeta*, erected in honour of his mother Julia Mammaea, and commonly called "ad Mammam" (Id. *Al. Sev.* 26). These diaetae were small isolated buildings, commonly in parks, and somewhat resembled a modern Roman *casino* or pavilion (Plin. *Ep.* ii. 17, v. 6). It is also related of both these emperors that they caused the streets of the Palatine to be paved with porphyry and *verde antico* (Lampr. *Hel.* 24, *Al. Sev.* 25). The Palatium was probably inhabited by Maxentius during his short reign, after which we hear no more of it. That emperor is said to have founded baths there. (*Catal. Imp. Vienn.* t. ii. p. 248, Ronc.)

The Victoria Germaniciana, the only object recorded in the *Notitia* between the Septizonium and the Lupercal, and which must therefore have stood on the side next the circus, was probably one of those numerous monuments erected either in honour of Germanicus, of which Tacitus speaks (*Ann.* ii. 83), or else to Caracalla, who likewise bore the name of Germanicus (Preller, *Regionen*, p. 187).

We have already treated generally of the Velia and Sacra Via, and of some of the principal objects connected with them, as well as of the Nova Via under the Palatine. The Nova Via was not a very important road, and we have little more to add respecting it. It seems to have begun at the Porta Mugionis, where, like the Sacra Via, at the same spot, it was called *Summa* Nova Via (Solin. i. 1). From this place it ran almost parallel with the Sacra Via, and between it and the hill, as far as its northern point, where it turned to the S., and still continued to run along the base of the Palatine as far at least as the Porta Romanula (near *S. Giorgio in Velabro*). Some, indeed, carry it on as far as the Circus Maximus (Canina, *Indic. Top.* p. 331); a view which does not

seem to be supported by any authority. The lower part of it, both on the side of the forum and of the Velabrum, was called Infima Nova Via. (Varro, v. § 43, Müll.) Ovid describes it as touching the forum (" Qua Nova Romano nunc Via juncta foro est," *Fast.* vi. 389); whence we must conclude that not only the open space itself, but also the ground around it on which the temples and basilicae stood, was included under the appellation of forum. A road appears, however, to have led from the Nova Via to the forum between the temples of Vesta and Castor, as is shown by remains of pavement discovered there; and this may have been the *junction* alluded to by Ovid, which from his words would seem to have been comparatively recent. The Lucus Vestae must have lain behind the Nova Via, towards the Palatine, and indeed on the very slope of the hill, as appears from the following passages: " Exaudita vox est a luco Vestae, qui a Palatii radice in Novam Viam devexus est" (Cic. *Div.* i. 45); " M. Caedicius de plebe nuntiavit tribunis, se in Nova Via, ubi nunc sacellum est supra aedem Vestae vocem noctis silentio audisse clariorem humana" (Liv. v. 32). The sacellum here alluded to was that of Aius Loquens. (Cic. *l. c.* and ii. 32.) It is described by Varro (*ap. Gell.* xvi. 17) as "in infima Nova Via"; whence we must conclude that it was in the part near the forum that Caedicius heard the voice. Though called *Nova*, the road must have been of high antiquity, since Livy mentions that Tarquinius lived in it (i. 47); and perhaps it received its name from its newness in comparison with the Sacra Via.

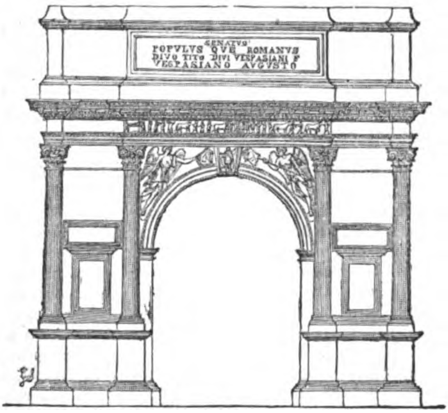
Before we proceed to describe the monuments on the Velia, we must observe that some writers, and especially the Italian school of topographers (Canina, *Foro Rom.* p. 60, seq., *Indic. Top.* p. 462), do not allow that the Velia consisted of that height which lies between the Palatine, the Esquiline, and the eastern side of the forum, but confine the appellation to the northern angle of the Palatine, which, it is contended, like the Germalus, was in ancient times considered as distinct from the remainder of the hill. Indeed it appears that Niebuhr first applied the name of Velia to the ridge in question (*Hist.* i. p. 390, Eng. trans.), in which view he was of course followed by Bunsen (*Beschr.* iii. p. 81). One of the chief arguments adduced against it is the account given of the house of Valerius Publicola. Valerius is said to have begun building a house on the same spot where Tullus Hostilius had previously dwelt (Cic. *Rep.* ii. 31); and the residence of Tullus Hostilius again is recorded to have been on the Velia, on the spot *afterwards* occupied by the Aedis Deum Penatium (Varro, *ap. Non.* xii. 51, p. 363, Gerl.; " Tullus Hostilius in Velia, ubi postea Deum Penatium aedes facta est," Solin. i. 22). Now Bunsen (*Ib.* p. 85), and after him Becker (*de Muris*, p. 43, *Handb.* p. 249), hold that the Aedes Deum Penatium here alluded to was that mentioned by Dionysius Halicarnassensis (i. 68) as standing in the short cut which led from the forum to the Carinae, in the district called Ὑπελαίαις. The MSS. vary in the spelling of this name; but we think with Becker that the Velia, or rather " Sub Velia," is meant, as Cujacius has translated the word: and Casaubon (*ad Mon. Anyr.*) reads Οὐέλιαι. But, whatever opinion may be entertained on that point, the other part of the description of Dionysius, namely, that the temple stood in the short cut between the forum and the Carinae, sufficiently indicates the locality; and we are of opinion, with Becker, that Bunsen arrived at a very probable conclusion in identifying this temple with the present circular vestibule of the church of *SS. Cosma e Damiano.* Yet, if we assume with those writers that this was the only temple of the Penates on the Velia, and consequently the spot on which the house of Publicola stood, then we must confess that we see considerable force in the objection of Canina, that such a situation does not correspond with the descriptions given by Cicero, Livy, and other writers. All those descriptions convey the idea that Publicola's house stood on a somewhat considerable, though not very great, elevation. Thus Dionysius characterises the spot as *λόφον ὑπερκείμενον τῆς ἀγορᾶς ὑψηλὸν ἐπιεικῶς καὶ περίτομον ἐκλεξάμενος* (v. 19). And Cicero says of the house: " Quod in excelsiore loco coepisset aedificare" (*Rep.* ii. 31). A still more decisive passage is that of Livy: " Aedificabat in *summa Velia*" (ii. 7). For how can that spot be called the *top* of the Velia, which was evidently *at the bottom*, and, according to Becker's own showing, in a district called *sub* Velia? His attempts to evade these difficulties are feeble and unsatisfactory (*de Muris*, p. 45). Yet they are not incapable of solution, without abandoning Niebuhr's theory respecting the Velia, which we hold to be the true one. There were in fact two temples of the Penates on the Velia, namely, that identified by Bunsen with *SS. Cosma e Damiano*, and another " in Summa Velia," as Livy says; which latter occupied the site of the residence of Tullus Hostilius, and of the subsequent one of Valerius Publicola. Thus Solinus: " Tullus Hostilius in Velia (habitavit), ubi *postea* Deum Penatium aedes facta est" (i. 22). We cannot determine the length of this *postea;* but it was most probably after the time of Publicola, and perhaps a great deal later. But the other temple was certainly older, as it is mentioned in the sacred books of the Argives (*ap.* Varro, *L.L.* v. § 54: " In Velia apud aedem Deum Penatium"); and thus it is plain that there must have been two temples. The one in the Summa Velia is the Sacellum Larum mentioned by Tacitus, in describing the pomoerium of Romulus (*Ann.* xii. 24): and this is another proof that there were two temples; for it is impossible to imagine that the pomoerium could have extended so far to the N. as the church of *SS. Cosma e Damiano.* The situation of this sacellum would answer all the requirements of the passages before cited. For there is still a very considerable rise from the forum to the arch of Titus, near to which the sacellum must have stood, which rise was of course much more marked when the forum was in its original state, or some 20 feet below its present level. Indeed the northern angle of the Palatine, which Canina supposes to have been the Velia, does not present any great difference of height: and thus the objections which he justly urges against the aedes near the temple of Faustina do not apply to one on the site that we have indicated. Besides it appears to us an insuperable objection to Canina's view that he admits the spot near the temple of Faustina to have been called Sub Velia, though it is separated by a considerable space and by the intervening height, from the N. angle of the Palatine. The account of Asconius (*ad Cic. Pis.* 22) of a house of P. Valerius " sub Velia, ubi nunc aedis Victoriae est," is too confused and imperfect to draw any satisfactory conclusion from it. By all other authorities the

Aedis Victoriae is said to be not at the *foot* of the *Velia*, but on the *summit* of the *Palatine*.

But there is another argument brought forwards by Canina against the height in question being the Velia. He observes that the area on which the temple of Venus and Rome stands is divided from the Palatine by the Sacra Via, and hence could not have belonged to the Velia; since the Sacra Via, and all the places on the opposite (northern) side of it, were comprehended in the 1st Regio of Servius, or the Suburana, whilst the Palatine, including the Velia, were contained in the 4th Regio (*Indicaz. Topogr.* p. 462, cf. *Foro Rom.* p. 61). Now if this were so, it would certainly be a fatal objection to Niebuhr's view; but we do not think that any such thing can be inferred from Varro's words. In describing the 1st Region, in which a place called Ceroliensis was included, he says, "Ceroliensis a Carinarum junctu dictus Carinae, postea Cerolia, quod hinc oritur caput Sacrae Viae ab Streniae sacello," &c. (*L. L.* v. § 47.) The passage is obscure, but we do not see how it can be inferred from it that the Sacra Via formed the boundary between the 1st and 4th Servian Regions. Varro seems rather to be explaining the origin of the name Cerolia, which he connects with the Sacra Via, but in a manner which we cannot understand. The Sacra Via traversed the highest part of the ridge, and thus on Canina's own showing must have included some part of it in the 4th Region, making a division where no natural one is apparent, which is not at all probable. Besides, if this height was not called Velia, what other name can be found for it? And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very heart of the city, should have been without a name.

Assuming the Velia, therefore, to have been that rising ground which lies between the valley of the forum on the one hand, and that of the Colosseum on the other, we shall proceed to describe its monuments. The Aedes Penatium, before referred to as standing on the declivity of the ridge, or Sub Velia, and described by Dionysius (i. 68), seems to have been one of the most venerable antiquity. In it were preserved the images of the household gods said to have been brought from Troy, having upon them the inscription ΔΕΝΑΣ, which has given rise to so much controversy; namely, whether it is a scribe's error for ΠΕΝΑΣ, that is ΠΕΝΑΣΙ = Penatibus, or whether it should have been ΔΙΣ ΜΑΓΝΙΣ (Diis Magnis), &c. &c. (See Ambrosch, *Stud. u. Andeut.* p. 231, seq.; Clausen, *Aeneas u. die Penaten*, ii. p. 624, n. 1116; Hertzberg, *de Diis Rom. Patriis*, lib. ii. c. 18.) We shall here follow our usual rule, and give Dionysius credit for understanding what he was writing about, as there does not appear to be any grave objection to doing so; and as he immediately adds, after citing the above epigraph, that it referred to the Penates (ΔΕΝΑΣ ἐπιγραφὴν ἔχουσαι, δηλοῦσαν τοὺς Πενάτας), we shall assume that this was really the temple of the Trojan household gods. The Italian writers regard it as the temple of Remus.

We do not find any large buildings mentioned upon the Velia till the time of Nero, who, as we have seen, occupied it with the vestibule of his palace. A considerable part of it had perhaps been a market previously. Close to its NW. foot, immediately behind the Aedes Penatium just indicated, Vespasian, after his triumph over Jerusalem, built his celebrated Temple of Peace, to which we have already had occasion to allude, when describing the imperial fora. (Joseph. *B. J.* vii. 5. § 7; Suet. *Vesp.* 9; Dion Cass. lxvi. 15.) It stood in an enclosed space, much like the temple of Venus Genitrix in Caesar's forum, or that of Mars Ultor in the forum of Augustus; and hence though not designed like them as a place for legal business, it was nevertheless sometimes called Forum Pacis. The temple was built with the greatest splendour, and adorned with precious works of art from Nero's palace, as well as with the costly spoils brought from the temple of Jerusalem, which made it one of the richest and most magnificent sanctuaries that the world ever beheld. (Joseph. *l. c.*; Plin. xxxiv. 8. s. 84, xxxvi. 24; Herodian, i. 14.) Hence its attraction and notoriety gave a new name to the 4th Region, in which it stood, which was previously called "Sacra Via," but now obtained the name of "Templum Pacis." The exact site of this temple was long a subject of dispute, the older topographers maintaining that the remains of the three vast arches a little to the E. of the spot just described, and now universally allowed to belong to the basilica of Constantine, were remnants of it. Piranesi raised some doubts on the point, but Nibby was the first who assigned to these two monuments their true position (*Foro Rom.* p. 189, seq.); and his views have been further developed and confirmed by Canina. (*Indicaz. Topogr.* p. 131, seq.) As Becker has also adopted the same conclusion, it will not be necessary to state the grounds which led to it, as they would occupy considerable space; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annexed to the temple was a library, in which the learned were accustomed to meet for the purposes of study and literary intercourse. (A. Gell. v. 21, xvi. 8.) The temple was burnt down a little before the death of Commodus. (Dion Cass. lii. 24; Herodian, i. 14; Galen, *de Comp. Med.* i. 1.) It does not appear to have been restored, but the ruins still remained undisturbed, and the spot is several times mentioned in later writers under the name of Forum Pacis, or Forum Vespasiani (Amm. Marc. xvi. 10; Procop. *B. G.* iv. 21; Symm. *Ep.* x. 78; *Catal. Imp. Vienn.* p. 243.)



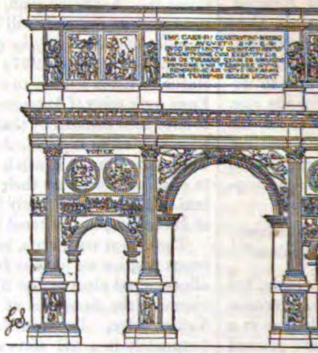
The three arches just alluded to as standing near the temple of Peace, and apparently at the commencement of a road branching off from the Sacra Via, belonged, as is almost universally admitted, to the Basilica Constantini, erected by Maxentius, and dedicated after his death in the name of Constantine. Their architecture has all the characteristics of a basilica, and could not possibly have been adapted to a temple. (Canina, *Indicaz.* p. 124.) The first notice which we find of this building is in Aurelius Victor (*Caesar*, 40, 26), who mentions it as having been erected by Maxentius; and this account is confirmed by an accident which happened in 1828, when on the falling in of a part of an arch a coin bearing the name of Maxentius was discovered in the masonry. (*Beschr.* iii. 298.) In the *Cat. Imp. Vienn.* p. 243, it is mentioned as occupying the site of the *horrea piperataria*, or spice warehouses of Domitian ("horrea piperataria ubi modo est Basilica Constantiniana et Forum Vespasiani"). These spice warehouses must have been the same that are related by Dion Cassius (lxxii. 24) to have first caught the flames when the temple of Peace was burnt, A. D. 192, and are described as τὰς ἀποθήκας τῶν τε Ἀραβίων καὶ τῶν Αἰγυπτίων φορτίων; whence, as the fire spread towards the Palatine, it may be presumed that they stood on the site of the basilica.

Between the basilica of Constantine and the Colosseum, and consequently on the eastern side of the Velian height, Hadrian built the splendid TEMPLE OF ROMA AND VENUS, commonly called at a later period Templum Urbis, considerable remains of which still exist behind the convent of *S. Francesca Romana.* In the middle ages it was called Templum Concordiae et Pietatis (*Mirabilia Rom.* in *Effemerid. Letter.* i. p. 385); the older topographers gave it various names, and Nardini was the first to designate it correctly. The remains exhibit the plan of a double temple, or one having two cellae, the semicircular tribunes of which are joined together back to back, so that one cella faced the Capitol and the other the Colosseum; whence the description of Prudentius (*Contra Symm.* i. 214):—

"Atque Urbis Venerisque pari se culmine tollunt
Templa, simul geminis adolentur tura deabus."

The cella facing the Colosseum is still visible, but the other is enclosed in the cloisters of *S. Francesca.* In them were colossal statues of the goddesses in a sitting posture. Hadrian is related to have planned this temple himself, and to have been so offended with the free-spoken criticisms of the great architect Apollodorus upon it that he caused him to be put to death. (Dion Cass. lxix. 4.) Apollodorus is related to have particularly criticised the extravagant size of the two goddesses, who he said were too large to quit their seats and walk out of the temple, had they been so minded. The temple was of the style technically called *pseudo-dipteros decastylos,* that is, having only one row of ten columns, but at the same distance from the cella as if there had been two rows. With its porticoes it occupied the whole space between the Sacra Via and the street which ran past the front of the Basilica Constantini. For a more detailed description of it see Nibby, *Foro Romano,* p. 209, seq., and Canina, *Edifizj di Roma,* classe ii. A ground plan, and elevations and sections of it as restored, will be found in Burgess, *Antiquities and Topography of Rome,* i. pp. 268, 280. Servius (*ad Aen.* ii. 227) speaks of snakes on the statue of Roma similar to those on that of Minerva. From some coins of Antoninus Pius the temple appears to have been restored by that emperor. Silver statues were erected in it to M. Aurelius and Faustina, as well as an altar on which it was customary for brides to offer sacrifice after their marriage. (Dion Cass. lxxi. 31.) It was partly burnt down in the reign of Maxentius, but restored by that emperor.

The ARCH OF TITUS, to which from its conspicuous position we have so frequently had occasion to allude, stood close to the SW. angle of this temple, spanning the Sacra Via at the very summit of the Velian ridge. Its beautiful reliefs, which are unfortunately in a bad state of preservation, represent the Jewish triumphs of Titus. The arch could not have been completed and dedicated till after the death of that emperor, since he is called Divus in the inscription on the side of the Colosseum, whilst a relief in the middle of the vault represents his apotheosis. It has undergone a good deal of restoration of a very indifferent kind, especially on the side which faces the forum. During the middle ages it was called Septem Lucernae and Arcus Septem Lucernarum, as we see from the Anonymus.



ARCH OF TITUS RESTORED.

We shall here mention two other monuments which, though strictly speaking they do not belong to the Palatine, yet stand in such close proximity to it that they may be conveniently treated of in this place. These are the ARCH OF CONSTANTINE and the Meta Sudans. The former, which stands at the NE. corner of the Palatine, and spans the road now called *Via di S. Gregorio,* between that hill and the Caelian, was erected, as the inscription testifies, in honour of Constantine's victory over Maxentius. It is adorned with superb reliefs relating to the history of Trajan, taken apparently from some arch or other monument of that emperor's. They contrast strangely with the tasteless and ill-executed sculptures belonging to the time of Constantine himself, which are inserted at the lower part of the arch. This monument is in a much better state of preservation than the arch of Titus, a circumstance which may perhaps be ascribed to the respect entertained for the memory of the first Christian emperor. For detailed descriptions and drawings of this arch see Niebuhr (*Beschr.* iii. p. 314, seq.), Canina (*Edifizj Antichi,* classe xii.), Overbeke (*Restes de l' An. Rome,* ii. t. 8, 9), Piranesi (*Ant. Rom.* i.).

The META SUDANS, so called from its resemblance to the metae of the circus, was a fountain erected by Domitian, remains of which are still to be seen

between the arch of Constantine and the Colosseum. (Hieron. p. 443, Ronc.; Cassiod. *Chron.* ii. p. 198.) It stands in the middle of a large circular basin, which was discovered in the last excavations at that spot, as well as traces of the conduit which con-

veyed the w

ARCH OF CONSTANTINE.

VII. The Aventine.

We have already adverted to the anomalous character of this hill, and how it was regarded with suspicion in the early times of Rome, as ill-omened. Yet there were several famous spots upon it, having traditions connected with them as old or older than those relating to the Palatine, as well as several renowned and antique temples. One of the oldest of these legendary monuments was the Altar of Evander, which stood at the foot of the hill, near the Porta Trigemina. (Dionys. i. 32.) Not far from it, near the Salinae, was the Cave of Cacus, a name which a part of the hill near the river still retains. (Solinus, i. 8; cf. Virg. *Aen.* viii. 190, seq.; Ovid, *Fast.* i. 551, seq.) Here also was the altar said to have been dedicated by Hercules, after he had found the cattle, to Jupiter Inventor. (Dionys. i. 39.) A spot on the summit of the hill, called Remoria, or Remuria, preserved the memory of the auspices taken by Remus. (Paul. Diac. p. 276; Dionys. i. 85, seq.) Niebuhr, however, assumes another hill beyond the basilica of *St. Paolo*, and consequently far outside the walls of Aurelian, to have been the place called Remoria, destined by Remus for the building of his city. (*Hist.* i. p. 223, seq. and note 618.) Other spots connected with very ancient traditions, though subsequent to the foundation of the city, were the Armilustrium and the Lauretum. The Armilustrum, or Armilustrium, at first indicated only a festival, in which the soldiers, armed with *ancilia*, performed certain military sports and sacrifices; but the name was subsequently applied to the place where it was celebrated. (Varr. *L.L.* v. § 153, vi. § 22, Müll.; Liv. xxvii. 37; Plut. *Rom.* 23.) Plutarch (*l. c.*) says that king Tatius was buried here; but the Lauretum, so named from its grove of laurels, is also designated as his place of sepulture. (Varr. *L.L.* v. § 152; Plin. xv. § 40; Dionys. iii. 43; Festus, p. 360.) There was a distinction between the Lauretum Majus and Minus (*Cal. Capran. Id. Aug.*); and the *Basis Capitolina* mentions a Vicus Loreti Majoris and another Loreti Minoris. The same document also records a Vicus Armilustri. Numa dedicated an altar to Jupiter Elicius on the Aventine. (Varr. *L. L.* vi.

temple was approached by the Clivus Publicius, which ascent lay at the northern extremity of the Aventine, near the Porta Trigemina; but its situation cannot be accurately inferred from this circumstance. The Clivus Publicius, made, or rather perhaps widened and paved, by the aediles L. and M. Publicii Malleoli, was the main road leading up the hill. (Festus, p. 238; Varr. *L. L.* v. § 158; Front. *Aq.* 5.) Canina places the temple near the church of *S. Sabina*, where there are traces of some ancient building (*Indicazione*, p. 536). This is one of the temples mentioned as having been rebuilt by Augustus (*Mon. Ancyr.* tab. iv.)

From the document last quoted it would appear that there was a Temple of Jupiter on the Aventine; and its existence is also testified by the *Fasti Amiternini* (*Id. Aug.* FER. IOVI. DIANAE. VORTVMNO. IN. AVENTINO.); but we do not find it mentioned in any author. The passage just quoted likewise points probably to a sacellum or Ara of Vortumnus, which the *Fasti Capranici* mention as being in the Loretum Majus. The Temple of Minerva, also mentioned in the *Mon. Ancyranum* as having been repaired by Augustus, is better known, and seems to have been in existence at all events as early as the Second Punic War, since on account of some verses which Livius Andronicus had written to be sung in celebration of the better success of the war, this temple was appointed as a place in which *scribes*, as it appears poets were then called, and actors should meet to offer gifts in honour of Livius. (Festus, p. 333.) From an imperfect inscription (Gruter, xxxix. 5) it would appear that the temple was near the Armilustrium, and indeed it is named in conjunction with it in the *Notitia*.

There was a part of the Aventine called "Saxum," or "Saxum Sacrum" (Cic. *Dom.* 53), on which Remus was related to have stood when he took the auguries, which must therefore be considered as identical with, or rather perhaps as the highest and most conspicuous part of, the place called Remuria, and consequently on the very summit of the hill. Hence Ovid (*Fast.* v. 148, seq.):—

"——interea Diva canenda Bona est.
Est moles nativa, loco res nomina fecit,
Appellant Saxum; pars bona montis ea est.

On this spot was erected a Temple of the Bona Dea, as Ovid proceeds to say "leniter acclivi jugo." From the expression *jugum*, we may conclude that it lay about the middle of the hill; but Hadrian removed it ("Aedem Bonae Deae transtulit," Spart. *Hadr.* 19), and placed it under the hill; whence it subsequently obtained the name of Templum Bonae Deae Subsaxoneae, and now stood in the 12th Region, or Piscina Publica, where it is mentioned in the *Notitia*, probably under the SE. side of the Aventine. For a legend of Hercules, connected with the rites of the Bona Dea, see Propertius (v. 9) and Macrobius (*Sat.* i. 12).

Besides these we find a Temple of Luna and one of Libertas mentioned on the Aventine. The former of these is not to be confounded with the temple of Diana, as Bunsen has done (*Beschr.* iii. p. 412), since we find it mentioned as a substantive temple in several authors. (Liv. xl. 2; Aur. Vict. *Vir. Ill.* 65; *Fast. Praen. Prid. Kal. Apr.* "Lunae in Ave . . .;" whilst in the *Capran.*, *Amitern.*, and *Antiat.* we find, under *Id. Aug.*, "Dianae in Aventino.") It probably stood on the side next the circus. The Temple of Libertas was founded by T. Sempronius Gracchus, the father of the conqueror of Beneventum; the latter caused a picture representing his victory to be placed in the temple. (Liv. xxiv. 16.) Some difficulty has been occasioned by the manner in which the restoration of this temple by Augustus is mentioned in the *Monumentum Ancyranum*, namely, "Aedes Minervae et Junonis Reginae et Jovis Libertatis in Aventino (feci)" (tab. iv. l. 6). In the Greek translation of this record, discovered in the temple at Ancyra, and communicated by Hamilton (*Researches in Asia Min.* ii. n. 102), the words "Jovis Libertatis" are rendered Διὸς Ἐλευθερίου, whence Franz assumed that the Latin text was corrupt, and that we ought to read "Jovis Liberatoris." (Gerhard's *Archäolog. Zeitung*, no. ii. p. 25.) But there is no mention of any such temple at Rome, though Jupiter was certainly worshipped there under the title of Liberator (see the section on the Circus Maximus); whilst the existence of a temple of Libertas on the Aventine is attested not only by the passage just cited from Livy, but also by Paulus Diaconus. ("Libertatis templum in Aventino fuerat constructum," p. 121.) Hence it seems most probable that the Greek translation is erroneous, and that the reading "Jovis Libertatis" is really correct, the copula being omitted, as is sometimes the case; for example, in the instance "Honoris Virtutis," for Honoris et Virtutis, &c. And thus, in like manner, we find a temple of Jupiter Libertas indicated in inscriptions belonging to municipal towns of Italy (v. Orell. *Inscr.* no. 1249, 1282; cf. Becker, *Handb. Nachträge*, p. 721; Zumpt, *in Mon. Ancyr. Commentar.* p. 69). Another question concerning this Templum Libertatis, namely, whether there was an Atrium Libertatis connected with it, has occasioned much discussion. The Atrium Libertatis mentioned by Cicero (*ad Att.* iv. 16), the situation of which we have examined in a preceding section, could not possibly have been on the Aventine; yet the existence of a second one adjoining the temple of Libertas on that hill has been sometimes assumed, chiefly from Martial (xii. 3). The question turns on the point whether the words "Domus alta Remi," in that epigram, necessarily mean the Aventine; for our own part we think they do not. The question, however, is somewhat long; and they who would examine it more minutely may refer to Becker (*Handb.* p. 458, seq.; Urlichs, *Röm. Topogr.* p. 31, seq.; Becker, *Antwort*, p. 25, seq.; Canina, *Indicazione*, p. 536, seq.; Urlichs, *Antwort*, p. 5, seq.)

As the *Basis Capitolina* names among the Vici of the 13th Region, a Vicus Fidii and a Vicus Fortunae Dubiae, we may perhaps assume that there were temples to those deities on or near the Aventine; but nothing further is known respecting them. The *Notitia* mentions on the Aventine, "Thermae Surianae et Decianae." The former of these baths seem to have been built by Trajan, and dedicated in the name of his friend Licinius Sura, to whom he was partly indebted for the empire. ("Hic ob honorem Surae, cujus studio imperium arripuerat, lavacra condidit," Aur. Vict. *Epit.* 13; cf. Dion Cass. lxviii. 15; Spart. *Adri.* 2, seq.) The dwelling of Sura was on that side of the Aventine which faced the Circus Maximus, and probably, as we have said, near the temple of Diana:—

"Quique videt propius Magni certamina Circi
Laudat Aventinae vicinus Sura Dianae."
(Mart. vi. 64. 12.)

Whence we may perhaps conclude that the baths also were near the same spot (v. Preller, *Regionen*, p. 200; Canina, *Indicaz.* p. 533, seq.), where they seem to be indicated by the Capitoline plan (Bellori, tav. 4) and by traces of ruins. The baths of Decius are mentioned by Eutropius (ix. 4). Near the same spot appears to have been the HOUSE OF TRAJAN before he became emperor, designated in the *Notitia* as *Privata Trajani*, in which neighbourhood an inscription relating to a Domus Ulpiorum was found. (Gruter, xlv. 10.) Hence we may conclude that under the Empire the Aventine had become a more fashionable residence than during the Republic, when it seems to have been principally inhabited by plebeian families. The residence of Ennius, who, as we have said, possessed a house here, was, however, sufficient to ennoble it.

The narrow strip of ground between the hill and the Tiber also belonged to the district of the Aventine. In ancient times it was called "EXTRA PORTAM TRIGEMINAM," and was one of the busiest parts of the city, in consequence of its containing the emporium, or harbour of discharge for all laden ships coming up the river. Here also was the principal corn-market, and the *Basis Capitolina* mentions a Vicus Frumentarius in this neighbourhood. The period of its development was between the Second and Third Punic Wars, when the aediles M. Aemilius Lepidus and L. Aemilius Paullus first founded a regular EMPORIUM, and at the same time the PORTICUS AEMILIA. (Liv. xxxv. 10.) Their successors, M. Tuccius and P. Junius Brutus, founded a second portico *inter lignarios*, which epithet seems to refer to the timber yards at this spot. (Id. xxxv. 41.) Subsequently, in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, the building of a harbour and of a bridge over the Tiber was commenced, as well as the foundation of a market and of other porticoes. (Liv. xl. 51.) The next censors, Q. Fulvius Flaccus and A. Postumius Albinus, paved the emporium with slabs of stone, constructed stairs leading down to the river, restored the Porticus Aemilia, and built another portico on the summit of the Aventine. (Liv. xli. 27.) The neighbourhood still bears the name of *La Marmorata;* and as numerous blocks of unwrought marble have at different times been discovered near the *Vigna Cesarini*, sometimes bearing numbers and the names of the exporters, it seems to have been the principal place for landing foreign marbles, and perhaps also for the workshops of the sculptors. (Vacca, *Mem.* 95—98; Fea, *Miscell.* i. p. 93; Bunsen, *Beschr.* iii. p. 432.) Just in this neighbourhood stood a temple of JUPITER DOLICHENUS or Dolicenus, indicated in the *Notitia* under the name of *Dolocenum*. It is connected with the worship of the sun-god, brought from Heliopolis in Syria, concerning which there are numerous inscriptions, treated of by Marini (*Atti, &c.* pp. 538—548). In these the god is called Jup. O. M. Dolichenus, and sometimes a Juno Assyria Regina Dolichena is also mentioned. The worship resembled that brought to Rome by Elagabalus, but was previous to it, as some of the inscriptions relate to the time of Commodus. The temple seems to have been in the neighbourhood of *S. Alessio*, as several inscriptions relating to the god were found here. (Preller, *Regionen*, p. 202.)

The broad level to the S. of the hill in which the *Monte Testaccio* stands, probably contained the large and important magazines mentioned in the *Notitia*, such as the HORREA GALBIANA ET ANICIANA, which

There was also a Velabrum Minus, which it is natural to suppose was not far distant from the Velabrum Majus. Varro says that there was in the Velabrum Minus a lake or pond formed from a hot spring called LAUTOLAE, near the temple of Janus Geminus (*Ib.* § 156); and Paulus Diaconus (p. 118) describes the Latulae as being "locus extra urbem." Hence it would seem that the Janus Geminus alluded to by Varro, must have been the temple near the Porta Carmentalis; but both the spring and the lake had vanished in the time of Varro, and were no longer anything but matters of antiquity.

The ARCUS ARGENTARIUS already mentioned as standing near the church of *S. Giorgio in Velabro* appears, from the inscription, to have been erected by the Negotiantes and Argentarii of the Forum Boarium in honour of Septimius Severus and his family. (Gruter, cclxv. 2; Orell. 913.) Properly speaking, it is no arch, the lintel being horizontal instead of vaulted. It is covered with ill-executed sculptures. Close to it stands the large square building called JANUS QUADRIFRONS, vaulted in the interior, and having a large archway in each front. The building had an upper story, which is said to have been used for mercantile purposes. The architecture belongs to a declining period of art, and the arch seems to have been constructed with fragments of other buildings, as shown by the inverted bas-reliefs on some of the pieces. (*Beschr.* iii. p. 339.) The *Notitia* closes the description of Regio xi. by mentioning an "Arcus Constantini," which cannot, of course, refer to the triumphal arch on the other side of the Palatine. The conjecture of Bunsen, therefore (*Beschr.* Anh. iii. p. 663), does not seem improbable, that this Janus was meant; and from its style of architecture it might very well belong to the time of Constantine.

The FORUM BOARIUM, one of the largest and most celebrated places in Rome, appears to have extended from the Velabrum as far as the ascent to the Aventine, and to have included in breadth the whole space between the Palatine and Circus Maximus on the E. and the Tiber on the W. Thus it must not be conceived as a regular forum or market surrounded with walls or porticoes, but as a large irregular space determined either by natural boundaries or by those of other districts. Its connection with the river on the one side and the circus on the other is attested by the following lines of Ovid (*Fast.* vi. 477):—

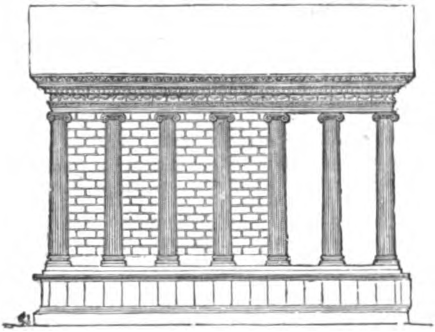
> "Pontibus et Magno juncta est celeberrima Circo
> Area quae posito de bove nomen habet."

Its name has been variously derived. The referring of it to the cattle of Hercules is a mere poetical legend (Prop. v. 9. 17, seq.); and the derivation of it from the statue of a bronze bull captured at Aegina and erected in this place, though apparently more plausible, is equally destitute of foundation, since the name is incontestably much older than the Macedonian War. (Plin. xxxiv. 5; Ov. *l. c.*; Tac. *Ann.* xii. 24.) It seems, therefore, most probable, as Varro says (*L.L.* v. § 146; cf. Paul. Diac. p. 30), that it derived its name from the use to which it was put, namely, from being the ancient cattle-market; and it would appear from the inscription on the Arcus Argentarius before alluded to that this traffic still subsisted in the third century. The Forum Boarium was rich in temples and monuments of the ancient times. Amongst the most famous were those of Hercules, Fortuna, and Mater Matuta; but unfortunately the positions of them are not very precisely indicated. There seems to have been more than one TEMPLE OF HERCULES in this district, since the notices which we meet with on the subject cannot possibly be all referred to the same temple. The most ancient and important one must have been that connected with the MAGNA ARA HERCULIS, which tradition represented as having been founded by Evander. ("Et magna ara fanumque, quae praesenti Herculi Arcas Evander sacraverat," Tac. *Ann.* xv. 41; cf. *Ib.* xii. 24; Solin. i. 10.) This appears to have been the Hercules styled *triumphalis*, whose statue, during the celebration of triumphs, was clothed in the costume of a triumphant general; since a passage in Pliny connects it with that consecrated by Evander. ("Hercules ab Evandro sacratus ut produnt, in Foro Boario, qui triumphalis vocatur atque per triumphos vestitur habitu triumphali," xxxiv. 16.) It was probably this temple of Hercules into which it was said that neither dogs nor flies could find admittance (Ib. x. 41; Solin. i. 10), and which was adorned with a painting by Pacuvius the poet (Plin. xxxv. 7). A ROUND TEMPLE OF HERCULES, also in the Forum Boarium, seems to have been distinct from this, since Livy (x. 23) applies apparently the epithet "rotunda" to it, in order to distinguish it from the other. ("Insignem supplicationem fecit certamen in sacello Pudicitiae Patriciae, quae in Foro Boario est ad aedem rotundam Herculis, inter matronas ortum.") Canina (*Indicazione*, p. 338) assumes from this passage that the temple to which it refers must have been in existence at the time of the contest alluded to, namely, B. C. 297; but this, though a probable inference, is by no means an absolutely necessary one, since Livy may be merely indicating the locality as it existed in his own time. The former of these temples, or that of Hercules Triumphalis, seems to be the one mentioned by Macrobius (*Sat.* iii. 6) under the name of Hercules Victor; and it appears from the same passage that there was another with the same appellation, though probably of less importance, at the Porta Trigemina. Besides these we hear of a "Hercules Invictus" by the Circus Maximus (*Fast. Amitern; Prid. Id. Aug.*), and of another at the same place "in aede Pompeii Magni" (Plin. xxxiv. 8. s. 57), which seems to refer to some Aedes Herculis built or restored by Pompey, though we hear nothing more of any such temple. Hence there would appear to have been three or four temples of Hercules in the Forum Boarium. The conjecture of Becker seems not improbable that the remains of a round temple now existing at the church of *S. Maria del Sole*, commonly supposed to have belonged to a

TEMPLE OF HERCULES.

temple of Vesta, may have been that of Hercules, and the little temple near it, now the church of *S. Maria Egiziaca*, that of Pudicitia Patricia. (*Handb.* p. 478, seq.)

This question is, however, in some degree connected with another respecting the sites of the TEMPLES OF FORTUNA and MATER MATUTA. Canina identifies the remains of the round temple at the church of *S. Maria del Sole* with the temple of Mater Matuta; whilst the little neighbouring temple, now the church of *S. Maria Egiziaca*, he holds to have been that of FORTUNA VIRILIS. His chief reason for maintaining the latter opinion is the following passage of Dionysius, which points, he thinks, to a temple of Fortuna Virilis, built by Servius Tullius close to the banks of the Tiber, a position which would answer to that of *S. Maria Egiziaca*: *καὶ ναοὺς δύο κατασκευασάμενος Τύχης, τὸν μὲν ἐν ἀγορᾷ τῃ καλουμένῃ Βοαρίᾳ, τὸν δ' ἕτερον ἐπὶ ταῖς ἠϊόσι τοῦ Τιβέριος, ἣν Ἀνδρείαν προσηγόρευσεν, ὡς καὶ νῦν ὑπὸ τῶν Ῥωμαίων καλεῖται.* (*Ant. Rom.* iv. 27.) It should be premised that Canina does not hold the two temples in question to have been in the Forum Boarium, but only just at its borders. ("Corrispondevano da vicino al Foro Boario," *Indicaz.* p. 338.) The temple of Fortuna Virilis here mentioned by Dionysius was, he contends, a distinct thing from the temple of Fors Fortuna, which he allows lay outside of the city on the other bank of the Tiber (p. 506). Indeed the distinction between them is shown from the circumstance that their festivals were celebrated in different months: that of Fortuna Virilis being in April, that of Fors Fortuna in June. (Comp. Ov. *Fast.* iv. 145, seq., with the *Fasti Praenestini* in April: "Frequenter mulieres supplicant . . . Fortunae Virili humiliores." Also comp. Ov. *Fast.* vi. 773, seq., with the *Fasti Amiternini*, *VIII. Kal. Jul.*: "Forti Fortunae Transtiber. ad Milliar. Prim. et Sext.")

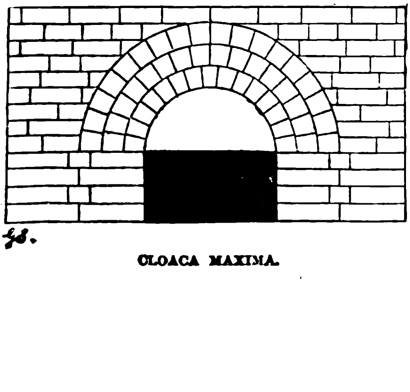


Now these passages very clearly show the distinction between Fortuna Virilis and Fors Fortuna; and it may be shown just as clearly that Dionysius confounded them, as Plutarch has also done. (*De Fort. Rom.* 5.) Servius Tullius, as Dionysius says, built a temple of Fortuna in the Forum Boarium; but this Fortuna was not distinguished by any particular epithet. Dionysius gives her none in the passage cited; nor does any appear in passages of other authors in which her temple is mentioned. Thus Livy: "De manubiis duos fornices in foro Boario ante Fortunae aedem et Matris Matutae, unum in Maximo Circo fecit" (xxxiii. 27). So also in the passages in which he describes the fire in that district (xxiv. 47, xxv. 7). One of the two temples of Fortuna built by Servius Tullius was then that on the Forum Boarium, as shown in the preceding passages from Livy and from Dionysius: that the other was a temple of Fors Fortuna and not of Fortuna Virilis appears from Varro: "Dies Fortis Fortunae appellatus ab Servio Tullio Rege, quod is fanum Fortis Fortunae *secundum Tiberim extra Urbem Romam* dedicavit *Junio mense*" (*L.L.* vi. § 17, Müll.) Hence it is plain that both Dionysius and Plutarch have made a mistake which foreigners were likely enough to fall into. Temples being generally named in the genitive case, they have taken *fortis* to be an adjective equivalent to *ἀνδρεῖος* or *virilis* (v. Bunsen, *Beschr.* iii. Nachtr. p. 665; Becker, *Handb.* p. 478, note 998), and thus confounded two different temples. But as this temple of Fors Fortuna was "extra Urbem," it could not have been the same as that with which Canina indentifies it, which, as Livy expressly says, was "intra portam Carmentalem" (xxv. 7). The site of the temple of Fortuna Virilis cannot be determined, and Bunsen (*l. c.*) denies that there was any such temple: but it seems probable from the passage of Ovid referred to above that there was one, or at all events an altar; and Plutarch (*Quaest. Rom.* 74) mentions a Τύχης Ἄῤῥενος *ἱερόν*. On the other hand, there seem to have been no fewer than three temples of Fors Fortuna on the right bank of the Tiber. First, that built by Servius Tullius, described by Varro as "extra Urbem secundum Tiberim." Second, another built close to that of Servius by the consul Sp. Carvilius Maximus (B. C. 293): "De reliquo aere aedem Fortis Fortunae de manubiis faciendam locavit, prope aedem ejus Deae ab rege Ser. Tullio dedicatam." (Liv. x. 46.) Third, another dedicated under Tiberius (A. D. 16) near the Tiber in the gardens of Caesar, and hence, of course, on the right bank of the river: "Aedis Fortis Fortunae, Tiberim juxta, in hortis quos Caesar dictator populo Romano legaverat." (Tac. *Ann.* ii. 41.) That the Horti Caesaris were on the right bank of the Tiber we know from Horace (*S.* i. 9. 18) and Plutarch. (*Brut.* 20.) The temple built by Servius must also have been on the right bank, as it seems to be referred to in the following passage of Donatus: "Fors Fortuna est cujus diem festum colunt qui sine arte aliqua vivunt: hujus aedes trans Tiberim est" (*ad Terent. Phorm.* v. 6. 1). The same thing may be inferred from the *Fasti Amiternini*: "Forti Fortunae Transtiber. ad Milliar. Prim. et Sextum" (*VIII. Kal. Jul.*). The temple in the gardens of Caesar seems here to be alluded to as at the distance of one mile from the city, whilst that of Servius, and the neighbouring one erected by Carvilius appear to have been at a distance of six miles. But this need not excite our suspicion. There are other instances of temples lying at a considerable distance from Rome, as that of Fortuna Muliebris at the fourth milestone on the Via Latina. (Fest. p. 542; cf. Val. Max. i. 8. § 4, v. 2. § 1; Liv. ii. 40, &c.) It would appear, too, to have been some way down the river, as it was customary to repair thither in boats, and to employ the time of the voyage in drinking (*Fast.* vi. 777): —

> "Pars pede, pars etiam celeri decurrite cymba
> Nec pudeat potos inde redire domum.
> Ferte coronatae juvenum convivia lintres
> Multaque per medias vina bibantur aquas."

We have entered at more length into this subject than its importance may perhaps seem to demand, because the elegant remains of the temple now forming the Armenian church of *S. Maria Egiziaca* cannot fail to attract the notice of every admirer of classical antiquity that visits Rome. We trust we have shown that it could not possibly have been the temple of Fortuna Virilis, as assumed by Canina and others. The assumption that the neighbouring round temple was that of Mater Matuta may perhaps be considered as disposed of at the same time. The only grounds for that assumption seem to be its vicinity to the supposed temple of Fortuna Virilis. Livy's description (xxxiii. 27) of the two triumphal arches erected in the Forum Boarium before the two temples appearing to indicate that they lay close together.

With regard to the probability of this little church



having been the temple of PUDICITIA PATRICIA, it might be objected that there was in fact no such temple, and that we are to assume only a statue with an altar (Sachse, *Gesch. d. S. Rom.* i. p. 365). Yet, as Becker remarks (*Handb.* p. 480, note 100), Livy himself (x. 23) not only calls it a *sacellum*, a name often applied to small temples, but even in the same chapter designates it as a *templum* ("Quum se Virginia, et patriciam et pudicam in Patriciae Pudicitiae templum ingressam vero gloriaretur"); and Propertius (ii. 6. 25) also uses the same appellation with regard to it. On the other hand some have fixed on *S. Maria in Cosmedin* as the site of this temple, but with little appearance of

TEMPLE OF PUDICITIA PATRICIA.

probability. Becker seeks in the church just named the temple of Fortuna built by Servius Tullius in the Forum Boarium. The church appears to have been erected on the remains of a considerable temple, of which eight columns are still perceptible, built into the walls. This opinion may be as probable as any other on the subject; but as on the one hand, from our utter ignorance of the site of the temple, we are unable to refute it, so on the other we must confess that Becker's long and laboured argument on the subject is far from being convincing (*Handb.* p. 481, seq.). The site of the TEMPLE OF MATER MATUTA is equally uncertain. All that we know about it is that it was founded by Servius Tullius, and restored by Camillus after the conquest of Veii (Liv. v. 17), and that it lay somewhere on the Forum Boarium (Ovid, *Fast.* vi. 471). If we were inclined to conjecture, we should place both it and the temple of Fortuna near the northern boundary of that forum; as Livy's description of the ravages occasioned by the fire in that quarter seems to indicate that they lay at no great distance within the Porta Carmentalis (xxiv. 47, xxv. 7). The later history of both these temples is unknown.

In the Forum Boarium, near the mouth of the Cloaca Maxima, was also the place called DOLIOLA, mentioned in the former part of this article as regarded with religious awe on account of some sacred relics having been buried there, either during the attack of the Gauls, or at a still more ancient period. (Liv. v. 40; Varr. *L.L.* v. § 157, Müll.) When

CLOACA MAXIMA.

the Tiber is low, the mouth of the CLOACA MAXIMA may be seen from the newly erected iron bridge connecting the *Ponte Rotto* with the left bank. The place called AD BUSTA GALLICA where it is said that the bodies of the Gauls were burnt who died during or after the siege of the Capitol, has also been assumed to have been in this neighbourhood because it is mentioned by Varro (*Ib.*) between the Aequimelium and the Doliola (cf. Liv. v. 48, xxii. 14). But such an assumption is altogether arbitrary, as Varro follows no topographical order in naming places. Lastly, we shall mention two objects named in the *Notitia*, which seem to have stood on the Forum Boarium. These are the APOLLO COELISPEX, and the HERCULES OLIVARIUS, apparently two of those statues which Augustus dedicated in the different Vici. Becker (*Handb.* p. 493) places them in the Velabrum, and thinks that the epithet of Olivarius was derived from the oil-market, which was established in the Velabrum (Plaut. *Capt.* iii. 1. 29), but it seems more probable that it denoted the crown of olive worn by Hercules as Victor (Preller, *Regionen*, p. 194). The Forum Boarium was especially devoted to the worship of Hercules, whence it seems probable that his statue stood there; besides both that and the Apollo are mentioned in the *Notitia* in coming from the Porta Trigemina, before the Velabrum.

Before we quit the Forum Boarium we must advert to a barbarous custom of which it appears to have been the scene even to a late period of Roman history. Livy relates that after the battle of Cannae a Gallic man and woman and a Greek man and woman were, in accordance with the commands of the Sibylline books, buried alive in a stone sepulchre constructed in the middle of the Forum Boarium, and that this was not the first time that this barbarous and un-Roman custom had been practised (xxii. 57). Dion Cassius adverts to the same instance in the time of Fabius Maximus Verrucosus (*Fr. Vales.* 12), and Pliny mentions another which had occurred even in his own time ("Boario vero in foro Graecum Graecamque defossos, aut aliarum gentium, cum quibus tum res esset, etiam nostra aetas vidit," xxviii. 3; cf. Plut. *Q. R.* 83). It may also be remarked that the first exhibition

of gladiatorial combats at Rome took place on the Forum Boarium, at the funeral of the father of Marcus and Decimus Brutus, B. C. 264. (Val. Max. ii. 4. § 7.)

The valley between the Palatine and Aventine, occupied by the Circus Maximus was, as we have had occasion to mention in the former part of this article, in earlier times called VALLIS MURCIA, from an altar of the Dea Murcia, or Venus, which stood there. He who mounts the enormous mass of ruins which marks the site of the imperial palace on the S. side of the Palatine hill may still trace the extent and configuration of the circus, the area of which is occupied by kitchen gardens, whilst a gas manufactory stands on the site of the carceres. The description of the circus itself will be reserved for a separate section devoted to objects of the same description, and we shall here only treat of the different monuments contained in it as a Region or district. The whole length of the circus was 3½ stadia, or nearly half a mile, the circular end being near the Septizonium, and the carceres or starting place nearly under the church of *S. Anastasia*, where the circus adjoined the Forum Boarium. Its proximity to the latter is shown by the circumstance that the Maxima Ara Herculis before alluded to is sometimes mentioned as being at the entrance of the Circus Maximus, and sometimes as on the Forum Boarium ("Ingens ara Herculis pos januas Circi Maximi," Serv. *ad Aen.* viii. 271; cf. Dionys. i. 40; Ovid, *Fast.* i. 581; Liv. i. 7, &c.) The large TEMPLE OF HERCULES must undoubtedly have been close to this altar, but on the Forum Boarium.

The Vallis Murcia contained several old and famous temples and altars, some of which were included in the circus itself. Such was the case with the altar or SACELLUM OF MURCIA herself ("Intumus Circus ad Murcim vocatur — ibi sacellum etiam nunc Murteae Veneris," Varr. *L. L.* v. § 154, Müll.); but its exact site cannot be determined. CONSUS had also a subterranean altar in the circus, which was opened during the games and closed at other times. It is described by Tertullian as being "ad primas metas," and therefore probably at a distance of about one-third of the whole length of the circus from the carceres, and near the middle of the S. side of the Palatine hill. (Tert. *de Spect.* 5; Varr. *L. L.* vi. § 20, Müll.; Tac. *Ann.* xii. 24; Plut. *Rom.* 14.) But the chief temple on the circus was the TEMPLE OF THE SUN, to which deity it was principally consecrated ("Circus Soli principaliter consecratur: cujus aedes medio spatio et effigies de fastigio aedis emicat," Tert. *Spect.* 8). Tacitus mentions the same ancient temple as being "apud Circum" (*Ann.* xv. 74); and from a comparison of these passages we may conclude that it stood in the middle of one of its sides, and probably under the Aventine. The *Notitia* and *Curiosum* mention it ambiguously in conjunction with a TEMPLE OF LUNA, so that it might possibly be inferred that both deities had a common temple ("Templum Solis et Lunae," *Reg.* xi.). It seems, however, more probable that there were two distinct temples, as we frequently find them mentioned separately in authors, but never in conjunction. It is perhaps the same temple of Luna which we have already mentioned on the Aventine, in which case it might have been situated on the declivity of that hill facing the circus, and behind the temple of Sol. Luna, like Sol, was a Circensian deity, both performing their appointed circuits in quadrigae. (Joh. Lydus, *de Mens.* i. 12; Tert. *Spect.* 9; Cass. *Var.* iii. 51.) The situation of the TEMPLE OF MERCURY, mentioned next to the two preceding ones in the *Curiosum*, may be determined with more accuracy, if we may believe an account recorded by Nardini (*Rom. Ant.* lib. vii. c. 3) on the authority of a certain Francesco Passeri, respecting the discovery of the remains of a small temple of that deity in a vineyard between the Circus Maximus and the Aventine. The remains were those of a little tetrastyle temple, which was identified as that of Mercury from an altar having the caduceus and petasus sculptured on it. The temple is represented on a medal of M. Aurelius, who appears to have restored it. The site agrees with that described by Ovid (*Fast.* v. 669):—

"Templa tibi posuere patres spectantia Circum
Idibus: ex illo est haec tibi festa dies."

A comparison of this passage with Livy, "aedes Mercurii dedicata est Idibus Maiis" (ii. 21), shows that the same ancient sanctuary is alluded to, the dedication of which caused a dispute between the consuls, B. C. 495 (*Ib.* c. 27). We next find mentioned in the *Notitia* an AEDES MATRIS DEUM, and another of JOVIS ARBORATORIS, for which we should probably read "Liberatoris." The Magna Mater was one of the Circensian divinities. Her image was exhibited on the spina (Tert. *Spect.* 8), and it would appear that she had also a temple in the vicinity. Of a temple of Jupiter Liberator we know nothing further, though Jove was certainly worshipped at Rome under that name (Tac. *Ann.* xv. 64, xvi. 35), and games celebrated in his honour in the month of October. (*Calend. Vindob.* ap. Preller, *Reg.* p. 192.)

Next to these an AEDES DITIS PATRIS is named in the *Notitia*, but does not appear in the *Curiosum*. Some writers would identify Dispater with SUMMANUS, quasi Summus Manium (v. Gruter, MXV. 7; Mart. Capell. ii. 161); but there was a great difference of opinion respecting this old Sabine god, and even the Romans themselves could not tell precisely who he was. Thus Ovid (*Fast.* vi. 725):—

"Reddita, quisquis is est, Summano templa feruntur
Tunc cum Romanis, Pyrrhe, timendus eras."

The temple to him here alluded to was, however, certainly near the Circus Maximus, since Pliny mentions some annual sacrifices of dogs as made "inter aedem Juventatis et Summani" (xix. 4); and that the TEMPLE OF JUVENTAS was at the Circus Maximus we learn from Livy: "Juventatis aedem in Circo Maximo C. Licinius Lucullus triumvir dedicavit" (xxxvii. 36; cf. *Calend. Amert. XII. Kal. Jul.*: "Summano ad Circ. Max."). The temple of Summanus, therefore, must have been dedicated during the war with Pyrrhus, and that of Juventas in B. C. 192.

Close to the W. extremity of the circus, and towering as it were over the carceres, from its being built apparently on the slope of the Aventine (ὑπὲρ αὐτὰς ἱδρυμένος τὰς ἀφέσεις, Dionys. vi. 94), stood a famous TEMPLE OF CERES, dedicated also to LIBER AND LIBERA. Thus Tacitus, relating the dedication of the temple by Tiberius, it having been restored by Augustus, says: "Libero, Liberaeque et Cereri, juxta Circum Maximum, quam A. Postumius dictator voverat (dedicavit)" (*Ann.* ii. 49). It is mentioned by other writers as "ad Circum Maximum"; whence Canina's identification of it with the church of *S. Maria in Cosmedin* seems improbable (*Indicaz.*

p. 498), since that building is at some little distance from the circus, and certainly does not stand on higher ground. The temple of Ceres contained some precious works of art (Plin. xxxv. 10. s. 36. § 99), especially a picture of Dionysus by Aristides, which Strabo mentions that he saw (viii. p. 381), but which was afterwards destroyed in a fire which consumed the temple.

We also find a TEMPLE OF VENUS mentioned at the circus, founded by Q. Fabius Gurges, B. C. 295, very appropriately out of the money raised by fines levied on certain matrons for incontinence. (Liv. x. 31.) It seems to have been at some distance from the Forum Boarium, since the censors M. Livius and C. Claudius contracted for the paving of the road between the two places. (Id. xxix. 37.) Yet we have no means of defining its site more accurately, nor can we even tell whether it may not have been connected with the altar of Venus Murcia before mentioned. But the TEMPLE OF FLORA, founded by the aediles L. and M. Publicius, the same who constructed the clivus or ascent to the Aventine which bore their name, must have lain close to that ascent, and consequently also to the temple of Ceres just described; since Tacitus, after relating the re-dedication of the latter under Tiberius, adds: "eodemque in loco aedem Florae (dedicavit), ab Lucio et Marco Publiciis aedilibus constitutam." (*Ann.* ii. 49.) The Publicii applied part of the same money — raised by fines — with which they had constructed the clivus, in instituting floral games in honour of the divinity which they had here consecrated, as we learn from the account which Ovid puts into the mouth of the goddess herself (*Fast.* v. 283).

These are all the temples that we find mentioned in this quarter; but before we leave it there are one or two points which deserve to be noticed. The CAVE OF CACUS was reputed to have been near the Clivus Publicius. Solinus mentions it as being at the Salinae, near the Porta Trigemina (i. 8); a situation which agrees with the description in Virgil of the meeting of Aeneas and Evander at the Ara Maxima of Hercules, from which spot Evander points out the cave on the Aventine (*Aen.* viii. 190, seq.):—

> "Jam primum saxis suspensam hanc adspice
> rupem," &c.

Of the DUODECIM PORTAE mentioned in the *Notitia* in this Region we have already spoken [Part II. p. 757].

IX. THE CAELIAN HILL.

The Caelius presents but few remains of ancient buildings, and as the notices of it in the classics are likewise scanty its topography is consequently involved in considerable obscurity. According to Livy (i. 30) Tullus Hostilius fixed his residence upon it; but other accounts represent him as residing on the Velia. (Cic. *Rep.* ii. 31.) We find a SACELLUM DIANAE mentioned on the Caeliolus — an undefined part of the eastern ridge (*de Har. Resp.* 15); another of the DEA CARNA "in Caelio monte" (Macrob. *S.* i. 12); and a little TEMPLE OF MINERVA CAPTA situated on the declivity of the hill:—

> "Caelius ex alto qua Mons descendit in aequum,
> Hic ubi non plana est, sed prope plana via est,
> Parva licet videas Captae delubra Minervae."
> (Ov. *Fast.* iii. 837, seq.)

Hence it was probably the same ancient sanctuary called "Minervium" in the sacred books of the Argives, which lay on the northern declivity of the Caelian towards the Tabernola ("Circa Minervium qua e Caelio monte iter in Tabernola est," Varr. *L. L.* v. § 47), and probably near the modern street *Via della Navicella*.

The most considerable building known on the Caelian in later times was the TEMPLE OF DIVUS CLAUDIUS, begun by Agrippina, destroyed by Nero, and restored by Vespasian. (Suet. *Vesp.* 9; Aur. Vict. *Caes.* 9.) The determination of its site depends on the question how far Nero conducted the Aqua Claudia along the Caelius, since we learn from Frontinus that the arches of that aqueduct terminated at the temple in question. (Front. *Aq.* 20, 76.) These Arcus Neroniani (also called Caelimontani, Gruter, *Inscr.* clxxxvii. 3) extend along the ridge of the narrow hill, supposed to be the Caeliolus, from the *Porta Maggiore* to the *Santa Scala* opposite the Lateran, where they are interrupted by the piazza and buildings belonging to that basilica. They recommence, however, on the other side in the *Via di S. Stefano Rotondo*, and proceed with a small gap as far as that church. There are further traces of them on the W. side of the arch of Dolabella; and the opinion of Canina seems probable enough, that they terminated near the garden of the convent of *SS. Giovanni e Paolo*, and that the remains of a huge substruction at this spot belonged to the temple of Claudius. (*Indicaz.* p. 73, seq.) Canina is further of opinion that the Aqua Claudia was distributed a little beyond this spot, and that one of the uses to which it was applied by Nero was to replenish his lake, which occupied the site of the Flavian amphitheatre. Others, however, are of opinion that the aqueduct did not proceed beyond the church of *S. Stefano Rotondo*, and therefore that the temple of Claudius stood near that spot, or that the church may even have been built on its foundations. But there are no sufficient grounds for arriving at any satisfactory conclusion on these points, and altogether the view of Canina is perhaps the more probable one.

The ARCH OF DOLABELLA, just alluded to, appears from the inscription on it to have been erected in the consulship of Dolabella and Silanus, A. D. 10. Its destination has been the subject of various conjectures. Some have imagined it to be a restoration of the Porta Caelimontana; but this can hardly be the case, since, if the Servian walls had run in this direction, half of the Caelian hill would have been shut out of the city. On the other hand, its appearance excludes the notion of a triumphal arch; and it could not originally have formed part of an aqueduct, since it was erected previously to the construction of the Aqua Claudia. It seems most probable therefore that it was designed as an entrance to some public place; but there are appearances that Nero subsequently conducted his aqueduct over it. (Canina, *Indicaz.* p. 77.) The road which led up to it from the *Via di S. Gregorio* seems in ancient times to have been called CLIVUS SCAURI. It is mentioned under that name in the *Epistles of S. Gregory* (vii. 13), and the Anonymus Einsiedlensis calls it Clivus Tauri, which is probably a scribe's error.

Next to the temple of Claudius, the *Notitia* mentions a MACELLUM MAGNUM, probably the market recorded by Dion Cassius as founded by Nero (τὴν ἀγορὰν τῶν ὄψων, τὸ μάκελλον ὠνομασμένον, κα-

θιέρωσε, lxi. 18). Nardini, who is followed by Canina (*Indicazione*, p. 83), is of opinion that the church of *S. Stefano Rotondo* was part of the macellum, perhaps a slaughter-house with a dome, and surrounded with porticoes.

MACELLUM.

The CASTRA PEREGRINA recorded in the *Notitia* are not mentioned by any author except Ammianus Marcellinus, who relates that Chnodomar, when conquered by Julian, was conducted to and died in this camp on the Caelian (xvi. 12, extr.) The name, however, occurs in inscriptions, and sometimes in connection with a temple of Jupiter Redux, as in that found in the church of *S. Maria in Domnica* (Gruter, xxii. 3; Orell. 1256). These inscriptions also mention a Princeps Peregrinorum, the nature of whose office we are unacquainted with; but it seems probable that he was the commander of the foreign troops stationed in this camp. Near the same church were found several little marble ships, apparently votive offerings, and one which stood a long while before it gave to the church and to the surrounding place the name of *della Navicella*.

An ISIUM, or temple of Isis, is mentioned by Treb. Pollio (*XXX. Tyran.* 25) on the Caelian, but it occurs nowhere else. It was probably one of the many temples erected to this goddess by Caracalla (Lampr. *Carac.* 9.) The spring called the AQUA MERCURII recorded by Ovid near the Porta Capena (*Fasti*, v. 673) was rediscovered by M. Fea in 1828, in the vigna of the *Padri Camaldolesi di S. Gregorio*. On the Caelian was also the CAMPUS MARTIALIS in which the Equiria were held in March, in case the Campus Martius was overflowed (Ovid, *Fast.* v. 673; Paul. Diac. p. 161). Its situation rests chiefly on conjecture; but it was probably near the Lateran; where the neighbouring church of *S. Gregorio*, now *S. Maria Imperatrice*, was called in the middle ages "in Campo Martio" (Canina, *Indicazione*, p. 84.)

In the Imperial times the Caelian was the residence of many distinguished Romans; and it is here that Martial places the "limina potentiorum" (xii. 8). We have already had occasion to allude to the HOUSE OF CLAUDIUS CENTUMALUS on this hill, which was of such an extraordinary height that the augurs commanded him to lower it; but this was during the Republic. Under the Empire we may mention the HOUSE OF MAMURRA, a Roman knight of Formiae, and praefectus fabrum of Caesar in his Gallic wars, the splendour of which is described by Pliny (xxxvi. 7), and lampooned by Catullus (xlii. 4). Here also was the HOUSE OF ANNIUS VERUS, the grandfather of Marcus Aurelius, in which that emperor was educated, situated near the house of the Laterani (Jul. Capit. *M. Ant.* 1) It appears to have been surrounded with gardens; and according to the Italian writer Vacca (*Memor.* 18) the noble equestrian statue of Marcus Aurelius which now adorns the Capitol was discovered in a vineyard near the *Scala Santa*. On the same hill were the AEDES VICTILIANAE where Commodus sought refuge from the uneasy thoughts which tormented him in the palace, but where he could not escape the snares of the assassin (Lampr. *Comm.* 16; Jul. Capitol. *Pert.* 5). But the most remarkable of all these residences was the PALACE OF THE LATERANI, characterised by Juvenal (x. 18) as the "egregias Lateranorum aedes," the residence of the consul Plautius Lateranus, whose participation in Piso's conspiracy against Nero cost him his life (Tac. *Ann.* xv. 49, 60). After this event the palace of the Laterani seems to have been confiscated, and to have become imperial property, since we find Septimius Severus presenting it to his friend Lateranus, probably a descendant of the family to which it had once belonged (Aur. Vict. *Epit.* 20). Subsequently, however, it appears to have been in the possession of the emperor Constantine, who erected upon its site the celebrated basilica which still bears the name of the Lateran, and presented it to the bishop of Rome (Niceph. vii. 49). The identity of the spot is proved by several inscriptions found there, as well as by the discovery of chambers and baths in making the façade of the modern basilica. (Venuti, *Roma Ant.* P. i. c. 8; Canina, *Indic.* p. 85). The DOMUS PHILIPPI mentioned in the *Notitia* was probably the private house of the emperor of that name. Lastly, we may mention that on the Caelian was the HOUSE OF SYMMACHUS, the strenuous defender of paganism in the reign of Valentinian (Symm. *Epist.* iii. 12, 88, vii. 18, 19).

There are a few other objects on the Caelian mentioned in the *Notitia*, some of which, however, hardly admit of explanation. Such is the ATRIUM or ANTRUM CYCLOPIS, respecting which we cannot say whether it was a cavern, or an area surrounded with porticoes. Whatever it was it seems to have stood on the S. side of the hill, since the vicus Ab Cyclopis in the 1st Region, or Porta Capena, was probably named after it (Preller, *Reg.* p. 119.) The CAPUT AFRICAE of the *Notitia*, which likewise appears in several inscriptions (Orell. 2685, 2934, 2935), is thought to have been a street in the neighbourhood of the Colosseum, since the Anonymus Einsiedlensis mentions it between the Meta Sudans and the church of *SS. Quattro Coronati*; whence it is held to have corresponded with the modern street which bears the name of that church (Nibby, *Mura di Roma*, p. 173, note 140; Urlichs, *Röm. Topogr.* p. 101). Becker observes (*Handb.* p. 508), that the name does not appear in any earlier writer, and connects it with some building founded by Septimius Severus, in order to strike his countrymen, the Africans, who arrived at Rome by the Via Appia; though, as Urlichs observes, they must have gone rather out of their way "to be imposed upon." Varro mentions a Vicus Africus on the Esquiline, so named because the African hostages in the Punic War were said to have been detained there ("Exquilis vicus Africus, quod ibi obsides ex Africa bello Punico dicuntur custoditi," *L. L.* v. § 159). Hence it is very probable, as Canina remarks (*Indicaz.* p. 91), that the head, or beginning, of this street stood at the spot indicated by the Anonymus, namely, near the Colosseum, whence it ran up in the direction of the Esquiline, although Becker (*Handb.* p. 560) denies that the Caput Africae had any connection with the Vicus Africus. The ARBOR SANCTA is inexplicable

The Ludus Matutinus et Gallicus (or Dacicus), the Spoliarium, Saniarium, and Armamentarium, were evidently gladiatorial schools with their appurtenances, situated apparently on the northern side of the Caelian, not far from the amphitheatre. Officers attached to these institutions are frequently mentioned in inscriptions. The Spoliarium and Armamentarium speak for themselves. The Saniarium is a word that does not occur elsewhere, and is thought by Preller to denote a hospital (a sanie) where the wounded gladiators were received. For a further account of these institutions see Preller, *Regionen*, pp. 120—122. Lastly, the Mica Aurea appears from an epigram of Martial's to have been a banqueting room of Domitian's (ii. 59): —

"Mica vocor; quid sim cernis; coenatio parva.
Ex me Caesareum prospicis, ecce, tholum."

It is also mentioned, along with the Meta Sudans, as built by Domitian in the *Chronica Regia Coloniensis*, in Eccard's *Corpus Historicum* (vol. i. p. 745.)

X. The District to the S. of the Caelian.

To the S. of the Caelian lies a somewhat hilly district, bounded on the W. by the Aventine, and comprehending the 1st and 12th Regions of Augustus, or those called Porta Capena and Piscina Publica. The latter of these is decidedly the least important district of Rome, but the former presents several objects of considerable interest. Of the Porta Capena itself we have already treated. In its immediate vicinity stood the double Temple of Honos and Virtus, vowed by Marcellus in his Gallic wars, but not erected till after his conquest of Syracuse. It was the first intention of Marcellus that both the deities should be under the same roof; and, indeed, the temple seems to have been a mere restitution of an ancient one dedicated to Honos by Q. Fabius Verrucosus many years before. (Cic. *N. D.* ii. 23.) But when Marcellus was about to dedicate it, and to introduce the statue of another deity within the sanctuary, the pontifices interposed, and forbade him to do so, on the ground that the *procuratio*, or expiation of any prodigy occurring in a temple so constructed, would be difficult to perform. (Liv. xxvii. 25.) Hence, Marcellus was constrained to add another temple of Virtus, and to erect two images of the deities "separatis aedibus;" but though the work was pressed on in haste, he did not live to dedicate them. (Liv. *l. c.*; Val. Max. i. 1. § 8.) Nevertheless, we frequently find the temple mentioned in the singular number, as if it had formed only one building ("ad aedem Honoris atque Virtutis," Cic. *Verr.* iv. 54; cf. Ascon. *ad Cic. in Pis.* 19; also the *Notitia* and *Curiosum*.) Hence, perhaps, the most natural conclusion is that it consisted of two *cellae* under the same roof, like the temple of Venus and Rome, a form which agrees with the description of Symmachus: "Majores nostri — aedes Honori ac Virtuti gemella facie junctim locarunt." (*Epist.* i. 21.) The temple was adorned with the spoils of Grecian art brought by Marcellus from Syracuse; an instance noted and condemned by Livy as the first of that kind of spoliation, which he observes was subsequently inflicted upon the Roman temples themselves, and especially upon this very temple of Marcellus; for, in Livy's time, few of those ornaments remained, which had previously rendered it an object of attraction to all strangers who visited Rome (xxv. 40, cf. xxxiv. 4). They probably disappeared during the Civil Wars, in which the Roman temples seem to have suffered both from neglect and spoliation; for in the time of Cicero the Syracusan spoils still existed in the temple (*in Verr.* iv. 54). It appears to have been burnt in the fire of Nero, since it is mentioned as having been restored by Vespasian. (Plin. xxxv. 37.)

According to Aurelius Victor (*Vir. Ill.* 32) the annual procession of the Roman knights to the temple of Castor started from this temple of Honos and Virtus, whereas Dionysius (xi. 13) names the temple of Mars as the starting-place. Becker (*Handb.* p. 311) regards the discrepancy between these accounts as tending to prove the correctness of his assumption that the temples must have lain close together. That one of the accounts is erroneous is a more probable conclusion, and it is a certain one that it is fallacious to draw any topographical deductions from such very shadowy premises. The true site of the Temple of Mars has been ascertained as satisfactorily as that of any of the monuments which do not actually speak for themselves; such, we mean, as the Colosseum, Trajan's column, the Pantheon, and others of the like description. There can be no doubt that the temple of Mars, instead of being close to the Porta Capena, or at *S. Sisto*, as Becker places it (*Handb.* p. 513), lay on the Via Appia, at the distance of about 1½ miles from that gate. The proofs are overwhelming. In the first place an inscription, still preserved in the Vatican, recording the levelling of the Clivus Martis, was found in the *Vigna Nari*, outside of the Porta Appia (the modern *S. Sebastiano*). Secondly, another inscription, in the *Palazzo Barberini*, recorded by Fabretti (*Inscr.* p. 724, no. 443), Marini (*Fratr. Arv.* p. 8), and others, testifies that Salvia Marcellina gave a piece of ground to the Collegium of Aesculapius and Hygia for a small temple, close to the temple of Mars, between the first and second milestone on the Via Appia, on the left-hand side in going from the city. Thirdly, both the *Notitia* and *Curiosum* place the Aedes Martis at the extremity of the first Regio, close to the Flumen Almonis. The Almo flows outside the Porta Appia, near the *Vigna Nari*:—

"Est locus ante urbem, qua primum nascitur ingens
Appia, quaque Italo gemitus Almone Cybebe
Ponit, et Idaeos jam non reminiscitur amnes."
(Stat. *Silv.* v. 1. 222.)

A brook now flows between the *Porta S. Sebastiano* and the church of *Domine quo vadis*, which, with great probability, has been identified with the Almo. (Cluver, *Ital. Ant.* p. 718; Westphal, *Röm. Campagna*, p. 17.) Fourthly, the same locality is indicated by several documents of the middle ages. Thus, in the *Acts of the Martyrs*: "Tunc B. Stephanus ductus a militibus foras muros Appiae portae ad T. Martis" (*Act of S. Stephanus and S. Julius*). "Diacones duxerunt in clivum Martis ante templum et ibidem decollatus est" (*Act of S. Sixtus*). And the *Mirabilia* (in Montfaucon, *Diar. Ital.* p. 283): "Haec sunt loca quae inveniuntur in passionibus sanctorum foris portam Appiam, ubi beatus Syxtus decollatus fuit, et ubi Dominus apparuit Petro, *Domine quo vadis?* Ibi templum Martis, intus portam, arcus Syllae." Now, the passages in the classics which relate to the subject do not run counter to these indications, but, on the contrary

tend to confirm them. Appian (*B. C.* iii. 41) mentions a temple of Mars 15 stadia distant from the city, which would answer pretty nearly to the distance of between 1 and 2 miles given in the inscription quoted. Ovid says (*Fast.* vi. 191): —

> "Lux eadem Marti festa est; quem prospicit extra
> Appositum tectae Porta Capena viae."

The word *prospicit* denotes a long view; and as the temple of Mars stood on a hill, as is evident from the Clivus Martis, it might easily be visible at the distance of a mile or two. The words of Statius ("qua primum nascitur," &c.) must be corrupt, being both tautological and contrary to fact. The paving of the road from the Porta Capena to the temple would not have been worth twice recording by Livy, had it lain only at a distance of some 300 yards (x. 23, xxxviii. 28). The only way in which Becker can escape from the legitimate conclusion is by assuming two temples of Mars in this quarter; in which few, we suspect, will be inclined to follow him, and which may be regarded as equivalent to a confession of defeat. (Becker, *Handb.* p. 511, seq.; *Antw.* p. 63, seq.; Urlichs, *Röm. Topogr.* p. 105, seq.; Preller, *Regionen*, p. 116, seq.; Canina, *Indicazione*, p. 56, seq.)

Close to the Porta Capena and the temple of Honos et Virtus lay the VALLEY OF EGERIA with the LUCUS and AEDES CAMENARUM, the traditionary spot where Numa sought inspiration and wisdom from the nymph Egeria. (Liv. i. 21; Plut. *Num.* 13.) In the time of Juvenal, whose description of the spot is a locus classicus for its topography, the grove and temple had been profaned and let out to the Jews:—

> "Substitit ad veteres arcus madidamque Capenam
> Hic ubi nocturnae Numa constituebat amicae.
> Nunc sacri fontis nemus et delubra locantur
> Judaeis, quorum cophinus foenumque supellex.
> Omnis enim populo mercedem pendere jussa est
> Arbor, et ejectis mendicat silva Camenis.
> In vallem Egeriae descendimus et speluncas
> Dissimiles veris. Quanto praestantius esset
> Numen aquae, viridi si margine clauderet undas
> Herba, nec ingenuum violarent marmora tophum." (*Sat.* iii. 10, seq.)

It is surprising how Becker could doubt that there was an Aedes Camenarum here, since it is not only alluded to in the preceding passage, but also expressly mentioned by Pliny (xxxiv. 10.) The modern *Ciceroni* point out to the traveller as the valley of Egeria a pretty retired spot some distance outside of the *Porta S. Sebastiano*, in the valley called *La Caffarella*, near which are the remains of a little temple, called by some the temple of Honos et Virtus, by others a temple of Bacchus, with a grove said to be sacred to the latter deity. But though at present our imagination would more gladly fix on this spot as the scene of the conferences between Numa and his nymph, and though respectable authorities are not wanting in favour of this view (Venuti, *Descr. di Rom.* ii. p. 18; Guattani, *Rom. Descr.* ii. p. 45), yet the preceding passages, to which may be added Symmachus ("Sed enim propter eas (aedes Honoris et Virtutis) Camenarum religio sacro fonti advertitur," *Epist.* i. 21) and the *Notitia*, which places the temple of the Camenae close to that of Honour and Valour, are too decisive to allow us to do so; and we must therefore assume the valley of Egeria to have been that near the church of *S. Sisto*, opposite to the baths of Caracalla. The little fountain pointed out as that of Egeria in the valley *Caffarella*, is perhaps the remains of a nymphaeum. Here was probably a sanctuary of the Almo, which waters the valley.

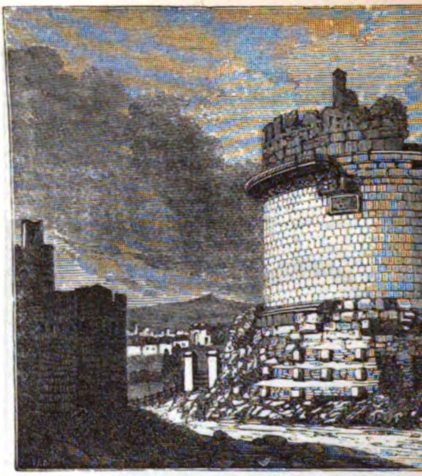
Near the temple of Mars, since it is mentioned in the *Notitia* in conjunction with it, lay the TEMPLE OF TEMPESTAS, built by L. Cornelius Scipio, the victor of Aleria, in commemoration of the escape of the Roman fleet from shipwreck off the island of Corsica, as appears from the inscription on his tomb. The temple and the occasion of its foundation are alluded to by Ovid (*Fasti*, vi. 193) in the following lines: —

> "Te quoque, Tempestas, meritam delubra fatemur,
> Cum paene est Corsis obruta classis aquis."

But of the TEMPLE OF MINERVA, also mentioned at the same time with that of Mars, we know nothing more. Near the last was preserved the LAPIS MANALIS, a large cylindrical stone so called from *manare*, "to flow," because during seasons of drought it was carried in procession into the city, for the sake of procuring rain. (Paul. Diac. p. 128; Varr. *ap. Non.* xv. p. 375, Gerl.)

Close to the Porta Capena, and probably outside of it, lay one of the three SENACULA mentioned by Festus; but the only time at which we find meetings of the senate recorded there is during the year following the battle of Cannae, when they appear to have been regularly held at this place. (Liv. xxiii. 32.) During the same period the tribunal of the praetor was erected at the PISCINA PUBLICA. This last object, which seems to have been a swimming-place for the people in the Republican times (Festus, p. 213), gave name to the 12th Regio, which adjoined the 1st, or that of Porta Capena, on the W. (Amm. Marc. xvii. 4; cf. Cic. *ad Quint. Fr.* iii. 7.) The pond had, however, vanished in the time of Festus, and its exact situation cannot be determined. There are several other objects in this district in the like predicament, such as the LACUS PROMETHEI, the BALNEUM TORQUATI, and others mentioned in the *Notitia*. The Thermae Commodianae and Severianae will be considered under the section which treats of the thermae. The MUTATORIUM CAESARIS, perhaps a kind of imperial villa (Preller, *Reg.* p. 115), appears to have been situated near the modern church of *S. Balbina*. (Montfaucon, *ap. Urlichs Röm. Topogr.* p. 112.) The three TRIUMPHAL ARCHES OF TRAJAN, VERUS, AND DRUSUS, mentioned by the *Notitia* in the 1st Regio, probably spanned the Via Appia in the space between the temple of Mars and the Porta Capena. The arch still existing just within the *Porta S. Sebastiano* is generally thought to be that of Drusus, the father of the emperor Claudius. ("Praeterea Senatus, inter alia complura, marmoreum arcum cum tropaeis via Appia decrevit (Druso)," Suet. *Claud.* 1.)

For many miles the tombs of distinguished Romans skirt both sides of the Via Appia; and these remains are perhaps better calculated than any other object to impress the stranger with an adequate idea of Rome's former greatness. For the most part, however, they lie beyond the bounds of the present subject, and we shall therefore content ourselves



ARCH OF DRUSUS.

without mentioning a few which were contained within the actual boundaries of the city. They appear to have commenced immediately outside the Porta Capena ("An tu egressus porta Capena, cum Calatini, Scipionum, Serviliorum, Metellorum sepulcra vides, miseros putas illos?" Cic. *Tusc.* i. 7); and hence many of them were included in the larger circuit of the walls of Aurelian. The tomb of Horatia, slain by the hand of her victorious brother, seems to have been situated just outside the gate. (Liv. i. 26.) Fortunately the most interesting of those mentioned by Cicero — the TOMB OF THE SCIPIOS — is still in existence. It was discovered in 1780 in the *Vigna Sassi*, on the left-hand side of the Via Appia, a little beyond the spot where the Via Latina branches off from it, and about 400 paces within the *Porta S. Sebastiano*. Its entrance is marked by a single tall cypress tree. In Livy's time the tomb was still adorned with three statues, said to be those of Publius and Lucius Scipio, and of the poet Ennius, who was interred in the sepulchre of his patrons. (Hieron. *Chron.* p. 379, Ronc.) It was here that the sarcophagus of L. Scipio Barbatus, consul in B. C. 298, now preserved in the Vatican, was discovered, together with several monumental stones with inscriptions relating to other members of the family, or to their connections and freedmen. The originals were carried off to the Vatican and copies inserted in their stead. The most remarkable of these inscriptions are that of Scipio Barbatus; of his son Lucius Cornelius Scipio, the conqueror of Corsica, consul in B. C. 259; of Publius Scipio, son of Africanus Major, whose feeble state of health is alluded to by Cicero (*Cato Maj.* 11), and whose touching epitaph shows that he died young; of L. Cornelius Scipio, grandson of the conqueror of Spain, gathered to his fathers at the early age of 20; and of another of the same name, the son of Asiaticus, who died aged 33, whose title to honour is summed up in the laconic words, "Pater regem Antiochum subegit." A complete account of this tomb will be found in Visconti (*Mon. degli Scipioni*, Rom. 1785) and in the *Beschreibung Roms* (vol. iii. p. 612, seq.), where the various epitaphs are given.

Also on the left-hand side of the Via Appia in going from the Porta Capena was the MAUSOLEUM OF SEPTIMIUS SEVERUS, which he caused to be erected for himself in his lifetime, in imitation of his Septizonium, but probably on a reduced scale. (Spart. *Geta*, 7.) In the same neighbourhood are some of those COLUMBARIA, or subterranean chambers, which formed the common resting-places for the ashes of persons of a lower condition. One of these, not far from the tomb of the Scipios, is said to contain the remains of the courtiers and domestics of the Caesars, from Julius to Nero. Among others there is an inscription to M. Valerius Creticus, with a bust. The walls, as well as a large pier in the middle, are hollowed throughout with vaulted recesses like large pigeon-holes, — whence the name, — in which are contained the ashes of the dead. The MAUSOLEUM OF CAECILIA METELLA, which stands on the Via Appia, about 2 miles outside the *Porta S. Sebastiano*, though it does not properly belong to our subject, demands, from the magnificence of its construction, as well as from Byron's well-known lines (*Childe Harold*, canto iv.), a passing word of notice here.

The remaining part of the district, or that forming the 12th Regio, and lying to the W. of the Via Appia, does not present many monuments of interest. The most striking one, the Thermae Antoninianae, or baths of Caracalla, will be spoken of under its proper head. We have already treated of the Bona Dea Subsaxanea and of the Isium. Close to the baths just mentioned Caracalla built the street called NOVA VIA, reckoned one of the handsomest in Rome. (Spart. *Carac.* 2; Aur. Vict. *Caes.* 21.) Respecting the FORTUNA MAMMOSA, we know nothing more than that the *Basis Capitolina* mentions a street of the same name in this neighbourhood. In the later period of the Empire this district appears to have contained several splendid palaces, as the SEPTEM DOMUS PARTHORUM, the

TOMB OF METELLA CAECI

Domus Cilonis, and Domus Cornificies. The Domus Parthorum and Cilonis seem to have been some of those palaces erected by Septimius Severus, and presented to his friends. (Aur. Vict. *Epit.* 20.) Cilon is probably the same person mentioned by Dion (lxxvii. 4), Spartian (*Carac.* 3), and in the *Digest* (i. 12. 1, and 15. 4.) The Parthi seem to have been Parthian nobles, whom Severus brought with him to Rome, and of whose luxurious habits Tertullian has drawn a characteristic picture. (*De Hab. Mul.* 7.) The Privata Adriani and the Domus Cornificies (Cornificiae) mentioned in the *Notitia*, lay doubtless close together. The former must have been the private residence of Hadrian, where M. Antoninus dwelt after his adoption by that emperor. (Jul. Capit. *M. Anton.* 5.) M. Antoninus had a younger sister named Anna Cornificia, to whom the house bearing her name doubtless belonged. (*Ib.* c. 1; Preller, *Regionen*, p. 198.)

XI. The Esquiline and its Neighbourhood.

The Esquiline (*Esquiliae*, or in a more ancient form *Exquiliae*) was originally covered with a thick wood, of which, in the time of Varro, the only remains were a few sacred groves of inconsiderable extent, the rest of the hill having been cleared and covered with buildings. (Varr. *L. L.* v. § 49, Müll.) Yet the derivation of the name of the hill from *aesculetum* seems to have been unknown to antiquity, and is a mere conjecture of Müller's (*ad loc.*); the ancient etymology being derived either from *excubiae regis*, because Servius Tullius had fixed his abode there, or from *excolere*, because the hill was first cleared and settled by that king. (Varr. *l. c.*; Ov. *Fast.* iii. 245.)

We have already described the Esquiline as throwing out two tongues or projections, called respectively, in the more ancient times of Rome, Oppius and Cispius. Their relative situation is indicated in the following passage of Festus: "Oppius autem appellatus est, ut ait Varro rerum humanarum L. viii., ab Opita Oppio Tusculano, qui cum praesidio Tusculanorum missus ad Romam tuendam, dum Tullus Hostilius Veios oppugnaret, consederat in Carinis et ibi castra habuerat. extended the district so as to embrace the western extremity of the Oppius; whilst Urlichs, on the contrary, confined the Carinae entirely to that hill. (*Beschr.* vol. iii. part ii. p. 119, seq.) That the Italian view is, at all events, partly erroneous, can hardly admit of a question. Besides the preceding passage of Festus, which clearly identifies the Carinae as part of the Oppius, there are other places in ancient writers which show that a portion at least of the district so called lay on a height. Thus Dionysius, speaking of the Tigillum Sororium, says that it was situated in the lane which *led down from the Carinae* to the Vicus Cyprius (ἔστι δ' ἐν τῷ στενωπῷ τῷ φέροντι ἀπὸ Καρίνης κάτω τοῖς ἐπὶ τὸν Κύπριον ἐρχομένοις στενωπόν, iii. 22). Again Varro (*L. L.* v. § 48), in describing the Subura or valley at the foot of the Oppius, says that it lay "sub muro terreo Carinarum;" obviously indicating that the latter place was on a height. Becker, indeed, maintains that walls of earth or aggeres were used in fortification only where the ground was level. But a wall on a height was certainly the usual mode of fortification in ancient Italy; and, as Mr. Bunbury justly remarks (*Class. Mus.* vol. v. p. 222), the peculiar appellation of "murus terreus" clearly distinguishes this wall from a common *agger*. Nor, as the Subura lay behind the gorge between the Esquiline and Quirinal, is it easy to see how any murus terreus in the district of the Carinae could have been so situated as to overhang the Subura, except upon the hill. The following words of Varro (*l. c.*) are even perhaps still more conclusive. He identifies the Subura with the Pagus Succusanus, — the ancient name of Subura being Succusa, by an interchange of *b* and *c*, — and holds it was thus named "quod succurrit Carinis:" where, whatever we may think of his etymology, it is plain that he regarded the Carinae as a height. It may be added that the western part of the Oppius, where the church of *S. Pietro in Vincoli* now stands, bore the name of *le Carre* as late as the 16th century. (And. Fulvius, *de Urb. Ant.* p. 304; cf. Niebuhr, *Hist.* i. p. 390, seq.)

It cannot therefore be doubted that the Carinae occupied the extremity of the Oppius; but how far that district extended eastwards cannot be said. It is a more difficult question to determine whether part of the valley lying at the western foot of the hill also bore the name of Carinae. Its solution is connected with another question respecting the site of the Temple of Tellus. We know that this temple—which was a considerable one, since assemblies of the senate were sometimes held in it — lay in the Carinae, and that it was built on the site of the house of Sp. Cassius, which was confiscated and pulled down when that demagogue was convicted of a design to make himself sovereign of Rome. (Liv. ii. 41; Val. Max. vi. 3. § 1; Plin. xxxiv. 14.) That event took place B.C. 485; but the temple does not seem to have been built till B.C. 269. Its site is further determined by notices respecting the house of Pompey, which subsequently came into the possession of M. Antony, the situation of which is known to have been in the Carinae, and at the same time close to the temple of Tellus: "Docuit (Lenaeus) in Carinis, ad Telluris aedem, in qua regione Pompeiorum domus fuerat." (Suet. *Ill. Gramm.* 15, cf. Id. *Tib.* 15; Vell. Pat. ii. 77; Aur. Vict. *Vir. Ill.* 84; Dion Cass. xlviii. 38.) And Servius says expressly, though in some respects unintelligibly, "Carinae sunt aedificia facta in Carinarum modum, quae erant circa templum Telluris" (*ad Aen.* viii. 361).

There is nothing in the preceding passages to exclude the possibility of the Templum Telluris having been on the summit of the hill; since it is not necessary to assume with Urlichs that it stood on its very edge (*Röm. Topogr.* p. 117); in which case, as there was an area attached to the temple, its back front must have been turned towards the road leading up to it from the valley, and the area have lain before it on the summit of the hill — a disposition which does not appear very probable. Yet there are some other circumstances tending to the inference that the temple was situated in the valley. Dionysius mentions it as being, not in the Carinae, but on the road leading to the Carinae (κατὰ τὴν ἐπὶ Καρίνας φέρουσαν ὁδόν, viii. 79.) A curious view, taken by Urlichs (*l. c.*) of the construction of ἐπί in this passage is one of the reasons which led him to place the temple on the hill. He thinks that it must necessarily mean "up to:" but it might just as well be said that it means "down to," in a passage quoted a little while ago from the same author respecting the situation of the Carinae and the Vicus Cyprius. In both cases it simply means "to." It will be perceived that Dionysius is here at variance with the authorities before quoted respecting the site of the temple. If the appellation of Carinae extended over some part of the adjacent valley it is possible that Dionysius, as a foreigner, might have been unaware of that fact, and have attached the name only to the more striking part of the district which lay on the hill. And there is a passage in Varro, a very obscure one indeed, from which it might be inferred that part of the Ceroliensis, which seems to have been the name of the valley between the Caelian, the Esquiline, and the Velian ridge, had likewise borne the name of Carinae ("Ceroliensis a Carinarum junctu dictus Carinae, postea Cerolia, quod hinc oritur caput Sacrae Viae," *L.L.* v. § 47). These passages would seem to indicate that the temple of Tellus lay in the valley between *S. Maria de' Monti* and the *Tor de' Conti*, where indeed we find traces of the name; since the churches of *S. Salvatore* and of *S. Pantaleone*, the latter of which still exists near the *Via del Colosseo*, bore in the middle ages the epithet of "in Tellure." Passages are also adduced from the *Acts of the Martyrs* to show that the temple of Tellus stood opposite to that of Pallas in the Forum Transitorium. ("Clementianus praecepit ei caput amputari ante templum in Tellure, corpusque ejus projici ante Palladis aedem in locum supradictum," *Act. S. Gordian.*) Hence it seems not improbable that the district of the Carinae, in which the temple undoubtedly stood, may have extended over a considerable part of the valley; but the passages relating to the subject are far from being decisive; and the question is one of that kind in which much may be said on both sides.

Two striking legends of early Roman history are connected with the Esquiline and its vicinity; that of the murder of Servius Tullius by his inhuman daughter, and that of the Tigillum Sororium, or typical yoke, by passing under which Horatius expiated the murder of his sister. We have before related that Servius Tullius resided on the Esquiline, and that he was the first to clear that hill and make it habitable. It was on his return to his residence on it, after his ejection from the curia by his son-in-law, Tarquinius Superbus, that he was murdered by the hirelings of that usurper. Livy's account of the

transaction is clear and graphic, and the best guide to the topography of the neighbourhood. The aged monarch had reached the top of the VICUS CYPRIUS ("ad summum Cyprium vicum") when he was overtaken and slain. His daughter followed in her carriage, and, having arrived at the same spot where stood a temple of Diana a little before the time when Livy wrote, she was just *turning to the right* in order to ascend the CLIVUS URBIUS, which led to the summit of the Esquiline, when the affrighted driver reined his horses, and pointed out to Tullia the bleeding corpse of her murdered father; but the fiend-like Tullia bade him drive on, and arrived at home bespattered with the blood of her parent. From this unnatural deed the street which was the scene of it obtained the name of VICUS SCELERATUS (i. 48). The question that has been sometimes raised whether Tullia was returning to her father's or to her husband's house, does not seem to be of much importance. Solinus, indeed (i. 25), represents Servius Tullius as residing "supra clivum Urbium," and Tarquinius Superbus, also on the Esquiline, but, "Supra clivum Pullium ad Fagutalem lucum." The house of the latter therefore must have been upon the Oppius, on which the Lucus Fagutalis was situated, and most probably upon the southern side of it; but he may not have resided here till after he became king. On the other hand, as Tullia is represented as turning to the right in order to ascend the Clivus Urbius to the royal residence, it is plain that the Vicus Cyprius must have lain on the *north side* of one of the tongues of the Esquiline; and as we are further informed by Dionysius, in a passage before quoted (iii. 22), that there was a lane which led down from the Carinae, or western extremity of the Oppius, to the Vicus Cyprius, the conclusion is forced upon us that the palace of Servius Tullius must have been situated upon the eastern part of the northern side of the Oppius, and that consequently the Vicus Cyprius must have corresponded with the modern *Via di S. Lucia in Selci.* The Summus Cyprius Vicus was evidently towards the head of the valley, the lower part of the street running under the Carinae; and hence the Clivus Urbius and the residence of Servius may be placed somewhere near the church of *S. Martino.* Before the usurpation of Tarquin, he and his wife may have resided near his father-in-law, or even under the same roof; or, what is still more probable, Tullia, as Ovid represents her ("patrios initura Penates," *Fast.* vi. 602), was proceeding to take possession of her father's palace, since his deposition had been effected in the senate before his murder. Urlichs (*Röm. Topogr.* p. 119) admits that the Vicus Cyprius answered to the *Via di S. Lucia*, yet holds that Servius resided on the Cispius; a view utterly irreconcilable with the fact that the Clivus Urbius and palace lay on the right of that street. The passages before adduced prove the direction of the Vicus Cyprius as clearly as any locality in Rome can be proved which depends for its determination solely on notices in the classics. Yet Becker shuts his eyes to this satisfactory evidence, and maintains that the Vicus Cyprius corresponded with the modern *Via del Colosseo* (*Antwort*, p. 78); although in that case also it would have been impossible for Tullia to have ascended the Esquiline by turning to the right. The only ground he assigns for this incomprehensible view is an arbitrary estimate of the distances between the objects mentioned in *Regio IV.* of the *Notitia*, founded also on the assumption that these objects are enumerated strictly in the order in which they actually followed one another. But we have already shown from Becker himself that this is by no means always the case, and it is evidently not so in the present instance; since, after mentioning the Tigillium Sororium, which lay in or near the Subura, the order of the catalogue leaves that spot and proceeds onwards to the Colosseum, and then again at the end of the list reverts to the Subura. The chief objection to placing the Vicus Cyprius under this side of the Oppius is, as Mr. Bunbury observes (*Class. Mus.* vol. v. p. 227), that it would thus seem to interfere with the Subura. But this objection is not urged either by Becker or Urlichs; and indeed the Subura, like the Velabrum, seems to have been a district rather than a street, so that we may conceive the Vicus Cyprius to have run through it.

The position of the TIGILLUM SORORIUM is determined by what has been already said; namely, in a narrow street leading down from the Carinae to the Vicus Cyprius. It seems to have been a wooden beam erected across the street. As it is mentioned in the *Notitia*, this monument, connected with one of Rome's early legends, must have existed down to the 5th century; and indeed Livy (i. 26) informs us that it was constantly repaired at the public expense. We learn from Dionysius (iii. 22) and Festus (p. 297, Müll.) that on each side of it stood an altar; one to JUNO SORORIA, the other to JANUS CURIATIUS.

Having had occasion to mention the SUBURA, it may be as well to describe that celebrated locality before proceeding further with the topography of the Esquiline. We have already seen from Varro that it was one of the most ancient districts in Rome; and its importance may be inferred from its having given name to the 1st Servian Region. We have also alluded to a passage in the same author (*L. L.* v. § 48, Müll.) which shows it to have been originally a distinct village, called Succusa or Pagus Succusanus, lying under the Carinae. Varro adds, that the name still continued to be written with a C instead of a B; a statement which is confirmed by the fact that in inscriptions the Tribus Suburana is always denoted by the abridged form TRIB. SVC. (Cf. Festus, *s. v. Subura*, p. 309, Müll.; Quintil. *Inst. Or.* i. 7. § 29; Mommsen, *Die Röm. Tribus*, p. 79, seq.) A *piazza* or place under the church of *S. Pietro in Vincoli* still bears the name of *Subura*; and the church of *S. Agata* over the *Via de' Serpenti*, which skirts the eastern foot of the Quirinal hill, bore in the middle ages the name of "in Suburra" or "super Suburra." Hence it seems probable that the Subura occupied the whole of the valley formed by the extremities of the Quirinal, Viminal, and Esquiline, and must consequently have been, not a street but, a region of some extent; as indeed we find it called by Gregory the Great in the 6th century ("in regione urbis illa quae Subura dicitur," *Dial.* iii. c. 30). But that it extended westward as far as the Forum Transitorium, a supposition which seems to rest solely on the order of the the names in the 4th Region of the *Notitia*, we can hardly conceive. We have shown that the district between the back of the imperial fora and the western extremity of the Esquiline may perhaps have formed part of the Carinae; but it can hardly have been called both Carinae and Subura. The latter seems to have properly begun at the point where the Quirinalis approaches the extremity of the Oppius; and

this seems to have been the spot called by Martial the *primae fauces* of the Subura (ii. 17):—

"Tonstrix Suburae faucibus sedet primis,
Cruenta pendent qua flagella tortorum
Argique letum multus obsidet sutor."

Juvenal (v. 106) represents the Cloaca Maxima as penetrating to the middle of the Subura, and this fact was established by excavations made in the year 1743. (Ficoroni, *Vestigia di Roma*, ap. Bunbury, *Class. Mus.* vol. v. p. 219.)

From its situation between the imperial fora and the eastern hills, the Subura must have been one of the most frequented thoroughfares in Rome; and hence we are not surprised to find many allusions to its dirt and noise. It was the peculiar aversion of Juvenal,— a man, indeed, of many aversions ("Ego vel Prochytam praepono Suburae," *Sat.* iii. 5); a trait in his friend's character which had not escaped the notice of Martial (xii. 18):—

"Dum tu forsitan inquietus erras
Clamosa, Juvenalis, in Subura."

The epithet *clamosa* here probably refers to the cries of itinerant chapmen: for we learn from other passages in Martial that the Subura was the chief place in which he used to market (vii. 31, x. 94, &c.; cf. Juv. xi. 136, seq.) It appears also to have been the abode of prostitutes (vi. 66; comp. Hor. *Epod.* v. 58). It was therefore what is commonly called a low neighbourhood; though some distinguished families seem to have resided in it, even Caesar himself in his early life (Suet. *Caes.* 46), and in the time of Martial, L. Arruntius Stella (xii. 3. 9). The Suburanenses, or inhabitants of the Subura, kept up to a late period some of the ancient customs which probably belonged to them when they formed a distinct village; especially an annual contest with the Sacravienses, or inhabitants of the Sacra Via, for the head of the horse sacrificed to Mars in the Campus Martius every October. If the Suburanenses gained the victory they fixed the head on a tower in the Subura called TURRIS MAMILIA, whilst the Sacravienses, if successful, fixed it on the Regia. (Festus, *s. v. October Equus*, p. 178, Müll.; Paul. Diac. p. 131.)

Throughout the time of the Republic the Esquiline appears to have been by no means a favourite or fashionable place of residence. Part of it was occupied by the CAMPUS ESQUILINUS, a place used as a burying-ground, principally for the very lowest class of persons, such as paupers and slaves; whose bodies seem to have been frequently cast out and left to rot here without any covering of earth. But under the Empire, and especially the later period of it, many palaces were erected on the Esquiline. Maecenas was the first to improve it, by converting this field of death, and probably also part of the surrounding neighbourhood, — the pauper burial-ground itself appears to have been only 1000 feet long by 300 deep,— into an agreeable park or garden. Horace (*S.* i. 8. 14) mentions the laying out of these celebrated HORTI MAECENATIS:—

"Nunc licet Esquiliis habitare salubribus atque
Aggere in aprico spatiari, qua modo tristes
Albis informem spectabant ossibus agrum."

It appears from these lines that the Campus Esquilinus adjoined the *agger* of Servius Tullius, which, by the making of these gardens, was converted into a cheerful promenade, from which people were no longer driven by the disgusting spectacle of mouldering bones. The Campus Esquilinus being a cemetery, must of course have been on the outside of the *agger*, since it was not lawful to bury within the pomoerium; and Varro (*L.L.* v. § 25) mentions it as "ultra Exquilias," by which he must mean the Servian Region so called, which was bounded by the *agger*. Its situation is also determined by a passage in Strabo (v. p. 237), where the Via Labicana, which issued from the Esquiline gate at the southern extremity of the *agger*, is said to leave the campus on the left. It appears to have also been the place of execution for slaves and ignoble criminals (Suet. *Claud.* 25; Tac. *Ann.* ii. 32, xv. 60; Plaut. *Mil.* ii. 4. 6, ed. Ritschl.). There does not seem to be any authority for Becker's assumption that the whole of the Esquiline outside of the Servian walls was called Campus Esquilinus (*Handb.* p. 554), nor that after the laying out of the gardens of Maecenas the ancient place of execution was transferred to the Sessorium, near *S. Croce in Gerusalemme.* Part of the campus was the field given, as the scholiast on Horace says, by some person as a burying-place. The Sessorium mentioned in the *Excerpta Valesiana de Odoacre* (69) was a palace; and though Theodoric ordered a traitor to be beheaded there it can hardly have been the ordinary place of execution for common malefactors. Besides the Sessorium mentioned by the scholiasts on Horace (*Epod.* v. 100, *Sat.* i. 8. 11) was close to the Esquiline gate, a full mile from *S. Croce*, and seems, therefore, to have been another name for the Campus Esquilinus, if the scholiasts are right in calling it Sessorium. The executions recorded in the passages before quoted from Suetonius and Tacitus took place long after the gardens of Maecenas were made; yet when Tacitus uses the words "extra Portam Exquilinam," there can be no doubt that he means *just without* the gate. It would be a wrong conception of the Horti Maecenatis to imagine that they resembled a private garden, or even a gentleman's park. They were a common place of recreation for the Roman populace. Thus Juvenal describes the *agger* as the usual resort of fortune-tellers. (*S.* vi. 588.) We see from the description of Horace that not even all the tombs had been removed. Canidia comes there to perform her incantations and evoke the *manes* of the dead; at sight of which infernal rites the moon hides herself behind the sepulchres (v. 35):—

"—— lunamque rubentem,
Ne foret his testis, post magna latere sepulcra."

Such a place, therefore, might still have been used for executions; though, doubtless, bodies were no longer exposed there, as they had formerly been. These "magna sepulcra" would also indicate that some even of the better classes were buried here; and the same thing appears from Cicero. (*Phil.* ix. 7.)

The Horti Maecenatis probably extended within the *agger* towards the baths of Titus, and it was in this part that the HOUSE OF MAECENAS seems to have been situated. Close to these baths, on the NE. side, others, built by Trajan, existed in ancient times, although all traces of them have now vanished. They have sometimes been confounded with those of Titus; but there can be no doubt that they were distinct and separate foundations. Thus the *Notitia* mentions in the 3rd Region the "Thermae Titianae et Trajanae;" and their distinction is also shown

by the inscription of Ursus Togatus: THERMIS TRAIANI THERMIS AGRIPPAE ET TITI, &c. (Gruter, dcxxxvii. 1). The site of the baths of Trajan, close to the church of *S. Martino*, may be determined from another inscription found near that church, in the pontificate of Paul III., which records some improvements made in them; as well as from a notice by Anastasius, in his Life of Symmachus (p. 88, Blanch.), stating that the church alluded to was erected "juxta Thermas Trajanas." It is a very common opinion that the house of Maecenas occupied part of the site of the baths of Titus, and this opinion is as probable as any other. It was a very lofty building. Horace describes it as a "molem propinquam nubibus arduis" (*Od.* iii. 20. 10), and from its situation and height must no doubt have commanded a view of Tibur and its neighbourhood; though we do not draw that conclusion from the immediately preceding lines, where we think the far better reading is, "*Ut* semper udum Tibur," &c., the *semper* belonging to "udum," and not to "contemplere" (cf. Tate's *Horace, Prel. Diss.* p. 24). We have before related how Nero beheld the fire of Rome from the house of Maecenas. Suetonius, in his account of that scene, calls the house "turris Maecenatiana" (*Nero*, 38), by which, perhaps, we are not to understand a tower, properly so called, but a lofty superstructure of several stories over the lower part of the house (Becker, *Charikles*, i. p. 195). Maecenas bequeathed his house and gardens to Augustus; and Tiberius lived there after his return from Rhodes, and before he succeeded to the empire (Suet. *Tib.* 15). The subsequent history of the house is unknown; but, as we have said, it may probably have been included in the baths of Titus.

Close to the gardens of Maecenas lay the HORTI LAMIANI (Philo Jud. vol. ii. p. 597, Mang.), belonging perhaps, to the Aelius Lamia celebrated by Horace (*Od.* i. 26, &c.). We learn from Valerius Maximus (iv. 4. 8) that the ancient family of the Aelii dwelt where the monument of Marius afterwards stood; whence it seems probable that the Horti Lamiani may have lain to the E. of those of Maecenas, towards the church of *S. Bibiana*. It was here that the body of Caligula was first hastily buried, which was afterwards burnt and reinterred by his sisters (Suet. *Cal.* 59).

There appear to have been several more gardens between the Porta Esquilina and the modern *Porta Maggiore;* as the HORTI PALLANTIANI, founded apparently by Pallas, the powerful freedman of Claudius (Tac. *Ann.* xi. 29; Suet. *Claud.* 28; Plin. *Ep.* viii. 6); and which, from several passages of Frontinus (*Aq.* 19, seq.), appear to have been situated between *P. Maggiore*, the Marian monument, and the church of *S. Bibiana*. Frontinus also mentions (*Aq.* 68) certain HORTI EPAPHRODITIANI, perhaps belonging to Epaphroditus, the *libertus* of Nero, who assisted in putting that emperor to death (Suet. *Ner.* 49, *Dom.* 14; Tac. *Ann.* xv. 55); as well as some HORTI TORQUATIANI (c. 5), apparently in the same neighbourhood. The CAMPUS VIMINALIS SUB AGGERE of the *Notitia* was probably an exercise ground for the Praetorian troops on the outside of the agger near the Porta Viminalis. Hence the eastern ridge of the Viminal and Esquiline beyond the Servian walls must have been very open and airy.

The Esquiline derives more interest from its having been the residence of several distinguished poets and authors than the most splendid palaces could have conferred upon it. Virgil dwelt upon the Esquiline, close to the gardens of his patron Maecenas. Whether Horace also had a house there cannot be said; but he was certainly a frequent guest with Maecenas; he loved to saunter on "the sunny agger," and be was at last buried close to the tomb of his munificent benefactor at the extremity of the hill. (Suet. *V. Hor.* 20.) Propertius himself informs us that his abode was on the Esquiline (iii. (iv.). 23. 23); where also dwelt the younger Pliny, apparently in the house formerly belonging to the poet Pedo Albinovanus (Plin. *Ep.* iii. 21; Mart. x. 19). Its precise situation will be examined a little further on, when treating of the Lacus Orphei.

The Esquiline and its neighbourhood did not contain many temples of note. That of Tellus, already mentioned, was the most important one; the rest seem for the most part to have been more remarkable for antiquity than for size or beauty. We have already adverted to the ancient *sacraria* mentioned here by Varro (*L. L.* v. 49, seq.); as the LUCUS AND SACELLUM OF JUPITER FAGUTALIS, on the southern side of the Oppius; the LUCUS ESQUILINUS, probably near the Esquiline gate; a LUCUS POETELIUS; a LUCUS MEFITIS, with an aedes, lying near the Vicus Patricius (Festus, *s. v. Septimontio*, p. 351, Müll.); and a LUCUS OF JUNO LUCINA, where, according to Pliny (xvi. 85), a temple was built to that goddess, B. C. 374; although it would appear from Dionysius (iv. 15) that there must have been one there previously in the time of Servius Tullius. An inscription relating to this temple was found in 1770, in digging the foundations of the monastery *delle Paollotte*, in the road which separated the Oppius and Cispius. We learn from Ovid (*Fast.* ii. 435) that the grove lay beneath the Esquiline; but as it appears from Varro that the temple stood on the Cispius, whilst the stone with the inscription in question was found on the side of the Oppius: it is probable that it may have rolled down from the monastery of the *Filippine* on the opposite height (Nibby, *Roma nel Anno* 1838, p. 670; Urlichs, *Röm. Top.* p. 120; Canina, *Indic.* p. 151). The SACELLUM STRENIAE, where the Sacra Via began, probably lay on the S. side of the Carinae, near the Colosseum. It seems not improbable that the LUCUS VENERIS LIBITINAE may also have been situated on the Esquiline, on account of the neighbourhood of the Campus Esquilinus; but there are no authorities by which its site can be satisfactorily determined. It was the great magazine for funereal paraphernalia (cf. Dionys. iv. 15; Festus, *s. v. Rustica Vinalia*, p. 265; Plut. *Q. R.* 23). On the Esquiline were also ALTARS OF MALA FORTUNA and of FEBRIS, the latter close to the Marian monument (Cic. *N. D.* iii. 25; Plin. ii. 5; Val. Max. ii. 5. § 6). We may likewise mention a TEMPLE OF FORTUNA RESPICIENS (Plut. *Fort. R.* 10), of FORTUNA SEIA in the Vicus Sandaliarius (*Inscr. ap. Graev. Thes.* iii. p. 288; Plin. xxxvi. 46), and one of DIANA in the Vicus Patricius, from which men were excluded (Plut. *Q. R.* 3). The HERCULES VICTOR or HERCULES SULLANUS of the *Notitia* was perhaps only a statue. We shall close this list by mentioning a TEMPLE OF SPES VETUS, near the Horti Pallantiani, several times alluded to by Frontinus; of ISIS PATRICIA, probably in the Vicus Patricius; and of MINERVA MEDICA, commonly identified with the ruins of a large circular building in a vineyard near the *Porta Maggiore*. This building bore, in the middle ages, the name of *Le Galuzze*, whence Canina is of opinion that it was the place where the emperor Gallienus

was accustomed to divert himself with his court. (Treb. Pollio, *Gall. Duo*, c. 17.) The temple of Minerva Medica mentioned in the *Notitia* may probably have stood in the neighbourhood; but the building in question seems too large to be identified with it.

Among the profane monuments of this district we have had occasion to mention once or twice an object called the TROPHIES OF MARIUS. Valerius Maximus relates that Marius erected two *tropaea* (vi. 9. § 14); and that these must have been on the Esquiline appears from a passage of the same author (ii. 5. § 6), quoted a little while ago respecting the site of the altar of Febris. A building which stands at the junction of the *Via di S. Bibiana* and *Via di P. Maggiore* a little way outside the ancient Porta Esquilina bore during the middle ages the name of Templum Marii, or Cimbrum. and was adorned with those sculptured trophies which were removed in the pontificate of Sixtus V. to the balustrade of the *Piazza del Campidoglio*, where they still remain. (*Ordo Rom.* an. 1143, ap. Mabill. *Mus. Ital.* ii. p. 141; Poggio, *de Var. Fort.* p. 8, ed. Par. 1723.) There can be no doubt, however, that the building so called was no temple, but the *castellum* of an aqueduct, and is in all probability the object mentioned in the *Notitia* as the NYMPHEUM DIVI ALEXANDRI. It must have been one of the principal castella of the Aqua Julia, and from the trophies which stood in the neighbourhood having been applied to its adornment it was mistaken in a later age for a temple erected by Marius. (Canina, *Indicaz.* p. 156, seq.; Preller, *Regionen*, p. 131.)

Between this Nymphaeum and the Porta Esquilina stands the ARCUS GALLIENI, which must have spanned the ancient Via Praenestina. It is a simple arch of travertine, and we learn from the inscription upon it, which is still legible, that it was erected by a certain M. Aurelius Victor in honour of the emperor Gallienus and his consort Salonina. Originally there were smaller arches on each side of it (*Spec. Rom. Magn.* tab. 24), but at present only the middle one remains.

Close to this arch and between it and the basilica of *S. Maria Maggiore*, lay the FORUM ESQUILINUM and MACELLUM LIVIANUM. This position of the macellum is certain. The basilica just named was built "juxta Macellum Liviae." (Anastas. *V. Liberii* and *V. Sixt. III.*) That it was close to the arch of Gallienus appears from the *Ordo Romanus*. ("Intrans sub arcum (Gallieni) ubi dicitur Macellum Lunanum (Livianum) progreditur ante templum Marii quod dicitur Cimbrum," *Ann.* 1143, p. 141.) And the church of *S. Vito* close to the arch was designated as "in Macello." (An. Fulvius, *Ant. R.* ii. c. 6.) But it is a more difficult question to determine whether the Forum Esquilinum and Macellum Livianum were distinct objects or one and the same. We know that the Forum Esquilinum was in existence in B. C. 88, since it is mentioned by Appian (*B. C.* i. 58) as the scene of the struggle between Marius and Sulla. Hence Nibby (*Roma nell' Anno* 1838, tom. ii. p. 25), assuming that the macellum and forum were identical, regarded it as founded by M. Livius Salinator, who was censor with Claudius Nero, B. C. 204. But this view is unsupported by any authority, nor is it probable that the forum had two appellations; whence it seems most likely that the macellum was quite a distinct but adjoining market founded by Augustus, and named after his consort Livia. (Preller, *Regionen*, p. 131.)

There was also a PORTICUS LIVIAE somewhere on the Esquiline, named in the *Notitia* in the 3rd Region after the baths of Titus. It was a quadrangular porticus (περίστῳον), built by Augustus, B. C. 14, on the site of the house of Vedius Pollio, which he had inherited. (Dion Cass. liv. 23.) As the same author (lv. 8) calls it a τεμένισμα, we may conclude that it contained the TEMPLE OF CONCORD mentioned by Ovid. (*Fast.* vi. 633.) It is alluded to by Strabo (v. p. 236), and by both the Plinys. (xiv. 3; *Ep.* i. 5; cf. Becker, *Handb.* p. 542, *Antw.* p. 78.) We also read of a PORTICUS JULIA, built in honour of Caius and Lucius Caesar (Dion Cass. lvi. 27, as emended by Merkel *ad Ov. Fast.* p. cxli.), but its situation cannot be determined.

Near the church of *S. Croce in Gerusalemme*, towards the side of the *Porta Maggiore*, lie the ruins of a large building already alluded to, which in the middle ages bore the name of SESSORIUM. We have remarked that in the *Excerpta Valesiana* at the end of Ammianus Marcellinus it is called a palace ("in palatio, quod appellatur Sessorium," *de Odoac.* 69). It is identified by a passage in Anastasius stating that the church of *S. Croce* was erected there. (*Vit. Silvest.* p. 45, Blanch.)

Also near the same church, but on the other side of it, and built into the wall of Aurelian, are the remains of a considerable amphitheatre which are usually identified as the AMPHITHEATRUM CASTRENSE of the *Notitia*. Becker, however (*Handb.* p. 552, seq.), denies this identity, his chief objection being the great space which the 5th Regio must have occupied if this building is included in it, and holds that the true Amphitheatrum Castrense must have been near the Castra Praetoria There are, however, no traces of the remains of an amphitheatre in that direction, and Becker acknowledges (*Handb.* p. 558) that he is unable to give any name to that by *S. Croce*. But there could not have been many structures of this description in Rome, and on the whole it seems most reasonable to conclude with Preller (*Regionen*, p. 132) that the one in question was the Castrense; especially as we know from Procopius (*B. G.* i. 22, seq.) that there was a vivarium, or place for keeping wild beasts used in the sports of the amphitheatre, close to the Porta Praenestina.

In the valley under this amphitheatre were the GARDENS AND CIRCUS OF ELAGABALUS (Lampr. *Heliog.* 14, 23), where the obelisk was found which now stands on the promenade on the Pincian (Ligorio, *Sui Cerchi*, p. 3; Canina, *Indic.* p. 178). Just outside the *Porta Maggiore* is the curious MONUMENT OF EURYSACES the baker, which has been spoken of above, p. 760.

The remaining monuments in the district under consideration are few and unimportant. The APOLLO SANDALIARIUS mentioned in the *Notitia* in the 4th Region was one of those statues which Augustus erected in the different Vici. (Suet. *Aug.* 57.) We have said that the temple of Fortuna Seia stood in the Vicus Sandaliarius; and as this temple was included in the domain of the golden house of Nero (Plin. xxxvi. 46) we may conclude that it was in or near the Carinae. (Becker, *Handb.* p. 561.) The COLOSSEUM will be described in a separate section. The 3rd Region, in which it was situated, must doubtless have contained a splendid TEMPLE OF

Isis and Serapis, from which the Region derived its name, but the history of the temple is unknown. The same remark applies to the Moneta mentioned in this Region, which seems to have been the imperial mint. (Preller, *Reg.* p. 124.) It is mentioned in inscriptions of the time of Trajan. (Marini, *Atti, &c.* p. 488.) The Summum Choragium is inexplicable. The Lacus Pastorum or Pastoris was a fountain near the Colosseum, as appears from the *Acta Sanctorum* (*in Eusebio*). The Domus Brutti Praesentis probably lay on the Esquiline. Marcus Aurelius affianced Commodus with the daughter of a Bruttus Praesens. (Capitol. *M. Anton. Ph.* c. 27.) A Porticus Claudia stood at the extremity of Nero's golden house, not far from the colossus of that emperor:—

> "Claudia diffusas ubi porticus explicat umbras
> Ultima pars aulae deficientis erat."
> (Mart. *de Spec.* 2.)

It is mentioned by the Anonymus Einsiedlensis and in the *Mirabilia* under the name of "Palatium Claudii," between the Colosseum and *S. Pietro in Vincoli*. The Ludus Magnus was a gladiatorial school apparently near the *Via di S. Giovanni*. (Canina, *Indic.* p. 108.) The Schola Quaestorum et Caplatorum or Capulatorum seems to have been an office for the scribes or clerks of the quaestors, as the Schola Xantha on the Capitoline was for those of the curule aediles. The Capulatores were those officers who had charge of the *capides* or *capulae*, that is, the bowls with handles used in sacrifices (Varr. *L.L.* v. § 121); but where this schola may have been cannot be said. The Castra Misenatium were the city station for what we may call the marines, or soldiers attached to the fleet and naval station at Misenum, established by Augustus. (Tac. *Ann.* iv. 5; Suet. *Aug.* 49.) This camp appears to have been situated near the church of *S. Vito* and *Via Merulana*, where also there was an *aedicula* of Neptune. (Canina, *Indicaz*, p. 110.) The Balneum Daphnidis, perhaps alluded to by Martial (iii. 5. 6), was probably near the Subura and Carinae. Lastly the Lacus Orphei, or fountain of Orpheus, seems to have lain near the church of *S. Lucia*, which bore the epithet *in Orfeo*, or, as the Anonymous calls it, *in Orthea*. It is described in the lines of Martial, in which he desires Thalia to carry his book to Pliny (x. 19. 4, seq.):—

> "I, perfer, brevis est labor peractae
> Altum vincere tramitem Suburae.
> Illic Orphea protenus videbis
> Udi vertice lubricum theatri,
> Mirantesque feras avemque regis
> Raptum quae Phryga pertulit Tonanti.
> Illic parva tui domus Pedonis
> Caelata est aquilae minore penna."

From this description it would appear that the fountain was in a circular basin—for such seems to be the meaning of "udum theatrum," because a statue of Orpheus playing on the lyre stood high in the midst of the basin, wet and shining with spray, and surrounded by the fascinated beasts as an audience. (Becker, *Handb.* p. 559, note.) The situation of the fountain near the church mentioned is very clearly indicated in these lines. As Martial lived on the southern extremity of the Quirinal the way from his house to that spot would of course lie through the Subura. At the top of the street leading through it, which, as we have seen, must have been the Vicus Cyprius, a short but steep ascent brought the pedestrian to the top of the Esquiline, where the first object that met his eyes was the fountain in question. The locality is identified by another poem of Martial's addressed to Paulus, who also lived on the Esquiline (v. 22. 4):—

> "Alta Suburani vincenda est semita clivi
> Et nunquam sicco sordida saxa gradu;"

where we must not take Clivus Suburanus to be the name of a road, like Clivus Capitolinus, Publicius, &c., but merely a synonymous appellative with what Martial calls "altus trames" in the other poem. It may be further observed that this situation of the fountain agrees with the order of the *Notitia*, where it is named immediately before the Macellum Livianum. Close to it lay the small house formerly inhabited by Pedo Albinovanus, and in Martial's time the residence of his friend the younger Pliny.

XII The Colles, or the Viminal, Quirinal, and Pincian Hills.

We have already remarked that the three northernmost hills of Rome were called *Colles*, in contradistinction to the others, which were called *Montes*. Only two of the former, the Viminal and Quirinal, were enclosed within the walls of Servius Tullius, and considered as properly belonging to the city; but part of the Pincian was included within the walls of Aurelian.

The Collis Viminalis, the smallest of the three hills, is separated from the Esquiline by the valley through which ran the Vicus Patricius, and by a hollow running towards the rampart of Servius. On the other side, towards the Quirinal, is another valley, which divides it from that hill, at present traversed by the streets called *Via de' Serpenti* and *Via di S. Vitale*. The most northern part of the valley, through which the latter street runs, was the ancient Vallis Quirini (Juv. ii. 133). The hill derived its name from the osiers with which it was anciently covered ("dictum a vimine collem," Id. iii. 71); and upon it was an Altar of Jupiter Viminalis, answering to the Jupiter Fagutalis of the Esquiline. (Varr. *L. L.* v. § 51; Fest. p. 373.) The Viminal was never a district of much importance, and seems to have been chiefly inhabited by the lower classes. The only remarkable building which we find recorded on it is the splendid Palace of C. Aquilius (Plin. xvii. 2). The existence of some baths of Agrippina upon it rests only on traditions of the middle ages. The baths of Diocletian, which lay on the ridge which united the Viminal and Quirinal, will be described in the section on the thermae. The Sacellum of Naenia lay without the Porta Viminalis. (Paul. Diac. p. 163.)

After the Palatine and Capitoline hills, the Quirinal was the most ancient quarter of the city. As the seat of the Sabine part of the population of Rome, it acquired importance in the period of its early history, which however it did not retain when the two nations had become thoroughly amalgamated. The Quirinal is separated from the Pincian on the N. by a deep valley; its western side is skirted by the Campus Martius; the manner in which it is parted from the Viminal by the Vallis Quirini has been already described. The street which ran

through this last valley was called VICUS LONGUS, as we learn from the Anonymous of Einsiedlen, who mentions the church of S. Vitalis as situated "in vico longo." We find its name recorded in Livy (x. 23), and Valerius Maximus (ii. 5. § 6). Of the different ancient divisions of the Collis Quirinalis and of the origin of its name, we have already spoken in the former part of this article.

The Quirinal abounded in ancient fanes and temples. One of the earliest foundations of this sort was the TEMPLE OF QUIRINUS, erected by Numa to Romulus after his apotheosis. The first practical notice that we find of it is, however, in B. C. 435, when Livy (iv. 21) records a meeting of the senate in it; a fact which shows that it must have been a considerable building. A new one was dedicated, probably on the same spot, by L. Papirius Cursor, B. C. 292. (Liv. x. 46; Plin. vii. 60.) This structure appears to have been burnt in B. C. 48, and we do not hear of its re-erection till B. C. 15, when Augustus rebuilt it, as recorded in the *Monumentum Ancyranum*, and by Dion Cassius (liv. 19). Yet in the interval between these dates we find it alluded to as still existing (*Id.* xliii. 45; Cic. *ad Att.* xiii. 28), whence we may conclude that it had been only partially destroyed. Dion (liv. 19) describes the new structure of Augustus as having 76 columns, equalling the years which he had lived. Hence, it appears to have been the same building as that adduced by Vitruvius (iii. 2, 7) as an example of the *dipteros octastylos*; for that kind of temple had a double row of columns all round; namely, two rows of 8 each at the front and back; and, without counting the outside ones of these over again, two rows of 11 each at the sides (32 + 44 = 76). This noble portico appears to have been the same alluded to by Martial as the resort of the idlers of the vicinity (ix. 1. 9). Topographers are universally agreed that it was situated on the height over *S. Vitale* in the neighbourhood of *S. Andrea del Noviziato*. (Becker, *Handb.* p. 573; Urlichs, *Beschr.* iii. 2, 366; Canina, *Indic.* p. 185.) There appears to have been also a SACELLUM QUIRINALIS near the Porta Collina.

All the more interesting traditions respecting the Quirinal belong to the reign of Numa. One of the residences of that Sabine monarch was situated on this hill (Plut. *Num.* 14; Solin. i. 21), where he also founded a citadel, or capitol; and where his successor Tullus Hostilius, in pursuance of a vow made in the Sabine War, repeated, as it were in duplicate, Numa's peculiar institution of the Salian worship (Liv. i. 27; Dionys. ii. 70). All these things show very clearly the distinction between the Roman and Sabine cities during the reigns of the first monarchs. On the Quirinal, the Salian priests with their ancilia were attached to the worship of Quirinus, as, in the Romulean city, they were to that of Mars ("Quid de ancilibus vestris, Mars Gradive, tuque Quirine pater (loquar)?" Liv. v. 52); and the priests were called, by way of distinction, Salii Agonenses, or Collini, from the name of the hill ("In libris Saliorum quorum cognomen Agonensium," Varr. *L. L.* vi. § 14; cf. Dionys. *l. c.*, where, however, he erroneously speaks of a λόφος Κολλῖνος.)

Next to the temple of Quirinus, proceeding in a westerly direction, as may be inferred from the order in which the objects are mentioned in the *Curiosum* (the *Notitia* somewhat differs), stood a STATUE OF MAMURIUS; and then, after an interval occupied in later times by the baths of Constantine, — the site of the present *Palazzo Rospigliosi*, — followed the VETUS CAPITOLIUM, or citadel of Numa. Whether Mamurius was another name for Mamers, the Sabine god of war, of which, according to Varro (*L. L.* v. § 73), the Roman name of Mars was only a corruption, or whether it was the name of the reputed maker of the ancilia (Paul. Diac. p. 131, Müll.), matters but little; the statue is equally connected with the ancient Salian rites, and therefore one of the most venerable objects in the city. We find a CLIVUS MAMURI mentioned in the middle ages in the neighbourhood of *S. Vitale* (Anastas. *V. Innoc. I.* p. 64, Blanch.), which no doubt took its name from this statue; whence we may infer that it stood near the temple of Quirinus; since the church of *S. Vitale* and that of *S. Andrea*, where the temple stood, are close together.

We have remarked in the former part of this article that the ancient Capitol of Numa probably stood on the height of *Magnanapoli*. It contained, like the Palatine before it and the Capitoline subsequently, a temple to the three divinities, Jupiter, Juno, and Minerva, as we learn from Varro: "Clivos proximus a Flora susus versus Capitolium vetus, quod ibi sacellum Jovis, Junonis, Minervae; et id antiquius quam aedis, quae in Capitolio facta" (*L. L.* v. § 158). Its site may be determined by that of another ancient sanctuary, the TEMPLE OF FLORA. In the order of the *Curiosum* and *Notitia* that temple stands between the Capitolium Vetus and the temple (or temples) of Salus and Serapis. The temple of Salus must undoubtedly have been situated near the Porta Salutaris, which, as we have before remarked, took its name from that sanctuary; and we must consequently seek for the temple of Flora on the W. side of the Quirinal, or that which faced towards the Campus Martius. That it stood on this side is confirmed by what Martial says respecting the situation of his house, which, as we learn from one of his epigrams, lay near the temple of Flora (v. 22. 2):—

> "Sed Tiburtinae sum proximus accola pilae
> Qua videt antiquum rustica Flora Jovem."

(Cf. vi. 27.) From which we also learn that the temple of Flora could not have been very far from that of Jupiter in Numa's Capitol; as indeed likewise appears from the passage of Varro before quoted, with the addition that it must have lain on a lower part of the hill. But as Martial's house is thus shown to have been near the temple of Flora, so also that it was on the W. side of the hill appears from another epigram (i. 108. 2):—

> "At mea Vipsanas spectant coenacula laurus
> Factus in hac ego sum jam regione senex."

It can hardly be doubted that this passage contains an allusion to some laurel trees growing near the Porticus Vipsania, erected, as will appear in a subsequent section, near the Via Lata by Agrippa, whose family name was Vipsanius. This portico is plainly alluded to in another passage of Martial (iv. 18), under the name of Vipsaniae Columnae. There is nothing surprising in Martial's indicating a locality by certain trees. In ancient Rome trees were noted objects, and claimed a considerable share of public attention, as we have already seen with regard to several that grew in or about the forum. Two laurel trees grew before the imperial palace (Tert. *Apol.* 35); and in front of the temple of Quirinus

just described were two sacred myrtles, which were characterised by distinctive appellations as *patricia* and *plebeia*. But, to have faced the Porticus Vipsania, Martial's house must not only have been situated on the western side of the Quirinal, but also towards its southern extremity; which likewise appears from what has been said in the preceding section respecting the *route* from it to that of his friend Pliny being through the Subura and Vicus Cyprius: for this would have been a roundabout way had Martial dwelt towards the northern part of the hill.

All these circumstances tend to show that Numa's Capitol must have stood on the spot before indicated, and the temple of Flora a little to the N. of it. The part of the hill which it occupied was probably that called LATIARIS in the Argive fragments. The part styled COLLIS SALUTARIS must have been that near the gate of the same name, derived from the ancient SACELLUM OF SALUS, which stood near it; in place of which a regular TEMPLE OF SALUS was dedicated by C. Junius Bubulcus, B. C. 203 (Liv. ix. 43, x. 1), and adorned with paintings by Fabius Pictor. These were still to be seen in the time of Pliny, when the temple was destroyed by fire in the reign of Claudius (xxxv. 7; cf. Val. Max. viii. 14. § 6).

Cicero's friend Atticus lived close to the temple of Salus ("—tuae vicinae Salutis," *ad Att.* iv. 1), and at the same time near that of Quirinus: "Certe non longe a tuis aedibus inambulans post excessum suum Romulus Proculo Julio dixerit, se deum esse et Quirinum vocari, templumque sibi dedicari in eo loco jusserit." (*De Leg.* i. 1.) The vicinity of the temples is likewise indicated in another passage relating to a statue of Caesar, which had been erected in that of Quirinus: "De Caesare *vicino* scripseram ad te, quia cognoram ex tuis literis: eum σύνναον Quirino malo quam Saluti" (*ad Att.* xii. 45). Hence the sites of the two temples in question are still further established. For as that of Salus lay on the N. side of the hill, near the Porta Salutaris, and that of Quirinus some 200 yards to the S. of it, at the church of *S. Andrea*, so we may assume that the house of Atticus lay between the two, and he would thus be a close neighbour to both.

Another ancient sacrarium on the Quirinal was that of SEMO SANCUS or DIUS FIDIUS. We have shown, when treating of the Servian gates, that the Porta Sanqualis took its name from this sacellum; and Livy (viii. 20) describes it as facing the temple of Quirinus. Hence it must have stood on or near the site of the *Palazzo Quirinale*, between the temple of Salus and that of Flora. It had a perforated roof, for the deity loved the open air, whence his title of Dius; and some thought that no oath by this god should be sworn under a roof. (Varr. *L. L.* v. § 66.) Sancus was an old Sabine deity, and his temple at Rome appears to have been founded by Tatius. (Ov. *Fast.* vi. 213; Prop. v. 9. 74; Tertull. *ad Nat.* ii. 9.) Its antiquity is attested by the circumstance that the distaff and sandals of Tanaquil, the wife of Tarquinius Priscus, are recorded to have been preserved in it, and are said to have been in existence down to the time of Augustus. (Plin. viii. 74; Plut. *Q. R.* 30.) It appears to have been rebuilt by Tarquinius Superbus, but its dedication was reserved for Sp. Postumius. (Dionys. ix. 60.) The part of the hill where it stood must have been the COLLIS MUCIALIS of the Argive fragments. (Varr. v. § 52.)

There were several TEMPLES OF FORTUNA on the Quirinal, but they do not seem to have been of much importance; and the notices respecting them are very obscure. Vitruvius (iii. 2) mentions three which stood close together at the Porta Collina, belonging perhaps to those alluded to by Ovid under the name of FORTUNA PUBLICA (*Fast.* iv. 375, v. 729), and by Livy, who mentions a temple of FORTUNA PRIMIGENIA on this hill (xxxiv. 53). There was also an ALTAR OF FORTUNA in the Vicus Longus. (Plut. *Fort. Rom.* 10.)

In the street just named stood also a SACELLUM PUDICITIAE PLEBEIAE, founded by Virginia, the daughter of Aulus, after the quarrel between the matrons in that of Pudicitia Patricia alluded to in a former section (Liv. x. 23). Outside of the Porta Collina was a temple of VENUS ERYCINA, near which the Ludi Apollinares were held when the circus had been overflowed by the Tiber. (Liv. xxx. 38; Appian, *B. C.* i. 93.) Of the TEMPLE OF SERAPIS, mentioned in the *Notitia* along with that of Salus, nothing further is known, except that from the fragment of an inscription found near the church of *S. Agata alla Subura*, where possibly the temple may have stood, it may be inferred that it was dedicated by Caracalla. (Gruter, lxxxv. 6; Preller, *Reg.* p. 124.)

These are all the ascertained temples that lay on the Quirinal; for it is a disputed point whether we are to place on this hill the splendid TEMPLE OF SOL, erected by Aurelian. (Aur. Vict. *Caes.* 25; Eutrop. ix. 15 (9); Vopisc. *Aurel.*) Altogether, however, the most probable conclusion is that it stood there, and Becker's objections admit of an easy answer (*Handb.* p. 587, seq.). By those who assume it to have been on the Quirinal it is commonly identified with the remains of a very large building, on the declivity of the hill, in the *Colonna* gardens, on which spot a large Mithraic stone was discovered with the inscription "Soli Invicto." (Vignoli, *de Columna Antoniniana*, p. 174.) This position may be very well reconciled with all the ancient accounts respecting the temple. Becker objects that it is mentioned in the *Notitia* in the 7th Region (Via Lata). But this Region adjoined the western side of the Quirinal, and the temple of the Sun may have been recorded in it, just as many buildings on the declivity of the Aventine are enumerated in the 11th Region, or Circus Maximus. In the *Catalogus Imperatorum Vienn.* (ii. p. 246, Ronc.) it is said of Aurelian, "Templum Solis et Castra in Campo Agrippae dedicavit;" and it will appear in the next section that the Campus Agrippae must have been situated under this part of the Quirinal. Becker assumes from the description given by Vopiscus of his ride with Tiberianus, the conversation during which was the occasion of his writing the life of Aurelian, that the temple in question could not have been so near the Palatine as the spot indicated ("Ibi quum animus a causis atque a negotiis publicis solutus ac liber vacaret, sermonem multum a Palatio usque ad hortos Valerianos instituit, et in ipso praecipue de vita principum. Quumque ad templum Solis venissemus ab Aureliano principe consecratum quod ipse nonnihilum ex ejus origine sanguinem duceret, quaesivit," &c., Vopisc. *Aurel.* 1). We do not know where the Horti Valeriani lay; they might possibly, as assumed by Preller, have been identical with those of Lucullus on the Pincian, subsequently in the possession of Valerius Asiaticus (Tac. *Ann.* xi. 1),

though these continued to bear in general the name of Lucullus. But Becker interprets the passage wrongly when he thinks that the temple of Sol lay beyond these gardens: on the contrary, the passing that temple gave rise to the conversation, which lasted till Vopiscus and his friend arrived at the Horti Valeriani, wherever these may have been; and if they were on the Pincian, the temple of Sol, in the locality indicated, would have been on the road to them from the Palatium. Lastly, we may observe that the Quirinal had, in very early times, been dedicated to the worship of Sol, who was a Sabine deity (Varro, *L. L.* v. § 74); and there was a PULVINAR SOLIS in the neighbourhood of the temple of Quirinus. (Quint. *Inst. Or.* i. 7; *Fast. Capran. Id. Aug.*; cf. Urlichs, *Beschr.* iii. 2. p. 386; Canina, *Indic.* p. 210, seq.: Preller, *Regionen*, p. 137.)

Such were the sanctuaries of the Quirinal. The ancient topographers, who are followed by the modern Italians, have assigned two circi to this quarter: the CIRCUS FLORAE near the temple of the same name, and the CIRCUS SALLUSTII in the gardens of Sallust, between the Quirinal and Pincian. The former has certainly been invented by misconstruing an inscription relating to the games of Flora in the Circus Maximus. (Becker, *Handb.* p. 673.) It is more doubtful whether a Circus Sallustii may not have existed. We have seen from a passage of Livy that the Ludi Apollinares were performed outside the Porta Collina when the overflowing of the Tiber prevented their performance in the usual place; and, according to Canina (*Indicaz.* p. 199), traces of a circus are still visible in that locality. But none is mentioned in the catalogues of the Regions, nor does it occur in any ancient author. The HORTI SALLUSTIANI, however, undoubtedly lay in the valley between the Quirinal and Pincian, but their exact extent cannot be determined. They were formed by Sallust the historian with the money which he had extorted in Numidia. (Dion Cass. xliii. 9.) The house of Sallust lay near to the (subsequent) Porta Salaria, as we learn from Procopius, who relates that it was burnt in the storm of the city by Alaric, and that its half-consumed remains still existed in his time. (*B. V.* i. 2.) The Anonymous of Einsiedlen mentions some THERMAE SALLUSTIANAE near the church of *S. Susanna;* and the older topographers record that the neighbourhood continued to be called *Salustricum* or *Salustium* even in their days. (Andr. Fulvius, *de Urb. Ant.* p. 140; Luc. Fauno, *Ant. di R.* iv. 10. p. 120.) Becker (*Handb.* p. 585) raises a difficulty about the situation of these gardens from a passage in Tacitus (*Hist.* iii. 82), which, however, presents none if rightly understood. The Flavian troops which had penetrated to the gardens of Sallust *on their left* were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. *Ann.* xiii. 49.)

The Horti Sallustiani subsequently became imperial property, though in what manner is unknown. The first notice which we find of them as such occurs under Nero in the passage just cited from Tacitus. Several emperors are described as residing in them, as Vespasian, Nerva, and Aurelian. (Dion Cass. lxvi. 10; Vopisc. *Aur.* 49; Hieron. p. 445, Ronc.)

Also close to the Porta Collina, but inside and to the right of it, lay the CAMPUS SCELERATUS, immediately under the *agger*. The spot obtained its name from being the place where Vestal Virgins convicted of unchastity were buried alive; for even in this frightful punishment they retained their privilege of being interred within the walls. Dionysius attributes the introduction of this mode of execution to Tarquinius Priscus; and, according to Livy, the first example of its application was in the case of Minucia, B. C. 348. Dionysius, however, calls the first vestal who suffered Pinaria. (Dionys. ii. 67, iii. 67; Liv. viii. 15; Plut. *Num.* 10.)

The emperors appear to have shared with the vestals the privilege of intramural interment, although they did not always avail themselves of it. Indeed, according to Hieronymus (vol. i. p. 449, Ronc.), Trajan was the only emperor buried within the walls; but this statement is certainly erroneous, since Domitian erected a magnificent mausoleum for the Flavian family somewhere between the gardens of Sallust and the spot subsequently occupied by the baths of Diocletian. It is the object mentioned under the name of "Gens Flavia" in the *Notitia*, and is alluded to in several epigrams of Martial, in one of which he designates it as being near his own dwelling (v. 64. 5):—

> "Tam vicina jubent nos vivere Mausolea,
> Quum doceant ipsos posse perire deos."

(Cf. ix. 2 and 35; Stat. *Silv.* iv. 3. 18.) It was commonly called TEMPLUM GENTIS FLAVIAE, as appears from Suetonius (*Dom.* 17); but the same passage shows it to have been a sepulchre also, since the ashes of Julia, the daughter of Titus, as well as those of Domitian himself, were deposited in it. (Cf. Becker, *de Muris*, &c. p. 69.) It was erected on the site of the house in which Domitian was born, designated as being AD MALUM PUNICUM (Suet. *Dom.* 1); which name occurs again in the *Notitia*, and could not, therefore, have been applied to the whole Region, as Preller supposes (*Regionen*, p. 69), but must have denoted some particular spot, perhaps a vicus, called after a pomegranate tree that grew there. We have already adverted to the importance attached to trees growing within the city.

The only other object that remains to be noticed on the Quirinal is the PRAETORIAN CAMP, since the baths of Diocletian will be described under the proper head. We have related in the former part of this article that the Castra Praetoria were established in the reign of Tiberius outside the Porta Collina, to the eastward of the agger. They were arranged after the usual model of a Roman camp, and were enclosed within a brick wall, of which there are still some remains. (Canina, *Indicaz.* p. 194.) They were included within the wall of Aurelian, which preserved their outline. We need only add that the 6th Region of Augustus, of which the Esquiline formed the principal part, was called ALTA SEMITA, from a road which ran along the whole back of the hill, answering to the modern *Strada di Porta Pia.*

The PINCIAN HILL presents but few objects of importance. Its earlier name was COLLIS HORTORUM, or HORTULORUM, derived from the gardens which covered it; and it was not till a late period of the empire that it obtained the name of Mons Pincius, from a magnificent palace of the Pincian family which stood upon it. (Urlichs, *Beschr.* vol. iii. part. ii. p. 572, *Röm. Top.* p. 136.) This DOMUS PINCIANA is rendered interesting from

its having been the residence of Belisarius during his defence of Rome. It is the same building mentioned by Procopius under the name of παλάτιον. (Procop. *B. G.* ii. 8. 9; Anastasius, *V. Silver.* pp. 104, 106, Blanch) The part of the hill included within the later city was bounded by the wall of Aurelian, by the valley which separates the Pincian from the Quirinal, and by the Campus Martius on the west.

The most famous place on the Pincian was the GARDENS OF LUCULLUS. Their situation is determined by a passage in Frontinus, from which we learn that the arches of the Aqua Virgo began under them. (*Aq.* 2.) This must have been in the street called *Capo le Case*, since the arches are still in existence from that spot to the *Fontana di Trevi*. (Canina, *Indic.* p. 395.) The early history of these gardens is obscure. They were probably formed by a Lucullus, and subsequently came into the possession of Valerius Asiaticus, by whom they were so much improved that Messalina's desire of possessing them caused the death of Valerius. (Tac. *Ann.* xi. 1, 32, 37.) They appear to have been also called after him "Horti Asiatici" (Becker, *Handb.* p. 591), and it is possible, as we have said before, that they may sometimes have borne the name of "Horti Valeriani." They were the scene of Messalina's infamous marriage with Silius (Juv. *S.* x. 334) and of her death by the order of Claudius. (Tac. *Ann.* xi. 37.) The gardens remained in the possession of the imperial family, and were reckoned the finest they had. (Plut. *Lucull.* 39.) The family of the Domitii, to which Nero belonged, had previously possessed property, or at all events a sepulchre, on the Pincian; and it was here that the ashes of that emperor were deposited. (Suet. *Ner.* 50.) Popular tradition places it on that part of the hill which overhangs the church of *S. Maria del Popolo* near the gate of the same name.

XIII. THE CAMPUS MARTIUS, CIRCUS FLAMINIUS, AND VIA LATA.

The whole plain which lies between the Pincian, Quirinal, and Capitoline hills on the E. and the Tiber on the W.,—on which the principal part of modern Rome stands,—may be designated generally by the name of CAMPUS MARTIUS, though strictly speaking it was divided into three separate districts. It is narrow at the northern part between the Pincian and the river, but afterwards expands to a considerable breadth by the winding of the Tiber. It is terminated by the approach of the latter to the Capitoline hill, between which and the stream a part of the Servian wall forming its southern boundary anciently ran. It was cut through its whole length by a straight road, very nearly corresponding with the modern *Corso*, running from the Porta Flaminia to the foot of the Capitol. The southern part of the district lying between this road and the hills formed, under the name of Via Lata, the 7th of the Augustan Regions; but how far it extended to the N. cannot be determined. From its northern boundary, wherever it may have been, to the Porta Flaminia and beyond that gate, the road before described was called Via Flaminia. The southern portion of the Campus Martius lying between the same road and the Tiber, as far N. as the modern *Piazza Navona* and *Piazza Colonna*, constituted the 9th Region of Augustus, under the name of CIRCUS FLAMINIUS.

In the earlier times all this district between the hills and the river was private property, and was applied to agricultural purposes. We have already related in the former part of this article, how, after the expulsion of the Tarquins, the Campus Martius was assigned, or rather perhaps restored, to the public use. But the southern portion of the plain appears still to have belonged to private owners. The most considerable of these possessions was the PRATA FLAMINIA, or CAMPUS FLAMINIUS, which, however, must soon have become public property, since we find that assemblies of the people were held here under the decemvirs. (Liv. iii. 54.) Among these private estates must have been the AGER CATI, in which was a fountain whence the stream called Petronia flowed into the Tiber, and seems to have formed the southern boundary of the proper Campus Martius ("Petronia amnis est in Tiberim perfluens, quam magistratus auspicato transeunt cum in Campo quid agere volunt," Fest. p. 250; cf. Paul. Diac. p. 45); also the CAMPUS TIBERINUS, the property of the vestal Taracia, or Suffetia, which she presented to the people. (Plin. xxxiv. 11.)

We shall begin the description of this district from its southern side; that is, from the Servian wall between the Capitoline hill and the Tiber. Immediately before the Porta Carmentalis lay the FORUM OLITORIUM. It was, as its name implies, the vegetable market. (Varr. *L.L.* v. § 146.) The ELEPHAS HERBARIUS, or bronze statue of an elephant, which stood near the boundary of the 8th Region (v. *Notitia*) has by some topographers been connected with this forum, merely, it would seem, from the epithet *herbarius;* but the wall must have made here a decided separation between the 8th and 9th Regions. There were several temples in the Forum Olitorium, as those of Spes, of Juno Sospita, of Pietas, and of Janus. The TEMPLE OF SPES was founded by M. Atilius Calatinus in the First Punic War. (Tac. *Ann.* ii. 49; Cic. *N. D.* ii. 23; Liv. xxi. 62.) It was destroyed in the great fire which devastated this neighbourhood during the Second Punic War (Liv. xxiv. 47), and though soon rebuilt, was again burnt down in B. C. 30; after which the restored temple was dedicated by Germanicus. (Tac. *l. c.*) The TEMPLE OF JUNO was consecrated by C. Cornelius Cethegus in B. C. 195. There is a confusion in Livy between the names of SOSPITA and MATUTA applied to this deity (xxxii. 30, xxxiv. 53); and it is difficult to decide which epithet may be the correct one. The TEMPLE OF PIETAS is connected with the well-known legend of the Roman daughter who nourished her father (or mother) when in prison with the milk of her breast, and is said to have resided on the spot where the temple was erected. (Festus, p. 209; Val. Max. ii. 5. § 1.) It was dedicated in B. C. 180 by the son of M. Acilius Glabrio, in pursuance of a vow made by his father, on the day when he engaged king Antiochus at Thermopylae. (Liv. xl. 34.) It was pulled down in order to make room for the theatre of Marcellus. (Plin. vii. 36.) There appears, however, to have been another temple of Pietas in the Circus Flaminius itself. (Jul. Obs. 114.) Close by was the TEMPLE OF JANUS, to which we have already adverted in the former part of this article. The greater portion of the Forum Olitorium must have been engrossed by the THEATRE OF MARCELLUS, of which we shall speak in another section; and it may therefore be doubted whether it continued to serve the purposes of a market when the theatre was

erected. On the Forum Olitorium also stood the Columna Lactaria, so called because children were provided with milk at that spot. (Paul. Diac. p. 118.) The supposition that there was likewise a Forum Piscarium in this neighbourhood rests only on a doubtful reading in Varro. (*L. L.* v. § 146.)

The Campus Flaminius began at an early period to be occupied with temples and other public buildings. One of the most ancient and renowned of the former was the Temple of Apollo. The site appears to have been sacred to that deity from very early times, and was called Apollinare, probably from some altar which stood there. (Liv. iii. 63.) The temple was dedicated in B. C. 430, in consequence of a vow made with the view of averting a pestilence. (Liv. iv. 25, 29.) It remained down to the time of Augustus the only temple of Apollo at Rome, and must have been of considerable size, since the senate frequently assembled in it. It lay between the Forum Olitorium and Circus Flaminius, or, according to Pliny's designation, which amounts to the same thing, close to the Porticus Octaviae. (Ascon. *ad Cic. in Tog. Cand.* p. 90, Orell.; Plin. xxxvi. 5. s. 34.)

Another celebrated and important temple was the Aedes Bellonae, since it was the chief place for assemblies of the senate when it was necessary for them to meet outside of the *pomoerium*; as, for instance, when generals *cum imperio* were soliciting them for a triumph, for the reception of foreign ambassadors whom it was not advisable to admit into the city, and other similar occasions. Close to it was one of the three Senacula mentioned by Festus (p. 347). The temple of Bellona is said to have been built in pursuance of a vow made by Appius Claudius Caecus, in the battle against the Etruscans, B. C. 297 (Liv. x. 19); but according to Pliny (xxxv. 3) it was built by Appius Claudius Regillensis two centuries earlier, who placed the images of his forefathers in it, B. C. 494; in which case the vow of Appius Claudius Caecus must have been accomplished by restoring the former temple. In front of the temple lay a small area, on which stood the Columna Bellica, so called because it was the spot whence the Fetialis threw a lance in the ceremony of declaring war. When the war with Pyrrhus broke out this custom could not be observed in the usual manner by throwing the lance into the enemy's country; wherefore, a captured soldier of Pyrrhus's was made to buy a piece of ground near the temple, which symbolised the territory of the enemy; and into this the lance was flung on all subsequent occasions of declaring war against a people whose country lay beyond the sea. (Serv. *ad Aen.* ix. 53.) This custom was observed as late as the time of Marcus Aurelius. (Dion Cass. lxxi. 33.) There are two points in dispute about this temple; first, whether the area containing the Columna Bellica stood before or behind it; and secondly, whether the temple itself stood at the eastern or western end of the Circus Flaminius; which latter question also concerns the site of the temple of Hercules Custos, as will be seen from the following lines of Ovid (*Fast.* vi. 206): —

> "Prospicit a templo summum brevis area Circum:
> Est ibi non parvae parva columna notae.
> Hinc solet hasta manu, belli praenuntia, mitti,
> In regem et gentes quum placet arma capi.
> Altera pars Circi custode sub Hercule tuta est
> Quod deus Euboico carmine munus habet."

In the first line Becker (*Handb.* p. 607) reads "a tergo," with Merkel, instead of "a templo," which is the reading of Heinsius, and of most editions, and thus places the *area* behind the temple. But this was not the usual situation for an area, and there is express authority that the column stood *before* the temple. (Paul. Diac. p. 33; Serv. *l. c.*, where Becker admits that we should read "ante aedem" for "ante pedem.") The other point respecting the site of the temple depends on whether "summus circus" means the part where the *carceres* were, or the circular end. Becker adopts the former meaning, and consequently places the temple of Bellona at the eastern end of the circus, and that of Hercules Custos at the western end. Urlichs reverses this order, and quotes in support of his view Salmasius, *ad Solin.* p. 639, A.: "Pars circi, ubi metae ultimae *superior* dicitur; *inferior* ad carceres." (*Antw.* p. 31.) This is a point that is not altogether established; but Becker's view seems in this case the more probable one, as will appear a little further on, when we come to treat of the Villa Publica.

The Circus Flaminius itself, which will be described in another section, lay under the Capitol, on which side its *carceres* were, and extended in a westerly direction towards the river. Between it and the theatre of Marcellus lay the Porticus Octaviae,—which must be carefully distinguished from the Porticus Octavia, built by Cn. Octavius,—enclosing Temples of Jupiter Stator and Juno. This portico occupied the site of a former one built by Q. Caecilius Metellus, after his Macedonian triumph, and called after him Porticus Metelli. It seems most probable that the two temples before alluded to were in existence before the time when Metellus erected his portico; but the notices on this subject in ancient authors are obscure and contradictory. (Becker, *Handb.* p. 608, seq.) There can be no doubt, however, that the Porticus Octaviae superseded that of Metellus. (Plin. xxxiv. 14; cf. Plut. *C. Gracch.* 4.) It was erected by Augustus, and dedicated in the name of his sister; but at what date is uncertain. (Suet. *Aug.* 29; Ov. *A. A.* iii. 391.) It contained a library, which was destroyed in the great fire in the reign of Titus, with all its literary treasures. (Dion Cass. xlix. 43, lxvi. 24; Suet. *Ill. Gramm.* 21.) This library was probably in the part called the "Schola in porticibus Octaviae," and, like the Palatine library, was sometimes used for assemblies of the senate. (Plin. xxxv. 10. s. 114, xxxvi. 5, s. 22. s. 28; Dion Cass. lv. 8.) Hence, it was even called Octavia Curia, and sometimes Octaviae Opera. The church of *S. Angelo in Pescaria* now stands opposite to its principal entrance towards the river.

Close to the Porticus Octaviae, on its western side, lay the Porticus Philippi, enclosing a temple of Hercules Musarum. This temple was built by M. Fulvius Nobilior, the conqueror of the Aetolians (Cic. *p. Arch.* 11), and rebuilt by L. Marcius Philippus, the step-father of Augustus, who also surrounded it with the portico. (Suet. *Aug.* 29.) The name of the temple does not signify, as Becker supposes (*Handb.* p. 613), that it was dedicated to Hercules *and* the Muses, but to Hercules as leader of the Muses (Μουσαγέτης), the genitive, *Musarum*, depending on Hercules, as appears from coins of the Gens Pomponia, where he is represented in that character, with the legend HERCVLES MVSARVM, as well as from an inscription in Gruter (mlxx.

5) HERCVLI . MVSARVM . PYTHVS (Urlichs, *Röm. Topogr.* p. 140, and *Antw.* p. 32). Indeed Eumenius expressly says that Fulvius Nobilior when in Greece had heard "Herculem Musagetem esse comitem ducemque Musarum" (*pro Inst. Schol. Aug.* p. 195, Arntz.); and we learn from Ovid that the statue of Hercules represented him with a lyre (*Fast.* vi. 810):—

"Annuit Alcides, increpuitque lyram."

The vicinity of the temple and portico is indicated in Martial (v. 49. 8).

It is supposed that the THEATRUM BALBI lay close to the western side of this portico, and, a little farther on, opposite the round end of the circus, but rather to the north of it, the THEATRUM POMPEII; of which latter there are still some remains at the *Palazzo Pio.* Pompey's theatre must have lain close to the boundary between the Campus Martius and Circus Flaminius since Pliny mentions that a colossal statue of Jupiter, erected by the emperor Claudius in the Campus, was called Pompeianus from its vicinity to the theatre ("Talis in Campo Martio Jupiter a Divo Claudio Caesare dicatus, qui vocatur Pompeianus a vicinitate theatri," xxxiv. 18). The same thing might also be inferred from Cicero ("Quid enim loci natura afferre potest, ut in porticu Pompeii potius quam in Campo ambulemus," *de Fato,* 4.) Hence it would appear that the boundary of the two districts, after proceeding along the northern side of the Circus Flaminius, took a north-westerly direction towards the river. The PORTICUS POMPEII adjoined the *scena* of his theatre, and afforded a shelter to the spectators in the event of bad weather. (Vitruv. v. 9.) But what conferred the greatest interest on this group of buildings was the CURIA POMPEII, a large hall or hexedra in the portico itself, sometimes used for the representation of plays as well as for assemblies of the senate. It was here that Caesar was assassinated, at the base of Pompey's statue; an event which caused it to be regarded as a *locus sceleratus,* and to be walled up in consequence. (Cic. *Div.* ii. 9; Dion Cass. xliv. 16. 52; Suet. *Caes.* 80, 88; Plut. *Brut.* 14, *Caes.* 66, &c.) The statue of Pompey, however, was first taken out by order of Augustus, and placed under a marble arch or Janus, opposite the portico. (Suet. *Aug.* 31.) It is a question whether the portico styled HECATOSTYLON, from its having a hundred columns, was only another name for the portico of Pompey, or quite a distinct building. It is sometimes mentioned in a manner which would seem to intimate that it was identical with the Porticus Pompeii. Thus both are said to have had groves of plane-trees (Prop. ii. 32. 11), and to have been consumed in one and the same fire. (Hieron. *Chron.* p. 475, Ronc.) The following lines of Martial, however, appear to show that they were separate, but adjoining buildings (ii. 14. 6):—

"Inde petit centum pendentia tecta columnis;
Illinc Pompeii dona nemusque duplex"

From these lines, and from two fragments of the Capitoline Plan, Canina has correctly inferred that there were two distinct porticoes, and that the Hecatostylon adjoined the N. side of that of Pompey. (*Indic.* p. 373.) Pompey also built a private dwelling-house near his theatre, in addition to the house which he possessed in the Carinae. The former of these seems to have been situated in some gardens. (Plut. *Pomp.* 40, 44.) We find other HORTI POMPEII mentioned with the epithet of *superiores,* probably from their lying on the Pincian hill. (Ascon. *ad Cic. Mil. Arg.* p. 37, and c. 25. p. 50, Orell.)

Near the theatre of Pompey was also the PORTICUS OCTAVIA, which, as we have said, must be carefully distinguished from the Porticus Octaviae. It was a double portico originally erected by Cn. Octavius after his triumph over Perseus. It was likewise called CORINTHIA, from its columns being adorned with bronze capitals. (Plin. xxxiv. 7; Vell. Pat. ii. 1; Fest. p. 178.) Augustus rebuilt it, but dedicated it again in the name of its founder. Also near the theatre was the TRIUMPHAL ARCH OF TIBERIUS, erected by Claudius. (Suet. *Claud.* 11.)

Other temples in the district of the Circus Flaminius, besides those already enumerated, were a TEMPLE OF DIANA, and another of JUNO REGINA, — different from that of Juno in the Porticus Octaviae,—both dedicated by M. Aemilius Lepidus, B.C. 179. (Liv. xl. 52.) An AEDES FORTUNAE EQUESTRIS vowed by Q. Fulvius Flaccus in a battle against the Celtiberians, B. C. 176. (Liv. xl. 40, 44, xlii. 3, 10.) It stood near the theatre of Pompey in the time of Vitruvius (iii. 3. § 2, Schn.), but seems to have disappeared before that of Tacitus. (*Ann.* iii. 71.) A TEMPLE OF MARS, founded by D. Junius Brutus Callaicus (Plin. xxxvi. 5. s. 26); one of NEPTUNE, cited as "delubrum Cn. Domitii" (*Ib.*; Gruter, *Inscr.* cccxviii. 5); one of CASTOR AND POLLUX (Vitruv. iv. 8. 4); and probably also one of VULCAN. (*Fast. Capran. X. Kal. Sep.*) Some of these last, however, were perhaps, mere *sacella* in the circus itself.

A few profane objects will close the list of public buildings in this quarter. The STABULA IV. FACTIONUM of the *Notitia* must have been the stables in which the horses of the four factions or colours of the circus, albata, prasina, russata, and veneta, were kept. Domitian added two more colours, the aurata and purpurea, and another reading of the *Curiosum* mentions six stables, whilst the *Notitia* — certainly erroneously — names eight; but it seems most probable that there were only four. (Preller, *Regionen,* p. 167.) Some of the emperors paid great attention to these stables. Tacitus represents Vitellius as building some (*Hist.* ii. 94); and Caligula was constantly dining and spending his time in the stables of the Green Faction. (Suet. *Cal.* 55.) The four in question were probably situated under the Capitol, near the carceres of the Circus Flaminius. Between the Porticus Philippi and the theatre of Balbus lay two PORTICUS MINUCIAE, styled respectively VETUS and FRUMENTARIA, both built by Minucius who was consul in B. C. 111. (Vell. Pat. ii. 8.) The *Frumentaria* appears to have been the place in which the *tesserae* were distributed to those entitled to share the public gifts of corn. (Appul. *de Mund.* extr. p. 74. 14, Elm.; cf. Cic. *Phil.* ii. 34; Lampr. *Comm.* 16.) The CRYPTA BALBI mentioned in the *Notitia* was probably a peculiar species of portico, and most likely attached to the theatre of Balbus. A *crypta* differed from a portico by having one of its sides walled, and by being covered with a roof, in which were windows. (Urlichs, *Beschr.* vol. iii. pt. ii. p. 62.)

Such were the public buildings in the district called Circus Flaminius; immediately to the N. of which lay the CAMPUS MARTIUS, sometimes called merely Campus. The purposes to which this plain

was applied were twofold; it served for gymnastic and warlike exercises, and also for large political assemblies of the people, as the *comitia* and *contiones*. At first it must have been a completely open field with only a few scattered sacred places upon it; and it was not till the 6th century of the city that regular temples began to be built there. By degrees it became covered with buildings, except in that part devoted to the public games and exercises, and especially the *equiria*, or horse-races, instituted by Romulus in honour of Mars. (Varr. *L. L.* vi. § 13; Paul. Diac. p. 81.) The spot where these took place is indicated by Ovid (*Fast.* iii. 519):—

> "Altera gramineo spectabis Equiria campo
> Quem Tiberis curvis in latus urget aquis.
> Qui tamen ejecta si forte tenebitur unda
> Caelius accipiet pulverulentus equos."

The part of the Campus the side of which may be said to be "pressed upon" by the stream of the Tiber, is that lying between *Piazza Navona* and the bridge of *S. Angelo*, where the ground forms an angle opposed to the descending waters. Here also was the bathing-place of the Roman youth. (Hor. *Od.* iii. 7. 25; Comp. Cic. *pro Coel.* 15.)

Some writers have assumed that this spot was regarded as forming a distinct division called CAMPUS MINOR, whilst the remainder of the plain was called CAMPUS MAJOR. (Preller, *Regionen*, p. 160; Urlichs, *Röm. Marsfeld*, p. 19; Canina, *Indic*, pp. 384, 412.) But this distinction does not appear to rest on adequate authority. It is derived from a passage in Catullus: "Te campo quaesivimus minore" (liii. (lv.). 3); and from another in Strabo, quoted in the former part of this article, where, in describing the Campus Martius, he speaks of another field, or plain, near it (*πλησίον δ' ἐστὶ τοῦ πεδίου τούτου καὶ ἄλλο πεδίον, καὶ στοαὶ κύκλῳ παμπληθεῖς, κ. τ. λ.*). But, as Becker observes (*Handb.* p. 599), Strabo has already described the Campus Martius as the usual place for gymnastic exercises, and therefore his *ἄλλο πεδίον* cannot be the part of it just described. It seems most probable that he meant the Campus Flaminius, which still retained its ancient name, though for the most part covered with the porticoes and other buildings which he describes; just as we have a Moorfields and Goodman's Fields in the heart of London. The Campus Minor of Catullus may have been the Campus Martialis on the Caelian; or, as Preller observes, the punctuation may be:—

> "Te campo quaesivimus, minore
> Te in circo."

The ancient *loci religiosi* on the Campus Martius were the following:—The PALUS CAPREAE, or CAPRAE, where Romulus is said to have disappeared during the holding of an assembly of the people: its situation is unknown; but it does not seem improbable, as Preller suggests (*Regionen*, p. 137), that its site may have been marked by the AEDICULA CAPRARIA, mentioned in the *Notitia* in the 7th Region, and that it may consequently have lain somewhere under the Quirinal. (Liv. i. 16; Ov. *Fast.* ii. 489, &c.) A place called TARENTUM, or TERENTUM, which appears to have been volcanic (campus ignifer), with a subterranean ARA DITIS PATRIS ET PROSERPINAE, where the ludi saeculares were performed. The legend of Valesius and his children, and an account of the institution of the games, will be found in the *Dictionary of Antiquities*, p. 716. We are here only concerned for the situation of the place, which is very variously assigned by different writers. Urlichs placed it in the Forum Boarium, which, however, must be wrong, as it was undoubtedly in the Campus Martius (Val. Max. ii. 4. § 5; Festus, p. 329), though at one extremity of it. (Zos. ii. 4.) Hence Becker placed it near the mausoleum of Augustus, being led to this conclusion by the Sibylline oracle recorded by Zosimus (*l.c.*):—

> *Ῥέζειν ἐν πεδίῳ παρὰ Θύμβριδος ἄπλετον ὕδωρ*
> *Ὅππῃ στεινότατον.*

Becker refers the word *στεινότατον* in this passage to *πεδίον*, and hence selects the northern part of the Campus for the site of Tarentum, as being the narrowest. But it may equally well refer to *ὕδωρ*; and the narrowest part of the Tiber in its course through the Campus Martius — taking that appellation in its more extended sense—is where it is divided by the Insula Tiberina. Other passages adduced are undecisive, as those of Ovid (*Fast.* i. 501) and Seneca (*de Morte Claudii*, 13); and therefore though Preller (*Regionen*, Anhang, p. 241) pronounces against Becker's site, we must leave the question undetermined.

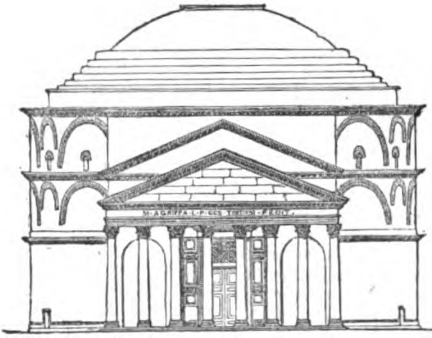
The ARA MARTIS, near which, when the *comitia* were ended the newly-elected censors took their seats in curule chairs, was probably the earliest holy place dedicated to the god on the Campus which bore his name. We have already observed, when treating of the Porta Fontinalis, that it must have been near that gate, and that it was perhaps erected by Numa. There was also an AEDES MARTIS on the Campus, probably at the spot where the *equiria* were celebrated. (Dion Cass. lvi. 24; Ov. *Fast.* ii. 855.) It seems to have been a distinct temple from that already mentioned in the Circus Flaminius. The site of the TEMPLE OF THE LARES PERMARINI, dedicated by the censor M. Aemilius Lepidus, B. C. 179, in pursuance of a vow made by L. Aemilius Regillus after his naval victory over the fleet of Antiochus, cannot be determined (Liv. xl. 52; Macrob. *Sat.* i. 10); but it may probably have stood, as Preller conjectures, near the Navalia. The AEDES JUTURNAE, built by Q. Lutatius Catulus towards the end of the Republic, stood near the arches of the Aqua Virgo, and consequently near the Septa. (Serv. *ad Aen.* xii. 139; Ov. *Fast.* i. 463; Cic. *pro Cluent.* 36.)

Such was the Campus Martius down to the imperial times; when the great works undertaken there by Julius Caesar and Augustus gave it quite a new appearance. But, before we proceed to describe these, we must say a few words respecting the NAVALIA, or government dockyards. The older topographers placed them under the Aventine, from confounding them with the Emporium or commercial docks. Piale first pointed out the incorrectness of this view; but erred himself in placing the Navalia on the opposite bank of the Tiber, from his ignorance of certain passages which determine them to have been in the Campus Martius. These passages, which were first adduced by Becker (*de Muris, &c.* p. 96, *Handb.* p. 159), are the following: "Spes unica imperii populi Romani, L. Quinctius, trans Tiberim contra eum ipsum locum, ubi nunc Navalia sunt, quatuor jugerum colebat agrum, quae prata Quinctia vocantur." (Liv. iii. 26.) This passage shows the Navalia to have been on the left bank of the Tiber, opposite some fields called prata Quinctia; and the following one from Pliny fixes the situation

of these fields in the district called Vaticanus: "Aranti quatuor sua jugera in Vaticano, quae prata Quinctia appellantur, Cincinnato viator attulit dictaturam" (xviii. 4). That the Navalia were in the Campus Martius may also be inferred from Livy (xlv. 42): "Naves regiae captae de Macedonibus inusitatae ante magnitudinis in Campo Martio subductae sunt"; and from Plutarch's account of the return of the younger Cato from Cyprus, in which he relates that although the magistrates and senate, as well as a great part of the Roman population, were ranged along both banks of the Tiber in order to greet him, yet he did not stop the course of his vessels till he arrived at the Navalia (*Cat. Min.* 39); a circumstance which shows that this arsenal must have lain towards the upper part of the stream's course through the city. Hence, though we cannot define the boundary between the Janiculum and the Vatican, nor consequently the exact situation of the Prata Quinctia, yet the site fixed upon by Becker for the Navalia, namely, between the *Piazza Navona* and *Porto di Ripetta*, seems sufficiently probable. Preller is disposed to place them rather lower down the stream, but without any adequate reason (*Regionen*, Anh. p. 242).

It was Caesar who began the great changes in the Campus Martius to which we have before alluded. He had at one time meditated the gigantic plan of diverting the course of the Tiber from the Milvian bridge to the Vatican hill, by which the Ager Vaticanus would have been converted into a new Campus Martius, and the ancient one appropriated to building; but this project was never carried into execution. (Cic. *ad Att.* xiii. 33.) The only building which he really began in the Campus was the SEPTA JULIA. It has been said, when treating of the Porta Flumentana, that a spot near the Circus Flaminius was appropriated to the holding of the Comitia Centuriata. In early times it was enclosed with a rude kind of fence or boundary, probably of hurdles; whence, from its resemblance to a sheep-fold, it obtained the name of OVILE, and subsequently of Septa. (Liv. xxvi. 22; Juv. vi. 528; Serv. *ad Virg. Ec.* i. 34.) For this simple and primitive fence Caesar substituted a marble building (Septa marmorea), which was to be surrounded with a portico a mile square, and to be connected with the Villa Publica. (Cic. *ad Att.* iv. 16.) It was probably not much advanced at the time of Caesar's assassination; since we find that it was continued by the triumvir Lepidus, and finally dedicated by Agrippa (Dion Cass. liii. 23); but whether it was completed on the magnificent plan described by Cicero cannot be said. Its situation may be determined by a passage in Frontinus, in which he says that the arches of the Aqua Virgo ended in the Campus Martius in front of the Septa. (*Aq.* 22.) These arches, which, as we have seen before, began under the gardens of Lucullus on the Pincian, were conducted to the baths of Agrippa. Donati mentions that remains of them were discovered in his time in front of the church of *S. Ignazio* (near the *Collegio Romano*). (*De Urb. R.* iii. 18.) This coincides with remains of the portico of the Septa existing under the *Palazzo Doria* and church of *S. Maria in Via Lata* in the *Corso* (Canina, *Indic.* 400); and we may therefore conclude that the Septa Julia stood at this spot. The portico must have enclosed a large open space where the assemblies were held, and in which gladiatorial shows, and on one occasion even a naumachia, were exhibited. (Suet. *Aug.* 43, *Cal.* 18, *Ner.* 12; Dion Cass. lv. 8, lix. 10.) There was of course a suggestum or rostra, for haranguing the people. (Dion Cass. lvi. 1.) The Septa were destroyed in the great fire under Titus (Dion Cass. lvi. 24), but must have been restored, since, in the time of Domitian, when they had lost their political importance, they appear to have been used as a market, in which the most valuable objects were exposed for sale. (Mart. ix. 60.) They appear to have undergone a subsequent restoration under Hadrian. (Spart. *Hadr.* 19.)

The VILLA PUBLICA adjoined the Septa Julia, and must have been on its S. side, since it is described by Varro (*R. R.* iii. 2) as being "in Campo Martio extremo," and must consequently have lain between the Septa and the Circus Flaminius, near the *Palazzo di Venezia*. The original one was an ancient and simple building, and is mentioned by Livy (iv. 22) as early as the year B. C. 436. It was used by the consuls for the levying of troops, and by the censors for taking the census (Varr. *l. c.*); also for the reception of foreign ambassadors whom it was not thought advisable to admit into the city, and of Roman generals before they obtained permission to enter the gates in triumph (Liv. xxx. 21, xxxiii. 24, &c.). It was the scene of the massacre of the four Marian legions by Sulla (Val. Max. ix. 2. § 1; Liv. *Epit.* lxxxviii.; Strab. v. 249). A passage in Lucan respecting this horrible transaction confirms the position of the Villa Publica close to the Septa (ii. 196): —



"Tunc flos Hesperiae, Latii jam sola juventus
Concidit et miserae maculavit Ovilia Romae"

And another passage in Plutarch shows that it must have adjoined the Circus Flaminius on the other side (Οὐ μὴν ἀλλὰ καὶ τούτους καὶ τῶν ἄλλων τοὺς περιγενομένους εἰς ἑξακισχιλίους ἀθροίσας παρὰ τὸν ἱππόδρομον, ἐκάλει τὴν σύγκλητον εἰς τὸ τῆς Ἐνυοῦς ἱερόν, *Sull.* 30.) Seneca (*de Clem.* i. 12) likewise mentions the assembling of the senate in the neighbouring temple of Bellona, where the cries of the massacred soldiers were heard; and this circumstance would rather lead us to suppose that the temple in question was situated at the eastern end, or towards the *carceres*, of the Circus Flaminius, since the Septa and Villa Publica must have lain towards that end of it nearest to the Capitol. The simple building described by Varro must have been that rebuilt in the censorship of S. Aelius Paetus and C. Cornelius Cethegus, B. C. 194. Caesar could hardly have done anything to it, since a coin of C. Fonteius Capito, consul in B. C. 33, testifies that the latter either restored or rebuilt it.

The name of M. Vipsanius Agrippa, the son-in-law of Augustus, is connected with the principal changes and the most important buildings in the Campus Martius. The latter consisted of the Pantheon, the thermae, a portico, and the large structure called the Diribitorium. The Campus Agrippae and its buildings will be described when we come to treat of that part of the district under consideration called Via Lata.

The PANTHEON of Agrippa, which is still in so good a state of preservation that it serves for public worship, is one of the finest monuments of ancient Rome. An inscription on the frieze of the portico testifies that it was erected by Agrippa in his third consulate; whilst another below records repairs by the emperors Septimius Severus and Caracalla. From

a very corrupt passage in Pliny (xxxvi. 24. s. 1), topographers have related that the temple was dedicated to Jupiter Ultor; but this is altogether inconsistent with other accounts of its destination; and it appears from an emendation of Jan, derived from the Codex Bambergensis, that we should read *Diribitorii* for *Jovi Ultori* (Becker, *Handb.* p. 635). Dion Cassius states that it received the name of Pantheon because it contained the images of many gods (liii. 27), which, however, seem to have been those of the deities mythically connected with the Julian race, and among them that of Caesar himself. The temple is circular, and its magnificent portico with triple row of columns, though perhaps not quite in harmony with the main building, cannot fail to excite the admiration of the beholder. It owes its

PANTHEON OF AGRIPPA.

excellent state of preservation partly to the solidity of its construction, partly to its having been consecrated as a Christian church as early as the reign of Phocas, under the title of *S. Maria ad Martyres*, or *della Rotonda*. To the lover of the fine arts it is doubly interesting from containing the tomb of Raphael. Some architects have thought that it was not originally intended for a temple, but as part of the baths; a notion, however, that is refuted by passages in ancient writers, where it is styled *templum* (Plin. xxxvi. 5. s. 88; Macrob. *Sat.* ii. 13). The Pantheon stood in the centre of the Campus Martius, taking that name in its widest sense. The THERMAE, of which only a few unimportant remains exist, adjoined it on the S., and must have extended to near the Hecatostylon. The DIRIBITORIUM was a large building destined, according to Becker (*Handb.* p. 638), to the examination of the voting tablets used in the comitia, in order to determine the result of elections, and must therefore have been situated near the Septa. It seems to have been left unfinished at Agrippa's death, and was dedicated by Augustus, B. C. 7. Its vast unsupported roof was one of the wonders of Rome, and, when destroyed in the fire of Titus, could not be replaced. (Dion Cass. lv. 8; Plin. xvi. 40.) In hot weather Caligula sometimes converted it into a theatre (Dion Cass. lix. 7). The portico which Agrippa erected in the Campus Martius appears to have been called PORTICUS ARGONAUTARUM, from its being adorned with a picture of the Argonauts, and was erected in commemoration of Agrippa's naval victories (Dion Cass. liii. 27; Mart. iii. 20. 11). Becker (*Handb.* p. 637) contends that this was the same building called Basilica Neptuni by Spartian (*Hadr.* 19), and Ποσειδώνιον by Dion Cassius (lxvi. 24). But a basilica is not equivalent to a portico, nor can we imagine that Dion would have used the term Ποσειδώνιον of a στοά; whence it seems more probable, as assumed by Canina (*Indic.* p. 406) and other topographers, that Agrippa also erected a TEMPLE OF NEPTUNE, which was connected with, or probably surrounded by the portico. Nardini and Canina—the latter from recent researches—are of opinion that the eleven columns now existing in the front of the *Dogana di Terra* in the *Piazza di Pietra*, near the Antonine column, belonged to this temple. Of a PORTICUS MELEAGRI mentioned in the *Notitia* in connection with that of the Argonautarum, we know nothing further.

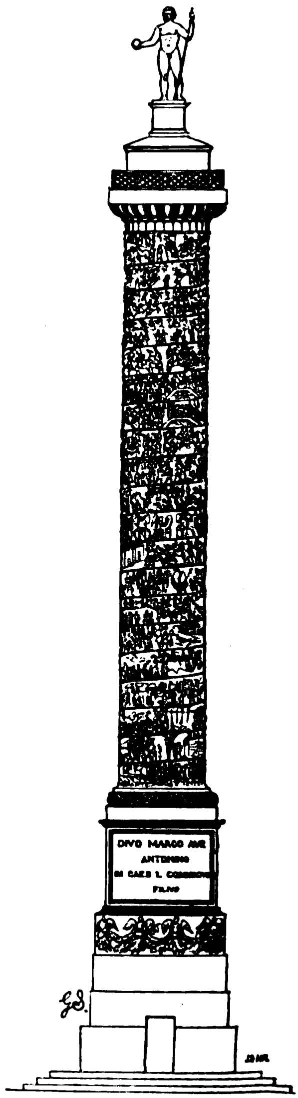
Augustus also erected a few monuments on the Campus Martius. Among them was the SOLARIUM AUGUSTI, an obelisk which now stands on *Monte Citorio*, which served as a gigantic gnomon, and, on an immense marble flooring that surrounded it, exhibited not only the hours, but also the increase and decrease of the days (Plin. xxxvi. 15). In the northern part of the Campus, between the Via Flaminia and the Tiber, he caused to be constructed during his life-time that superb MAUSOLEUM, a description of which by Strabo has already been cited in the former part of this article. This district had for some time previously served as a burying place for the most distinguished persons. Among others buried near this spot were Sulla, Caesar together with his aunt and daughter, and the two consuls Hirtius and Pansa, who fell at Mutina. Several members of the family of Augustus had been entombed in the mausoleum before the ashes of Augustus himself were deposited within it; as Marcellus, Agrippa, Octavia, and Drusus (Dion Cass. liii. 30; Virg. *Aen.* vi. 873, seq.; Ov. *Cons. ad Liv.* 67). By the time of Hadrian it was completely filled; which caused him to build a new one on the opposite side of the river (Dion Cass. lxix. 23). There are still considerable remains of the monument of Augustus. The area on which the sepulchre of the Caesars stood is now converted into a sort of amphitheatre for spectacles of the lowest description: sic transit gloria mundi. It is doubtful whether a third building of Augustus called PORTICUS AD NATIONES, or XIV. NATIONES, stood in the Campus Martius or in the Circus Flaminius. It appears to have been near the theatre of Pompey, and contained statues representing different nations (Plin. xxxvi. 5. s. 4; Serv. *ad Aen.* viii. 721.)

Near the Mausoleum appears to have been a portico called VIA TECTA, the origin of which is un-

known. Its situation near the place assigned is determined by the following passage in Seneca's *Apocolocyntosis*: "Injicit illi (Claudio) manum Talthybius deorum nuntius et trahit capite obvoluto, ne quis eum possit agnoscere, per Campum Martium; et inter Tiberim et Viam Tectam descendit ad inferos" (p. 389, Bip.). If this descent to the infernal regions was at the subterranean altar of Pluto and Proserpine before mentioned, it would go far to fix the situation of the Tarentum in the northern part of the Campus; but this, though probable, is not certain. The Via Tecta is mentioned once or twice by Martial (iii. 5, viii. 75).

Among the other monuments relating to Augustus in the Campus Martius, was an ARA PACIS, dedicated to Augustus on his return from Germany, B. C. 13. (Dion Cass. liv. 25; Ov. *Fast.* iii. 882; *Fast. Praen. III. Kal. Feb.*) The ARA FORTUNAE REDUCIS was another similar altar (Dion Cass. liv. 19); but there is nothing to prove that it was on the Campus Martius.

In the reign of Augustus, Statilius Taurus erected an AMPHITHEATRE on the Campus,—the first built of stone at Rome; but its situation cannot be determined. (Dion Cass. li. 23; Suet. *Aug.* 29.)

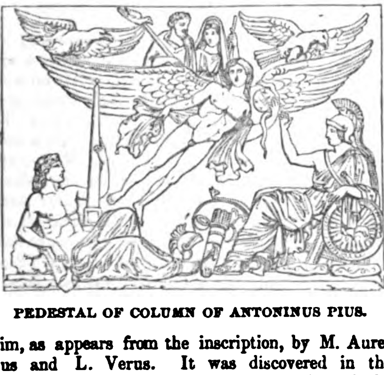


A long interval ensued after the reign of Augustus before any new public buildings were erected on the Campus Martius. Caligula began, indeed, a large amphitheatre near the Septa; but Cladius caused it to be pulled down. Nero erected, close to the baths of Agrippa, the THERMAE NERONIANAE, which seem to have been subsequently enlarged by Alexander Severus, and to have obtained the name of THERMAE ALEXANDRINAE. The damage occasioned in this district by the fire of Nero cannot be stated, since all that we certainly know is that the amphitheatre of Statilius Taurus was destroyed in it (Dion Cass. lxii. 18). The fire under Titus was considerably more destructive in this quarter (Id. lxvi. 24); but the damage appears to have been made good by Domitian. Among the buildings restored by him on this occasion we find the TEMPLES OF ISIS AND SERAPIS mentioned; but we have no accounts respecting their foundation. Their site may, however, be fixed between the Septa Julia and the baths of Agrippa, near the modern church of *S. Maria sopra Minerva*. Thus Juvenal (vi. 527):—

> "A Meroe portabit aquas, ut spargat in aedem
> Isidis, antiquo quae proxima surgit Ovili."

(Cf. Joseph. *B. Jud.* vii. 5. § 4.) It was near the spot indicated that the celebrated group of the Nile was discovered which now adorns the Vatican (Braun, *Museums of Rome*, p. 160), together with several other Egyptian objects (Flaminio Vacca, *Mem.* nos. 26, 27; Bartoli, *Mem.* no. 112, &c.). Alexander Severus devoted much attention to these temples (Lampr. *A. Sev.* 26), and they must have existed till a late period, since they are enumerated in the *Notitia*.

Domitian also restored a temple of Minerva which stood near the same spot, the MINERVA CHALCIDICA of Cassiodorus (*Chron. sub Domit.*) and of the *Notitia*. (Montf. *Diar. Ital.* p. 292). It must have been the temple originally founded by Pompey in commemoration of his eastern victories, the inscription on which is recorded by Pliny (vii. 27). It was from this temple that the church of *S. Maria* just mentioned derived its epithet of *sopra Minerva;* and it seems to have been near this spot that the celebrated statue of the Giustiniani Pallas, now in the *Braccio Nuovo* of the Vatican, was discovered; though according to other, but less probable, accounts, it was found in the circular temple near the *Porta Maggiore* (Braun, *Museums, &c.* p. 154). Some topographers assume that the temple built by Pompey was a different one from the above, with the barbarous title of Minerva Campensis, but in the same neighbourhood; which does not seem probable (Canina, *Indicaz.* p. 405).



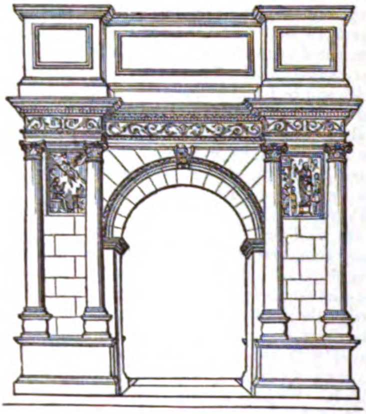
Domitian also founded in the Campus Martius an ODEUM and a STADIUM (Suet. *Dom.* 5), which will be described in the proper sections. The situation of the former cannot be determined. The Stadium, in all probability, occupied the site of the *Piazza Navona*, the form of which shows that it must have been a circus. The name of *Navona* is a corruption of *in Agone*, and important remains of this Stadium

ANTONINE COLUMN. (COLUMN OF M. AURELIUS.)

were in existence in the time of the Anonymous of Einsiedlen (Preller, *Regionen*, p. 171). The assumption that this place was occupied by a stadium built by Alexander Severus — in which case that of Domitian must be sought in some other part of the Campus — rests only on traditions of the middle ages (Canina, *Indic.* p. 392).

Trajan is said to have built a theatre in the Campus Martius, which, however, was destroyed by Hadrian. (Spart. *Hadr.* 8.) The same emperor probably erected what is called in the *Notitia* the BASILICA MARCIANES (Marcianae), which was probably a temple in honour of his sister, Marciana. The Antonines appear to have adorned this quarter with many buildings The BASILICA MATIDIES (Matidiae) was perhaps erected by Antoninus Pius, and consecrated to Matidia, the wife of Hadrian; as well as the HADRIANUM, or temple to Hadrian himself, also mentioned in the *Notitia.* (Preller, p. 175.) The TEMPLUM ANTONINI and COLUMNA COCHLIS were the temple and pillar erected in honour of M. Aurelius Antoninus. (Capitol. *M. Ant.* 18; Aur. Vict. *Epit.* 16.) All these buildings stood near together in the vicinity of the *Piazza Colonna*, on which the column (Columna Antoniniana) still exists. For a long while this column was thought to be that of Antoninus Pius, and was even declared to be such in the inscription placed on the pedestal during the pontificate of Sixtus V. But the sculptures on the column were subsequently perceived to relate to the history of Antonine the philosopher; and this view was confirmed not only by the few remaining words of the original inscription, but also by another inscription found in the neighbouring *Piazza di Monte Citorio*, regarding a permission granted to a certain Adrastus, a freedman of Septimius Severus and Caracalla, to erect a small house in the neighbourhood of the column, as curator of it. This inscription, which is now preserved in the corridor of the Vatican, twice mentions the column as being that "Divi Marci." (Canina, *Indic.* p. 417, seq.) The column is an imitation of that of Trajan, but not in so pure a style of art. Both derive their name of *cochlis* from the spiral staircase (cochlea, κοχλίας) in the interior of them. (Isid. *Orig.* xv. 2, 38.) The COLUMNA ANTONINI PII was a large pillar of red granite, erected to

PEDESTAL OF COLUMN OF ANTONINUS PIUS.



him, as appears from the inscription, by M. Aurelius and L. Verus. It was discovered in the pontificate of Clement XI., in the garden of the *Padri della Missione*, on the E. side of the *Palazzo di Monte Citorio.* It broke in the attempt to erect it in the *Piazza di Monte Citorio*, where the obelisk now stands; but the pedestal with the inscription is still preserved in the garden of the Vatican. (Canina *Indic.* p. 419.) The sculptures on the pedestal represent the Apotheosis of Antoninus Pius and Faustina.

The THERMAE COMMODIANAE and ALEXANDRINAE will be treated of in the section on the baths. After the time of Alexander Severus we find but few new buildings mentioned in this district. Gordian III. is said to have entertained the design of building an enormous portico under the Pincian hill, but it does not appear that it was ever executed. (Capitol. *Gord. III.* c. 32.) Respecting the Porticus Flaminia, see the article PONS MILVIUS. Some porticoes near the Pons Aelius, which appear to have borne the name of *Maximae*, were terminated by the TRIUMPHAL ARCH OF GRATIAN, VALENTINIAN, AND THEODOSIUS; the inscription on which will be found in the Anonymous of Einsiedlen, and in Gruter (clxxii. 1). Claudius, who was prefect of the city under Valentinian I., erected a portico near the baths of Agrippa, which he called PORTICUS BONI EVENTUS, after a neighbouring temple with the same name (Amm. Marc. xxix. 6. § 19); but with regard to this temple we have no information.

We shall now proceed to that part of the district under consideration comprised in the 7th Region of Augustus, and subsequently called VIA LATA, from the road which bounded its western side, and which formed the southern extremity of the Via Flaminia. The most important topographical question connected with this district is the situation of the CAMPUS AGRIPPAE, and the buildings connected with it. We have already shown from the situation of Martial's house, as well as from the probable site of the temple of Sol, that the Campus Agrippae must have lain under the western side of the Quirinal, and not under the Pincian, where Becker places it. It is probable, too, that it lay on a line with the Pantheon and thermae of Agrippa, although divided from them by the Via Lata; and hence Canina correctly describes it as facing the *Septa* (*Indic.* p. 215), whilst Urlichs and Preller, in like manner, place it between the *Piazza degli Apostoli* and the *Fontana Trevi.* (*Beschr.* vol. iii. pt. iii. p. 112; *Regionen*, p. 138.) The Campus Agrippae contained gardens, porticoes, and places for gymnastic exercises, and was, in short, a kind of Campus Martius in miniature. It was also a favourite lounge and promenade. (A. Gell. xiv. 5.) It appears from a passage in Dion Cassius, that the Campus was not finished before Agrippa's death, and that it was opened to the public by Augustus (lv. 8.) It contained a PORTICUS POLAE, so named after Agrippa's sister Pola or Polla; which is probably the same as that alluded to by Martial, in some passages before quoted, under the name of VIPSANIA. The latter name seems to be corrupted in the *Notitia* into *Porticus Gypsiani.* Becker (*Handb.* p. 596) would identify the Porticus Polae with the PORTICUS EUROPAE, but they seem to be different structures. (Urlichs, *Röm. Topogr.* p. 139.) The latter, which derived its name from a picture of the rape of Europa, is frequently mentioned by Martial (ii. 14, iii. 20, xi. 1). Its situation cannot be determined; but most topographers place it in the Campus Martius, among the other buildings of Agrippa. (Canina, *Indicaz.* p. 409; Urlichs, *Röm. Marsfeld*, p. 116.) It appears from the *Notitia* that the Campus Agrippae contained CASTRA, which, from the *Catalogus Imperat. Vienn.* (t. ii. p. 246, Ronc.), appear to have been dedicated by Aurelian; but the Porticus Vipsania served as a

sort of barracks as early as the time of Galba. (Tac. *H.* i. 31; Plut. *Galb.* 25.)

Several objects mentioned in this district are doubtful as to site, and even as to meaning, and are not important enough to demand investigation. It contained TRIUMPHAL ARCHES OF CLAUDIUS AND M. AURELIUS. The latter subsisted in a tolerably perfect state near the *Piazza Fiana* in the *Corso*, till the year 1662, when pope Alexander VII. caused it to be pulled down. Its reliefs still adorn the staircase of the *Palazzo de' Conservatori.* (Canina, *Indicaz.* p. 220.)

ARCH OF AURELIUS.

We shall conclude this section with noticing a very humble but very useful object, the FORUM SUARIUM. Bacon was an article of great consumption at Rome. It was distributed, as well as bread, among the people, and its annual consumption in the time of Valentinian III. was estimated at 3,628,000 pounds. (Gibbon, *Decline and Fall*, vol. iv. p. 85, ed. Smith.) The custom of distributing it had been introduced by Aurelian. (Vopisc. *Aurel.* 25.) A country in which hogs'-flesh is the cheapest meat betrays a low state of farming. The swine still abounds in Italy; but in ancient times the Roman market was principally supplied from the forests of Lucania. The market was important enough to have its special tribune, and the "pigmen of the eternal city" ("Porcinarii Urbis aeternae") were considered such a useful body that peculiar privileges were granted to them. (*Cod.* xi. tit. 16; *Not. Dignit. Part. Occ.* p. 16; Gruter, *Inscr.* cclxxx. 4.) The market is alluded to in a sort of proverbial manner by Philostratus (ἄτιμά τε καὶ κοινὰ φύοιτ' ἄν, ὥσπερ ἐν συῶν ἀγορᾷ, *Heroic.* p. 283. 19, ed. Kayser.). It is supposed to have stood near the present church of *S. Croce dei Lucchesi*, which was substituted for that of *S. Nicolò in Porcilibus.* (Canina, *Indic.* p. 209; Preller, *Regionen*, p. 139.)

XIV. THE TRANSTIBERINE DISTRICT.

Although the district beyond the Tiber formed one of the 14 Regions of Augustus, and although part of it may perhaps have been enclosed with a wall as early as the time of Ancus Marcius, and was certainly included in that of Aurelian, yet, while it was considered a part of Rome, it never belonged to the Urbs, properly so called. The distinction be-

to the W., whence it stretches in a southerly direction to a point opposite the Aventine. The masculine form of the name (Janiculus), though employed as a substantive by some modern writers, seems to rest on no classical authority, and can only be allowed as an adjective form with *mons* or *collis*. (Becker, *Handb.* p. 653.) The name *Janiculum* is usually derived from Janus, who is said to have had an *arx* or citadel here. (Ov. *Fast.* i. 245; Macrob. *Sat.* i. 7.) As the ridge runs in a tolerably straight line nearly due S. from the point where it commences, the curve described by the Tiber towards the E. leaves a considerable plain between the river and the hill, which attains its greatest breadth at the point opposite to the Forum Boarium. This was the original REGIO TRANSTIBERINA. It appears to have been covered with buildings long before the time of Augustus, and was principally inhabited by the lower classes, especially fishermen, tanners, and the like, though it contained some celebrated gardens. Hence the *Ludi Piscatorii* were held in this quarter. (Ov. *Fast.* vi. 237; Fest. pp. 210, 238.) It was the ancient *Ghetto*, or Jews' quarter, which now lies opposite to it. (Philo, *de Virt.* ii. p. 568, Mangey.)

The Regio Transtiberina contained but few temples or other public buildings. Of the temple of FORS FORTUNA we have already spoken when discussing the question respecting that of Pudicitia Patricia [supra, p. 814]. Of other *loci religiosi* in this quarter little more is known than the name. Such was the LUCUS FURINAE, mentioned in the narratives of the death of C. Gracchus. (Aur. Vict. *Vir. Ill.* 65; Plut. *C. Gracch.* 17.) Cicero connected this grove with the Eumenides, or Furies (*Nat. Deor.* iii. 18): but there is no account of those Attic deities having been naturalised at Rome, and we should rather infer from Varro that the grove was consecrated to some ancient indigenous goddess. (*L. L.* vi. § 19, Müll.) It was a universal tradition that Numa was buried in the Janiculum (Dionys. ii. 76; Plut. *Num.* 22; Val. Max. i. 1. § 12). Cicero, in a corrupt passage, places his tomb "haud procul a FONTI ARA" (or Fontis Aris) (*de Leg.* ii. 22); but of such a deity or altar we have no further account. We also find a LUCUS CORNISCARUM DIVARUM mentioned by Paulus Diaconus (p. 64, Müll.) as "trans Tiberim;" but though the names of these goddesses are also found in an inscription (Gruter, lxxxviii. 14), what they were cannot be told. Lastly, as the *Basis Capitolina* records a VICUS LARUM RURALIUM in this district, we may conclude that they had a *sacellum* here.

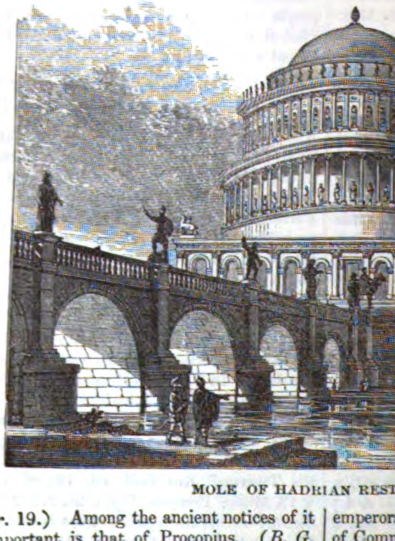
Among the profane places *trans Tiberim* were the MUCIA PRATA and the field called CODETA. The former—the land given to Mucius Scaevola by the Senate as a reward of his valour (Liv. ii. 13) —may, however, have lain beyond the district now under consideration, and probably farther down the Tiber. The Codeta, or Ager Codetanus, was so named from a plant that grew there resembling a horse's tail (coda) (Paul. Diac. pp. 38 and 58, Müll.), — no doubt the *Equisetis*, or *Equisetum palustre* of Linnaeus. ("Invisa et equisetis est, a similitudine equinae setae," Plin. xviii. 67. s. 4.) There seems to have been a Codeta Major and a Minor, since Suetonius relates that Caesar exhibited a naval combat in the latter, where he had formed a lake ("in minore Codeta defosso lacu," *Caes.* 39) Dion Cassius, on the other hand, represents this *naumachia* as taking place in the Campus Martius (xliii. 23). Becker (*Handb.* p. 656, note) would reconcile these divergent accounts by assuming that the Codeta Minor lay in the Campus Martius, and the Codeta Major opposite to it, on the other side of the Tiber. (Cf. Preller, *Regionen*, p. 218.) But there seem to be some grave objections to this assumption. It is not probable that two places bearing the same name should have been on different sides of the river, nor that there should have been a marshy district, as the Codeta evidently was, in the Campus Martius, in the time of Caesar. Besides, had the latter contained a place called Codeta Minor, — which must have been of considerable size to afford room for the exhibition of a naval combat,— we should surely have heard of it from some other source. Becker adduces, in proof of his view, another passage from Suetonius (*Ib.* c. 44), from which it appears that Caesar contemplated building a magnificent temple of Mars, on the site of the lake, after causing it to be filled up; a project, however, which does not seem to have been carried into execution. Becker assumes that this temple must of course have been in the Campus Martius; though on what grounds does not appear, as we have already seen that there was a temple of Mars a long way outside the Porta Capena, besides a subsequent one in the forum of Augustus. We are, therefore, of opinion, that the word 'Αρείῳ, in Dion Cassius, must be a mistake either of his own, or of his copyists, and that the Campus Codetanus of the *Notitia* must have lain rather below the city, on the right bank of the Tiber. (Cf. Canina, *Indic.* p. 566, seq.) The *Notitia* mentions a CAMPUS BRUTTIANUS in connection with the Campus Codetanus, but what it was cannot be said. Some have conjectured that it was called after the Bruttii, who were employed at Rome as public servants. (Paul. Diac. p. 31.)

Near the same spot must have been the HORTI CAESARIS, which Caesar bequeathed to the Roman people. (Suet. *Caes.* 83; Tac. *Ann.* ii. 41; Cic. *Phil.* ii. 42.) According to Horace, they must have lain at some distance:—

> "Trans Tiberim longe cubat is, prope Caesaris hortos." (*Sat.* i. 9. 18.)

And it may be inferred from the situation of the TEMPLE OF FORS FORTUNA, which we have already discussed [supra, p. 814], that they must have been at about a mile's distance from the Porta Portuensis. (*Fast. Amit. VIII. Kal. Jul.*) It seems probable that they were connected with the NEMUS CAESARUM, where Augustus exhibited a *naumachia*, and where a grove or garden was afterwards laid out. ("Navalis proelii spectaculum populo dedi trans Tiberim, in quo loco nunc nemus est Caesarum" *Mon. Ancyr.*) This would rather tend to confirm the view that the codeta was in this neighbourhood. In Tacitus (*Ann.* xii. 56: "Ut quondam Augustus structo cis Tiberim stagno") we are therefore probably to read *uls* for *cis*, which ancient form seems to have been retained in designating the Transtiberine district ("Dicebatur cis Tiberim et uls Tiberim," Aul. Gell. xii. 13; cf. Varr. *L.L.* v. § 83, Müll.; Pompon. *Dig.* i. tit. 2. l. 2. § 31.) The Nemus Caesarum seems to have been so called from Caius and Lucius Caesar. (Dion Cass. lxvi. 25.) We are not to suppose that it occupied the site of the lake excavated for the *naumachia*, but was planted round it as we learn from Tacitus (—"apud

nemus quod navali stagno circumposuit Augustus," *Ann.* xiv. 15). There are several passages which show that the lake existed long after the time of Augustus. Thus Statius (*Silv.* iv. 4. 5):—



> "Continuo dextras flavi pete Tybridis oras,
> Lydia qua penitus stagnum navale coercet
> Ripa, suburbanisque vadum praetexitur hortis."

This passage likewise confirms the situation of the lake on the right, or Etruscan, bank (Lydia ripa) with the Nemus round it (cf. Suet. *Tib.* 72). It was used by Titus to exhibit a *naumachia* (Suet. *Tit.* 7; Dion Cass. *l. c.*); and remains of it were visible even in the time of Alexander Severus (Id. lv. 10). Although the passage in the *Monumentum Ancyranum* in which Augustus mentions this lake or basin is rather mutilated, we may make out that it was 1800 feet long by 1200 broad.

The *Notitia* mentions five NAUMACHIAE in the 14th Region, but the number is probably corrupt, and we should read two. (Preller, *Regionen*, p. 206.) We know at all events that Domitian also made a basin for ship-fights in the Transtiberine district. (Suet. *Dom.* 4.) The stone of which it was constructed was subsequently employed to repair the Circus Maximus (*Ib.* 5). That it was in a new situation appears from Dion Cassius (ἐν καινῷ τινι χωρίῳ, lxvii. 8). It probably lay under the Vatican, since St. Peter's was designated in the middle ages as "apud Naumachiam." (Flav. Blond. *Instaur. R.* i. 24; Anastas. *V. Leo. III.* p. 306, Blanch.; Montf. *Diar. Ital.* p. 291.) The *naumachia* ascribed to the emperor Philip (Aur. Vict. *Caes.* 28) was perhaps only a restoration of this, or of that of Augustus.

Among other objects in the district of the Janiculum, we need only mention the HORTI GETAE and the CASTRA LECTICARIORUM. The former were probably founded by Septimius Severus, and inherited by his son Geta. We know at all events that

These gardens of the Domitian family are frequently mentioned in inscriptions; and those who are curious respecting their history will find a long account of them in Preller's *Regionen* (p. 207, seq.). They appear to have existed under the same name in the time of Aurelian. (Vopisc. *Aurel.* 49.) In the same district were also the HORTI AGRIPPINAE. These came into the possession of her son, Caligula, who built a circus in them, afterwards called the Circus Neronis. It will be treated of in another section; and we shall only mention here that this was the place in which the Christians, having previously been wrapped in the *tunica molesta* or *picata*, were burnt, to serve as torches for the midnight games. (Tac. *Ann.* xv. 44.) Both the gardens mentioned came into the possession of Nero, and may therefore have also been called HORTI NERONIS. (Tac. *Ib.* and c. 39.)

The neighbourhood seems to have been a chosen spot for the sepulchres of the great. One of them, a pyramid larger than the still existing monument of Cestius, existed till the end of the 15th century, and was absurdly regarded sometimes as the *sepulcrum Romuli*, sometimes as the *sepulcrum Scipionis Africani*. It appears from notices belonging to the middle ages that on or near the spot where St. Peter's now stands, there was anciently a TEMPLUM APOLLINIS, or more probably of Sol. (Anastasius, *Vit. Silvestri*, p. 42; Montf. *Diar.* i. p. 155.)

Having thus gone over the various districts of the city, and noted the principal objects of interest which they contained, we shall now proceed to give an account of certain objects which, from their importance, their general similarity, and the smallness of their number, may be most conveniently ranged together and treated of in distinct sections. Such are, — (1) the structures destined for public games and spectacles, as the Circi, Theatres, and Amphitheatres; (2) the Thermae or Baths; (3) the Bridges; and, (4) the Aqueducts.

The general characteristics of these objects have been so fully described in the *Dictionary of Antiquities* that it will be unnecessary to repeat the descriptions here, and we shall therefore confine ourselves to what may be called their topographical history; that is, an account of their origin and progress, their situation, size, and other similar particulars.

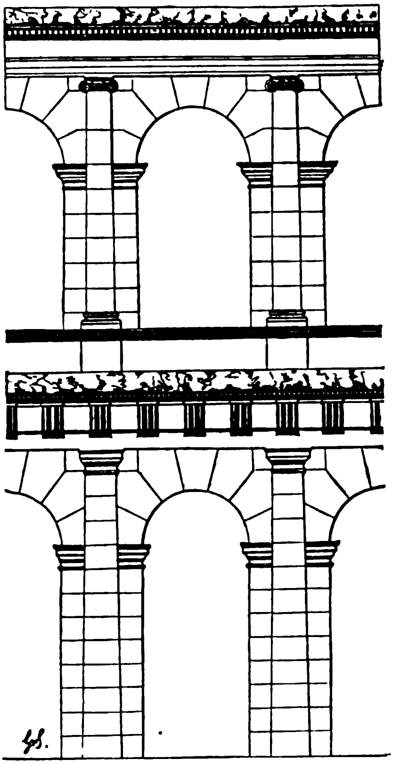
XV. THE CIRCI, THEATRES, AND AMPHITHEATRES.

Horse and chariot races were the earliest kind of spectacle known at Rome. The principal circus in which these sports were exhibited, and which by way of pre-eminence over the others came ultimately to be distinguished by the title of CIRCUS MAXIMUS, was founded, as we have already related, by the elder Tarquin, in the valley between the Palatine and Aventine. That king, however, probably did little more than level and mark out the ground; for certain spaces around it were assigned to the patricians and knights, and to the 30 curiae, on which, at the time of the games, they erected their own seats or scaffolds, called *spectacula* and *fori*. (Liv. i. 35; cf. Dionys. iii. 68.) According to Livy, the same custom continued to prevail under Tarquinius Superbus (*Ib.* c. 56); though Dionysius represents that monarch as surrounding the circus with porticoes (iv. 44). It was not till the year B. C. 328 that *carceres* for the chariots were built. (Liv. viii. 20.) We cannot tell what the original number of *carceres* may have been, but it was probably adapted to that of the chariots which started in the race. According to Tertullian (*de Spect.* 9) there were originally only two Circensian factions, or colours, the *albata* and *russata*—that is, winter and summer; but these distinctions of colours and factions do not seem to have been known till the time of the Empire. Joannes Lydus (*de Mens.* iv. 25, Beck.) states the original number of the factions to have been three, the *russata*, *albata* and *prasina*; and this seems to agree with the following passage in Cicero—if, indeed, it is to be interpreted strictly, and is anything more than a fortuitous coincidence: "Neque enim in quadrigis eum secundum numeraverim, aut tertium, qui vix e carceribus exierit, cum palmam jam primus acceperit." (*Brut.* 47.) However this may be, we know that in the early part of the Empire there were four colours, though by whom the fourth, or *veneta*, was added, cannot be said. Domitian added two more the *aurata* and *purpurata* (Suet. *Dom.* 7), but these do not seem to have come into customary use. The usual *missus*, or start, consisted of four chariots, as we learn from Virgil with the note of Servius:—

> "Centum quadrijugos agitabo ad flumina currus"
> (*Georg.* iii. 18);

where the commentator remarks from Varro:—"Id est, unius diei exhibebo circenses ludos, quia, ut Varro dicit in libris de gente populi Romani, olim XXV. missus fiebant." It appears probable that the *carceres* were twice the number of the chariots which started, in order to afford egress to those which had finished the course, whilst fresh charioteers were waiting in those which were closed to begin a new course (v. Becker, *de Muris*, p. 87). Thus in the Lyons mosaic eight *carceres* are represented; but in the Circus Maximus, after the increase of the factions to six, there were probably twelve *carceres*; and such also appears to have been the number in the circus on the Via Appia. (Cf. Cassiod. *Var.* iii. 51.) The Circus Maximus seems to have remained in a very rude and imperfect state till the time of Julius Caesar. He increased it by adding to both its extremities; and its size when thus enlarged appears to have been 3 stadia in length and 1 in breadth. Caesar also surrounded it with a canal, called EURIPUS, in order to protect the spectators from the fury of the elephants; but this was filled up by Nero and converted into seats for the equites, whose increased numbers probably required more accommodation. (Suet. *Caes.* 39; Plin. viii. 7, xxxvi. 24. s. 1.) The description of the circus by Dionysius (iii. 68) is the clearest and longest we possess, but the measurements which he gives differ from those of Pliny, as he makes it 3½ *stadia* long and 4 *plethra*, or ⅔ds of a stade, broad. But perhaps these authorities may be reconciled by assuming that one took the inner and the other the outer circumference. The reader will find a lengthened examination of these different measures in Canina's *Indicazione Topografica*, p. 491, seq. In Caesar's circus it was only the lower rows of seats that were built of stone; the upper rows were of wood, which accounts for the repeated fires that happened there. The first of these occurred in B. C. 31, a little before the battle of Actium, and destroyed a considerable

part of the building. (Dion Cass. l. 10.) Augustus rebuilt the *Pulvinar*, or place on which the images of the gods were laid, and erected the first obelisk between the *metae*. (*Mon. Ancyr.*; Suet. *Aug.* 45; Plin. xxxvi. 14. s. 5.) The side towards the Aventine was again burnt in the reign of Tiberius. (Tac. *Ann.* vi. 45.) Claudius much improved the appearance of the circus by substituting marble *carceres* for those of tufo, and *metae* of gilt bronze for the previous ones of wood. He also appropriated certain seats to the senators. (Suet. *Claud.* 21.) We have seen that the fire of Nero broke out in the circus, whence it is natural to conclude that it must have been completely destroyed. Yet it must have been soon restored, since Nero caused his ridiculous triumphal procession to pass through it, and hung his triumphal wreaths round the obelisk of Augustus. (Dion Cass. lxiii. 21.) The effects of another fire under Domitian were repaired with the stone from his *naumachia*, and it was now, perhaps, that 12 *carceres* were first erected. (Suet. *Dom.* 5, 7.) We read of another restoration on a still more magnificent scale by Trajan. (Dion Cass. lviii. 7.) During the celebration of the Ludi Apollinares in the reign of Antoninus Pius, some of the rows of seats fell in and killed a large number of persons. (Capitol. *Anton. P.* 9; *Catal. Imp. Vienn.* ii. p. 244.) We know but little more of the history of the Circus Maximus. Constantine the Great appears to have made some improvements (Aur. Vict. *Caes.* 40. § 27), and we hear of the games being celebrated there as late as the 6th century. (Cassiod. *Var.* iii. 51.) The circus was used for other games besides the chariot races, as the *Ludus Trojae*, *Certamen Gymnicum*, *Venatio*, *Ludi Apollinares*, &c. The number of persons it was capable of accommodating is variously stated. Pliny (xxxvi. 24. s. 1) states it at 260,000. One codex of the *Notitia* mentions 485,000, another 385,000; the latter number is probably the more correct. (Preller, *Regionen*, p. 191.) The circus seems to have been enlarged after the time of Pliny, in the reign of Trajan.



The Circus Flaminius was founded in B.C. 220 by the censor of that name. (Liv. *Epit.* xx.; Cass. *Chron.* p. 178.) We have but few notices respecting this circus, which lay under the Capitoline, with its *carceres* towards the hill, and its circular end towards the river. The *Ludi Plebeii*, and those called *Taurii*, were celebrated here (Val. Max. i. 7. § 4; Varr. *L.L.* v. § 154), and Augustus afforded in it the spectacle of a crocodile chase. (Dion Cass. lv. 10.) It also served for meetings of the people, which had previously been held in the *Prata Flaminia*. (Liv. xxvii. 21; Cic. *ad Att.* i. 14.) We find no mention of the Circus Flaminius after the first century of our era; and in the early part of the 9th century it had been so completely forgotten that the Anonymous of Einsiedlen mistook the *Piazza Navona* for it. Yet remains of it are said to have existed till the 16th century, at the church of *S. Caterina de' Funari* and the *Palazzo Mattei*. (And. Fulvio, *Ant. Urb.* lib. iv. p. 264; Lucio Fauno, *Ant. di Roma*, iv. 23. p. 138.)

What is sometimes called by modern topographers the Circus Agonalis, occupied, as we have said, the site of the *Piazza Navona*. But the *Agonalia* were certainly not celebrated with Circensian games, and there are good reasons for doubting whether this was a circus at all. Its form, however, shows that it was a place of the same kind,

viously to this period, plays were performed in wooden theatres, erected for the occasion. Some of these temporary buildings were constructed with extravagant magnificence, especially that of M. Aemilius Scaurus in B. C. 59, a description of which is given by Pliny (xxxvi. 24. s. 7). An attempt, to which we have before alluded, was indeed made by the censor Cassius, B. C. 154, to erect a stone theatre near the Lupercal, which was defeated by the rigid morality of Scipio Nasica (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Liv. *Epit.* xlviii.; Oros. iv. 21). A good deal of this old Roman feeling remained in the time of Pompey; and in order to overcome, or rather to evade it, he dedicated a temple to VENUS VICTRIX on the summit of his theatre, to which the rows of seats appeared to form an ascent (Tac. *Ann.* xiv. 20; Tert. *de Spect.* 10; Plin. viii. 7). Gellius places the dedication of the theatre in the third consulship of Pompey, which is at variance with the other authorities (*N. A.* x. 1). We have spoken of its situation in a preceding section, and shall refer the reader who desires any further information on this head to Canina (*Indicaz.* p. 368, seq.), who has bestowed much labour in investigating the remains of this building. There is great discrepancy in the accounts of the number of spectators which this theatre was capable of accommodating. According to Pliny, in whose MSS. there are no variations, it held 40,000 persons (xxxvi. 24. s. 7); and the account of Tacitus of the visit of the German ambassadors seems to indicate a large number ("Intravere Pompeii theatrum, quo magnitudinem populi viserent," *Ann.* xiii. 54). Yet one of the codices of the *Notitia* assigns to it only 22,888 seats, and the *Curiosum* still fewer, or 17,580. It was called *theatrum lapideum*, or *marmoreum*, from the material of which it was built; which, however, did not suffice to protect it from the ravages of fire. The *scena* was destroyed in the reign of Tiberius, and rededicated by Claudius (Tac. *Ann.* iii. 72; Dion Cass. lx. 6). The theatre was burnt in the fire under Titus, and again in the reign of Philip; but it must have been restored on both occasions, as it is mentioned by Ammianus Marcellinus among the objects most worthy of notice in his account of the visit of Constantius II. (xvi. 10). We learn from the *Catalogus Imperatorum*, that it had been repaired by Diocletian and Maximian; and it was also the object of the care of Theodoric (Cassiod. *Var.* iv. 51).

The THEATRE OF BALBUS, dedicated in B. C. 12 (Suet. *Aug.* 29; Dion Cass. liv. 25), was a building of much less importance, and but few accounts have been preserved of it; yet it must have lasted till a late period, as it is recorded in the *Notitia*. According to the *Curiosum* it accommodated 11,600 persons; whilst the *MSS.* of the *Notitia* mention 11,510 and 8088.

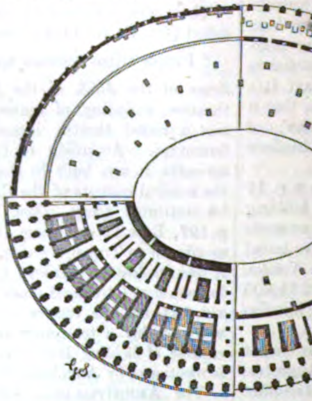
The THEATRUM MARCELLI was begun by Caesar (Dion Cass. xliii. 49), and dedicated by Augustus, B. C. 12, to the memory of his nephew, Marcellus. (*Mon. Ancyr.*; Suet. *Aug.* 29; Dion Cass. liv. 26.) We have already mentioned its situation in the Forum Olitorium; and very considerable remains of it are still to be seen in the *Piazza Montanara*. Its arches are now occupied by dirty workshops. It does not seem to have enjoyed so much celebrity as Pompey's theatre. According to the *Curiosum* it was capable of accommodating 20,000 spectators. The *scena* was restored by Vespasian (Suet. *Vesp.* 19); and Lampridius mentions that Alexander Severus contemplated a renovation of the theatre (*Alex.* 44.)

THEATRE OF MARCELLUS.

These were the three Roman theatres, properly so called (Ov. *Tr.* iii. 12. 24.):—

"Proque tribus resonant terna theatra foris."

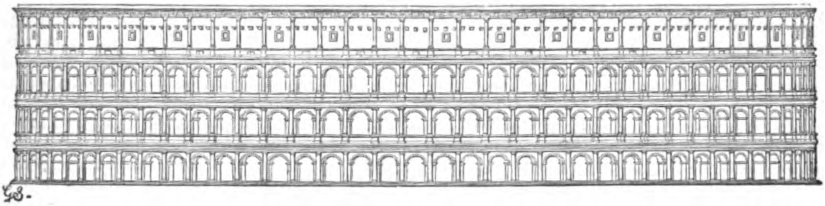
Some of the *MSS.* of the *Notitia* mention four theatres, including, of course, the ODEUM, which was a roofed theatre, intended for musical performances. According to the most trustworthy accounts, it was built by Domitian, to be used in the musical contests of the Capitoline games which he instituted (Suet. *Dom.* 4; Cassiod. *Chron.* p. 197, Ronc.); and when Dion Cassius (lxix. 4) ascribes it to Trajan, we may perhaps assume that it was finished or perfected by him. Nero appears to have first introduced musical contests (Tac. *Ann.* xiv. 20), but the theatre in which they were held was probably a temporary one. The Odeum was capable of holding 10,000 or 12,000 persons. It is mentioned by Ammianus Marcellinus (xvi. 10).



The AMPHITHEATRE OF STATILIUS TAURUS was the first permanent building of that kind erected at Rome. After the chariot races, the gladiatorial combats were the most favourite spectacle of the Romans; yet it was long before any peculiar building was appropriated to them. We have already related that the first gladiators were exhibited in the Forum Boarium in B. C. 264; and subsequently these combats took place either in the circus or in the Forum Romanum: yet neither of these places was well adapted for such an exhibition. The former was

inconvenient, from its great length, and the *metae* and *spinae* were in the way; whilst the latter, besides its moral unsuitableness for such a spectacle, became by degrees so crowded with monuments as to leave but little space for the evolutions of the combatants. The first temporary amphitheatre was the wonderful one built of wood by Caesar's partisan, C. Scribonius Curio. It consisted of two separate theatres, which, after dramatic entertainments had been given in them, were turned round, with their audiences, by means of hinges or pivots, and formed an amphitheatre (Plin. xxxvi. 24. s. 8). Caesar himself afterwards erected a wooden amphi-

COLOSSEUM.



erected by Vespasian, appears to have been originally designed by Augustus. (Suet. *Vesp.* 9.) It stood on the site previously occupied by the lake of Nero, between the Velia and the Esquiline. (Mart. *Spect.*

GROUND PLAN OF THE COL

peated here. It was not completely erected, till the reign of Domitian; though Titus dedicated it in the year 80. (Suet. *Tit.* 7; Aur. Vict. *Caes.* 9. 7.) In the reign of Macrinus it was so much damaged by a fire, occasioned by lightning, that it was necessary to exhibit the *gladiatores* and *venationes* for several years in the Stadium. (Dion Cass. lxxviii. 25.) The restoration was undertaken by

Romans themselves, in order to build the *Cancelleria* and the *Palazzo Farnese* with the materials. Enough, however, is still left to render it one of the most striking and important monuments of imperial Rome. Its name of *Colosseum*, first mentioned by Bede (ap. Ducange, *Gloss.* ii. p. 407, ed. Bas.)

ELEVATION OF COLOSSEUM.

under the form *Colyseus*, was either derived from the vast size of the building, or, more probably, from the colossus of Nero, which stood close to it. (See Nibby, *Dell' Anfiteatro Flavio*, in the Appendix to Nardini, i. p. 238, which contains the best history of the building down to modern times.) Of the AMPHITHEATRUM CASTRENSE, near *S. Croce*, we have already spoken [p. 827].

XVI. THE THERMAE, OR BATHS.

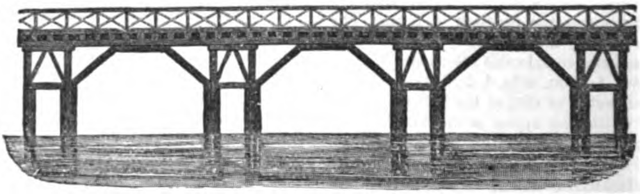
We, of course, propose to speak here only of those large public institutions which were open either *gratis* or for a mere trifle to all, and of which the first were the THERMAE AGRIPPAE, near his Pantheon. The thermae must not be regarded as mere *balneae*, or places for bathing. They likewise contained *gymnasia*, or places for gymnastic exercises; *hexedrae*, or rooms for the disputations of philosophers; as well as apartments for the delivery of lectures, &c. The *thermae* of Agrippa do not seem to have been so splendid as some of the subsequent ones; yet, though they suffered in the fire under Titus, they were preserved till a late period, and are mentioned more than once by Martial (iii. 20. 15, 36. 6). The THERMAE NERONIANAE were erected by Nero very near to those of Agrippa (Tac. *Ann.* xiv. 47; Suet. *Nero*, 12). After their restoration by Alexander Severus, who appears, however, to have also enlarged them (Lamprid. *Alex.* 25), they obtained the name of THERMAE ALEXANDRINAE (Cassiod. *Chron.* vol. ii. p. 194, Ronc.). They must have lain between the *Piazza Navona* and the Pantheon, as they are thrice mentioned by the Anonymous of Einsiedlen between the latter building and the Circus Flaminius, which was the name he applied to the *Piazza Navona*. Hence the probability that the place just named was the Stadium of Nero. The Thermae Neronianae are frequently mentioned in a way that indicates considerable splendour (Mart. ii. 38. 8, vii. 34. 5; Stat. *Silv.* i. 5. 62); but their name was obliterated by that of the Thermae Alexandrinae, by which they appear in the *Notitia*.

The third baths erected at Rome were the THERMAE TITI, on the Esquiline, near the Flavian amphitheatre. (Mart. *Spect.* 2). There are still considerable remains of these baths; but the plan of them is difficult to make out, from their having been erected on the site of a large previous building. Canina's account of them is the best (vide *Memorie Romane di Antichità*, vol. ii. p. 119, *Indicaz.* p. 101). The site on which they stand was perhaps previously occupied by the golden house of Nero. Near them stand the THERMAE TRAJANI, which Canina has correctly distinguished from those of Titus (Preller, *Regionen*, p. 126; Becker, *Handb.* p. 687). They are named in the *Notitia* as distinct, and also in the Chroniclers, who however, singularly enough, place the building of both in the reign of Domitian. (Cassiod. *Chron.* vol. ii. p. 197, Ronc.; Hieron. vol. i. p. 443.) The baths of Titus had been run up very expeditiously ("*velocia* munera,' Mart. *Spect.* 2; "thermis juxta *celeriter* extructis," Suet. *Tit.* 7), and might consequently soon stand in need of restorations; and it seems not improbable, as Becker suggests (*Handb.* p. 687), that Trajan, whilst he repaired these, also built his own at the side of them, before he had yet arrived at the imperial dignity. Cassiodorus (*l. c.*) expressly mentions the year 90. Those actually built by Trajan must have been the smaller ones lying to the NE. of those of Titus, since Anastasius mentions the church of *S. Martino de' Monti* as being built "juxta thermas Trajanas" (*Vit. Symmachi*, p. 88, Blanch.). His object in building them may have been to separate the baths of the sexes; for the men and women had hitherto bathed promiscuously: and thus the *Catal. Imp. Vienn.* notes, under Trajan: "Hoc Imperat. mulieres in Termis Trajanis laverunt."

The emperor Commodus, or rather his freedman Cleander in his name, is related to have built some baths (Lampr. *Comm.* 17; Herod. i. 12); and we find the THERMAE COMMODIANAE set down in the 1st Region in the *Notitia*; whilst, by the Anonymous of Einsiedlen, on the contrary, they are three or four times mentioned as close to the Rotunda. Their history is altogether obscure and impenetrable. The THERMAE SEVERIANAE are also recorded in the *Notitia* in the 1st Region in connection with the Commodianae. They are mentioned by Lampridius (*Sever.* 19); but no traces of them remain.

The THERMAE ANTONINIANAE or CARACALLAE present the most perfect remains of any of the Roman baths, and from their vastness cannot fail to strike the spectator with astonishment. The large hall was regarded in antiquity as inimitable. (Spart. *Carac.* 9, *Sever.* 21.) They were dedicated by Caracalla; but Elagabalus commenced the outer porticoes, which were finished by Alexander Severus. (Lampr. *Hel.* 17, *Alex.* 25.) They are situated under the church of *S. Balbina*, on the right of the Via Appia.

But the largest of all the baths at Rome were the THERMAE DIOCLETIANAE. Unfortunately they are in such a ruined state that their plan cannot be traced so perfectly as that of the baths of Caracalla, though enough remains to indicate their vast extent. They are situated on the inside of the *agger* of Servius, between the ancient Porta Collina and Porta Viminalis. Vopiscus mentions them in connection with the Bibliotheca Ulpia, which they contained (*Prob.* 2). These were followed by the



Thermae Constantinianae, the last erected at Rome. They are mentioned by Aurelius Victor as an "opus caeteris haud multo dispar" (*Caes.* 40. 27). In the time of Du Pérac, there were still some vestiges of them on the Quirinal, on the site of the present *Palazzo Rospigliosi;* but they have now entirely disappeared. At one time the colossal figures on *Monte Cavallo* stood near these baths, till Sixtus V. caused them to be placed before the Quirinal palace. Tradition connects them with the *Equi Tiridatis Regis Armeniorum*, mentioned in the *Notitia* in the 7th Region; in which case they would belong to the time of Nero. On the other hand they claim to be the works of Phidias and Praxiteles; but there is no means of deciding this matter.

Besides the baths here enumerated, the *Notitia* and *Curiosum* mention, in the 13th Region, but under mutilated forms, certain Thermae Suranae et Decianae, to which we have already alluded in the 5th Section. They do not, however, seem to have been of much importance, and their history is unknown.

XVII. The Bridges.

Rome possessed eight or nine bridges; but the accounts of them are so very imperfect that there are not above two or three the history of which can be satisfactorily ascertained. The Pons Sublicius, the oldest and one of the most frequently mentioned of all the Roman bridges, is precisely that whose site is most doubtful. It was built of wood, as its name imports, by Ancus Marcius, in order to connect the Janiculum, which he had fortified, with the city. (Liv. i. 33; Dionys. iii. 45.) It was considered of such religious importance that it was under the special care of the pontifices (Varr. *L. L.* v. § 83), and was repaired from time to time, even down to the reign of Antoninus Pius. (Capitol. *Ant. P.* 8.) Nay that it must have existed in the time of Constantine is evident, not only from its being mentioned in the *Notitia*, but also from the fact of a bridge at Constantinople being named after it, no doubt to perpetuate in that city the remembrance of its sacred character. (*Descr. Const. Reg.* xiv.) Yet the greatest difference of opinion prevails with regard to its situation; and as this question also involves another respecting the site of the Pons Aemilius, we shall examine them both together.

We shall first consider the circumstances under which the Sublician bridge was built; and then inquire into the passages in ancient authors regarding it. Whether Ancus Marcius likewise built walls on the *right* bank of the Tiber when he built the bridge is, as we have before observed, very problematical, seeing that in his time there were none on the *left* bank, and therefore there could have been no impediment to his choosing whatever site he pleased for his bridge, due regard being paid to the nature of the ground. But, as before the time of Tarquinius Priscus, the district about the Forum Boarium and circus was little better than a swamp, it does not seem probable that such a spot should have been selected as the approach to a bridge. The ground beyond the subsequent Porta Trigemina lies higher and drier, and would consequently have afforded a more eligible site. Then comes the question whether, when Servius Tullius built his walls he included the Sublician bridge within them, or contrived that it should be left outside of the gate. As the intention of walls is to defend a city, it is evident that the latter course would be the safer one; for had the bridge afforded a passage to a spot within the walls, an enemy, after forcing it, would have found himself in the heart of the city. And if we examine the passages in ancient authors relating to the subject we shall find that they greatly preponderate in favour of this arrangement. Polybius expressly says that the bridge was πρὸ τῆς πόλεως, *before* or *outside of* the city (vi. 55). Becker, indeed (p. 697), would rob πρό of its usual meaning here, and contends that the expression cited is by no means equivalent to πρὸ τῶν πυλῶν or ἔξω τῆς πόλεως; but he does not support this assertion with any examples, nor would it be possible to support it. The narratives of the flight of Caius Gracchus likewise prove that the bridge must have been outside of the town. Thus Valerius Maximus: "Pomponius, quo is (Gracchus) facilius evaderet, concitatum sequentium agmen in Porta Trigemina aliquamdiu acerrima pugna inhibuit — Laetorius autem in ponte Sublicio constitit, et eum, donec Gracchus transiret, ardore spiritus sui sepsit" (iv. 7. § 2). In like manner the account of Aurelius Victor (*Vir. Ill.* c. 65) plainly shows that Gracchus must have passed the gate before he arrived at the bridge. There is nothing in Livy's narrative of the defence of the bridge by Horatius Cocles to determine the question either one way or

PONS SUBLICIUS, RESTORED BY CANINA.

the other. An inference might perhaps be drawn from a passage in Seneca, compared with another in Plautus, in favour of the bridge being outside of the Porta Trigemina: "In Sublicium Pontem me transfer et inter egentes me abige: non ideo tamen me despiciam, quod in illorum numero consideo, qui manum ad stipem porrigunt." (Sen. *de V. Beat.* 25.) As the Pons Sublicius is here shown to have been the haunt of beggars, so Plautus intimates that their station was beyond the P. Trigemina (*Capt.* i. 1. 22): —

"Ire extra Portam Trigeminam ad saccum licet."

When the Tiber is low the piles of a bridge are still visible that existed just outside of the Porta Trigemina, near the *Porto di Ripa Grande* (Canina, *Indicaz.* p. 557); and the Italian topographers, as well as Bunsen, have assumed them to be the re-

mains of the Sublician bridge; whilst Becker, in his *De Muris*, held them to belong to the Pons Aemilius. That writer in the treatise alluded to (p. 78, seq.) made three assertions respecting the Aemilian bridge: (1) That it was not the same as the Sublician; (2) that it stood where the Sublician is commonly placed, i. e. just below the Porta Trigemina; (3) that it was distinct from the Pons Lapideus, or Lepidi. But in his *Handbuch*, published only in the following year, he rejected all these assertions except the first.

According to the most probable view of this intricate and much disputed question at which we can arrive, the matter appears to us to have stood as follows: the Pons Sublicius was outside of the Porta Trigemina, at the place where remains of a bridge still exist. The reasons for arriving at this conclusion have been stated at the beginning of this discussion. Another bridge, of stone, also called Sublicius, was erected close to it to serve the purposes of traffic; but the wooden one was still preserved as a venerable and sacred relic, and as indispensable in certain ancient religious ceremonies, such as the precipitating from it the two dozen men of straw. But the stone bridge had also another name, that of *Lapideus*, by way of distinction from the wooden bridge.

Becker is of opinion that the notion of Aethicus, or Julius Orator, that *Pons Lapideus* was only a vulgar error for *Pons Lepidi*, is a "falsae eruditionis conjectura," and we think so too. We do not believe that the bridge ever bore the name of Lepidus. We may see from the account given of the wooden bridge by Dionysius, that, though preserved in his time, it was useless for all practical purposes (iii. 45). We may be sure that the pontifices would not have taken upon themselves the repairs of a bridge subject to the wear and tear of daily traffic. Ovid (*Fast.* v. 622) adverts to its existence, and to the sacred purposes to which it was applied: —

> "Tunc quoque priscorum virgo simulacra virorum
> Mittere *roboreo* scirpea *ponte* solet."

The coexistence of the two bridges, the genuine wooden Sublician, and its stone substitute, is shown in the following passage of Plutarch: *οὐ γὰρ θεμιτὸν, ἀλλ' ἐπάρατον ἡγεῖσθαι Ῥωμαίοις τὴν κατάλυσιν τῆς ξυλίνης γεφύρας ... Ἡ δὲ λιθίνη πολλοῖς ὕστερον ἐξειργάσθη χρόνοις ὑπ' Αἰμιλίου ταμιεύοντος.* (*Num.* 9.) Still more decisive is the testimony of Servius: "Cum per Sublicium pontem, hoc est ligneum, qui modo lapideus dicitur, transire conaretur (Porsena)" (*ad Aen.* viii. 646). There must certainly have been a strong and practicable bridge at an early period at this place, for the heavy traffic occasioned by the neighbourhood of the Emporium; but when it was first erected cannot be said. The words of Plutarch, *ὑπ' Αἰμιλίου ταμιεύοντος*, are obscure, and perhaps corrupt; but at all events we must not confound this notice with that in Livy respecting the building of the Pons Aemilius; the piles of which were laid in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, B.C. 179, and the arches completed some years afterwards, when P. Scipio Africanus and L. Mummius were censors (xl. 51). There is no proof that the *Ponte Rotto* is the Pons Aemilius; but Becker, in his *second* view, and Canina assume that it was; and this view is as probable as any other.

INSULA TIBERINA, WITH THE PONS FABRICIUS AND PONS CESTIUS.

There were several bridges at Rome before the Pons Aemilius was built, since Livy (xxxv. 21) mentions that *two* were carried away by the stream in B. C. 193; and these could hardly have been all, or he would undoubtedly have said so. The Insula Tiberina was, in very early times, connected with each shore by two bridges, and hence obtained the name of INTER DUOS PONTES. (Plut. *Popl.* 8; Macrob. *Sat.* ii. 12.) That nearest the city (now *Ponte Quattro Capi*) was the PONS FABRICIUS, so named from its founder, or probably its restorer, L. Fabricius, as appears from the inscription on it, and from Dion Cassius (xxxvii. 45). It was the favourite resort of suicides: —

> "—— jussit sapientem pascere barbam
> Atque a Fabricio non tristem ponte reverti."
> (Hor. *S.* ii. 3. 36.)

The bridge on the farther side of the island (now *Ponte S. Bartolommeo*) is commonly called PONS CESTIUS, and appears to have borne that name in

the middle ages. In the inscription, however, which is still extant upon it, it is called Pons Gratianus, and its restoration by Valentinian, Valens, and Gratian is commemorated (Canina, *Indic.* p. 576; cf. Amm. Marc. xxvii. 3; Symm. *Epist.* v. 76, x. 45).

Besides these bridges we find four others recorded in the summary of the *Notitia*, namely, the Aelius, Aurelius, Probi, and Milvius. The last of these lay two miles N. of Rome, at the point where the Flaminian Way crossed the Tiber, and has been already described in this dictionary. [Pons Milvius.] The Pons Aelius (now *Ponte S. Angelo*) was built by Hadrian when he founded his mausoleum, to which it directly leads. (Spart. *Hadr.* 19.) In the time of the Anonymous of Einsiedlen, who has preserved the inscription, it was called Pons S. Petri. But before the time of Hadrian there was a bridge which connected the district of the Vatican with the city near the gardens of Caligula and Nero, remains of which still exist near *S. Spirito*. This is probably the bridge which is called in the *Mirabilia* "Pons Neronianus," and by the ancient topographers "Pons Vaticanus." The Pons Triumphalis has also been sometimes identified with this bridge; but Piranesi, who is followed by Bunsen, places the Pons Triumphalis above the Aelian bridge; and it is said that there are still remains of one of the piles near *Tor di Nona*. But in the time of Procopius these had disappeared, and the Pons Aelius formed the only communication between the city and the Vatican district.

The Pons Aurelius was most probably the present *Ponte Sisto*, leading to the Janiculum and the Porta Aurelia. It appears to have been called Pons Antoninus in the middle ages. What the Pons Probi may have been it is impossible to say. Becker assigns the name to the bridge by the Porta Trigemina, but merely because, having denied that to be the Sublicius, he has nowhere else to place it. Canina, on the contrary (*Indic.* p. 609), places it where we have placed the Pons Aurelius.

XVIII. Aqueducts.

In the time of Frontinus there were at Rome nine principal aqueducts, viz., the Appia, Anio Vetus, Marcia, Tepula, Julia, Virgo, Alsietina, Claudia, Anio Novus; and two subsidiary ones, the Augusta and Rivus Herculaneus. (*Aq.* 4.) Between the time of Frontinus and that of Procopius their number had considerably increased, since the latter historian relates that the Goths destroyed 14 aqueducts that were without the walls. (*B. G.* i. 19.) The *Notitia* enumerates 19, viz. the Trajana, Annia, Attica, Marcia, Claudia, Herculea, Cerulea, Julia, Augustea, Appia, Alseatina, Ciminia, Aurelia, Damnata, Virgo, Tepula, Severiana, Antoniniana, Alexandrina. To enter into a complete history of all these would almost require a separate treatise; and we shall therefore confine ourselves to a statement of the more important particulars concerning them, referring those readers who are desirous of more information on the subject to the *Dictionary of Antiquities*, art. Aquaeductus.

The Aqua Appia was, as we have already related, the first aqueduct conferred on Rome by the care of the censor Appius Claudius Caecus, after whom it was named. It commenced on the Via Praenestina, between the 7th and 8th milestone, and extended to the Salinae, near the Porta Trigemina. The whole of it was underground, with the exception of sixty *passus* conducted on arches from the Porta Capena. Its water began to be distributed at the imus Clivus Publicius, near the Porta Trigemina. (Front. *Aq.* 5.)

The Anio Vetus was commenced by the censor M'. Curius Dentatus in B.C. 273, and completed by M. Fulvius Flaccus. (*Ib.* 6; Aur. Vict. *Vir. Ill.* 33.) It began above Tibur, and was 43 miles long; but only 221 *passus*, or less than a quarter of a mile, was above ground. It entered the city a little N. of *Porta Maggiore*.

The Aqua Marcia, one of the noblest of the Roman aqueducts, was built by Q. Marcius Rex, in pursuance of a commission of the senate, B. C. 144. It began near the Via Valeria at a distance of 36 miles from Rome; but its whole length was nearly 62 miles, of which 6935 *passus* were on arches. Respecting its source, see the article Fucinus Lacus [Vol. I. p. 918]. It was lofty enough to supply the Mons Capitolinus. Augustus added another source to it, lying at the distance of nearly a mile, and this duct was called after him, Aqua Augusta, but was not reckoned as a separate aqueduct. (Frontin. *Aq.* 12; Plin. xxxi. 24; Strab. v. p. 240.)

The Aqua Tepula was built by the censors Cn. Servilius Caepio and L. Cassius Longinus, B. C. 127. Its source was 2 miles to the right of the 10th milestone on the Via Latina.

The preceding aqueduct was united by Agrippa with the Aqua Julia, which began 2 miles farther down; and they flowed together as far as the Piscina on the Via Latina. From this point they were conducted in separate channels in conjunction with the Aqua Marcia, so that the Aqua Julia was in the uppermost canal, the Marcia in the lowest, and the Tepula in the middle. (Front. *Aq.* 8, 9, 19.) Remains of these three aqueducts are still to be seen at the *Porta S. Lorenzo* and *Porta Maggiore*.

The Aqua Virgo was also conducted to Rome by Agrippa in order to supply his baths. According to Frontinus (*Aq.* 10) its name was derived from its source having been pointed out by a young maiden, but other explanations are given. (Plin. xxxi. 25; Cassiod. *Var.* vii. 6.) It commenced in a marshy district at the 8th milestone on the Via Collatina, and was conducted by a very circuitous route, and mostly underground, to the Pincian hill; whence, as we have before mentioned, it was continued to the Campus Martius on arches which began under the gardens of Lucullus. It is the only aqueduct on the left bank of the Tiber which is still in some degree serviceable, and supplies the *Fontana Trevi*.

The Aqua Alsietina belonged to the Transtiberine Region. It was constructed by Augustus, and had its source in the Lacus Alsietinus (now *Lago di Martignano*), lying 6½ miles to the right of the 14th milestone on the Via Claudia. Its water was bad, and only fit for watering gardens and such like purposes. (Front. 11.)

The Aqua Claudia was begun by Caligula, and dedicated by Claudius, A. D 50. This and the Anio Novus were the most gigantic of all the Roman aqueducts. The Claudia was derived from two abundant sources, called Caerulus and Curtius, near the 38th milestone of the Via Sublacensis, and in its course was augmented by another spring, the Albudinus. Its water was particularly pure, and the best after that of the Marcia.

The Anio Novus began 4 miles lower down the Via Sublacensis than the preceding, and was the

longest and most lofty of all the aqueducts, being 58,700 passus, or nearly 59 miles, long, and its arches were occasionally 109 feet high. (Front. 15.) This also was completed by the emperor Claudius, as appears from the inscription still extant upon its remains over the *Porta Maggiore;* where both enter the city on the same arch, the Anio Novus flowing over the Claudia. Hence it was conducted over the Caelian hill on the ARCUS NERONIANI or CAELIMONTANI, which terminated, as we have already said, near the temple of Claudius.

As Procopius mentions fourteen aqueducts, five new ones must have been added between the time of Frontinus and of that historian; but respecting only two have we any certain information. The first of these is probably the AQUA TRAJANA, which we find recorded upon coins of Trajan, and which is also mentioned in the *Acta Martyr. S. Anton.* The water was taken from the neighbourhood of the Lacus Sabatinus (*Lago di Bracciano*), and, being conducted to the height of the Janiculum, served to turn the mills under that hill. (Procop. *B. G.* i. 19.) This duct still serves to convey the *Acqua Paola*, which, however, has been spoilt by water taken from the lake. It was also called CIMINIA.

The AQUA ALEXANDRINA was constructed by the emperor Alexander Severus for the use of his baths. (Lamprid. *Alex.* 25.) Originally it was the same as that now called *Acqua Felice*, but conducted at a lower level.

The AQUA SEVERIANA is supposed to have been made by the emperor Septimius Severus for the use of his baths in the 1st Region; but there is no evidence to establish its execution.

The AQUA ANTONINIANA was probably executed by Caracalla for the service of his great baths in the 12th Region; but this also is unsupported by any satisfactory proofs. (Canina, *Indic.* p. 620.) The names and history of a few other aqueducts which we sometimes find mentioned are too obscure to require notice here.

It does not belong to this subject to notice the Roman VIAE, an account of which will be found under that head.

SOURCES AND LITERATURE OF ROMAN TOPOGRAPHY.

With the exception of existing monuments, the chief and most authentic sources for the topography of Rome are the passages of ancient authors in which different localities are alluded to or described. Inscriptions also are a valuable source of information. By far the most important of these is the MONUMENTUM ANCYRANUM, or copy of the record left by Augustus of his actions; an account of which is given elsewhere. [Vol. I. p. 134.] To what is there said we need only add that the best and most useful edition of this document is that published at Berlin with the emendations of Franz, and a commentary by A. W. Zumpt (1845, 4to. pp. 120). Another valuable inscription, though not nearly so important as the one just mentioned, is that called the BASIS CAPITOLINA (Gruter, ccl.), containing the names of the Vici of 5 Regions (the 1st, 10th, 12th, 13th, and 14th), whose curatores and vicomagistri erected a monument to Hadrian. It will be found at the end of Becker's *Handbuch*, vol. i. We may also mention among sources of this description the fragments of Calendars which have been found in various places, and which are frequently useful by marking the sites of temples where certain sacrifices were performed. For the most part the original marbles of these fragments have disappeared, and the inscriptions on them are consequently only extant in MS. copies. One of the most ancient monuments of this kind is the FASTI MAFFEORUM or CALENDARIUM MAFFEANUM, so called from its having been preserved in the *Palazzo Maffei.* With a few *lacunae*, it contains all the twelve months; but what little information that is to be found in it, besides the principal festivals, relates chiefly to Augustus. The next in importance is the FASTI PRAENESTINI, discovered at Praeneste (*Palestrina*) in 1774. Verrius Flaccus, the celebrated grammarian, arranged and annotated it, caused it to be cut in marble, and erected it in the forum at Praeneste. (Suet. *Ill. Gramm.* c. 17.) Only four or five months are extant, and those in an imperfect state. The CALENDARIUM AMITERNINUM was discovered at Amiternum in 1703, and contains the months from May to December, but not entire. The calendar called FASTI CAPRANICORUM, so named from its having formerly been preserved in the *Palazzo Capranica*, contains August and September complete. Other calendars of the same sort are the ANTIATINUM, VENUSINUM, &c. Another lapidary document, but unfortunately in so imperfect a state that it often serves rather to puzzle than to instruct, is the CAPITOLINE PLAN. This is a large plan of Rome cut upon marble tablets, and apparently of the age of Septimius Severus, though with subsequent additions. It was discovered by the architect Giovanni Antonio Dosi, in the pontificate of Pius IV., under the church of *SS. Cosmo e Damiano;* where, broken into many pieces, it was used as a covering of the walls. It came into the possession of Cardinal Farnese, but was put away in a lumber room and forgotten for more than a century. Being rediscovered, it was published in 1673, in 20 plates, by Giovanni Pietro Bellori, librarian to Queen Christina; and subsequently at the end of the 4th volume of the *Thesaurus* of Graevius. The original fragments were carried to Naples with the other property of the Farnese family, and were subsequently given by the king of Naples to Pope Benedict XIV. In 1742 Benedict presented them to the Capitoline Museum at Rome, where they now appear on the wall of the staircase; but several of the pieces had been lost, for which copies, after the designs of Bellori and marked with a star, were substituted. On these fragments the plans of some ancient buildings may be made out, but it is very seldom that their topographical connection can be traced.

Amongst the literary records relating to Roman topography, the first place must be assigned to the NOTITIA. The full title of this work is: *Notitia Dignitatum utriusque Imperii*, or *in Partibus Orientis et Occidentis;* and it is a statistical view of the Roman empire, of which the description of Rome forms only a small portion or appendix. It cannot be later than the reign of Constantine, since no Christian church is mentioned in it, and indeed no building later than that emperor; nor, on the other hand, can it be earlier, since numerous buildings of the 3rd century, and even some of Constantine's, are named in it. The design of it seems to have been, to name the principal buildings or other objects which marked the boundaries of the different Regions; but we are not to assume that these objects are always named in the order in which they occurred, which is far from being the case. This

catalogue has come down to us in various shapes. One of the simplest and most genuine seems to be that entitled *Curiosum Urbis Romae Regionum XIIII. cum Breviariis suis*, the MS. of which is in the Vatican. Some of the other MSS. of the *Notitia* seem to have been interpolated. The spelling and grammar betray a late and barbarous age; but it is impossible that the work can have been composed at the time when the MS. was written.

Besides these there are two catalogues of the so-called REGIONARII, PUBLIUS VICTOR, and SEXTUS RUFUS, which till a very recent period were regarded as genuine, and formed the chief basis of the works of the Italian topographers. It is now, however, universally allowed that they are compilations of a very late date, and that even the names of the writers of them are forgeries. It would be too long to enter in this place into the reasons which have led to this conclusion; and those readers who are desirous of more information will find a full and clear statement of the matter in a paper of Mr. Bunbury's in the *Classical Museum* (vol. iii. p. 373, seq.).

The only other authorities on Roman topography that can be called original are a few notices by travellers and others in the middle ages. One of the principal of these is a collection of inscriptions, and of routes to the chief churches in Rome, discovered by Mabillon in the monastery of Einsiedlen, whence the author is commonly cited as the ANONYMUS EINSIEDLENSIS. The work appears to belong to the age of Charlemagne, and is at all events older than the Leonine city, or the middle of the 9th century. It was published in the 4th vol. of Mabillon's *Analecta;* but since more correctly, according to the arrangement of Gustav Haenel, in the *Archiv für Philologie und Pädagogik*, vol. v. p. 115, seq. In the Routes the principal objects on the right and left are mentioned, though often lying at a considerable distance.

The treatise called the MIRABILIA ROMAE, prefixed to the *Chronicon Romualdi Salernitani* in a MS. preserved in the Vatican, and belonging apparently to the 12th century, seems to have been the first attempt at a regular description of ancient Rome. It was compiled from statistical notices, narratives in the *Acta Martyrum*, and popular legends. It appears, with variations, in the *Liber Censuum* of Cencius, and in many subsequent manuscripts, and was printed as early as the 16th century. It will be found in Montfaucon, *Diarium Ital.* p. 283, seq., and in Nibby's *Effemeridi Letterarie*, Rome, 1820, with notes. A work ascribed to MARTINUS POLONUS, belonging probably to the latter part of the 13th century, seems to have been chiefly founded on the *Mirabilia*. Accounts of some of the gates of Rome will be found in WILLIAM OF MALMESBURY'S work *De Gestis Regum Anglorum* (book iv.).

The Florentine POGGIO, who flourished in the 15th century, paid great attention to Roman antiquities. His description of Rome, as it existed in his time, is a mere sketch, but elegant, scholar-like, and touching. It is contained in the first book of his work entitled *De Varietate Fortunae Urbis Romae*, and will be found in Sallengre, *Nov. Thesaur. Ant. Rom.* vol. i. p. 501. A separate edition of his work was also published in Paris, 1723. His predecessor, PETRARCH, has given a few particulars respecting the state of the city in his time; but he treats the subject in an uncritical manner. The traveller KYRIACUS, called from his native town Anconitanus, who accompanied the emperor Sigismund, passed a few days in Rome during the time that Poggio was also there, which he spent in collecting inscriptions, and noting down some remarks. His work, entitled *Kyriaci Anconitani Itinerarium*, was published at Florence in 1742.

Such are the chief original sources of Roman topography. The literature of the subject is abundantly copious, but our space will permit us to do little more than present the reader with a list of the principal works. The first regular treatise on the antiquities of Rome was that of Biondo Flavio (Blondus Flavius) (1388—1463), who was at once a man of business and a man of letters. His work entitled *Roma Instaurata*, a gigantic step in Roman topography, was published by Froben at Basle, 1513, fol. An Italian translation by Lucio Fauno, but imperfect, appeared at Venice in 1548. Towards the end of the 15th century, Julius Pomponius Laetus founded the Roman Academy. Laetus was an enthusiastic collector of inscriptions, but his fondness for them was such that he sometimes invented what he failed in discovering, and he is accused of having forged the inscription to the statue of Claudian found in the forum of Trajan. (Tiraboschi, *Storia della Lett.* vol. ii. lib. iv.) His book, *De Romanae Urbis vetustate*, is uncritical, and of small value. Janus Parrhasius had a little previously published the pseudo-Victor. To the same period belong the *De Urbe Roma Collectanea* of the bishop Fabricius Varranus, a compilation chiefly borrowed from Biondo, and published, like the work of Laetus, in the collection of Mazocchi, Rome, 1515, 4to. Bernardo Ruccellai, a friend of Lorenzo de' Medici, commenced a description of Rome, by way of commentary on the so-called Victor. It was never completed, and the MS., which is of considerable value, was first printed among the Florentine "Scriptores," in an Appendix to Muratori's collection (vol. ii. p. 755).

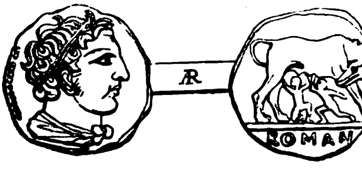
The next work that we need mention is the *Antiquitates Urbis Romae* of Andreas Fulvius, Rome, 1527, fol. Bresc. 1545, 8vo. This production is a great step in advance. Fulvius procured from Raphael a sketch of the 14 Regions, according to the restoration of them by himself, but it does not seem to have been preserved. In 1534 the Milanese knight Bartholomaeus Marlianus published his *Urbis Romae Topographia*, a work in many points still unsurpassed. An augmented and much improved edition was published in 1544; but that of 1588 is a mere reprint of the first. It will also be found in the *Thesaurus* of Graevius, vol. iii. Marliano was the first to illustrate his work with plans and drawings, though they are not of a very superior kind. Lucio Fauno's *Delle Antichità della Città di Roma* appeared at Venice in 1548. It contains a few facts which had been overlooked by his predecessors. The celebrated hermit Onuphrius Panvinius of Verona, published at Venice in 1558 his *Commentarium Reipublicae Romanae Libri III.* The first book, entitled *Antiquae Urbis Imago*, which is the topographical part, is written with much learning and acuteness. It was intended merely as a preface to a complete description of Rome according to the Regions of Augustus, but the early death of Panvinius prevented the execution of this plan. His work is contained in the collection of Graevius, vol. iii. It was Panvinius who first published Sextus Rufus, and he also greatly augmented Publius

Victor. George Fabricius, of Chemnitz, author of *Antiquitatum Libri II.*, Basle, 1550, accused Panvinius of stealing from him; but if such was the case, he greatly improved what he purloined. Jean Jacques Boissard, of Besançon, published at Frankfort in 1597 a *Topographia Romanae Urbis*, which is not of much value; but the sketches in his collection of inscriptions have preserved the aspect of many things that have now disappeared. The next work of any note is the *Roma Vetus et Recens* of the Jesuit Alex. Donatus of Siena, in which particular attention was paid to the illustration of Roman topography by passages in ancient authors. It was published at Rome, 1638, 4to, and also in the *Thesaurus* of Graevius, vol. iii. But this production was soon obscured by the more celebrated work of Faminiano Nardini, the *Roma Antica*, which marks an epoch in Roman Topography, and long enjoyed a paramount authority. So late as the year 1818, Hobhouse characterised Nardini as "to this day the most serviceable conductor." (*Hist. Illustrations of Childe Harold*, p. 54.) Yet, in many respects, he was an incompetent guide. He knew no Greek; he took the works of the pseudo-Regionaries for the foundation of his book; and it is even affirmed that, though he lived in Rome, he had never visited many of the buildings which he describes. (Bunsen, *Vorrede zur Beschreibung*, p. xxxix.) His work was published at Rome, 1668, 4to; but the best edition of it is the 4th, edited by Nibby, Rome, 1818, 4 vols. 8vo. There is a Latin translation of it in Graevius, vol. iv. In 1680, Raphael Fabretti, of Urbino, secretary to Cardinal Ottoboni, published a valuable work, *De Aquaeductibus*, which will also be found in the same volume of Graevius.

Towards the end of the 17th century two learned French Benedictines, Mabillon and Montfaucon, rendered much service to Roman topography. Mabillon first published the Anonymus Einsiedlensis in his *Analecta* (vol. iv. p. 50, seq.) Montfaucon, who spent two years and a half in Rome (1698—1700). inserted in his *Diarium Italicum* a description of the city divided into twenty days. The 20th chapter contains a copy of the *Mirabilia*. In 1687 Olaus Borrichius published a topographical sketch of Rome, according to the Regions. It is in the 4th volume of Graevius. The work of the Marquis Ridolfino Venuti, entitled *Accurata e succinta Descrizione Topografica delle Antichità di Roma* (Roma, 1763, 2 vols. 4to.), is a book of more pretensions. Venuti took most of his work from Nardini and Piranesi, and the new matter that he added is generally erroneous. The 4th edition by Stefano Piale, Rome, 1824, is the best. Francesco Ficoroni's *Vestigia e Rarità di Roma Antica* (Roma, 1744, 4to.) is not a very satisfactory performance. The most useful portions of it have been inserted in the *Miscellanea* of Fea (part i. pp. 118—178). The work of our countryman Andrew Lumisden, *Remarks on the Antiquities of Rome and its Environs* (London, 1797, 4to.) was, in its day, a book of some authority. Many valuable observations on Roman topography are scattered in the works of the learned Gaetano Marini, and especially in his *Atti de' Fratelli Arvali*; but he treated the subject only incidentally. The same remark applies to Visconti. The *Roma descritta ed illustrata* (Roma, 1806, 2 vol. 4to.), of the Abbate Guattani is the parent of most of the modern guide books. Antonio Nibby has published several useful works on Roman topography, which, if sometimes deficient in accurate scholarship, display nevertheless considerable acuteness and knowledge of the subject. His principal works are, *Del Foro Romano, della Via Sacra, &c.*, Roma, 1819, 8vo.; *Le Mura di Roma, disegnate da Sir W. Gell, illustr. da A. Nibby*, Roma, 1820; and his *Roma Antica*, published in 1838. Sir Wm. Gell's *Topography of Rome and its Vicinity* (2nd Edit., revised and enlarged by Bunbury, London, 1846) contains some useful information. The *Miscellanea filologica, critica ed antiquaria* (Rome, 1790), and the *Nuova Descrizione di Roma* (Rome, 1820, 3 vols. 8vo.), by Carlo Fea, are useful works. Hobhouse's *Historical Illustrations of Childe Harold, with Dissertations on the Ruins of Rome* (London, 2nd ed. 1818, 8vo.) are chiefly valuable for their account of the gradual destruction of the city. The works of two other Englishmen are now out of date viz. Edward Burton's *Description of the Antiquities of Rome* (Oxf. 1821; London, 1828, 2 vols. 8vo.); and the Rev. Richard Burgess's *Topography and Antiquities of Rome* (London, 1831, 2 vols. 8vo.). Forsyth's *Italy* is of little service for Rome. Sachse's *Geschichte und Beschreibung der alten Stadt Rom* (Hanover, 1824—1828, 2 vols. 8vo.), though still in some respects a useful production, must now be regarded as superseded by more recent works.

We are now arrived at the *Beschreibung der Stadt Rom*, with which may be said to commence the modern epoch of Roman topography. This work was projected in 1817 by some German *literati* then residing at Rome, among whom were the present Chevalier Bunsen, and Ernst Platner, Eduard Gerhard and Wilhelm Röstell. They were joined by the celebrated historian B. G. Niebuhr, who undertook the superintendence of the ancient part; for the scheme of the book embraced a complete description of the modern city, with all its treasures of art, besides an account of ancient Rome. It is, however, of course only with the latter that we are here concerned, which was undertaken by Niebuhr, Bunsen, and subsequently L. Urlichs. Niebuhr's connection with the work was not of long duration, and only a few of the descriptions are from his hand, which form the most valuable portion of the book. The views of the German scholars threatened a complete revolution in Roman topography. They seemed to have come to Rome with the express design of overturning the paper city, as their ancestors many centuries before had subverted the stone one. In extent and accuracy of erudition they were far superior to their Italian antagonists; but this advantage is often more than counterbalanced by that want of sober and critical good sense which so frequently mars the productions of German scholars. They have succeeded in throwing doubt upon a great deal, but have established very little in its place. To Piale, and not to the Germans, belongs the merit of having re-established the true situation of the forum, which may be considered as the most important step in the modern topography of Rome. The German views respecting the Capitol, the comitium, and several other important points, have found many followers; but to the writer of the present article they appear for the most part not to be proved; and he has endeavoured in the preceding pages to give his reasons for that opinion.

It cannot be denied, however, that the appearance of the *Beschreibung* did good service to the cause of Roman topography, by awakening a sharper and more extended spirit of inquiry. The first volume



appeared at Stuttgard in 1829, the last in 1842. As a literary production — we are speaking of course of the ancient parts — it is of little service to the scholar. The descriptions are verbose, and the ancient ones being intermingled with the modern have to be sought through a voluminous work. A still graver defect is the almost entire absence, especially in the earlier volumes, of all citation of authorities.

At this period in the history of Roman topography W. A. Becker, paid a short visit to Rome. Becker took up the subject of his researches as a point of national honour; and in his first tract, *De Romae Veteris Muris atque Portis* (Leipzig, 1842), devoted two pages of the preface to an attack upon Canina, whom he suspected of the grave offence of a want of due reverence for German scholarship. But with an inborn pugnacity his weapons were also turned against his own countrymen. Amid a little faint praise, the labours of Bunsen and Urlichs were censured as incomplete and unsatisfactory. In the following year (1843) Becker published the first volume of his *Handbuch der Römischen Alterthümer*, containing a view of the topography of Rome. A review of his work by L. Preller, which appeared in the *Neue Jenaische Allgemeine Literatur-Zeitung*, though written with candour and moderation, seems to have stung Becker into fury. He answered it in a pamphlet entitled *Die Römische Topographie in Rom, eine Warnung* (Leipsig, 1844), in which he accused Preller of having taken up the cudgels in favour of Canina, though that gentleman is a moderate adherent of the German school of topographers. Nothing can exceed the arrogant tone of this pamphlet, the very title of which is offensive. It was answered by Urlichs in his *Römische Topographie in Leipzig* (Stuttgart, 1845), in which, though Becker well deserved castigation, the author adopted too much of the virulent and personal tone of his adversary. The controversy was brought to a close by a reply and rejoinder, both written with equal bitterness; but the dispute has served to throw light on some questions of Roman topography. In a purely literary point of view, Becker's *Handbuch* must be allowed to be a very useful production. His views are arranged and stated with great clearness, and the constant citation of authorities at the bottom of the page is very convenient to the student. The writer of this article feels himself bound to acknowledge that it would not have been possible for him to have prepared it without the assistance of Becker's work. Nevertheless he is of opinion that many of Becker's views on the most important points of Roman topography are entirely erroneous, and that they have gained acceptation only from the extraordinary confidence with which they are asserted and the display of learning by which they are supported. Amongst other German topographers we need only mention here L. Preller, who has done good service by some able papers and by his useful work on the Regions of Augustus (*Die Regionen der Stadt Rom*, Jena, 1846, 8vo.). We may add that the English reader will find a succinct and able sketch of the views of the German school, and particularly of Becker, in a series of very valuable papers by Mr. Bunbury, published in the *Classical Museum* (vols. iii. iv. and v.).

We shall close this list with the names of two modern Italian topographers. Between the years 1820 and 1835, Stefano Piale published some very useful dissertations on various points of Roman topography, among which the following may be particularly mentioned: *Delle Porte settentrionali del Recinto di Servio; Delle Porte orientali, delle meridionali, e di quelle del Monte Aventino della stessa cinta; Della grandezza di Roma al tempo di Plinio; Del Foro Romano; Delle Mura Aureliane; e degli antichi Arsenali detti Navalia, &c.* But at the head of the modern Italian school must be placed the Commendatore, Luigi Canina. Canina has a real enthusiasm for his subject, which, from his profession, he regards from an architectural rather than a philological point of view; and this, combined with the advantages of a residence at Rome, goes far to compensate the absence of the profounder, but often unwieldy, erudition of the Germans. The later editions of his works have been freed from some of the errors which disfigured the early ones, and contain much useful information, not unmixed sometimes with erroneous views; a defect, however, which in a greater or less degree must be the lot of all who approach the very extensive and very debatable subject of Roman topography. Canina's principal works are the *Indicazione topografica di Roma antica*, 4th ed. Rome, 1850, 8vo.; *Del Foro Romano e sue Adjacenze*, 2nd ed. 1845; and especially his magnificent work in four large folio volumes entitled *Gli Edifizi di Roma antica*, with views, plans, and restorations.

It now only remains to notice some of the principal maps and other illustrations of Rome. The Florentine San Gallo, who flourished in the 15th century, drew several of the most remarkable monuments. The sketches and plans of Antonio Labacco, executed at the beginning of the 16th century, are valuable but scarce. We have already mentioned that Raphael designed, or thought of designing, a plan of the restored city. This plan, if ever executed, is no longer in existence; but a description of it will be found in a letter addressed by Castiglione to Pope Leo X. (Published in the works of Castiglione, Padua, 1733. There is a translation of it in the *Beschreibung*, vol. i. p. 266. seq.) Serlio of Bologna, architect to Francis I., gave many plans and sketches of ancient Roman buildings in the 3rd book of his work on architecture (Venice, 1544, fol.), to which, however, he added *restorations*. Leonardo Buffalini's great plan of Rome, as it was in 1551, was most important for Roman topography. It was drawn on wood in 24 plates; but unfortunately all that now remains of it is an imperfect copy in the Barberini palace. Pirro Ligorio and Bernardo Gamucci published several views in Rome about the middle of the 16th century. In 1570 appeared the great work of Palladio, *Libri IV. dell' Architettura, &c.* (Venice, fol.), in the 4th book of which are several plans of ancient temples; but the collection is not so rich as that of Serlio. Scamozzi's *Discorsi sopra le Antichità di Roma* (Venice, 1852, fol.) contains some good views, but the letter-press is insignificant. In 1574 Fulvius Ursinus assisted the Parisian architect Du Pérac in drawing up a plan of the restored city, which was published in several sheets by Giacomo Lauro. It is erroneous, incomplete, and of little service. Of much more value are the views of ancient monuments published by Du Pérac in 1573, and republished by Lossi in 1773. In the time of Du Pérac several monuments were in existence which have now disappeared, as the forum of Nerva, the Septizonium, and the trophies of Marius. The sketches of Pietro Santi Bartoli, first published in 1741, are clever but full of mannerism.

Antoine Desgodetz, sent to Rome by Colbert, published at Paris in 1682 his work in folio, entitled *Les Edifices antiques de Rome mesurés et dessinés.* The measurements are very correct, and the work indispensable to those who would thoroughly study Roman architecture. Nolli's great plan of Rome, the first that can be called an accurate one, appeared in 1748. In 1784 Piranesi published his splendid work the *Antichità Romane* (Rome, 4 vols. fol.), containing the principal ruins. It was continued by his son, Francesco Piranesi. The work of Mich. d'Overbeke, *Les restes de l'ancienne Rome* (à la Haye, 1673, 2 vols. large fol.), is also of great value. In 1822 appeared the *Antichità Romane* of *Luigi Rossini* (Rome, 1822, large fol.). To the plans and restorations of Canina in his *Edifizi* we have already alluded. His large map of Rome represents of course his peculiar views, but will be found useful and valuable. Further information on the literature of Roman topography will be found in an excellent preface to the *Beschreibung* by the Chevalier Bunsen. [T. H. D.]

COIN OF ROME.

ROMATI'NUS. [CONCORDIA.]

ROME'CHIUM, a place on the E. coast of the Bruttian peninsula, mentioned only by Ovid, in his description of the voyage of the Epidaurian serpent to Rome (Ovid. *Met.* xv. 705). The geography of the passage is by no means very precise; but according to local topographers the name of *Romechi* is still retained by a place on the sea-coast near *Roccella*, about 12 miles N. of the ruins of Locri (Romanelli, vol. i. p. 156; Quattromani, *Not. ad Barrii Calabr.* iii. 13.) [E. H. B.]

RO'MULA, a place in Upper Pannonia, on the road leading from Aemona along the river Savus to Sirmium. (*It. Ant.* p. 274; *Tab. Peut.*) It is perhaps the modern *Carlstadt*, the capital of *Croatia.* [L. S.]

RO'MULA. [DACIA, p. 744. b.]

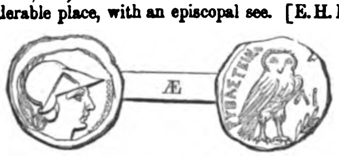
ROMU'LEA (Ῥωμυλία, Steph. B.: *Bisaccia*), a city of Samnium, mentioned by Livy (x. 17), as being taken by the Roman consul P. Decius, or according to others by Fabius, in the Third Samnite War, B. C. 297. It is described as being a large and opulent place; but seems to have afterwards fallen into decay, as the name is not noticed by any other writer, except Stephanus of Byzantium, and is not found in any of the geographers. But the Itineraries mention a station Sub Romula, which they place on the Appian Way, 21 miles beyond Aeculanum, and 22 miles from the Pons Aufidi (*Itin. Ant.* p. 120). Both these stations being known, we may fix Romulea, which evidently occupied a hill above the road, on the site of the modern town of *Bisaccia*, where various ancient remains have been discovered. (Romanelli, vol. ii. p. 348; Cluver. *Ital.* p. 1204; Pratilli, *Via Appia*, iv. 5). [E. H. B]

ROSCIA'NUM (*Rossano*), a town of Bruttium, situated on a hill about 2 miles from the sea-coast, on the gulf of Tarentum, and 12 miles from the mouth of the Crathis. The name is not found in the geographers, or mentioned by any earlier writer; but it is found in the Itinerary of Antoninus, which places it 12 miles from Thurii, and is noticed by Procopius during the Gothic wars as a strong fortress, and one of the most important strongholds in this part of Italy. (*Itin. Ant.* p. 114; Procop. *B. G.* iii. 30.) It was taken by Totila in A. D. 548, but continued throughout the middle ages to be a place of importance, and is still one of the most considerable towns in this part of *Calabria.* [E.H.B.]

ROSTRUM NEMAVIAE, a place in the central part of Vindelicia, on the river Virdo. (*It. Ant.* pp. 237, 258.) [L. S.]

ROTOMAGUS (Ῥατόμαγος), in Gallia Lugdunensis, is mentioned by Ptolemy (ii. 8. § 8) as the capital of the Veneliocasi, as the name is written in some editions. [VELLOCASSES.] In the Table the name is written Rattomagus, with the mark which indicates a capital town; and in the Antonine Itin. it occurs in the corrupted form Latomagus on the road which runs from a place called Carocotinum. Ammianus (xv. 11) speaks of it in the plural number Rotomagi. There are said to be coins with the legend Ratumacos.

Rotomagus is *Rouen* on the north side of the *Seine*, and the capital of the department of *Seine Inférieure.* The old Gallic name was shortened to Rotomum or Rodomum, and then to *Rouen*, as Rodumna has been shortened to *Roanne.* The situation of *Rouen* probably made it a town of some importance under the Roman Empire, but very few Roman remains have been found in *Rouen.* Some Roman tombs have been mentioned. [G. L.]



ROXOLA'NI (Ῥωξολανοί), a people belonging to the Sarmatian stock, who first appear in history about a century before Christ, when they were found occupying the steppes between the *Dnieper* and the *Don.* (Strab. ii. p. 214, vii. pp. 294, 306, 307, 309; Plin. iv. 12; Ptol. iii. 5. §§ 19, 24, 25.) Afterwards some of them made their footing in Dacia and behind the Carpathians. Strabo (vii. p. 306) has told the story of the defeat of the Roxolani and their leader Tasius by Diophantus, the general of Mithridates, and takes the opportunity of describing some of their manners which resembled those of the Sarmatian stock to which they belonged. Tacitus (*Hist.* i. 79) mentions another defeat of this people, when making an inroad into Moesia during Otho's short lease of power. From the inscription (Orelli, *Inscr.* 750) which records the honours paid to Plautius Silvanus, it appears that they were also defeated by him. Hadrian, who kept his frontier quiet by subsidising the needy tribes, when they complained about the payment came to terms with their king (Spartian, *Hadr.* 6) — probably the Rasparasanus of the inscription (Orelli, *Inscr.* 833). When the general rising broke out among the Sarmatian, German and Scythian tribes from the Rhine to the Tanais in the reign of M. Aurelius, the Roxolani were included in the number. (Jul. Capit. *M. Anton.* 22.) With the inroads of the Goths the name of the Roxolani almost disappears. They probably were partly exterminated, and partly united with the kindred tribes of the Alani, and shared the general fate when the Huns poured down from the interior of Asia, crossed the *Don*, and oppressed the Alani, and, later, with the help of these, the Ostro-Goths.

It has been assumed that the name of the RHACALANI (Ῥακαλάνοι, Ptol. iii. 5. § 24) is not different from that of the Roxolani, who, according to

Schafarik (*Slav. Alt.* vol. i. p. 342), received their appellation from the Sarmatian "Raxa,"—perhaps the *Volga* or some other river in their settlements. [E. B. J.]

RUADITAE. [MARMARICA, p. 278, a.]

RUBI (*Eth.* Ῥυβαστεινός, Rubastinus: *Ruvo*), a city of Apulia, situated on the branch of the Appian Way between Canusia and Butuntum, and about 10 miles distant from the sea-coast. It is mentioned by Horace, as one of the places where Maecenas and his companions slept on the journey from Rome to Brundusium. (Hor. *Sat.* i. 5. 94.) The distance from Canusium is given as 23 miles in the Antonine Itinerary, and 30 in the Jerusalem Itinerary, which is the more correct, the direct distance on the map being above 28 miles. (*Itin. Ant.* p. 116; *Itin. Hier.* p. 610.) Neither Strabo nor Ptolemy notices the existence of Rubi, but the inhabitants are mentioned under the name of Rubustini by Pliny, among the municipal towns of Apulia, and the "Rubustinus Ager" is enumerated in the Liber Coloniarum among the "Civitates Apuliae." (Plin. iii. 11. s. 16; *Lib. Colon.* p. 262.) An inscription also attests the municipal rank of Rubi in the reign of the younger Gordian. (Mommsen, *Inscr. R. N.* 624.) The singular ethnic form given by Pliny is confirmed by the evidence of coins which have the name ΡΥΒΑΣΤΕΙΝΩΝ at full. These coins show also that Rubi must have received a considerable amount of Greek influence and cultivation; and this is still more strongly confirmed by the discoveries which have been recently made by excavations there of numerous works of Greek art in bronze and terra cotta, as well as of vast numbers of painted vases, of great variety and beauty. These, however, like all the others found in Apulia and Lucania, are of inferior execution, and show a declining state of art as compared with those of Nola or Volci. All these objects have been discovered in tombs, and in some instances the walls of the tombs themselves have been found covered with paintings. (Romanelli, vol. ii. p. 172; *Bullett. dell' Inst. Arch.* 1829, p. 173, 1834, pp. 36, 164, 228, &c.) The modern town of *Ruvo* is still a considerable place, with an episcopal see. [E. H. B.]

COIN OF RUBI.

RUBICON (Ῥουβίκων), a small river on the E. coast of Italy, flowing into the Adriatic sea, a few miles N. of Ariminum. It was a trifling stream, one of the least considerable of the numerous rivers that in this part of Italy have their rise in the Apennines, and discharge their waters into the Adriatic; but it derived some importance from its having formed the boundary between Umbria, or the part of the Gaulish territory included in that province, and Cisalpine Gaul, properly so called. Hence, when the limits of Italy were considered to extend only to the frontiers of Cisalpine Gaul, the Rubicon became on this side the northern boundary of Italy. (Strab. v. p. 217; Plin. iii. 15. s. 20; Lucan. i. 215.) This was the state of things at the outbreak of the Civil War between Caesar and Pompey: Cisalpine Gaul was included in the government of the former, and the Rubicon was therefore the limit of his province; it was this which rendered the passage of this trifling stream so momentous an event, for it was, in fact, the declaration of war. Caesar himself makes no mention of its passage, and it is difficult to believe that he would have set out on his march from Ravenna without being fully prepared to advance to Ariminum; but the well-known story of his halt on its banks, his hesitation and ultimate decision, is related in detail by Suetonius and Plutarch, as well as by Lucan, and has given a proverbial celebrity to the name of the Rubicon. (Suet. *Caes.* 31; Plut. *Caes.* 32; Appian, *B. C.* ii. 35; Lucan, i. 185, 213—227.) The river is alluded to by Cicero a few years later as the frontier of Gaul; and M. Antonius was ordered by a decree of the senate to withdraw his army across the Rubicon, as a proof that he abandoned his designs on the Gaulish province. (Cic. *Phil.* vi. 3.) Strabo still reckons the Rubicon the limit between Gallia Cisalpina and Umbria; but this seems to have been altered in the division of Italy by Augustus; and though Pliny alludes to the Rubicon as "quondam finis Italiae," he includes Ariminum and its territory as far as the river Crustumius, in the 8th Region or Gallia Cispadana. (Plin. *l. c.*; Ptol. iii. 1. § 23.) Its name, however, was not forgotten; it is still found in the Tabula, which places it 12 miles from Ariminum (*Tab. Peut.*), and is mentioned by Sidonius Apollinaris. (*Ep.* i. 5.) But in the middle ages all trace of it seems to have been lost; even the Geographer of Ravenna does not notice it, notwithstanding its proximity to his native city.

In modern times the identification of this celebrated stream has been the subject of much controversy, and cannot yet be considered as fully determined. But the question lies within very narrow compass. We know with certainty that the Rubicon was intermediate between Ariminum and Ravenna, and between the rivers Sapis (*Savio*), which flowed some miles S. of the latter, and the Ariminus or *Marecchia*, which was immediately to the N. of the former city. Between these two rivers only two streams now enter the Adriatic, within a very short distance of each other. The southernmost of these is called the *Luso* or *Lusa*, a considerable stream, which crosses the high-road from *Rimini* to *Ravenna* about 10 miles from the former city. A short distance further N. the same road crosses a stream now called *Fiumicino*, which is formed by the united waters of three small streams or torrents, the most considerable of which is the *Pisatello* (the uppermost of the three); the other two are the *Rigosa* or *Rigone*, called also, according to some writers, the *Rugone*, and the *Plusa*, called also the *Fiumicino*. These names are those attested by the best old maps as well as modern ones, especially by the Atlas of Magini, published in 1620, and are in accordance with the statements of the earliest writers on Italian topography, Flavio Biondo and Leandro Alberti. Cluverius, however, calls the northernmost stream the *Rugone*, and the one* next to it the *Pisatello*. This point is, however, of little importance, if it be certain that the two streams always united their waters as they do at the present day before reaching the sea. The question really lies between the *Luso* and the *Fiumicino*, the latter being the outlet both of the *Rugone* and the *Pisatello*. A papal bull, issued in 1756, pronounced in favour of the *Luso*, which has, in consequence, been since commonly termed the Rubicon, and is still called by the peasants on its banks *Il Rubicone*. But it is evident that such an authority has no real

weight. The name of *Rugone*, applied to one of the three branches of the *Fiumicino*, would be of more value, if it were certain that this name had not been distorted by antiquarians to suit their own purposes. But it appears that old maps and books write the name *Rigosa*. Two arguments, however, may be considered as almost decisive in favour of the *Fiumicino* as compared with the *Luso:* 1st. The distance given in the Tabula of 12 miles from Ariminum, coincides exactly with the distance of the *Fiumicino* from that city, as stated by Cluverius, who examined the question on the spot; and 2ndly, the redness of the gravel in the bed of the stream, from which it was supposed to have derived its name, and which is distinctly alluded to by Sidonius Apollinaris, as well as by Lucan (Sidon. *Ep.* i. 5; Lucan, i. 214), was remarked by Cluverius as a character of the *Fiumicino*, which was wholly wanting in the *Luso*. The circumstance which has been relied on by some authors, that the latter river is a more considerable and rapid stream than the other, and would therefore constitute a better frontier, is certainly of no value, for Lucan distinctly speaks of the Rubicon as a trifling stream, with little water in it except when swollen by the winter rains.

The arguments in favour of the *Fiumicino* or *Pisatello* (if we retain the name of the principal of its three confluents) thus appear decidedly to preponderate; but the question still requires a careful examination on the spot, for the statements of Cluverius, though derived from personal observation, do not agree well with the modern maps, and it is not improbable that the petty streams in question may have undergone considerable changes since his time: still more probable is it that such changes may have taken place since the time of Caesar. (Cluver. *Ital.* pp. 296—299; Blondi Flavii *Italia Illustrata*, p. 343; Alberti, *Descrizione d' Italia*, p. 246; Magini, *Carta di Romagna*; Mannert. *Geographie von Italien*, vol. i. p. 234; Murray's *Handbook for Central Italy* p. 104. The older dissertations on the subject will be found in Graevius and Burmann's *Thesaurus*, vol. vii. part 2.) [E. H. B.]

RUBRAE and AD RUBRAS, a town in Hispania Baetica, now *Cabezas Rubias*. (*It. Ant.* p. 431.) [T. H. D.]

RUBRESUS LACUS. [ATAX.]

RUBRICA'TA (Ῥουβρίκατα, Ptol. ii. 6. § 74), an inland city of the Laeëtani in the NE. part of Hispania Tarraconensis, on the river Rubricatus; according to Reichard, *Olesa*. [T. H. D.]

RUBRICA'TUS or -UM (Ῥουβρίκατος, Ptol. ii. 6. § 18), a river of Hispania Tarraconensis flowing into the Mare Internum a little W. of Barcino, the modern *Llobregat*. (Mela, ii. 6. § 5; Plin. iii. 3. s. 4.) [T. H. D]

RUBRICA'TUS, in Numidia. [RHUBRICATUS.]

RUBRUM MARE, or ERYTHRAEUM MARE (ἡ ἐρυθρὰ θάλασσα, Herod. i. 180, 202, ii. 8, 158, 159, iv. 39; Polyb. v. 54. § 12, ix. 43. § 2; Strab. i. pp. 32, 33, 50, 56, xvi. pp. 765, 779, xvii. pp. 804, 815; Pomp. Mela, iii. 8. § 1; Plin. vi. 2. s. 7). The sea called Erythra in Herodotus has a wide extension, including the *Indian Ocean*, and its two gulfs the *Red Sea* and the *Persian Gulf* [PERSICUS SINUS], which latter he does not seem to have considered as a gulf, but as part of a continuous sea-line; when the *Red Sea* specifically is meant it bears the name of Arabicus Sinus [ARABICUS SINUS]. The thick, wall-like masses of coral which form the shores or fringing reefs of the cleft by which the waters of the *Indian Ocean* advance through the straits of *Bab-el-Mandeb*, with their red and purple hues, were no doubt the original source of the name. Thus also in Hebrew (*Exod.* x. 19, xiii. 18; *Ps.* cvi. 7, 9, 22) it was called "yam sûph," or the "weedy sea," from the coralline forests lying below the surface of the water. Ramses Miamoum (Sesostris) was the first (from 1388 to 1322, B. C.) — so said the priests — who with long ships subjected to his dominion the dwellers on the coast of the Erythraean, until at length sailing onwards, he arrived at a sea so shallow as to be no longer navigable. Diodorus (i. 55, 56; comp. Herod. ii. 102) asserts that this conqueror advanced in India beyond the Ganges, while Strabo (xvi. p. 760) speaks of a memorial pillar of Sesostris near the strait of Deire or *Bab-el-Mandeb*. It appears that the *Persian Gulf* had been opened out to Phoenician navigation as three places were found there which bore similar if not identical names with those of Phoenicia, Tylus or Tyrus, Aradus, and Dora (Strab. xvi. pp. 766, 784, comp. i. p. 42), in which were temples resembling those of Phoenicia (comp. Kenrick, *Phoenicia*, p. 48). The expeditions of Hiram and Solomon, conjoint undertakings of the Tyrians and Israelites, sailed from Ezion Geber through the Straits of *Bab-el-Mandeb* to Ophir, one locality of which may be fixed in the basin of the Erythraean or *Indian Ocean* [OPHIR]. The Lagid kings of Aegypt availed themselves with great success of the channel by which nature brought the traffic and intercourse of the *Indian Ocean*, within a few miles of the coast of the Interior Sea. Their vessels visited the whole western peninsula of India from the gulf of Barygaza, *Guzerat*, and *Cambay*, along the coasts of *Malabar* to the Brahminical sanctuaries of *Cape Comorin*, and to the great island of Taprobane or *Ceylon*. Nearchus and the companions of Alexander were not ignorant of the existence of the periodical winds or monsoons which favour the navigation between the E. coast of Africa, and the N. and W. coasts of India. From the further knowledge acquired by navigators of this remarkable local direction of the wind, they were afterwards emboldened to sail from Ocelis in the straits of *Bab-el-Mandeb* and hold a direct course along the open sea to Muziris, the great mart on the *Malabar* coast (S. of *Mangalor*), to which internal traffic brought articles of commerce from the E. coast of the Indian peninsula, and even gold from the remote Chryse. The Roman empire in its greatest extent on its E. limit reached only to the meridian of the *Persian Gulf*, but Strabo (i. p. 14, ii. p. 118, xvi. p. 781, xvii. pp. 798, 815) saw in Aegypt with surprise the number of ships which sailed from Myos Hormos to India. From the Zend and Sanscrit words which have been preserved in the geographical nomenclature of Ptolemy, his tabular geography remains an historic monument of the commercial relations between the West and the most distant regions of Southern and Central Asia. At the same time Ptolemy (iv. 9, vii. 3. § 5) did not give up the fable of the "unknown southern land" connecting Prasum Prom. with Cattigara and Thinae (Sinarum Metropolis), and therefore joined E. Africa with the land of Tsin or *China*. This isthmus-hypothesis, derived from views which may be traced back to Hipparchus and Marinus of Tyre, in which, however, Strabo did not concur, made the *Indian Ocean* a Mediterranean sea. About half a century later than Ptolemy a minute, and as it ap-

pears a very faithful, account of the coast was given in the Periplus of the Erythraean Sea (a work erroneously attributed to Arrian, and probably not anterior to Septimius Severus and his son Caracalla) (comp. Cooley, *Claudius Ptolemy and the Nile*, p. 56). During the long wars with Persia, the Aegyptian and Syrian population, cut off from their ordinary communication with Persia and India, were supplied by the channel which the shores of the *Persian Gulf* and the Red Sea afforded; and in the reign of Justinian this commerce was very important. After the disturbances caused by the wars of Heraclius and Chosroes, the Arabs or Saracens placed upon the confines of Syria, Aegypt, and Persia, had the greatest portion of the rich trade with Aethiopia, S. Africa, and India thrown into their hands. From the middle of the ninth century the Arab population of the *Hedjaz* maintained commercial relations with the northern countries of *Europe* and with *Madagascar*, with *E. Africa*, *India*, and *China*, diffusing their language, their coins, and the Indian system of numbers. But from the time that the Kaliph Al-Mansur closed the canal connecting the Red Sea with the Nile, the important line of communication between the commerce of Aegypt and India and the E. coast of S. Africa has never been restored. For all that concerns the data furnished by the ancient writers to the geography of the Erythraean sea the Atlas appended by Müller to his *Geographi Graeci Minores* (Paris, 1855) should be consulted. He has brought together the positions of Agatharchides, Artemidorus, Pliny, Ptolemy, and the Pseudo-Arrian, and compared them with the recent surveys made by Moresby, Carless, and others. [E. B. J.]

RUCCO'NIUM. [DACIA, p. 744, b.]

RUESSIUM. [REVESSIO.]

RUFINIA'NA (Ῥουφινίανα). Ptolemy (ii. 9. § 17) names Noeomagus [NOVIOMAGUS, No. 2.] and Rufiniana as the two towns of the Nemetes, a people on the Rhine in Gallia Belgica. If we place Rufiniana with D'Anville and others at *Ruffach* in *Upper Alsace* and in the present department of *Haut Rhin*, we must admit that Ptolemy has made a great mistake, for *Ruffach* is within the territory of the Rauraci. But D'Anville observes that it is not more extraordinary to find Rufiniana misplaced in Ptolemy than to find him place Argentoratum in the territory of the Vangiones. [G. L.]

RUFRAE, a town of the Samnites on the borders of Campania, mentioned by Virgil (*Aen.* vii. 739) in a manner that would lead us to suppose it situated in Campania, or at least in the neighbourhood of that country; while Silius Italicus distinctly includes it among the cities of the Samnites (viii. 568), and Livy also mentions Rufrium (in all probability the same place) among the towns taken from the Samnites at the commencement of the Second Samnite War, B. C. 326. (Liv. viii. 25.) None of these passages afford any clue to its position, which cannot be determined; though it must certainly be sought for in the region above indicated. The sites suggested by Romanelli (vol. ii. p. 463) and other local topographers are mere conjectures. [E. H. B.]

RUFRIUM. [RUFRAE.]

RUGII, RUGI (Ῥοῦγοι or Ῥόγοι), an important people in the north of Germany, occupying a considerable part of the coast of the Baltic. (Tac. *Germ.* 43.) Their country extended from the river Viadus in the west to the Vistula in the east, and was surrounded in the west by the Sideni, in the south by the Helvecones, and in the east by the Sciri, who were probably a Sarmatian tribe. Strabo does not mention them, and Ptolemy (ii. 11. § 14) speaks of a tribe Ῥουτίκλειοι, who are probably the same as the Rugii. After their first appearance in Tacitus, a long time passes away during which they are not noticed, until they suddenly reappear during the wars of Attila, when they play a conspicuous part. (Sidon. Apoll. *Paneg. ad Avit.* 319; Paul. Diac. *de Gest. Rom.* p. 534, ed. Erasm.) After the death of Attila, they appear on the north side of the Danube in Austria and Upper Hungary, and the country there inhabited by them was now called Rugia, and formed a separate kingdom. (Procop. *Bell. Goth.* ii. 14, iii. 2; Paul. Diac. *Longob.* i. 19.) But while in this latter country no trace of their name is now left, their name is still preserved in their original home on the Baltic, in the island of *Rügen*, and in the town of *Rügenwalde*, and perhaps also in *Rega* and *Regenwalde*. (Comp. Latham on *Tac. l. c.*, and Prolegom. p. xix., who strangely believes that the Rugii of Tacitus dwelt on the *Gulf of Riga*.) [L. S.]

RUGIUM (Ῥούγιον), a town in the north of Germany on the coast of the Baltic (Ptol. ii. 11. § 27), the site of which seems to correspond exactly with that of the modern *Regenwalde*, on the river *Rega*, though others seek it elsewhere. (Wilhelm, *Germanien*, p. 273.) [L. S.]

RUNICATAE (Ῥουνικᾶται), an Alpine tribe in the north-east of Vindelicia between the Oenus and Danubius. (Ptol. ii. 13. § 1.) In the inscription of the Alpine trophy quoted by Pliny (iii. 24) they are called Rucinates. [L. S.]

RURA (*Ruhr*), a river of Western Germany, which flows into the Rhine from the east near the town of *Duisburg*. (Geogr. Rav. iv. 24.) [L. S.]

RURADA (Ruradensis Resp?), a place in Hispania Baetica, the name of which appears only upon coins, the present *Rus* near *Baeza*. (Florez, *Esp. Sagr.* vii. p. 98.) [T. H. D.]

RUSADIR (Plin. v. 1; Ῥυσσάδειρον, Ptol. iv. 1. § 7; Russader, *Itin. Ant.*), a colonia of Mauretania, situated near Metagonites Prom., which appears sometimes to have been called from the town Rusadir (Ptol. iv. 1. § 12). It is represented by the "barídero" of *Melilla*, or Spanish penal fortress, on the bight formed between *C. Tres Forcas* and the *Mlúia*. [E. B. J.]

RUSAZUS. [MAURETANIA, p. 298, b.]

RUSCINO (Ῥουσκινών, Ῥουσκινών), a city of the Volcae Tectosages in Gallia Narbonensis. (Ptol. ii. 10. § 9.) When Hannibal entered Gallia by the Pyrenees, he came to Illiberis (*Elne*), and thence marched past Ruscino (Liv. xxi. 24). Ruscino stood on a river of the same name (Ptol. Strab.): "There was a lake near Ruscino, and a swampy place a little above the sea full of salt and containing mullets (κεστρεῖς), which are dug out; for if a man digs down two or three feet, and drives a trident into the muddy water, he may spear the fish, which is of considerable size; and it feeds on the mud like the eels." (Strab. iv. p. 182.) Polybius (xxxiv. 10, ed. Bekker) has the same about the river and the fish, which, however, he says, feed on the plant agrostis. (Athen. viii. p. 332.) The low tract which was divided by the Ruscino is the Cyneticum Littus of Avienus (*Or. Mar.* v. 565):—

> "post Pyrenaeum jugum,
> Jacent arenae littoris Cynetici,
> Easque late sulcat amnis Roschinus."

Mela (ii. 5) names the place a Colonia, and so the title appears on coins, COL. RUS. LEG. VI. Pliny calls it "Oppidum Latinorum." It seems to have been a Colonia Latina.

The name is incorrectly written Ruscione in the Antonine Itin. and in the Table. It is placed between Combusta [COMBUSTA] and Illiberis, and it is represented by *Castel-Roussillon* or the *Tour de Roussillon* on the *Tet*, the ancient Ruscino, a short distance from *Perpignan*, the capital of the French department of the *Pyrénées Orientales*. *Perpignan* lies on the high-road from France into Spain, and there is no other great road in this part of the Pyrenees.

Ruscino is named Rosciliona in middle age documents, and from this name the modern name *Roussillon* is derived. *Roussillon* was a province of the ante-revolutionary history of France, and it corresponds to the modern department of *Pyrénées Orientales*.

The river Ruscino or Ruscinus is the Telis of Mela (ii. 5), the *Tet;* and we may probably conclude that the true reading in Mela is Tetis. The *Tet* rises in the Pyrenees, and flows past *Perpignan* into the Mediterranean, after a course of about 70 miles. Sometimes it brings down a great quantity of water from the mountains. [G. L.]

RUSELLAE (Ῥουσέλλαι: *Eth.* Rusellanus: *Roselle*), an ancient and important city of Etruria, situated about 14 miles from the sea, and 3 from the right bank of the river *Ombrone* (Umbro). In common with several of the ancient Etruscan cities, we have very little information concerning its early history, though there is no doubt of its great antiquity and of its having been at a very early period a powerful and important city. There is every probability that it was one of the twelve which formed the Etruscan League (Müller, *Etrusker*, vol. i. p. 346). The first mention of it in history is during the reign of Tarquinius Priscus, when it united with Clusium, Arretium, Volaterrae, and Vetulonia, in declaring war against the Roman king, apart from the rest of the confederacy,—a sufficient proof that it was at that time an independent and sovereign state. (Dionys. iii. 51.) From this time we hear no more of it until the Romans had carried their arms beyond the Ciminian forest, when, in B. C. 301, the dictator M. Valerius Maximus carried his arms, apparently for the first time, into the territory of the Rusellae, and defeated the combined forces of the Etruscans who were opposed to him. (Liv. x. 4, 5.) A few years later, in B. C. 294, the consul L. Postumius Megellus not only laid waste the territory of Rusellae, but took the city itself by storm, taking more than 2000 of the inhabitants captives (Id. x. 37). No other mention of it occurs during the period of Etruscan independence; but during the Second Punic War the Rusellani are mentioned among the "populi Etruriae" who came forward with voluntary supplies to equip the fleet of Scipio (B. C. 205), and furnished him with timber and corn (Id. xxviii. 45). It is evident that at this time Rusellae was still one of the principal cities of Etruria. We find no subsequent notice of it under the Roman Republic, but it was one of the places selected by Augustus to receive a colony (Plin. iii. 5. s. 8; Zumpt, *de Colon.* p. 347); notwithstanding which it seems to have fallen into decay; and though the name is mentioned by Ptolemy (iii. 1. § 48) we meet with no later notice of it in ancient times. It did not, however, altogether cease to exist till a much later period, as it retained its episcopal see down to the twelfth century, when it was transferred to the neighbouring town of *Grosseto*. (Repetti, *Diz. Top.* vol. ii. pp. 526, 822.)

The site of Rusellae is now wholly desolate and overgrown with thickets, which render it very difficult of access. But the plan may be distinctly traced, and the line of the ancient walls may be followed in detached fragments throughout their entire circuit. It stood on the flat top of a hill of considerable elevation, about 6 miles from the modern city of *Grosseto*, overlooking the broad valley of the *Ombrone* and the level plain of the *Maremma*, which extends from thence to the sea. The walls follow the outline of the hill, and enclose a space of about 2 miles in circuit. They are constructed of very rude and massive stones, in some places with an approach to horizontal structure, similar to that at *Volterra* and Populonia; but in other parts they lose all traces of regularity, and present (according to Mr. Dennis) a strong resemblance to the rudest and most irregular style of Cyclopian construction, as exemplified in the walls of Tiryns in Argolis. (Dennis's *Etruria*, vol. ii. pp. 248, 249.) The sites of six gates may be traced; but there are no indications of the manner in which the gateway itself was formed. Within the walls are some fragments of rectangular masonry and some vaults of Roman construction. It is remarkable that no traces of the necropolis — so often the most interesting remnant of an Etruscan city — have yet been discovered at Rusellae. But the site is so wild and so little visited, that no excavations have been carried on there. (Dennis, *l. c.* p. 254.)

About 2 miles from the ruins, and 4 from *Grosseto*, are some hot-springs, now called *I Bagni di Roselle*. On a hill immediately above them are the mediaeval ruins of a town or castle called *Moscona*, which have been often mistaken for those of Rusellae. (Dennis, *l. c.*) [E. H. B.]

RUSGU'NIA (*Itin. Ant.*; Ῥουσγόνιον, Ptol. iv. 2. § 6), a town of Mauretania, and a colonia, which lay 15 M. P. to the E. of Icosium. Its ruins have been found near *Cape Matafu* or *Temendfuz* (Barth, *Wanderungen*, p. 55). For an account of these, see *Ausland*, 1837, No. 144. [E. B. J.]

RUSICADE (Plin. v. 2; Mela, i. 7. § 1; Ῥουσίκαδα, Ptol. iv. 3. § 3; Rusiccade, *Itin. Ant.*, *Peut. Tab.*), the harbour of Cirta in Numidia, and a Roman colonia, at the mouth of the small river THAPSUS (Vib. Seq. *de Flum.* p. 19: *U. Safsa*), and probably therefore identical with the THAPSA (Θάψα), a harbour-town, of Scylax (p. 50). Its site is near *Stora;* and the modern town of *Philippeville*, the *Râs-Skikda* of the Arabs, is made in part of the materials of the old Rusicade (Barth, *Wanderungen*, p. 66). [E. B. J.]

RUSIDA'VA. [DACIA, p. 744, b.]

RUSPE (*Peut. Tab.*; Ῥοῦσπαι *al.* Ῥοῦσπε, Ptol. iv. 3. § 10), a town of Numidia between Acholla and Usilla, near the CAPUT VADORUM (Corippus, *Johann.* i. 366: *C. K'abúdiah*), and the see of Fulgentius, well-known in the Pelagian controversy; he was expelled from it by the Vandal Thrasimund. Barth (*Wanderungen*, p. 177) found remains at *Schebba*. [E. B. J.]

RUSPI'NUM (Ῥουσπῖνον, Strab. xvii. p. 831; Ruspina, Auct. *B. Afr.* 6; Plin. v. 3; *Peut. Tab.*), a town of Africa Proper, where Caesar defeated Scipio, and which he afterwards made his position while waiting for reinforcements. It is probably the

same place as the THERMAE of the Coast-describer (*Stadiasm.* § 114, ed. Müller), near the ruins of Leptis Parva. [E. B. J.]

RUSTICIA'NA (Ῥουστίκανα, Ptol. ii. 5. § 7), a city of the Vettones in Lusitania, on the right bank of the Tagus. Variously identified with *Corchuela* and *Galisteo*. (*It. Ant.* p. 433.) [T. H. D.]

RUSUCU'RRIUM, RUSSUCU'RRIUM (Plin. v. 1; *It. Ant.*; Ῥουσσοκκόραι, Ptol. iv. 2. § 8), a town of Mauretania, which Claudius made a municipium (Plin. *l. c.*), but which was afterwards a colonia (*Itin. Ant.*). Barth (*Wanderungen*, p. 60) has identified it with the landing-place *Dellys* in *Algeria*, where there is good anchorage. [E. B. J.]

RUTE'NI (Ῥουτῆνοι), and Ῥουτανοί in Ptolemy (ii. 7. § 21), who places them in Gallia Aquitania. Pliny (iv. 19) says that the Ruteni border on the Narbonensis Provincia; and Strabo (iv. p. 191) places them and the Gabaleis or Gabali next to the Narbonensis. Their country was the old province of *Rouergue*, which extended from the *Cévennes*, its eastern boundary, about 90 miles in a western direction. The chief town was *Rhodez*. The modern department of *Aveyron* comprehends a large part of the *Rouergue*. There were silver mines in the country of the Ruteni and their neighbours the Gabali [GABALI], and the flax of this country was good.

The Arverni and Ruteni were defeated by Q. Fabius Maximus, B. C. 121, but their country was not reduced to the form of a Roman province (Caes. *B. G.* i. 45). In Caesar's time part of the Ruteni were included in the Provincia under the name of Ruteni Provinciales (*B. G.* vii. 5, 7). Vercingetorix in B. C. 52 sent Lucterius of the Cadurci into the country of the Ruteni to bring them over to the Gallic confederation, which he did. Caesar, in order to protect the Provincia on this side, placed troops in the country of the Ruteni Provinciales, and among the Volcae Arecomici and Tolosates. Pliny, who enumerates the Ruteni among the people of Aquitania, also mentions Ruteni in the Narbonensis (iii. 4), but he means the town Segodunum [SEGODUNUM]. The Ruteni Provinciales of course were nearer to the Tectosages than the other Ruteni, and we may perhaps place them in that part of the departments of *Aveyron* and *Tarn* which is south of the Tarnis (*Tarn*). It may be conjectured that part of the Ruteni were added to the Provincia, either after the defeat of the Ruteni by Maximus, or after the conquest of Tolosa by Caepio (B.C. 106.) [G.L.]

RUTICLEI. [RUGII.]

RUTUBA (*Roja*), a river of Liguria, which rises in the Maritime Alps, near the *Col de Tende*, and flows into the sea at *Vintimiglia* (Albium Intemelium). Its name is found in Pliny (iii. 5. s. 7), who places it apparently to the W. of Albium Intemelium, whereas it really flows on the E. side of that town; Lucan also notices it among the streams which flow from the Apennines (ii. 422), and gives it the epithet of "cavus," from its flowing through a deep bed or ravine. From the mention of the Tiber just after, some writers have supposed that he must mean another river of the name; but there is no reason to expect such strict geographical order from a poet, and the mention of the Macra a few lines lower down sufficiently shows that none such was intended. Vibius Sequester (p. 17) who makes the Rutuba fall into the Tiber, has obviously misunderstood the passage of Lucan. [E. H. B.]

RUTUBIS (Polyb. *ap. Plin.* v. 1; Ῥουσιβίς, Ptol. iv. 5. § 1), a port of Mauretania, which must be identified with the low rocky point of *Mazagan*. The town situated upon this was the last possessed by the Portuguese in *Marocco*, and was abandoned by them in 1769. (Jackson, *Marocco*, p. 104; *Journ. of Geogr. Soc.* vol. vi. p. 306.) [E. B. J.]

RU'TULI (Ῥούτουλοι), a people of ancient Italy, who, according to a tradition generally received in later times, were settled at a very early period in a part of Latium, adjoining the sea-coast, their capital city being Ardea. The prominent part that they and their king Turnus bear in the legendary history of Aeneas and the Trojan settlement, especially in the form in which this has been worked up by Virgil, has given great celebrity to their name, but they appear to have been, in fact, even according to these very traditions, a small and unimportant people. Their king Turnus himself is represented as dependent on Latinus; and it is certain that in the historical period Ardea was one of the cities of the Latin League (Dionys. v. 61), while the name of the Rutuli had become merged in that of the Latin people. Not long before this indeed Livy represents the Rutuli as a still existing people, and the arms of Tarquinius Superbus as directed against them when he proceeded to attack Ardea, just before his expulsion. (Liv. i. 56, 57.) According to this narrative Ardea was not taken, but we learn from much better authority (the treaty between Rome and Carthage preserved by Polybius, iii. 22) that it had fallen under the power of the Romans before the close of the monarchy, and it is possible that the extinction of the Rutuli as an independent people may date from this period. The only other mention of the Rutuli which can be called historical is that their name is found in the list given by Cato (*ap. Priscian.* iv. 4. p. 629) of the cities that took part in the foundation of the celebrated temple of Diana at Aricia, a list in all probability founded upon some ancient record; and it is remarkable that they here figure as distinct from the Ardeates. There were some obscure traditions in antiquity that represented Ardea as founded by a colony from Argos [ARDEA], and these are regarded by Niebuhr as tending to prove that the Rutuli were a Pelasgic race. (Nieb. vol. i. p. 44, vol. ii. p. 21.) Schwegler, on the other hand considers them as connected with the Etruscans, and probably a relic of the period when that people had extended their dominion throughout Latium and Campania. This theory finds some support in the name of Turnus, which may probably be connected with Tyrrhenus, as well as in the union which the legend represents as subsisting between Turnus and the Etruscan king Mezentius. (Schwegler, *Röm. Gesch.* vol. i. pp. 330, 331.) But the whole subject is so mixed up with fable and poetical invention, that it is impossible to feel confidence in any such conjectures. [E. H. B.]

RUTU'NIUM (*It. Ant.* p. 469), apparently a town of the Cornavii in the W. part of Britannia Romana. Camden (p. 651) identifies it with *Rowton* in *Shropshire*, Horsley (p. 418) with *Wem*. [T. H. D.]

RUTU'PIAE (Ῥουτούπιαι, Ptol. ii. 3. § 27; in the *Tab. Peut.* and *Not. Imp.* Rutupae; in the *Itin. Ant.* Ritupae, also Portus Rutupensis and Portus Ritupius: *Adj.* Rutupinus, Luc. *Phars.* vi. 67; Juv. iv. 141), a town of the Cantii on the E. coast of Britannia Prima, now *Richborough* in *Kent*. Rutupiae and Portus Rutupensis were probably distinct, the former being the city, the latter its harbour at some little distance. The harbour was probably

Stonar, not *Sandwich;* which latter town seems to have sprung up under the Saxons, after Rutupiae had begun to fall into decay, and was indeed probably built with materials taken from it. According to Camden (p. 244) the etymology of the name of Rutupiae is analogous to that of *Sandwich*, being derived from the British *Rhydtufeth*, signifying "sandy bottoms"; a derivation which seems much more probable than that from the Ruteni, a people who occupied the district in France now called *La Roergue*. The territory around the town was styled Rutupinus Ager (Auson. *Parent.* xviii. 8) and the coast Rutupinus Littus (Luc. *l. c.*). The latter was celebrated for its oysters, as the coast near *Margate* and *Reculver* is to the present day. Large beds of oyster-shells have been found in the neighbourhood, at a depth of from 4 to 6 feet under ground. The port is undoubtedly that mentioned by Tacitus (*Agric.* 38), under the erroneous name of Trutulensis Portus, as occupied by the fleet of Agricola. It was a safe harbour, and the usual and most convenient one for the passage between France and England. (Amm. Marc. xx. 1, xxvii. 8. § 6.) The principal Roman remains at *Richborough* are those of a castrum and of an amphitheatre. The walls of the former present an extensive ruin, and on the N. side are in some places from 20 to 30 feet in height. Fragments of sculptured marbles found within their circuit show that the fortification must have contained some handsome buildings. The foundation walls of the amphitheatre were excavated in 1849, and are the first remains of a walled building of that description discovered in England. There is a good description of *Richborough*, as it existed in the time of Henry VIII., in Leland's *Itinerary* (vol. vii. p. 128, ed. Hearne). Leland mentions that many Roman coins were found there, which still continues to be the case. Other Roman antiquities of various descriptions have been discovered, as pottery, fibulae, ornaments, knives, tools, &c. Rutupiae was under the jurisdiction of the Comes litoris Saxonici, and was the station of the Legio IIda Augusta. (*Notitia*, c. 52.) A complete account of its remains will be found in Roach Smith's *Antiquities of Richborough*, London, 1850. [T. H. D.]

RYSSADIUM (Ῥυσσάδιον ὄρος, Ptol. iv. 6. § 8), "a mountain of Interior Libya, from which flows the Stacheir (*Gambia*), making near it the lake Clonia; the middle of the mountain (or lake?) 17° E. long., 11° N. lat." (Ptol. *l. c.*) This mountain terminated in the headland also called Ryssadium (Ῥυσσάδιον ἄκρον), the position of which is fixed by Ptolemy (iv. 6. § 6) at 8° 30′ E. long., and 11° 30′ N. lat. We assume, with Rennell and Leake, that Arsinarium is *C. Verde*, a conjecture which can be made with more confidence because it is found that Ptolemy's difference of longitude between Arsinarium and Carthage is very nearly correct,—according to that assumption this promontory must be looked for to the N. of the mouth of the *Gambia*. The mountain and lake must be assigned to that elevated region in which the *Senegal* and the *Gambia* take their rise, forming an appendage to the central highlands of Africa from which it projects northwards, like a vast promontory, into the *Great Sáhara*. [E. B. J.]

S.

SABA, SABAEI (Σάβη or Σαβαί: *Eth.* Σαβαῖος, fem. Σαβαία), were respectively the principal city and nation in *Yemen*, or Arabia Felix. [ARABIA.] Ancient geographers differ considerably as to the extent of territory occupied by the Sabaeans, Eratosthenes assigning to it a much larger area than Ptolemy. The difference may perhaps be reconciled by examining their respective accounts.

Our knowledge of the Sabaeans is derived from three sources: the Hebrew Scriptures, the Greek historians and geographers, and the Roman poets and encyclopedists, Pliny, Solinus, &c. The Arabian geographers, also, throw some light upon this ancient and far-extending race.

1. In the Hebrew genealogies (*Genesis*, x. 6, xxv. 3) the Sabaeans are described as the descendants of Cush, the son of Ham. This descent was probably not so much from a single stem, as from several branches of Hamite origin; and as the tribes of the Sabaeans were numerous, some of them may have proceeded immediately from Cush, and others from later progenitors of the same stock. Thus one tribe descended from Seba, the son of Cush, another from Jokshan, Abraham's son by Keturah; a third from Sheba, the son of Raamah—the Ῥεγμὰ of the LXX. (Compare *Psalm* lxxii. 10; *Isaiah*, xlv. 14; *Ezekiel*, xxvii. 22, 23, xxxviii. 13.) The most material point in this pedigree is the fact of the pure Semitic blood of the Sabaeans. The Hebrew prophets agree in celebrating the stature and noble bearing, the enterprise and wealth of this nation, therein concurring with the expression of Agatharchides, who describes the Sabaeans as having τὰ σώματα ἀξιολογώτερα. Their occupations appear to have been various, as would be the case with a nation so widely extended ("Sabaei ... ad utraque maria porrecti," Plin. vi. 28. s. 32): for there is no doubt that in the south they were actively engaged in commerce, while in the north, on the borders of Idumea, they retained the predatory habits of nomades. (*Job*, ii. 15.) The "Queen of the South," i. e. of *Yemen* or Sabaea, who was attracted to Palestine by the fame of Solomon, was probably an Arabian sovereign. It may be observed that *Yemen* and Saba have nearly the same import, each signifying the right hand; for a person turning his face to the rising sun has the south on his right, and thus Saba or *Yemen*, which was long regarded as the southern limit of the habitable zone, is the left-hand, or southern land. (Comp. Herod. iii. 107—113; Forster's *Geogr. of Arabia*, vol i. pp. 24—38.) A river Sabis, in Carmania (Mela, iii. 8. § 4), and a chain of mountains Sabo, at the entrance of the *Persian Gulf* (Arrian, *Periplus. M. Erythr.*, ὄρη μέγιστα λεγόμενα Σάβα; comp. Ptol. vi. 7. § 23), apparently indicate an extension of the Sabaeans beyond Arabia Proper. That they reached to the eastern shore of the Red Sea is rendered probable by the circumstance that a city named Sabu or Sabe stood there, about 36 miles S. of Podnu, in lat. 14° N. (Ptol. vi. 7. § 38, v. 22. § 14.)

2. The first Greek writer who mentions the Sabaeans by name is Eratosthenes. His account, however, represents a more recent condition of this nation than is described by Artemidorus, or by Agatharchides, who is Strabo's principal authority in his narrative of the Sabaeans. On the other hand, Diodorus Siculus professes to have compiled his

accounts of them from the historical books of the Aegyptian kings, which he consulted in the Alexandreian Library. (Diod. iii. 38, 46.) There can be little question that Herodotus, although he does not name the Sabaeans, describes them in various passages, when speaking of the Arabians, the southernmost people of the earth. (Herod. ii. 86, iii. 107—113.) The commerce of *Yemen* with Phoenicia and Aegypt under the Pharaohs would render the name of the Sabaeans familiar in all the havens of the Red Sea and the eastern Mediterranean. The Aegyptians imported spices largely, since they employed them in embalming the dead; and the Phoenicians required them for the Syrian markets, since perfumes have in all ages been both favourite luxuries and among the most popular medicines of the East. At the time when Ptolemy wrote (in the second century A.D.) their trade with Syria and Aegypt, as the carriers of the silks and spices so much in request at Rome, brought the Sabaeans within ken of the scientific geographer and of the learned generally.

3. Accordingly, we meet in the Roman poets with numerous, although vague, allusions to the wealth and luxury of the Sabaeans. "Molles," "divites," "beati," are the epithets constantly applied to them. (See Catull. xi. 5; Propert. ii. 10. 16, *ib.* 29. 17, iii. 13. 8; Virgil, *Georg.* i. 57, ii. 150, *Aeneid.* i. 416; Horace, *Carm.* i. 29. 2, ii. 12. 24; Id. *Epist.* i. 6. 6, *ib.* 7. 36; Statius, *Silv.* iv. 8. 1; Senec. *Hercules, Oet.* v. 376.) The expedition of Aelius Gallus, indeed (B.C. 24), may have tended to bring Southern Arabia more immediately under the notice of the Romans. But their knowledge was at best very limited, and rested less on facts than on rumours of Sabaean opulence and luxury. Pliny and the geographers are rather better informed, but even they had very erroneous conceptions of the physical or commercial character of this nation. Not until the passage to India by the Cape had been discovered was Sabaea or *Yemen* really explored by Europeans.

Assuming, then, that the Sabeans were a widely-spread race, extending from the *Persian Gulf* to the Red Sea, and running up to the borders of the desert in the Arabian peninsula, we proceed to examine the grounds of their reputation for excessive opulence and luxury. A portion of their wealth was undoubtedly native; they supplied Aegypt and Syria from the remotest periods with frankincense and aromatics; and since the soil of *Yemen* is highly productive, they took in exchange, not the corn or wine of their neighbours, but the precious metals. But aromatics were by no means the capital source of their wealth. The Sabaeans possessed for many centuries the keys of Indian commerce, and were the intermediate factors between Aegypt and Syria, as these countries were in turn the Indian agents for Europe. During the Pharaonic eras of Aegypt, no attempt was made to disturb the monopoly of the Sabaeans in this traffic. Ptolemy Philadelphus (B.C. 274) was the first Aegyptian sovereign who discerned the value of the Red Sea and its harbours to his kingdom. He established his Indian emporium at Myos-Hormus or Arsinoe, and under his successors Berenice, which was connected with Coptos on the Nile by a canal, shared the profits of this remunerative trade. But even then the Sabaeans lost a small portion only of their former exclusive advantages. They were no longer the carriers of Indian exports to Aegypt, but they were still the importers of them from India itself. The Aegyptian fleets proceeded no further than the haven of Sabbatha or Mariaba; while the Sabaeans, long prior even to the voyage of Nearchus (B.C. 330), ventured across the ocean with the monsoon to *Ceylon* and the *Malabar* coast. Their vessels were of larger build than the ordinary merchant-ships of the Greeks, and their mariners were more skilful and intrepid than the Greeks, who, it is recorded, shrunk back with terror from the Indian Ocean. The track of the Sabaean navigators lay along the coast of Gedrosia, since Nearchus found along its shores many Arabic names of places, and at *Possem* engaged a pilot acquainted with those seas. In proportion as luxury increased in the Syro-Macedonian cities (and their extravagance in the article of perfumes alone is recorded by Athenaeus, xii.), and subsequently in Rome, the Indian trade became more valuable to the Sabaeans. It was computed in the third century of the Empire, that, for every pound of silk brought to Italy, a pound of silver or even gold was sent to Arabia; and the computation might fairly be extended to the aromatics employed so lavishly by the Romans at their banquets and funerals. (Comp. Petronius, c. 64, with Plutarch, *Sulla*, c. 38.) There were two avenues of this traffic, one overland by Petra and the Elanitic gulf, the other up the Red Sea to Arsinoe, the Ptolemaic canal, and Alexandreia. We may therefore fairly ascribe the extraordinary wealth of the Sabaeans to their long monopoly of the Indian trade. Their country, however, was itself highly productive, and doubtless, from the general character of the Arabian peninsula, its southern extremity was densely populated. The Sabaeans are described by the Hebrew, the Greek, and the Arabian writers as a numerous people, of lofty stature, implying abundance of the means of life; and the recurrence of the name of Saba thoughout the entire region between the Red Sea and Carmania shows that they were populous and powerful enough to send out colonies. The general barrenness of the northern and central districts of Arabia drove the population down to the south. The highlands that border on the *Indian Ocean* are distinguished by the plenty of wood and water; the air is temperate, the animals are numerous (the horses of *Yemen* are strong and serviceable), and the fruits delicious. With such abundance at home the Sabaeans were enabled to devote themselves to trade with undivided energy and success.

Nothing more strikingly displays the ignorance of the ancient geographers as regards Sabaea than their descriptions of the opulence of the country. Their narratives are equally pompous and extravagant. According to Agatharchides and Diodorus, the odour of the spice-woods was so potent that the inhabitants were liable to apoplexies, and counteracted the noxious perfumes by the ill odours of burnt goats'-hair and asphaltite. The decorations of their houses, their furniture, and even their domestic utensils were of gold and silver: they drank from vases blazing with gems; they used cinnamon chips for firewood; and no king could compete in luxury with the merchant-princes of the Sabaeans. We have only to remember the real or imputed sumptuousness of a few of the Dutch and English East India Companies' merchants in the 18th century, while the trade of the East was in a few hands, in order to appreciate the worth of these descriptions by Agatharchides and Diodorus.

The delusions of the ancients were first dis-

pelled by the traveller Niebuhr. (*Description de l'Arabie*, p. 125.) He asserts, and he has not been contradicted, that *Yemen* neither produces now, nor ever could have produced, gold; but that, in the district of *Saade*, it has iron-mines,—a fact unnoticed by earlier describers,—which were worked when he visited the country. He states, moreover, that the native frankincense is of a very ordinary quality, Sabaea yielding only the species called Libân, while the better sorts of that gum are imported from *Sumatra*, *Siam*, and *Java*. The distance from which the superior kinds of myrrh, frankincense, nard, and cassia were fetched, probably gave rise to the strange tales related about the danger of gathering them from the trees, with which the Sabaeans regaled the Aegyptian and Greek merchants, and through them the Greek geographers also. One cause of danger alone is likely to have been truly reported: the spice-woods were the abode of venomous reptiles; one of which, apparently a purple cobra, was aggressive, and, springing on intruders, inflicted an incurable wound. The ancients, however, said and believed that cinnamon was brought to *Yemen* by large birds, which build their nests of its chips, and that the *ledonum* was combed from the beards of he-goats.

The Sabaeans were governed by a king. (Dion Cass. liii. 29.) One inexorable condition of the royal office was, that he should never quit his palace: found beyond its precincts, it was allowable to stone him to death. The rule which governed the succession to the throne was singular. A certain number of noble families possessed equal claims to the crown: and the first child (females were eligible) born after an accession was presumptive heir to the reigning monarch. This seclusion of the king, and the strange mode of electing him, seem to indicate a sacerdotal influence, similar to that which regulates the choice of the Grand Lama and the homage paid to him by the Thibetians.

The precise boundaries of Sabaea it is impossible to ascertain. The area we have presumed is comprised within the *Arabian Sea* W., the *Persian Gulf* E., the *Indian Ocean* S., and an irregular line skirting the Desert, and running up in a narrow point to Idumea N.

For the principal divisions of the Sabaeans see the articles on ARABIA; ADRAMITAE; MINAEI.

The decline of the Sabaeans seems to have proceeded from two causes: (1) the more direct intercourse of the Aegypto-Greeks with India, and (2) the rivalry of the powerful tribe of the Homeritae, who subjugated them. In the account of their eastern traffic, and of the characteristics of their land, we have traced the features of the race. Compared with the Arabs of the Desert, the Sabaeans were a highly civilised nation, under a regular government, and, as a mercantile community, jealous of the rights of property. The author of the Periplus remarks upon similar security among the Adramitae; the interests of the merchant had curbed and softened the natural ferocity of the Arab. This also, according to Niebuhr (*Descript. de l'Arabie*, p. 315), is still observable in *Yemen*, in comparison with the inland provinces of *Hejâz*, and *Neged*. [W. B. D.]

SABA. Three cities of this name are distinguished by ancient geographers: the name indeed was a common appellation of towns, and signified head of the province, or of its lesser divisions. (Comp. Plin. vi. 28. s. 32.)

1. (Σαβαί, Steph. B. *s. v.* Σαβᾶς, Agatharch. *ap. Phot.* p. 63), was the chief city of the Sabaeans. It is described by Diodorus (iii. 46) as situated upon a lofty wooded hill, and within two days' journey of the frankincense country. The position of Saba is, however, quite uncertain: Mannert (*Geogr. der Griech. u. Röm.* vol. vi. pt. i. p. 66) places it at the modern *Saade*: other geographers identify it with *Mareb* [MARIABA]; and again Sabbatha, both from its site in the interior and its commercial importance, seems to have a good title to be considered as Saba (Σάβη of Agatharchides) or Sheba, the capital of the Sabaeans.

2. (Σάβη, Ptol. vi. 7. §§ 38, 42; Plin. vi. 23. s. 34), was also seated in the interior of the Sabaean territory, 26 miles NE. of *Aden*. Niebuhr (*Descript. de l'Arabie*, vol. ii. p. 60) identifies it with the modern *Saaba*.

3. (Σάβαι, Strab. xvii. p. 771; Σαβάτ, Ptol. iv. 7. § 8), on the western shore of the Red Sea, was the capital city of the Sabaeans, and its harbour was the Sabaiticum Os (Σαβαΐτικον στόμα, Strab. xvii. p. 770). The position of Sabae, like that of so many Aethiopian races and cities, is very uncertain. Some writers place it at the entrance of the Arabian gulf (Heeren, *Histor. Researches*, vol. i. p. 333); others carry it up as high as the bay of Adule, lat. 15° N. Bruce (*Travels*, vol. iii. p. 144) identifies the modern *Azab* with the Sabae, and places it between the tropics and the Abyssinian highlands. Combes and Tamisier (*Voyages*, vol. i. p. 89) consider the island *Massowa* to have a better claim: while Lord Valentia (*Travels*, vol. ii. p. 47) finds Sabae at *Port Mornington*. But although neither ancient geographers nor modern travellers are agreed concerning the site of the Aethiopian Sabae, they accord in placing it on the sea-coast of the kingdom or island of Meroe, and between the Sinus Avalites and the bay of Adule, i. e. between the 12th and 15th degrees of N. latitude. On the opposite shore were seated the Sabaeans of Arabia, and as there was much intercourse between the populations of the opposite sides of the Red Sea, the Aethiopian Sabaeans may have been a colony from Arabia. Both races are described as lofty in stature and opulent (*Psalm* lxxii.; 1 *Kings*, x. 1; *Isaiah*, xlv. 14), and this description will apply equally to the Sabaeans who dwelt in the spice country of Arabia, and to those who enjoyed almost a monopoly of the Libyan spice-trade, and were not far removed from the gold-mines and the emerald and topaz-quarries of the Aegyptian and Aethiopian mountains. The remarkable personal beauty of the Sabaeans is confirmed by the monuments of Upper Nubia, and was probably reported to the Greek geographers by the slave-dealers, to whom height and noble features would be a recommendation. The Sabaeans, at least in earlier periods, may be regarded as one of the principal tribes of the Aethiopian kingdom of Meroe. [MEROE.] Josephus (*Antiq.* ii. 5) affirms that the Queen of Sheba or Saba came from this region, and that it bore the name of Saba before it was known by that of Meroe. There seems also some affinity between the word Saba and the name or title of the kings of the Aethiopians, Saba-co. [W. B. D.]

SABADI'BAE (Σαβαδείβαι νῆσοι, Ptol. vii. 2. § 28), three islands, mentioned by Ptolemy, in the neighbourhood of the Aurea Chersonesus in India extra Gangem. From the great resemblance of the name, it is not unlikely that he has confounded it with that of the island of Iabadius (or Sabadius), now *Java*, which he mentions in his next section. [IABADIUS.] [V.]

SABAGE'NA (Σαβάγηνα, Σαβάγειva, or Σαβάγινα), a town in Lesser Armenia, is mentioned only by Ptolemy (v. 7. § 10) as belonging to the prefecture of Laviniane. [L. S.]

SABALINGII (Σαβαλίγγιοι), a German tribe, placed by Ptolemy (ii. 11. § 11) above the Saxones in the Cimbrian peninsula, the modern *Schleswig*. In the absence of all further information about them, it has been inferred, from the mere resemblance of name, that they dwelt in and about the place called *Sabyholm* in the island of *Laland*. [L. S.]

SABA'RIA (Σαουαρία), an important town in the north of Upper Pannonia, was situated in a plain between the river Arrabo and the Deserta Boiorum, on the road from Carnuntum to Poetovium. The town, which seems to have been an ancient settlement of the Boii, derived its importance partly from the fertility of the plain in which it was situated, and partly from the fact that it formed a kind of central point at which several roads met. The emperor Claudius raised it to the rank of a Roman colony, whence it received the surname of Claudia. (Plin. iii. 27; Ptol. ii. 15. § 4.) In this town Septimius Severus was proclaimed Augustus (Aurel. Vict. *Epit*. 19), and the emperor Valentinian resided there some time. (Amm. Marc. xxx. 5.) Owing to this and other circumstances, the town rose to a high degree of prosperity during the latter period of the Roman Empire; and its ancient greatness is still attested by its numerous remains of temples and aqueducts. Many statues, inscriptions, and coins also have been found at *Stein am Anger*, which is the modern name, or, as the Hungarians call it, *Szombathely*. (*It. Ant.* pp. 233, 261, 262, 434; Orelli, *Inscript.* n. 200 and 1789; Schönwisner, *Antiquitates Sabariae*. p. 45; Muchar, *Noricum*, i. p. 167.) [L. S.]

SABARICUS SINUS. [INDICUS OCEANUS.]

SABATA or SABDATA (Plin. vi. 27. s. 31), a town of Assyria, probably the same place as the Σαβαθά of Zosimus (iii. 23), which that writer describes as 30 stadia from the ancient Seleuceia. It is also mentioned by Abulfeda (p. 253) under the name of Sabath.

SABA'TIA VADA. [VADA SABATIA.]

SABATI'NUS LACUS (Σάβατα λίμνη, Strab.: *Lago di Bracciano*), one of the most considerable of the lakes of Etruria, which, as Strabo observes, was the most southerly of them, and consequently the nearest to Rome and to the sea. (Strab. v. p. 226.) It is, like most of the other lakes in the same region, formed in the crater of an extinct volcano, and has consequently a very regular basin-like form, with a circuit of about 20 miles, and is surrounded on all sides by a ridge of hills of no great elevation. It is probable that it derived its name from a town of the name of SABATE, which stood on its shores, but the name is not found in the geographers, and the only positive evidence of its existence is its mention in the Tabula as a station on the Via Claudia. (*Tab. Peut.*) The lake itself is called Sabata by Strabo, and Sabate by Festus, from whom we learn that it gave name to the Sabatine tribe of the Roman citizens, one of those which was formed out of the new citizens added to the state in B. C. 387. (Liv. vi. 4, 5; Fest. *s. v. Sabatina*, pp. 342, 343.) Silius Italicus speaks of the "Sabatia stagna" in the plural (viii. 492), probably including under the name the much smaller lake in the same neighbourhood called the Lacus Alsietinus or *Lago di Martignano*. The same tradition was reported of this lake as of the Ciminian, and of many others, that there was a city swallowed up by it, the remains of which could still occasionally be seen at the bottom of its clear waters. (Sotion, *de Mir. Font.* 41, where we should certainly read Σάβατος for Σάκατος.) It abounded in fish and wild-fowl, and was even stocked artificially with fish of various kinds by the luxurious Romans of late times. (Columell. viii. 16.)

The Tabula places Sabate at the distance of 36 miles from Rome, but this number is much beyond the truth. The true distance is probably 27 miles, which would coincide with a site near the W. extremity of the lake about a mile beyond the modern town of *Bracciano*, where there are some ruins of Roman date, probably belonging to a villa. (*Tab. Peut.*; Holsten. *Not. ad Cluver.* p. 44; Westphal, *Röm. Kampagne*, pp. 156, 158.) The town of *Bracciano*, which now gives name to the lake, dates only from the middle ages and probably does not occupy an ancient site. [E. H. B.]

SABATUS. 1. (*Sabbato*), a river of Samnium, in the country of the Hirpini, and one of the tributaries of the Calor (*Calore*), with which it unites under the walls of Beneventum. [CALOR.] The name of the river is not found in any ancient author, but Livy mentions the Sabatini among the Campanians who were punished for their defection to Hannibal in the Second Punic War. (Liv. xxvi. 33, 34.) These may mean generally the people of the valley of Sabatus, or there may have been, as supposed by Cluver, a town of the same name on the banks of the river. (Cluver. *Ital.* p. 1199.)

2. (*Savuto*), a river of Bruttium, on the W. coast of the peninsula, flowing into the sea between *Amantea* and *Capo Suvero*. Its name is known only from the Itineraries, from which we learn that it was crossed by the high-road to Rhegium 18 miles S. of Consentia (*Cosenza*), a distance which, combined with the name, clearly identifies it with the modern *Savuto*. (*Itin. Ant.* pp. 105, 110.) It is generally identified by geographers with the Ocinarus of Lycophron, on the banks of which the Greek city of Terina was situated; but this assumption rests on no sufficient grounds. [TERINA.] [E. H. B.]

SA'BBATA or SABBA'TIA. [VADA SABATIA.]

SA'BBATHA (Σάββαθα, Ptol. vi. 7. § 38; Sabotha, Plin. vi. 28. s. 32), was the capital of the Adramitae, a Sabaean tribe inhabiting the S. coast of Arabia Felix (lat. 14° N.). [ADRAMITAE.] Its inhabitants are called Sabbathae by Festus Avienus (*Descr. Orb. Terr.* v. 1136). Sabbatha was seated far inland, on the coast of a navigable river (Prion?) — an unusual circumstance in that region, where the streams are brief in their course and seldom navigable. (*Peripl. Mar. Erythr.* p. 15.) If it really contained sixty temples within its walls, Sabbatha must have ranked second to none of the cities of Arabia. Its monopoly of the Indian trade doubtless rendered it a wealthy and important place. At no other haven on the coast were the spices, gums, and silks of India permitted to be landed: if exposed to sale elsewhere, they were confiscated, and their vendors punished with death. They were conveyed up the river to Sabbatha in boats made of leather, strained over wooden frames. One gate alone — probably for the convenience of detecting fraud — of Sabbatha was assigned to this branch of commerce; and after the bales had been examined, the goods were not handed over to their owners until a tithe had been deducted for a deity named Sabis (= dominus), and also a portion for the king.

Geographers attempt to identify Sabbatha with Mariaba (*Mareb*), but the proofs of their identity are unsatisfactory; and it may even be questioned whether Sabbatha be not an elongated form of Saba, a common appellation for cities in Arabia Felix. The Καβάτανον of Strabo (xvi. p. 768) is supposed by his translator Groskurd (vol. iii. p. 287) to be an error for Σαβάτανον, and the latter to be a form of Sabbatha. [See MARIABA, Vol. II. p. 274.] [W. B. D.]

SABI'NI (Σαβῖνοι), a people of Central Italy, who inhabited the rugged mountain country on the W. of the central chain of the Apennines, from the sources of the Nar and Velinus to the neighbourhood of Reate, and from thence southwards as far as the Tiber and the Anio. They were bounded on the N. and W. by the Umbrians and Etruscans, on the NE. by Picenum, from which they were separated by the main ridge of the Apennines; on the E. by the Vestini, the Marsi and Aequiculi, and on the S. by Latium. Their country thus formed a narrow strip, extending about 85 miles in length from the lofty group of the Apennines above Nursia, in which the Nar takes its rise (now called the *Monti della Sibilla*), to the junction of the Tiber and Anio, within a few miles of Rome. The southern limit of the Sabines had, however, undergone many changes; in Pliny's time it was fixed as above stated, the Anio being generally received as the boundary between them and Latium; hence Pliny reckons Fidenae and Nomentum Sabine cities, though there is good ground for assigning them both in earlier times to the Latins, and Ptolemy again includes them both in Latium. Strabo, on the other hand, describes the Sabine territory as extending *as far as* Nomentum, by which he probably means to include the latter city; while Eretum, which was only about 3 miles N. of Nomentum, seems to have been universally considered as a Sabine city. (Strab. v. p. 228; Plin. iii. 5. s. 9, 12. s. 17; Ptol. iii. 1. § 62.) In like manner Pliny includes the important city of Tibur among the Sabines, though it was certainly commonly reckoned a Latin city, and never appears in the early history of Rome in connection with the Sabines. The fact appears to be, that the frontier between the Sabines and Latins was in early times constantly fluctuating, as the Sabines on the one hand were pressing down from the N., and on the other were driven back in their turn by the arms of the Romans and Latins. But on the division of Italy into regions by Augustus, the Anio was established as the boundary of the First Region, and for this reason was considered by Pliny as the limit also between the Latins and Sabines. (Plin *l. c.*) It is remarkable that no name for the *country* is found in ancient writers, standing in the same relation to that of the people which Samnium does to Samnites, Latium to Latini, &c.: it is called only "the land of the Sabines" (Sabinorum ager, or Sabinus ager, Liv. i. 36, ii. 16, &c.; Tac. *Hist.* iii. 78), and Roman writers would say "in Sabinis versari, in Sabinos proficisci," &c. The Greeks indeed used ἡ Σαβίνη for the name of the country (Strab. v. pp. 219, 228, &c.; Steph. Byz. *s. v.*), which is called to the present day by the Roman peasantry *La Sabina*, but we do not find any corresponding form in Latin authors.

All ancient authors agree in representing the Sabines as one of the most ancient races of Italy, and as constituting one of the elements of the Roman people, at the same time that they were the progenitors of the far more numerous races which had spread themselves to the E. and S., under the names of Picentes, Peligni, and Samnites, the last of whom had in their turn become the parents of the Frentani, the Lucanians, Apulians and Bruttians. The minor tribes of the Marsi, Marrucini and Vestini, were also in all probability of Sabine origin, though we have no distinct testimony to this effect [MARSI]. These various races are often comprehended by modern writers under the general name of Sabellian, which is convenient as an ethnic designation; but there is no ancient authority for this use of the word, which was first introduced by Niebuhr (vol. i. p. 91). Pliny indeed in one passage says that the Samnites were also called Sabelli (Plin. iii. 12. s. 17), and this is confirmed by Strabo (v. p. 250). Sabellus is found also in Livy and other Latin writers, as an *adjective* form for Samnite, though never for the name of the nation (Liv. viii. 1, x. 19); but it is frequently also used, especially by the poets, simply as an equivalent for the adjective Sabine. (Virg. *G.* ii. 167, *Aen.* vii. 665; Hor. *Carm.* iii. 6. 37; Juv. iii. 169.)

But notwithstanding the important position of the Sabines in regard to the early history and ethnography of Italy, we have very little information as to their own origin or affinities. Strabo calls them a very ancient race and autochthons (v. p. 228), which may be understood as meaning that there was no account of their immigration or origin which he considered worthy of credit. He distinctly rejects as a fiction the notion that they or their Samnite descendants were of Laconian origin (*Ib.* p. 250); an idea which was very probably suggested only by fancied resemblances in their manners and institutions to those of Sparta (Dionys. ii. 49). But this notion, though not countenanced by any historian of authority, was taken up by the Roman poets, who frequently allude to the Lacedaemonian descent of the Sabines (Ovid. *Fast.* i. 260, iii. 230; Sil. Ital. ii. 8, viii. 412, &c.), and adopted also by some prose writers (Plut. *Rom.* 16; Hygin. *ap. Serv. ad Aen.* viii. 638). A much more important statement is that preserved to us by Dionysius on the authority of Zenodotus of Troezen, which represents the Sabines as an offshoot of the Umbrian race (Dionys. ii. 49). The authority of Zenodotus is indeed in itself not worth much, and his statement as reported to us is somewhat confused; but many analogies would lead us to the same conclusion, that the Sabines and Umbrians were closely cognate races, and branches of the same original stock. We learn from the Eugubine tables that Sancus, the tutelary divinity of the Sabine nation, was an object of especial worship with the Umbrians also; the same documents prove that various other points of the Sabine religion, which are spoken of as peculiar to that nation, were in fact common to the Umbrians also (Klenze, *Philol. Abhandl.* p. 80). Unfortunately the Sabine language, which would have thrown much light upon the subject, is totally lost; not a single inscription has been preserved to us; but even the few words recorded by ancient writers, though many of them, as would naturally be the case in such a selection, words *peculiar* to the Sabines, yet are abundantly sufficient to show that there could be no essential difference between the language of the Sabines and their neighbours, the Umbrians on the one side, and the Oscans on the other (Klenze, *l. c.*; Donaldson, *Varronianus*, p. 8). The general similarity between their dialect and that of the Oscan was probably the cause that they adopted with facility in the more southern regions of Italy, which they had conquered.

the language of their Oscan subjects; indeed all the extant inscriptions in that language may be considered as Sabello-Oscan, and have probably received some influence from the language of the conquerors, though we have no means of estimating its amount. The original Sabines appear to have early lost the use of their own language, and adopted the general use of Latin; which, considering the rugged and secluded character of their country, and their primitive habits of life, could hardly have been the case, had the two languages been radically distinct.

On the whole, therefore, we may fairly conclude that the Sabines were only a branch of the same great family with the Oscans, Latins, and Umbrians, but apparently most closely related to the last of the three. Their name is generally derived from that of Sabus, who is represented as a son of Sancus, the chief tutelary divinity of the nation. (Cato, *ap. Dionys.* ii. 49; Sil. Ital. viii. 422; Serv. *ad Aen.* viii. 638.) But another etymology given by ancient writers derives it from their religious habits and devotion to the worship of the gods. (Varr. *ap. Fest.* p. 343; Plin. iii. 12. s. 17.) This last derivation in fact comes to much the same thing with the preceding one, for the name of Sabus (obviously a mythological personage) is itself connected with the Greek σέβω, and with the word "sevum" found in the Eugubine tables in the sense of venerable or holy, just as Sancus is with the Latin "sanctus," "sancire," &c. (Donaldson, *l. c.*)

The original abode of the Sabines was, according to Cato, in the upper valley of the Aternus, about Amiternum, at the foot of the loftiest group of the Apennines. We cannot indeed understand literally, at least as applying to the whole nation, his assertion (as quoted by Dionysius) that they proceeded from a village called Testrina, near Amiternum (Cato, *ap. Dionys.* i. 14, ii. 49); though this may have been true of the particular band or clan which invaded and occupied Reate. But there is no reason to doubt the general fact that the Sabines, at the earliest period when their name appears in history, occupied the lofty mountain group in question with its adjacent valleys, which, from the peculiar configuration of this part of the Apennines, would afford natural and convenient outlets to their migrations in all directions. [APENNINUS.] The sending forth of these migrations, or national colonies, as they may be called, was connected with an ancient custom which, though not unknown to the other nations of Italy, seems to have been more peculiarly characteristic of the Sabines — the Ver Sacrum or "sacred spring." This consisted of dedicating, by a solemn vow, usually in time of pressure from war or famine, all the produce of the coming year, to some deity: Mamers or Mars seems to have been the one commonly selected. The cattle born in that year were accordingly sacrificed to the divinity chosen, while the children were allowed to grow up to man's estate, and were then sent forth in a body to find for themselves new places of abode beyond the limits of their native country. (Strab. v. p. 250; Fest. *s. vv. Mamertini*, p. 158, *Sacrani*, p. 321, *Ver Sacrum*, p. 379; Sisenna, *ap. Non.* p. 522; Varr. *R. R.* iii. 16. § 29; Liv. xxii. 9, 10.) Such colonies were related by tradition to have given origin to the nations of the Picentes, the Samnites, and the Hirpini, and in accordance with the notion of their consecration to Mars they were reported to have been guided by a woodpecker, or a wolf, the animals peculiarly connected with that deity. (Strab. v. pp. 240, 250; Fest. pp. 106, 212.) We have no statements of the period at which these successive emigrations towards the E. and S. took place: all that is known of the early history of the nations to which they gave rise will be found in the respective articles, and we shall here content ourselves with tracing that of the Sabines themselves, or the people to whom that appellation continued to be confined by the Romans.

These, when they first emerged from their upland valleys into the neighbourhood of Reate, found that city, as well as the surrounding territory, in the possession of a people whom Dionysius calls Aborigines, and who, finding themselves unable to withstand the pressure of the Sabines, withdrew, after the capture of their capital city of Lista, towards the lower valley of the Tiber, where they settled themselves in Latium, and finally became one of the constituent elements of the Latin people. (Cato, *ap. Dionys.* i. 14, ii. 48, 49.) [ABORIGINES; LATIUM.] Meanwhile the Sabines, after they had firmly established themselves in the possession of Reate and its neighbourhood, gradually pressed on towards the S. and W., and occupied the whole of the hilly and rugged country which extends from Reate to the plain of the Tiber, and from the neighbourhood of Ocriculum to that of Tibur (*Tivoli.*) (Dionys. ii. 49.) The conquest and colonisation of this extensive tract was probably the work of a long time, but at the first dawn of history we find the Sabines already established on the left bank of the Tiber down to within a few miles of its confluence with the Anio; and at a period little subsequent to the foundation of Rome, they pushed on their advanced posts still further, and established themselves on the Quirinal hill, at the very gates of the rising city. The history of the Sabines under Titus Tatius, of the wars of that king with Romulus, and of the settlement of the Sabines at Rome upon equal terms with the Latin inhabitants, so that the two became gradually blended into one people, has been so mixed up with fables and distorted by poetical and mythological legends, that we may well despair of recovering the truth, or extricating the real history from the maze of various and discordant traditions; but it does not the less represent a real series of events. It is an unquestionable historical fact that a large part of the population of the city was of Sabine origin, and the settlement of that people on the Quirinal is attested by numerous local traditions, which there is certainly no reason to doubt. (Schwegler, *Röm. Gesch.* vol. i. pp. 243, 478, &c.)

We cannot attempt here to discuss the various theories that have been suggested with a view to explain the real nature of the Sabine invasion, and the origin of the legends connected with them. One of the most plausible of these is that which supposes Rome to have been really conquered by the Sabines, and that it was only by a subsequent struggle that the Latin settlers on the Palatine attained an equality of rights. (Ihne, *Researches into the History of the Roman Constitution*, p. 44, &c.; Schwegler, vol. i. pp. 491—493.) It cannot be denied that this view has much to recommend it, and explains many obscure points in the early history, but it can be scarcely regarded as based on such an amount of evidence as would entitle it to be received as a historical fact.

The Sabine influence struck deep into the character of the Roman people; but its effect was especially prominent in its bearing on their sacred

rites, and on their sacerdotal as well as religious institutions. This is in entire accordance with the character given of the Sabines by Varro and Pliny; and it is no wonder therefore that the traditions of the Romans generally ascribed to Numa, the Sabine king, the whole, or by far the greater part, of the religious institutions of their country, in the same manner as they did the military and political ones to his predecessor Romulus. Numa, indeed, became to a great extent the representative, or rather the impersonation of the Sabine element of the Roman people; at the same time that he was so generally regarded as the founder of all religious rites and institutions, that it became customary to ascribe to him even those which were certainly not of Sabine origin, but belonged to the Latins or were derived from Alba. (Ambrosch, *Studien*, pp. 141—148; Schwegler, *R. G.* vol. i. pp. 543, 554.)

Throughout these earliest traditions concerning the relations of the Sabines with Rome, Cures is the city that appears to take the most prominent part. Tatius himself was king of Cures (Dionys. ii. 36); and it was thither also that the patricians sent, after the interregnum, to seek out the wise and pacific Numa. (Liv. i. 18; Dionys. ii. 58.) A still more striking proof of the connection of the Roman Sabines with Cures was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as immediately derived from that of Cures. (Liv. i. 13; Varr. *L. L.* vi. 68; Dionys. ii. 46; Strab. v. p. 228.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from "quiris," a spear, and meant merely "spearmen" or "warriors," just as Quirinus was the "spear-god," or god of war, closely connected, though not identical with, Mamers or Mars. It is certain also that this superiority of Cures, if it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconsiderable place. [CURES.]

The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secure the rising city from hostilities with the rest of the nation. Already in the reign of Tullus Hostilius, the successor of Numa, we find that monarch engaged in hostilities with the Sabines, whose territory he invaded. The decisive battle is said to have taken place at a forest called Silva Malitiosa, the site of which is unknown. (Liv. i. 30; Dionys. iii. 32, 33.) During the reign of Ancus Marcius, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Collatia and the adjoining territory. (Liv. i. 36—38; Dionys. iii. 55—66.) Cicero also speaks of Tarquin as repulsing the Sabines from the very walls of the city. (Cic. *de Rep.* ii. 20.) There seems therefore no doubt that they had at this time extended their power to the right bank of the Anio, and made themselves masters of a considerable part of the territory which had previously belonged to the Latins. From this time no further mention of them occurs in the history of Rome till after the expulsion of the kings; but in B. C. 504, after the repulse of Porsena, a Sabine war again broke out, and from this time that people appears almost as frequently among the enemies of Rome, as the Veientes or the Volscians. But the renewal of hostilities was marked by one incident, which exercised a permanent effect on Roman history. The whole of one clan of the Sabines, headed by a leader named Atta Clausus, dissenting from the policy of their countrymen, migrated in a body to Rome, where they were welcomed as citizens, and gave rise to the powerful family and tribe of the Claudii. (Liv. ii. 16; Dionys. v. 40; Virg. *Aen.* vii. 708; Tac. *Ann.* xi. 24; Appian, *Rom.* i. Fr. 11.) It is unnecessary to recapitulate in detail the accounts of the petty wars with the Sabines in the early ages of the Republic, which present few features of historical interest. They are of much the same general character as those with the Veientes and the Volscians, but for some reason or other seem to have been a much less favourite subject for popular legend and national vanity, and therefore afford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed disposes of them for the most part in a very summary manner; but they are related in considerable detail by Dionysius. One thing, however, is evident, that neither the power nor the spirit of the Sabines had been broken; as they are represented in B. C. 469, as carrying their ravages up to the very gates of Rome; and even in B. C. 449, when the decisive victory of M. Horatius was followed by the capture of the Sabine camp, we are told that it was found full of booty, obtained by the plunder of the Roman territories. (Liv. ii. 16, 18, &c., iii. 26, 30, 38, 61—63; Dionys. v. 37—47, vi. 31, &c.) On this, as on several other occasions, Eretum appears as the frontier town of the Sabines, where they established their head-quarters, and from whence they made incursions into the Roman territory.

There is nothing in the accounts transmitted to us of this victory of M. Horatius over the Sabines to distinguish it from numerous other instances of similar successes, but it seems to have been really of importance; at least it was followed by the remarkable result that the wars with the Sabines, which for more than fifty years had been of such perpetual recurrence, ceased altogether from this time, and for more than a century and a half the name of the Sabines is scarcely mentioned in history. The circumstance is the more remarkable, because during a great part of this interval the Romans were engaged in a fierce contest with the Samnites, the descendants of the Sabines, but who do not appear to have maintained any kind of political relation with their progenitors. Of the terms of the peace which subsisted between the Sabines and Romans during this period we have no account. Niebuhr's conjecture that they enjoyed the rights of isopolity with the Romans (vol. ii. p. 447) is certainly without foundation; and they appear to have maintained a position of simple neutrality. We are equally at a loss to understand what should have induced them at length suddenly to depart from this policy, but in the year B. C. 290 we find the Sabines once more in arms against Rome. They were, however, easily vanquished. The consul M'. Curius Dentatus, who had already put an end to the Third Samnite War, next turned his arms against the Sabines, and reduced them to submission in the course of a single campaign. (Liv. *Epit.* xi.; Vict. *Vir. Ill.* 33; Oros. iii. 22; Flor. i. 15.) They were severely punished for their defection; great numbers of pri-

soners were sold as slaves; the remaining citizens were admitted to the Roman franchise, but without the right of suffrage, and their principal towns were reduced to the subordinate condition of Praefecturae. (Vell. Pat. i. 14; Festus, *s. v. Praefecturae; Serv. ad Aen.* vii. 709, whose statement can only refer to this period, though erroneously transferred by him to a much earlier one.) The right of suffrage was, however, granted to them about 20 years later (B. C. 268); and from this time the Sabines enjoyed the full rights of Roman citizens, and were included in the Sergian tribe. (Vell. Pat. *l. c.*; Cic. *pro Balb.* 13, *in Vatin.* 15.) This circumstance at once separated them from the cause of the other nations of Italy, including their own kinsmen the Samnites, Picentes, and Peligni, during the great contest of the Social War. On that occasion the Sabines, as well as the Latins and Campanians, were arrayed on behalf of Rome.

The last occasion on which the name of the Sabines as a people is found in history is during the Second Punic War, when they came forward in a body to furnish volunteers to the army of Scipio. (Liv. xxviii. 45.) After their incorporation with the Roman state, we scarcely meet with any separate notice of them, though they continued to be regarded as among the bravest and hardiest of the subjects of Rome. Hence Cicero calls them "florem Italiae ac robur rei publicae." (*Pro Ligar.* 11.)

Under the Empire their name did not even continue to be used as a territorial designation. Their territory was included in the Fourth Region by Augustus. (Plin. iii. 12. s. 17.) It was subsequently reckoned a part of the province of Valeria, and is included with the rest of that province under the appellation of Picenum in the Liber Coloniarum. (*Lib. Col.* pp. 253, 257, &c.; P. Diac. *Hist. Lang.* ii. 20; Mommsen, *ad Lib. Col.* p. 212.) But though the name of the Sabines thus disappeared from official usage, it still continued in current popular use. Indeed it was not likely that a people so attached to ancient usages, and so primitive in their habits, would readily lose or abandon their old appellation. Hence it is almost the only instance in which the ancient name of a district or region of Italy has been transmitted without alteration to the present day: the province of *La Sabina* still forms one of the twelve into which the States of the Church are divided, and is comprised within very nearly the same limits as it was in the days of Strabo. (Rampoldi, *Diz. Corog. d'Italia*, *s. v.*)

The country of the Sabines was, as already mentioned, for the most part of a rugged and mountainous character; even at the present day it is calculated that above two-thirds of it are incapable of any kind of cultivation. But the valleys are fertile, and even luxuriant; and the sides of the hills, and lower slopes of the mountains, are well adapted for the growth both of vines and olives. The northernmost tract of their territory, including the upper valleys of the Nar and Velinus, especially the neighbourhood of Nursia, was indeed a cold and bleak highland country, shut in on all sides by some of the highest ranges of the Apennines; and the whole broad tract which extends from the group of the *Monte Velino*, SE. of Reate, to the front of the mountain ranges that border the *Campagna* of Rome, is little more than a mass of broken and rugged mountains, of inferior elevation to the more central ranges of the Apennines, but still far from inconsiderable. The *Monte Gennaro* (the Mons Lucretilis of Horace), which rises directly from the plain of the *Campagna*, attains to an elevation of 4285 English feet above the sea. But the isolated mountain called *Monte Terminillo* near *Leonessa*, NE. of *Rieti*, which forms a conspicuous object in the view from Rome, rises to a height of above 7000 feet, while the *Monte Velino*, SE. of *Rieti*, on the confines of the Sabines and the Vestini, is not less than 8180 feet in height. The whole of the ridge, also, which separates the Sabines from Picenum is one of the most elevated of the Apennines. The *Monti della Sibilla*, in which the Nar takes its rise, attain the height of 7200 feet, while the *Monte Vettore* and *Pizzo di Sevo*, which form the continuation of the same chain towards the *Gran Sasso*, rise to a still greater elevation. There can be no doubt that these lofty and rugged groups of mountains are those designated by the ancients as the MONS FISCELLUS, TETRICA ("Tetricae horrentes rupes," Virg. *Aen.* vii. 713), and SEVERUS; but we are unable to identify with any certainty the particular mountains to which these names were applied. The more westerly part of the Sabine territory slopes gradually from the lofty ranges of these central Apennines towards the valley of the Tiber, and though always hilly is still a fertile and productive country, similar to the part of Umbria, which it adjoins. The lower valley of the Velinus about Reate was also celebrated for its fertility, and even at the present day is deservedly reckoned one of the most beautiful districts in Italy.

The physical character of the land of the Sabines evidently exercised a strong influence upon the character and manners of the people. Highlanders and mountaineers are generally brave, hardy, and frugal; and the Sabines seem to have possessed all these qualities in so high a degree that they became, as it were, the types of them among the Romans. Cicero calls them "severissimi homines Sabini," and Livy speaks of the "disciplina tetrica ac tristis veterum Sabinorum." (Cic. *in Vatin.* 15, *pro Ligar.* 11; Liv. i. 18.) Cato also described the severe and frugal mode of life of the early Romans as inherited from the Sabines (*ap. Serv. ad Aen.* viii. 638). Their frugal manners and moral purity continued indeed, even under the Roman government, to be an object of admiration, and are often introduced by the poets of the Empire as a contrast to the luxury and dissoluteness of the capital. (Hor. *Carm.* iii. 6. 38—44, *Epod.* 2. 41, *Epist.* ii. 1. 25; Propert. iii. 24. 47; Juv. iii. 169.) With these qualities were combined, as is not unfrequently found among secluded mountaineers, an earnest piety and strong religious feeling, together with a strenuous attachment to the religious usages and forms of worship which had been transmitted to them by their ancestors. The religion of the Sabines does not appear to have differed essentially from that of the other neighbouring nations of Italy; but they had several peculiar divinities, or at least divinities unknown to the Latins or Etruscans, though some of them seem to have been common to the Umbrians also. At the head of these stood Sancus, called also Semo Sancus, who was the tutelary divinity of the nation, and the reputed father of their mythical progenitor, or eponymous hero Sabus. He was considered as the peculiar guardian of oaths, and was thence generally identified by the Romans with Dius Fidius; while others, for less obvious reasons, identified him with

Hercules. (Ovid. *Fast.* vi. 215; Sil. Ital. viii. 420; Lactant. i. 15; Augustin, *Civ. Dei*, xviii. 19; Ambrosch. *Studien.* p. 170, &c.) Among the other deities whose worship is expressly said to have been introduced at Rome by the Sabines, we find Sol, Feronia, Minerva and Mars, or Mamers, as he was called by the Sabines and their descendants. (Varr. *L. L.* v. 74.) Minerva was, however, certainly an Etruscan divinity also; and in like manner Vejovis, Ops, Diana, and several other deities, which are said to be of Sabine extraction, were clearly common to the Latins also, and probably formed part of the mythology of all the Italian nations. (Varro, *l. c.*; Augustin, *C. D.* iv. 23; Schwegler, *Röm.* Gesch. i. p. 250; Ambrosch. *l. c.* pp. 141—176.) On the other hand Quirinus was certainly a Sabine deity, notwithstanding his subsequent identification with the deified Romulus. His temple, as well as that of Sancus, stood on the Quirinal hill, to which indeed it probably gave name. (Varr. *L. L.* v. 51; Ambrosch, pp. 149, 169.)

Connected with the religious rites of the Sabines may be mentioned their superstitious attachment to magical incantations, which they continued to practise down to a late period, as well as their descendants the Marsi and other Sabellian tribes. (Hor. *Epod.* 17. 28, *Sat.* i. 9. 29.) They were noted also for their skill, or pretended skill, in divination by dreams. (Fest. p. 335.) The rites of augury, and especially of auspices, or omens from the flight of birds, were also considered to be essentially of Sabine origin, though certainly common in more or less degree to the other nations of Central Italy. Attus Navius, the celebrated augur in the reign of Tarquin the Elder, who was regarded by many as the founder of the whole science of augury (Cic. *de Div.* ii. 38), was a Sabine, and the institution of the "auspicia majora" was also referred to Numa. (Cic. *de Rep.* ii. 14.)

The Sabine language, as already observed, is known to us only from a few words preserved by ancient writers, Varro, Festus, &c. Some of these, as "multa," "albus," "imperator," &c., are well known to us as Latin words, though said to have originally passed into that language from the Sabines. Others, such as "hirpus" or "irpus" for a wolf, "curis" or "quiris" (a spear), "nar" (sulphur), "teba" (a hill), &c., were altogether strange to the Latin, though still in use among the Sabines. A more general peculiarity of the Sabine dialect, and which in itself proves it to have been a cognate language with the Latin, is that it inserted the digamma or F at the commencement of many words instead of the rough aspirate; thus they said "fircus," 'fedus," "fostis," "fostia," &c., for the Latin "hircus," "hedus," "hostis," "hostia," &c. (Varro, *L. L.* v. 97; Fest. pp. 84, 102; Klenze, *Philolog. Abhandl.* pp. 70—76; Mommsen, *U. I. Dialekte*, pp. 335—359.) The two last authors have well brought together the little that we really know of the Sabine language. It is not quite clear from the expressions of Varro how far the Sabine language could be considered as still existing in his time; but it seems probable that it could no longer be regarded as a living language, though the peculiar expressions and forms referred to were still in use as provincialisms. (Klenze, *l. c.*)

The Sabines, we are told, dwelt principally in villages, and even their towns in the earliest times were unwalled. (Strab. v. p. 228; Dionys. ii. 49.) This is one of the points in which they were thought to resemble the Lacedaemonians (Plut. *Rom.* 16); though it probably arose merely from their simplicity of manners, and their retaining unchanged the habits of primitive mountaineers. In accordance with this statement we find very few towns mentioned in their territory; and even of these REATE appears to have been the only one that was ever a place of much importance. INTEROCREA, about 14 miles higher up the valley of the Velinus (the name of which is still preserved in *Antrodoco*), seems never to have been a municipal town; and it is probable that the whole upper valley of the Velinus was, municipally speaking, included in the territory of Reate, as we know was the case with the lower valley also, down to the falls of the river, which formed the limit of the territory of the Sabines on this side; Interamna, as well as Narnia and Ocriculum, being included in Umbria. FALACRINUM, the birthplace of Vespasian, situated near the sources of the Velinus, was certainly a mere village; as was also FORULI (*Civita Tommasa*), situated in the cross valley which led from Interocrea to Amiternum and formed the line of communication between the valley of the Velinus and that of the Aternus. AMITERNUM itself, though situated in the valley of the Aternus, so that it would seem to have more naturally belonged to the Vestini, was certainly a Sabine city (Plin. iii. 12. s. 17; Strab. v. p. 228), and was probably, next to Reate, the most considerable that they possessed. NURSIA, in the upper valley of the Nar, was the chief town of the surrounding district, but was never a place of much importance. The lower country of the Sabines, between Reate and Rome, seems to have contained several small towns, which were of municipal rank, though said by Strabo to be little more than villages. Among these were FORUM NOVUM, the site of which may be fixed at *Vescovio*, on the banks of the *Imele*, and FORUM DECII, the situation of which is wholly unknown. Both these were, as the names show, Roman towns, and not ancient Sabine cities; the former appears to have replaced the Sabine CASPERIA, which was probably situated at *Aspra*, in the same neighbourhood. On the other hand CURES, the supposed metropolis of the Sabines that had settled at Rome, still retained its municipal rank, though not a place of much importance. The same was the case with ERETUM, which was, as already observed, the last of the strictly Sabine towns in proceeding towards Rome; though Pliny includes Nomentum and Fidenae also among the Sabines. Besides these there were two towns of the name of Trebula, both of which must probably be placed in the southern part of the land of the Sabines. Of these TREBULA MUTUSCA (the Mutuscae of Virgil, *Aen.* vii. 711) is represented by *Monte Leone*, about 15 miles S. of *Rieti*, and on the right of the Salarian Way; while TREBULA SUFFENAS may perhaps be placed at *S. Antimo* near *Stroncone*, in the hills W. of *Rieti*. Lastly, VARIA, in the valley of the Anio, 4 miles above Tibur, still called *Vicovaro*, would appear to have been certainly a Sabine town; the whole valley of the Digentia (*Licenza*), with its villages of Mandela, Digentia, and Fanum Vacunae (the well-known neighbourhood of Horace's Sabine farm), being included among its dependencies. [DIGENTIA.]

The territory of the Sabines was traversed throughout its whole extent by the Salarian Way, which was from an early period one of the great highroads of Italy. This proceeded from Rome

direct to Reate, and thence ascended the valley of the Velinus by Interocrea and Falacrinum, from whence it crossed the ridge of the Apennines into the valley of the Truentus in Picenum, and thus descended to Asculum and the Adriatic. The stations between Rome and Reate were Eretum, which may be fixed at *Grotta Marozza*, and Vicus Novus, the site of which is marked by the *Osteria Nuova*, or *Osteria dei Massacci*, 32 miles from Rome. (Westphal, *Röm. Kamp.* p. 128.) [VIA SALARIA.]

Notwithstanding its mountainous character the Sabine territory was far from being poor. Its productions consisted chiefly of oil and wine, which, though not of first-rate quality, were abundant, and supplied a great part of the quantity used by the lower classes at Rome. (Hor. *Carm.* i. 9. 7, 20. 1; Juv. iii. 85.) The Sabine hills produced also in abundance the plant which was thence known as Sabina herba (still called *Savin*), which was used by the natives for incense, before the more costly frankincense was introduced from the East. (Plin. xvi. 20. s. 33, xxiv. 11. s. 61; Virg. *Cul.* 402; Ovid, *Fast.* i. 342.) The neighbourhood of Reate was also famous for its breed of mules and horses; and the mountains afforded excellent pasturage for sheep. The wilder and more inaccessible summits of the Apennines were said still to be frequented by wild goats, an animal long since extinct throughout the continent of Italy. (Varr. *R. R.* ii. 1. § 5, 3. § 3.) [E. H. B.]

SABIS (Σάβις), a small river of Carmania, which is mentioned by Mela in connection with two other small streams, the Andanis and Coros (iii. 8). It is also noticed by Pliny, who places it in the neighbourhood of Harmuza (*Ormúz*, vi. 23. s. 27). Ptolemy speaks of a town in Carmania of the same name with this river (vi. 8. § 14). [V.]

SABIS (*Sambre*), a river of Belgica, which joins the Mosa (*Maas*) at *Charleroi*. Caesar (B. C. 57) marched against the Nervii and their confederates from the south, and he found the enemy posted on the north side of the Sabis (*B. G.* ii. 16). In this battle the Belgae were defeated with great slaughter. [NERVII.] [G. L.]

SABLONES, in Gallia Belgica, is placed by the Antonine Itin. on a road from Colonia Trajana (*Kelln*) to Juliacum (*Juliers*) and Colonia Agrippinensis (*Cologne*). Sablones is supposed to be a place named *Int-Sandt* near *Strälen*, a town on the river *Niers*, a branch of the *Maas*. But see MEDIOLANUM in Gallia, No. 3. [G. L.]

SABOCI (Σαβῶκοι al. Σαβόκοι, Ptol. iii. 5. § 20), a people of European Sarmatia, who from the termination "boki," "bank," so often occurring in Russian and Polish local names, must be looked for in the basin of the river *San*, one of the largest affluents of the *Vistula*, and which drains a greater part of *Galizia*. (Schafarik, *Slav. Alt.* vol. i. p. 206.) [E. B. J.]

SABORA, a place in Hispania Baetica, in the mountains above *Malaga*, near *Cannete;* known only from inscriptions. (Carter, *Travels*, p. 252; Ukert, vol. ii. pt. i. p. 360.) [T. H. D.]

SABRACAE, a people who dwelt, according to Curtius, in the southern part of the *Punjáb*, in the neighbourhood of the Insula Pattalene (ix. 8. § 4). They are mentioned in connection with the Praesti as forming part of the realm of Musicanus. (Arrian, *Anab.* vi. 15; Diod. xvii. 102.) [V.]

SABRATA (Σαβράτα, Ptol. iv. 3. § 41; Plin. v. 4. s. 5; Solin. 37; *Itin. Anton.*; *Peut. Tab.*; Σαβαραθά, Procop. *de Aed.* vi. 4; Σαβράθα, *Stadiasm.* §§ 99, 100), a Phoenician town (Sil. Ital. iii. 256) on the coast of N. Africa between the Syrtes. The name, which is Phoenician and occurs on coins (Movers, *Die Phönix.* vol. ii. p. 491), received the Graecised form ABROTONUM; for although Pliny (*l. c.*) distinguishes the two towns they are undoubtedly the same places. It became afterwards a Roman colonia, and was the birthplace of Flavia Domitilla, the first wife of Vespasian, and mother of Titus and Domitian. (Sueton. *Vespas.* 3). Justinian fortified it (Procop. *l. c.*), and it remained during the middle ages one of the most frequented markets upon this coast, to which the natives of central Africa brought their grain (comp. Ibn Abd-el-Hakem, *Journal Asiatique*, 1844, vol. ii. p. 358). Barth (*Wanderungen*, p. 277) has given an account of the extensive ruins of Sabrata, which he found to the W. of *Tripoli*, at *Tripoli Vecchio*, or *Soâra-esch-Schurkía*, lat. 32° 49′, long. 12° 26′. (Smyth, *Mediterranean*, p. 456.) [E. B. J.]

SABRINA (called by Ptolemy Σαβριάνα, ii. 3. § 3; probably also the Sarva of the Geog. Rav. v. 31), a river on the W. coast of Britannia Romana, which falls into the sea near Venta Silurum, now the *Severn*. Its mouth formed an estuary of the same name. (Comp. Tac. *Ann.* xii. 31.) [T. H. D.]

SABUS, a fortified place in Armenia Minor, at the foot of Antitaurus. (*It. Ant.* p. 209; *Not. Imp.* c. 27.) In the Peuting. Table it is called Saba. [L. S.]

SACAE. [SCYTHIA.]

SACALA (τὰ Σάκαλα), a desert spot on the seashore of Gedrosia which was visited by the fleet of Nearchus (Arrian, *Ind.* c. 22). It is not satisfactorily identified with any modern place. (Vincent, *Voyage of Nearchus*, i. p. 202.) [V.]

SACANI. [SARMATIA.]

SACAPENE. [SACASENE.]

SACARAULI (Σακαραῦλοι, Strab. xi. p. 511), a nomad people of Central Asia, belonging to the oldest stock of the *Turks* of the *Altai*. In Ptolemy (vi. 14. § 4) this people appear under the name of Sagaraucae (Σαγαραῦκαι) (comp. Ritter, *Erdkunde*, vol. vii. p. 696). [E. B. J.]

SACASSE'NE (Σακασσηνή, Strab. ii. p. 73, xi. pp. 509, 511, 529: *Eth.* Sacassani, Plin. vi. 11), a province of Armenia, on the borders of Gogarene, which it separated from the valley of the Araxes, and which extended to the river Cyrus. St. Martin (*Mém. sur l'Arménie*, vol. i. pp. 143, 209, 210) identifies it with the Armenian province of *Siounik'h*, which was governed up to the 12th century by a race of princes who traced their descent to Haig, first king of Armenia, and who in the 9th century had political relations with the Byzantine court. (Const. Porph. *de Caerem. Aul. Byz.* vol. i. p. 397.) The SACAPENE of Ptolemy (v. 13. § 9) appears to be the same as this province. [E. B. J.]

SACASTE'NE (Σακαστηνή), a district of the interior of Drangiana, which was occupied by the Sacae or Scythians, who appear to have descended through the *Punjáb*, and to have settled there. (Isidor. *Mans. Parth.* c. 18.) According to Isidorus, it bore also the name of Paraetacene. It has been supposed that the modern name of this country, *Segestan* or *Seistan*, is derived from Sacastene (Wahl, *Vorder u. Mittel-Asien*, i. p. 569; comp. Ritter, viii. p. 120). Four towns, Baida, Min, Palacenti, and Sigal, are mentioned in it: of these, Min may

be compared with Min-nagara, a town on the Indus belonging to the same people. (Arrian, *Peripl. Mar. Eryth.* § 38.) [MINNAGARA.] [V.]

SACCASE'NA, a place in Cappadocia, probably in the neighbourhood of the modern *Urgub* or *Urkup*. (*It. Ant.* p. 296.) [L. S.]

SACCO'PODES (Σακκοπόδες), according to Strabo, a name given to the people of Adiabene in Assyria (xvi. p. 745). There has been a great dispute among learned men as to this name, which does not appear to be a genuine one. Bochart has suggested Saucropodes (Σαυκρόποδες). On the whole, however, it would seem that the emendation of Tzschukke is the best, who reads Σαυλόποδες. (Groskurd, *ad Strab.* vol. iii. p. 225.) [V.]

SACER MONS (τὸ Ἱερὸν ὄρος) was the name given to a hill about 3 miles from Rome, across the Anio and on the right of the Via Nomentana. It is mentioned only on occasion of the two secessions of the plebeians from Rome: the first of which, in B. C. 494, was terminated by the dexterity of Menenius Agrippa, and gave occasion to the election of the first tribunes of the people. (Liv. ii. 32; Dionys. vi. 45; Appian, *B. C.* i. 1.) In memory of this treaty and the "Lex Sacrata" which was passed there to confirm it, an altar was erected on the spot, which thenceforth always bore the name of "the Sacred Mount." (Dionys. vi. 90; Appian, *l. c.*). The second occasion was during the Decemvirate; when the plebeians, who had at first seceded only to the Aventine, on finding that this produced no effect, withdrew to the Sacred Mount (Liv. iii. 52). Cicero, on the contrary, represents the secession on this occasion as taking place first to the Sacred Mount, and then to the Aventine (Cic. *de R. P.* ii. 37). Hardly any spot in the neighbourhood of Rome, not marked by any existing ruins, is so clearly identified by the descriptions of ancient writers as the Sacer Mons. Both Livy and Cicero concur in placing it 3 miles from Rome, across the Anio; and the former expressly tells us that the plebeians, on the second occasion, proceeded thither by the Via Nomentana, which was then called Ficulensis (Liv. ii. 32, iii. 52; Cic. *Brut.* 14, *pro Cornel.*, ap. Ascon. p. 76). Now the third mile along the Via Nomentana brings us to a point just across the Anio; and on the right of the road at this point is a hill overlooking the river, in some degree isolated from the *plateau* beyond, with which it is, however, closely connected, while its front towards the valley of the Anio is steep and almost precipitous.

On its E. side flows a small stream, descending from the *Casale dei Pazzi* (apparently the one known in ancient times as the Rivus Ulmanus); so that the position is one of considerable strength, especially on the side towards Rome. The site is now uninhabited, and designated by no peculiar appellation. (Nibby, *Dintorni di Roma*, vol. iii. pp. 54, 55.) [E. H. B.]

SACHALI'TAE (Σαχαλῖται), a people upon the S. coast of Arabia Felix (Ptol. vi. 7. §§ 11, 24, 25), and upon the bay called after them SACHALITES SINUS (Σαχαλίτης κόλπος). Respecting the position of this bay there was a difference of opinion among the ancient geographers, Marinus placing it towards the west, and Ptolemy towards the east, of the promontory Syagrus (*Ras Fartak*). (Ptol. i. 17. § 2, comp. vi. 7. §§ 11, 46.) Marcianus (p. 23) agrees with Ptolemy; and says that the bay extended from this promontory to the mouth of the Persian gulf (comp. Steph. B. *s. v.* Σαχαλίτης κόλπος). Arrian (*Peripl. Mar. Erythr.* p. 17. § 29) on the other hand agrees with Marcian, and places the bay between Cane and the promontory Syagrus. (See C. Müller, *ad Arrian, l. c.*)

SACILI or SACILI MARTIALIUM (Plin. iii. 1. s. 3; called by Ptolemy Σακιλίς, ii. 4. § 11), a town of the Turduli in Hispania Baetica, at a place near *Perabad*, now called *Alcorrucen*. (Morales, *Antig.* p. 96: Florez, *Esp. Sagr.* p. 147.) [T. H. D.]

SA'CORA (Σάκορα), a town in the interior of Paphlagonia, is mentioned only by Ptolemy (v. 4. § 5). [L. S.]

SACORSA (Σάκορσα), a town in the interior of Paphlagonia, is mentioned only by Ptolemy (v. 4. § 6). [L. S.]

SACRA'NI, was the name given by a tradition, probably of very ancient date, to a conquering people or tribe which invaded Latium at a period long before the historical age. Festus represents them as proceeding from Reate, and expelling the Siculi from the Septimontium, where Rome afterwards stood. He tells us that their name was derived from their being the offspring of a "ver sacrum." (Fest. *s. v. Sacrani*, p. 321.) It hence appears probable that the Sacrani of Festus were either the same with the people called Aborigines by Dionysius (i. 16) [ABORIGINES], or were at least one clan or tribe of that people. But it is very doubtful whether the name was ever really used as a national appellation. Virgil indeed alludes to the Sacrani as among the inhabitants of Latium in the days of Aeneas (*Sacranae acies, Aen.* vii. 796), but apparently as a small and obscure tribe. Servius in his commentary on the passage gives different explanations of the name, all varying from one another, and from that given by Festus, which is the most distinct statement we have upon the subject. In another passage (*ad Aen.* xi. 317) Servius distinguishes the Sacrani from the Aborigines, but little value can be attached to his statements on such subjects. [E. H. B.]

SACRARIA. [CLITUMNUS.]

SACRIPORTUS (ὁ Ἱερὸς λιμήν, Appian, *B. C.* i. 87), a place in Latium, between Signia and Praeneste, celebrated as the scene of the decisive battle between Sulla and the younger Marius, in which the latter was totally defeated, and compelled to take refuge within the walls of Praeneste, B. C. 82. (Liv. *Epit.* lxxxvii.; Appian, *B. C.* i. 87; Vell. Pat. ii. 26, 28; Flor. iii. 21. § 23; Vict. *Vir. Ill.* 68, 75; Lucan, ii. 134.) The scene of the battle is universally described as "apud Sacriportum," but with no more precise distinction of the locality. The name of Sacriportus does not occur upon any other occasion, and we do not know what was the meaning of the name, whether it were a village or small town, or merely a spot so designated. But its locality may be approximately fixed by the accounts of the battle; this is described by Appian as taking place *near* Praeneste, and by Plutarch (*Sull.* 28) as *near* Signia. We learn moreover from Appian that Sulla having besieged and taken Setia, the younger Marius, who had in vain endeavoured to relieve it, retreated step by step before him until he arrived in the neighbourhood of Praeneste, when he halted at Sacriportus, and gave battle to his pursuer. It is therefore evident that it must have been situated in the plain below Praeneste, between that city and Signia, and probably not far from the opening between the Alban hills and the Volscian mountains, through which must have lain the line of retreat of Marius;

but it is impossible to fix the site with more precision. [E. H. B.]

SACRUM PR. 1. (τὸ ἱερὸν ἀκρωτήριον, Strab. iii. p. 137), the SW. extremity of Lusitania; according to Strabo (*l. c.*), the most W. point, not only of Europe but of the known world; the present *Cape St. Vincent*. Strabo adds that the surrounding district was called in Latin "Cuneus." Strabo also says that the geographer Artemidorus, who had been there, compared the promontory with the bow of a ship, and said that there were three small islands there; which, however, are not mentioned by any other writer, nor do they now exist. (Cf. Mela, ii. 1; Plin. iv. 22. s. 35, &c.)

2. (τὸ ἱερὸν ἄκρον, Ptol. ii. 2. § 6) the SE. point of Hibernia, now *Carnsore Point*. [T. H. D.]

SACRUM PROM. (τὸ ἱερὸν ἄκρον, Ptol. iii. 5. § 8), the western point of the ACHILLEOS DROMOS. [E. B. J.]

SACRUM PROM., a promontory of Lycia upon the borders of Pamphylia, opposite the Chelidoniae Insulae, whence the promontory is called by Livy Chelidonium Prom. [For details, see Vol. I. p. 606, b.]

SADACORA (Σαδάκορα), a town of Cappadocia, situated on the great road from Coropassus and Garsabora to Mazaca. (Strab. xiv. p. 663.) [L. S.]

SADAME (*Itin. Ant.* p. 230; in Geog. Rav. 4, 6, written Sadanua), a town in the NE. part of Thrace, on the road from Hadrianopolis to Develtus, its distance from the latter, according to the Itinerary, being 18,000 paces. This would give as its site the present town of *Kanareh*, situated near the source of a small river which runs through a narrow valley and falls into the Black Sea at *Cape Zaitan*. But according to Reichard it was in the neighbourhood of *Omar-Fakhi*, which is perhaps the *Sarbazan* of Voudoucourt. [J. R.]

SADOS (Σάδος), a small river of the Aurea Chersonesus, which fell into the *Bay of Bengal* (Ptol. vii. 2. § 3). It has been supposed by Forbiger to be the same as the present *Sandoway*. Ptolemy mentions also in the same locality a town called Sada, which was, in all probability, on or near the river. [V.]

SAELI'NI. [ASTURES, Vol. I. p. 249.]

SAEPI'NUM or SEPI'NUM (the name is variously written both in MSS. and even inscriptions, but Saepinum is probably the most correct form: Σαίπινον, Ptol.: *Eth.* Saepinas: *Altilia* near *Sepino*), a city of Samnium, in the country of the Pentri, on the E. slope of the great group of the *Monte Matese*, and near the sources of the *Tamaro* (Tamarus). It seems to have been in early times one of the chief towns of the Samnites, or rather one of the few which they possessed worthy of the name. From its position in the heart of their country it was not till the Third Samnite War that it was attacked by the Roman arms; but in B. C. 293 it was besieged by the consul L. Papirius Cursor, and though vigorously defended by a garrison amounting almost to an army, was at length carried by assault. (Liv. x. 44, 45.) From this time the name of Saepinum disappears from history, but it is found again at a later period among the municipal towns of Samnium under the Roman Empire. Its name is not indeed mentioned by Strabo, among the few surviving cities of Samnium in his day: but it received a colony under Nero (*Lib. Colon.* p. 237), and appears for a time to have recovered some degree of importance. Its name is found both in Ptolemy and Pliny among

SAGALASSUS (Σαγαλασσός: *Eth.* Σαγαλασσεύς or Σαγαλασσηνός), an important town and fortress near the north-western frontier of Pisidia, or, as Strabo (xii. p. 569) less correctly states, of Isauria, while Ptolemy (v. 3. § 6) erroneously mentions it among the towns of Lycia. (Comp. Steph. B. *s. v.*) Alexander the Great took the town by assault, having previously defeated its brave Pisidian inhabitants, who met the aggressor drawn up on a hill outside their town. (Arrian, *Anab.* i. 28.) Livy (xxxviii. 15), in his account of the expedition of Cn. Manlius, describes Sagalassus as situated in a fertile plain, abounding in every species of produce; he likewise characterises its inhabitants as the bravest of the Pisidians, and the town itself as most strongly fortified. Manlius did not take it, but by ravaging its territory compelled the Sagalassians to come to terms, to pay a contribution of 50 talents, 20,000 medimni of wheat, and the same quantity of barley. Strabo states that it was one of the chief towns of Pisidia, and that after passing under the dominion of Amyntas, tetrarch of Lycaonia and Galatia, it became part of the Roman province. He adds that it was only one day's march from Apamea, whereas we learn from Arrian that Alexander was five days on the road between the two towns; but the detention of the latter was not occasioned by the length of the road but by other circumstances, so that Strabo's account is not opposed to that of Arrian. (Comp. Polyb. xxii. 19; Plin. v. 24.) The town is mentioned also by Hierocles (p. 693), in the Ecclesiastical Notices, and the Acts of Councils, from which it appears to have been an episcopal see.

The traveller Lucas (*Trois Voyages*, i. p. 181, and *Second Voyage*, i. c. 34) was the first that reported the existence of extensive ruins at a place called *Aglasoun*, and the resemblance of the name led him to identify these ruins with the site of the ancient Sagalassus. This conjecture has since been fully confirmed by Arundell (*A Visit to the Seven Churches*, p. 132, foll.), who describes these ruins as situated on the long terrace of a lofty mountain, rising above the village of *Aglasoun*, and consisting chiefly of massy walls, heaps of sculptured stones, and innumerable sepulchral vaults in the almost perpendicular side of the mountain. A little lower down the terrace are considerable remains of a large building, and a large paved oblong area, full of fluted columns, pedestals, &c., about 240 feet long; a portico nearly 300 feet long and 27 wide; and beyond this some magnificent remains either of a temple or a gymnasium. Above these rises a steep hill with a few remains on the top, which was probably the acropolis. There is also a large theatre in a fine state of preservation. Inscriptions with the words Σαγαλασσέων πόλις leave no doubt as to these noble ruins belonging to the ancient town of Sagalassus. (Comp. Hamilton, *Researches*, vol. i. p. 486, foll.; Fellows, *Asia Minor*, p. 164, foll.) [L. S.]

SAGANUS (Σαγανός, Marcian, *Peripl.* p. 21., ed. Hudson), a small river on the coast of Carmania, about 200 stadia from Harmuza. It is mentioned also by Ptolemy (vi. 8. § 4), and Pliny (vi. 25). It is probably the same stream which is called by Ammianus Marcellinus, Saganis (xxiii. 6). Vincent thinks that it may be represented by a small river which flows into the *Persian Gulf*, near *Gomeroon*. (*Voy. of Nearchus*, vol. i. p. 370). [V.]

SAGA'POLA (Σαγάπολα *al.* Σαγάπολα ὄρος, Ptol. iv. 6. §§ 8, 14, 16, 17), a mountain of Interior Libya, from which flows the Subus, the position of which is fixed by Ptolemy (*l. c.*) 13° E. long., 22° N. lat. It may be assumed that the divergent which Ptolemy describes as ascending to this mountain from the Nigeir is one of the tributaries which flow into the *Djolibá* or *Quorra*, from the highlands to the N. of that river (comp. *Journ. Geog. Soc.* vol. ii. p. 13.) [E. B. J.]

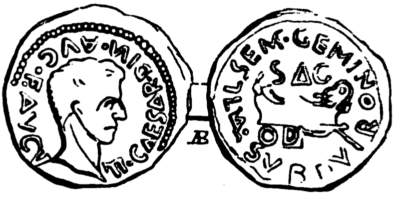
SAGARAUCAE. [SACARAULI.]

SAGARIS, a river of European Sarmatia (Ov. *ex Pont.* iv. 1047), which has been assumed, from the name, to have discharged itself into the SINUS SAGARIUS. (Plin. iv. 26.) [E. B. J.]

SAGA'RTII. [PERSIS.]

SAGIDA (Σάγιδα or Σάγηδα, Ptol. vii. 1. § 71), a metropolis of Central India, which is perhaps the same as the present *Sohajpur*, near the sources of the river *Soane*. [V.]

SAGRAS (ἡ Σάγρας, Strab. vi. p. 261), a river of Bruttium, on the E. coast of the peninsula, to the S. of Caulonia, between that city and Locri. It is celebrated in history for the great battle fought on its banks, in which an army of 130,000 Crotoniats is said to have been totally defeated by 10,000 Locrians: an event regarded as so extraordinary that it passed into a kind of proverb for something that appeared incredible, though true. (ἀληθέστερα τῶν ἐπὶ Σάγρᾳ, Suid. *s. v.*; Strab. vi. p. 261; Cic. *de N. D.* iii. 5; Justin. xx. 3; Plin. iii. 10. s. 15.) The victory was ascribed by the Locrians to the direct intervention of the Dioscuri, to whom they in consequence erected altars on the banks of the river, which were apparently still extant in the time of Strabo. It was added that the news of the victory was miraculously conveyed to the Greeks assembled at Olympia the same day that the battle was fought. (Strab. *l. c.*; Cic. *de N. D.* ii. 2.) But notwithstanding the celebrity thus attached to it, the date and occasion of the battle are very uncertain: and the circumstances connected with it by Strabo and Justin would lead to opposite conclusions. [CROTONA.] The date assigned by Heyne is B. C. 560, while Strabo certainly seems to imply that it took place *after* the fall of Sybaris in B. C. 510. (Grote's *Greece*, vol. iv. p. 552, note.) But whatever uncertainty prevailed concerning the battle, it seems certain that the Sagras itself was a well known stream in the days of Strabo and Pliny; both of whom concur in placing it to the N. of Locri and S. of Caulonia, and as the latter city was a colony and perhaps a dependency of Crotona, it is probable that the battle would be fought between it and Locri. Unfortunately the site of Caulonia cannot be determined [CAULONIA], and we are therefore quite at a loss which of the small streams flowing into the sea between Locri and the *Punta di Stilo* should be identified with the celebrated Sagras. The *Alaro* has been generally fixed upon by local writers, but has really no better claim than any other. (Romanelli, vol. i. p. 161; Swinburne's *Travels*, vol. i. p. 340.). [E. H. B.]



SAGRUS (Σάγρος: *Sangro*), one of the most considerable of the rivers of Samnium, which has its sources in the lofty group of the Apennines S. of the *Lago di Fucino*, and has a course of above 70 miles from thence to the Adriatic. It flows at first in a SE. direction, passes under the walls of Aufidena as well as of the modern *Castel di Sangro*, and in this part of its course flows through a broad and level, but upland valley, bounded on both sides by lofty

mountains. After passing Aufidena it turns abruptly to the NE., and pursues this course till it reaches the sea. In the lower part of its course it enters the territory of the Frentani, which it traverses in its whole breadth, flowing into the sea between Histonium and Ortona. Strabo indeed represents it as forming the boundary between the Frentani and the Peligni, but this is certainly a mistake, as the Peligni did not in fact descend to the sea-coast at all, and Ortona, one of the chief towns of the Frentani, was situated to the N. of the Sagrus. (Strab. v. p. 242; Ptol. iii. 1. § 19; where the name is erroneously written Σάρος.) The upper valley of the Sagrus, with its adjoining mountains, was the territory of the Samnite tribe of the Caraceni. (Ptol. iii. 1. § 66.) [E. H. B.]

SAGU'NTIA. 1. (Σαγουντία, Ptol. ii. 4. § 13), a town in the SW. part of Hispania Baetica. (Liv. xxxiv. 12; Plin. iii. 1. s. 3.) Now *Xigonza* or *Gigonza*, NW. from *Medina Sidonia*, where there are many ruins. (Morales, *Antig.* p. 87; Florez, *Esp. Sagr.* x. p. 47.)

2. A town of the Arevaci, in Hispania Tarraconensis, SW. from Bilbilis. It was in the jurisdiction of Clunia, on the road from Emerita to Caesaraugusta, and was the scene of a battle between Sertorius and Metellus. (Plut. *Sert.* 21; App. *B. C.* i. 110.) The name is written Segontia in the *Itin. Ant.* pp. 436 and 438, and in the Geog. Rav. iv. 43; but must not be confounded with that of a town of the Celtiberi. Now *Siguenza* on the *Henarez*. (Florez, *Esp. Sagr.* viii. p. 18; Morales, *Antig.* p. 87.) [T. H. D.]

SAGUNTUM (Σάγουντον, Ptol. ii. 6. § 63), also called SAGUNTUS (Mela, ii. 6; Σάγουντος, Steph. B. *s. v.*), a town of the Edetani or Sedetani in Hispania Tarraconensis, seated on an eminence on the banks of the river Pallantias, between Sucro and Tarraco, and not far from the sea. Strabo (iii. p. 159) erroneously places it near the mouth of the Iberus, though it lies near 100 miles to the SW. of it. The same author states that it was founded by Greeks from Zacynthus; and we find that Stephanus calls it Ζάκανθα and Ζάκυνθος. Livy adds that the founders were mixed with Rutuli from Ardea (Liv. xxi. 7); whence we sometimes find the city called Ausonia Saguntus. (Sil. Ital. i. 332.) Another tradition ascribed its foundation to Hercules. (Ib. 263, 505.) Saguntum lay in a very fertile district (Polyb. xvii. 2), and attained to great wealth by means of its commerce. It was the immediate cause of the Second Punic War, from its being besieged by Hannibal when it was in the alliance of the Romans. The siege is memorable in history. The town was taken, after a desperate resistance, in B. C 218, and all the adult males put to the sword; but how long the siege lasted is uncertain. (Liv. xxi. 14, 15; Cf. Sil. Ital. i. 271, seq.) Eight years afterwards Saguntum was recovered by the Romans. The Carthaginians had partly destroyed it, and had used it as a place for the custody of their hostages. (Polyb. iii. 98; Liv. xxiv. 42.) The city was restored by the Romans and made a Roman colony. (Liv. xxviii. 39; Plin. iii. 3. s. 4.) Saguntum was famous for its manufacture of earthenware cups (calices Saguntini) (Plin. xxxv. 12. s. 46; Mart. iv. 46, xiv. 108), and the figs grown in the neighbourhood were considered very fine. (Plin. xv. 18. s. 19.) Its site is now occupied by the town of *Murviedro*, which derives its name from the ancient fortifications (muri veteres). But little now remains of the ruins, the materials having been unsparingly used by the inhabitants for the purpose of building. "The great temple of Diana stood where the convent of *La Trinidad* now does. Here are let in some six Roman inscriptions relating to the families of Sergia and others. At the back is a water-course, with portions of the walls of the Circus Maximus. In the suburb *San Salvador*, a mosaic pavement of Bacchus was discovered in 1745, which soon afterwards was let go to ruin, like that of Italica. The famous theatre is placed on the slope above the town, to which the orchestra is turned; it was much destroyed by Suchet, who used the stones to strengthen the castle, whose long lines of wall and tower rise grandly above; the general form of the theatre is, however, easily to be made out. . . . The local arrangements are such as are common to Roman theatres, and resemble those of *Merida*. They have been measured and described by Dean Marti; Ponz, iv. 232, in the *Esp. Sagr.* viii. 151." (Ford's *Handbook for Spain*, p. 206.) For the coins of Saguntum see Florez, *Med.* ii. p. 560; Mionnet, i. p. 49, Suppt. i. p. 98. The accompanying coin of Saguntum contains on the obverse the head of Tiberius, and on the reverse the prow of a ship. [T. H. D.]

COIN OF SAGUNTUM.

SAGUTE SINUS (Polyb. *ap. Plin.* v. 1), a gulf on the W. coast of Mauretania, S. of the river Lixus, which must be identified with the EMPORICUS SINUS. The Phoenician word "Sacharut" signifies "Emporia," and by an elision not uncommon among the Africans assumed the form under which it appears in Polybius. (Movers, *Die Phönix.* vol. ii. p. 541.) [E. B. J.]

SAGY'LIUM (Σαγύλιον), a castle situated on a steep rock in the interior of Pontus, which was one of the strongholds of the Pontian kings. (Strab. xii. pp. 560, 561.) [L. S.]

SAIS (Σάϊς, Herod. ii. 28, 59, 152, 169; Strab. xvii. p. 802; Steph. B. *s. v.*; Mela, i. 9. § 9; Plin. v. 10. s. 11: *Eth.* Σαΐτης, fem. Σαΐτις), the capital of the Saitic Nome in the Delta, and occasionally of Lower Aegypt also, stood, in lat. 31° 4′ N., on the right bank of the Canopic arm of the Nile. The site of the ancient city is determined not only by the appellation of the modern town of *Sa-el-Hadjar*, which occupies a portion of its area, but also by mounds of ruin corresponding in extent to the importance of Sais at least under the later Pharaohs. The city was artificially raised high above the level of the Delta to be out of the reach of the inundations of the Nile, and served as a landmark to all who ascended the arms of the river from the Mediterranean to Memphis. Its ruins have been very imperfectly explored, yet traces have been found of the lake on wh ch the mysteries of Isis were performed, as well as of the temple of Neith (Athenè) and the necropolis of the Saite kings. The wall of

unburnt brick which surrounded the principal buildings of the city was 70 feet thick, and probably therefore at least 100 feet high. It enclosed an area 2325 feet in length by 1960 in breadth. Beyond this enclosure were also two large cemeteries, one for the citizens generally, and the other reserved for the nobles and priests of the higher orders. In one respect the Saites differed from the other Aegyptians in their practice of interment. They buried their kings within the precincts of their temples. The tomb of Amasis attracted the attention of Herodotus (ii. 169), and Psammitichus, the conqueror and successor of that monarch, was also buried within the walls of the temple of Neith.

Sais was one of the sacred cities of Aegypt: its principal deities were Neith, who gave oracles there, and Isis. The mysteries of the latter were celebrated annually with unusual pomp on the evening of the Feast of Lamps. Herodotus terms this festival (ii. 59) the third of the great feasts in the Aegyptian calendar. It was held by night; and every one intending to be present at the sacrifices was required to light a number of lamps in the open air around his house. The lamps were small saucers filled with salt and oil, on which a wick floated, and which continued to burn all night. At what season of the year the feast of burning lamps was celebrated Herodotus knew, but deemed it wrong to tell (ii. 62); it was, however, probably at either the vernal or autumnal equinox, since it apparently had reference to one of the capital revolutions in the solar course. An inscription in the temple of Neith declared her to be the Mother of the Sun. (Plutarch, *Is. et Osir.* p. 354, ed. Wyttenbach; Proclus, *in Timaeum*, p. 30.) It ran thus: "I am the things that have been, and that are, and that will be; no one has uncovered my skirts; the fruit which I brought forth became the Sun." It is probable, accordingly, that the kindling of the lamps referred to Neith as the author of light. On the same night apparently were performed what the Aegyptians designated the "Mysteries of Isis." Sais was one of the supposed places of the interment of Osiris, for that is evidently the deity whom Herodotus will not name (ii. 171) when he says that there is a burial-place of *him* at Sais in the temple of Athene. The mysteries were symbolical representations of the sufferings of Osiris, especially his dismemberment by Typhon. They were exhibited on the lake behind the temple of Neith. Portions of the lake may be still discerned near the hamlet of *Sa-el-Hadjar*.

Sais was alternately a provincial city of the first order and the capital of Lower Aegypt. These changes in its rank were probably the result of political revolutions in the Delta. The nome and city are said by Manetho to have derived their appellation from Saites, a king of the xviith dynasty. The xxivth dynasty was that of Bocchoris of Sais. The xxvith dynasty contained nine Saite kings; and of the xxviiith Amyrtaeus the Saite is the only monarch: with him expired the Saite dynasty, B. C. 408.

Bocchoris the Wise, the son of Tnephactus (Diodor. i. 45. § 2, 79. § 1), the Technatis of Plutarch (*Is. et Osir.* p. 354; comp. Athen. x. p. 418; Aelian, *H. A.* xi. 11), and the Aegyptian *Pehor*, was remarkable as a judge and legislator, and introduced, according to Diodorus, some important amendments into the commercial laws of Sais. He was put to death by burning after revolting from Sabaco the Aethiopian. During the Aethiopian dynasty Sais seems to have retained its independence. The period of its greatest prosperity was between B. C. 697—524, under its nine native kings. The strength of Aegypt generally had been transferred from its southern to its northern provinces. Of the Saite monarchs of Aegypt Psammitichus and Amasis were the most powerful. Psammitichus maintained himself on the throne by his Greek mercenaries. He established at Sais the class of interpreters, caused his own sons to be educated in Greek learning, and encouraged the resort of Greeks to his capital. The intercourse between Sais and Athens especially was promoted by their worshipping the same deity — Neith-Athene; and hence there sprung up, although in a much later age, the opinion that Cecrops the Saite led a colony to Athens. The establishment of the Greeks at Cyrene was indirectly fatal to the Saitic dynasty. Uaphris, Apries, or Hophra, was defeated by the Cyrenians, B. C. 569; and his discontented troops raised their commander Amasis of Siouph to the throne. He adorned Sais with many stately buildings, and enlarged or decorated the temple of Neith; for he erected in front of it propylaea, which for their height and magnitude, and the quality of the stones employed, surpassed all similar structures in Aegypt. The stones were transported from the quarries of *El-Mokattam* near Memphis, and thence were brought also the colossal figures and androsphinxes that adorned the Dromos. To Sais Amasis transported from Elephantine a monolithal shrine of granite, which Herodotus especially admired (ii. 175). Though the ordinary passage from Elephantine to Sais was performed in twenty days, three years were employed in conveying this colossal mass. It was, however, never erected, and when Herodotus visited Aegypt was still lying on the ground in front of the temple. It measured, according to the historian, 30 feet in height, 12 feet in depth from front to back, and in breadth 21 feet. After the death of Amasis, Sais sank into comparative obscurity, and does not seem to have enjoyed the favour of the Persian, Macedonian, or Roman masters of Aegypt.

Sais indeed was more conspicuous as a seat of commerce and learning, and of Greek culture generally, than as the seat of government. Nechepsus, one of its kings, has left a name for his learning (Auson. *Epigram.* 409), and his writings on astronomy are cited by Pliny (ii. 23. s. 21). Pythagoras of Samos visited Sais in the reign of Amasis (comp. Plin. xxxvi. 9. s. 14); and Solon the Athenian conversed with Sonchis, a Saite priest, about the same time (Plut. *Solon*, 26; Herod. ii. 177; Clinton, *Fast. Hellen.* vol. ii. p. 9). At Sais, if we may credit Plato (*Timaeus*, iii. p. 25), Solon heard the legend of Atlantis, and of the ancient glories of Athens some thousand years prior to Phoroneus and Niobe and Deucalion's flood. The priests of Sais appear indeed to have been anxious to ingratiate themselves with the Athenians by discovering resemblances between Attic and Aegyptian institutions. Thus Diodorus (i. 28), copying from earlier narratives, says that the citizens of Sais, like those of Athens were divided into eupatrids, or priest-nobles; geomori, land-owners liable to military service; and craftsmen or retail traders. He adds that in each city the upper town was called *Astu*. The Greek population of Sais was governed, according to Manetho, by their own laws and magistrates, and had a separate quarter of the city assigned to them. So strong indeed was the Hellenic element in Sais that

it was doubted whether the Saites colonised Attica, or the Athenians Sais; and Diodorus says inconsistently, in one passage, that Sais sent a colony to Athens (i. 28. § 3), and in another (v. 57. § 45) that it was itself founded by Athenians. The principal value of these statements consists in their establishing the Graeco-Aegyptian character of the Saite people.

The ruins of Sais consist of vast heaps of brick, mingled with fragments of granite and Syenite marble. Of its numerous structures the position of one only can be surmised. The lake of *Sa-el-Hadjar*, which is still traceable, was at the back of the temple of Neith: but it remains for future travellers to determine the sites of the other sacred or civil structures of Sais. (Champollion, *l'Egypte*, vol. ii. p. 219; Id. *Lettres*, 50—53; Wilkinson, *Mod. Egypt and Thebes*.) [W. B. D.]

SALA (Σάλας). 1. A river in Germany, between which and the *Rhine*, according to Strabo (vii. p. 291), Drusus Germanicus lost his life. That the river was on the east of the Rhine is implied also in the account which Livy (*Epit.* 140) and Dion Cassius give of the occurrence; and it has therefore been conjectured with some probability that the Sala is the same river as the modern *Saale*, a tributary of the *Elbe*, commonly called the *Thuringian Saale;* though others regard the Sala as identical with the *Yssel*.

2. A river of Germany, alluded to by Tacitus (*Ann.* xiii. 57), who, without mentioning its name, calls it "flumen gignendo sale fecundum." It formed the boundary between the country of the Chatti and Hermunduri and near its banks were great salt-works, about which these two tribes were perpetually involved in war. From this circumstance it is clear that the river alluded to by Tacitus is none other but the *Saale* in Franconia, a tributary of the Moenus or *Main;* and that the salt-springs are, in all probability, those of the modern town of *Kissingen*.

3. A town in Upper Pannonia, on the road from Sabaria to Poetovium (Ptol. ii. 15. § 4; *It. Ant.* p. 262, where it is called Salle; Geogr. Rav. iv. 19, where it is called Salla). Some identify the place with the town of *Szala Egerszek*, and others with *Lüvir* on the river *Szala*. (Comp. Muchar, *Noricum*, i. p. 261.)

4. A town in the south-western part of Phrygia, on the frontiers of Caria and Pisidia, on the north-west of Cibyra. (Ptol. v. 2. § 26.)

5. A town in the north-western part of Armenia Minor, on the eastern slope of Mount Moschus. (Ptol. v. 13. § 10.) [L. S.]

SALA (Σάλα, Ptol. ii. 4. § 12), a town of the Turdetani in Hispania Baetica between Ptucci and Nabrissa. [T. H. D.]

SALA (Σάλα, Ptol. iv. 1. § 2; Plin. v. 1), a town of Mauretania, on the W. coast of Africa, situated near a river of the same name, "noticed by the Romans as the extreme object of their power and almost of their geography." (Gibbon, c. i.) In the Antonine Itinerary the name occurs as Salaconia, which has been supposed to be a corruption of Sala Colonia; but from the Vienna MS. it appears that the word "conia" has been inserted by a later hand. (*Itin. Anton.* ed. Parthey, p. 3.) The modern *Slá* or *Sallée*, near the mouth of the river *Bu-Regrâb*, retains the name, though the site of the ancient town must be sought at *Rabat*, on the S. side of the river, where there are Roman remains. (Barth, *Wanderungen*, pp. 32, 37, 50.) [E. B. J.]

SALACIA. 1. (Σαλακεία, Ptol. ii. 5. § 3), a municipal town of Lusitania, in the territory of the Turdetani, to the NW. of Pax Julia and to the SW. of Ebora. It appears from inscriptions to have had the surname of Urbs Imperatoria. (Gruter, p. 13. 16; Mionnet, i. p. 4; Sestini, p. 16.) Salacia was celebrated for its manufacture of fine woollen cloths. (Plin. viii. 48. s. 73; Strab. iii. p. 144, with the note of Groskurd.) Now *Alaçer do Sal*. (Florez, *Esp. Sagr.* xiii. p. 115, xiv. p. 241; comp. Mela, iii. 1; *It. Ant.* pp. 417, 418, and 422.)

2. A town of the Callaici Bracarii in the NW. of Hispania Tarraconensis. (*Itin. Ant.* p. 422.) Identified either with *Salamonde* or *Pombeiro*. [T. H. D.]

SALAMBOREIA (Σαλαμβόρεια), a town of Cappadocia, in the district Garsauritis. (Ptol. v. 6. § 14; *Tab. Peut.*, where it is called Salaberina.) [L. S.]

SALAMI'NIA. [SALAMIS.]

SALAMI'NIAS, a town in Coele-Syria in the district Chalybonitis (*It. Anton.* p. 197; *Not. Imp.*), which Reland (*Palaest.* i. p. 217) identifies with Salamias (Σαλάμιας) in the *Not. Leonis Imp.*, and with *Salemjat* in Abulfeda (*Tab. Syr.* p. 105). It is said still to bear the name *Selmen*. (Richter, *Wallfahrten*, p. 238.)

SA'LAMIS (Σαλαμίς, Aesch. *Pers.* 880; Scyl. p. 41; Ptol. v. 14. § 3, viii. 20. § 5; *Stadiasm.* §§ 288, 289; Pomp. Mela, ii. 7. § 5; Plin. v. 35; Horat. *Carm.* i. 729; Σαλαμίν, Eustath *ad Il.* ii. 558; Σαλαμίας, Malala, *Chron.* xii. p. 313, ed. Bonn: *Eth.* Σαλαμίνιος, Böckh, *Inscr.* nos. 2625, 2638, 2639), a city on the E. coast of Cyprus, 18 M. P. from Tremithus, and 24 M. P. from Chytri. (*Peut. Tab.*) Legend assigned its foundation to the Aeacid Teucer, whose fortunes formed the subject of a tragedy by Sophocles, called Τεῦκρος, and of one with a similar title by Pacuvius. (Cic. *de Orat.* i. 58, ii. 46.) The people of Salamis showed the tomb of the archer Teucer (Aristot. *Anthologia*, i. 8, 112), and the reigning princes at the time of the Ionic revolt were Greeks of the Teucrid "Gens," although one of them bore the Phoenician name of Siromus (Hiram). (Herod. v. 104.) In the 6th century B. C. Salamis was already an important town, and in alliance with the Battiad princes of Cyrene, though the king Evelthon refused to assist in reinstating Arcesilaus III. upon the throne. (Herod. iv. 162.) The descendant of this Evelthon — the despot Gorgus — was unwilling to join in the Ionic revolt, but his brother Onesilus shut him out of the gates, and taking the command of the united forces of Salamis and the other cities, flew to arms. The battle which crushed the independence of Cyprus was fought under the walls of Salamis, which was compelled to submit to its former lord, Gorgus. (Herod. v. 103, 104, 108, 110.) Afterwards it was besieged by Anaxicrates, the successor of Cimon, but when the convention was made with the Persians the Athenians did not press the siege. (Diod. xii. 13.) After the peace of Antalcidas the Persians had to struggle for ten years with all their forces against the indefatigable and gentle Evagoras. Isocrates composed a panegyric of this prince addressed to his son Nicocles, which, with every allowance for its partiality, gives an interesting picture of the struggle which the Hellenic Evagoras waged against the Phoenician and Oriental influence under which Salamis and Cyprus had languished. (Comp. Grote, *Hist. of Greece*, vol. x. c. lxxvi.)

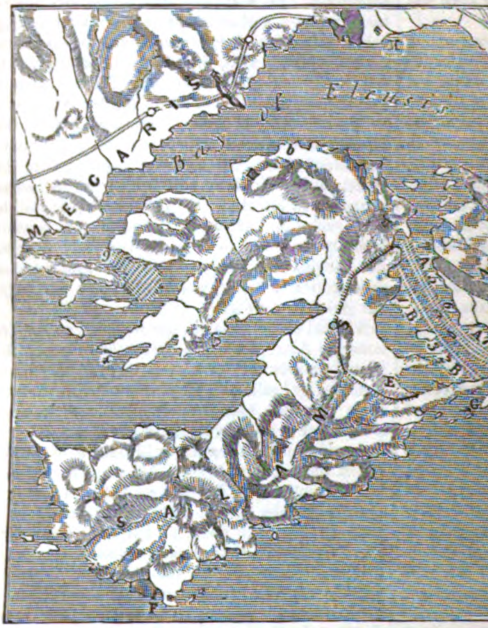
Evagoras with his son Pnytagoras was assassinated by a eunuch, slave of Nicocreon (Aristot. *Pol.* v. 8. § 10; Diodor. xv. 47; Theopomp. *Fr.* iii. ed. Didot), and was succeeded by another son of the name of Nicocles. The Graeco-Aegyptian fleet under Menelaus and his brother Ptolemy Soter was utterly defeated off the harbour of Salamis in a sea-fight, the greatest in all antiquity, by Demetrius Poliorcetes, B. C. 306. (Diodor. xx. 45—53.) The famous courtezan Lamia formed a part of the booty of Demetrius, over whom she soon obtained unbounded influence. Finally, Salamis came into the hands of Ptolemy. (Plut. *Demetr.* 35; Polyaen. *Strateg.* 5.) Under the Roman Empire the Jews were numerous in Salamis (*Acts*, xiii. 6), where they had more than one synagogue. The farming of the copper mines of the island to Herod (Joseph. *Antiq.* xv. 14. § 5) may have swelled the numbers who were attracted by the advantages of its harbour and trade, especially its manufactures of embroidered stuffs. (Athen. ii. p. 48.) In the memorable revolt of the Jews in the reign of Trajan this populous city became a desert. (Milman, *Hist. of the Jews*, vol. iii. pp. 111, 112.) Its demolition was completed by an earthquake; but it was rebuilt by a Christian emperor, from whom it was named CONSTANTIA. It was then the metropolitan see of the island. Epiphanius, the chronicler of the heretical sects, was bishop of Constantia in A. D. 367. In the reign of Heraclius the new town was destroyed by the Saracens.

The ground lies low in the neighbourhood of Salamis, and the town was situated on a bight of the coast to the N. of the river Pediaeus. This low land is the largest plain—SALAMINIA—in Cyprus, stretching inward between the two mountain ranges to the very heart of the country where the modern Turkish capital—*Nicosia*—is situated. In the *Life and Epistles of St. Paul*, by Coneybeare and Howson (vol. i. p. 169), will be found a plan of the harbour and ruins of Salamis, from the survey made by Captain Graves. For coins of Salamis, see Eckhel, vol. iii. p. 87. [E. B. J.]

SA'LAMIS (Σαλαμίς, -ῖνος: *Eth.* and *Adj.* Σαλαμίνιος, Salaminius: *Adj.* Σαλαμινιακός, Salaminiacus: *Kulúri*), an island lying between the western coast of Attica and the eastern coast of Megaris, and forming the southern boundary of the bay of Eleusis. It is separated from the coasts both of Attica and of Megaris by only a narrow channel. Its form is that of an irregular semicircle towards the west, with many small indentations along the coast. Its greatest length, from N. to S., is about 10 miles, and its width, in its broadest part, from E. to W., is a little more. Its length is correctly given by Strabo (ix. p. 393) as from 70 to 80 stadia. In ancient times it is said to have been called Pityussa (Πιτυοῦσσα), from the pines which grew there, and also SCIRAS (Σκιράς) and CYCHREIA (Κυχρεία), from the names of two heroes Scirus* and Cychreus. The former was a native hero, and the latter a seer, who came from Dodona to Athens, and perished along with Erechtheus in fighting against Eumolpus. (Strab. ix. p. 393; Paus. i. 36. § 1; Philochor. *ap. Plut. Thes.* 17.) The latter name was perpetuated in the island, for Aeschylus (*Pers.* 570) speaks of the ἀκταὶ Κυχρεῖαι, and Stephanus B. mentions a Κυχρεῖος πάγος. The island is said to have obtained the name of Salamis from the mother of Cychreus, who was also a daughter of Asopus. (Paus. i. 35. § 2.) It was colonised at an early period by the Aeacidae of Aegina. Telamon, the son of Aeacus, fled thither after the murder of his half-brother Phocus, and became sovereign of the island. (Paus. i. 35. § 1.) His son Ajax accompanied the Greeks with 12 Salaminian ships to the Trojan War. (Hom. *Il.* ii. 557.) Salamis continued to be an independent state till about the beginning of the 40th Olympiad (B. C. 620), when a dispute arose for its possession between the Athenians and Megarians. After a long struggle, it first fell into the hands of the Megarians, but was subsequently taken possession of by the Athenians through a stratagem of Solon. (Plut. *Sol.* 8, 9; Paus. i. 40. § 5.) Both parties appealed to the arbitration of Sparta. The Athenians supported their claims by a line in the Iliad, which represents Ajax ranging his ships with those of the Athenians (*Il.* ii. 558), but this verse was suspected to have been an interpolation of Solon or Peisistratus; and the Megarians cited another version of the line. The Athenians, moreover, asserted that the island had been made over to them by Philaeus and Eurysaces, sons of the Telamonian Ajax, when they took up their own residence in Attica. These arguments were considered sufficient, and Salamis was adjudged to the Athenians. (Plut. *Sol.* 10; Strab. ix. p. 394.) It now became an Attic demus, and continued incorporated with Attica till the times of Macedonian supremacy. In B. C. 318, the inhabitants voluntarily received a Macedonian garrison, after having only a short time before successfully resisted Cassander. (Diod. xviii. 69; Polyaen. *Strat.* iv. 11. § 2; Paus. i. 35. § 2.) It continued in the hands of the Macedonians till B. C. 232, when the Athenians, by the assistance of Aratus, purchased it from the Macedonians together with Munychia and Sunium. Thereupon the Salaminians were expelled from the island, and their lands divided among Athenian cleruchi. (Plut. *Arat.* 34; Paus. ii. 8. § 6; Böckh, *Inscr.* vol. i. p. 148, seq.) From that time Salamis probably continued to be a dependency of Athens, like Aegina and Oropus; since the grammarians never call it a δῆμος, which it had been originally, but generally a πόλις.

The old city of Salamis, the residence of the Telamonian Ajax, stood upon the southern side of the island towards Aegina (Strab. ix. p. 393), and is identified by Leake with the remains of some Hellenic walls upon the south-western coast near a small port, where is the only rivulet in the island, perhaps answering to the BOCARUS or BOCALIAS of Strabo (ix. p. 394; Leake, *Demi*, p. 169). The Bocarus is also mentioned by Lycophron (451). In another passage, Strabo (ix. p. 424) indeed speaks of a river Cephissus in Salamis; but as it occurs only in an enumeration of various rivers of this name, and immediately follows the Athenian Cephissus without any mention being made of the Eleusinian Cephissus, we ought probably to read with Leake ἐν Ἐλευσῖνι instead of ἐν Σαλαμῖνι.

When Salamis became an Athenian demus, a new city was built at the head of a bay upon the eastern side of the island, and opposite the Attic coast. In the time of Pausanias this city also had fallen into decay. There remained, however, a ruined agora and a temple of Ajax, containing a statue of the hero in ebony; also a temple of Artemis, the trophy erected in honour of the victory gained over the Persians, and a temple of Cychreus. (Paus. i. 35. § 3, 36. § 1.) Pausanias has not mentioned the



statue of Solon, which was erected in the agora, with one hand covered by his mantle. (Dem. *de Fals. Leg.* p. 420; Aeschin. *in Tim.* p. 52.) There are still some remains of the city close to the village of *Ambelákia*. A portion of the walls may still be traced; and many ancient fragments are found in the walls and churches both of *Ambelákia* and of the neighbouring village of *Kulúri*, from the latter of which the modern name of the island is derived. The narrow rocky promontory now called *Cape of St. Barbara*, which forms the SE. entrance to the bay of *Ambelákia*, was the SILENIAE (Σιληνίαι) of Aeschylus, afterwards called TROPAEA (Τροπαία), on account of the trophy erected there in memory of the victory. (Asch. *Pers.* 300, with Schol.) At the extremity of this promontory lay the small island of PSYTTALEIA (Ψυττάλεια), now called *Lipsokutáli*, about a mile long, and from 200 to 300 yards wide. It was here that a picked body of Persian troops was cut to pieces by Aristeides during the battle of Salamis. (Herod. viii. 95; Aesch. *Pers.* 447, seq.; Plut. *Arist.* 9; Paus. i. 36. § 2, iv. 36. § 3; Strab. ix. p. 393; Plin. iv. 12. s. 20; Steph. B. *s. v.*)

In Salamis there was a promontory SCIRADIUM (Σκιράδιον), containing a temple of the god of war, erected by Solon, because he there defeated the Megarians. (Plut. *Sol.* 9.) Leake identifies this site with the temple of Athena Sciras, to which Adei-

1. Athenian ships.
2. Lacedaemonian and other Peloponnesian ships.

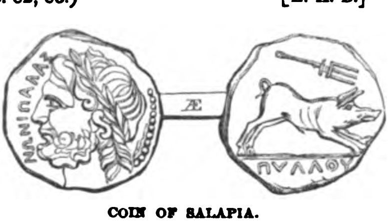
shown in the annexed plan. The Grecian fleet was drawn up in the small bay in front of the town of Salamis, and the Persian fleet opposite to them off the coast of Attica. The battle was witnessed by Xerxes from the Attic coast, who had erected for himself a lofty throne on one of the projecting declivities of Mt. Aegaleos. Colonel Leake has discussed at length all the particulars of the battle, but Mr. Blakesley has controverted many of his views, following the authority of Aeschylus in preference to that of Herodotus. In opposition to Col. Leake and all preceding authorities, Mr. Blakesley supposes, that though the hostile fleets occupied in the afternoon before the battle the position delineated in the plan annexed, yet that on the morning of the battle the Greeks were drawn up across the southern entrance of the strait, between the *Cape of St. Barbara* and the Attic coast, and that the Persians were in the more open sea to the south. Into the discussion of this question our limits prevent us from entering; and we must refer our readers for particulars to the essays of those writers quoted at the close of this article. There is, however, one difficulty which must not be passed over in silence. Herodotus says (viii. 76) that on the night before the battle, the Persian ships stationed about Ceos and Cynosura moved up, and beset the whole strait as far as Munychia. The only known places of those names are the island of Ceos, distant more than 40 geographical miles from Salamis, and the promontory of Cynosura, immediately N. of the bay of Marathon, and distant more than 60 geographical miles from Salamis. Both of those places, and more especially Cynosura, seem to be too distant to render the movement practicable in the time required. Accordingly many modern scholars apply the names Ceos and Cynosura to two promontories, the southernmost and south-easternmost of the island of Salamis, and they are so called in Kiepert's maps. But there is no authority whatever for giving those names to two promontories in the island; and it is evident from the narrative, as Mr. Grote has observed, that the names of Ceos and Cynosura must belong to some points in Attica, not in Salamis. Mr. Grote does not attempt to indicate the position of these places; but Mr. Blakesley maintains that Ceos and Cynosura are respectively the well-known island and cape, and that the real difficulty is occasioned, not by their distance, but by the erroneous notion conceived by Herodotus of the operations of the Persian fleet. (Leake, *Demi of Attica*, p. 166, seq., and Appendix II. *On the Battle of Salamis*; Blakesley, *Excursus on Herodotus*, viii. 76, vol. ii. p. 400, seq.; Grote, *Hist. of Greece*, vol. v. p. 171, seq.)

COIN OF SALAMIS.

SALANIA'NA, a town of the Callaici Bracarii in Gallaecia (*Itin. Ant.* p. 427.) Variously identified with *Cela Nova*, *Moymenta*, and *Portela de Abade*. [T. H. D.]

SALA'PIA (Σαλαπία: *Eth.* Σαλαπῖνος; Salapinus: *Salpi*), one of the most considerable cities of Apulia, situated on the coast of the Adriatic, but separated from the open sea by an intervening lagune, or salt-water lake, which was known in ancient times as the SALAPINA PALUS (Lucan, v. 377; Vib. Seq. p. 26), and is still called the *Lago di Salpi*. This lagune has now only an artificial outlet to the sea through the bank of sand which separates them; but it is probable that in ancient times its communications were more free, as Salapia was certainly a considerable sea-port and in Strabo's time served as the port both of Arpi and Canusium (Strab. vi. p. 284). At an earlier period it was an independent city, and apparently a place of considerable importance. Tradition ascribed its foundation, as well as that of the neighbouring cities of Canusium and Arpi, to Diomedes (Vitruv. i. 4. § 12); or, according to others, to a Rhodian colony under Elpias (Id. *ib.*; Strab. xiv. p. 654).* There is no trace of its having received a Greek colony in historical times, though, in common with many other cities of the Daunian Apulians, it seems to have imbibed a large amount of Hellenic influence. This was probably derived from the Tarentines, and did not date from a very early period.

The name of Salapia is not mentioned in history till the Second Punic War, in which it bears a considerable part. It was evidently one of the cities of Apulia which revolted to Hannibal after the battle of Cannae (Liv. xxii. 61); and a few years after we find it still in his possession. It was apparently a place of strength, on which account he collected there great magazines of corn, and established his winter quarters there in B. C. 214. (Id. xxiv. 20.) It remained in his hands after the fall of Arpi in the following year (Id. xxiv. 47); but in B. C. 210 it was betrayed into the power of Marcellus by Blasius, one of its citizens, who had been for some time the leader of the Roman party in the place, and the Numidian garrison was put to the sword. (Id. xxvi. 38; Appian, *Annib.* 45—47.) Its loss seems to have been a great blow to the power of Hannibal in this part of Italy; and after the death of Marcellus, B.C. 208, he made an attempt to recover possession of it by stratagem; but the fraud was discovered, and the Carthaginian troops were repulsed with loss. (Liv. xxvii. 1, 28; Appian, *Annib.* 51.) No subsequent mention of it is found till the Social War, in the second year of which, when the tide of fortune was beginning to turn in favour of Rome, it was taken by the Roman praetor C. Cosconius, and burnt to the ground (Appian, *B. C.* i. 51). After this time it appears to have fallen into a state of decay, and suffered severely from malaria in consequence of the exhalations of the neighbouring lagune. Vitruvius tells us, that at length the inhabitants applied to M. Hostilius, who caused them to remove to a more healthy situation, about 4 miles from the former site, and nearer the sea, while he at the same time opened fresh communications between the lagune and the sea (Vitruv. i. 4. § 12). We have no clue to the time at which this change took place, but it could hardly have been till after the town had fallen into a declining condition. Cicero, indeed, alludes to Salapia as in his day notorious for its pestilential climate (*de Leg. Agr.* ii. 27); but this may be understood as relating to its territory rather than the actual town. Vitruvius is the only author who notices the change of site; but if his account can be depended



* Lycophron, on the other hand, seems to assign it a Trojan origin; though the passage, as usual, is somewhat obscure. (Lycophr. *Alex.* 1129.)

upon, the Salapia mentioned by Pliny and Ptolemy as well as Strabo, must have been the new town, and not the original city of the name. (Strab. vi. p. 284; Plin. iii. 12. s. 17; Ptol. iii. 1. § 16.) The Liber Coloniarum also speaks of it as a colony adjoining the sea-coast, which doubtless refers to the new town of the name. This does not, however, seem to have ever risen into a place of much importance, and the name subsequently disappears altogether.

Extensive ruins of Salapia are still visible on the southern shore of the *Lago di Salpi*, in a tract of country now almost wholly desolate. They evidently belong to a city of considerable size and importance, and must therefore be those of the ancient Apulian city. This is further confirmed by the circumstance that the coins of Salapia, which of course belong to the period of its independence, are frequently found on the spot. (Swinburne's *Travels*, vol. i. p. 81.) The site of the Roman town founded by M. Hostilius is said to be indicated by some remains on the sea-shore, near the *Torre di Salpi*. (Romanelli, vol. ii. p. 201.)

The lagune still called the *Lago di Salpi* is about 12 miles in length by about 2 in breadth. At its eastern extremity, where it communicates with the sea by an artificial cut, are extensive salt-works, which are considered to be the representatives of those noticed in the Itineraries under the name of Salinae. It is by no means certain (though not improbable) that these ancient salt-works occupied the same site as the modern ones; and the distances given in the Itineraries along this line of coast, being in any case corrupt and confused, afford no clue to their identification. (*Itin. Ant.* p. 314; *Tab. Peut.*) It is probable that the name of Salapia itself is connected with *sal*, the lagune having always been well adapted for the collection of salt.

The coins of Salapia, as well as those of Arpi and Canusium, have Greek legends, and indicate the strong influence of Greek art and civilisation, though apparently at a late period, none of them being of an archaic style. The magistrates' names which occur on them (ΔΑΖΟΣ, ΠΥΛΛΟΣ, &c.) are, on the contrary, clearly of native origin. (Mommsen, *U. I. D.* pp. 82, 83.) [E. H. B.]

COIN OF SALAPIA.

SALA'RIA. 1. (Σαλάρια, Ptol. ii. 6. § 61), a town of the Bastitani, in the SE. part of Hispania Tarraconensis. According to Pliny it was a Roman colony. (Colonia Salariensis, iii. 3. s. 4.) Ukert (ii. pt. i. p. 407) identifies it with *Sabiote*, between *Ubeda* and *Baeza*.

2. A town of the Oretani, in the same neighbourhood. (Ptol. ii. 6. § 59.) [T. H. D.]

SALAS. [SALA.]

SALASSI (Σαλασσοί), one of the most powerful of the Alpine tribes in the N. of Italy, who occupied the great valley of the Durias or *Dora Baltea*, now called the *Val d'Aosta*, from the plains of the *Po* to the foot of the Graian and Pennine Alps. Their country is correctly described by Strabo as a deep and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance at *Ivrea* to its head among the very highest ranges of the Alps, must always have been one of the natural inlets into the heart of those mountains: hence the two passes at its head, now called the *Great and Little St. Bernard*, seem to have been frequented from a very early period. If we may trust to Livy, it was by the former of these passes, or the Pennine Alps, that the Boii and Lingones crossed when they first migrated into the plains of the N. of Italy. (Liv. v. 35.) It was the same pass by which Hannibal was commonly supposed in the days of Livy to have crossed those mountains, while Coelius Antipater represented him as passing the *Little St. Bernard*, an opinion commonly adopted by modern writers, though still subject to grave difficulties. One of the most serious of these arises from the character of the Salassi themselves, who are uniformly described as among the fiercest and most warlike of the Alpine tribes, and of inveterate predatory habits, so that it is difficult to believe they would have allowed an army like that of Hannibal to traverse their country without opposition, and apparently without molestation. (See Arnold's *Rome*, vol. iii. p. 481.)

The Salassi are commonly reckoned a Gaulish people, yet there are reasons which render it more probable that they were in fact, like their neighbours the Taurini, a Ligurian race. The Ligurians indeed seem, at a very early period, to have spread themselves along the whole of the western chain of the Alps, and the Gaulish tribes which occupied the plains of the Padus passed through their country. But the ethnical relations of all these Alpine races are very obscure. No mention of the Salassi is found in history till B. C. 143, when they were attacked without provocation by the consul Appius Claudius, who was, however, punished for his aggression, being defeated with the loss of 5000 men. But he soon repaired this disaster, and having in his turn slain 5000 of the mountaineers, claimed the honour of a triumph. (Dion Cass. *Fr.* 79; Liv. *Epit.* liii.; Oros. v. 4.) From this time they appear to have frequently been engaged in hostilities with Rome, and though nominally tributary to the republic, they were continually breaking out into revolt, and ravaging the plains of their neighbourhood, or plundering the Roman convoys, and harassing their troops as they marched through their country. As early as B. C. 100 a Roman colony was established at Eporedia (*Ivrea*), at the mouth of the valley (Vell. Pat. i. 15), with the view of keeping them in check, but it suffered severely from their incursions. Even at a much later period the Salassi plundered the baggage of the dictator Caesar when marching through their country, and compelled Decimus Brutus, on his way into Gaul after the battle of Mutina, to purchase a passage with a large sum of money. (Strab. iv. p. 205.) In B. C. 35 they appear to have broken out afresh into revolt, and for some time were able to defy the efforts of Antistius Vetus; but the next year they were reduced to submission by Valerius Messala. (Dion Cass. xlix. 34, 38; Appian, *Illyr.* 17.) Still, however, their subjection was imperfect, till in B. C. 25 Terentius Varro was sent against them, who having compelled the whole nation to lay down their arms, sold them without distinction as slaves. The number of captives thus sold is said to have amounted to

36,000 persons, of whom 8000 were men of military age. The tribe of the Salassi being thus extirpated, a Roman colony was settled at Praetoria Augusta (*Aosta*), and a highroad made through the valley. (Dion Cass. liii. 25; Strab. iv. p. 205; Liv. *Epit.* cxxxv.) The name of the Salassi, however, still remained, and is recognised as a geographical distinction both by Pliny and Ptolemy, but no subsequent trace of them is found as an independent tribe. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 34.)

One of the main causes of the disputes between the Salassi and Romans had arisen from the gold-washings which were found in the valley, and which are said to have been extremely productive. These were worked by the Salassi themselves before the Roman invasion; but the Romans seem to have early taken possession of them, and they were farmed out with the other revenues of the state to the Publicani. But these were, as might be expected, involved in constant quarrels with the neighbouring barbarians, who sometimes cut off their supplies of water, at other times attacked them with more open violence. (Strab. iv. p. 205; Dion Cass. *Fr.* 79.)

The line of road through the country of the Salassi, and the passes which led from Augusta Praetoria over the Pennine and Graian Alps, are described in the article ALPES [Vol. I. p. 110]. [E. H. B.]

SALA'SSII. [MAURETANIA, Vol. II. p. 298, b.]

SALATARAE (Σαλατάραι, Ptol. vi. 11. § 6), a tribe of the Bactrians who lived along the banks of the Oxus. Forbiger suspects that they are the same as the Saraparae, noticed by Pliny (vi. 16. s. 18). [V.]

SALATHUS (Σάλαθος, Ptol. iv. 6. § 5), a river on the W. coast of Africa, with a town of the same name. This river, which took its rise in Mt. Mandrus, is represented by one of the *Wadys*, which flows into the sea in the district occupied by the ancient Autololes, on the coast to the N. of *Cape Mirik*. [E. B. J.]

SALAURIS, a town on the coast of Hispania Tarraconensis, mentioned in the *Ora Marit.* of Avienus (v. 518). [T. H. D.]

SALDA, a town in the south of Lower Pannonia, on the southern bank of the Savus, and on the great highroad from Siscia to Sirmium. (*Tab. Peut.*; Geogr. Rav. iv. 19, where it is called Saldum.) It is very probably the same as the town of Sallis (Σαλλίς) mentioned by Ptolemy (ii. 16. § 8). The site is commonly believed to be occupied by the modern *Szlatina*. [L. S.]

SALDAE (Σάλδαι, Strab. xvii. p. 831; Ptol. iv. 2. § 9, viii. 13. § 9; Plin. v. 1; *Itin. Anton.; Peut. Tab.*), a town on the coast of Mauretania Caesariensis, with a spacious harbour, which was in earlier times the E. boundary between the dominions of Juba and those of the Romans. (Strab. *l. c.*) Under Augustus it became a Roman "colonia." (Plin. *l. c.*) In later times it was the W. limit of Mauretania Sitifensis, against Mauretania Caesariensis in its more contracted sense. It is identified with *Bujeiyah*, the flourishing city of the *Kaliphat*, taken by Pedro Navarro, the general of Ferdinand the Catholic, after two famous battles, A. D. 1510 (comp. Prescott's *Ferdinand and Isabella*, vol. ii. p. 457), or the *C. Bongie* of the French province. (Barth, *Wanderungen*, p. 62.) [E. B. J.]

SALDAPA, a town of Moesia (Theophyl. Simocat. i. 8), which was ravaged by the Avars in their wars with the emperor Maurice (Le Beau, *Bas Empire*, vol. x. pp. 248, 369). Schafarik (*Slav. Alt.* vol. ii. p. 158) has fixed the site at the ruins of *Dikelrick* upon the *Danube*. [E. B. J.]

SALDU'BA. 1. A small river in the territory of the Turduli in Hispania Baetica, probably the same called Σαδούκα, (with *var. lect.*) by Ptolemy (ii. 4. § 7). Now *Rio Verde*.

2. A town at the mouth of the preceding river (Σάλδουβα, Ptol. ii. 4. § 11), of no great importance (Mela. ii. 6; Plin. iii. 1. s. 3), near the present *Marbella*.

3. [CAESARAUGUSTA.] [T. H. D.]

SALE, a town on the S. coast of Thrace, near the W. mouth of the Hebrus, and nearly equidistant from Zone and Doriscus. It is mentioned by Herodotus (vii. 59) as a Samothracian colony. [J. R.]

SALEM. [JERUSALEM.]

SALENI, a people of Hispania Tarraconensis, probably in Cantabria, mentioned by Mela (iii. 1). They are perhaps the same as the Σαιλινοί of Ptolemy (ii. 6. § 34). [T. H. D.]

SALENTI'NI or SALLENTI'NI (both forms seem to rest on good authority), (Σαλεντῖνοι), a people of Southern Italy, who inhabited a part of the peninsula which forms the SE. extremity, or as it is very often called the *heel*, of Italy. Their territory was thus included in the region known to the Greeks by the name of Iapygia, as well as in the district called by the Romans Calabria. Strabo remarks that the peninsula in question, which he considers as bounded by a line drawn across from Tarentum to Brundusium, was variously called Messapia, Iapygia, Calabria, and Salentina; but that some writers established a distinction between the names. (Strab. vi. p. 282.) There seems no doubt that the names were frequently applied irregularly and vaguely, but that there were in fact two distinct tribes or races inhabiting the peninsula, the Salentines and the Calabrians (Strab. vi. p. 277), of whom the latter were commonly known to the Greeks as the Messapians [CALABRIA]. Both were, however, in all probability kindred races belonging to the great family of the Pelasgian stock. Tradition represented the Salentines as of Cretan origin, and, according to the habitual form of such legends, ascribed them to a Cretan colony under Idomeneus after the Trojan War. (Strab. vi. p. 282; Virg. *Aen.* iii. 400; Fest. *s. v. Salentini*, p. 329; Varr. *ap. Prob. ad Virg. Ecl.* vi. 31.) They appear to have inhabited the southern part of the peninsula, extending from its southern extremity (the *Capo di Leuca*), which was thence frequently called the Salentine promontory ("Salentinum Promontorium," Mel. ii. 4. § 8; Ptol. iii. 1. § 13), to the neighbourhood of Tarentum. But we have no means of distinguishing accurately the limits of the two tribes, or the particular towns which belonged to each.

The name of the Salentines does not seem to have been familiarly known to the Greeks, at least in early times: as we do not hear of their name in any of the wars with the Tarentines, though from their position they must have been one of the tribes that early came into collision with the rising colony. They were probably known under the general appellation of Iapygians, or confounded with their neighbours the Messapians. On the contrary, as soon as their name appears in Roman history, it is in a wider and more general sense than that to which it is limited by the geographers. Livy speaks of the Salentini as acceding to the Samnite alliance in B. C. 306, when the consul L. Volumnius was sent into their country, who defeated them in several battles, and took some of their towns. (Liv. ix. 42.) It is almost impossible to believe that the Romans

had as early as this pushed their arms into the Iapygian peninsula, and it is probable that the Salentines are here confounded with the Peucetians, with whom, according to some accounts, they were closely connected. (Plin. iii. 11. s. 16.) But the name is used with still greater laxity shortly after, when Livy speaks of Thuriae as "urbem in Sallentinis" (x. 2), if at least, as there seems little doubt, the place there meant is the well-known city of Thurii in Lucania [THURII].

The name of the Sallentines does not again occur in history till the Fourth Samnite War, when they joined the confederacy formed by the Samnites and Tarentines against Rome; and shared in their defeat by the consul L. Aemilius Barbula in B. C. 281, as we find that general celebrating a triumph over the Tarentines, Samnites, and Sallentines. (*Fast. Capit.* ann. 473.) For some time after this the appearance of Pyrrhus in Italy drew off the attention of the Romans from more ignoble adversaries, but when that monarch had finally withdrawn from Italy, and Tarentum itself had fallen into the hands of the Romans, they were left at leisure to turn their arms against the few tribes that still maintained their independence. In B. C. 267 war was declared against the Salentines, and both consuls were employed in their subjugation. It was not likely that they could offer much resistance, yet their final conquest was not completed till the following year, when both consuls again celebrated triumphs "de Messapiis Sallentinisque." (*Fast. Capit.*; Zonar. viii. 7; Liv. *Epit.* xv; Florus, i. 20; Eutrop. ii. 17.) All the Roman writers on this occasion mention the Salentines alone; the Triumphal Fasti, however, record the name of the Messapians in conjunction with them, and it is certain that both nations were included both in the war and the conquest, for Brundusium, which is called by Florus "caput regionis," and the occupation of which was evidently the main object of the war (Zonar. *l. c.*), seems to have been at that period certainly a Messapian city. The Salentines are again mentioned as revolting to Hannibal during the Second Punic War (B.C. 213), but seem to have been again reduced to subjection without difficulty. (Liv. xxv. 1, xxvii. 36, 41.) From this time their name disappears from history, and is not even found among the nations of Italy that took up arms in the Social War. But the "Sallentinus ager" continued to be a recognised term, and the people are spoken of both by Pliny and Strabo as distinct from their neighbours the Calabri. (Strab. vi. p. 277; Plin. iii. 11. s. 16; Ptol. iii. 1. § 13; Mel. ii. 4; Cic. *pro Rosc. Am.* 46.) The "regio Salentina" is even mentioned as a distinct portion of Calabria as late as the time of the Lombards. (P. Diac. *Hist. Lang.* ii. 21.)

The physical character and topography of the country of the Salentines are given in the article CALABRIA. The following towns are assigned by Pliny to the Salentines, as distinguished from the Calabrians, strictly so called: ALETIUM, BASTA, NERETUM, UXENTUM, and VERETUM. All these are situated in the extreme southern end of the Iapygian peninsula. The list given by Ptolemy nearly agrees with that of Pliny; but he adds Rhudiae, which was considerably further N., and is reckoned on good authority a Calabrian city [RHUDIAE]. The place he calls Banota is probably the Basta of Pliny. To these inland towns may probably be added the seaports of CALLIPOLIS, CASTRUM MINERVAE, and perhaps HYDRUNTUM also, though the last seems to have early received a Greek colony. But it is probable that at an earlier period the territory of the Salentines was considerably more extensive. Stephanus of Byzantium speaks of a *city* of the name of Sallentia, from which was derived the name of the Sallentines, but no mention of this is found in any other writer, and it is probably a mere mistake. [E. H. B.]

SALERNUM (Σάλερνον: *Eth.* Salernitanus: *Salerno*), a city of Campania, but situated in the territory of the Picentini, on the N. shore of the gulf of Posidonia, which now derives from it the name of the *Gulf of Salerno*. We have no account of its origin or early history; it has been supposed that it was like the neighbouring Marcina a Tyrrhenian or Pelasgic settlement [MARCINA]; but there is no authority for this, and its name is never mentioned in history previous to the settlement of a Roman colony there. But when this was first decreed (in B. C. 197, it was not actually founded till B. C. 194), Livy speaks of the place as Castrum Salerni, whence we may infer that there was at least a fortress previously existing there (Liv. xxxii. 29, xxxiv. 45; Vell. Pat. i. 14; Strab. v. p. 251.) The Roman colony was established, as we are expressly told by Strabo, for the purpose of holding the Picentines in check, that people having actively espoused the cause of Hannibal during the Second Punic War (Strab. *l. c.*) Their town of Picentia being destroyed, Salernum became the chief town of the district; but it does not appear to have risen to any great importance. In the Social War it was taken by the Samnite general C. Papius (Appian. *B. C.* i. 42): but this is the only occasion on which its name is mentioned in history. Horace alludes to it as having a mild climate, on which account it had apparently been recommended to him for his health (Hor. *Ep.* i. 15. 1.) It continued to be a municipal town of some consideration under the Roman Empire, and as we learn from inscriptions retained the title of a Colonia (Plin. iii. 5. s. 9; Ptol. iii. 1. § 7; *Itin. Ant.*; *Tab. Peut.*; Mommsen, *Inscr. R. N.* pp. 9—12.) But it was not till after the Lombard conquest that it became one of the most flourishing cities in this part of Italy; so that it is associated by Paulus Diaconus with Caprea and Neapolis among the "opulentissimae urbes" of Campania (P. Diac. *Hist. Lang.* ii. 17). It retained this consideration down to a late period of the middle ages, and was especially renowned for its school of medicine, which, under the name of Schola Salernitana, was long the most celebrated in Europe. But it seems certain that this was derived from the Arabs in the 10th or 11th century, and was not transmitted from more ancient times. Salerno is still the see of an archbishop, with a population of about 12,000 inhabitants, though greatly fallen from its mediaeval grandeur.

The ancient city, as we learn from Strabo (v. p. 251), stood on a hill at some distance from the sea, and this is confirmed by local writers, who state that many ancient remains have been found on the hill which rises at the back of the modern city, but no ruins are now extant. (Romanelli, vol. iii. p. 612.) From the foot of this hill a level and marshy plain extends without interruption to the mouth of the Silarus, the whole of which seems to have been included in the municipal territory of Salernum, as Lucan speaks of the Silarus as skirting the cultivated lands of that city (Lucan, ii. 425.) The distance from Salernum itself to the mouth of the

Silarus is not less than 18 miles, though erroneously given in the Tabula at only 9. (*Tab. Peut.*) [E. H. B.]

SALE'TIO, in Gallia. This name occurs in the Not. Imp., in the Antonine Itin. and in the Table. Ammianus (xvi. 2) names it Saliso: "Argentoratum, Brocomagum, Tabernas, Salisonem, &c." The Itin. places Saletio between Argentoratum (*Strassburg*) and Tabernae; and the Table places it between Tabernae and Brocomagus (*Brumath*), which is north of *Strassburg*. The numbers are not correct in the Itin.; but there is no doubt that the place is *Setz* near the Rhine. A diploma of Otho the Great names it "Salise in Elisazium," in *Elsas* or *Alsace*. (D'Anville, *Notice, &c.*) [G. L.]

SALGANEUS (Σαλγανεύς; Liv. uses the Gr. acc. Salganea: *Eth.* Σαλγάνιος), a town upon the eastern coast of Boeotia, and between Chalcis and Anthedon, is said to have derived its name from a Boeotian, who served as pilot to the Persian fleet of Xerxes, and was put to death upon suspicion of treachery, because no outlet appeared to the channel of the Euripus; but the Persian commander, having found out his mistake, erected a monument on the spot, where the town was afterwards built. (Strab. ix. p. 403; Dicaearch. *Stat. Graec.* p. 19; Steph. B. *s. v.*). Salganeus was considered an important place from its commanding the northern entrance to the Euripus. (Diod. xix. 77; Liv. xxxv. 37, 46, 51.) The remains of the town stand directly under the highest summit of Mount Messapium, in the angle where the plain terminates, and upon the side of a small port. The citadel occupied a height rising from the shore, 90 yards in length, and about 50 broad, and having a flat summit sloping from the SE. towards the sea. There are remains of walls on the crest of the summit, and on the SE. side of the height. (Leake, *Northern Greece*, vol. ii. p. 267.)

SALI (Σάλοι, Ptol. iii. 5. § 22), a people of European Sarmatia, whom Schafarik (*Slav. Alt.* vol. i. p. 302) places on the river *Salis* in the Baltic province of *Livonia*. [E. B. J.]

SA'LIA, a river in the territory of the Astures, on the N. coast of Hispania Tarraconensis. (Mela, iii. 1.) Now the *Sella*. [T. H. D.]

SA'LIA, a branch of the Mosella (*Mosel*), mentioned by Venant. Fortun. (iii. 12. 5), which must be the *Seille* (Forbiger, vol. iii. p. 126). The *Seille* joins the *Mosel* at *Metz*. [G. L.]

SALICA (Σάλικα, Ptol. ii. 6. § 59), a town of the Oretani in Hispania Tarraconensis. [T. H. D.]

SALICE. [TAPROBANE.]

SALICES (AD), a place in Moesia which the Antonine Itinerary places not far from the mouths of the Danube at 43 M. P. from Halmyris, and 62 M. P. from Tomi. The low and marshy meadows which surrounded it were the scene of the sanguinary battle between the great Fridigern and the legions of Valens. (Amm. Marc. xxxi. 7. § 5; Gibbon, c. xxvi.; Le Beau, *Bas Empire*, iv. p. 112; Greenwood, *Hist. of the Germans*, p. 328.) [E. B. J.]

SALIENTIS (Salientibus, *Itin. Ant.* p. 428), a place in Gallaecia, on the road from Bracara to Asturica; variously identified with *Caldelas* and *Orense*. [T. H. D.]

SALINAE, in Gallia, the chief town of the Suetri or Suctrii (Ptol. iii. 1. § 42), a people in the Provincia E. of the Rhone. An inscription in Spon, "Decc. civitatis Salin.," is said to belong to this place; and another inscription has been found at *Lucerano* near the sources of the *Paglione*: "C. Julio Valenti J. F. Fabr VI. viro civitat. Saliniens. ... Alpium maritimarum patrono optimo." Some place Salinae at *Castellan* in the diocese of *Senez* in the Maritime Alps, where there are salt springs, and where Spon's inscription is said to have been found. D'Anville places it at *Seillans* in the diocese of *Fréjus*, near Faventia (*Fayence*); and he observes that all the old towns of this country preserve their names. (D'Anville, *Notice, &c.*; Ukert, *Gallien*, p. 438.) [G. L.]

SALI'NAE (Σαλῖναι, Ptol. ii. 3. § 21), a town of the Catyeuchlani or Capelani, towards the E. coast of Britannia Romana. Camden (p. 339) identifies it with *Salndy* or *Sandye*, near *Potton* in *Bedfordshire*; others have sought it in the S. part of *Lincolnshire*. [T. H. D.]

SALI'NAE (Σαλῖναι, Ptol. iii. 8. § 7; *Peut. Tab.*; Geog. Rav. iv. 7), a town of Dacia identified with *Thorda*, on the *Aranyos* in *Transylvania*, where there are Roman remains. (Comp. Paget, *Hungary and Transylvania*, vol. ii. p. 259.) [E. B. J.]

SALINSAE. [MAURETANIA, Vol. II. p. 299, a.]

SALI'NUM (Σαλῖνον), a place on the right bank of the Danube, a little below Aquincum, on the road from this town to Mursa in Lower Pannonia. (Ptol. ii. 16. § 4; *It. Ant.* p. 245, where it is called Vetus Salina.) On the Peut. Table we find in that spot the corrupt name Vetusalium. Its site must have been in the neighbourhood of the modern *Hanszabek*. [L. S.]

SALIOCANUS. [STALIOCANUS.]

SALIOCLITA, in Gallia, is placed by the Antonine Itin. on the road from Genabum (*Orléans*) to Lutetia (*Paris*). It is *Saclas*, a little south of *Etampes*, on the *Juine*, a branch of the *Seine*. The Itin. makes the distance the same from Genabum, and Lutetia, which we must take to be *La Cité de Paris*; but there is an error in the Itin., as D'Anville shows, in the distance from Salioclita to Lutetia, and he proposes to correct it. [G. L.]

SALISSO, in north Gallia, is placed by the Antonine Itin. on a road from Augusta Trevirorum (*Trier*) to Bingium (*Bingen*). The places reckoned from Augusta are Baudobrica xviii., Salisso xxii, Bingium xxiii. This Baudobrica is not the place described under the article BAUDOBRICA (*Boppart*). These 63 Gallic leagues exceed the real distance from *Trier* to *Bingen* considerably. The site of Salisso is uncertain. [G. L.]

SALLAECUS (Σάλλαικος, Ptol. ii. 5. § 8), a town in the S. of Lusitania. [T. H. D.]

SALLENTI'NI. [SALENTINI.]

SALLUNTUM. [DALMATIA.]

SALMA'NTICA (Σαλμάντικα, Ptol. ii. 5. § 9; in the *Itin. Ant.* called Salmatice; in Polyaenus *Strat.* viii. 48, Σαλματίς), an important town of the Vettones in Lusitania, on the S. bank of the Durius, on the road from Emerita to Caesaraugusta. It is incontestibly identical with the Ἐλμαντική of Polybius (iii. 14), and the Hermandica or Helmantica of Livy (xxi. 5; cf. Nonius, *Hisp.* c. 38). It is the celebrated modern town of *Salamanca*, where the piers of a bridge of twenty-seven arches over the *Tormes*, built by Trajan, are still in existence. (Cf. Miñano, *Diccion.* vii. p. 402; Florez, *Esp. Sagr.* xiv. p. 267.) [T. H. D.]

SALMO'NA, a branch of the Mosella (*Mosel*).

> "Nec fastiditos Salmonae usurpo fluores."
> (Ausonius, *Mosell.* 366.)

The Salmona is the *Salme*, which flows into the *Mosel*, near the village of *Neumagen*. [G. L.]

SALMO'NE (Σαλμώνη, Steph. B. *s. v.*; Strab.; Σαλμωνία, Diod. iv. 68: *Eth.* Σαλμωνεύς, Σαλμωνείτης, Steph. B.; the form Σαλμωνείτης presupposes a form Σαλμώνεια, which probably ought to be read in Diodorus instead of Σαλμωνία), an ancient town of Pisatis in Elis, said to have been founded by Salmoneus, stood near Heracleia at the sources of the Enipeus or Barnichius, a branch of the Alpheius. Its site is uncertain. (Strab. viii. p. 356; Diod. *l. c.*; Apollod. i. 9. § 7; Steph. B. *l. c.*)

SALMONE. [SAMONIUM PROMONTORIUM.]

SALMYCA (Σάλμυκα, Steph. B. *l. c.*) a city of Spain near the Pillars of Hercules; perhaps in the Campus Spartiarius near Carthago Nova, if the reading of Brodaeus in Oppian (*Cyneg.* iv. 222) is correct. (Comp. Ukert, ii. pt. i. p. 402.) [T. H. D.]

SALMYDESSUS (Ἀλμυδισσὸς ἤτοι Σαλμυδησσός, Ptol iii. 11. § 4; Halmydessos, Plin iv. 11. s. 18; Mela, ii. 2. § 5). a coast-town or district of Thrace, on the Euxine, about 60 miles NW. from the entrance of the Bosporus, probably somewhere in the neighbourhood of the modern *Midjeh.* The eastern offshoots of the Haemus here come very close to the shore, which they divide from the valley of the Hebrus. The people of Salmydessus were thus cut off from communication with the less barbarous portions of Thrace, and became notorious for their savage and inhuman character, which harmonised well with that of their country, the coast of which was extremely dangerous.

Aeschylus (*Prom.* 726*) describes Salmydessus as "the rugged jaw of the sea, hostile to sailors, step-mother of ships;" and Xenophon (*Anab.* vii. 5. § 12, seq.) informs us, that in his time its people carried on the business of wreckers in a very systematic manner, the coast being marked out into portions by means of posts erected along it, and those to whom each portion was assigned, having the exclusive *right* to plunder all vessels and persons cast upon it. This plan, he says, was adopted to prevent the bloodshed which had frequently been occasioned among themselves by their previous practice of indiscriminate plunder. Strabo (vii. p. 319) describes this portion of the coast of the Euxine as "desert, rocky, destitute of harbours, and completely exposed to the north winds;" while Xenophon (*l. c.*) characterises the sea adjoining it as "full of shoals."

The earlier writers appear to speak of Salmydessus as a district only, but in later authors, as Apollodorus, Pliny and Mela, it is mentioned as a town.

Little is known respecting the history of this place. Herodotus (iv. 93) states that its inhabitants, with some neighbouring Thracian tribes, submitted without resistance to Darius when he was marching through their country towards the Danube. When the remnant of the Greeks who had followed Cyrus the Younger entered the service of Seuthes, one of the expeditions in which they were employed under Xenophon was to reduce the people of Salmydessus to obedience; a task which they seem to have accomplished without much difficulty. (*Anab. l. c.*) [J. R.]

SALO, a tributary of the Iberus in Celtiberia, which flowed past the town of Bilbilis (whence Justin, xliv. 3, calls the river itself Bilbilis), and entered the Iberus at Allabon. (Mart. i. 49, x. 20, 103, iv. 55.) Now the *Xalon.* [T. H. D.]

SALODU'RUM, in Gallia, is placed in the Antonine Itin. x. from Petinesca [PETINESCA], and the distance from Salodurum to Augusta Rauracorum (*Augst* near *Basle*) is xxii.

Salodurum is *Solothurn*, as the Germans call it, or *Soleure*, and though the distance between *Basle* and *Solothurn* is somewhat less than that in the Itins., this may be owing to the passage over the hills which separate the cantons of *Basle* and *Solothurn.*

It is said that there are Roman remains at *Soleure*, and an inscription of the year B. C. 219, "Vico Salod.", has been found there. Salodurum is one of the towns of the Helvetii with a Celtic termination (*dur*). Cluver conjectured that Ptolemy's Ganodurum [GANODURUM] might be Salodurum. (D'Anville, *Notice &c.*; Ukert, *Gallien.*) [G. L.]

SALOE (Σαλόη, Paus. vii. 24. § 7), or SALE (Plin. v. 31), a small lake of Lydia at the oot of Mount Sipylus, on the site of Tantalis or Sipylus, the ancient capital of Maeonia, which had probably perished during an earthquake. (Strab. i. p. 58, xii. p. 579.)

The lake was surrounded by a marsh; and the Phyrites, which flowed into it as a brook, issued at the other side as a river of some importance. [L. S.]

SALOMACUM, or SALAMOCUM, is placed by the Antonine Itin. on a road from Aquae Tarbellicae (*Dax*) to Burdigala (*Bordeaux*). Salomacum is the next place on the road to Burdigala and xviii. distant. The distance and the name *Sales* show that *Sales* is Salomacum. [G.L.]

SALO'NA, SALO'NAE (Σαλῶνα, Σαλῶναι; this latter is the more usual form, as found in Inscriptions, Orelli, *Inscr.* nos. 502, 3833, 4995; and on coins, Rasche, vol. iv. pt. i. p. 1557: *Eth.* Σαλωνίτης, Σαλωνεύς), a town and harbour of Dalmatia, which still bears its ancient name, situated on the SE. corner of the gulf into which the Adriatic breaks (*Can. di Castelli*) on the N. of the river IADER (*il Giad o*). Lucan's description (viii. 104) —

> "Qua maris Adriaci longas ferit unda Salonas
> Et tepidum in molles Zephyros excurrit Iader"—

agrees with its oblong form, still traceable in the ruins, and with the course of the river. Though the public buildings and houses of ancient Salonae have been destroyed, enough remains of the wall to show the size, as well as position, of the city; and the arch of the bridge proves that the course of the river is unch nged.

The city consisted of two parts, the eastern and the western; the latter stands on rather higher ground, sloping towards the N., along which the wall on that side is built. Little is known of Salonae before the time of Julius Caesar; after the fall of Dalminium it became the chief town of Dalmatia, and the head-quarters of L. Caecilius Metellus, B. C. 117. (Appian, *Illyr.* 11.) It was besieged a second time, and opened its gates to Cn. Cosconius, B. C. 78. (Eutrop. vi. 4; Oros. v. 23.) When the Pompeian fleet swept the Ionian gulf from Corcyra to Salonae, M. Octavius, who commanded a squadron for Pompeius, was compelled to retreat with loss from before this stronghold of

* In this passage the poet, strangely enough, places Salmydessus in Asia Minor near the Thermodon.

Caesar's. (Caes. *B. C.* iii. 9.) The profligate Gabinius, after being cooped up for months in the fortress, died here. (Auct. *B. Alex.* 43 ; Dion Cass. xlii. 12.) In B. C. 39 Asinius Pollio defeated the Partheni, who had espoused the cause of Brutus and Cassius, and took Salonae, in commemoration of which his son Asinius Gallus bore the "agnomen" Saloninus (Comp. Virg. *Bucol.* viii. 7 ; Hor. *Carm.* ii. 1. 14—16.) From the time it received a colony it was looked upon as the great bulwark of the Roman power on that side the Adriatic, and was distinguished for its loyalty, as was shown in the siege it maintained against Bato the native leader, A. D. 6. All the great Roman roads in Dalmatia met at this point, and when the country was divided into three "conventus," or assize towns, as many as 382 "decuriae" were convened to it. (Plin. iii. 26.) Under the earlier emperors the town was embellished with many public buildings, the number of which was greatly increased by Diocletian, who, according to Porphyrogenitus (*de Adm. Imp.* 29), completely rebuilt the city. No great change took place for nearly two centuries after the death of that emperor; but if we are to believe Porphyrogenitus (*l. c.*) the "long Salonae" attained to half the size of Constantinople. In A. D. 481 Salonae was taken by Odoacer, king of the Heruli, but was recovered from the Goths by the Gepid prince Mundus, the general of Justinian. Totila occupied it for a time. Little is known of these sieges, except that it was partially destroyed. (Procop. *B. G* i. 5, 7, 17, &c.) It soon recovered from these diasters; and it was from Salonae that Belisarius in 544, and Narses in 552, set out to rescue Italy from Totila and the Goths. (Comp. Gibbon, c. xliii.) The Avars invaded Dalmatia in 639, and, advancing upon Salonae, pillaged and burnt the town, which from that time has been deserted and in ruins. (Const. Porph. *l. c.*) The town possessed a dockyard, which, from Strabo's (vii. p. 315) account, seems to have been the only one deserving that name on the Dalmatian coast. The present state of the place offers many illustrations of past events; the following works touch very fully upon the remains of the fortifications and other ruins: Wilkinson, *Dalmatia*, vol. i. pp. 151—164; Neigebaur, *Die Sud-Slaven*, pp. 151—164 ; Lanza, *Antiche lapide Salonitane inedite*, Zara, 1850; F. Carrara, *Topografia e Scavi di Salona*, Trieste, 1850.

The fame of Salonae mainly rests upon its neighbourhood having been chosen by Diocletian as the place of his retirement. That emperor, after his resignation, spent the last nine years of his life in the seclusion of the palace which has given its name to *Spalato*. *Spalato*, often erroneously called *Spalatro*, in Illyric *Split*, is a corrupted form of Salonae Palatium or S. Palatium. The building of the palace, within the precincts of which the greater part of the modern town is constructed, occupied twelve years. The stone, which was very little inferior to marble itself, was brought from the quarries of Tragurium. After the death of Diocletian, but little is known of the palace or its occupants. Part of it was kept by the magistrates of Salonae, as a state palace; and part was occupied by the "Gynaecium," or cloth manufactory, in which women only were employed,—whence the name. It was tenanted by the phantom emperors of the West, Glycerius and Julius Nepos, the latter of whom was murdered here. When Salonae was captured by the Avars, the houseless citizens fled to the massive structure of the palace for shelter: the settlement swelled by the arrival of their countrymen became a Roman city under the name of ASPALATHUM, and paid an annual tribute of 200 pieces of gold to the Eastern emperors. (Const. Porph. *l. c.*)

The palace is nearly a square, terminated at the four corners by a quadrangular tower. According to the latest and most accurate admeasurements, the superficial content, including the towers, occupies a space of a little more than eight acres. (Wilkinson, *Dalmatia*, vol. i. pp. 114—143 ; Neigebaur, *Die Sud-Slaven*, pp. 134—151.) The entire building was composed of two principal sections, of which the one to the S. contained two temples — one dedicated to Jupiter the other to Aesculapius — and the private rooms of the emperor. Two streets intersected each other at right angles, nearly in the centre of it; the principal one led from the Porta Aurea, the main entrance on the N. front, to a spacious court before the vestibule; the other ran in a direct line from the W. to the E. gate, and crossed the main street just below the court. What remains is not enough to explain the distribution of the various parts of the interior. By a comparison of what existed in his time with the precepts of Vitruvius, Adams (*Antiquities of Diocletian's Palace*, 1764) has composed his ingenious restoration of the palace. (Comp. Gibbon, c. xiii.) All the gates, except the Porta Argentea, were defended by two octagonal towers; the principal or "golden gate" still remains nearly perfect. The temple of Jupiter is now the "Duomo," and that of Aesculapius is a baptistery dedicated to St. John. Diocletian's palace marks an aera; — columnar was so combined with arched architecture, that the arches were at first made to rest upon the entablature, and afterwards were even forced immediately to spring from the abacus, in violation of the law of statics, which requires undiminished and angular pillars under the arch; at length the entablature itself took the form of an arch. (Müller, *Ancient Art*, § 193.) But although this architecture offends against the rules of good taste, yet these remains may serve to show how directly the Saracens and Christian architects borrowed from Roman models many of the characteristics which have been looked upon as the creation of their own imagination. (Comp. Hope, *Architecture*, vol. i. c. viii.; Freeman, *Hist. of Architecture*, p. 152.) A plan of the palace of Diocletian, taken from Adams, will be found in Fergusson's *Handbook of Architecture*, vol. i. p. 356, accompanied by an account of the general arrangements of the building. [E.B.J.]

SALPESA, a Roman municipium in Hispania Baetica, SE. of Hispalis, at the ruined *Facialcazar*, between *Utrera* and *Coronil*. (Florez, *Esp. Sagr.* ix. p. 17; Mionnet, *Suppl.* i. p. 44.) [T. H. D.]

SALPI'NUM (*Eth.* Salpinas), an ancient city of Etruria, mentioned only by Livy (v. 31, 32), who speaks of the Salpinates as assisting the Volsinians in their war against Rome in B. C. 389. It is clear from the manner in which they are here spoken of that they were an independent people, with a considerable territory and a fortified city; and the manner in which they are associated with the powerful Volsinians would lead to the inference that they also must have been a people of considerable power. Yet no subsequent mention of their name is found, and all trace of their existence disappears. Niebuhr conjectures that Salpinum occupied the site of the

modern *Orvieto*, the name of which is evidently a corruption of Urbs Vetus, the form used by Paulus Diaconus in the seventh century (P. Diac. iv. 33): there is, therefore, little doubt that the site was one of a more ancient Etruscan city; and its proximity to Volsinii renders it probable enough that it may have been Salpinum. But no reliance can be placed upon any such conclusion. (Niebuhr, vol. ii. p. 493.) [E. H. B.]

SALSAS or SALSA, a river of Carmania, noticed by Pliny (vi. 25). Reichard imagines that this is the same stream as that called by Marcian, Cathraps (p. 21, ed. Hudson), and by Ptolemy, Araps or Cathraps (vi. 8. § 4); and he identifies it with the modern *Shúr;* but this seems very doubtful. [V.]

SALSULAE, in Gallia. Mela (ii. 5) describes the Salsulae Fons as not sending forth fresh water, but water salter than the sea. He places the Fons south of the lake Rubresus, and near the shore which he calls Leucate [LEUCATE]. Salsulae is in the Antonine Itin. on the road from Narbo to the Pyrenees. Salsulae is *Salses* or *Salçes*, where there is a salt-spring. Near the Fons, says Mela, is a plain very green with fine and slender reeds, under which is water. This is the place, he says, where fish are got by striking down with a prong or something of the sort; and this is the origin of the fables told by the Greeks and some Romans about fishes being dug out of the ground. He alludes to Polybius (xxxiv. 10). [RUSCINO.] [G. L.]

SALSUM FLUMEN, a tributary of the Baetis in Hispania Baetica, between Attegua and Attubis. (Hirtius, *B. A.* c. 7, 8.) Variously identified with the *Guadajoz* and *Salado*. [T. H. D.]

SALSUS. [STACHIR.]

SALTIA'TES (Σαλτιῆται, Strab. iii. p. 144), according to Strabo a people of Spain celebrated for their woollen manufacture. But we must probably read in this passage Σαλακιῆται. [T. H. D.]

SALTICI, a town of the Celtiberi in Hispania Tarraconensis. (*Itin. Ant.* p. 447.) Variously identified with *Jorquera* and *S. Maria del Campo*. [T. H. D.]

SALTIGA (Σάλτιγα, Ptol. ii. 6. § 61), a town of the Bastitani in Hispania Tarraconensis. [T. H. D.]

SALTOPYRGUS. [TEGLICIUM.]

SALURNIS (*Salurn*), a town in Rhaetia, on the river Athesis, in the north of Tridentum, is mentioned only by Paulus Diaconus. (*Hist. Langob.* iii. 9.) [L. S.]

SALUTARIS PHRYGIA. [PHRYGIA, p. 625.]

SALVA (Σαλούα), a town in the north-eastern extremity of Lower Pannonia, on the right bank of the Danube. (Ptol. ii. 16. § 4; *Itin. Ant.* pp. 266, 267.) According to the Notitia Imperii, where it is called Solva, it contained a garrison of a body of horsemen. The site of this place cannot be ascertained with certainty. [L. S.]

SA'LYES (Σάλυες), SA'LYI, SALLU'VII, or SA'LLYES (Steph. Byz. *s. v.*), a Ligurian people in Gallia. There are other varieties in the writing of the word. The early Greeks gave the name of Ligyes to these Salyes; and their territory, which was in the possession of the Massaliots, when Strabo wrote, was originally called Ligystice. (Strab. iv. p. 203.) The geographer means to say that the old Greeks were not acquainted with the name of Salyes, but only with the name of the nation to which they belonged. Livy (v. 34) speaks of the Phocaeans who founded Massilia being attacked by the Salyes, for in his time the name Salyes was familiar to the Romans.

Strabo speaks of the Salyes in his description of the Alps. He makes their country extend from Antipolis to Massilia, and even a little further. They occupied the hilly country which lies inland and some parts of the coast, where they were mingled with the Greeks (iv. p. 203). They extended west as far as the Rhone. The Salyes had also the country north of Massilia as far as the Druentia (*Durance*), a distance of 500 stadia; but on crossing the Druentia at Cabellio or Caballio (*Cavaillon*) a man would be in the country of the Cavares (Strab. iv. p. 185), who extended from the Druentia to the Isara (*Isère*). [CAVARES.] Strabo adds that the Salyes occupy both plains and the mountains above the plains. In this passage (Οἱ μὲν οὖν Σάλυες ἐν αὐτοῖς) Groskurd (*Transl. Strab.* vol. i. p. 318) has altered Σάλυες into Καούαροι, and so he has spoiled the meaning. Ukert has defended the true reading, though he has not correctly explained ἐν αὐτοῖς. The Salyes occupied the wide plains east of Tarascon and *Arles*, one of the best parts of the country between the *Durance* and the Mediterranean; and so Strabo could correctly say that the Volcae Tectosages who reach to the Rhone had the Salyes extending along their border and opposite to them on the other side of the river, and the Cavares opposite to them (north of the *Durance*).

The Salyes are sometimes distinguished from the Ligures, as when Strabo (iv. p. 178) speaks of the coast which the Massaliots possess and the Salyes as far as the Ligyes to the parts towards Italy and the river Varus, the boundary of the Narbonitis (Provincia Narbonensis) and Italy. Livy also (xxi. 26) speaks of P. Cornelius Scipio sailing along the coast of Etruria and of the Ligures, and then the coast of the Salyes till he came to Massilia. This shows that the Ligurians of Gallia, or the country west of the *Var*, became known to the Romans by the name of Salyes. Strabo's remark that these Salyes, whom the early Greeks named Ligures, were called Celtoligyes by the later Greeks, may explain how Livy or his Epitomiser has called the Salyes both Ligurians ("Transalpinos Ligures," *Epit.* 47) and Galli (*Epit.* 60). They were a mixed race of Galli and Ligures.

The Salyes were a warlike people. They had both infantry and cavalry, distributed into ten tribes or divisions. They were the first of the Transalpine nations which the Romans subdued. (Florus, iii. 2.) The Romans fought for a long time with the Ligurians east of the *Var*, and with the Salyes west of it, for these people being in possession of the sea-coast closed against the Romans the way into Spain. They plundered both by sea and land, and were so formidable that the road through their land was hardly safe for a large army. After eighty years of fighting the Romans with difficulty succeeded in getting a road of 12 stadia in width allowed for the free passage of those who went on the public service.

Livy (xxxi. 10) tells us that in the Second Punic War the Insubres, Cenomani, and Boii stirred up the Salyes and other Ligurians to join them; and all together under Hamilcar attacked Placentia. There is no ground, as Ukert remarks, to alter the reading "Salyis," for we see no reason why the Salyes as well as other Ligurians or mixed Ligurians should not aid the enemies of Rome. Both the Ligurians and the Cisalpine Galli dreaded the arms and the encroachment of the Romans. The alliance with

Massilia first brought the Romans into the country of the Salyes; and in B. C. 154 the Oxybii and Deceates, or Deciates, who were threatening Massilia, were defeated by the consul Q. Opimius. The Salyes or Salluvii are not named on this occasion by the historians, and the Deceates and Oxybii, who were certainly Ligurians, may have been two smaller tribes included under the general name of Salyes or Salluvii. [DECIATES; OXYBII.] The consul M. Fulvius Flaccus in B. C. 125 defeated the Salyes, and in B. C. 123 the consul C. Sextius Calvinus completed the subjugation of this people, and founded Aquae Sextiae (*Aix*) in their territory.

Ptolemy (ii. 10. § 15) enumerates Tarascon, Glanum, Arelatum (Arelate) Colonia, Aquae Sextiae Colonia, and Ernaginum as the towns of the Salyes. Tarascon, Glanum (*St. Remi*), Arelate, and Ernaginum [ERNAGINUM] all lie west of Aquae Sextiae (*Aix*) and of *Marseille;* and we may conclude that the country of the Salyes is the western half of the tract between the *Var* and the Rhone, and between the *Durance* and the Mediterranean.

The tribes east of the Salyes, the Albici, Suetri, Nerusi, Oxybii, and Deciates, and there may be some others [COMMONI], were perhaps sometimes included under the name of the more powerful nation of the Salyes; but Strabo's statement does not appear to be strictly correct, when he makes the Salyes extend along the coast to Antipolis. The coast immediately west of the *Var* belonged to the Deceates and Oxybii. Pliny says "Ligurium celeberrimi ultra Alpes, Salluvii, Deciates, Oxybii" (iii. 5); the three tribes of Transalpine Ligures whose names occur in the history of the Roman conquestof this country.

In Pliny's list of the Coloniae in the interior of Narbonensis east of the Rhone there is "Aquae Sextiae Salluviorum," and we may conclude that the head-quarters of the Salyes or Salluvii were in the plain country above *Aix*, and thence to *Arles*. Owing to their proximity to the Greeks of Massilia they would be the first of the Ligures or the mixed Galli and Ligurians who felt the effect of Greek civilisation, and there can be no doubt that their race was crossed by Greek blood. Possessing the town of Arelate, at the head of the delta of the Rhone, they would have in their hands the navigation of the lower part of the river. The history of this brave and unfortunate people is swallowed up in the blood-stained annals of Rome; and the race was probably nearly extirpated by the consul Calvinus selling them after his conquest. [G. L.]

SAMAICA (Σαμαϊκή, Ptol. iii. 11. § 9), is described by Ptolemy as a στρατηγία of Thrace, on the borders of Macedonia and the Aegean. [J. R.]

SAMACHONI'TIS LACUS (Σαμαχωνῖτις λίμνη al. Σεμεχωνῖτις), the name given by Josephus to the small lake of the Upper Jordan, called in Scripture the "waters of Merom," where Joshua routed the army of Jabin, king of Hazor, which city, according to Josephus, was situated above the lake. (Comp. *Josh.* xi. 5, 7, and *Judg.* iv. with Josephus, *Ant.* v. 5. § 1.) He elsewhere describes the lake as 60 stadia long by 30 broad, extending its marshes to a place called Daphne, which Reland is probably right in altering to Dane, i. e. Dan, as Josephus immediately identifies it with the temple of the Golden Calf. (Joseph. *B. J.* iv. 1. § 1; Reland, *Palaest.* p. 263.) The name, which is not elsewhere found, has been variously derived, but the most probable etymology would connect it in sense with the Hebrew name Merom = *aquae superiores*, deriving the word from the Arabic "samaca," *altus fuit.* (Reland, *l. c.* p. 262.) It is singular that no other notices occur of this lake in sacred or in other writings. Its modern name is *Bahr-el-Huleh.* Pococke writes: "Josephus says the lake was 7 miles long, but it is not above 2 miles broad, except at the north end, where it may be about 4. The waters are muddy and esteemed unwholesome, having something of the nature of the water of a morass." (*Observations on Palaestine*, vol. ii. p. 73.) Dr. Robinson "estimated its length at about 2 hours, or from 4 to 5 geographical miles; its breadth at the northern end is probably not less than 4 miles." It had the appearance almost of a triangle, the northern part being far the broadest; "or rather the map gives to it in some degree the shape of a pear." (*Bibl. Res.* vol. iii. pp. 339, 340, *Biblioth. Sacr.* vol. i. p. 12; Stanley, *Sinai and Palestine*, p. 383, n. 1.) [G. W.]

SAMAMYCII. [SYRTICA.]

SA'MARA. [FRUDIS; SAMAROBRIVA.]

SAMA'RIA (Σαμαρεῖτις, LXX., Joseph.; χώρα Σαμαρέων, Σαμαρίς, Σαμάρεια, Ptol.). The district has been already described in general, under PALAESTINA [p. 518], where also the notice of Josephus has been cited [p. 532]. It remains to add a few words concerning its extent, its special characteristics, and its place in classical geography. It lay, according to Josephus, "between Judaea and Galilee (comp. *St. John*, iv. 4), extending from a village called Ginaea in the great plain (Esdraelon) to the toparchy of Acrabatta." Ginaea there can be no difficulty in identifying with the modern *Jenin*, at the southern extremity of the plain, on the road from *Nablûs* to *Nazareth*. The toparchy of Acrabatta, mentioned also by Pliny, it is difficult to define: but it certainly lay between *Nablûs* and Jericho, and therefore probably east of the toparchy of Gophna and in the same parallel of latitude. (Eusebius, *Onomast. s. v.* Ἀκραββείν; Reland, *Palaest.* p. 192.) The northern boundary of Samaria is well defined by a continuous line of hills, which, commencing with Mount Carmel on the W., runs first in a SW direction and then almost due E. to the valley of the Jordan, bounding the great plain of Esdraelon on the S. Its southern boundary is not so distinctly marked, but was probably conterminous with the northern limits of the tribe of Benjamin. It comprehended the tribe of Ephraim, and the half of Manasseh on this side Jordan, and, if it be extended as far E. as Jordan, included also some part of Issachar, that skirted these two tribes on the E. Pliny (v. 13) reckons to Samaria the towns Neapolis, formerly called Mamortha, Sebaste, and Gamala, which last is certainly erroneous. [GAMALA.] Ptolemy names Neapolis and Thena (Θῆνα, v. 16. § 5), which last is evidently identical with Thanath (Θανὰθ) of the tribe of Joseph, mentioned by Eusebius (*Onomast. s. v.*), and still existing in a village named *Thena*, 10 miles E. of Neapolis, on the descent to the Jordan. St. Jerome notes that the most precious oil was produced in Samaria (*in Hoseam*, cap. xii.), and its fertility is attested by Josephus. [G. W.]

SAMARIA, SEBASTE (Σαμάρεια, Σεβάστη), the Hebrew SHOMRON, the capital city of the kingdom of Israel, and the royal residence from the time of Omri (cir. B. C. 925), of whom it is said that "he bought the hill Samaria of Shemer for two talents of silver, and built on the hill, and called the name of the city which he built after the name of Shemer, owner of the hill, Samaria" (Heb. *Shemeron*). (1 *Kings*, xvi. 24.) Mr. Stanley thinks

that Omri built it merely as a palatial residence (*Sinai and Palestine*, p. 240); but Dr. Robinson perhaps more justly concludes that it was chosen as the site of the capital, and remarks that "it would be difficult to find in all Palestine a situation of equal strength, fertility, and beauty combined." (*Bibl. Res.* iii. p. 146.) Its great strength is attested by the fact that it endured a siege from all the power of the Syrian army under Hazael, in the days of Jehoram (cir. B. C. 892), little more than 30 years after its first foundation, and was not taken notwithstanding the frightful effects of the famine within the walls (2 *Kings*, vii. 24—viii. 20); and when subsequently besieged by the Assyrians (cir. B. C. 721) it was only reduced after a siege of three years (xviii. 9, 10). After the captivity it was taken by John Hyrcanus, after a year's siege, when he is said to have sapped the foundations of it with water and destroyed all traces of a city. It was subsequently occupied by the Jews, until Pompey restored it to its own inhabitants. It was further restored by Gabinius. (Joseph. *Ant.* xiii. 10. § 3, 15. § 4, xiv. 4. § 4, 5. § 3, xiii. 10. § 3, 15. § 4.) It was granted to Herod the Great by Augustus on the death of Antony and Cleopatra, and was by him converted into a Roman city under the name of Sebaste =Augusta, in honour of his imperial patron. (*Ant.* xv. 3. §§ 3, 7, 8. § 5, *B. J.* i. 20. § 3.) The town was surrounded with a wall 20 stadia in length: in the middle of the town was a temple built in honour of Caesar, itself of large dimensions, and standing in a *temenos* of 1½ stadium square. It was colonised with 6000 veterans and others, to whom was assigned an extremely fertile district around the city. (*B. J.* i. 21. § 2.) Dr. Robinson imagines that it was in this city that Philip first preached the Gospel, and that the church was founded by the apostles St. Peter and St. John (*Acts*, viii. 5, &c.); but considering the absence of the article in the original, supplied in the English translation, and comparing the passage with the identical expression in St. John (iv. 5), it is more probable that the same town is intended, viz. Sychar, or Neapolis, the chief seat of the Samaritan worship. Nor does the expression in Acts (viii. 14), that "Samaria had received the word of God," militate against this view; for here also the country may be very well understood, and it is well remarked by Dr. Robinson that "it is sometimes difficult to distinguish whether, under the name Samaria, the city or the region is meant." (*Bibl. Res.* iii. p. 146.) It is most probable, however, that the sacred writers would have used the classical name then in vogue had they had occasion to mention the city. Septimius Severus placed a colony there in the beginning of the third century (Ulpian, quoted by Robinson, *l. c.* p 148, n. 1), and it was probably at that time an episcopal see; for its bishop, Marius or Marinus, was present at the Council of Nicaea and subscribed its acta. (Le Quien, *Oriens Christianus*, vol. iii. col. 549—552.) The tradition which assigns Sebaste as the place of St. John Baptist's imprisonment and martyrdom is first found in St. Jerome (*Comment in Osee*, i. 5), who also places there the tombs of Obadiah and Elisha (*Comment. in Abdiam*, i. 1, *Epitaph. Paulae*, c. 6), and militates against Josephus, whose statement, however, is inadmissible. [MACHAERUS.] The modern village which represents in its name and site the magnificent city of Herod the Great is situated on an isolated hill 6 miles N. of *Nablûs*, reckoned by Josephus a day's journey from Jerusalem. (*Ant.* xv. 11.) The village occupies only the eastern extremity of the hill, and stands at the height of about 926 feet above the sea. Its only conspicuous building is the ruined church of St. John, overhanging the brow of the eastern declivity: at the further extremity of the hill, are the remains of an ancient gateway, and near it stand 60 columns *in situ*, the commencement apparently of a colonnade which extended the whole length of the hill, for at some distance eastward 20 more still stand, and others, whole or in fragments, lie prostrate over the whole hill, while the *débris* of the buildings have raised the surrounding valleys, remarkably fulfilling the prophecy of Micah (i. 6): "I will make Samaria as an heap of the field, as plantings of a vineyard; and I will pour down the stones thereof into the valley, and I will discover the foundations thereof." At about half its height the hill is girt about with a distinct belt of level ground, while similar terraces, not so well defined, may be traced above and below, which it is thought may have once served as the streets of the city. (Ritter, *Erdkunde Palästina*, iii. pp. 661—666.) Coins of the city are quoted by Vaillant, Noris, Eckhel, and others, chiefly of the earlier emperors. [G. W.]

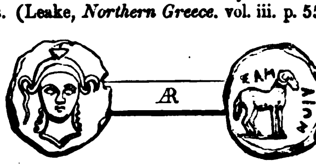
SAMARIANE, a town of Hyrcania, mentioned by Strabo (xi. p. 508). It is no doubt the same as that called Samaranne by Ptolemy (vi. 9. § 2), and by Ammianus Marcellinus, Saramanna (xxiii. 6). It cannot be identified with any modern place. [V.]

SAMAROBRI'VA, in Gallia, the ford or passage of the Samara, was a town of the Ambiani on the Samara (*Somme*). Caesar held a meeting of the states of Gallia at Samarobriva in the autumn of B. C. 54, before putting his troops in winter-quarters. Caesar himself stayed at Samarobriva, as his narrative shows (*B. G.* v. 24, 46, 47, 53), and as appears from those letters of Cicero addressed to his friend Trebatius, who was about Caesar at that time (*ad Fam.* vii. 11, 12, 16). Ptolemy mentions Samarobriva as the chief town of the Ambiani (ii. 9. § 8). The town afterwards took the name of "Ambiani urbs inter alias eminens" (Amm. Marc. xv. 11), or "Civitas Ambianorum" in the Notitia Prov. Galliа. The name of Samarobriva appears in the Antonine Itin. and in the Table; but the Itin. has Ambiani also. There seems no reason for fixing Samarobriva at any other site than *Amiens*, though some geographers would do so. [G. L.]

SAMBANA (Σάμβανα), a small place mentioned by Diodorus Siculus (xvii. 27). There can be little doubt that it is the same as the Sabata of Pliny (vi. 27. § 31). It was situated about two days' journey N. of Sittake and E. of Artemita. [V.]

SAMBASTAE (Σαμβασταί), one of the many small tribes in the district of Pattalene mentioned by Arrian (vi. 15) as noticed by Alexander and his troops near the mouths of the Indus. It has been conjectured that the present ruins of *Sewistan* or *Schwan* indicate the site of the chief fortress of this people; and Burnes appears to believe that this is the same place noticed by Curtius (ix. 8) as a stronghold of the Brachmani (Burnes, *Travels in Bokhara*, iii. p. 57). [V.]

SAMBRACITA'NUS SINUS, in Gallia, is placed in the Maritime Itin. between Forum Julii and Heraclea. It is the gulf of *Grimaud*. [G. L.]



SA'MBROCA (Σάμβροκα, Ptol. ii. 6. § 20), a river of Hispania Tarraconensis, which entered the sea between the Pyrenees and the Iberus. Ukert (ii. pt. i. p. 292) takes it to be the same river called Alba by Pliny (iii. 3. s. 4); the modern *Ter*. [T. H. D.]

SAMBULOS. [BAGISTANUS MONS.]

SAMBUS (Σάμβος), a small river which forms one of the tributaries of the *Jumna*. It is mentioned by Arrian in his list of Indian rivers (*Ind.* c. 4.). [V.]

SAME or SAMOS (Σάμη, Σάμος: *Eth.* Σαμαῖος: *Samo*), the most ancient city in Cephallenia, which is also the name of this island in the poems of Homer. [CEPHALLENIA.] The city stood upon the eastern coast, and upon the channel separating Cephallenia and Ithaca. (Strab. x. p. 455.) Along with the other Cephallenian towns it joined the Athenian alliance in B. C. 431. (Thuc. ii. 30.) When M. Fulvius passed over into Cephallenia in B. C. 189, Samos at first submitted to the Romans along with the other towns of the island; but it shortly afterwards revolted, and was not taken till after a siege of four months, when all the inhabitants were sold as slaves. (Liv. xxxviii. 28, 29.) It appears from Livy's narrative that Same had two citadels, of which the smaller was called Cyatis; the larger he designates simply as the major arx. In the time of Strabo there existed only a few vestiges of the ancient city. (Strab. *l. c.*; comp. Plin. iv. 12. s. 19.)

Same has given its name to the modern town of *Samo*, and to the bay upon which it stands. Its position and the remains of the ancient city are described by Leake. It stood at the northern extremity of a wide valley, which borders the bay, and which is overlooked to the southward by the lofty summit of Mount Aenus (*'Elato*). It was built upon the north-western face of a bicipitous height, which rises from the shore at the northern end of the modern town. "The ruins and vestiges of the ancient walls show that the city occupied the two summits, an intermediate hollow, and their slope as far as the sea." On the northern of the two summits are the ruins of an acropolis, which seems to have been the major arx mentioned by Livy. On the southern height there is a monastery, on one side of which are some remains of a Hellenic wall, and which seems to be the site of the Cyatis, or smaller citadel. There are considerable remains of the town walls. The whole circuit of the city was barely two miles. (Leake, *Northern Greece*. vol. iii. p. 55.)

COIN OF SAME.

SA'MIA. [SAMICUM.]

SA'MICUM (Σαμικόν: *Eth.* Σαμικεύς), a town of Triphylia in Elis, situated near the coast about half-way between the mouths of the Alpheius and the Neda, and a little north of the Anigrus. It stood upon a projecting spur of a lofty mountain, which here approaches so near the coast as to leave only a narrow pass. From its situation commanding this pass, it is probable that a city existed here from the earliest times; and it was therefore identified with the Arene of Homer (*Il.* ii. 591, xi. 723), which the poet places near the mouth of the Minyeius, a river supposed to be the same as the Anigrus [ARENE.] According to Strabo the city was originally called SAMOS (Σάμος), from its being situated upon a hill, because this word formerly signified "heights." Samicum was at first the name of the fortress, and the same name was also given to the surrounding plain. (Strab. viii. pp. 346, 347; Paus. v. 5. § 3.) Pausanias speaks (v. 6. § 1) of a city SAMIA (Σαμία), which he apparently distinguishes from Samicum; but Samicum is the only place mentioned in history. [See some remarks under MACISTUS.] Samicum was occupied by the Aetolian Polysperchon against the Arcadians, and was taken by Philip, B. C. 219. (Paus. v. 6. § 1; Polyb. iv. 77, 80.) The ruins of Samicum are found at *Khaiáffa* (written Χαϊάφφα), which is only the name of the guarded pass. The ruined walls are 6 feet thick, and about 1½ mile in circumference. They are of the second order of Hellenic masonry, and are evidently of great antiquity. The towers towards the sea belong to a later age.

Near Samicum upon the coast was a celebrated temple of the Samian Poseidon, surrounded by a grove of wild olives. It was the centre of the religious worship of the six Triphylian cities, all of whom contributed to its support. It was under the superintendence of Macistus, the most powerful of the Triphylian cities. (Strab. viii. pp. 344, 346, 347.) In a corrupt passage of Strabo (p. 344) this temple is said to be 100 stadia equidistant from Lepreum and the Annius (τοῦ Ἀννίου); for the latter name we ought to read Alpheius and not Anigrus, as some editors have done.

In the neighbourhood of Samicum there were celebrated medicinal springs, which were said to cure cutaneous diseases. Of the two lagoons which now stretch along the coast, the larger, which extends as far as the mouth of the Alpheius, begins at the northern foot of the hill upon which Samicum stands; the southern extends along the precipitous sides of the hill, which were called in antiquity the Achaean rocks. (Strab viii. p. 347.) The river Anigrus flows into the latter of these lagoons, and from thence flows out into the sea. The lagoon is deep, being fed with subterraneous sources; in summer it is said to be very fetid, and the air extremely unwholesome. Strabo relates that the waters of the lake were fetid, and its fish not eatable, which he attributes to the Centaurs washing their wounds in the Anigrus. Pausanias mentions the same circumstances; and both writers describe the efficacy of the water in curing cutaneous diseases. There were two caves, one sacred to the Nymphs Anigrides (Ἀνιγρίδες, Paus.; Ἀνιγριάδες, Strab.), and the other to the Atlantides: the former was the more important, and is alone mentioned by Pausanias. It was in the cave of the Anigrides that the persons who were going to use the waters first offered up their prayers to the Nymphs. (Strab. viii. p. 346, seq.; Paus. v. 5. §§ 7—11.) These two caves are still visible in the rocks; but they are now accessible only by a boat, as they are immediately above the surface of the lake. General Gordon, who visited these caverns in 1835, found in one of them water distilling from the rock, and bringing with it a pure yellow sulphur. (Leake, *Morea*, vol. i. p. 54, seq., *Peloponnesiaca*, p. 108; Boblaye, *Recherches, &c.*, p. 133, seq.; Curtius, *Peloponnesos*, vol. ii. p. 78, seq.)

SAMINTHUS (Σάμινθος), a town in the Argeia, on the western edge of the Argive plain, which was taken by Agis, when he marched from Phlius into the territory of Argos in B. C. 418. (Thuc. v. 58.) Its position is uncertain. Leake, who supposes Agis to have marched over Mt. Lyrceium and the adjoining hills, places it at *Kutzopódhi* (*Morea*,

vol. ii. p. 415), and Ross at the village of *Phil'lia*, on the southern side of Mt. Tricaranon, across which is the shortest pass from the Phliasia into the Argive plain. (*Peloponnes*, p. 27.)

SAMMO'NIUM. [SAMONIUM.]

SA'MNIUM (ἡ Σαυνῖτις, Pol., Strab.: *Eth.* SAMNIS, pl. SAMNITES, Σαυνῖται, Pol.. Strab., &c.: Σαμνῖται, Ptol.), one of the principal regions or districts of Central Italy. The name was sometimes used in a more extensive, sometimes in a more restricted, sense, the Samnites being a numerous and powerful people, who consisted of several distinct tribes, while they had founded other tribes in their immediate neighbourhood, who were sometimes included under the same appellation, though they did not properly form a part of the nation. But Samnium proper, according to the more usual sense of the name (exclusive of the Frentani, but including the Hirpini), was a wholly inland district, bounded on the N. by the Marsi, Peligni, and Frentani, on the E. by Apulia, on the S. by Lucania, and on the SW. and W. by Campania and Latium.

I. GENERAL DESCRIPTION.

The territory thus limited was almost wholly mountainous, being filled up with the great mountain masses and ramifications of the Apennines, which in this part of their course have lost even more than elsewhere the character of a regular chain or range, and consist of an irregular and broken mass, the configuration of which it is not very easy to understand. But as the whole topography of Samnium depends upon the formation and arrangement of these mountain groups, it will be necessary to examine them somewhat in detail.

1. In the northern part of the district, adjoining the Marsi and Peligni, was a broken and irregular mass of mountains, containing the sources of the Sagrus (*Sangro*), and extending on both sides of the valley of that river, as far as the frontiers of the Frentani. This was the land of the CARACENI, the most northerly of the Samnite tribes, whose chief city was Aufidena, in the valley of the Sagrus. about 5 miles above *Castel di Sangro*, now the chief town of the surrounding district.

2. The valley of the Sagrus was separated by a mountain pass of considerable elevation from the valley of the Vulturnus, a river which is commonly considered as belonging to Campania; but its sources, as well as the upper part of its course, and the valleys of all its earliest tributaries, were comprised in Samnium. Aesernia, situated on one of these tributaries, was the principal town in this part of the country; while Venafrum, about 15 miles lower down the valley, was already reckoned to belong to Campania. This portion of Samnium was one of the richest and most fertile, and least mountainous of the whole country. From its proximity to Latium and Campania, the valley of the Vulturnus was one of the quarters which was most accessible to the Roman arms, and served as one of the highroads into the enemy's country.

3. From Aesernia a pass, which was probably used from very early times, and was traversed by a road in the days of the Roman Empire, led to Bovianum in the valley of the Tifernus. This city was situated in the very heart of the Samnite country, surrounded on all sides by lofty mountains. Of these the most important is that on the SW., the *Monte Matese*, at the present day one of the most celebrated of the Apennines, but for which no ancient name has been preserved. The name of Mons Tifernus may indeed have been applied to the whole group; but it is more probable that it was confined, as that of *Monte Biferno* is at the present day, to one of the offshoots or minor summits of the *Matese*, in which the actual sources of the Tifernus were situated. The name of *Matese* is given to an extensive group or mass of mountains filling up the whole space between *Bojano* (Bovianum) and the valley of the Vulturnus, so that it sends down its ramifications and underfalls quite to the valley of that river. whence they sweep round by the valley of the Calor, and thence by *Morcone* and *Sepino* to the sources of the Tamarus. Its highest summit, the *Monte Miletto*, SW. of *Bojano*, rises to a height of 6744 feet. This rugged group of mountains, clothed with extensive forests, and retaining the snow on its summits for a large part of the year, must always have been inaccessible to civilisation, and offered a complete barrier to the arms of an invader. There could never have been any road or frequented pass between that which followed the valley of the Vulturnus and that which skirts the eastern base of the *Matese*, from the valley of the *Calore* to that of the *Tamaro*. This last is the line followed by the modern road from *Naples* to *Campobasso*.

4. N. of *Bojano* the mountains are less elevated, and have apparently no conspicuous (or at least no celebrated) summits; but the whole tract, from *Bojano* to the frontier of the Frentani, is filled up with a mass of rugged mountains, extending from *Agnone* and the valley of the *Sangro* to the neighbourhood of *Campobasso*. This mountainous tract is traversed by the deep and narrow valleys of the *Trigno* (Trinius) and *Biferno* (Tifernus), which carry off the waters of the central chain, but without affording any convenient means of communication. The mountain tracts extending on all sides of Bovianum constituted the country of the PENTRI, the most powerful of all the Samnite tribes.

5. S. of the *Matese*, and separated from it by the valley of the Calor (*Calore*), is the group of the MONS TABURNUS, still called *Monte Taburno*, somewhat resembling the *Matese* in character, but of inferior elevation as well as extent. It formed, together with the adjoining valleys, the land of the CAUDINI, apparently one of the smallest of the Samnite tribes, and the celebrated pass of the Caudine Forks was situated at its foot. Closely connected with Mount Taburnus, and in a manner dependent on it, though separated from it by the narrow valley of the *Isclero*, is a long ridge which extends from *Arpaja* to near Capua. It is of very inferior elevation, but rises boldly and steeply from the plain of Campania, of which it seems to form the natural boundary. The extremity of this ridge nearest to Capua is the MONS TIFATA, so celebrated in the campaigns of Hannibal, from which he so long looked down upon the plains of Campania.

6. At the eastern foot of Mons Taburnus was situated Beneventum, the chief town of the HIRPINI, and which, from its peculiar position, was in a manner the key of the whole district inhabited by that people. It stood in a plain or broad valley formed by the junction of the Calor with its tributaries the Sabatus and Tamarus, so that considerable valleys opened up from it in all directions into the mountains. The Calor itself is not only the most considerable of the tributaries of the Vulturnus, but at the point of its junction with that river, about 20 miles below

Beneventum, is little if at all inferior to it in magnitude and volume of waters. The Calor itself rises in the lofty group of mountains between *S. Angelo dei Lombardi* and *Eboli*. This group, which is sometimes designated as *Monte Irpino*, and is the most elevated in this part of the Apennines, sends down its waters to the N. in the Calor and its tributary the Sabatus; while on the E. it gives rise to the Aufidus, which flows into the Adriatic sea, after traversing more than two-thirds of the breadth of Italy; and on the S. the Silarus flows by a much shorter course into the *Gulf of Salerno*. From this point, which forms a kind of knot in the main chain of the Apennines, the mountains sweep round in a semicircle to the NE. and N. till they reach the head waters of the Tamarus, and adjoin the mountains already described in the neighbourhood of *Bojano* and *Campobasso*. In this part of its course the main chain sends down the streams of the *Ufita* and the *Miscano* on the W. to swell the waters of the *Calore*, while on the E. it gives rise to the Cerbalus or *Cervaro*, a stream flowing into the Adriatic.

7. From the *Monte Irpino* towards the E. the whole of the upper valley of the Aufidus was included in Samnium, though the lower part of its course lay through Apulia. The exact limit cannot be fixed,—the confines of the Hirpini towards Apulia on the one side, and Lucania on the other, being, like the boundaries of Samnium in general, almost wholly arbitrary, and not marked by any natural limit. It may be considered, indeed, that in general the mountain country belonged to Samnium, and the lower falls or hills to Apulia; but it is evident that such a distinction is itself often arbitrary and uncertain. In like manner, the rugged mountain chain which extends along the right bank of the Aufidus appears to have been included in Samnium; but the line of demarcation between this and Lucania cannot be determined with accuracy. On the other hand, the detached volcanic mass of Mons Vultur, with the adjacent city of Venusia, was certainly not considered to belong to Samnium.

II. History.

All ancient writers agree in representing the Samnites as a people of Sabine origin, and not the earliest occupants of the country they inhabited when they first appear in history, but as having migrated thither at a comparatively late period. (Varr. *L. L.* vii. 29; Appian, *Samnit.*, *Fr.* 4, 5: Strab. v. p. 250; Fest. *s. v. Samnites*, p. 326; A. Gell. xi. 1.) This account of their origin is strongly confirmed by the evidence of their name; the Greek form of which, Σαυνῖται, evidently contains the same root as that of Sabini (*Sav*-nitae or *Saf*-nitae, and *Sab*-ini or *Saf*-ini); and there is reason to believe that they themselves used a name still more closely identical. For the Oscan form "Safinim," found on some of the denarii struck by the Italian allies during the Social War, cannot refer to the Sabines usually so called, as that people was long before incorporated with the Romans, and is, in all probability, the Oscan name of the Samnites. (Mommsen, *Unter Ital. Dialekte*, p. 293; Friedländer, *Oskische Münzen*, p. 78.) The adjective form Sabellus was also used indifferently by the Romans as applied to the Sabines and the Samnites. [Sabini.]

The Samnite emigration was, according to Strabo (v. p. 250), one of those sent forth in pursuance of a vow, or what was called a "ver sacrum." It was, as usual, under the special protection of Mars, and was supposed to have been guided by a bull. (Strab. *l. c.*) It is probable from this statement that the emigrants could not have been numerous, and that they established themselves in Samnium rather as conquerors than settlers The previously existing population was apparently Oscan. Strabo tells us that they established themselves in the land of the Oscans (*l. c.*); and this explains the circumstance that throughout the Samnite territory the language spoken was Oscan. (Liv. x. 20.) But the Oscans themselves were undoubtedly a cognate tribe with the Sabines [Italia]; and whatever may have been the circumstances of the conquest (concerning which we have no information), it seems certain that at an early period both branches of the population had completely coalesced into one people under the name of the Samnites.

The period at which the first emigration of the Samnites took place is wholly unknown; but it is probable that they had not been long in possession of their mountainous and inland abodes before they began to feel the necessity of extending their dominion over the more fertile regions that surrounded them. Their first movements for this purpose were probably those by which they occupied the hilly but fertile tract of the Frentani on the shores of the Adriatic, and the land of the Hirpini on the S. Both these nations are generally admitted to be of Samnite origin. The Frentani, indeed, were sometimes reckoned to belong to the Samnite nation, though they appear to have had no political union with them [Frentani]: the Hirpini, on the contrary, were generally regarded as one of the component parts of the Samnite nation; but they appear to have been originally a separate colony, and the story told by Strabo and others of their deriving their name from the wolf that had been their leader, evidently points to their having been the result of a separate and subsequent migration. (Strab. v. p. 250; Serv. *ad Aen.* xi. 785.) The period of this is, however, as uncertain as that of the first settlement of the other Samnites: it is not till they began to spread themselves still further both towards the S. and W., and press upon their neighbours in Lucania and Campania, that the light of history begins to dawn upon their movements. Even then their chronology is not clearly fixed; but the conquest and occupation of Campania may be placed from about B. C. 440 to B. C. 420, and was certainly completed by the last of these dates. [Campania.] That of Lucania must probably be placed somewhat later; but whatever were the causes which were at this time urging the movements of the Sabellian tribes towards the S., they seem to have continued steadily in operation; and within less than half a century (B. C. 410—360) the Samnites spread themselves through the whole of Lucania, and almost to the southern extremity of Italy. [Lucania.] The subsequent fortunes of these conquering races, and their contests with the cities of Magna Graecia, do not belong to our present subject, for the Lucanians seem to have early broken off all political connection with their parent nation, the Samnites, just as the latter had done with their Sabine ancestors. This laxity in their political ties, and want of a common bond of union, seems to have been in great measure characteristic of the Sabellian races, and was one of the causes which undoubtedly paved the way for their final subjection under the Roman yoke. But the Samnites seem to have retained possession, down to a much later period, of

the tract of country from the Silarus to the Sarnus, which was subsequently occupied by the Picentini. (Scylax, p. 3. § 11; Niebuhr, vol. i p. 94.) They certainly were still in possession of this district in the Second Samnite War; and it is probable that it was not till the close of their long struggles with Rome that it was wrested from them, when the Romans transplanted thither a colony of Picentines, and thus finally cut off the Samnites from the sea. On the side of Apulia the progress of the Samnites was less definite: and it does not appear that they established themselves in the permanent possession of any part of that country, though they were certainly pressing hard upon its frontier cities; and it was probably the sense of this and the fear of the Samnite arms that induced the Apulians early to court the alliance of Rome. [APULIA.]

The Samnite nation, when it first appears in Roman history, seems to have consisted of four different tribes or cantons. Of these the PENTRI and the HIRPINI were much the most powerful; so much so indeed that it is difficult to understand how such petty tribes as the CARACENI and CAUDINI could rank on terms of equality with them. The FRENTANI are frequently considered as forming a fifth canton; but though that people was certainly of Samnite race, and must have been regarded by Scylax as forming an integral part of the Samnite nation, as he describes the Samnites as occupying a considerable part of the coast of the Adriatic (*Peripl.* p. 5. § 15), they seem to have already ceased to form a part of their political body at the time when they first came into contact with Rome. [FRENTANI.] We have no account of the nature and character of the political constitution that bound together these different tribes. It seems to have been a mere federal league, the bonds of which were drawn closer together in time of war, when a supreme general or commander-in-chief was chosen to preside over the forces of the whole confederacy, with the title of Embratur, the Sabellian form corresponding to the Latin Imperator. (Liv. ix. 1; Niebuhr, vol. i. p. 107.) But we find no mention, even on occasions of the greatest emergency, of any regular council or deliberative assembly to direct the policy of the nation; and the story told by Livy of the manner in which Herennius Pontius was consulted in regard to the fate of the Roman army at the Caudine Forks seems to negative the supposition that any such body could have existed. (Liv. ix. 3; see also viii. 39.)

The first mention of the Samnites in Roman history, is in B. C. 354, when we are told that they concluded a treaty of alliance with the republic, the progress of whose arms was already beginning to attract their attention (Liv. vii. 19; Diod. xvi. 45). It is probable that the Samnites, who were already masters of Aesernia and the upper valley of the Vulturnus, were at this time pushing forward their arms down the course of that valley, and across the mountain country from thence to the Liris, then occupied by the Volscians, Auruncans, and other tribes, of Ausonian or Oscan origin. It was not long before these onward movements brought them into collision with the Romans, notwithstanding their recent alliance. Among the minor tribes in this part of Italy were the Sidicini, who, though situated on the very borders of Campania, had hitherto preserved their independence, and were not included in the Campanian people [SIDICINI]. This petty people having been assailed by the Samnites, upon what cause or pretext we know not, and finding themselves unable to cope with such powerful neighbours, invoked the assistance of the Campanians. The latter, notwithstanding their connection with the Samnites, readily espoused the cause of the Sidicini, but it was only to bring the danger upon their own heads; for the Samnites now turned their arms against the Campanians, and after occupying with a strong force the ridge of Mount Tifata, which immediately overlooks Capua, they descended into the plain, defeated the Campanians in a pitched battle at the very gates of Capua, and shut them up within the walls of the city (Liv. vii. 29). In this extremity the Campanians in their turn applied for assistance to Rome, and the senate, after some hesitation on account of their recent alliance with the Samnites, granted it (*Ib.* 30, 31). Thus began the First Samnite War (B. C. 343), the commencement of that long struggle which was eventually to decide whether the supremacy of Italy was to rest with the Romans or the Samnites.

This first contest was, however, of short duration. In the first campaign the two consuls M. Valerius Corvus and A. Cornelius Cossus gained two decisive victories; the one at the foot of Mount Gaurus, the other near Saticula. The first of these, as Niebuhr observes (vol. iii. p. 119). was of especial importance; it was the first trial of arms between the two rival nations, and might be taken as a sort of omen of the ultimate issue of the contest. A third battle near Suessula, where the remains of the army that had been defeated at Mount Gaurus, after having been reinforced, again attacked Valerius, terminated in an equally decisive victory of the Romans; and both consuls triumphed over the Samnites (Liv. vii. 32—38; *Fast. Capit.*). The next year the military operations of the Romans were checked by a mutiny of their own army, of which the commons at Rome took advantage; and the city was divided by dissensions. These causes, as well as the increasing disaffection of the Latins, naturally disposed the Romans to peace, and a treaty was concluded with the Samnites in the following year, B. C. 341. The account which represents that people as humiliated and suing for peace, is sufficiently refuted by the fact that the Romans abandoned the Sidicini to their fate, and left the Samnites free to carry out their aggressive designs against that unfortunate people (Liv. viii. 1, 2).

The peace which terminated the First Samnite War renewed the alliance previously existing between the Romans and the Samnites. In consequence of this the latter took part in the great war with the Latins and Campanians, which almost immediately followed, not as the enemies, but as the allies, of Rome: and the Roman armies were thus enabled to reach Campania by the circuitous route through the country of the Marsi and Peligni, and down the valley of the Vulturnus (Liv. viii. 6). During the fifteen years that followed, down to the renewal of the contest between Rome and Samnium, the course of events was almost uniformly favourable to the former power. The successful termination of the war with the Latins and Campanians, and the consolidation of the Roman power in both those countries had added greatly to the strength of the republic; and the latter had followed up this advantage by the reduction of several of the smaller independent tribes in the same neighbourhood—the Ausones, Sidicini, and the Privernates, who appear on this occasion as independent of, and separate from, the

other Volscians [PRIVERNUM]. But the power of the Volscians seems to have been by this time very much broken up; and it was apparently during this interval that the Samnites on their side carried on successful hostilities against that people, and wrested from them or destroyed the cities of Sora and Fregellae in the valley of the Liris, while they threatened Fabrateria with the same fate (Liv. viii. 19, 23, x. 1). This movement, however, gave umbrage to the Romans, while the Samnites on their side could not view with indifference the reduction of the Sidicini, and it was evident that a fresh rupture between the two nations could not be long delayed (Id. viii. 17, 19). The attention of the Samnites was, however, drawn off for a time by the danger that threatened them from another quarter, and they joined with their kinsmen the Lucanians to oppose the arms of Alexander, king of Epirus, who was advancing from Paestum into the heart of the country. Both Samnites and Lucanians were defeated by him in a pitched battle; but he subsequently turned his arms towards the south, and his death in B. C. 326 relieved the Samnites from all apprehension in that quarter. (Liv. viii. 17, 24.)

The same year (B. C. 326) witnessed the outbreak of the Second Samnite War. The immediate occasion of this was the assistance furnished by the Samnites to the Greek cities of Palaepolis and Neapolis, against which the Romans had declared war, when the Samnites and Nolans (who were at this time in alliance with Samnium) threw into their cities a strong body of auxiliaries as a garrison. They did not, however, avert the fall of Palaepolis; while Neapolis escaped a similar fate, only by espousing the alliance of Rome, to which it ever after steadily adhered (Liv. viii. 22—26). The Romans had about the same time secured a more important alliance in another quarter; the Lucanians and Apulians, with whom, as Livy remarks, the republic had previously had no relations, either friendly or hostile, now concluded an alliance with Rome (*Ib.* 25). The Lucanians indeed were soon persuaded by the Tarentines to abandon it again (*Ib.* 27), but the Apulians continued steadfast; and though it is evident that the whole nation was not united, and that many of the chief towns took part with the Samnites, while others continued to side with Rome, yet such a diversion must have been of the greatest consequence. Hence throughout the war we find the contest divided into two portions, the Romans on the one side being engaged with the Samnites on the frontiers of Campania, and in the valley of the Vulturnus, from whence they gradually pushed on into the heart of Samnium; and on the other carrying on the war in Apulia, in support of their allies in that country, against the hostile cities supported by the Samnites. It is evident that the Frentani must have at this time already separated themselves from the Samnite alliance, otherwise it would have been impossible for the Romans to march their armies, as we find them repeatedly doing, along the coast of the Adriatic into Apulia. (Liv. ix. 2, 13.)

The first operations of the war were unimportant; the Romans conquered some small towns in the valley of the Vulturnus (Liv. viii. 25); and we are told that Q. Fabius and L. Papirius gained repeated victories over the Samnites, so that they even sued for peace, but obtained only a truce for a year, and, without observing even this, resumed the contest with increased forces. (*Ib.* 30, 36, 37.) It is evident therefore that no real impression had been made upon their power. Nor did the victory of A. Cornelius Arvina in the following year (B. C. 322), though it again induced them to sue for peace without success, produce any permanent effect; for the very next year (B. C. 321) the Samnites under the command of C. Pontius were not only able to take the field with a large army, but inflicted on the Romans one of the severest blows they had ever sustained in the celebrated pass of the Caudine Forks. [CAUDIUM.] There can be little doubt that the circumstances and character of that disaster are greatly disguised in the accounts transmitted to us; but, whatever may have been its true nature, it is certain that it caused no material interruption of the Roman arms, and that, after repudiating the treaty or capitulation concluded by the consuls, the Romans renewed the contest with undiminished vigour. It is impossible here to follow in detail the operations of the succeeding campaigns, which were continued for seventeen years with many fluctuations of fortune. The disaster at Caudium shook the faith of many of the Roman allies, and was followed by the defection even of their own colonies of Satricum, Fregellae, and Sora. Some years later (B. C. 315) the capture of Saticula by the Romans and of Plistia by the Samnites shows that both armies were still engaged on the very frontiers of Samnium; while the advance of the Samnites to the pass of Lautulae, and the victory which they there a second time obtained over the Romans (Liv. ix. 22, 23; Diod. xix. 72), once more gave a shock to the power of the latter, and for a moment endangered their supremacy in Campania. But they speedily recovered the advantage, and the victory gained by them at a place called Cinna (of uncertain site) decided the submission of the revolted Campanians. (Liv. ix. 27; Diod. xix. 76.) Their arms had meanwhile been successful in Apulia, and had ultimately effected the reduction of the whole province, so that in B. C. 316 the consul Q. Aemilius Barbula was able to carry the war into Lucania, where he took the town of Nerulum. (Liv. ix. 20.) The decisive victory of the consuls of B. C. 314 had also for the first time opened the way into the heart of Samnium, and they laid siege to Bovianum, the capital of the Pentri. The next year was marked by the fall of Nola, followed by that of Atina and Calatia (*Cajazzo*); and it seemed probable that the war was at length drawing to a close in favour of the Romans, when the outbreak of a fresh war with the Etruscans in B. C. 311 divided the attention of that people, and, by occupying a large part of their forces in another quarter, operated a powerful diversion in favour of the Samnites. To these additional enemies were added the Umbrians as well as the Marsi and Peligni; yet the Romans not only made head against all these nations, but at the same time carried their victorious arms into the heart of Samnium. Bovianum, the capital city of the Pentri, was twice taken and plundered, once in 311 by C. Junius, and again in 305 by T. Minucius. At the same time Sora and Arpinum were finally added to the Roman dominion. These successive defeats at length compelled the Samnites to sue for peace, which was granted them in B. C. 304; but on what terms is very uncertain. It seems impossible to believe that the Romans, as asserted by Livy, should have restored them their ancient treaty of alliance, and it is probable that they in some form consented to acknowledge the supremacy of Rome. (Liv. ix. 45; Dionys. *Exc.* p. 2331; Niebuhr, vol. iii. p. 259.)

But the peace thus concluded was of short duration. Little more than five years elapsed between the close of the Second Samnite War and the commencement of the Third. It might well have been thought that, after a struggle of more than twenty years' duration, the resources of the Samnites, if not their spirit, would have been exhausted; but they seem to have been actively engaged, even before the actual outbreak of hostilities, in organising a fresh coalition against Rome. A new and formidable auxiliary had appeared in a large body of Gauls, which had recently crossed the Alps, and, uniting with their countrymen the Senones, threatened the Romans from the N. Rome was at this time engaged in war with the Etruscans and Umbrians, and the Etruscans hastened to secure the services of the Gauls. Meanwhile the Samnites, deeming the attention of the Romans sufficiently engaged elsewhere, attacked their neighbours the Lucanians, probably with the view of restoring the power in that country of the party favourable to the Samnite alliance. The opposite party, however, called in the Romans to their assistance, who declared war against the Samnites, and thus began the Third Samnite War, B. C. 298. (Liv. x. 11.) The contest had now assumed larger dimensions; the Samnites concluded a league with the Etruscans, Umbrians, and Gauls, and for several successive campaigns the operations in Samnium were subordinate to those in the valley of the Tiber. But the territory of Samnium itself was at the same time ravaged by the Roman generals in so systematic a manner, that it is clear they had obtained a decided superiority in the field; and though the Samnites on one occasion retaliated by laying waste the Campanian and Falernian plains, they were soon again driven back to their mountain fastnesses. (Liv. x. 15, 17, 20.) At length, in B. C. 295, the great battle of Sentinum, in which the united forces of the Gauls and Samnites were totally defeated by the Roman consul Q. Fabius, decided the fortune of the war. Gellius Egnatius, the Samnite general, who had been the main organiser of the confederacy, was slain, and the league itself virtually broken up. (Liv. x. 27—30.) Nevertheless the Samnites continued to carry on the war with unabated energy; and in B. C. 293 they raised a fresh army of 40,000 men, levied with solemn sacred rites, and arrayed in a peculiar garb. These circumstances sufficiently prove the importance which they attached to this campaign, yet its result was not more successful than those which had preceded it, and the Samnite armies were again defeated by the consuls L. Papirius Cursor and Sp. Carvilius in two successive battles near Aquilonia and Cominium. (Liv. x. 38—45.) The operations of the subsequent campaigns are imperfectly known to us, from the loss of the books of Livy in which they were related: but the next year (B. C. 292) C. Pontius, the victor of the Caudine Forks, reappears, after a long interval, at the head of the Samnite armies; he defeated Q. Fabius, but was in his turn defeated in a far more decisive engagement, in which it is said that 20,000 Samnites were slain, and 4000 taken prisoners, including C. Pontius himself, who was led in triumph by Fabius, and then put to death. (Oros. iii. 22; Liv. *Epit.* xi.) It is probable that this battle gave the final blow to the Samnite power, yet their resistance was still prolonged for two years more; and it was not till B. C. 290 that they consented to lay down their arms and sue for peace. Even in that year the consul M'. Curius Dentatus could still earn the honour of a triumph, and the fame of having put an end to the Samnite wars after they had lasted for more than fifty years. (Liv. *Epit.* xi.; Eutrop. ii. 9.)

The conclusion of the Third Samnite War is regarded by some of the Roman historians as the close of the struggle between Rome and Samnium, and not without reason, for though the name of the Fourth Samnite War is given by modern writers to the war that broke out afresh in B. C. 282, the Samnites on that occasion certainly figure rather as auxiliaries than as principals. They, however, joined the league which was formed at the instigation of the Tarentines against Rome; and bore a part in all the subsequent operations of the war. They seem indeed to have at first looked with jealousy or suspicion upon the proceedings of Pyrrhus; and it was not till after the battle of Heraclea that they sent their contingent to his support. (Plut. *Pyrrh.* 17.) But in the great battle at Asculum the following year (B. C. 278) the Samnites bore an important part, and seem to have sustained their ancient reputation for valour. (Dionys. xx. *Fr.* Didot.) The departure of Pyrrhus for Sicily shortly after, and his final defeat by M'. Curius at Beneventum after his return (B. C. 274), left the Samnites and their allies to bear the whole brunt of the war, and they were wholly unable to contend with the power of Rome. We know nothing in detail of these last campaigns: we learn only that in B. C. 272, just before the fall of Tarentum, the Samnites, as well as their allies the Lucanians and Bruttians, made their final and absolute submission; and the consul Sp. Carvilius celebrated the last of the long series of triumphs over the Samnites. (Zonar. viii. 6; Liv. *Epit.* xiv.; *Fast. Capit.*) A fresh revolt indeed broke out in the N. of Samnium three years afterwards, among the petty tribe of the Caraceni, but was speedily suppressed, before it had attained any more formidable character. (Zonar. viii. 7; Dionys. xx. 9, *Fr.* Mai.)

We have no account of the terms on which the Samnites were received to submission by the Romans, or of their condition as subjects of the republic. But there can be no doubt that the policy of the dominant people was to break up as much as possible their national organisation and all bonds of union between them. At the same time two colonies were established as fortresses to keep them in check: one at Beneventum, in the country of the Hirpini (B. C. 268), and the other at Aesernia, in the valley of the Vulturnus (B. C. 264). All these precautions, however, did not suffice to secure the fidelity of the Samnites during the Second Punic War. After the battle of Cannae (B. C. 216), the Hirpini were among the first to declare themselves in favour of Hannibal, and their example is said to have been followed by all the Samnites, except the Pentrians. (Liv. xxii. 61.) It is singular that this tribe, long the most powerful and warlike of all, should have thus held aloof; but the statement of Livy is confirmed by the subsequent course of the war, during which the Pentrians never seem to have taken any part, while the land of the Hirpini, and the southern portions of Samnium bordering on Lucania, were frequently the scene of hostilities. But the Roman colonies Aesernia and Beneventum never fell into the hands of the Carthaginians; and the latter was through a great part of the war held by one of the Roman generals, as a post of the utmost military importance. In B. C. 214 and again in B. C. 212,

the land of the Hirpini was still in the hands of the Carthaginians, and became the scene of the operations of Hannibal's lieutenant Hanno against Sempronius Gracchus. It was not till B. C. 209 that, Hannibal having been finally compelled to relinquish his hold upon Central Italy, the Hirpini (and apparently the other revolted Samnites also) renewed their submission to Rome. (Liv. xxvii. 15.)

From this time we hear no more of the Samnites in history till the great outbreak of the Italian nations, commonly known as the Social War, B. C. 90, in which they once more took a prominent part. They were not indeed among the first to take up arms, but quickly followed the example of the Picentes and Marsi; and so important an element did they constitute of the confederation, that of the two consuls chosen as the leaders of the allies, one was a Samnite, Caius Papius Mutilus. (Diod. xxxvii. 2. p. 539.) Besides Papius, several of the most distinguished of the Italian generals, Marius Egnatius, Pontius Telesinus, and Trebatius, were also of Samnite origin; and after the fall of Corfinium, the seat of government and head-quarters of the allies was transferred to the Samnite town of Bovianum, and from thence subsequently to Aesernia. The Samnites indeed suffered severely in the second campaign of the war, being attacked by Sulla, who defeated Papius Mutilus, took Aeculanum and Bovianum by assault, and reduced the Hirpini to submission. The other Samnites, however, still held out, and an army which had thrown itself into Nola was able to prolong its resistance against all the efforts of Sulla. Hence at the end of the second year of the war (B. C. 89), when all the other nations of Italy had successively submitted and been admitted to the Roman franchise, the Samnites and Lucanians were still unsubdued, and maintained a kind of guerilla warfare in their mountains, while the strong fortress of Nola enabled them still to maintain their footing in Campania. (Vell. Pat. ii. 17; Liv. *Epit.* lxxx; Diod. xxxvii. 2. p. 540; Appian, *B. C.* i. 53.) In this state of things the civil war which broke out between Sulla and Marius altered the nature of the contest. The Samnites warmly espoused the Marian cause, from a natural feeling of enmity towards Sulla, from whose arms they had recently suffered so severely; and so important was the share they took in the struggle that ensued after the return of Sulla to Italy (B. C. 83), that they in some measure imparted to what was otherwise a mere civil war, the character of a national contest. A large number of them served in the army of the younger Marius, which was defeated by Sulla at Sacriportus (Appian, *B.C.* i. 87); and shortly afterwards an army, composed principally of Samnites and Lucanians, under the command of C. Pontius Telesinus, made a desperate attempt to relieve Praeneste by marching suddenly upon Rome. They were met by the army of Sulla at the very gates of the city, and the battle at the Colline gate (Nov. 1, B. C. 82), though it terminated in the complete victory of Sulla, was long remembered as one of the greatest dangers to which Rome had ever been exposed. (Vell. Pat. ii. 27; Appian, *B. C.* i. 93; Plut. *Sull.* 28; Lucan, ii. 135—138.) Pontius Telesinus fell in the field, and Sulla displayed his implacable hatred towards the Samnites by putting to the sword, without mercy, 8000 prisoners who had been taken in the battle. (Appian, *l. c.*; Strab. v. 249; Plut. *Sull.* 30.) He had already put to death all the Samnites whom he had taken prisoners at the battle of Sacriportus, alleging that they were the eternal enemies of the Roman name; and he now followed up this declaration by a systematic devastation of their country, carried on with the express purpose of extirpating the whole nation. (Strab. *l. c.*) It can hardly be believed that he fully carried out this sanguinary resolution, but we learn from Strabo that more than a century afterwards the province was still in a state of the utmost desolation,—many of what had once been flourishing cities being reduced to the condition of mere villages, while others had altogether ceased to exist. (Strab. *l. c.*)

Nor is it probable that the province ever really recovered from this state of depression. The rhetorical expressions of Florus point to its being in his day still in a state of almost complete desolation. (Flor. i. 16. § 8.) Some attempts seem indeed to have been made under the Roman Empire to recruit its population with fresh colonists, especially by Nero, who founded colonies at Saepinum, Telesia, and Aesernia (*Lib. Colon.* pp. 259, 260, &c.); but none of these attained to any great prosperity, and the whole region seems to have been very thinly populated and given up chiefly to pasturage. Beneventum alone retained its importance, and continued to be a flourishing city throughout the period of the Roman Empire. In the division of Italy under Augustus the land of the Hirpini was separated from the rest of Samnium, and was placed in the Second Region with Apulia and Calabria, while the rest of the Samnites were included in the Fourth Region, together with the Sabines, Frentani, Peligni, &c. (Plin. iii. 11. s. 16, 12. s. 17.) At a later period this district was broken up, and Samnium with the land of the Frentani constituted a separate province. This is the arrangement which we find in the Notitia, and it was probably introduced at an earlier period, as the Liber Coloniarum in one part gives under a separate head the "Civitates Regionis Samnii," including under that name the towns of the Peligni, as well as the Frentani. (*Notit. Dign.* ii. pp. 9, 10; *Lib. Colon.* p. 259.) In another part of the same document, which is undoubtedly derived from different sources, the Samnite towns are classed under the head of Campania: but this union, if it ever really subsisted, could have been but of very brief duration. The "Provincia Samnii" is repeatedly mentioned in inscriptions of the 4th century, and was governed by an officer styled "Praeses." (Mommsen, *Die Lib. Col.* p. 206.) The same appellation continued in use after the fall of the Roman Empire, and the name of Samnium as a separate province is found both in Cassiodorus and Paulus Diaconus. (Cassiod. *Var.* xi. 36; P. Diac. *Hist. Lang.* ii. 20.) The only towns in it that retained any consideration in the time of the last writer were Aufidena, Aesernia, and Beneventum. The last of these cities became under the Lombards the capital of an independent and powerful duchy, which long survived the fall of the Lombard kingdom in the N. of Italy. But in the revolutions of the middle ages all trace of the name and ancient limits of Samnium was lost. At the present day the name of *Sannio* is indeed given to a province of the kingdom of Naples; but this is merely an official designation, recently restored, to the district, which had previously been called the *Contado di Molise.* This and the adjoining province of the *Principato Ultra* comprise the greater part of the ancient Samnium; but the modern boundaries have no reference to the ancient divisions, and a considerable portion

of the Samnite territory is included in the *Terra di Lavoro*, while a corner in the NW. is assigned to the *Abruzzi*.

Of the national character of the Samnites we learn little more than that they were extremely brave and warlike, and had inherited to a great degree the frugal and simple habits of their ancestors the Sabines. We find also indications that they retained the strong religious or superstitious feelings of the Sabines, of which a striking instance is given by Livy in the rites and ceremonies with which they consecrated the troops that they levied in B. C. 293. (Liv. x. 38.) But they had almost ceased to exist as a nation in the days of the Latin poets and writers that are preserved to us; and hence we cannot wonder that their name is seldom alluded to. They are said to have dwelt for the most part, like the Sabines, in open villages; but it is evident, from the accounts of their earliest wars with the Romans, that they possessed towns, and some of them, at least, strongly fortified. This is confirmed by the remains of walls of a very ancient style of construction, which are still preserved at Aesernia and Bovianum, and still more remarkably at Aufidena. (Abeken, *Mittel Italien*, pp. 142, 148.) But from the very nature of their country the Samnites must always have been, to a great extent, a rude and pastoral people, and had probably received only a faint tinge of civilisation, through their intercourse with the Campanians and Apulians.

III. Topography.

The rivers of the Samnite territory have been already noticed in connection with the mountain chains and groups in which they take their rise. From the purely inland character of the region, none of these rivers, with the exception of the Calor and its tributaries, belong wholly to Samnium, but traverse the territories of other nations before they reach the sea. Thus the Sagrus and Trinius, after quitting the mountains of Samnium, flow through the land of the Frentani to the Adriatic; the Tifernus separates the territory of that people from Apulia, while the Frento and the Aufidus traverse the plains of Apulia. On the other side of the central chain the Vulturnus, with its affluent the Calor, and the tributaries of the latter, the Sabatus and Tamarus, carry down the whole of the waters of the Apennines of Samnium, which flow to the Tyrrhenian sea.

The topography of Samnium is the most obscure and confused of any part of Italy. The reason of this is obvious. From the continued wars which had devastated the country; and the state of desolation to which it was reduced in the time of the geographers, only a few towns had survived, at least in such a state as to be deemed worthy of notice by them; and many of the names mentioned by Livy and other authors during the early wars of the Romans with the Samnites never reappear at a later period. It is indeed probable that some of these were scarcely towns in the stricter sense of the term, but merely fortified villages or strongholds, in which the inhabitants collected their cattle and property in time of war. Those which are mentioned by the geographers as still existing under the Roman Empire, or the site of which is clearly indicated, may be briefly enumerated. AUFIDENA, in the upper valley of the Sagrus, is the only town that can be assigned with any certainty to the Caraceni. In the upper valley of the Vulturnus was AESERNIA, the territory of which bordered on that of Venafrum in Campania. At the northern foot of the *Monte Matese* was BOVIANUM; and in the mountain tract between it and the Frentani was TREVENTUM or TEREVENTUM (*Trivento*). SE. of Bovianum lay SAEPINUM, the ruins of which are still visible near *Sepino;* and at the southern foot of the *Monte Matese*, in the valley of the Calor, was TELESIA. ALLIFAE lay to the NW. of this, in the valley of the Vulturnus, and at the foot of the *Matese* in that direction. In the country of the Hirpini were BENEVENTUM, the capital of the whole district; AECULANUM, near *Mirabella*, about 15 miles to the SW.; EQUUS TUTICUS, near the frontiers of Apulia; AQUILONIA, at *Lacedogna*, on the same frontier; ABELLINUM, near the frontiers of Campania; and COMPSA, near the sources of the Aufidus, bordering on Lucania, so that it is assigned by Ptolemy to that country. On the borders of Campania, between Beneventum and the plains, were Caudium, apparently once the capital of the Caudine tribe; and SATICULA, the precise site of which has not been determined, but which must have been situated in the neighbourhood of Mount Tifata. The Samnite CALATIA, on the other hand, was situated N. of the Vulturnus, at *Cajazzo;* and COMPULTERIA, also a Samnite city, was in the same neighbourhood. The group of hills on the right bank of the Vulturnus, extending from that river towards the Via Latina, must therefore have been included in Samnium; but Teanum and Cales, situated on that highroad, were certainly both of them Campanian towns. It is probable, however, that in early times the limits between Campania and Samnium were subject to many fluctuations; and Strabo seems to regard them as imperfectly fixed even in his day. (Strab. v. p. 249.)

Of the minor towns of Samnium, or those which are mentioned only in history, may be noticed: DURONIA (Liv. x. 39), identified, but on very slight grounds, with *Civita Vecchia*, N. of *Bojano;* MURGANTIA (Liv. x. 17), supposed to be *Baselice*, on the frontiers of Apulia, near the sources of the Frento (*Fortore*); ROMULEA, on the frontiers of Apulia, between Aeculanum and Aquilonia; TRIVICUM, in the same neighbourhood, still called *Trevico;* PLISTIA, near *Sta Agata dei Goti*, on the frontiers of Campania; CALLIFAE and RUFRIUM, both of them mentioned by Livy (viii. 25) in connection with Allifae, and probably situated in the neighbourhood of that city; COMINIUM (Liv. x. 39, 44), of very uncertain site; AQUILONIA (Liv. *l. c.*), also of uncertain site, but which must be distinguished from the city of the same name in the country of the Hirpini; Maronea, noticed by Livy in the Second Punic War, when it was recovered by Marcellus, in B. C. 210 (Liv. xxvii. 1); MELAE, Fulfulae, and Orbitanium, all of which are noticed on only one occasion (Liv. xxiv. 20), and the sites of which are wholly undetermined.* To these must be added Cluvia, Cimetra, Volana, Palumbinum, and Herculaneum, all of them mentioned as towns taken from the Samnites (Liv. ix. 31, x. 15, 45), but of which nothing more is known; Imbrinium (Liv. viii. 30), where Fabius gained a victory over the Samnites in B. C. 325; Cinna, which is repre-

* It has been thought unnecessary to repeat in these and other similar cases the modern sites assigned by Italian or German topographers, where these rest on no other foundation than mere conjecture.

sented by Diodorus as the scene of the decisive victory in B. C. 314 (Diod. xix. 76); and several places of which the names are found only in Virgil and Silius Italicus,—MUCRAE, RUFRAE, BATULUM, and CELENNA (Virg. *Aen.* vii. 739; Sil. Ital. viii. 564), which seem to have been situated on the borders of Campania, so that it is doubtful to which country they are to be assigned. The minor towns of the Hirpini have been already discussed in that article; Pauna, or Panna, a name found in Strabo (v. p. 250) as that of a place still existing in his time, is probably corrupt, but we are wholly at a loss what to substitute. On the other hand, inscriptions attest the existence under the Roman Empire of a town called Juvavium, or Juvanum, of municipal rank, which is not mentioned by any of the geographers, but is probably the one meant by the Liber Coloniarum, which notices the "Iobanus ager" among the "civitates Samnii." (*Lib. Col.* p. 260.) It was probably situated in the neighbourhood of *Sta Maria di Palazzo*, a few miles N. of the Sagrus, and on the very frontiers of the Marrucini. (Mommsen, *Inscr. R. N.* p. 271.) The existence of a town named Tifernum is very doubtful [TIFERNUS]; and that of a city of the name of Samnium, though adopted by many local writers (Romanelli, vol. ii. p. 490), certainly rests on no adequate authority.

Samnium was traversed in ancient times by several lines of highway. One of these, following nearly the same line with the modern road from *Naples* to *Aquila*, proceeded up the valley of the Vulturnus from Venafrum to Aesernia, thence crossed the mountain ridge to Aufidena in the valley of the Sagrus, and from thence again over another mountain pass to Sulmo in the land of the Peligni. Another branch led from Aesernia to Bovianum, and from thence to Equus Tuticus, where it joined the Via Appia or Trajana. A third followed the valley of the Vulturnus from Aesernia to Allifae, and thence by Telesia to Beneventum. There seems also to have been a cross line from the latter place by Saepinum to Bovianum. (*Itin. Ant.* p. 102; *Tab. Peut.*) But these different lines are very confusedly laid down in the Tabula, and the distances given are often either corrupt or erroneous. The course of the Via Appia, and its branch called the Via Trajana, through the land of the Hirpini, has been already noticed in that article. [See also VIA APPIA.] [E. H. B.]

SAMO'NIUM, SAMMO'NIUM, SALMO'NIUM, SALMO'NE PROM. (Σαμώνιον, Σαλμώνιον, Strab. ii. p. 106, x. pp. 474, 475, 478, 489; Σαλμώνη, *Acts*, xxvii. 7; comp. Ptol. iii. 15. § 5; Pomp. Mela, ii. 7. § 12; Plin. iv. 20. s. 21; *Stadiasm.* § 318: *Eth.* Σαλμώνιος, Σαλμώνις, Apoll. Rhod. iv. 1693; Dionys. Per. 110; *Inscrip. ap. Böckh, Corpus*, vol. ii. p. 409), the E. promontory of Crete, to which the seamen of the Alexandrian vessel which conveyed Paul to Rome, thinking they could pursue their voyage under the lee of the island, ran down. (*Acts, l. c.*) Much difference of opinion has been entertained relative to the identification of this celebrated foreland, the position of which would seem to be incontrovertibly ascertained by the existence of the modern name *C. Salomon.* (Comp. Höck, *Kreta*, vol. i. p. 427.) But though the name is certainly in favour of this site, the statements of the ancients as to its position, and of the seven islets or rocks which surround it, determine conclusively that it must be *C. S. Sidero.* It is true that by the recent Admiralty survey it is not quite so far to the E. as *C. Salomon* (the difference is, however, only a few seconds of longitude); but by its extreme extension from the mainland it would be considered as the principal promontory at this end of the island, and known as the "E. foreland." (Comp. *Museum of Class. Antiquities*, vol. ii. p. 302.) [E. B. J.]

SAMOS or SAMUS (Σάμος: *Eth.* and *Adj.* Σάμιος, Samius, Σαμαῖος, Σαμιακός in Steph.: Σαμιώτης in the language of the modern Greeks, who call the island *Samo*, Σάμο: the Turks call it *Susam Adassi*), a large island in that part of the Aegaean which is called the Icarian sea, and the most important of the Sporades next after Rhodes. The word denotes a height, especially by the sea-shore. (See Const. Porphyrog. *de Them.* 16. p. 41, ed. Bonn.) Hence SAMOTHRACIA, or the Thracian Samos, which is said by Pausanias (vii. 4. § 3) to have been colonised and named by certain fugitives from the Icarian Samos,—and SAME, one of the names of Cephalonia, which is inversely connected with it by one of Strabo's conjectures (x. p. 457). How applicable the idea of elevation is to the island before us may be seen in the narratives and views given by Dr. Clarke (*Travels*, vol. ii. p. 192, vol. iii. p. 366), who uses the strongest language in describing the conspicuous height of Samos above the surrounding islands.

The following earlier names of Samos are mentioned by Pliny (v. 37) and other writers,— Parthenia, Anthemus, Melamphylus, Dryusa and Cyparissia. Some of these have evidently arisen from the physical characteristics of the island. Samos was, and is, well-wooded. It is intersected from E. to W. by a chain of mountains, which is in fact a continuation of the range of Mycale, being separated from it only by the narrow channel, hardly a mile in breadth, which the Turks call the *Little Boghas.* Here was fought the decisive victory against the Persians, B. C. 479. The *Great Boghas*, which is nearly 10 miles in breadth, separates the other extremity of Samos from the comparatively low island of ICARIA. The length of Samos, from E. to W., is about 25 miles. Its breadth is very variable. Strabo reckons the circuit at 600 stadia, Pliny at 87 miles, though he says that Isidorus makes it 100. These differences may be readily accounted for by omitting or including *Port Vathy*, which is a wild-looking bay, though a very serviceable harbour, on the north. Here the modern capital is situated: but in ancient times the bay of *Vathy* seems to have been comparatively deserted—perhaps, as Tournefort suggests, because it was peculiarly exposed to pirates, who infested the straits and bays of an island which lay in the route of commerce between the Bosporus and Egypt. What Tournefort tells us of his travels through Samos gives us the idea of a very rugged, though picturesque and productive, island. (Possibly the Palinurus and Panormus of Samos, mentioned by Livy, xxxvii. 11, may have been in the bay of *Vathy.*) The highest point, *Mount Kerkis*, the ancient Cerceteus (Strab. x. p. 488), which is nearly always covered with snow, and reaches the height of 4725 English feet, is towards the west. A ridge, which branches off in a south-easterly direction from the main range, and ends in the promontory of Poseidium, opposite Mycale, was called Ampelus, which name seems also to have been given to the whole mountain-system (Strab. xiv. p. 637). The westernmost extremity of the island, opposite Icaria was anciently called Cantharium. Here the cliffs are very bare and lofty. A landslip, which has taken place in

this part of the island, has probably given rise to the name by which it is now called (ἡ καταιβατή).

The position of Samos was nearly opposite the boundary-line of Caria and Ionia; and its early traditions connect it, first with Carians and Leleges, and then with Ionians. The first Ionian colony is said to have consisted of settlers from Epidaurus, who were expelled from thence by the Argives. However this may be, we find Samos at an early period in the position of a powerful member of the Ionic confederacy. At this time it was highly distinguished in maritime enterprise and the science of navigation. Thucydides tells us (i. 13) that the Samians were among the first to make advances in naval construction, and that for this purpose they availed themselves of the services of Ameinocles the Corinthian shipbuilder. The story of Pliny (vii. 57), that either they or Pericles the Athenian first constructed transports for the conveyance of horses, though less entitled to literal acceptance, is well worthy of mention; and Samos will always be famous for the voyage of her citizen Colaeus, who, "not without divine direction" (Herod. iv. 152), first penetrated through the Pillars of Hercules into the Ocean, and thus not only opened out new fields of commercial enterprise, but enlarged the geographical ideas of the Greeks by making them for the first time familiar with the phenomenon of the tides.

Under the despot Polycrates, Samos was in fact the greatest Greek maritime power. This famous man, about ten years after the taking of Sardis by Cyrus, held Samos in a position of proud independence, when Lesbos and Chios had submitted to the Persians. He had 1000 bowmen in his pay; he possessed 100 ships of war, and made considerable conquests both among the islands and the mainland. He fought successfully against the Milesians and Lesbians, and made a treaty with Amasis, king of Egypt. Whether we are to take the story in the poetical form in which it is presented to us by Herodotus, or to attribute the change to the more probable motive of self-interest, this treaty was broken off for an alliance with Cambyses. In connection with this monarch's expedition to the Nile, some Samian malcontents were so treacherously treated by Polycrates, that they sought and obtained assistance from Greece. A joint force of Lacedaemonians and Corinthians besieged Polycrates in Samos for forty days: but in this struggle also he was successful. At last his own cupidity, acted on by the fraud of Oroetes, a neighbouring satrap, brought him to a wretched death on the mainland. The time which succeeded was full of crime and calamity for Samos. In the end, Syloson, the brother of Polycrates (whose association with Cambyses is the subject of another romantic story in Herodotus), landed with a Persian army on Samos, and became a tributary despot; but not till his native island had been so depopulated as to give rise to the proverb ἕκητι Συλοσῶντος εὐρυχωρίη. For details see the lives of POLYCRATES and SYLOSON in the *Dict. of Biography*. It was at this period that Pythagoras, who was a native of Samos, left the island to travel in foreign countries, being partly urged to leave his home (according to Plutarch, *Placit.* i. 3) through discontent under the government of Polycrates, who, however, was a patron of literature, and had Anacreon many years at his court. For the chronology of this period see Clinton, *Fast. Hell.* vol. ii. note B. pp. 230—232.

Samos was now Persian. It was from Samos that Datis sailed to Marathon, taking Naxos on his way. But the dominion of the Persians did not last long. When their fleet was gathered at Samos again, after the battle of Salamis, to the number of 400 sail, it was in a great measure the urgency of Samian envoys which induced the commanders of the Greek fleet at Delos to go across to the eastern side of the Aegaean. Then followed that battle in the strait, which completed the liberation of the Greeks.

In the maritime confederacy which was organised soon afterwards under Athenian rule, Samos seems to have been the most powerful of the three islands which were exempted from paying tribute. It was at the instance of her citizens that the common treasure was removed from Delos to Athens. But this friendship with Athens was turned into bitter enmity in consequence of a conflict with Miletus about the territory of Priene. Samos openly revolted; and a large force was despatched from Athens against it under the command of ten generals, two of whom were Sophocles and Pericles. The latter pronounced in the Cerameicus the funeral oration over those who had fallen in the war which, after a resistance of nine months, reduced Samos to complete subjection.

From 439 to 412 Samos remained without fortifications and without a fleet. But about this latter date it became the hinge upon which all the concluding events of the Peloponnesian War really turned. The first movements towards the establishment of an oligarchy at Athens began at Samos through the intrigues of Alcibiades; and yet this island was practically the home of the Athenian democracy during the struggle which ensued. It was at Samos that Alcibiades rejoined his fellow-citizens; and from Samos that he finally sailed for the Peiraeus in 407. Even till after the battle of Arginusae Samos was, more than any other place, the head-quarters and base of operations for the Athenian fleet.

Our notices of the island now become more fragmentary. After the death of Alexander the Great it was for a time subject to the kings of Egypt. (Polyb. v. 35.) Subsequently, it took the part of Antiochus the Great in his war with Rome. It also acted with Mithridates against Rome; but was finally united with the province of Asia B.C. 84. After the battle of Actium, Augustus passed the winter there. Under the Roman emperors it was on the whole a place of no great importance, though it had the honour of being a free state. (Plin. v. 37.) This privilege was taken away under Vespasian. (Suet. *Vesp.* 8.) In the division of the Empire contained in the Synecdemus we find it placed with Rhodes, Cos, Chios, &c., in the *Province of the Islands*. In the later division into *themes*, it seems to be again raised to a distinguished position. It gave its name to a separate theme, which included a large portion of the mainland, and was divided into the two *turmae* of Ephesus and Adramyttium, the governor having his residence (πραιτώριον) at Smyrna; and this arrangement is spoken of in such a way (Const. Porphyrog. *de Them.* *l. c.*) as distinctly to connect it with the ancient renown of Samos.

It would be difficult to follow the fortunes of Samos through the middle ages. (See Finlay's *History of the Byzantine and Greek Empires*, vol. ii. p. 112.) There are some points of considerable interest in its modern history. In 1550, after being sacked by the Ottomans, it was given by Selim to the Capitan Pacha Ochiali, who introduced colonists

from various other places; whence the names of some of the modern villages in the island, *Metelinous*, *Albaniticori*, and *Vourlotes* (*Vourla* giving the name to some islands at the entrance of the bay of Smyrna). Samos was much injured by the ravages of Morosini. In Tournefort's time the largest part of the island was the property of ecclesiastics; and the number of convents and nunneries was considerable. He reckoned the population to be 12,000; now it is estimated at 50,000, nearly the whole being Christian. Samos performed a distinguished part in the War of Independence. The Turks often attempted to effect a landing: the defences constructed by the Samiotes are still visible on the shore: and the Greek fleet watched no point more carefully than this important island. On the 17th of August, 1824, a curious repetition of the battle of Mycale took place. Formidable preparations for a descent on the island were made by Tahir-Pacha, who had 20.000 land-troops encamped on the promontory of Mycale. Canaris set fire to a frigate near Cape Trogillium, and in the confusion which followed the troops fled, and Tahir-Pacha sailed away. At this time the Logothete Lycurgus was τύραννος of the island "in the true classical sense of the word," as is observed by Ross, who describes the castle built by Lycurgus on the ruins of a mediaeval fort, adding that he was then (1841) residing with the rank of Colonel at Athens, and that he was well remembered and much regretted in Samos. This island was assigned to Turkey by the treaty which fixed the limits of modern Greece; but it continued to make struggles for its independence. Since 1835 it has formed a separate Beylick under a Phanariot Greek named Stephen Vogorides, who resides in Constantinople with the title of "Prince of Samos," and sends a governor as his deputy. Besides other rights, the island has a separate flag exhibiting the white Greek cross on a blue ground, with a narrow red stripe to denote dependence on the Porte. It does not appear, however, that this government of Greeks by a Greek for the Sultan is conducive to contentment.

The present inhabitants of this fruitful island are said to be more esteemed for their industry than their honesty. They export silk, wool, wine, oil, and fruits. If the word *Sammet* is derived from this place, it is probable that silk has been an object of its industry for a considerable time. Pliny (xiii. 34) mentions pomegranates among its fruits. At the present day the beans of the carob-tree are exported to Russia, where a cheap spirit for the common people is made from them. We might suppose from the name of Mount Ampelus, that the wine of the island was celebrated in the ancient world; but such a conclusion would be in direct contradiction to the words of Strabo, who notices it as a remarkable fact, that though the wine of the surrounding islands and of the neighbouring parts of the mainland was excellent, that of Samos was inferior. Its grapes, however, under the name of ὀμομηλίδες or ἀμαμηλίδες, are commended by Athenaeus (xiv. p. 653; see Poll. *Onomast.* vi. 11), and now they are one of the most valued parts of its produce. Ross saw these grapes (σταφίδα) drying in large quantities in the sun; and other authorities speak highly of the Malmsey or sweet muscato wine exported in large quantities from Samos. Its marble is abundant; but it has a greater tendency to split into small fragments than that of Pentelicus or Paros. A stone found in the island is said by Pliny (xxxvi. 40) to have been used for polishing gold. He also mentions in several places (*l. c.*, also xxviii. 53, 77, xxxi. 46, xxxv. 19, 53) the various medicinal properties of its earth. The Samian earthenware was in high repute at Rome ("Samia etiamnum in esculentis laudantur," Plin. xxxv. 46), and the name has been traditionally given by modern writers to the "red lustrous pottery" made by the Romans themselves for domestic use. (See Marryatt's *Pottery and Porcelain*, London 1850, pp. 286, 290.) For the natural Flora and Fauna of the island we must be content to refer to Tournefort, who says, among other facts, that tigers sometimes swim across to it from Mycale, which Chandler describes as a mountain infested with wild beasts. The woody flanks of *Mount Kerkis* still supply materials for shipbuilding. It is said in Athenaeus (*l. c.*) that the roses and fruits of Samos came to perfection twice a year; and Strabo informs us that its general fruitfulness was such as to give rise to the proverb φέρει καὶ ὀρνίθων γάλα.

The archaeological interest of Samos is almost entirely concentrated in that plain on the S., which contained the sanctuary of Hera at one extremity and the ancient city on the other. This plain is terminated at the SW. by a promontory, which from its white cliffs is called ἄσπρο κάβο by the Greeks, but which received from the Genoese the name of *Cape Colonna*, in consequence of the single column of the Heraeum which remains standing in its immediate neighbourhood. Virgil tells us (*Aen.* i. 16), that Samos was at least second in the affections of Juno; and her temple and worship contributed much to the fame and affluence of Samos for many centuries. Herodotus says that the temple was the largest he had seen. It was of the Ionic order; in form it was decastyle dipteral, in dimensions 346 feet by 189. (See Leake, *Asia Minor*, p. 348.) It was never entirely finished. At least, the fluting of the columns was left, like the foliage on parts of our cathedrals, incomplete. The original architect was Rhoecus, a Samian. The temple was burnt by the Persians. After its restoration it was plundered by pirates in the Mithridatic War, then by Verres, and then by M. Antony. He took to Rome three statues attributed to Myron: of these Augustus restored the Athene and Heracles, and retained the Zeus to decorate the Capitol. The image of the goddess was made of wood, and was supposed to be the work of Smilis, a contemporary of Daedalus. In Strabo's time the temple, with its chapels, was a complete picture gallery, and the hypaethral portion was full of statues. (See Orig. *c. Cels.* 4.) In the time of Tacitus, this sanctuary had the rights of asylum. (*Ann.* iv. 14.) When Pausanias was there, the people pointed out to him the shrub of Agnus Castus, under the shade of which, on the banks of the river Imbrasus, it was believed that Hera was born. (Paus. *l. c.*) Hence the river itself was called Parthenias, and the goddess Imbrasia. (Comp. Apoll. Rhod. i. 187, Ἰμβρασίης ἕδος Ἥρης.) The anchorage in front of the sanctuary was called ὅρμος Ἡραΐτης. (Athen. xv. p. 672.) The temple was about 200 paces from the shore, according to Ross, who found its whole basement covered with a mass of small fragments of marble, among which are portions of the red tiles with which the temple was roofed. He discovered hardly anything of interest, except an inscription with the word ναοποῖαι.

The appearance of the watercourses of the Imbrasus shows that they are often swollen by rains,

and thus harmonises with the natural derivation of the word. In the plain which extends along the base of the mountains eastwards towards the city, Ross says that there are traces of ancient channels made for the purpose of irrigation. He regards the marshy places near the temple to be the Κάλαμοι and the Ἕλος mentioned by Athenaeus (xiii. p. 572) in connection with the expedition of Pericles. (The former place is likewise referred to by Herodotus, ix. 96.) Across this plain, which is about two miles in length, there is no doubt that a Sacred Way extended from the sanctuary to the city, like that which connected Athens with Eleusis. Somewhere on this line (κατὰ τὴν ὁδὸν τὴν εἰς τὸ Ἡραῖον, Paus. vii. 5. § 6) was the tomb of Rhadine and Leontichus, where lovers used to make their vows; and traces of funeral monuments are still seen at the extremity of the line, close to the city-wall.

The modern town of *Chora*, close to the pass leading through the mountains to *Vathy*, is near the place of the ancient city, which was situated partly in the plain and partly on the slope of the hill. The western wall runs in a straight line from the mountain towards the sea, with the exception of a bend inwards near the tombs just mentioned. Here is a brackish stream (ἡ γλυφάδα), which is the Chesius, the second of the three streams mentioned by Pliny. (See *Etym. Magn. s. v.* Ἀστυπαλαία.) The southern wall does not touch the sea in all its length, and is strengthened by being raised on vaulted substructions. Here and elsewhere the ruins of Samos touch the question of the use of the arch among the Greeks. On the east side of the city the walls are very considerable, being 10 or 12 feet thick, and about 18 feet high. The masonry is partly quadrangular and partly polygonal; there are round towers at intervals on the outside of the wall, and in one place are traces of a gate. In the eastern part of the city was the steep citadel of Astypalaea, which was fortified by Polycrates (Polyaen. *Strat.* i. 23. § 2), and here probably was what Suetonius calls the palace of Polycrates. (Suet. *Calig.* 21.) In the higher part of the town the theatre is distinctly visible; the marble seats are removed; underneath is a large cistern. The general area is covered with small fragments, many of the best having furnished materials for the modern castle of Lycurgus near the shore on the SE.; and little more remains of a city which Herodotus says was, under Polycrates, the greatest of cities, Hellenic or Barbarian, and which, in the time of comparative decay, is still called by Horace *Concinna Samos*.

Herodotus makes especial mention of the harbour and of an immense tunnel which formed an aqueduct for the city. The former of these works (τὸ τιγάνι, as it is now called, from being shaped like a frying-pan) is below Astypalaea; and, though it is now accessible only to small craft, its famous moles remain, one extending eastwards from the castle of Lycurgus, the other extending to meet it from the extremity of the east city-wall southwards. Here Ross saw subterranean passages hewn in the rock, one of which may possibly be the κρυπτὴ διώρυξ ἐκ τῆς ἀκροπόλεος φέρουσα ἐπὶ θάλασσαν (Herod. iii. 146), constructed by Maeandrius after the death of Polycrates. The tunnel has not been clearly identified; but, from what M. Musurus told Prof. Ross, it is probable that it is where Tournefort placed it, and that it penetrated the hill from *Metelinous* to *Chora*, and that thence the water was taken into the city by a covered channel, traces of which remain. It is clear that it cannot be in the quarry pointed out to Ross; both because the cleavage of the rock is in the wrong direction, and because water from such a height would fall like a cascade on the city.

The authorities, to which reference has been made in this article, are, Tournefort (*Voyage du Levant*, 1717, pp. 404—436), who has given a very copious account of the island; and Ross (*Reisen auf den Griechischen Inseln des Agäischer Meeres*, vol. ii. 1843, pp. 139—155), who has examined the sites and remains of the ancient city and Heraeum more carefully than any one else. (See also Clarke, *Travels*, vol. ii. pp. 192—194, vol. iii. pp. 364—367.) Maps of the island will be found in Tournefort and Choiseul-Gouffier; but the best delineation of it is given in three of the English Admiralty charts. There is a small sketch of the neighbourhood of the city in Kiepert's *Hellas* (1841), and a larger one in Ross. In Kiepert's general map the rivers Imbrasus and Chesius are wrongly placed, and also (probably) the ridge of Ampelus. It is very questionable whether the point called Poseidion can be where it is (doubtfully) placed in Ross's plan: the position of the little island Narthecis in the strait seems to show that this promontory ought to be further to the east. (See Strab. xiv. p. 637.) A little volume was published in London, and dedicated to James Duke of York, in 1678, entitled "*A Description of the present State of Samos, Nicaria, Patmos, and Mount Athos*, by Joseph Georgirenes (Γεωργειρήνης), Archbishop of Samos, now living in London, translated by one that knew the author in Constantinople." From this book it appears that Dapper has taken much directly, and Tournefort indirectly. Panofka has written a book on Samos (*Res Samiorum*, Berlin, 1822): and more recently (1856) Guérin has published a work on this island and Patmos. [J. S. H.]

COIN OF SAMOS.

SAMOS, in Triphylia. [SAMICUM.]

SAMOS or SAME, in Cephallenia. [SAME.]

SAMOSATA (Σαμόσατα), a strongly fortified city of Syria, placed by Ptolemy (v. 15. § 11) and Strabo in the district of Commagene. It contained the royal residence, and was a province in the time of Strabo, surrounded by a small but very rich country, and situated at the bridge of the Euphrates. (Strab. xvi. 2. § 3, p. 749.) Its distance from the borders of Cappadocia in the vicinity of Tomisa across Mount Taurus was 450 stadia. (Ib. xiv. 2. § 29, p. 664.) It was besieged and taken by Mark Antony during his campaign in Syria. (Joseph. *Ant.* xiv. 15. § 8.) Its strategic importance is intimated by Caesennius Paetus, prefect of Syria under Vespasian, who, having represented that Antiochus, king of Commagene, was meditating an alliance with the Parthians to enable him to throw off the Roman yoke, warned his imperial master "that Samosata, the largest city of Commagene, was situated on the Euphrates, and would therefore secure the Parthians an easy passage

of the river and a safe asylum on the western side." The legate was therefore instructed to seize and hold possession of Samosata. (*B. J.* vii. 7. § 1.) This town gave birth to Lucian, and became infamous in the third century in connection with the heretical bishop "Paul of Samosata," who first broached the heresy of the simple humanity of our Lord; and was condemned in a council assembled at Antioch (A. D. 272, Euseb. *H. E.* vii. 27, 28). The modern name of the town is *Sempsat* or *Samisat*, about 40 miles S. of the cataracts of the Euphrates, where it passes Mount Taurus, but Pococke could hear of no ruins there. (*Observations on Syria*, vol. ii. pt. 1, p. 156.) [G. W.]

COIN OF SAMOSATA.

SAMOTHRA'CE, SAMOTHRA'CA, or SAMOTHRA'CIA (Σαμοθρᾴκη: *Eth.* Σαμόθρᾳξ; Σαμοθρηΐκη in Herodotus, who uses the adjective Σαμοθρηΐκιος, and calls the inhabitants Σαμοθρήϊκες. In Pliny (iv. 23) we find the form Samothrace; in the *Itin. Ant.* (p. 522, Wess.), Samothraca; in Livy (xlii. 25, 50, xliv. 45, 46), both Samothraca and Samothracia. Properly it is "the Thracian Samos." Thus Homer calls it sometimes Σάμος Θρηικίη, sometimes simply Σάμος. Hence the line in Virgil (*Aen.* vii. 208):

> "Threiciamque Samum quae nunc Samothracia fertur."

By the modern Greeks it is called *Samothraki*, and often also *Samandraki* (ἐς τὸ μανδράκι), which is merely a corruption of the other, formed in ignorance, after the analogy of *Stamboul* and *Stalimni*,—μανδράκι denoting "a sheepfold"). An island in the north of the Aegaean, opposite the mouth of the Hebrus, and lying N. of Imbrus, and NE. of Lemnos. Its distance from the coast of Thrace is estimated at 38 miles by Pliny (*l. c.*), who says its circuit is 32 miles. It is of an oval shape, and, according to the English survey, 8 miles in length and 6 in breadth. It was traditionally said to have been diminished in size, in consequence of an outburst of waters from the Hellespont; and perhaps some great physical changes took place in this part of the Aegaean at no very remote period. (See Admiral Smyth's *Mediterranean*, pp. 74, 119.) However this may be, Samothrace is remarkable for its extreme elevation. No land in the north of the Archipelago is so conspicuous, except Mt. Athos; and no island in the whole Archipelago is so high, except *Candia*. The elevation of the highest point, called Saoce by Pliny (*l. c.*), is marked 5240 feet in the Admiralty Chart (No. 1654). The geographical position of this point (the modern name of which is *Mt. Fingaree*) is 40° 26′ 57″ N. lat., and 25° 36′ 23″ E. long. Though there are several anchorages on the coast of Samothrace, there is an entire absence of good harbours, a circumstance in harmony with the expression of Pliny, who calls it "importuosissima omnium." Scylax, however (p. 280, ed. Gail), mentions a port, which possibly was identical with the harbour Demetrium spoken of by Livy. The ancient city (of the same name as the island) was on the north, in the place marked *Palaepolis* on the chart.

The common name of the Thracian and the Ionian Samos was the occasion of speculation to Strabo and Pausanias. The latter (vii. 4. § 3) says that the Thracian island was colonised by emigrants from the other. The former (x. pp. 457, 472) mentions a theory that it might be named from the Saii, a people of Thrace. Scymnus Chius (692) says, that aid came from Samos to Samothrace in a time of famine, and that this brought settlers from the Ionian to the Thracian Island. The truth seems to be, that σάμος denotes any elevated land near the sea, and that the name was therefore given to the island before us, as well as to others. [CEPHALLENIA; SAMOS.] The earlier names of Samothrace were Dardania, Electris, Melite, and Leucosia. Diodorus Siculus (v. 47) speaks of its inhabitants as Autochthons, and dwells on peculiarities of their language as connected with their religious worship. The chief interest of this island is connected with the CABEIRI. For these mysterious divinities we must refer to the *Dict. of Biography and Mythology*. Pelasgians are said by Herodotus (ii. 51) to have first inhabited the island, and to have introduced the mysteries.

The lofty height of Samothrace appears in Homer in a very picturesque connection with the scenery of Troy. He describes Poseidon as gazing from this throne on the incidents of the war: and travellers in the Troad have noticed the view of Samothrace towering over Imbros as a proof of the truthfulness of the Iliad. Bearing in mind this geographieal affinity (if we may so call it) of the mountain-tops of Saoce and Ida, we shall hardly be surprised to find Scymnus Chius (678) calling Samothrace a Trojan island (νῆσος Τρωική). The tradition was that Dardanus dwelt there before he went to Troy, and that he introduced the Cabeiric mysteries from thence into Asia.

A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhabitants joined Xerxes in his expedition against Greece; they are spoken of as skilful in the use of the javelin; and a Samothracian ship is said to have sunk an Athenian ship, and to have been sunk in turn by an Aeginetan one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samothracians possessed forts erected on the mainland. (Ib. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. *Pax*, 277, and Schol.) Samothrace appears also to have had the rights of asylum; for Perseus took refuge there, after he was defeated by the Romans in the battle of Pydna. (Liv. xlv. 6.) Germanicus sailed to the island with the view of being initiated: but he was prevented by an omen (Tac. *Ann.* ii. 54.) St. Paul passed the night at anchor here on his first voyage from Asia to Europe. (*Acts*, xvi. 11.) In Pliny's time Samothrace was a free state (*l. c.*). In the Synecdemus we find it, with Thasos, in the province of Illyricum. (Wess. p. 640.) In the later division described by Constant. Porphyrog. (*De Them.* p. 47, ed. Bonn) it is in the Thracian subdivision of the First European or Thracian Theme.

Samothrace appears to have no modern history

and no present importance. Pliny (xxxvii. 67) makes mention of a gem which was found there; and in the Middle Ages its honey and goats are said to have been celebrated. No traveller seems to have explored and described this island. [J.S.H.]

SAMULOCENAE, according to the Peut. Tab., or more correctly according to inscriptions found on the spot, SUMLOCENNE, was apparently a Roman colony of some importance in the Agri Decumates of Germany. The Table erroneously places the town in Vindelicia, whence some antiquarians have regarded Samulocenae and Sumlocenne as two different places. But there can be no doubt that they are only two forms of the same name belonging to one town, the site of which is occupied by the modern *Sülchen*, near *Rottenburg* on the *Neckar*, where many Roman remains, such as coins, inscriptions, and arms, have been found. (Comp. Jaumann, *Colonia Sumlocenne, &c.*, Stuttgart, 1840, 8vo.; Leichtlen, *Schwaben unter den Römern*, p. 107, foll.) [L. S.]

SAMUS. [SAMOS.]

SAMUS, a river of Hispania Baetica. (Geog. Rav. iv. 45.) Ancient Spanish coins indicate a town of the same name. (Florez, *Med.* iii. p. 142.) [T. H. D.]

SAMYDACE (Σαμυδάκη), a town on the coast of Carmania, noticed by Marcian (c. 28. ed. Didot) and Ptolemy (vi. 8. § 7). It appears to have been placed near the mouth of the river Samydacus. (See also Steph. B. *s. v.*) It is possible, as suggested by Forbiger, that the river is the same as the present *Sudji*. [V.]

SANAUS (Σαναός), a town of Phrygia, in the neighbourhood of Laodiceia. (Strab. xii. p. 576; Hierocl. p. 666.) In the acts of the Council of Chalcedon (p. 674), it is called Σαναῶν πόλις, and is probably mentioned by Ptolemy (v. 2. § 26) under the name of Sanis. [L. S.]

SANCTIO, a place in the Agri Decumates, in the south-west of Germany, was situated on the banks of the Rhine, but is mentioned only by Ammianus Marcellinus (xxi. 3), and in such a manner that it is not easy to identify its site; it is possible, however, that the modern *Seckingen* may correspond with it. [L. S.]

SANDA, a river on the N. coast of Hispania Tarraconensis (Plin. iv. 20. s. 34.) Probably the *Miera*. [T. H. D.]

SANDA'LIUM (Σανδάλιον), a mountain fortress of Pisidia, mentioned only by Strabo (xii. p. 169) and Stephanus B. (*s. v.*). [L. S.]

SANDANES (Σανδάνες, *Peripl. Mar. Erythr.* c. 52). There has been some question whether this is the name of a man or of a place. As the text stands in the Periplus, it would seem to be that of a ruler of the coast-district in the neighbourhood of *Bombay*. On the other hand, Ptolemy speaks of the same territory under the title of Ἀριακὴ Σαδινῶν; whence Benfey (Ersch and Grüber, *Encycl.* art. *Indien*) argues, with strong probability, that the reading in the Periplus is incorrect, and that Ptolemy is right in making the name that of a people rather than of a chief. [V.]

SANDARACA (Σανδαράκη), a coast-town of Bithynia, at a distance of 90 stadia to the east of the river Oxines. (Arrian, *Peripl. P. E.* p. 14; Anonym. *Peripl. P. E.* p. 4.) [L. S.]

SANDOBANES. [ALBANIA, Vol. I. p. 89, b.]

SANDRIZETES, according to some editions of Pliny (iii. 28), the name of a tribe in Pannonia on the river Dravus; but a more correct reading gives the name Andizetes, which is no doubt the same as the Andizetii (Ἀνδιζήτιοι) mentioned by Strabo (vii. p. 314) among the tribes of Pannonia. [L. S.]

SANE. 1. (Σάνη: *Eth.* Σάνιος, Σηναῖος, Σαναῖος, Herod. vii. 22; Thuc. iv. 109; Steph. B. *s. v.*), a colony of Andros, situated upon the low, undulating ground, forming the isthmus which connects the peninsula of Acte with Chalcidice, through which the canal of Xerxes passed. Masses of stone and mortar, with here and there a large and squared block, and foundations of Hellenic walls, which are found upon this *Próvlaka* or neck of land, mark the site of ancient Sane, which was within Acte and turned towards the sea of Euboea. (Leake, *Northern Greece*, vol. iii. p. 143.)

2. It appears from Herodotus (vii. 123; comp. Thuc. v. 18) and the Epitomiser of Strabo (vii. p. 330, *Fr.* 27), that there was another town of this name in Pallene. According to the position assigned to it in the list of Herodotus, the site must be sought for between C. *Posidhi* and the W. side of the isthmus of *Porta*. Mela (ii. 3. § 1) is opposed to this position of Sane, as he places it near Canastraeum Prom. (*C. Paliúri*). [E. B. J.]

SANGALA (τὰ Σάγγαλα), a place mentioned by Arrian to the NW. of the Malli (or *Multán*), apparently near the junction of the Hydraotes and Acesines (v. 22). There can be little doubt that it is the same place as that noticed by Ptolemy under the name Σάγαλα ἡ καὶ Εὐθυμηδία (vi. 1. § 46). The position, however, of the latter is assigned with this difference, that it is placed below the junction of the Hydaspes and Acesines, whereas the former would seem to have been to the E. of the Hydraotes. Burnes has identified Sagala with the present *Lahore*, which is probable enough (*Travels*, vol. iii. p. 82). It may be remarked, that the Εὐθυμηδία of Ptolemy ought in all probability to be Εὐθυδημία, the name being derived from the well-known Bactrian king, Euthydemus. [V.]

SANGA'RIUS (Σαγγάριος: *Sakarya* or *Sakari*; Turkish *Ayala*), one of the principal rivers of Asia Minor, is mentioned in the Iliad (iii. 187, xvi. 719) and in Hesiod (*Theog.* 344). Its name appears in different forms as Sagraphos (Schol. *ad Apollon. Rhod.* ii. 724), Sangaris (Constant. Porphyr. i. 5), or Sagaris (Ov. *ex Pont.* iv. 10. 17; Plin. vi. 1; Solin 43). This river had its sources on Mount Adoreus, near the town of Sangia in Phrygia, not far from the Galatian frontier (Strab. xii. p. 543), and flowed in a very tortuous course, first in an eastern, then in a northern, then in a north-western, and lastly again in a northern direction through Bithynia into the Euxine. In one part of its course it formed the boundary between Phrygia and Bithynia; and in early times Bithynia was bounded on the east by the Sangarius. [BITHYNIA.]

The Bithynian part of the river was navigable, and was celebrated from the abundance of fish found in it. Its principal tributaries were the Alander, Bathys, Thymbres, and Gallus. (Comp. Scylax, p. 34; Apollon. Rhod. ii. 724; Scymnus. 234, foll.; Strab. xii. pp. 563, 567; Dionys. Perieg. 811; Ptol. v. 1. § 6; Steph. B. *s. v.*; Liv. xxxviii. 18; Plin. v. 43; Amm. Marc. xxii. 9.) [L. S.]

SA'NGIA (Σαγγία), a small place in the east of Phrygia, near Mount Adoreus and the sources of the Sangarius. (Strab. xii. p. 543.) [L. S.]

SANIA'NA (Σανίανα, Const. Porph. *Them.* i. p. 28, *de Adm. Imp.* c. 50, p. 225, Bonn.), a place in

the interior of Thrace, probably the modern *Ezenga* or *Zingane*. [J. R.]

SANIGAE (Σανίγαι, Arrian, *Peripl. Pont. Eux.* p. 12; Σάννιγαι, Steph. B. *s. v.*; Σαγίδαι, Procop. *B. G.* iv. 3), a tribe of Mt. Caucasus, who were found in the neighbourhood of DIOSCURIAS or the Roman SEBASTOPOLIS. [E. B. J.]

SANISERA, a city in the island Balearis Minor (Plin. iii. 5. s. 11), the modern *Alajor*. (Cf. Wernsd. *Ant. Bal.* p. 57; Salmas. *ad Solin.* c. 34, p. 401.) [T. H. D.]

SANITIUM (Σανίτιον), is placed in the Alpes Maritimae by Ptolemy (iii. 1. § 43), and named as one of the towns of the Vesdiantii or Vediantii. Cemenelium is the other town which he names [CEMENELIUM]. If Sanitium is *Senez*, which is west of the *Var*, part of this people were east of the *Var* and part of them were west of it. [G. L.]

SANNI. [MACRONES.]

SANTICUM (Σιαντικόν, Ptol. ii. 14. § 3), a town of Noricum, on the south-west of Virunum, on the road from this place to Aquileia (*It. Ant.* p. 276). The exact site of the place is utterly uncertain, but conjecture has fixed upon four or five different places that might be identified with Santicum with equal probability. [L. S.]

SA'NTONES or SA'NTONI (Σάντονες, Σάντονοι, Σάντωνες), a people of South-western Gallia, in the Celtogalatia Aquitania of Ptolemy (ii. 7. § 7), who names their capital Mediolanium. [MEDIOLANUM.] They were in the Celtica of Caesar, being north of the Garumna (*Garonne*). The Roman poets make the quantity of the word suit their verse, as Lucan does when he says (i. 422), "gaudetque amoto Santonus hoste;" and Juvenal and Martial when they use the word Santonicus.

Caesar, who first mentions the Santones (*B. G.* i. 10), says that when the Helvetii were preparing to leave their country with their families and moveables, their intention was to make their way to the territory of the Santones, "who are not far distant from the borders of the Tolosates." He gives us no means for conjecturing why the Helvetii proposed to cross the whole width of Gallia and settle themselves in a country on the coast of the Atlantic which was full of people. The position of the Santones is defined by Ptolemy, who places them between the Pictones and the Bituriges Vivisci, one of whose towns was Burdigala (*Bordeaux*). Strabo (iv. pp. 190, 208) fixes the position of the Santones still clearer when he says that the Garumna flows into the sea between the Bituriges Iosci (Vivisci) and the Santones, both of which are Celtic nations. In another passage he places the Pictones and Santones on the shores of the Atlantic, and the Pictones north of the Santones; which completes the description of their position.

Caesar never made any campaign against the Santones, or, if he did, he has said nothing about it. He got ships from the Pictones and Santones for his naval war with the Veneti (*B. G.* iii. 11), from which we learn that the Santones and Pictones were a maritime people. When Vercingetorix (B. C. 52) was stirring up the Gallic nations against Caesar, he secured the assistance of the Pictones and "all the rest of the states that border on the ocean," an expression which includes the Santones, though they are not mentioned. But the Santones sent 12,000 men to the siege of Alesia. (*B. G.* vii. 75.) In Pliny's enumeration of the Gallic people (iv. 33) the Santones are named Liberi.

The Santones gave name to that division of France before the revolution which was named *Saintonge*, the chief part of which is included in the French department of *Charente Inférieure*. The coast of the territory of the Santones is low and marshy; the interior is generally level and fertile. D'Anville supposed that the territory of the Santones comprehended the diocese of *Saintes*, and the small province of *Aunis* on the north-west.

The wormwood of this country is spoken of by various writers, Pliny (xxvii. 38), and Martial (*Ep.* ix. 95): —

"Santonica medicata dedit mihi pocula virga."

Martial (xiv. 128) and Juvenal (viii. 145) mention a "cucullus" with the name "Santonicus." It appears that some thick coarse woollen cloths were imported from Gallia into Italy.

Havercamp in his edition of Orosius (vi. 7) gives a coin with the name "Arivos," and on the other side the legend "Santonos" in Roman capitals with the figure of a horse in action. He gives also another coin with the same legend; and a third with the abbreviated name "Sant" and the name of "Q. Doci" on it. [G. L.]

SA'NTONUM PORTUS (Σαντόνων λίμην). Ptolemy in his description of the coast of Celtogalatia Aquitania (ii. 7. § 1) proceeds from south to north. Next to the outlets of the *Garonne* he places Santonum Portus, and next to it Santonum Promontorium (Σαντόνων ἄκρον). The outlet of the river Canentelus is placed north of the promontorium. The Carantonus of Ausonius is certainly the *Charente* [CARANTONUS]; and Ptolemy's Canentelus is a different river, or, if it is the same river, he has placed it wrong.

It is impossible to determine what is the Santonum Portus of Ptolemy. If it is *Rochelle*, as some geographers maintain, and if Ptolemy's Canentelus is the *Charente*, he has placed their positions in wrong order. It seems very unlikely that Ptolemy should mention a river between the *Garonne* and *Loire*, and not mention the *Charente*. The only other large river between the *Garonne* and the *Loire* is the *Sèvre Niortaise*, which is north of *La Rochelle*, and if Ptolemy's Canentelus is the *Sèvre*, the Santonum Portus might be *La Rochelle*. D'Anville supposes Santonum Portus to be the embouchure of the *Seudre*, which opens into the sea opposite the southern extremity of the *Isle d'Oléron*; but he does not undertake to fix the position of the Santonum Promontorium. The latitudes of Ptolemy cannot be trusted, and his geography of Gallia is full of errors. [G. L.]

SA'NTONUM PROMONTO'RIUM. [SANTONUM PORTUS.]

SAOCE. [SAMOTHRACE.]

SAO'CORAS (Σαόκορας, Ptol. v. 18. § 3), a river of Mesopotamia, mentioned by Ptolemy, which appears to have had its source in the M. Masius near Nisibis, and to have flowed to the SW. into the Euphrates. There has been much dispute, as to what river Ptolemy intended by this name, as at present there is no stream existing which corresponds with his description. Forbiger has conjectured with some reason that it is the same as the Mascas of Xenophon (*Anab.* i. 5. § 4), which flowed about 35 parasangs to the E. of the Chaboras (*Khabúr*), and surrounded the town of Corsote: Ptolemy would seem to have confounded it with the Mygdonius. [MYGDONIUS.] [V.]

SAPAEI (Σαπαῖοι or Σάπαιοι), a Thracian people, occupying the southern portion of the Pan-

gaeus, in the neighbourhood of Abdera. (Strab. xii. p. 549.) In this passage, however, Strabo calls them Sapae (Σάπαι), and assumes their identity with the Sinti, which in another place (x. p. 457) he treats as a mere matter of conjecture. The Via Egnatia ran through their country, and especially through a narrow and difficult defile called by Appian (*B. C.* iv. 87, 106) the pass of the Sapaei, and stated by him to be 18 miles from Philippi; so that it must have been nearly midway between Neapolis and Abdera. The Sapaei are mentioned, and merely mentioned, by Herodotus (vii. 110) and by Pliny (iv. 11. s. 18). Their town is called Sapaica (Σαπαϊκή) by Steph. B. (*s. v.*). [J. R.]

SAPAICA. [SAPAEI.]

SAPARNUS (Σάπαρνος), a small tributary of the Indus, in the upper *Panjáb*, noticed by Arrian (*Indic.* c. 4). It is probably the present *Abbasin*. [V.]

SAPAUDIA. This name occurs in Ammianus Marcellinus (xv. 11), in his description of Gallia. He says of the Rhone that after flowing through the *Lake of Geneva* "per Sapaudiam fertur et Sequanos." In the Notit. Imp. we read: "in Gallia Ripense praefectus militum Barcariorum Ebruduni Sapaudiae," where Ebrudunum appears to be *Yverdun*, which is at one end of the Lake of *Neufchâtel*. In another passage of the Notit. there occurs: "tribunus cohortis primae Sapaudiae Flaviae Calarone," or "Cularone," which is *Grenoble* [CULARO]. Thus Sapaudia extended northward into the country of the Helvetii and southward into the territory of the Allobroges. The name Sapaudia is preserved in Saboia, or *Savoy*, but in a much more limited signification; and in the country now called *Savoy* there is said to be a canton which bears the particular name of *Savoy*. (D'Anville, *Notice, &c.*) [G. L.]

SAPHAR. [SAPPHAR.]

SAPHE. [BEZABDA.]

SAPHRI (Σαφρί), a small village of Parthyene mentioned by Isidorus (*Stath. Parth.* c. 12). It may be the same place as that called by Ptolemy Σόφθα (vi. 9. § 6), which he places in Hyrcania, close to the Astabeni. Forbiger identifies it with the modern *Shoffri*. [V.]

SAPIRI'NE (Plin. vi. 29. s. 33.; Σαπειρήνη ἡ Σαπειρήνη νῆσος, Ptol. iv. 5. § 77; Σαπφειρηνή, Steph. B. *s. v.*), an island in the Arabian gulf, NE. of Myos Hormos and S. of the promontory Pharan, from which sapphires were obtained according to Stephanus. Now *Sheduan*.

SAPIS (Σάπις, Strab.: *Savio*), a small river of Cisalpine Gaul, not far from the frontiers of Umbria. It rises in the Umbrian Apennines, a few miles above Sarsina, flows under the walls of that town, and afterwards, pursuing a course nearly due N., crosses the Aemilian Way close to the town of Caesena (*Cesena*), and falls into the Adriatic about 10 miles S. of Ravenna. (Strab. v. p. 217; Plin. iii. 15. s. 20; Lucan. ii. 406; Sil. Ital. viii. 448; *Tab. Peut.*) It is called in the Tabula Sabis; and the name is written Isapis in several editions of Lucan and Strabo; but there seems little doubt that Sapis is the true form of the name. It is still called the *Savio*. There can be little doubt that the SAPINIA TRIBUS, mentioned by Livy (xxxi. 2, xxxiii. 37), as one of the tribes or divisions of the Umbrian nation, immediately adjoining the Gaulish tribe of the Boii, derived its name from the Sapis, and must have dwelt on the banks of that river. [E. H. B.]

SAPPHAR METROPOLIS (Σαπφάρα μητρόπολις), placed by Ptolemy in long. 88°, lat. 14° 30′; doubtless the capital of the Sappharitae (Σαπφαρῖται), whom the same geographer places near the Homeritae (vi. 6. § 25), which Bochart identifies with the "Sephar" called by Moses "a mount of the East," and which was the limit of the children of Joktan. (*Gen.* x. 30.) This Forster further identifies with the Mount Climax of Ptolemy, which Niebuhr judged to be the *Sumâra* or *Nakil Sumara* of modern Arabia, the highlands of *Yemen*, on the E. of which that same traveller found some ruins, half a day's journey SW. of *Jerim*, named *Saphar*, which he says is without doubt Aphar, or *Dhafar*. (Forster, *Geogr. of Arabia*, vol. i. pp. 94, 105, 127 notes, 175, vol. ii. pp. 154, 172.) Aphar was the metropolis of the Sabaeans according to the author of the Periplus ascribed to Arrian, and distant 12 days' journey eastward from Musa on the Arabian gulf; Mr. Forster remarks "that the direction and the distance correspond with the site of *Dhafar*" (vol. ii. p. 166, note *). It is to be regretted that this important and well marked site has not yet been visited and explored. [G. W.]

SAPPHARI'TAE. [SAPPHAR.]

SAPPIRE'NE. [SAPIRINE.]

SAPRA PALUS. [BUCES.]

SARACE'NI (Σαρακηνοί). This celebrated name, which became so renowned and dreaded in Europe, is given to a tribe of Arabia Felix by the classical geographers, who do not, however, very clearly define their position in the peninsula, and indeed the country of Saracene in Ptolemy seems scarcely reconcileable with the situation assigned to the Saraceni by the same geographer. Thus he, consistently with Pliny, who joins them to the Nabataei (vi. 28. s. 32), places the Saraceni south of the Scenitae, who were situated in the neighbourhood of the northern mountains of the Arabian peninsula (vi. 7. § 21); but the region Saracene he places to the west of the black mountains (μέλανα ὄρη)— by which name he is supposed to designate the range of Sinai, as he couples it with the gulf of Pharan — and on the confines of Egypt (v. 17. § 3). St. Jerome also calls this district the "mons et desertum Saracenorum, quod vocatur Pharan" (*Onomast. s. v.* Χωρήβ, Choreb), in agreement with which Eusebius also places Pharan near the Saraceni who inhabit the desert (*s. v.* Φαράν). According to these writers their country corresponds with what is in Scripture called Midian (*Exod.* ii. 15, iii. 1: see MIDIAN), which, however, they place incorrectly on the east of the Red Sea; and the people are identified with the Ishmaelites by St. Jerome (*Onomast. l. c.*), elsewhere with Kedar (*Comment. in Ies.* xlii. and in *Loc. Heb. ad voc.*), with the Midianites by St. Augustine (*in Numer.*), with the Scenitae by Ammianus Marcellinus, who, however, uses the name in a wider acceptation, and extends them from Assyria to the cataracts of the Nile (xiv. 4). Their situation is most clearly described by the author of the Periplus. "They who are called Saraceni inhabit the parts about the neck of Arabia Felix next to Petraea, and Arabia Deserta. They have many names, and occupy a large tract of desert land, bordering on Arabia Petraea and Deserta, on Palaestina and Persis, and consequently on the before-named Arabia Felix." (Marcian. *apud Geog. Min.* vol. i. p. 16, Hudson.) The fact seems to be that this name, like that of Scenitae (with whom, as we have seen, the Saraceni are sometimes identified), was used either in a laxer or more restricted sense for various

wandering tribes. As their nomadic and migratory habits were described by the latter, so their predatory propensities, according to the most probable interpretation of the name, was by the former, for the Arabic verb *Saraka*, according to lexicographers, signifies "to plunder." (Bochart, *Geog. Sac.* lib. iv. cap. 2, pp. 213, 214.) The derivation of the name from Sarah has been rejected by nearly all critics as historically erroneous; and the fact that the name was in use many centuries before Mohammed, at once negatives the theory that it was adopted by him or his followers, in order to remove the stigma of their servile origin from Hagar the bondwoman. (Reland, *Palaestina*, p. 87.) This author maintains that "*Saraceni* nil nisi orientales populos notat:" deriving the word from the Arabic *sharaka* = ortus fuit; and as unhappily the Greek alphabet cannot discriminate between *sin* and *shin*, and the name does not occur in the native authors, there is nothing to determine the etymology. Mr. Forster, in defiance of Bochart's severe sentence, "Qui ad Saram referunt, nugas agunt" (*Geog. Sac.* i. 2, p. 213), argues for the matronymic derivation from Sarah, and shows that the country of Edom, or the mountains and territory bordering on the Saracena of classic authors, are called "the country, mountains, &c. of Sarah" by the Jews; and he maintains that, as this tract derived its name of Edom and Idumaea from the patriarch Esau, so did it that of Sarah from Sarah the wife of Abraham, the acknowledged mother of the race. (*Geog. of Arabia*, vol. ii. pp. 17—19.) His attempt to identify the Saraceni with the Amalekites is not so successful; for however difficult it may be to account for the appearance of the latter in the Rephidim (*Exod.* xvii. 1, 8; REPHIDIM), which was the country of Saracena, yet their proper seat is fixed beyond doubt in the south of the promised land, in the hill-country immediately north of the wilderness of Paran, near to Kadesh (*Numb.* xiii. 29); and it is impossible to understand "the valley" in xiv. 25, and "the hill" in xiv. 45, of Horeb, as Mr. Forster does, since the whole context implies a position far to the north of the district of Horeb, marked by the following stations: Taberah, 3 days' journey from "the Mount of the Lord" (x. 33, xi. 3); Kibroth-hattaavah, Hazeroth, the wilderness of Paran (xi. 34, 35, xii. 16, compare xxxiii. 16—18). It must indeed be admitted that the name of the Amalekites is occasionally used, in a much wider acceptation than its proper one, of all the Edomite tribes, throughout Northern Arabia, as e. g. in 1 *Sam.* xv. 7; and similarly the name Saraceni is extended in Marcian's Periplus, already cited: but it seems more natural to interpret the words *οἱ καλούμενοι Σαρακηνοί, πλείονας ἔχοντες προσηγορίας* of the general name of several specific tribes, marking common habits or common position rather than common origin, according to the analogy of the Scenitae in old times and of *Bedawîn* = "deserti incolae," in modern times; particularly as it does not appear that the name was ever adopted by the Arabs themselves, who would not have been slow to appropriate an honourable appellation, which would identify them with the great patriarch. That their predatory character had become early established is manifest from the desperate expedient resorted to by the emperor Decius in order to repress their encroachments. He is said to have brought lions and lionesses from Africa and turned them loose on the borders of Arabia and Palestine, as far as the Circisium Castrum, that they might breed and propagate against the Saracens. (*Chron. Alex.* in A. M. 5760, Olymp. 257, Ind. xiv. = A. D. 251.) This strong fortress, called by Procopius Circesium (Κιρκήσιον φρούριον), the most remote of the Roman garrisons, which was fortified by Diocletian (Amm. Marc. xxiii. 5), was situated on the angle formed by the confluence of the Aborrhas (*Khabour*) and the Euphrates (it is still called *Karkisia*), so that it is clear that, in the time of Procopius, the name of Saraceni was given to the Arab tribes from Egypt to the Euphrates. Consistently with this view, he calls Zenobia's husband Odonathes, "king of the Saracens in those parts" (*Bell. Pers.* ii. 5, p. 288); and Belisarius's Arab contingent, under their king Aretas (Ἀρέθας) he likewise calls Saracens (ii. 16, p. 308). That Roman general describes them (c. 19, p. 312) as incapable of building fortifications, but adepts at plunder, which character again justifies the etymology above preferred; while it is clear from these and other passages that the use of the name had become established merely as a general name, and precisely equivalent to Arab (see *Bell. Pers.* i. 19, p. 261), and was accordingly adopted and applied indifferently to all the followers of Mohammed by the writers of the middle ages. [G. W.]

SARALA. [SARDINIA.]

SARA'LIUM or SARALUS (Σάραλος), a town of the Trocmi in Galatia, on the east of the river Halys. (*Tab. Peut.*; Ptol. v. 9. § 4.) [L. S.]

SARAME'NE (Σαραμήνη), a district of Pontus, on the bay of Amisus. (Strab. xii. p. 547; comp. PONTUS.) [L. S.]

SARANGA (τὰ Σάραγγα), a small place on the coast of Gedrosia between the Indus and the Arabis. It was visited by Nearchus in his coast voyage to Persia (Arrian, *Ind.* c. 22). It has been conjectured by Müller (*Geogr. Graec. Min. l. c.*, ed. Paris) that it is the same as the Ῥιζάνα of Ptolemy (vi. 21. § 2). [V.]

SARANGAE. [DRANGIANA.]

SARANGES (Σαράγγης), a small tributary of the Hydraotes (*Irávati*), mentioned by Arrian (*Ind.* c. 4) in his list of Indian rivers. It is doubtless the Sanscrit *Saranga*, though it has not been determined to what stream this Indian name applies. [V.]

SARAPANA (Σαραπανά, Strab. xi. p. 500; Σαραπανίς, Procop. *B. G.* iv. 14), a strong position in Iberia, upon the river Phasis, identified with *Scharapani* in *Imiretia*, on the modern road which leads from *Mingrelia* into *Georgia* over *Suram*. (Comp. *Journ. Geog. Soc.* vol. iii. p. 34.) [E. B. J.]

SARAPARAE (Σαραπάραι, Strab. xi. p. 531; Plin. vi. 16. s. 18), a Thracian people, dwelling beyond Armenia near the Guranii and Medi, according to Strabo, who describes them as a savage, lawless, and mountainous people, who scalped and cut off heads (περισκυθιστὰς καὶ ἀποκεφαλιστάς). The latter is said by Strabo to be the meaning of their name, which is confirmed by the fact that in the Persian *sar* means "head" and *para* "division." (Anquetil, *Sur les anc. Langues de la Perse*, in *Mém. de l'Acad. &c.* vol. xxxi. p. 419, quoted in Kramer's *Strab.* vol. ii. p. 500; comp. Groskurd's *Strab.* vol. ii. p. 439.)

SARAPIONIS PORTUS. [NICONIS DROMUS.]

SARAPIS INS. (Σαράπιδος νῆσος), an island off the South Coast of Arabia, mentioned by the author of the Periplus ascribed to Arrian (*Geog. Graec. Min.* vol. i. p. 19, Hudson) as situated 2000 stadia east

of the seven islands of Zenobia, which are identified with the islands of *Kurian Murian*. The island of Sarapis is therefore correctly placed by D'Anville at *Mozeira*. It is described in the Periplus as about 120 stadia distant from the coast, and about 200 stadia wide. It had three villages, and was inhabited by the sacred caste of the Ichthyophagi. They spoke Arabic, and wore girdles of cocoa leaves. The island produced a variety and abundance of tortoises, and was a favourite station for the merchant vessels of Cane. [G. W.]

SARA'VUS, a river of Gallia, a branch of the Mosella (*Mosel*). The Itins. place the Pons Saravi on the Saravus, on a road from Divodurum (*Metz*) to Argentoratum (*Strassburg*). [PONS SARAVI.]

The Saravus is mentioned in the poem of Ausonius on the Mosella (v. 367): —

> "Naviger undisona dudum me mole Saravus
> Tota veste vocat, longum qui distulit amnem,
> Fessa sub Augustis ut volveret ostia muris."

The Saravus is the *Sarre*, which joins the *Mosel* on the right bank a few miles above Augusta Trevirorum (*Trier*). In an inscription the river is named Sarra. [G. L.]

SARBACUM (Σάρβακον, Ptol. iii. 5. § 29), a town of Sarmatia, upon an affluent of the Tanais, probably a Graecised form of the Slavonic *Srbec*. (Schafarik, *Slav. Alt.* vol. i. pp. 512, 514.) [E. B. J.]

SARDABALE. [SIGA.]

SARDEMISUS, a southern branch of Mount Taurus on the frontiers of Pisidia and Pamphylia, extending as far as Phaselis; it is also connected with Mount Climax on the frontiers between Milyas and Pisidia Proper. (Pomp. Mela, i. 14; Plin. v. 26.) [L. S.]

SARDE'NE (Σαρδήνη), a mountain of Mysia, on the northern bank of the Hermus, in the neighbourhood of Cyme; at its foot was the town of Neonteichos. (Hom. *Ep.* i. 3; *Vit. Hom.* 9.) [L. S.]

SARDES (Σάρδεις or Σάρδις: *Eth.* Σαρδιανός), the ancient capital of the kingdom of Lydia, was situated at the northern foot of Mount Tmolus, in a fertile plain between this mountain and the river Hermus, from which it was about 20 stadia distant. (Arrian, *Anab.* i. 17.) The small river Pactolus, a tributary of the Hermus, flowed through the agora of Sardes. (Herod. v. 101.) This city was of more recent origin, as Strabo (xiii. p. 625) remarks, than the Trojan times, but was nevertheless very ancient, and had a very strong acropolis on a precipitous height. The town is first mentioned by Aeschylus (*Pers.* 45); and Herodotus (i. 84) relates that it was fortified by a king Meles, who, according to the Chronicle of Eusebius, preceded Candaules. The city itself was, at least at first, built in a rude manner, and the houses were covered with dry reeds, in consequence of which it was repeatedly destroyed by fire; but the acropolis, which some of the ancient geographers identified with the Homeric Hyde (Strab. xiii. p. 626; comp. Plin. v. 30; Eustath. *ad Dion. Per.* 830), was built upon an almost inaccessible rock, and surrounded with a triple wall. In the reign of Ardys, Sardes was taken by the Cimmerians, but they were unable to gain possession of the citadel. The city attained its greatest prosperity in the reign of the last Lydian king, Croesus. After the overthrow of the Lydian monarchy, Sardes became the residence of the Persian satraps of Western Asia. (Herod. v 25; Paus. iii. 9. § 3.) On the revolt of the Ionians, excited by Aristagoras and Histiaeus, the Ionians, assisted by an Athenian force, took Sardes, except the citadel, which was defended by Artaphernes and a numerous garrison. The city then was accidentally set on fire, and burnt to the ground, as the buildings were constructed of easily combustible materials. After this event the Ionians and Athenians withdrew, but Sardes was rebuilt; and the indignation of the king of Persia, excited by this attack on one of his principal cities, determined him to wage war against Athens. Xerxes spent at Sardes the winter preceding his expedition against Greece, and it was there that Cyrus the younger assembled his forces when about to march against his brother Artaxerxes. (Xenoph. *Anab.* i. 2. § 5.) When Alexander the Great arrived in Asia, and had gained the battle of the Granicus, Sardes surrendered to him without resistance, for which he rewarded its inhabitants by restoring to them their freedom and their ancient laws and institutions. (Arrian, i. 17.) After the death of Alexander, Sardes came into the possession of Antigonus, and after his defeat at Ipsus into that of the Seleucidae of Syria. But on the murder of Seleucus Ceraunus, Achaeus set himself up as king of that portion of Asia Minor, and made Sardes his residence. (Polyb. iv. 48, v. 57.) Antiochus the Great besieged the usurper in his capital for a whole year, until at length Lagoras, a Cretan, scaled the ramparts at a point where they were not guarded. On this occasion, again, a great part of the city was destroyed. (Polyb. vii. 15, &c. viii. 23.) When Antiochus was defeated by the Romans in the battle of Magnesia, Sardes passed into the hands of the Romans. In the reign of Tiberius the city was reduced to a heap of ruins by an earthquake; but the emperor ordered its restoration. (Tac. *Ann.* ii. 47; Strab. xiii. p. 627.) In the book of Revelation

COIN OF SARDES.

(iii. 1, &c.), Sardes is named as one of the Seven Churches, whence it is clear that at that time its inhabitants had adopted Christianity. From Pliny (v. 30) we learn that Sardes was the capital of a conventus: during the first centuries of the Christian era we hear of more than one council held there; and it continued to be a wealthy city down to the end of the Byzantine empire. (Eunap. p. 154; Hierocl. p. 669.) The Turks took possession of it in the 11th century, and two centuries later it was almost entirely destroyed by Tamerlane. (Anna Comn. p. 323; M. Ducas, p. 39.) Sardes is now little more than a village, still bearing the name of *Sart*, which is situated in the midst of the ruins of the ancient city. These ruins, though extending over a large space, are not of any great consequence; they consist of the remains of a stadium, a theatre, and the triple walls of the acropolis, with lofty towers.

The fertile plain of Sardes bore the name of Sardiene or *Σαρδιανὸν πεδίον*, and near the city was the celebrated tomb of Alyattes. Sardes was believed to be the native place of the Spartan poet Alcman, and it is well known that the two rhetoricians Diodorus and the historian Eunapius were natives of Sardes. (Chandler, *Travels in Asia Minor*, p. 316, foll.: Leake, *Asia Minor*, p. 342, foll.; Richter, *Wallfahrten*, p. 511, foll.; Prokesch, *Denkwürdigk.* vol. iii. p. 31, foll.] [L. S.]

SARDI'NIA (ἡ *Σαρδώ*: *Eth.* *Σαρδῷος*, Sardus: *Sardinia*), one of the largest and most important islands in the Mediterranean sea, situated to the S. of Corsica (from which it was separated only by a narrow strait, now called the *Strait of Bonifazio*) and NW. of Sicily. Its most southern extremity, *Cape Spartivento*, was distant only 120 geog. miles from *Cape Serrat* in Africa.

I. General Description.

It was a disputed point in ancient times whether Sicily or Sardinia was the largest. Herodotus calls Sardinia "the largest of islands" (*νήσων ἁπασέων μεγίστην*, i. 170, *νῆσον τὴν μεγίστην*, v. 106), but in passages where it is not certain that the expression is to be construed quite strictly. Scylax, however, distinctly calls Sardinia the largest of all the islands in the Mediterranean, assigning to Sicily only the second rank (Scyl. p. 56. § 113); and Timaeus seems to have adopted the same view (*ap. Strab.* xiv. p. 654). But the general opinion was the other way: the comic poet Alexius already enumerated the seven great islands, as they were called, placing Sicily first and Sardinia second (Alex. *ap. Const. Porphyr. de Prov.* ii. § 10): and this view is followed by Scymnus Chius, as well as by the later geographers. (Scymn. Ch. p. 223; Strab. ii. p. 123; Plin. iii. 7. s. 13, 8. s. 14; Diod. v. 17). Diodorus, however, justly remarks, that it is very nearly equal to Sicily in magnitude (Diod. v. 16): and this opinion, which was adopted by Cluverius (*Sicil. Ant.* p. 478), continued to prevail down to a very recent period. But modern researches have proved that Sardinia is actually the larger of the two, though the difference is but trifling. (Smyth's *Sardinia*, p. 66.) Its general form is that of an oblong parallelogram, above 140 geog. miles in its greatest length, by about 60 in its average breadth, which, however, attains to as much as 77 in one part. The measurements given by Pliny, of 188 miles (148⅜ geog. miles) in length along the E. coast, and 175 on the W., are therefore very fair approximations (Plin. iii. 7. s. 13), while those of Strabo, who calls the island 220 miles in length by 98 in breadth, are considerably overstated. (Strab. v. p. 224.)

Sardinia is a much more fertile and less mountainous island than Corsica. It is, however, traversed throughout its whole length from N. to S. by a chain of mountains which commence at the headland called *Capo Lungo Sardo*, and extend along the eastern side of the island, as far as *Capo Carbonara*, which forms the SE. extremity of the island. This range, which is composed of granitic and other primary rocks, is undoubtedly a continuation, in a geological sense, of the mountains of Corsica, and produces a rugged and difficult country forming much the wildest and most uncivilised part of Sardinia. The mountain summits, however, are far from attaining the same elevation as those of Corsica, the highest point, called *Monte Genargentu*, rising only to 5276 feet, while the *Monte di Sta Vittoria*, in the same neighbourhood, rises to 4040 feet, and the peak of *Limbarra* (the most northerly group of the chain) to 3686 feet: but the general elevation of the range rarely exceeds 3000 feet. (Smyth, p. 67.) West of this mountain district, which may be considered on a rough estimate as comprising about one half of the whole island, are situated three detached groups of mountains; the most considerable of which is that in the SW., which extends from *Capo Spartivento* to *Capo della Frasca* on the *Gulf of Oristano*, and the highest summits of which attain to an elevation of nearly 4000 feet. In the extreme NW. of the island is another isolated range of less extent, called the *Monti della Nurra*, extending from the *Capo della Caccia* to the *Capo del Falcone*. Both these groups are, like the mountains in the E. of the island, composed of primary rocks; but N. of the river *Tirso*, and extending from thence to the N. coast of the island beyond *Sassari*, is an extensive volcanic tract, occupied in considerable part by a range of extinct volcanoes, one of which, the *Monte Urticu*, rises to an elevation of 3430 feet. There is no trace of any volcanic action having taken place within the historical period, but extensive tracts are still covered with broad streams and fields of lava. Notwithstanding this abundance of mountains, Sardinia possesses several plains of considerable extent. The largest of these is that called the *Campidano*, which extends from the *Gulf of Cagliari* to that of *Oristano*, thus separating entirely the range of mountains in the SW. from those in the E. of the island; it is a tract of great fertility. A similar plain, though of less extent, stretches across from the neighbourhood of *Alghero* to that of *Porto Torres*, thus isolating the chain of the *Monti della Nurra;* while several smaller ones are found in other parts of the island. The general character of Sardinia is therefore well summed up by Strabo, when he says, "the greater part of it is a rugged and wild country, but a large part contains much fertile land, rich in all kinds of produce, but most especially in corn." (Strab. v. p. 224.)

The great disadvantage of Sardinia, in ancient as well as modern times, was the insalubrity of its climate. This is repeatedly alluded to by ancient writers, and appears to have obtained among the Romans an almost proverbial notoriety. Mela calls it "soli quam coeli melioris, atque ut foecunda, ita pene pestilens." Strabo gives much the same account, and Martial alludes to it as the most deadly climate he can mention. (Strab. v. p. 225; Mel. ii. 7. § 19; Paus. x. 17. § 11; Martial, iv. 60. 6;

Cic. *ad Q. Fr.* ii. 3; Tac. *Hist.* ii. 85; Sil. Ital. xii. 371.) There can be no doubt that this was mainly owing to the extensive marshes and lagunes on the coast, formed at the mouths of the rivers; and as these naturally adjoined the more level tracts and plains, it was precisely the most fertile parts of the island that suffered the most severely from malaria. (Strab. *l. c.*) The more elevated and mountainous tracts in the interior were doubtless then, as now, free from this scourge; but they were inhabited only by wild tribes, and rarely visited by the more civilised inhabitants of the plains and cities. Hence the character of unhealthiness was naturally applied to the whole island.

II. History.

The statements of ancient writers concerning the origin of the population of Sardinia are extremely various and conflicting, and agree only in representing it as of a very mixed kind, and proceeding from many different sources. According to Pausanias, who has given these traditions in the greatest detail, its first inhabitants were Libyans, who crossed over under the command of Sardus, the son of a native hero or divinity, who was identified by the Greeks with Hercules. (Paus. x. 17. § 2.) This Sardus was supposed to have given name to the island, which was previously called, or at least known to the Greeks, by that of Ichnusa (Ἰχνοῦσα), from the resemblance of its general form to the print of a man's foot. (Paus. *l. c.* § 1; Sil. Ital. xii. 358—360; Pseud. Arist. *Mirab.* 104.) Timaeus, according to Pliny, called it Sandaliotis from the same circumstance (Plin. iii. 12. s. 17); but it is clear that neither of these names was ever in general use. The fact that the earliest population came from Africa is intrinsically probable enough, though little value can be attached to such traditions. Pausanias indeed expressly tells us (*l. c.* § 7) that the population of the mountain districts (the people whom he calls Ilienses) resembled the Libyans both in their physical characters and their habits of life. The next settlers, according to Pausanias, were a Greek colony under Aristaeus, to whom some writers ascribe the foundation of Caralis; and these were followed by a body of Iberians under a leader named Norax, who founded the city called Nora in the SW. part of the island. Next to these came a body of Greeks from Thespiae and Attica, under the command of Iolaus, who founded a colony at Olbia in the NE. corner of the island. After this came a body of Trojans, a part of those who had escaped from the destruction of their city, and established themselves in the southern part of the island. It was not till long afterwards that they were expelled from thence by a fresh body of Libyans, who drove them up into the more rugged and inaccessible parts of the island, where they retained down to a late period the name of Ilienses (Ἰλιεῖς, Paus. x. 17. §§ 2—7; Sil. Ital. xii. 360—368). The existence of a mountain tribe of this name is a well attested fact, as they are mentioned by Livy as well as by the geographers; and it is probable that the casual resemblance of name gave occasion to the fable of their Trojan origin. [Ilienses.] The Iolai or Iolaenses, on the other hand, had lost their name in the time of Strabo, and were called, according to him, Diaghesbians (Διαγησβεῖς, v. p. 225), a name which is, however, not found in any other ancient author. Another tribe, whose name is found in historical times, is that of the Balari, who, according to Pausanias, derived their origin from a body of mercenaries in the service of Carthage, that had fled for refuge to the mountains. (Paus. *l. c.* § 9.) To these must be added the Corsi, whose origin is sufficiently indicated by their name. They dwelt in the mountains in the N. of the island (the *Montagne di Limbarra*), and had evidently crossed over from the adjacent island of Corsica, as they are described by Pausanias as having done. (Paus. *l. c.*)

It is idle to attempt to criticise such traditions as these; they are related with many variations by other writers, some of whom term the Iolaenses, others the Ilienses, the most ancient inhabitants of the island (Diod. iv. 29, v. 15; Mel. ii. 7. § 19; Strab. v. p. 225; Sil. Ital. *l. c.*); and it is clear that the different mountain tribes were often confounded with one another. Strabo alone has a statement that the earliest inhabitants of Sardinia (before the arrival of Iolaus) were Tyrrhenians (v. p. 225), by which he must probably mean Pelasgians, rather than Etruscans. We have no account of any Greek colonies in Sardinia during the historical period; though the island was certainly well known to them, and seems to have been looked upon as affording a tempting field for colonisation. Thus we are told by Herodotus that when Phocaea and Teos were taken by Harpagus (B. C. 545) the project was suggested that all the remaining Ionians should proceed in a body to Sardinia, and establish themselves in that island. (Herod. i. 170.) Again in B. C. 499, Histiaeus of Miletus promised Darius to subdue the whole island for him; and it appears that the project of emigrating there was seriously entertained. (Id. v. 106, 124.) Pausanias indeed represents the Messenians as thinking of emigrating there at a much earlier period, just after the close of the Second Messenian War, B. C. 668 (Paus. iv. 23. § 5); but none of these projects were realised, and it seems certain that there were no Greek settlements in the island at the time when it fell into the hands of the Carthaginians.
